 - c. As listed in paragraph 2.1A.

J. Type CL1 Lithonia C Series.

1. Description; 4 ft. - 0 in. long, fluorescent lamp strip luminaire with protective tube guards around lamps.
2. Lens: None
3. Housing: 20 gauge cold rolled steel housing with punched knockouts for mounting. End plates shall be die-formed heavy gauge rolled steel with punched knockouts for through wiring. White baked enamel with a minimum 90 percent reflectance.
4. Ballast: For requirements refer to Ballast section below and for quantities, and circuitry refer to drawings.
5. Mounting:
 - a. Surface mounted to the underside of the ceiling. Attach luminaire to ceiling grid by means of a gripper hanger which attaches to any standard ceiling grid system.

- b. For spaces without ceiling, suspend from structure with all-thread rods to required height.
 - c. Electrical Contractor to determine quantity of hangers required for either method.
 - 6. Lamps: One or two T8 as specified in the Lamps section below.
 - 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 - 8. Alternate Manufacturers:
 - a. Lightolier SW Series.
 - b. Metalux SS Series.
 - c. As listed in paragraph 2.1A.
- K. Type CL2 Lithonia C Series.
 - 1. Description; 3 ft. long, fluorescent strip luminaire with protective tube guards around lamps.
 - 2. Lens: None
 - 3. Housing: 20 gauge cold rolled steel housing with punched knockouts for mounting. End plates shall be die-formed heavy gauge rolled steel with punched knockouts for through wiring. White baked enamel or powder coated with a minimum 90 percent reflectance.
 - 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 - 5. Mounting:
 - a. Surface mounted to the underside of the ceiling. Attach luminaire to ceiling grid by means of a gripper hanger which attaches to any standard ceiling grid system.
 - b. For spaces without ceiling, suspend from structure with all-thread rods to required height.
 - c. Electrical Contractor to determine quantity of hangers required for either method.
 - 6. Lamps: Two or four T8 as specified in the Lamps section below.
 - 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 - 8. Alternate Manufacturers:
 - a. Lightolier SW Series.
 - b. Metalux SS Series.
 - c. As listed in paragraph 2.1A.
- L. Type EM1 Lithonia ELSQN-ELASRK Series.
 - 1. Description: Ceiling mounted semi-recessed 10.5 inch square decorative halogen emergency light unit with nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 - 2. Lens: Lexan lens.
 - 3. Housing: Black thermoplastic body, UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 - 4. Mounting: Provide with manufacturer rough-in kit for semi-recessed installation.
 - 5. Voltage: [277] [120]
 - 6. Lamps: 10W Tungsten Halogen (included)
 - 7. Alternate Manufacturers:
 - a. Lightolier SI Series.
 - b. Sure-Lites USF1 Series.
 - c. As listed in paragraph 2.1A.
- M. Type EM2 Lithonia ELM627 Series.
 - 1. Description: Compact contemporary design krypton emergency lighting unit with adjustable heads and nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 - 2. Battery: Sealed, maintenance free Nickel-Cadmium, 6 volt, with 27 Watt capacity.
 - 3. Housing: White thermoplastic body, UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 - 4. Mounting: Wall mounted.
 - 5. Voltage: [277] [120]
 - 6. Lamps: 9W krypton. (included)
 - 7. Alternate Manufacturers:

- a. Lightolier E2 Series.
 - b. Emergi-Lite #EC-2HC-AD-N.
 - c. As listed in paragraph 2.1A.
- N. Type EM3 Lithonia ELT24 Series.
 - 1. Description: Industrial design halogen emergency lighting unit with adjustable heads and nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 - 2. Battery: Sealed, maintenance free Nickel-Cadmium, 6 volt, with 24 Watt capacity.
 - 3. Housing: 18-gauge steel housing finished in instrument tan color, with hinged faceplate for ease of maintenance. UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 - 4. Mounting: Wall mounted.
 - 5. Voltage: [277] [120].
 - 6. Lamps: 8W Halogen (included)
 - 7. Alternate Manufacturers:
 - a. Lightolier E4 Series.
 - b. Sure-Lites XR16 Series.
 - c. As listed in paragraph 2.1A.
- O. Type EM4 (exterior egress doors) Lithonia AFN/EXT Series.
 - 1. Description: Wall Mounted UL wet location Xenon emergency lighting unit
 - 2. Lamping: Sealed Beam 6 Watt-Xenon.
 - 3. Housing: UL listed wet location (NEMA 4X) heavy-duty polycarbonate sealed, gasketed, and corrosion resistant. Finish by contracting officer.
 - 4. Battery: Nickel-Cadmium, with self-diagnostics. Listed for cold weather (-40 degrees to 122 degrees F), wet locations.
 - 5. Mounting: Surface wall.
 - 6. Voltage: [277] [120]
 - 7. Lamps: Two 6 Watt-Xenon.
 - 8. Alternate Manufacturers:
 - a. Lightolier LVL Series.
 - b. Sure-Lites: AELI Series
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

Ceiling mounted dock lights should be selected for all platforms. Luminaire to be controlled by dock door operation. Coordinate connection of control switch with dock door manufacturer.

- P. Type P1 Phoenix DL-INC-IR-GG1
 - 1. Description: Ceiling Mounted Dock Light with spring suspension swivel mounting, compact fluorescent provide light head with glare guard and timer control switch.
 - 2. Housing: Luminaire head of 18 gauge steel.
 - 3. Mounting: Swivel hanger for direct mounting to standard 4 inch junction box. Pendant to be 1/2 inch conduit with flexible spring for impact resistance and sufficient length to suspend center of light at 8 ft.- 6 in. AFF.
 - 4. Voltage: 120.
 - 5. Lamps: CF23EL/PAR38/BL/2/12 Sylvania
 - 6. Alternate Manufacturers:
 - a. Fostoria DKL-25-FLX + INC + GS-1

NOTE TO SPECIFIER

Exterior open platforms, canopies, docks, etc. to be lighted within coastal states, with hot and humid climates, shall be illuminated using wet location luminaires, type PL1 and/or PL2. The intent is to utilize luminaires type PL1/PL2 for applications where damp location luminaires B1/B2 are not appropriate.

- Q. Type PL1 (exterior platforms) Mark EXWL
1. Description: 4 ft. long enclosed and gasketed fluorescent luminaire. UL listed for wet location.
 2. Lens: 0.156 in. high impact, ribbed clear, polycarbonate diffuser.
 3. Housing: Extruded aluminum housing with die cast aluminum end caps.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface.
 6. Voltage: [277] [120].
 7. Lamps: One or two T8 as specified in the Lamps section below.
 8. Climate Temperature: Provide 0 degrees F or -20 degrees F rated electronic ballast(s) in colder climates.
 9. Alternate Manufacturers:
 - a. Nulite DM Series (painted stainless steel housing)
 - b. Kenall SH548 Series (painted stainless steel housing)
 - c. As listed in paragraph 2.1A.
- R. Type PL2 (exterior platforms) Mark EXWL
1. Description: 8 ft. long enclosed and gasketed fluorescent luminaire. UL listed for wet location.
 2. Lens: 0.156 in. high impact, ribbed clear, polycarbonate diffuser.
 3. Housing: Extruded aluminum housing with die cast aluminum end caps.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface.
 6. Voltage: [277] [120].
 7. Lamps: Two or four T8 as specified in the Lamps section below.
 8. Climate Temperature: Provide 0 degrees F or -20 degrees F rated electronic ballast(s) in colder climates.
 9. Alternate Manufacturers:
 - a. Nulite DM Series (painted stainless steel housing)
 - b. Kenall SH596 Series (painted stainless steel housing)
 - c. As listed in paragraph 2.1A.
- S. Type R1 Lightolier C4L10DL40KWHPVA-C4L10NZ10V.
1. Description: Recessed 4.5 inch dia. aperture LED downlight.
 2. Reflector: Low brightness, white painted, flangeless reflector.
 3. Ballast/Driver: 20 Watt/1000 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
 4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to grid ceiling bar hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
 5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
 6. Mounting: 24 inch grid ceiling bar hangers shall be supplied by manufacturer and securely fastened to grid or provide 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
 7. Voltage: [277] [120].
 8. Lamp: 1000 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
 9. Alternate Manufacturers:
 - a. Gotham #EVO41/104ARMDWH Series.
 - b. Portfolio #LD409D010ERM4840 Series.

c. As listed in paragraph 2.1A.

T. Type R3 Lithonia Lighting 2AVG/MDC Series.

1. Description: Recessed, 2 feet x 4 feet x 5.5 inches, fluorescent grid troffer with indirect louver.
2. Louver: Indirect, white metal diffuser, round holes with large center slots constructed of aluminum. Louver shall be held by internal spring catches and center itself in the housing when it is snapped-in.
3. Housing: 22 gauge steel, with white baked enamel or powder coated finish.
4. Ballast: For requirements refer to Ballast section below and for quantities, and circuitry refer to drawings.
5. Mounting: Recessed in inverted T suspended ceiling.
6. Lamps: Two or three T8 as specified in the Lamps section below.
7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
8. Alternate Manufacturers:
 - a. Lightolier QVS2 Series.
 - b. Metalux 2RDI-SL5 Series.
 - c. As listed in paragraph 2.1A.

U. Type R4 Lithonia AVG/MDC series.

1. Description: Recessed 1 foot x 4 feet x 5.5 inches, fluorescent grid troffer with indirect louver.
2. Louver: Indirect, white metal diffuser, round holes with large center slots constructed of aluminum. Louver shall be held by internal spring catches and center itself in the housing when it is snapped-in.
3. Housing: 22 gauge steel with white baked enamel finish or powder coated finish. Housing shall be prepared in a three step process of cleaning, degreasing and washing prior to painting.
4. Ballast: For requirements refer to Ballast section below and for quantities, ballast factor, and circuitry refer to drawings.
5. Mounting: Recessed in inverted T suspended ceiling.
6. Lamps: One or two T8 as specified in the Lamps section below.
7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
8. Alternate Manufacturers:
 - a. Lightolier QVS1 Series.
 - b. Metalux 2RDI-SLS Series.
 - c. As listed in paragraph 2.1A.

V. Type R5 Lightolier C6L1520D40KMWHP-C6L15N

1. Description: Recessed 6 inch dia. aperture LED downlight.
2. Reflector: Low brightness white painted, flangeless reflector.
3. Ballast/Driver: 27 Watt/1500 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to grid ceiling bar hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
6. Mounting: 24 inch grid ceiling bar hangers shall be supplied by manufacturer and securely fastened to grid or provide 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
7. Voltage: [277] [120].
8. Lamp: 1500 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
9. Alternate Manufacturers:
 - a. Gotham #EVO41/146ARMDWH Series.
 - b. Portfolio #LD615D010ERM6 Series
 - c. As listed in paragraph 2.1A.

- W. Type UC 1 Lithonia N2S Series.
1. Description: Under cabinet mounted 2' long, single fluorescent lamp luminaire, with solid front. Tandem wired.
 2. Housing: 20 gauge cold rolled steel. White polyester powder coat finish with 92% overall reflectance.
 3. Lens: Clear acrylic prismatic serrated diffuser shall snap into place without tools.
 4. Ballast: For requirements refer to Ballast section below and for quantities, ballast factor, and circuitry refer to drawings. Electrical contractor shall wire the lamp sockets to an adjacent UC 2 luminaire.
 5. Lamp: One T8 as specified in the Lamps section below.
 6. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 7. Alternate Manufacturers:
 - a. Lightolier TCF Series.
 - b. Metalux OFCL Series.
 - c. As listed in paragraph 2.1A.
- X. Type UC 2 Lithonia N2S Series.
1. Description: Under cabinet mounted 3' long, single fluorescent lamp luminaire, with solid front. Tandem wired.
 2. Housing: 20 gauge cold rolled steel. White polyester powder coat finish with 92% overall reflectance.
 3. Lens: Clear acrylic prismatic serrated diffuser shall snap into place without tools.
 4. Ballast: For requirements refer to Ballast section below and for quantities, ballast factor, and circuitry refer to drawings. Ballast to operate this luminaire and an adjacent UC 1 luminaire where applicable. Individual lead lengths shall not exceed 18 feet.
 5. Lamp: One T8 as specified in the Lamps section below.
 6. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 7. Alternate Manufacturers:
 - a. Lightolier TCF Series.
 - b. Metalux OFCL Series.
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

Standard preferred lamps are 3,100 lumens but lower lumen lamps may be used in combination with ballast factor to achieve optimum efficiency at the lowest installed/operating cost and still meet required light levels.

- Y. Type W1 Lithonia TAF Series
1. Description: Cable/chain hung, 8 ft. long tandem, industrial fluorescent luminaire, providing 20 percent uplighting with locking lamp holders and protective tube guards.
 2. Louvers: None.
 3. Housing: Channel and end plates of formed steel, 20 gauge material thickness. Finished with 90% minimum reflectance, white baked enamel or powder coated.
 4. Ballast: For requirements refer to Ballast section below and for quantities, and circuitry refer to drawings.
 5. Mounting: Wire rope/chain from ceiling structure.
 6. Lamps: Two, four, six or eight T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Switching: See electrical drawings.
 9. Alternate Manufacturers:
 - a. Lightolier TU8 Series.
 - b. Metalux 8TDIM Series.
 - c. H.E. Williams "828" Series.
 - d. Lighting Alternatives "TURT8" Series.
 - e. Holophane "ICS08" Series.

- Z. Type W2 Lithonia AF Series.

1. Description: Cable/chain hung, 4 ft. long single, industrial fluorescent luminaire, providing 20 percent uplighting with locking lamp holders and protective tube guards. Use wire guards if specified on drawings.
 2. Louver: None.
 3. Housing: Channel and end plates of formed 20 gauge steel. Finished with 90% minimum reflectance white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Wire rope/chain from ceiling structure.
 6. Lamps: One, two, three or four T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Switching: See electrical drawings.
 9. Alternate Manufacturers:
 - a. Lightolier TU4 Series.
 - b. Metalux DIM Series.
 - c. H.E.Williams "824" Series.
 - d. Lighting Alternatives "TURT8" Series.
 - e. Holophane "ICS04" Series.
- AA. Type W6 Nulite TH Series.
1. Description: Cable/chain hung 4 ft. long high bay industrial fluorescent luminaire with wide beam distribution and protective tube guards; no wire guards.
 2. Housing: Impact and corrosion resistant, die formed aluminum (0.40 inches), painted after fabrication with 90% reflectance white or specular aluminum reflector, baked enamel or powder coated finish.
 - a. Welded, riveted or screwed rigid housing, 20 gauge, cold rolled steel is an acceptable housing.
 3. Ballast: For requirements refer to Ballast section below and for quantities, and circuitry refer to drawings.
 4. Mounting: Ceiling, 20' and above, wire rope/chain from ceiling structure.
 5. Lamps: Four, six or eight T8 as specified in the Lamps section below.
 6. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 7. Alternate Manufacturers:
 - a. Lighting Alternatives FWHB24 Series.
 - b. Optimum Lighting G16 Series.
 - c. Metalux HBE Series.
 - d. LaMar Lighting MO Series.
 - e. H.E. Williams "GL" Series.
 - f. Holophane "HFN" Series.
 - g. Lithonia "FGB" Series.
- BB. Type XF1 (hazardous location) Canlet GFCF42H-GHC
1. Description: Vapor tight fluorescent luminaire UL listed for Class I, Div. 2, Groups C,D, hazardous locations.
 2. Lens: Heat and impact resistant glass globe.
 3. Housing: Body and guard of Lexan polycarbonate.
 4. Mounting: Surface ceiling mounted.
 5. Voltage: [277] [120]
 6. Lamps: One CF42DT/E/IN/841/ECO
 7. Alternate Manufacturer:
 - a. Hubbell NV21G15AHG-NV2FG42
 - b. Guth EXP-CFL42 Series.
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

The exit sign luminaires specified below include a battery. If the Facility is equipped with emergency power delete the battery and connect the luminaire to an emergency circuit as necessary. Modify manufacturer number as necessary.

CC. Type X1 Lithonia LQM-ELN Series.

1. Description: Ceiling mount, single face LED exit sign with canopy. Self powered and with self diagnostics.
2. Features: Red Letters, White Stencil, White Housing (verify colors with local jurisdiction). Injection molded UL94-5V rated polycarbonate frame and canopy.
3. Mounting: Ceiling or end-mount.
4. Battery: Maintenance free sealed Nickel Cadmium with long life, full recharge time of 24 hours max.
5. Voltage: [277] [120].
6. Lamps: LED lamp module.
7. Alternate Manufacturers:
 - a. Lightolier LL Series.
 - b. Sure-Lites LPX7 Series.
 - c. As listed in paragraph 2.1A.

DD. Type X2 Lithonia LQM-ELN Series.

1. Description: Ceiling mount, double face LED exit sign with canopy. Self powered and with self diagnostics.
2. Features: Red Letters, White Stencil, White Housing (verify colors with local jurisdiction). Injection molded UL94-5V rated polycarbonate frame and canopy. Two bottom apertures snap out to emit downlight as required.
3. Mounting: Ceiling or end-mount.
4. Battery: Maintenance free sealed nickel-cadmium with long life, full recharge time of 24 hours maximum.
5. Voltage: [277] [120].
6. Lamps: LED lamp module.
7. Alternate Manufacturers:
 - a. Lightolier LL Series.
 - b. Sure-Lites LPX7 Series.
 - c. As listed in paragraph 2.1A.

EE. Type CIO2 Vista AGVSP-LED-DC-HL-C-ZN-WT-UNV-MW

1. Description: Recessed 9.25" w x 3.3" h x 4.3" d step light with L.E.D. source
2. Features: Die cast aluminum step light with louver face.
3. Housing: Back box constructed of die-cast aluminum alloy.
4. Louvers: Die-cast aluminum alloy.
5. Mounting: Recessed wall mounting.
6. Voltage: Universal (both 120 & 277)
7. Lamp: White LED's included
8. Alternate Manufacturers:
 - a. Kenall MSLS)DBCPWLL (9.25 inch W x 3.75 inch H x 3.5 inch D).
 - b. Lumux SL630/LED/BRONZE (10.25 inch W x 4 inch H x 3.25 inch D).
 - c. Elcast Lighting 1216-LED-UNV (7 inch W x 3 inch H x 3.5 inch D).
 - d. As listed in paragraph 2.1A.

2.3 ELECTRONIC FLUORESCENT LAMP BALLASTS

A. Manufacturers:

1. Advance Transformer Company, Rosemont, IL (847) 390-5000.
2. General Electric Co., Nela Park, OH (800) 435-2677

3. Osram/Sylvania, Danvers, MA (800) 544-4828.
4. Universal Lighting Technologies, Nashville, TN (615) 316-5100.

B. Description:

1. Fluorescent lamp ballasts shall be parallel lamp, high frequency, energy efficient, electronic program start ballasts operating lamps at a frequency above 42 kHz with a minimum power factor of 0.98 for primary lamp. Ballast shall be compatible for operating the lamps indicated. Ballast shall have a minimum ballast factor for primary lamp of 1.15. The lamp crest factor shall measure 1.7 or less. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations Part 18 (including 15J). Ballasts shall be UL labeled and comply with all local, State and Federal efficiency standards. Lamp and ballast combinations shall be chosen to provide a minimum efficacy of 94 LMS/Watt.

NOTE TO SPECIFIER

R&A Projects may require several ballast factor and lamp types due to the existing construction. Therefore, substitute the paragraph below in place of paragraph 2.3 B.1. for R&A projects. Delete paragraph for new construction.

1. Fluorescent lamp ballasts shall be parallel lamp, high frequency, energy efficient, electronic program start ballasts operating lamps at a frequency above 42 kHz with a minimum power factor of 0.98 for primary lamp. Ballast shall be compatible for operating the lamps indicated. Ballast shall have a minimum ballast factor for primary lamp of 0.71. The lamp crest factor shall measure 1.7 or less. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations Part 18 (including 15J). Ballasts shall be UL labeled and comply with all local, State and Federal efficiency standards. Lamp and ballast combinations shall be chosen to provide a minimum efficacy of 84 LMS/Watt.
2. Compact fluorescent ballasts shall be parallel lamp, high frequency, energy efficient, electronic ballasts operating at a frequency above 50 kHz with a minimum power factor of 0.96. Ballast shall have a minimum ballast factor of 0.97. Total harmonic distortion shall range from 5 to 13 percent, depending upon lamp/ballast combination. Compact fluorescent ballasts shall operate 10 to 42 Watt lamps. Ballasts shall be factory tested and meet ANSI 15 C62.41, ANSI C82.1 Class P. Ballasts integrated into flood light or other special application lamps should meet the specifications if available.

C. Provide five-year lamp and five-year ballast factory warranties

- D. Universal Voltage shall be used when available and cost effective. Otherwise use Voltage 120 or 277 volts as required to match source voltage.**

NOTE TO SPECIFIER

Include paragraph 2.3E. below if the lightning risk assessment calculation deems a building lightning protection system is required.

- E. All ballasted fluorescent luminaires shall be equipped with individual factory fuse protection.**

2.4 LAMPS

A. Fluorescent and High Intensity Discharge (HID) Lamp Manufacturers:

1. General Electric Company, Nela Park, OH (800) 435-2677.
2. Osram/Sylvania, Danvers, MA (800) 544-4828.
3. Philips Lighting Company, Somerset, NJ (800) 555-0050.

- B. Lamp Types: As specified for luminaire. Refer to Section 016000 for substitutions and product options.
- C. Linear Fluorescent Lamps
 - 1. Color Temperature: 4100K.
 - 2. Life: Lamp to be rated for a minimum of 60,000 hours based on the lamp operating with a program start ballast on 12-hour cycles.
- D. Reflector Lamp Beam Patterns: ANSI C78.379.
- E. Mercury content: Fluorescent lamps shall contain low mercury and pass the federal Toxic Characteristic Leaching Procedure (TCLP) test and be classified as non-hazardous waste. Lamp must be marked as such (i.e., green tips, green etchings, etc.)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Conform to Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install suspended luminaires and exit luminaire signs using pendants supported from swivel hangers, as applicable, or wire rope from ceiling structure, as applicable, or in accordance with details shown on drawings. Provide pendant/wire rope length required to suspend luminaire at indicated height.
- B. Support grid mounted recessed fluorescent luminaires at each corner using a minimum of four wire hangers of same gauge as ceiling suspension system supported from building structure independent of ceiling framing.
- C. Locate recessed ceiling luminaires as indicated on reflected ceiling plan.
- D. Install surface mounted luminaires and exit luminaire signs plumb and adjust to align with building lines and with each other. Secure to prevent movement. Mount exit signs to outlet box mounted flush in wall or ceilings. Outlet box for ceiling mounted exit signs: Connect to rigid conduit system.
- E. Exposed Grid Ceilings: Support surface mounted luminaires on grid ceiling directly from building structure.
- F. Install recessed luminaires to permit removal from below.
- G. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating. In fire rated ceilings recessed luminaires must carry 1 hour UL fire rating classification.
- H. Install earthquake clips to secure recessed grid-supported luminaires in place.

- I. Install wall mounted luminaires, emergency lighting units and exit luminaire signs at height as scheduled.
- J. Install accessories furnished with each luminaire.
- K. Bond products and metal accessories to branch circuit equipment grounding conductor.
- L. Install specified lamps in each emergency lighting unit, exit luminaire sign, and luminaire.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Operate each luminaire after installation and connection. Inspect for proper connection and operation.
- C. Final acceptance for areas larger than 10,000 sq. ft. will be based on measurement of initial lighting levels after required hours of burn in as specified in USPS Mail Processing Facility Design Criteria, not maintained lighting levels.

3.4 ADJUSTING

- A. Aim and adjust luminaires as directed by Contracting Officer.
- B. Position exit luminaire sign directional arrows as indicated.

3.5 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Clean electrical parts to remove conductive and deleterious materials.
- C. Remove dirt and debris from enclosures.
- D. Clean photometric control surfaces as recommended by manufacturer.
- E. Clean finishes and touch up damage.
- F. Relamp luminaires with defective or burned out lamps just prior to Final Acceptance.

USPS Mail Processing Facility Specification issued: 5/1/2014
Last revised: 4/16/2014

END OF SECTION 26 51 00 00

SECTION 26 51 00 00 - CSF INTERIOR LIGHTING**

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only. This Specification is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES, THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior luminaires and accessories.
2. Emergency lighting units.
3. Exit signs.
4. Ballasts.
5. Lamps.
6. Luminaire accessories.

B. Substitutions:

1. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not allowed.

C. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the work of this section. Additional requirements and information necessary to complete the work of this section may be found in other documents.

D. Related Sections:

1.3 SUBMITTALS

- A. As specified in Section 260500 – Common Work Results for Electrical.
 - 1. Product Data: Provide dimensions, ratings, and performance data for each luminaire specified.
 - 2. Assurance/Control Submittals:
 - a. Manufacturer's Instructions: Indicate application conditions and limitations of use stipulated by product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
 - 1. Operation and Maintenance Data: Submit manufacturer's operation and maintenance instructions for each type of luminaire.

1.4 QUALITY ASSURANCE

- A. As specified in Section 260500 - Common Work Results for Electrical.

1.5 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Products: At completion of installation, deliver to Contracting Officer.
 - 1. Two of each luminaire lens type.
 - 2. Each component type: Provide quantity for each unique ballast, relay, I/O module and lamp equal to 2 percent of luminaire total, but not less than two of each type.

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES, THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 2 - PRODUCTS

2.1 LUMINAIRE MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Belfer Group, Farmingdale, NJ (732) 493-2666
 - 2. Canlet/Canplas Industries, Ltd., Denver, CO (303) 373-1918
 - 3. Chloride Systems, Burgaw, NC (910) 259-1000.
 - 4. Cooper Lighting (Halo, Invue, Lumark, Metalux, Portfolio, Sure-Lites), Peachtree City, GA (770)486-4800.
 - 5. Day-Brite, Tupelo, MS (662) 842-7212.

6. Dual-Lite, Cheshire, CT (203) 699-2000.
7. Edison-Price Lighting, Long Island City, NY (718) 685-0700.
8. Elcast Lighting, Addison, IL (630) 543-5390.
9. Fostoria Process Equipment, Chicago, IL (800) 495-4525.
10. Gardco Lighting, San Leandro, CA (800) 227-0758.
11. GE Lighting Systems, Charlotte, NC (803) 462-2016.
12. Gotham Lighting, Conyers, GA (800) 315-4982.
13. Guth Lighting, St. Louis, MO (314) 533-3200.
14. H.E. Williams, Carthage, MO (417) 358-4065.
15. Holophane, Newark, OH (740) 345-9631.
16. Hubbell Lighting, Inc., (Columbia, Spaulding, Sterner) Spartanburg, SC (864) 599-6000.
17. Indy Lighting, Fishers, IN (817) 849-1233.
18. Kenall Manufacturing, Gurnee, IL (847) 360-8200.
19. Kirlin Lighting, Detroit, MI (313) 259-6400.
20. Kramer Lighting, Sturtevant, WI (800) 236-6800.
21. Kurt Versen Company, Westwood, NJ (201) 664-8200.
22. LaMar Lighting, Farming Dale, NY (631) 777-7700.
23. LightAlarms (Thomas & Betts) Montreal, ON (888) 552-6467.
24. Lighting Alternatives, Cherry Hill, NJ (877) 847-1102.
25. Lightolier, Fall River, MA (508) 679-8131.
26. Lithonia Lighting, Conyers, GA (770) 922-9000.
27. LSI Industries, Cincinnati, OH (513) 793-3200.
28. Lumux Lighting, Inc., Sacramento, CA (877) 895-5552.
29. Nulite, Denver, CO (303) 287-9646.
30. Omega Lighting, Tupelo, MS (800) 234-1890.
31. Optimum Lighting, Henderson, NC (800) 541-9082.
32. Phoenix Products, Milwaukee, WI (414) 438-1200.
33. Prescolite Lighting, Spartanburg, SC (864) 599-6000.
34. Prudential Lighting, Los Angeles, CA (213) 746-0360.
35. Vista Lighting, Tupelo, MS (662) 690-4105.
36. Zumtobel Staff, Highland, NY (800) 448-4131.

NOTE TO SPECIFIER

Edit for location and Luminaire Schedule.

2.2 LUMINARIES

NOTE TO SPECIFIER

The USPS Design Criteria requires integral battery backup for fluorescent luminaires where mounting heights do not exceed 10 ft. – 0 in. AFF. The following luminaire types do not contain the necessary part numbers for integral battery packs. Contact the manufacturer to identify part numbers for the battery backup version of the same luminaire.

NOTE TO SPECIFIER

Interior, linear, fluorescent luminaires shall utilize 28W lamps for low ceiling applications (10 ft. or less). Utilize 32Watt, 3000 lumen lamps for high ceiling applications (above 10 ft.) and in areas where the temperature will fall below 65 degrees F.

- A. Type A1 Lithonia 2SP8G Series.
 1. Description: Recessed, 2' W x 4' L x 4" D fluorescent grid troffer with acrylic lens, non-air handling.
 2. Lens: Prismatic acrylic, A-12 pattern, 0.125 inches thick, 100% UV stabilized.

3. Housing: 22 gauge steel body, flush steel door with mitered corners. Frame and housing white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in Inverted T suspended ceiling.
 6. Lamps: Two, three or four T8 as specified in the Lamps section below.
 7. Marking: luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SPS2 Series.
 - b. Metalux 2GC8 Series.
 - c. As listed in paragraph 2.1A.
- B. Type A2 Lithonia 2SP8F Series.
1. Description: Recessed, 2' W x 4' L x 4" D fluorescent flanged troffer with acrylic lens, non-air handling.
 2. Lens: Prismatic acrylic, A-12 pattern, 0.125 inches thick, 100% UV stabilized.
 3. Housing: 22 gauge steel body, flush steel door with mitered corners. Frame and housing white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in a gypsum board ceiling. Provide frame-in kit or plaster frame.
 6. Lamps: Two, three or four T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SPS2 Series.
 - b. Metalux 2FC8 Series.
 - c. As listed in paragraph 2.1A.
- C. Type A3 Lithonia SP8G Series.
1. Description: Recessed, 1' W x 4' L x 4" D fluorescent grid troffer with acrylic lens, non-air handling.
 2. Lens: Prismatic acrylic, A-12 pattern, 0.125 inches thick, 100% UV stabilized.
 3. Housing: 22 gauge steel body, flush steel door with mitered corners. Frame and housing white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in Inverted T suspended ceiling.
 6. Lamps: One or Two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SPS1 Series.
 - b. Metalux GC8 Series.
 - c. As listed in paragraph 2.1A.
- D. Type A4 Lithonia SP8F Series.
1. Description: Recessed 1' W x 4' L x 4" D fluorescent flanged troffer with acrylic lens, non-air handling.
 2. Lens: Prismatic acrylic, A-12 pattern, 0.125 inches thick, 100% UV stabilized.
 3. Housing: 22 gauge steel, flush steel door with mitered corners, white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in gypsum board ceiling. Provide frame-in kit or plaster frame.
 6. Lamps: One or Two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.

8. Alternate Manufacturers:
 - a. Metalux FC8 Series.
 - b. Lightolier SPS1 Series.
 - c. As listed in paragraph 2.1A.

- E. Type A5 Lithonia VC Series.
 1. Description: 12" W x 4' L x 3.25" D fluorescent wraparound luminaire, non-air handling.
 2. Lens: Injection molded prismatic acrylic, A-12 pattern, 0.187 inches thick, 100% UV stabilized.
 3. Housing: 20 gauge steel body with mitered corners. Housing: White baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface ceiling mounted.
 6. Lamps: Two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier CBS232 Series.
 - b. Metalux WBI Series.
 - c. As listed in paragraph 2.1A.

- F. Type A6 Lightolier #LS4RX32.
 1. Description: 6" W x 4' L x 3 7/8" D fluorescent wraparound luminaire, non-air handling.
 2. Lens: Prismatic acrylic, A-12 pattern, 0.125 inches thick, 100% UV stabilized.
 3. Housing: 20 gauge steel with mitered corners. Housing: White baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface ceiling mounted.
 6. Lamps: One or Two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Metalux BC Series.
 - b. LSI Industries #TSW5X32 Series.
 - c. Prudential #5100T804WA Series.
 - d. As listed in paragraph 2.1A.

- G. Type B1 Lithonia DMS-ARDP Series.
 1. Description: 4 ft. long enclosed and gasketed industrial fluorescent luminaire. UL listed for damp location.
 2. Lens: Deep high impact acrylic diffuser.
 3. Housing: Steel housing
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface.
 6. Lamps: One, two or three T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SC4 Series
 - b. Nulite DM Series
 - c. As listed in paragraph 2.1A.

- H. Type B2 Lithonia DMST-ARDP Series.
 1. Description: 8 ft. long enclosed and gasketed industrial fluorescent luminaire. UL listed for damp location.
 2. Lens: Deep high impact acrylic diffuser.
 3. Housing: Steel housing

4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
5. Mounting: Surface.
6. Lamps: Two or four T8 as specified in the Lamps section below.
7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
8. Alternate Manufacturers:
 - a. Lightolier SC4 Series (2 required)
 - b. Nulite DM-8 Series
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

Utilize luminaire "B3" within unattended stairways to comply with ASHRAE 90.1 – 2010, 9.4.1.6.g.

- I. Type B3 Newstar #V1C4N-232-RC-UN-WH-PR-OC.
 1. Description: 4 ft. long enclosed and gasketed industrial fluorescent luminaire. UL listed for damp location.
 2. Lens: High impact, clear ribbed, polycarbonate diffuser.
 3. Housing: Extruded aluminum housing with cast aluminum end caps: White finish.
 4. Ballast: (2) Single lamp ballasts. For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Surface wall or ceiling.
 6. Lamps: One or two T8 as specified in the Lamps section below.
 7. Luminaire shall be equipped with integral occupancy sensor to control (1) lamp.
 8. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 9. Alternate Manufacturers:
 - a. Eclipse #574-CPR-2EB-WH-MS12-PRS
 - b. Luminaire #TSL94-2F32T8-2B-UNV-CP-WHT-DAMP
 - c. As listed in paragraph 2.1A.
- J. Type CL1 Lithonia C Series.
 1. Description; 4 ft. long, fluorescent strip luminaire with protective tube guards around lamps.
 2. Lens: None
 3. Housing: 20 gauge cold rolled steel housing with punched knockouts for mounting. End plates shall be die-formed heavy gauge rolled steel with punched knockouts for through wiring. White baked enamel or powder coated with a minimum 90 percent reflectance.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting:
 - a. Surface mounted to the underside of the ceiling. Attach luminaire to ceiling grid by means of a gripper hanger which attaches to any standard ceiling grid system.
 - b. For spaces without ceiling, suspend from structure with all-thread rods to required height.
 - c. Electrical Contractor to determine quantity of hangers required for either method.
 6. Lamps: One or two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SW Series.
 - b. Metalux SS Series.
 - c. As listed in paragraph 2.1A.
- K. Type CL2 Lithonia C Series.
 1. Description; 3 ft. long, fluorescent strip luminaire with protective tube guards around lamps.
 2. Lens: None

3. Housing: 20 gauge cold rolled steel housing with punched knockouts for mounting. End plates shall be die-formed heavy gauge rolled steel with punched knockouts for through wiring. White baked enamel or powder coated with a minimum 90 percent reflectance.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting:
 - a. Surface mounted to the underside of the ceiling. Attach luminaire to ceiling grid by means of a gripper hanger which attaches to any standard ceiling grid system.
 - b. For spaces without ceiling, suspend from structure with all-thread rods to required height.
 - c. Electrical Contractor to determine quantity of hangers required for either method.
 6. Lamps: Two or four T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier SW Series.
 - b. Metalux SS Series.
 - c. As listed in paragraph 2.1A.
- L. Type CV1 Lithonia S Series.
1. Description: 4 ft. long cove mounted; one lamp fluorescent narrow strip luminaire.
 2. Louver: Lay-in chrome parabolic cube louver for illuminated cove, manufactured by American Louver Company, Skokie, Illinois (800) 323-4250, or approved substitution. Cell size- 1 1/2 inch x 1 1/2 inch x 1 inch. Width and Length - Refer to plans.
 3. Louver to be shipped to the site and installed with the protective film. Once the final inspection has been conducted the film is to be removed.
 4. Housing: 20 gauge cold rolled steel with a painted exterior surface. Interlocked housing corners with positive locking and rigid construction. White baked enamel or powder coated finish with a minimum reflectivity of 90 percent.
 5. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings. Ballast to operate this luminaire and an adjacent CV2 luminaire where applicable.
 6. Individual lead lengths shall not exceed 18 feet.
 7. Mounting: Surface mounted to the underside of the cove on a 2 inch spacer.
 8. Louver lays into constructed cove on wall angles (furnished and installed by general contractor). Louver shall be made into lengths and configurations shown on plans and fill the cove end to end.
 9. Lamp: One T8 as specified in the Lamps section below.
 10. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 11. Alternate Manufacturers:
 - a. Metalux SN Series.
 - b. Lightolier SN Series.
 - c. As listed in paragraph 2.1A.
- M. Type CV2 Lithonia S Series.
1. Description: 2 ft. long cove mounted; one lamp fluorescent narrow strip luminaire.
 2. Louver: Lay-in chrome parabolic cube louver for illuminated cove, manufactured by American Louver Company, Skokie, Illinois (800) 323-4250, or approved substitution Paracube II. Cell size- 1 1/2 inch x 1 1/2 inch x 1 inch. Width and Length - Refer to plans.
 3. Louver to be shipped to the site and installed with the protective film. Once the final inspection has been conducted the film is to be removed.
 4. Housing: 20 gauge cold rolled steel with a painted exterior surface. Interlocked housing corners with positive locking and rigid construction. White baked enamel finish with a minimum reflectivity of 90 percent.
 5. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings. Electrical contractor shall wire the lamp sockets to an adjacent CV1 or CV3 luminaire.
 6. Mounting: Surface mounted to the underside of the cove on a 2 inch spacer.
 7. Louver lays into constructed cove on wall angles (furnished and installed by general contractor). Louver shall be made into lengths and configurations shown on plans and fill the cove end to end.
 8. Lamp: One T8 as specified in the Lamps section below.

9. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 10. Alternate Manufacturers:
 - a. Lightolier SN Series.
 - b. Metalux SN Series.
 - c. As listed in paragraph 2.1A.
- N. Type CV3 Lithonia S Series.
1. Description: 3 ft. long cove mounted; one lamp fluorescent narrow strip luminaire.
 2. Louver: Lay-in chrome parabolic cube louver for illuminated cove, manufactured by American Louver Company, Skokie, Illinois (800) 323-4250, or approved substitution Paracube II. Cell size- 1 1/2 inch x 1 1/2 inch x 1 inch. Width and Length - Refer to plans.
 3. Louver to be shipped to the site and installed with the protective film. Once the final inspection has been conducted the film is to be removed.
 4. Housing: 20 gauge cold rolled steel with a painted exterior surface. Interlocked housing corners with positive locking and rigid construction. White baked enamel finish with a minimum reflectivity of 90 percent.
 5. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings. Ballast to operate this luminaire and an adjacent CV2 luminaire where applicable.
 6. Individual lead lengths shall not exceed 18 feet.
 7. Mounting: Surface mounted to the underside of the cove on a 2 inch spacer.
 8. Louver lays into constructed cove on wall angles (furnished and installed by general contractor). Louver shall be made into lengths and configurations shown on plans and fill the cove end to end.
 9. Lamp: One T8 as specified in the Lamps section below.
 10. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 11. Alternate Manufacturers:
 - a. Lightolier SN Series.
 - b. Metalux SN Series.
 - c. As listed in paragraph 2.1A.
- O. Type EM1 Lithonia ELSQMN-ELASRK Series.
1. Description: Ceiling mounted semi-recessed 10.5 inch square decorative halogen emergency light unit with nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 2. Lens: Lexan lens.
 3. Housing: Black thermoplastic body, UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 4. Mounting: Provide with manufacturer rough-in kit for semi-recessed installation.
 5. Voltage: [277] [120]
 6. Lamps: 10W Tungsten Halogen (included)
 7. Alternate Manufacturers:
 - a. Lightolier SI Series
 - b. Sure-Lites USF1 Series
 - c. As listed in paragraph 2.1A.
- P. Type EM2 Lithonia ELM627 Series.
1. Description: Compact contemporary design krypton emergency light unit with adjustable heads and nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 2. Battery: Sealed, maintenance free Nickel-Cadmium, 6 volt, with 24 Watt capacity.
 3. Housing: White thermoplastic body, UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 4. Mounting: Wall mounted.
 5. Voltage: [277] [120]

6. Lamps: 9W krypton. (included)
 7. Alternate Manufacturers:
 - a. Lightolier E2 Series
 - b. Emergi-Lite #EC-2HC-AD-N
 - c. As listed in paragraph 2.1A.
- Q. Type EM3 Lithonia ELT24Series.
1. Description: Industrial design halogen emergency light unit with adjustable heads and nickel-cadmium battery. Provide with line latching, solid-state voltage limiting charger, solid-state switching, low voltage disconnect, brownout circuit, overload, short-circuit protection test switch and power indicator light.
 2. Battery: Sealed, maintenance free Nickel-Cadmium, 6 volt, with 24 Watt capacity.
 3. Housing: 18-gauge steel housing finished in instrument tan color, with hinged faceplate for ease of maintenance. UL924 listed, all components meet the UL 94-0.5VA flame retardant standard.
 4. Mounting: Wall mounted.
 5. Voltage: [277] [120].
 6. Lamps: 8W Halogen (included)
 7. Alternate Manufacturers:
 - a. Lightolier E4 Series
 - b. Sure-Lites XR16 Series
 - c. As listed in paragraph 2.1A.
- R. Type EM4 (exterior egress doors) Lithonia AFN/EXT Series.
1. Description: Wall mounted wet location xenon emergency light unit
 2. Lamping: Sealed Beam 6 Watt xenon.
 3. Housing: UL listed wet location (NEMA 4X) heavy-duty polycarbonate sealed, gasketed, and corrosion resistant. Finish by contracting officer.
 4. Battery: Nickel-Cadmium, with self-diagnostics. Listed for cold weather (-40 degrees to 122 degrees F), wet locations.
 5. Mounting: Surface wall.
 6. Voltage: [277] [120].
 7. Lamps: Two 6 Watt xenon.
 8. Alternate Manufacturers:
 - a. Lightolier LVL Series
 - b. Sure-Lites: AEL1 Series
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

Ceiling mounted dock lights should be selected for all platforms.

- S. Type P1 Phoenix DL-INC-IR-GG1
1. Description: Ceiling Mounted Dock Light with spring suspension swivel mounting, compact fluorescent light head with glare guard.
 2. Housing: Luminaire head of 18 gauge steel.
 3. Mounting: Swivel hanger for direct mounting to standard 4 inch junction box. Pendant to be 1/2 inch conduit with flexible spring for impact resistance and sufficient length to suspend center of light at 8 ft – 6 inch AFF.
 4. Voltage: 120.
 5. Lamps: CF23EL/PAR38/BL/2/12 Sylvania
 6. Alternate Manufacturers:
 - a. Fostoria DKL-25-FLX + INC + GS-1

NOTE TO SPECIFIER

Exterior open platforms, canopies, docks, etc. to be lighted within coastal states, with hot and humid climates, shall be illuminated using wet location luminaires, type PL1 and/or PL2. The intent is to utilize luminaires type PL1/PL2 for applications where damp location luminaires B1/B2 are not appropriate.

- T. Type PL1 (exterior platforms) Mark EXWL
 - 1. Description: 4 ft. long enclosed and gasketed fluorescent luminaire. UL listed for wet location.
 - 2. Lens: 0.156 in. high impact, ribbed clear, polycarbonate diffuser.
 - 3. Housing: Extruded aluminum housing with die cast aluminum end caps.
 - 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 - 5. Mounting: Surface.
 - 6. Voltage: [277] [120].
 - 7. Lamps: One or two T8 as specified in the Lamps section below.
 - 8. Climate Temperature: Provide 0 degrees F or -20 degrees F rated electronic ballast(s) in colder climates.
 - 9. Alternate Manufacturers:
 - a. Nulite DM Series (painted stainless steel housing)
 - b. Kenall SH548 Series (painted stainless steel housing)
 - c. As listed in paragraph 2.1A.

- U. Type PL2 (exterior platforms) Mark EXWL
 - 1. Description: 8 ft. long enclosed and gasketed fluorescent luminaire. UL listed for wet location.
 - 2. Lens: 0.156 in. high impact, ribbed clear, polycarbonate diffuser.
 - 3. Housing: Extruded aluminum housing with die cast aluminum end caps.
 - 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 - 5. Mounting: Surface.
 - 6. Voltage: [277] [120].
 - 7. Lamps: Two or four T8 as specified in the Lamps section below.
 - 8. Climate Temperature: Provide 0 degrees F or -20 degrees F rated electronic ballast(s) in colder climates.
 - 9. Alternate Manufacturers:
 - a. Nulite DM Series (painted stainless steel housing)
 - b. Kenall SH596 Series (painted stainless steel housing)
 - c. As listed in paragraph 2.1A.

- V. Type R1 Lightolier C4L10DL40KWHPVA-C4L10NZ10V.
 - 1. Description: Recessed 4.5 inch dia. aperture LED downlight.
 - 2. Reflector: Low brightness, white painted, flangeless reflector.
 - 3. Ballast/Driver: 20 Watt/1000 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
 - 4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to grid ceiling bar hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
 - 5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
 - 6. Mounting: 24 inch grid ceiling bar hangers shall be supplied by manufacturer and securely fastened to grid or provide 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
 - 7. Voltage: [277] [120].
 - 8. Lamp: 1000 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
 - 9. Alternate Manufacturers:
 - a. Gotham #EVO41/104ARMDWH Series.
 - b. Portfolio #LD409D010ERM4840 Series.

c. As listed in paragraph 2.1A.

- W. Type R2 Lightolier C4L10WW40KWHP-C4L10NZ10V
1. Description: Recessed 4.5 inch dia. aperture LED wallwasher type downlight.
 2. Reflector: Low brightness, white painted, flangeless reflector.
 3. Ballast/Driver: 20 Watt/1000 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
 4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to ceiling bar hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
 5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
 6. Mounting: 24 inch grid ceiling bar hangers shall be supplied by manufacturer and securely fastened to grid or provide 28 inch "C" channel mounting bars and flange kit for drywall ceiling.
 7. Voltage: [277] [120].
 8. Lamp: 1000 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
 9. Alternate Manufacturers:
 - a. Gotham #EVO41/104ARMDWH Series
 - b. Portfolio #LD409D010ERM4840 Series
 - c. As listed in paragraph 2.1A.
- X. Type R3 Lithonia Lighting 2AVG/MDC Series.
1. Description: Recessed, 2' W x 4' L x 5 1/2' D fluorescent grid troffer with indirect louver.
 2. Louver: Indirect white metal diffuser, round holes with large center slots, constructed of aluminum.. Louver shall be held by internal spring catches and center itself in the housing when it is snapped-in.
 3. Housing: 22 gauge steel with white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in Inverted T suspended ceiling.
 6. Lamps: Two or three T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier QVS2 Series.
 - b. MetaLux 2RDI-SL5 Series.
 - c. As listed in paragraph 2.1A.
- Y. Type R4 Lithonia AVG/MDC Series.
1. Description: Recessed 1' W x 4' L x 5 1/2" D, fluorescent grid troffer with indirect louver.
 2. Louver: Indirect white metal diffuser, round holes with large center slots, constructed of aluminum. Louver shall have a smooth, crack free, brilliant surface without iridescence. Louver shall be held by internal spring catches and center itself in the housing when it is snapped-in.
 3. Housing: 22 gauge steel with white baked enamel or powder coated finish.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Recessed in inverted T suspended ceiling.
 6. Lamps: One or two T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Metalux RDI-SLS Series.
 - b. Lightolier QVS1 Series.
 - c. As listed in paragraph 2.1A.
- Z. Type R5 Lightolier C6L1520DL40KMWHP-C6L15N

1. Description: Recessed 6 inch dia. aperture LED downlight.
 2. Reflector: Low brightness, white painted, flangeless reflector.
 3. Ballast/Driver: 27 Watt/1500 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
 4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to grid ceiling bar hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
 5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
 6. Mounting: 24 inch grid ceiling bar hangers shall be supplied by manufacturer and securely fastened to grid or provide 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
 7. Voltage: [277] [120].
 8. Lamp: 1500 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
 9. Alternate Manufacturers:
 - a. Gotham #EVO41/146ARMDWH Series.
 - b. Portfolio #LD615D010ERM6 Series.
 - c. As listed in paragraph 2.1A.
- AA. Type UC1 Lithonia N2S Series.
1. Description: Under cabinet mounted 2' long, single fluorescent lamp luminaire, with solid front.
 2. Lens: Clear acrylic prismatic serrated diffuser shall snap into place without tools.
 3. Housing: 20 gauge cold rolled steel. White polyester powder coat finish with 92% overall reflectance.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings. Electrical contractor shall wire the lamp sockets to an adjacent UC 2 luminaire.
 5. Lamp: One T8 as specified in the Lamps section below.
 6. Alternate Manufacturers:
 - a. Lightolier TCF Series.
 - b. Metalux OFCL Series.
 - c. As listed in paragraph 2.1A.
- BB. Type UC2 Lithonia N2S Series.
1. Description: Under cabinet mounted 3' long, single fluorescent lamp luminaire, with solid front. Tandem Wired.
 2. Lens: Clear acrylic prismatic serrated diffuser shall snap into place without tools.
 3. Housing: 20 gauge cold rolled steel. White polyester powder coat finish with 92% overall reflectance.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings. Ballast to operate this luminaire and an adjacent UC 1 luminaire where applicable. Individual lead lengths shall not exceed 18 feet.
 5. Lamp: One T8 as specified in the Lamps section below.
 6. Alternate Manufacturers:
 - a. Lightolier TCF Series.
 - b. Metalux OFCL Series.
 - c. As listed in paragraph 2.1A.
- CC. Type W1 Lithonia TAF Series.
1. Description: Cable/chain hung, 8 ft. long (tandem), industrial fluorescent luminaire providing 20% uplighting with locking lampholders and protective tube guards.
 2. Louver: None.
 3. Housing: Channel and end plates of formed steel, 20 gauge material thickness. Finished with 90 percent minimum reflectance white baked enamel or powder coated.

4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Wire rope/chain from ceiling structure.
 6. Lamps: Two, four, six or eight T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Alternate Manufacturers:
 - a. Lightolier TU8 Series.
 - b. H.E. Williams 828 Series.
 - c. Metalux 8TDMF Series.
 - d. Lighting Alternatives TURT8 Series.
 - e. Holophane ICS08 Series.
- DD. Type W2 Lithonia AF Series.
1. Description: Cable/chain hung, 4 ft. long, industrial fluorescent luminaire providing 20 percent uplighting, with locking lampholders and protective tube guards.
 2. Louver: None.
 3. Housing: Channel and end plates of formed steel, 20 gauge material thickness. Finished with 90 percent minimum reflectance white baked enamel or powder coated.
 4. Ballast: For requirements refer to Ballast section below and for quantities and circuitry refer to drawings.
 5. Mounting: Wire rope/chain from ceiling structure.
 6. Lamps: One, two, three or four T8 as specified in the Lamps section below.
 7. Marking: Luminaires are to be labeled on the reflector side with lamp and ballast type used.
 8. Switching: See electrical drawings for dual level workroom lighting requirements.
 9. Alternate Manufacturers:
 - a. Lightolier TU4 Series.
 - b. H.E. Williams 824 Series.
 - c. Metalux DMF Series.
 - d. Lighting Alternatives TURT8 Series.
 - e. Holophane ICS04 Series.
- EE. Type XF1 (hazardous location) Canlet GFCF42H-GHC
1. Description: Vapor tight fluorescent luminaire UL listed for Class I, Div. 2, Groups C,D, hazardous locations.
 2. Lens: Heat and impact resistant glass globe.
 3. Housing: Body and guard of Lexan polycarbonate.
 4. Mounting: Surface ceiling mounted.
 5. Voltage: [277] [120]
 6. Lamps: One CF42DT/E/IN/841/ECO
 7. Alternate Manufacturer:
 - a. Hubbell NV21G15AHG-NV2FG42
 - b. Guth EXP-CFL42 Series.
 - c. As listed in paragraph 2.1A.

NOTE TO SPECIFIER

The exit sign luminaires specified below include a battery. If the Facility is equipped with emergency power delete the battery and connect to an emergency circuit as appropriate. Modify manufacturer number as necessary.

- FF. Type X1 Lithonia LQM-ELN Series.
1. Description: Ceiling mount, single face LED exit sign with canopy. Self Powered and with self diagnostics.
 2. Features: Red Letters, White Stencil, White Housing (verify colors with local jurisdiction). Injection molded UL94-5V rated polycarbonate frame and canopy.
 3. Mounting: Ceiling or end-mount.

4. Battery: Maintenance free sealed Nickel Cadmium with long life, full recharge time of 24 hours max.
5. Voltage: [277] [120].
6. Lamps: LED lamp module.
7. Alternate Manufacturers:
 - a. Sure-Lites LPX7 Series.
 - b. Lightolier LL Series.
 - c. As listed in paragraph 2.1A.

GG. Type X2 Lithonia LQM-ELN Series.

1. Description: Ceiling mount, double face LED exit sign with canopy.
2. Features: Red Letters, White Stencil, White Housing (verify colors with local jurisdiction). Injection molded UL94-5V rated polycarbonate frame and canopy. Two bottom apertures snap out to emit downlight as required.
3. Mounting: Ceiling or end-mount.
4. Battery: Maintenance free sealed nickel-cadmium with long life, full recharge time of 24 hours maximum.
5. Voltage: [277] [120].
6. Lamps: LED lamp module.
7. Alternate Manufacturers:
 - a. Sure-Lites LPX7 Series.
 - b. Lightolier LL Series.
 - c. As listed in paragraph 2.1A.

HH. Type CIO2 Vista AGVSP-LED-DC-HL-C-ZN-WT-UNV-MW

1. Description: Recessed 9.25" w x 3.3" h x 4.3" d step light with L.E.D. source
2. Features: Die cast aluminum step light with louver face.
3. Housing: Back box constructed of die-cast aluminum alloy.
4. Louvers: Die-cast aluminum alloy.
5. Mounting: Recessed wall mounting.
6. Voltage: Universal (both 120 & 277)
7. Lamp: White LED's included
8. Alternate Manufacturers:
 - a. Kenall MSLS)DBCPWLL (9.25 inch W x 3.75 inch H x 3.5 inch D)
 - b. Lumux SL630/LED/BRONZE (10.25 inch W x 4 inch H x 3.25 inch D)
 - c. Elcast Lighting 1216 LED-UNV (7 inch W x 3 inch H x 3.5 inch D)
 - d. As listed in paragraph 2.1A.

2.3 ELECTRONIC FLUORESCENT LAMP BALLASTS

A. Manufacturers:

1. Advance Transformer Company, Rosemont, IL (847) 390-5000.
2. General Electric Co., Nela Park, OH (800) 435-2677.
3. Osram/Sylvania, Danvers, MA (800) 544-4828.
4. Universal Lighting Technologies, Nashville, TN (615) 316-5100.

B. Description:

1. Fluorescent lamp ballast shall be parallel lamp, high frequency, energy efficient, electronic program start ballasts operating lamps at a frequency above 42 kHz with a minimum Power Factor of 0.98 for primary lamp. Ballast shall be compatible for operating the lamps indicated. Ballast shall have a minimum Ballast Factor for primary lamp of 1.15. The lamp crest factor shall measure 1.7 or less. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations Part 18 (including 15J). Ballasts shall be UL labeled and comply with all local, State and Federal efficiency standards. Lamp and ballast combinations shall be chosen to provide a minimum efficacy of 94 LMS/Watt.

NOTE TO SPECIFIER

R&A Projects may require several ballast factor and lamp types due to the existing construction. Therefore, substitute the paragraph below in place of paragraph 2.3 B.1. for R&A projects. Delete paragraph for new construction.

1. Fluorescent lamp ballasts shall be parallel lamp, high frequency, energy efficient, electronic program start ballasts operating lamps at a frequency above 42 kHz with a minimum power factor of 0.98 for primary lamp. Ballast shall be compatible for operating the lamps indicated. Ballast shall have a minimum ballast factor for primary lamp of 0.71. The lamp crest factor shall measure 1.7 or less. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations Part 18 (including 15J). Ballasts shall be UL labeled and comply with all local, State and Federal efficiency standards. Lamp and ballast combinations shall be chosen to provide a minimum efficacy of 84 LMS/Watt.
 2. Compact fluorescent ballasts shall be parallel lamp, high frequency, energy efficient, electronic ballasts operating at a frequency above 50 kHz with a minimum Power Factor of 0.96. Ballast shall have a minimum ballast factor of 0.97. Total harmonic distortion shall range from 5 to 13%, depending upon lamp/ballast combination. Compact fluorescent ballasts shall operate 10 to 42 Watt lamps. Ballasts shall be factory tested and meet ANSI 15 C62.41, ANSI C82.1 Class P. Ballasts integrated into flood light or other special application lamps should meet the specifications if available.
- C. Provide five-year lamp and five-year ballast factory warranties.
- D. Universal Voltage shall be used when available and cost effective. Otherwise use 120 or 277 volts as required to match source voltage.

NOTE TO SPECIFIER

Include paragraph 2.3E. below, if the lightning risk assessment calculation deems a building lightning protection system is required.

- E. All ballasted fluorescent luminaires shall be equipped with individual factory fuse protection.

2.4 LAMPS

- A. Fluorescent and High Intensity Discharge (HID) Lamp Manufacturers:
 1. General Electric Company, Nela Park, OH (800) 435-2677.
 2. Osram/Sylvania, Danvers, MA (800) 544-4828.
 3. Philips Lighting Company, Somerset, NJ (800) 555-0050.
- B. Lamp Types: As specified for luminaire. Refer to Section 016000 for substitutions and product options.
- C. Linear Fluorescent Lamps
 1. Color Temperature: 4100K
 2. Life: Lamp to be rated for a minimum of 60,000 hours based on the lamp operating with a program start ballast on 12-hour cycles.
- D. Reflector Lamp Beam Patterns: ANSI C78.379.
- E. Mercury Content: Fluorescent lamps must contain low mercury and pass the federal Toxic Characteristic Leaching Procedure (TCLP) test and be classified as non-hazardous waste. Lamp must be marked as such (i.e., green tips, green etchings, etc.)

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 – Common Work Results for Electrical.

3.2 INSTALLATION

- A. Install suspended luminaires and exit luminaire signs using pendants supported from swivel hangers, as applicable, or wire rope from ceiling structure, as applicable, or in accordance with details shown on drawings. Provide pendant/wire rope length required to suspend luminaire at indicated height.
- B. Support grid mounted, recessed fluorescent luminaires at each corner using a minimum of four wire hangers of same gauge as ceiling suspension system supported from building structure independent of ceiling framing.
- C. Locate recessed ceiling luminaires as indicated on reflected ceiling plan.
- D. Install surface mounted luminaires and exit luminaire signs plumb and adjust to align with building lines and with each other. Secure to prevent movement. Mount exit signs to outlet box mounted flush in wall or ceilings. Outlet box for ceiling mounted exit signs: Connect to rigid conduit system.
- E. Exposed Grid Ceilings: Support surface mounted luminaires on grid ceiling directly from building structure.
- F. Install recessed luminaires to permit removal from below.
- G. Install recessed luminaires using accessories and firestopping materials to meet regulatory requirements for fire rating. In fire rated ceilings recessed luminaires must carry 1 hour UL fire rating classification.
- H. Install earthquake clips to secure recessed grid-supported luminaires in place.
- I. Install wall mounted luminaires, emergency lighting units and exit luminaire signs at height as scheduled.
- J. Install accessories furnished with each luminaire.
- K. Bond products and metal accessories to branch circuit equipment grounding conductor.
- L. Install specified lamps in each emergency lighting unit, exit luminaire sign, and luminaire.

3.3 FIELD QUALITY CONTROL

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Operate each luminaire after installation and connection. Inspect for proper connection and operation.
- C. Final acceptance for areas larger than 10,000 sq. ft. will be based on measurement of initial lighting levels after required hours of burn in as specified in USPS Customer Service Facilities Design Criteria, not maintained lighting levels.

3.4 ADJUSTING

- A. Aim and adjust luminaires as directed by Contracting Officer.
- B. Position exit luminaire sign directional arrows as indicated.

3.5 CLEANING

- A. Conform to Section 017300 - Execution: Cleaning installed work.
- B. Clean electrical parts to remove conductive and deleterious materials.
- C. Remove dirt and debris from enclosures.
- D. Clean photometric control surfaces as recommended by manufacturer.
- E. Clean finishes and touch up damage.
- F. Relamp any luminaires with defective or burned out lamps, just prior to Final Acceptance.

USPS CSF Specifications issued: 5/1/2014

SECTION 26 56 00 00 - CSF EXTERIOR LIGHTING**

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only. This Specification is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior luminaires and accessories.
 - 2. Poles.
 - 3. Ballasts
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the work of this section. Additional requirements and information necessary to complete the work of this section may be found in other documents.
- C. Related Sections
 - 1. As specified in Section 260500 - Common Work Results for Electrical.
 - 2. Section 033000 - Cast-in-Place Concrete.
 - 3. Section 260623 - Lighting Controls.

1.2 REFERENCES

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. American National Standards Institute (ANSI):
 - 1. ANSI C78.379 - Electric Lamps - Incandescent and High-Intensity Discharge Reflector Lamps - Classification of Beam Patterns.
 - 2. ANSI C82.4 - Ballasts for High-Intensity-Discharge and Low Pressure Sodium Lamps (Multiple-Supply Type).
- C. Illuminating Engineering Society North America (IESNA):
 - 1. IESNA RP-8 - Recommended Practice for Roadway Lighting.
 - 2. IESNA RP-20 - Recommended Practice for Lighting for Parking Facilities.
 - 3. IESNA RP-33 - Recommended Practice for Lighting for Exterior Environments.
- D. Federal Communications Commission Parts 18.305, 18.307 (EMI RFI).

- E. American Society of Heating, Refrigerating and Air Conditioning, Inc.
 - 1. ANSI/ ASHRAE/ IES Standard 90.1 – 2010.

1.3 SUBMITTALS

- A. As specified in Section 260500 – Common Work Results for Electrical.
 - 1. Product Data:
 - a. Luminaire dimensions, ratings, and performance data.
 - b. Complete computer data printout of illumination levels based on a 5 ft. by 5 ft. grid pattern.
 - 2. Shop Drawings:
 - a. Indicate dimensions and components for each luminaire which is not a standard Product of the manufacturer.
 - b. Indicate illumination levels in accordance with layout and scheduled luminaires indicated on Drawings.

1.4 QUALITY ASSURANCE

- A. As specified in Section 260500 – Common Work Results for Electrical.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Material and Equipment: Transport, Handle, Store, and Protect Products.

1.6 MAINTENANCE

- A. Section 017704 – Closeout Procedures and Training. Procedures for closeout submittals.
- B. Extra Products: At completion of installation, deliver to Contracting Officer.
 - 1. Each component type: Provide quantity for each unique ballast, surge protector and lamp equal to two (2) percent of luminaire total, but not less than two of each type.

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES, THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 2 - PRODUCTS

2.1 LUMINAIRE MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Architectural Landscape Lighting, Santa Ana, CA 92704 (714) 668-1107.
 - 2. Barron Lighting Group (Trace-Lite), Phoenix, AZ 85027 (888) 533-3948.
 - 3. Bronzelite Commercial Landscape Lighting, (800) 273-1569.
 - 4. Cooper Lighting (Halo, Invue, Lumark, Lumiere, McGraw-Edison, Portfolio), Peachtree City, GA (770) 486-4800.
 - 5. Gardco Lighting, San Leandro, CA (800) 227-0758.
 - 6. Gotham Lighting, Conyers, GA (800) 315-4982.
 - 7. H.E. Williams, Carthage, MO (417) 358-4065.

8. Holophane, Newark, OH (740) 345-9631.
9. Hubbell Lighting, Inc., (Kim, Spaulding, Sterner) Spartanburg, SC (864) 599-6000.
10. Hydrel Architectural and Landscape Products, Sylmar, CA 91342 (818) 362-9465.
11. Intense Lighting, Anaheim, CA (800) 961-5322.
12. Kenall Manufacturing, Gurnee, IL (847) 360-8200.
13. Kim Lighting, City of Industry, CA (626) 968-5666.
14. Kirlin Lighting, Detroit, MI (313) 259-6400.
15. Lightolier, Fall River, MA (508) 679-8131.
16. Lithonia Lighting, Conyers, GA (770) 922-9000.
17. McPhilben Lighting, San Leandro, CA (510) 357-6900.
18. Neptun Light Inc., Lake Bluff, IL (888) 735-8330.
19. Pathway Lighting, Old Saybrook, CT (800) 342-0592.
20. Quality Lighting, Franklin Park, IL (847) 451-0090.
21. Visionaire Lighting, Rancho Dominguez, CA (310) 512-6480.
22. Wide-Lite, San Marcos, TX (512) 392-5821

B. Substitutions:

1. Section 016000 – Product Requirements: Product options and substitutions, substitutions not permitted.

2.2 Luminaire Types

A. **Type MH3** (exterior) Trace-Lite TLED111A Series.

1. Description: 18 inch dia. half cylinder wall mounted full cut-off, solid state, LED luminaire. Lens door is fully gasketed with one-piece solid silicone and UL listed for wet locations.
2. Lens: 1/8 inch thick tempered glass.
3. Housing: Die-cast single piece aluminum housing. Finish by contracting officer.
4. Ballast: Solid state light engine and driver.
5. Mounting: Surface wall.
6. Voltage: [277] [120]
7. Lamp: 48Watt, 5,000 lumen, LED, 85cRI, 4100 degree K.
8. Published Life: 50,000 hours at 70 percent lumen depreciation.
9. Warranty: Full five (5) year factory replacement warranty (internal components).
10. Alternate Manufacturers:
 - a. Gardco: 104LED/55LA Series.
 - b. Hubbell: RDI-50L8.
 - c. Lithonia: WSRLED-2-700MA-X-MVOLT.
 - d. McGraw Edison: ISC-C02-LED-E1-BL3.
 - e. As listed in paragraph 2.1A.

B. **Type PL3** (exterior) Lightolier C6L1520DL-40KMWHP-C6L20N

1. Description: Recessed 6 inch diameter aperture LED downlight .
2. Reflector: Low brightness white painted, flangeless reflector.
3. Ballast/Driver: 39 Watt/2000 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to ceiling hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
6. Mounting: 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
7. Voltage: [277] [120].
8. Lamp: 2000 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
9. Label: U.L. listed for damp locations.

10. Alternate Manufacturers:
 - a. Gotham #EVO41/226WRMD Series
 - b. Portfolio #LD620D010ERM6-840H20 Series
 - c. Omega #OM6LED39U-R6LED40KMDWH
 - d. Intense Lighting #RP62000408-27 Series
 - e. As listed in paragraph 2.1A..

C. **Type PL4** (exterior) Kenall MR13EL-18L40K-DV-FS Series

1. Description: 13 inch dia., round with vertical eyelid, wall mounted, full cut-off LED luminaire. UL listed for wet locations.
2. Reflector: High efficiency, semi-specular aluminum.
3. Lens: Pearlescent, U.V. stabilized, high impact resistant, virgin injection molded polycarbonate.
4. Finish: Finish by contracting officer.
5. Recessed Housing: 18 gauge, cold rolled steel.
6. Ballast/Driver: 20 Watt/1000 Lumen, LED light engine; 5-year factory warranty.
7. Mounting: Semi-recessed, wall mounted; A.D.A. compliant.
8. Voltage: [277] [120].
9. Lamp: 1000 Lumen, 4000 degree K, enclosed LED array; 60,000 hours at LLD = 0.7.
10. Label: U.L. listed for wet locations.
11. Alternate manufacturers:
 - a. Cooper/Fail-Safe TR15LED Series.
 - b. KIM WF31CSLED Series.
 - c. As listed in paragraph 2.1A.

D. **Type PL5** Omega OM6LED39PC-40KMDCS-WL

1. Description: Pendant 8 inch dia., aperture LED downlight.
2. Reflector: Low brightness clear specular alzak finish.
3. Housing: Heavy gauge aluminum cylinder, finished white. Pendant hung on a 24 inch stem with a swivel canopy.
4. Ballast/Driver: 39 Watt/2450 Lumen, LED light engine with remote phosphor technology; 5-year factory warranty.
5. Mounting: Pendant mounted, height as indicated by architectural elevations.
6. Voltage: [277] [120].
7. Lamp: 2450 Lumen, 4000 degree K, enclosed LED array; 60,000 hours at LLD = 0.7.
8. Label: U.L. listed for wet locations.
9. Alternate manufacturers:
 - a. H.E. Williams.
 - b. Gotham: EVOCYL-41/22-6AR-MVOLT.
 - c. Pathway: C66PLB30-4K-M
 - d. Kirlin: LSR-09350-41K.
 - e. Portfolio: LCR8A-40-D010-ER8A-40/840-8LMO-H.
 - f. As listed in paragraph 2.1A.

E. **Type SB1** Kim #VRB1-20LED5KUV

1. Description: 6 inch dia. x 42 inch high aluminum domed top round LED bollard with flared cone.
2. Reflector: Anodized aluminum upper reflector with spun anodized aluminum flared cone
3. Housing: extruded, one piece aluminum, 0.156 inch wall thickness. Top cover is a weldment of 0.125 inch wall extrusion and 0.25 inch top plate. Top cover seals to housing with closed cell EPDM gasketing. Finish by contracting officer.
4. Ballast/Driver: 24 Watt/1300 Lumen, LED light engine; 5-year factory warranty.
5. Mounting: Four ½ inch x 11 inch anchor bolts with double nuts and washers included.
6. Voltage: [277] [120]
7. Lamp: 1300 Lumen, 5000 degree K, enclosed LED array; 60,000 hours at LLD = .07.
8. Label: U.L. listed for wet locations.
9. Alternate Manufacturers:

- a. Visionaire: OWK-2/42-COG-20-7-4K-UNV-AB.
- b. Gardco: BRM832-42-CWL-NW-360-UNIV.
- c. McGraw-Edison
- d. Spaulding
- e. As listed in paragraph 2.1A.

F. Type SF1 Bronzelite DB2100H/D/S/N/R/N/SL

- 1. Description: Round, direct burial spotlight to illuminate flagpole (3 required).
- 2. Reflector: 15 degree beam pattern, specular aluminum spun reflector.
- 3. Housing: Single piece, compression-molded, composite housing with integral junction box
- 4. External Lens: ¼ inch thick, walk-over, clear high-impact tempered glass lens.
- 5. Internal Lens and Gasket: Clear, high-impact, tempered glass lens with silicone gasket.
- 6. Ballast: Encapsulated, pulse start electronic ballast. Osram/Sylvania QTP1x100MH/UNV.
- 7. Mounting: Direct burial mounting. Provide 6 inch deep gravel bed.
- 8. Voltage: [480] [277] [208] [120].
- 9. Lamp: Osram Sylvania MC100/U/MED/940.
- 10. Alternate Manufacturers: As listed in paragraph 2.1A.

G. Type SP1 Gardco EH14L-XX-X-110LA

- 1. Description: Rectilinear architectural arm-mounted sharp cut-off, solid state, LED luminaire.
- 2. Reflector: Anodized segmented reflectors. Beam distribution as required.
- 3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat. Finish by contracting officer.
- 4. Ballast: Solid state light engine and driver.
- 5. Mounting: 20 – 25 ft. high straight square aluminum pole.
- 6. Voltage: [480] [277] [208] [120].
- 7. Lamp: 110Watt, 9,800 lumen, LED, 85cRI, 4000 degree K.
- 8. Quantity of luminaires per pole as shown on the design drawings.
- 9. Published Life: 60,000 hours at 70 percent lumen depreciation.
- 10. Warranty: Full five (5) year factory replacement warranty (internal components).
- 11. Alternate Manufacturers: As listed in paragraph 2.1A.

H. Type SP2 Gardco EH14L-XX-X-160LA

- 1. Description: Rectilinear architectural arm-mounted full cut-off, solid state, LED luminaire.
- 2. Reflector: Anodized segmented reflectors. Beam distribution as required.
- 3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat
- 4. Ballast: Solid state light engine and driver.
- 5. Mounting: 20 – 25 ft. aluminum pole.
- 6. Voltage: [480] [277] [208] [120].
- 7. Lamp: 160Watt, 13,170 lumen, LED, 85cRI, 4000 degree K.
- 8. Quantity of luminaires per pole as shown on the design drawings.
- 9. Published Life: 60,000 hours at 70 percent lumen depreciation.
- 10. Warranty: Full five (5) year factory replacement warranty (internal components).
- 11. Alternate Manufacturers: As listed in paragraph 2.1A.

I. Type SP5 Gardco EH14L-XX-X-85LA

- 1. Description: Rectilinear architectural arm-mounted full cut-off, solid state, LED luminaire.
- 2. Reflector: Anodized segmented reflectors. Beam distribution as required.
- 3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat
- 4. Ballast: Solid state light engine and driver.
- 5. Mounting: 12 – 15 ft. aluminum pole.
- 6. Voltage: [480] [277] [208] [120].
- 7. Lamp: 85Watt, 7,400 lumen, LED, 85cRI, 4000 degree K.
- 8. Quantity of luminaires per pole as shown on the design drawings.

9. Published Life: 60,000 hours at 70 percent lumen depreciation.
10. Warranty: Full five (5) year factory replacement warranty (internal components).
11. Alternate Manufacturers: As listed in paragraph 2.1A.

2.3 HIGH INTENSITY DISCHARGE (HID) BALLAST

A. Manufacturers:

1. Advance Transformer Company, Rosemont, IL (847) 390-5000.
2. General Electric Company, Nela Park, OH (800) 435-2677.
3. Universal Lighting Technologies, Nashville, TN (615) 316-5100.
4. Osram/Sylvania, Danvers, MA (800) 544-4828.

B. Description:

1. ANSI C82.4, high intensity discharge and low pressure sodium lamp ballast.
2. Metal Halide Electronic Ballast for lamps shall be high efficiency, energy efficient, pulse start, electronic ballasts with a minimum power factor of .98, ballast factor of 1.0, capable of powering pulse start lamps. Multi-voltage capable and shall operate from a nominal voltage range of 277/120 Volts. System efficiency of greater than 93% under full lamp operation. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations parts 18.305 and 18.307. Total harmonic distortion of less than 5 percent. Lamp wattage shall not vary more than 0.5 percent for a 10 percent change in input line voltage. The lamp crest factor shall measure 1.7 or less. Ballast assembly shall be UL listed for damp locations, 40 degrees C, and comply with all local, state and federal efficiency standards.

C. All luminaires shall be fused. Locate fuses within handhole of pole for pole mounted luminaires.

D. Voltage: [480] [277] [208] [120].

NOTE TO SPECIFIER

Include paragraph 2.3E below, if the lightning risk assessment calculation deems a building lightning protection system is required.

E. Provide individual surge protectors within handhole of each pole mounted luminaire. Branch circuit breakers feeding pole mounted luminaires shall also be equipped with surge protection.

2.4 LAMPS

A. High Intensity Discharge (HID) Lamp Manufacturers:

1. General Electric Company, Nela Park, OH (800) 435-2677.
2. Osram/Sylvania, Danvers, MA (800) 544-4828.
3. Philips Lighting Company, Somerset, NJ (800) 555-0050.
4. Section 016000 – Product Requirements: Product Options and Substitutions: Substitutions not permitted.

B. NEMA CFT designated lamps must pass the federal Toxic Characteristic Leaching Procedure (TCLP) test and be classified non-hazardous waste.

C. Lamp Types: As specified for luminaire.

NOTE TO SPECIFIER

Pole height listed as basis of design. Edit to suit site conditions or comply with jurisdictional requirements. Pole manufacturer to match pole mounted luminaires selected.

2.5 POLES

- A. Manufacturers:
 - 1. As listed in paragraph 2.1A.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Material and Finish: Aluminum. Finish by contracting officer.
- C. Section Shape and Dimensions: [Straight or Tapered] [Round or Square].
- D. Height: 25 feet, (7.62 m).
- E. Base: Nonbreakaway.
- F. Accessories:
 - 1. Handhole.
 - 2. Anchor bolts.
 - 3. Base Cover.
 - 4. Bolt covers.
 - 5. Ground rod and conductor.

NOTE TO SPECIFIER

Edit for Wind Loading.

- G. Approximate Loading Capacity Ratings:
 - 1. Luminaire Weight: 35 pounds.
 - 2. Luminaire and Bracket Effective Projected Area: 1.5 square feet.
 - 3. Steady Wind: [90] [____] miles per hour minimum, with gust factor of [1.3] [____].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 – Common Work Results for Electrical.

3.2 INSTALLATION

- A. Provide 3000 PSI minimum concrete for lighting pole bases at locations indicated, in accordance with Section 033000 and details shown on drawings.
- B. Install poles plumb and provide double nuts to adjust plumb. Grout around each base and provide bolt covers.
- C. Install lamps in each luminaire.

- D. Bond luminaires, metal accessories and metal poles to branch circuit equipment grounding conductor. Provide supplementary 3/4 inch x 10 foot copper clad rod with #2/AWG copper grounding electrode at each pole.

3.3 FIELD QUALITY CONTROL

- A. As specified Section 260500 - Common Work Results for Electrical.
- B. Operate each luminaire after installation and connection. Inspect for improper connections and operation.
- C. Measure illumination levels to verify conformance with layout and performance requirements.
- D. Take measurements during night sky, without moon or with heavy overcast clouds effectively obscuring moon.

3.4 ADJUSTING

- A. Aim and adjust luminaires to provide illumination levels and distribution as directed.

3.5 CLEANING

- A. Conform to Section 017300 - Execution: Cleaning installed work.
- B. Clean electrical parts to remove conductive and deleterious materials.
- C. Remove dirt and debris from enclosure, pole and base.
- D. Clean photometric control surfaces as recommended by manufacturer.
- E. Clean finishes and touch up damage.

3.6 PROTECTION OF FINISHED WORK

- A. Conform to Section 017300 - Execution: Protecting installed work.
- B. Relamp or re-ballast luminaires with defective or burned out lamps, just prior to final acceptance.

USPS CSF Specifications issued: 5/1/2014

Last revised: 4/16/2014

END OF SECTION 26 56 00 00

SECTION 26 56 00 00 - MPF EXTERIOR LIGHTING**

NOTE TO SPECIFIER

Use this Specification Section for Mail Processing Facilities only. This Specification is intended as a guide to the Architect/Engineer preparing the Construction Documents.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES, THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Exterior luminaires and accessories.
 - 2. Poles.
 - 3. Ballasts.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the work of this section. Additional requirements and information necessary to complete the work of this section may be found in other documents.
- C. Related Sections
 - 1. Section 033000 - Cast-in-Place Concrete: Concrete for pole foundation.
 - 2. Section 260500 - Common Work Results for Electrical: Basic electrical methods.
 - 3. Section 260623 - Lighting Control Devices.

1.2 REFERENCES

- A. American National Standards Institute (ANSI):
 - 1. ANSI C78.379 - Electric Lamps - Incandescent and High-Intensity Discharge Reflector Lamps - Classification of Beam Patterns.
 - 2. ANSI C82.4 - Ballasts for High-Intensity-Discharge and Low Pressure Sodium Lamps (Multiple-Supply Type).
- B. Illuminating Engineering Society North America (IESNA):
 - 1. IESNA RP-8 - Recommended Practice for Roadway Lighting.
 - 2. IESNA RP-20 - Recommended Practice for Lighting for Parking Facilities.
 - 3. IESNA RP-33 - Recommended Practice for Lighting for Exterior Environments.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.
 - 2. NFPA 101 - Life Safety Code
 - 3. State and Local Building Codes (where applicable)

- D. Federal Communications Commission Parts 18.305, 18.307 (EMI RFI).
- E. American Society of Heating, Refrigerating and Air Conditioning, Inc.
 - 1. ANSI/ ASHRAE/ IES Standard 90.1 – 2010.

1.3 SUBMITTALS

- A. Conform to Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data:
 - a. Luminaire dimensions, ratings, and performance data.
 - b. Complete computer data printout of illumination levels based on a 5 ft. by 5 ft. grid pattern.
 - 2. Shop Drawings:
 - a. Indicate dimensions and components for each luminaire which is not a standard Product of the manufacturer.
 - b. Indicate illumination levels in accordance with layout and scheduled luminaires indicated on Drawings.

1.4 QUALITY ASSURANCE

- A. Qualifications
 - 1. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum five years documented experience.
- B. Regulatory requirements
 - 1. Conform to requirements of NFPA 70 and 101.
 - 2. Products: Listed and classified by Underwriters Laboratories, Inc. as suitable for the purpose specified and indicated.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, Handle, Store, and Protect Products.

1.6 MAINTENANCE

- A. Section 017704 – Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Products: At completion of installation, deliver to Contracting Officer.
 - 1. Each component type: Provide quantity for each unique ballast, surge protector and lamp equal to two (2) per cent of luminaire total, but not less than two of each type.

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS FACILITIES, THROUGH THE CONTRACTING OFFICER'S REPRESENTATIVE.**

PART 2 - PRODUCTS

2.1 LUMINAIRE MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Architectural Landscape Lighting, Santa Ana, CA 92704 (714) 668-1107.
 2. Barron Lighting Group (Trace-Lite), Phoenix, AZ 85027 (888) 533-3948.
 3. Bronzelite Commercial Landscape Lighting, (800) 273-1569.
 4. Cooper Lighting (Invue, Lumark, Lumiere, Portfolio, McGraw-Edison, Portfolio), Peachtree City, GA (770)486-4800.
 5. Gardco Lighting, San Leandro, CA (800) 227-0758.
 6. Gotham Lighting, Conyers, GA (800) 315-4982.
 7. Hadco Lighting, Littlestown, PA (717) 359-7131.
 8. H.E. Williams, Carthage, MO (417) 358-4065.
 9. Holophane, Newark, OH (740) 345-9631.
 10. Hydrel Architectural and Landscape Products, Sylmar, CA 91342 (818) 362-9465.
 11. Hubbell Lighting, Inc., (KIM, Spaulding,) Spartanburg, SC (864) 599-6000.
 12. Intense Lighting, Anaheim, CA (800) 961-5322.
 13. Kenall Manufacturing, Gurnee, IL (847) 360-8200.
 14. Kim Lighting, City of Industry, CA (626) 968-5666.
 15. Kirlin Lighting, Detroit, MI (313) 259-6400.
 16. Lightolier, Fall River, MA (508) 679-8131.
 17. Lithonia Lighting, Conyers, GA (770) 922-9000.
 18. McPhilben Lighting, San Leandro, CA (510) 357-6900.
 19. Pathway Lighting, Old Saybrook, CT (800) 342-0592.
 20. Neptun Light Inc., Lake Bluff, IL (888) 735-8330.
 21. Quality Lighting, Franklin Park, IL (847) 451-0090.
 22. Visionaire Lighting, Rancho Dominguez, CA (310) 512-6480.
 23. Wide-Lite, San Marcos, TX (512) 392-5821.
- B. Substitutions:
1. Section 016000 – Product Requirements: Product options and substitutions, substitutions not permitted.

2.2 LUMINAIRE TYPES

- A. **Type MH3** (exterior) Trace-Lite TLED111A Series.
1. Description: 18 inch dia. half cylinder wall mounted full cut-off, solid state, LED luminaire. Lens door is fully gasketed with one-piece solid silicone and UL listed for wet locations.
 2. Lens: 1/8 inch thick tempered glass.
 3. Housing: Die-cast single piece aluminum housing. Finish by contracting officer.
 4. Ballast: Solid state light engine and driver.
 5. Mounting: Surface wall.
 6. Voltage: [277] [120]
 7. Lamp: 48Watt, 5,000 lumen, LED, 85cRI, 4100 degree K.
 8. Published Life: 50,000 hours at 70 percent lumen depreciation.
 9. Warranty: Full five (5) year factory replacement warranty (internal components).
 10. Alternate Manufacturers:
 - a. Gardco: 104LED/55LA Series.
 - b. Hubbell: RDI-50L8 Series.
 - c. Lithonia: WSRLED-2-700MA-X-MVOLT.
 - d. McGraw Edison: ISC-C02-LED-E1-BL3.
 - e. As listed in paragraph 2.1A.

- B. Type PL3 (exterior) Lightolier C6L1520DL40KMWHP-C6L20N**
1. Description: Recessed 6 inch diameter aperture LED downlight.
 2. Reflector: Low brightness white painted, flangeless reflector.
 3. Ballast/Driver: 39 Watt/2000 Lumen LED light engine with remote phosphor technology; 5-year factory warranty.
 4. Mounting Frame: Frame to be 18 gauge galvanized steel ring. Mounting ring shall be secured to ceiling hangers (supplied with luminaire). NOTE: Luminaire frame to be supported from the structure by at least two opposing corners.
 5. Junction Box: Junction box to be code approved for through wiring. Junction box to be secured to the mounting ring and accessible from two sides. Junction box to be pre-wired and accessible per code through the ceiling trim opening.
 6. Mounting: 28 inch 'C' channel mounting bars and flange kit for drywall ceilings.
 7. Voltage: [277] [120].
 8. Lamp: 2000 Lumen, 4000 degree K, remote phosphor enclosed LED array; 60,000 hours at LLD = 0.7.
 9. Label: U.L. listed for damp locations.
 10. Alternate Manufacturers:
 - a. Gotham #EVO41/226WRMD Series.
 - b. Portfolio #LD620D010ERM6-840H20 Series.
 - c. Omega #OM6LED39U-R6LED40KMDWH.
 - d. Intense Lighting #RP62000408-27 Series.
 - e. As listed in paragraph 2.1A.
 - f. .
- C. Type PL4 (exterior) Kenall MR13EL-18L40K-DV-FS Series**
1. Description: 13 inch dia., round with vertical eyelid, wall mounted, full cut-off LED luminaire. UL listed for wet locations.
 2. Reflector: High efficiency, semi-specular aluminum.
 3. Lens: Pearlescent, U.V. stabilized, high impact resistant, virgin injection molded polycarbonate.
 4. Finish: Finish by contracting officer.
 5. Recessed Housing: 18 gauge, cold rolled steel.
 6. Ballast/Driver: 20 Watt/1000 Lumen, LED light engine; 5-year factory warranty.
 7. Mounting: Semi-recessed, wall mounted; A.D.A. compliant.
 8. Voltage: [277] [120].
 9. Lamp: 1000 Lumen, 4000 degree K, enclosed LED array; 60,000 hours at LLD = 0.7.
 10. Label: U.L. listed for damp locations.
 11. Alternate manufacturers:
 - a. Cooper/Fail-Safe TR15LED Series.
 - b. KIM WF31CSLED Series.
 - c. As listed in paragraph 2.1A.
- D. TYPE PL5 Omega OM6LED39PC-40KMDCS-WL**
1. Description: Pendant 8 inch dia., aperture LED downlight.
 2. Reflector: Low brightness clear specular alzak finish.
 3. Housing: Heavy gauge aluminum cylinder, finished white. Pendant hung on a 24 inch stem with a swivel canopy.
 4. Ballast/Driver: 39 Watt/2450 Lumen, LED light engine with remote phosphor technology; 5-year factory warranty.
 5. Mounting: Pendant mounted, height as indicated by architectural elevations.
 6. Voltage: [277] [120].
 7. Lamp: 2450 Lumen, 4000 degree K, enclosed LED array; 60,000 hours at LLD = 0.7.
 8. Label: U.L. listed for wet locations.
 9. Alternate manufacturers:
 - a. H.E. Williams.
 - b. Gotham #EVOCYL-41/22-6AR-MVOLT.
 - c. Pathway #C66PLB30-4K-M

- d. Kirlin #LSR-09350-41K.
- e. Portfolio #LCR8A-40-D010-ER8A-40/840-8LM0-H.
- f. As listed in paragraph 2.1A.

E. Type SB1 Kim #VRB1-20LED5KUV

- 1. Description: 6 in. x 42 in. high aluminum domed top round LED bollard with flared cone.
- 2. Reflector: Anodized aluminum upper reflector with spun anodized aluminum flared cone
- 3. Housing: extruded, one piece aluminum, 0.156 inch wall thickness. Top cover is a weldment of 0.125 inch wall extrusion and 0.25 inch top plate. Top cover seals to housing with closed cell EPDM gasketing. Finish by contracting officer.
- 4. Ballast/Driver: 24 Watt/1300 Lumen, LED light engine; 5-year factory warranty.
- 5. Mounting: Four ½ in. x 11 in. anchor bolts with double nuts and washers, included.
- 6. Voltage: [277]
- 7. Lamp: 1300 Lumen, 5000 degree K, enclosed LED array; 60,000 hours at LLD = 0.7.
- 8. Label: U.L. listed for wet locations.
- 9. Alternate Manufacturers:
 - a. Visionaire #OWK-2/42-COG-20-7-4K-UNV-AB
 - b. Gardco #BRM832-42-CWL-NW-360-UNIV
 - c. McGraw-Edison
 - d. Spaulding
 - e. As listed in paragraph 2.1A.

F. Type SF1 Bronzelite DB2100H/D/S/N/R/N/SL

- 1. Description: Round, direct burial spotlight to illuminate flagpole (3 required).
- 2. Reflector: 15 degree beam pattern, specular aluminum spun reflector.
- 3. Housing: Single piece, compression-molded, composite housing with integral junction box.
- 4. External Lens: ¼ inch thick, walk-over, clear high-impact tempered glass lens.
- 5. Internal Lens and Gasket: Clear, high-impact, tempered glass lens with silicone gasket.
- 6. Ballast: Encapsulated, pulse start electronic. Osram/Sylvania QTP1x100MH/UNV
- 7. Mounting: Direct burial mounting. Provide 6 inch deep gravel bed.
- 8. Voltage: [480] [277] .
- 9. Lamp: Osram/Sylvania MC100/U/MED/940.
- 10. Alternate Manufacturers: As listed in paragraph 2.1 A.

G. Type SP1 Gardco EH14L-XX-X-110LA

- 1. Description: Rectilinear architectural arm-mounted sharp cut-off, solid state, LED luminaire.
- 2. Reflector: Anodized segmented reflectors, beam distribution as required.
- 3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat. Finish by contracting officer.
- 4. Ballast: Solid state light engine and driver.
- 5. Mounting: 20 – 25 ft. high straight square aluminum pole.
- 6. Voltage: [480] [277].
- 7. Lamp: 110Watt, 9,800 lumen, LED, 85cRI, 4000 degree K.
- 8. Quantity of luminaires per pole as shown on the design drawings.
- 9. Published Life: 60,000 hours at 70 percent lumen depreciation.
- 10. Warranty: Full five (5) year factory replacement warranty (internal components).
- 11. Alternate Manufacturers: As listed in paragraph 2.1 A.

H. Type SP2 Gardco EH14L-XX-X-160LA

- 1. Description: Rectilinear architectural arm-mounted full cut-off, solid state, LED luminaire.
- 2. Reflector: Anodized segmented reflectors. Beam distribution as required.
- 3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat. Finish by contracting officer.
- 4. Ballast: Solid state light engine and driver.
- 5. Mounting: 20 – 25 ft. high aluminum pole.
- 6. Voltage: [480] [277].

7. Lamp: 160Watt, 13,170 lumen, LED, 85cRI, 4000 degree K..
8. Quantity of luminaires per pole as shown on the design drawings.
9. Published Life: 60,000 hours at 70 percent lumen depreciation.
10. Warranty: Full five (5) year factory replacement warranty (internal components).
11. Alternate Manufacturers: As listed in paragraph 2.1 A.

I. **Type SP5** Gardo EH14L-XX-X-85LA

1. Description: Rectilinear architectural arm-mounted full cut-off, solid state, LED luminaire.
2. Reflector: Anodized segmented reflectors. Beam distribution as required.
3. Housing: Rugged aluminum rectilinear housing with all seams continuously welded for integrity. Corrosion-resistant polyester powder coat. Finish by contracting officer.
4. Ballast: Solid state light engine and driver.
5. Mounting: 12 – 15 ft. high aluminum pole.
6. Voltage: [480] [277].
7. Lamp: 85Watt, 7,400 lumen, LED, 85cRI, 4000 degree K.
8. Quantity of luminaires per pole as shown on the design drawings.
9. Published Life: 60,000 hours at 70 percent lumen depreciation.
10. Warranty: Full five (5) year factory replacement warranty (internal components).
11. Alternate Manufacturers: As listed in paragraph 2.1 A.

2.3 HIGH INTENSITY DISCHARGE (HID) BALLAST

A. Manufacturers:

1. Advance Transformer Company, Rosemont, IL (847) 390-5000.
2. General Electric Company, Nela Park, OH (800) 435-2677.
3. Universal Lighting Technologies, Nashville, TN (615) 316-5100.
4. Osram/Sylvania, Danvers, MA (800) 544-4828.

B. Description:

1. ANSI C82.4, high intensity discharge and low pressure sodium lamp ballast.
2. Metal halide electronic ballast for lamps shall be high efficiency, energy efficient, pulse start, electronic ballasts with a minimum power factor of .98, ballast factor of 1.0, capable of powering pulse start lamps. Multi-voltage capable and shall operate from a nominal voltage range of 277/120 Volts. System efficiency of greater than 93 percent under full lamp operation. Ballasts shall meet or exceed all EMI and RFI standards of the Federal Communications Commission (FCC) regulations parts 18.305 and 18.307. Total harmonic distortion of less than 5 percent. Lamp wattage shall not vary more than 0.5 percent for a 10 percent change in input line voltage. The lamp crest factor shall measure 1.7 or less. Ballast assembly shall be UL listed for damp locations, 40 degrees C, and comply with all local, state and federal efficiency standards

C. All luminaires shall be fused. Locate fuses within handhole of pole for pole mounted luminaires.

D. Voltage: [480] [277] [208] [120].

NOTE TO SPECIFIER

Include paragraph 2.3E below, if the lightning risk assessment calculation deems a building lightning protection system is required.

E. Provide individual surge protectors within handhole of each pole mounted luminaire. Branch circuit breakers feeding pole mounted luminaires shall also be equipped with surge protection.

2.4 LAMPS

- A. High Intensity Discharge (HID) Lamp Manufacturers:
 - 1. General Electric Company, Nela Park, OH (800) 435-2677.
 - 2. Osram/Sylvania, Danvers, MA (800) 544-4828.
 - 3. Philips Lighting Company, Somerset, NJ (800) 555-0050.
 - 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.
- B. NEMA CFT designated lamps must pass the federal Toxic Characteristic Leaching Procedure (TCLP) test and be classified non-hazardous waste.
- C. Lamp Types: As specified for luminaire.

NOTE TO SPECIFIER

Pole height listed as basis of design. Edit to suit site conditions or comply with jurisdictional requirements. Pole manufacturer to match pole mounted luminaires selected.

2.5 POLES

- A. Manufacturers:
 - 1. As listed in paragraph 2.1A.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not permitted.
- B. Material and Finish: Aluminum. Finish by contracting officer.
- C. Section Shape [straight or tapered] [round or square].
- D. Height: [25 feet].
- E. Base: Nonbreakaway.
- F. Accessories:
 - 1. Handhole.
 - 2. Anchor bolts.
 - 3. Base cover.
 - 4. Bolt covers.
 - 5. Ground rod and conductor.

NOTE TO SPECIFIER

Edit for Wind Loading.

- G. Approximate Loading Capacity Ratings:
 - 1. Luminaire Weight: 35 pounds.
 - 2. Luminaire and Bracket Effective Projected Area: 1.5 square feet.
 - 3. Steady Wind: [90] [____] miles per hour minimum, with gust factor of [1.3] [____].

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Provide 3000 PSI minimum concrete for lighting poles bases at locations indicated, in accordance with Section 033000 and details shown on drawings.

- B. Install poles plumb. Provide double nuts to adjust plumb. Grout around each base and provide bolt covers.
- C. Install lamps in each luminaire.
- D. Bond luminaires, metal accessories and metal poles to branch circuit equipment grounding conductor. Provide supplementary 3/4 inch x 10 foot copper clad rod with #2/AWG/copper grounding electrode conductor at each pole.

3.2 FIELD QUALITY CONTROL

- A. Conform to Section 014000: Quality Requirements.
- B. Operate each luminaire after installation and connection. Inspect for improper connections and operation.
- C. Measure illumination levels to verify conformance with layout and performance requirements.
- D. Take measurements during night sky, without moon or with heavy overcast clouds effectively obscuring moon.

3.3 ADJUSTING

- A. Aim and adjust luminaires to provide illumination levels and distribution as directed.

3.4 CLEANING

- A. Conform to Section 017300 -Execution: Cleaning and protecting installed work.
- B. Clean electrical parts to remove conductive and deleterious materials.
- C. Remove dirt and debris from enclosure, pole and base.
- D. Clean photometric control surfaces as recommended by manufacturer.
- E. Clean finishes and touch up damage.

3.5 PROTECTION OF FINISHED WORK

- A. Conform to Section 017300 – Execution: Protecting installed work.
- B. Relamp or re-ballast luminaires with defective or burned out lamps, just prior to final acceptance..

USPS Mail Processing Facility Specification issued: 5/1/2014
Last revised: 4/16/2014

END OF SECTION 26 56 00 00

Task	Specification	Specification Description
26 56 13 00	01 22 16 00	No Specification Required
26 56 23 00	01 22 16 00	No Specification Required
26 56 26 00	01 22 16 00	No Specification Required

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 05 00 00 - CSF COMMON WORK RESULTS FOR COMMUNICATIONS**

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the Common Work Results for the following structured wiring system components:
 - 1. Communication cable.
 - 2. Termination equipment.
 - 3. Patching equipment.
 - 4. Telecommunications Equipment Room (ER) Equipment Rack(s).
 - 5. Telecommunications Room (TR) Equipment Rack(s).
 - 6. Telephone service entrance.
- B. Related Documents:
 - 1. The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section.
 - 2. USPS Lan Infrastructure Best Practices, May 2011.
 - 3. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 078400 - Fire stopping: Fire stopping sealant at penetrations of fire-rated assemblies.
 - 2. Section 260500 - Common Work Results for Electrical: Basic electrical methods.
 - 3. Section 260533 - Raceway and Boxes for Electrical Systems: Conduit and boxes for installation of cable.
 - 4. Section 271100 - Communications Equipment Room Fittings
 - 5. Section 271300 - Communications Backbone Cabling
 - 6. Section 271500 - Communications Horizontal Cabling
 - 7. Section 281600 - Intrusion Detection

NOTES TO SPECIFIER

Use following Specification listings for larger CSF projects only.

- 8. Section 250504 - Building Automation System (BAS) General
- 9. Section 251304 - EMS Communication to Remote Enterprise Server
- 10. Section 275116 - Public Address Paging Systems
- 11. Section 282304 - Security, Burglary and Robbery Countermeasures Analog CCTV System
- 12. Section 282305 - Integrated Security and Investigative Platform (ISIP) CCTV System

1.2 REFERENCES

- A. Telecommunication Industry Association (TIA), Electronic Industries Association (EIA):
 - 1. ANSI/TIA/EIA-568-C Commercial Building Telecommunications Cabling Standard (2009 - including all addendums).

2. ANSI/TIA/EIA-569-B Commercial Building Standard for Telecommunications Pathways (2004 or Current edition).
3. ANSI/TIA/EIA J-STD-606B Administration Standard for Commercial Telecommunications Infrastructure (2002 or Current Edition).
4. ANSI/TIA/EIA-607A Commercial Building Grounding and Bonding Requirements for Telecommunications (2002 or Current Edition).
5. BICSI Telecommunications Distribution Methods Manual (Version-12 including all addendums.)

- B. National Electrical Manufacturer's Association (NEMA):
 1. NEMA WC 26 - Wire and Cable Packaging.
- C. National Fire Protection Association (NFPA):
 1. NFPA 70 - National Electrical Code. (Current Version)

1.3 SYSTEM DESCRIPTION

- A. Telecommunication system for entire building consisting of cables, connectors, faceplates, termination patch panels, patch cords, wire management panels, and cable supports. System serves the following:
 1. Telephone.
 2. Data.
 3. Modem.
 4. Printer.
 5. Facsimile.
 6. Point-of-service (POS)

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Provide for each material or equipment item specified.
 2. Shop Drawings:
 - a. Point-to-point wiring diagrams for cables installed under this Section.
 - b. Detailed plan views and elevations of telecommunications spaces showing racks, termination blocks, and cable paths.
 - c. Minimum Scale for Details: 1/4 inch.
 3. Termination Schedule: Indicate the following.
 - a. T/O (telecommunications outlet) identification.
 - b. Cable identification number.
 - c. Room location.
 - d. Patch panel identification number.
 - e. Patch panel port identification number.
 4. Assurance/Control Submittals:
 - a. Sample Forms: Submit proposed format for cable test reports.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to General Contractor. Prepare reports in conformance with section 014000 – Quality Requirements.
 - 1) End-to-end tests.
 - c. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - d. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

- B. Section 017704 -Closeout Procedures and Training: Procedures for closeout submittals. Deliver prior to Final Acceptance.
1. Certification: Comprehensive test results for Category 6 and fiber optic certification of cable plant per specifications of ANSI/TIA/EIA-568-C, and all addendums. Immediately following new Category 6 copper and laser optimized multi-mode fiber installation, submit raw test results via e-mail to the Raleigh IT Service Center representative who will be performing copper and fiber site acceptance. All testing must be performed using an industry standard compliant test device. Test results must be furnished in format used by test device. Vender generated spreadsheets or pdfs will not be accepted. If special software is required for viewing test results, said software shall be supplied by installing vendor at no cost to USPS.
 2. Project Record Documents: Accurately record the following:
 - a. Cable pulling schedules, in printed form on CD-ROM.
 - b. Cable routings (as-built drawings) shall be provided with cable plant depicted on floor plans prior to acceptance. The drawings must identify location of all T/Os (Telecommunications Outlets), TRs (Telecommunications Rooms), the ER (Telecommunications Equipment Room) and any other installed component of the cabling solution. The actual routing of the cable bundles (pathways) and backbone cables on the floor plans shall also be shown. Provide master overall set plus one set for the ER and each TR which will detail TOs served. As-built drawings will be provided to the USPS IT by the installing Contractor electronically in a USPS compatible version of AutoCad on a CDROM.
 - c. Labeling shall conform with the ANSI/TIA/EIA-606A and USPS labeling guidelines.
 - d. A detailed cable termination record shall be provided, in sufficient detail, so that:
 - 1) Telephone Utility Company or telephone interconnect company can install cross connects.
 - 2) Postal Service users can install and maintain patch cords at patch panel fields.
 - 3) Location and size of service entrance conduit can be determined.
 3. Operations and Maintenance Data: Data including wiring diagrams, parts lists, shop drawings, product data, manufacturer's instructions for cables and equipment, and Certification(s) identified above shall be provided.

1.5 QUALITY ASSURANCE

- A. Single Source Responsibility: Furnish and install Products of one manufacturer for each Product type. Multiple manufacturers not permitted.
- B. Qualifications:
1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in the installation of Category 6 and fiber optic Structured Cabling Systems with minimum 5 years documented experience. Contractor shall have a minimum of one BICSI Certified Technician on job site at all times with documented formal training in the installation of Category 6 and fiber optic cabling systems. Installers shall possess a certification for a total systems solution issued by the manufacturers of the cabling and terminating hardware. The contractor must present this certification to the contracting officer before beginning work. Contractor must have a full time BICSI RCDD with current credentialing on staff.
 3. Warranty: Total Systems Solution required providing minimum 15 year warranty from both manufacturer of cabling as well as connecting hardware when installed together according to predetermined manufacturers' specifications. Installer shall possess certifications from manufacturers of the components installed as a total systems solution and must present said certifications to the contracting officer in advance of beginning the Work.
- C. Regulatory Requirements:
1. Conform to requirements of NFPA 70.
 2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.

3. Perform Work that interfaces with Telephone Utility Company in accordance with Telephone Utility Company rules and regulations.
4. Conform to current ANSI/TIA/EIA and BICSI TDMM standards for telecommunications installation.

D. Pre-Installation Meetings:

1. Convene a pre-installation meeting two weeks prior to commencing Work of this Section.
2. Require attendance of parties directly affecting Work of this Section. The United States Postal Service telecommunications system representatives for CSF projects will be the District Telecommunications Specialist.
3. Review conditions of operations, procedures and coordination with related Work.
4. Agenda:
 - a. Tour, inspect, and discuss building conditions relating to communications cabling and equipment
 - b. Coordination with Telephone Utility Company and United States Postal Service telecommunications system representative will be through the Contracting Officer.
 - c. Review exact location of each item within building construction, casework, and fixtures and their requirements.
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review Drawings and Specifications.
 - f. Approve proposed equipment.
 - g. Review and finalize construction schedule related to voice and data installation and verify availability of materials, personnel, equipment, and facilities needed to complete project and avoid delays.
 - h. Review required labeling process, inspections and testing.
 - i. Review cable routing and support.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

2.1 CONDUITS AND BOXES

- A. Specified in Section 260533 - Raceway and Boxes for Electrical Systems.

2.2 TELEPHONE HANDSETS: Provided by US Postal Service under separate contract.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

3.2 INSTALLATION

- A. Special Requirements For Cable Routing And Installation
 1. The majority of the structured cabling system wiring in this building will be installed above ceilings without conduit. All cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
 2. Sealing of openings between floors, through rated fire and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
- B. Support cables installed in ceiling spaces with Category 6 compliant wide-base canvas loop suspension devices such as the Erico Caddy #425 Loop anchored to building structural steel (red iron). The use of wide-based, J-hooks ("Erico" Caddy Cable CAT series) shall be permitted for no more than (3) Category 6 cables.
 1. Minimum and Maximum Spacing Between Supports: 4 feet.
 2. Maximum Number of 4 Pair Cables per Support: 25.
 3. Furnish and install additional supports as required.
 4. Install complete cable support device system before starting installation of cable.
 - a. Installation of cable before completion of support system not permitted.
 - b. Unsupported cable shall not be permitted.
 5. Organize and group cables. Install cable group as single run through ceiling spaces following column and building lines. Do not install cable group runs diagonally across center of building.
 6. Install armored fiber optic cabling in cable tray or approved support solution.
 7. Cabling shall not be suspended from any electrical conduits, sprinkler systems, gas, or water pipes, etc.
 8. Cabling shall not be attached to suspended ceiling grid system.
 9. Cabling system shall be installed in approved suspension devices for telecommunications cabling.
 10. No element of the building structure (i.e. webbing of trusses) shall be used to support any telecommunications cabling.
 11. Vertical runs of backbone and horizontal cables (e.g.: cables exiting thru-wall penetrations) shall be equipped with factory manufactured cable drop out fittings or kellums cord grips to properly support the cables at the vertical bends.
- C. Cable trays shall be required for areas of heavy cable concentration including but not limited to the "ER" and TRs.
 1. Maximum spacing between each cable tray support: Specified by manufacturer of cable tray.
 2. Maximum number of cables supported by cable tray: Specified by manufacturer of cable tray not-to-exceed 40% fill ratio.
 3. Furnish and install additional supports as required.
 4. Install complete cable tray system before starting installation of cable.
 - a. Installation of cable before completion of tray system not permitted.
 - b. Cabling shall not be bundled within cable tray.
 - c. Provide factory manufactured cable drop-out fittings for transportation of cabling entering or exiting the cable tray.
- D. Cabling routed underground, exterior of the building, through inaccessible ceilings or less than 10'-0" A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and surface mounted, cast aluminum, "FS" factory boxes in unfinished areas. Provide 1" conduit risers with 90 degree bend and bushing for all T/O's.
 1. All conduit stubs must have a plastic bushing installed at each end.
 2. No conduit is to be buried in the slab.
 3. There shall be no more than 180 degrees of bend in a conduit longer than 30 feet. All conduits that are comprised of more than two (2) ninety degree bends or a reverse bend shall have a

- properly installed pull box. Pull boxes shall be 12"x 12" x 6" for up to 1" EMT, 18"x18"x8" for up to 1 ½" EMT. Ninety degree bends in fiber runs shall be installed using dual forty-five degree bends.
4. Under no circumstances shall a pull box be used to change direction of a conduit. All conduits shall be installed in a manner so that cabling passes directly through the pull box without changing direction.
 5. The minimum size conduit shall be 1" diameter. Larger conduits shall be sized for 40% fill.
- E. Route cable for T/O (telecommunications outlets) as follows:
1. Wall Mounted: Through ceiling spaces to conduit stub-ups or junction boxes. Include drag lines.
 2. Furniture System Cable Raceway: Point of entry to outlet.
 3. Floor Outlet Box: Through under floor conduit to box. (This method is highly discouraged.)
 4. Column Mounted-Workroom Floor: Through surface mount conduit stubs to junction box or cable tray.
 5. Ladder Rack mounted: Along ladder rack from rack to conduit stubs or cable tray.
- F. Separate communications cables from other cables and fixtures minimum distance as follows:
1. Non-Shielded Electrical Cables: 12 inches.
 2. Fluorescent Light Fixtures: 12 inches.
- G. Cross electrical cables with communications cables at 90 degrees only.
- H. Comply with cable manufacturers minimum bend radius requirements. For Category 6, minimum bend radius shall be no less than 4 times diameter of outer sheath of cable. For Fiber Optic cabling, minimum bend radius shall be no less than 10 times diameter of outer sheath of cable.
1. Do not stretch, stress, tightly coil, bend or crimp cables.
 2. Replace cables that are severely stressed during installation at no additional cost to United States Postal Service.
- I. Cabling installed in plenum or non-plenum air returns.
1. **Plenum Environments:** If the majority of the area for the cabling installation is deemed to be a return air plenum, all components of the installation in those areas shall be rated for the plenum environment in which they are installed. There shall be no installation of any non-plenum component of this cabling system in the plenum environment unless those components are enclosed in such a manner as to maintain the integrity of the plenum environment. If the area beneath a raised floor is considered a plenum environment, there shall be no installation of any components of the cabling system that are not rated for a plenum environment unless they are completely enclosed in such a manner as to maintain the integrity of the plenum environment. This includes, outlets, jacks, patch cords, copper or fiber, cabling or any other component that are not rated for installation in a plenum environment.
 2. **Non-Plenum Environments:** The work room floor is considered a non-plenum environment and all components of the Structured Cabling System shall be rated for installation in non-plenum area. If, at any point, the non-plenum cabling enters or passes through a plenum area, the cabling shall be encased in a continuous EMT conduit pathway throughout the entire plenum area.
 3. A determination as to which areas at a USPS facility are plenum or non plenum shall be obtained by the installing contractor prior to ordering any materials for the installation. It is the responsibility of the installing contractor to verify the cable installation meets the EIA/TIA standards for installation in the environment in which it is installed.
- J. Identification: Section 260500 - Common Work Results for Electrical; furnish and install machine generated labels.
1. Patch Panels and Outlet Faceplates: Display outlet or cable identification number in uppercase lettering on permanent adhesive label stock.

- a. Label the Telecommunications Equipment Room as ER and Telecommunications rooms 01, 02, 03, etc.
- b. Label all copper patch panel ports in a horizontal fashion (left to right in numerical sequence).
- c. Label telecommunications outlet faceplate in the same manner as the patch panel.
- d. Exception: in case of expansion projects, follow existing labeling scheme.
- 2. Communications Cables:
 - a. Display cable identification number in black uppercase lettering on permanent adhesive self laminating label of contrasting color from cable sheath.
 - b. Place labels on each end of cable, maximum 6 inches from cable termination.
 - c. Follow ANSI/TIA/EIA-606A – Administration Standard for Commercial Telecommunications Infrastructure (Current Edition).
- 3. Fiber Optic Interconnect Centers: Display ER/TR, and cable strand identification numbers in uppercase lettering, or numbers on machine generated permanent adhesive label stock.
 - a. Follow ANSI/TIA/EIA-606A – Administration Standard for Commercial Telecommunications Infrastructure (Current Edition)
- K. Cable Run Lengths: Route cables so that cable run length does not exceed recommended maximum.
 - 1. UTP cable limited to a total run of 90m (295 feet) between the back of the patch panel to the Telecommunications Outlet per ANSI/TIA/EIA-568-C.
 - 2. Cable conductors shall be continuous (“Homerun”) from originating termination equipment to destination termination equipment.

3.3 INSTALLATION - COMPONENTS

- A. Cables: Furnish and install communications cables as specified, in accordance with Cable Pulling Schedules, manufacturer's published instructions, ANSI/TIA/EIA-568-C including all addendums and as indicated on Drawings.
 - 1. Dress cable to final location, remove sheath to point allowing splaying of conductor, and terminate. Make each termination uniform and precise. Hook and Loop “velcro” cable ties shall be used for bundling and dressing all cabling. No nylon zip ties shall be used for cable bundling or attachment.
 - 2. Maintain sheath integrity. Remove minimum amount of sheath required for termination up to a maximum of 1 inch.
 - 3. Maintain manufacturer's twisting of wire pairs to termination point. Do not attempt to restore, modify, or add to manufacturer's twisting of cable. Do not untwist more than ½ inch of the stripped cable.
 - 4. Label each end with a machine generated, self laminating label.
 - 5. Mechanical couplers or splices not permitted in copper cabling.

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 s.f. and will not require fiber optic backbone cabling. Add paragraphs 3.3A.6. & 7. below if fiber cabling is deemed necessary.

- 6. A fiber optic service loop of sheathed fiber no less than 10 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 3 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturer's instructions.
- 7. When installing Armored Fiber Optic cabling, proper grounding techniques to ground the metallic member of the Armored Fiber Optic Cable must be maintained.

- B. Fire Stopping:
 - 1. Fire stop penetrations of fire-resistive rated assemblies as specified in Section 078400 – Fire Stopping.
 - a. No through wall penetrations or conduit sleeves used for communications cabling will be Firestop sealed with a Silicone foam or other non-removable type sealant. The penetrations shall be firestopped to allow for ease of future access using intumescent putty.

3.4 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Provide information to affected trades regarding requirements and responsibilities for preparation of Work of a particular trade for installation of Work installed under this Section.
 - 2. Coordinate with Telephone Utility Company for interface of systems and required interconnections.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Testing and Certification Overview
 - 1. The Contractor shall provide equipment and materials for the testing of all installed copper and fiber transmission media. The supplier shall employ Level III compliant test equipment that stores the test results in internal memory and produces test result reports. The supplier shall provide the USPS, test results in test equipment format (raw electronic). Supplier prepared spread sheets and PDF files are not acceptable. If the USPS does not have the software to read the test result files the supplier shall provide the necessary software to view the files at no charge to the USPS. The test reports shall provide complete listings of all tested parameters and provide optional plots and graphs of all parameters in the cable tests.
 - a. The USPS technical representative may conduct random tests of copper and fiber cable with USPS test equipment as part of the final inspection. The Contractor shall re-terminate and retest any cable found to be defective.
 - b. The Contractor shall provide all equipment and services necessary to secure and provide the USPS a system warranty. Inspect installation of cables and equipment during and at completion of installation.
- C. Copper Cable Testing
 - 1. The Contractor shall perform tests on all installed Category 6 data wiring. Contractor test equipment used shall be Level III compliant. The Category 6 copper cable tester must test for the copper cable being installed. A generic Category 6 cable setting is not acceptable. Example: If “Superior Essex” Cat.6 CMR, the tester shall be setup to test for “Superior Essex” Cat.6 CMR and not a generic CAT.6 cable. Test parameters include, but are not limited to:
 - NEXT, NEXT @ Remote
 - Wire Map
 - Characteristic Impedance
 - Length
 - DC Loop Resistance
 - Propagation Delay
 - Return Loss (RL), RL @ Remote
 - Delay Skew
 - Attenuation
 - Attenuation-to-Crosstalk Ratio (ACR), ACR @ Remote

Power Sum ACR, PSACR @ Remote
 ELFEXT, ELFEXT @ Remote
 Power Sum ELFEXT, PSELFEXT @ Remote
 Power Sum NEXT, PSNEXT @ Remote

2. Cable test parameters shall be set to correct values for NVP and Test Limit (ANSI/TIA/EIA 568-C Category 6, Permanent Link).
3. The copper wiring to be tested includes, but is not limited to:
 - a. Telecommunications outlet wiring
4. Perform end-to-end tests of each 4-pair cable as follows:
 - a. Pair/conductor for proper pinouts and continuity.
 - b. Ground fault.
 - c. Proper termination, shorts, and crossed pairs.
 - d. Channel attenuation per ANSI/TIA/EIA-568-C, including all addendums.
 - e. Channel bi-directional worst case near end cross talk (NEXT) at frequencies up to 250 MHz, per ANSI/TIA/EIA-568-C including all addendums.
 - f. Measured effective cable run length.

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 s.f. and will not require fiber optic backbone cabling. Add Section 3.5D. below if fiber cabling is deemed necessary.

D. Fiber Optic Cable Testing

1. The supplier shall perform Bi-directional testing on all installed fiber optic cabling. Supplier test equipment shall perform testing of fiber in accordance with the fiber type being tested, 50 micron laser optimized using the procedures outlined in ANSI/TIA/EIA-568C and ANSI/TIA/EIA-526-14-A, Method B for multimode fiber, ANSI/TIA/EIA-526-7 for singlemode fiber.
 - a. The fiber testers and test heads shall have passed calibration within one year of test date. Any calibration in excess of one year is not acceptable.
2. Multimode fiber optic cable shall be tested bi-directionally at wavelengths of 850nm and 1300nm. Singlemode fiber optic cable shall be tested bi-directionally at 1310nm and 1550 nm.
3. Cable tester test parameter shall be set to correct values for:
 - Actual manufacturer of 10Gb LOMF. Tester cannot be a generic 10Gb fiber type and must be specific to the manufacturer's model of fiber cable being tested.
 - Index of Refraction based on manufacturer specifications for cable type being tested..
 - Quantity of adapters (typically 2).
 - Fiber Type.
 - Test Limit (ANSI TIA/EIA/568-C).
4. The Supplier shall review test settings with the USPS technical representative. Supplier shall have cable specifications on site for USPS technical review to verify settings are correct on test equipment.
5. Fiber optic cables shall pass all attenuation tests referenced to formulas presented in the listed standards.
6. Perform end-to-end tests of each fiber optic backbone cable as follows (applies to TR applications only):
 - a. Power meter, and light source tests per ANSI/TIA/EIA-568-C specification.
 - b. Optical Time Domain Reflectometer (OTDR) tests per ANSI/TIA/EIA-568-C specification including all addendums.
 - c. Measured effective cable run length.

USPS CSF Specifications issued: 10/1/2013
Last revised: 8/29/2013

END OF SECTION 27 05 00 00

SECTION 27 05 00 00 - MPF COMMON WORK RESULTS FOR COMMUNICATIONS**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured cabling system components:
 - 1. Communication cable.
 - 2. Termination equipment.
 - 3. Patching equipment.
 - 4. Consolidated Computer Room (CCR).
 - 5. Telecommunications Room (TR) / Telecommunications Enclosure (TE)
 - 6. Telephone service entrance.
- B. Related Documents:
 - 1. The Contract Documents, as defined in Section 011000 – Summary of Work, apply to the Work of this Section.
 - 2. USPS Lan Infrastructure Best Practices, May 2011.
 - 3. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 078400 – Fire stopping: Fire stopping sealant at penetrations of fire-rated assemblies.
 - 2. Section 250504 – Building Automation System (BAS) General.
 - 3. Section 255104 – EEMS Integration.
 - 4. Section 260500 – Common Work Results for Electrical: Basic electrical methods.
 - 5. Section 260533 – Raceway and Boxes for electrical Systems: Conduit and boxes for installation of communications cabling
 - 6. Section 271100 – Communications Equipment Room Fittings
 - 7. Section 271300 – Communications Backbone Cabling
 - 8. Section 271500 – Communications Horizontal Cabling
 - 9. Section 275116 – Public Address Paging Systems.
 - 10. Section 281304 – Enterprise Physical Access Control System.

1.3 SYSTEM DESCRIPTION

A. Telecommunications system for entire building consisting of cabling, connectors, faceplates, termination patch panels, patch cords, wire management panels, and cabling supports. System will serve the following:

1. Telephone.
2. Data.
3. Modem.
4. Printer.
5. Facsimile.
6. Point-of-service (POS).

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide for each material or equipment item specified.
2. Shop Drawings:
 - a. Point-to-point wiring diagrams for cables installed under this Section.
 - b. Detailed plan views and elevations of telecommunications spaces showing racks, termination blocks, and cable paths.
 - c. Minimum Scale for Details: 1/4 inch.
3. Termination Schedule: Indicate the following.
 - a. T/O (telecommunications outlet) identification.
 - b. Cable identification number.
 - c. Room location.
 - d. Patch panel identification number.
 - e. Patch panel port identification number.
4. Assurance/Control Submittals:
 - a. Sample Forms: Submit proposed format for cable test reports.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to General Contractor. Prepare reports in conformance with Section 014000 – Quality Requirements.
 - 1) End-to-end tests.
 - c. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - d. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals. Deliver prior to Final Acceptance.

1. Certification: Comprehensive test results for Category 6 and fiber optic certification of cable plant per specifications of TIA/EIA-568-C, and all addendums. Immediately following new Category 6 copper and laser optimized multi-mode fiber installation, submit raw test results via e-mail to the Raleigh IT Service Center representative who will be performing copper and fiber site acceptance. All testing must be performed using an industry standard compliant test device. Test results must be furnished in format used by testing device. Vendor generated spreadsheets or PDF's will not be accepted. If special software is required for viewing test results, said software shall be supplied by installing vendor at no cost to USPS.
2. Project Record Documents: Accurately record the following:
 - a. Cable pulling schedules, in printed form on CD-ROM.
 - b. Cable routings (as-built drawings) shall be provided with cable plant depicted on floor plans prior to acceptance. The drawings must identify location of all T/Os (Telecommunications Outlets), TR/TE's (Telecommunications Rooms / Enclosures), Consolidated Computer Rooms (CCR) and any other installed component of the cabling solution. The actual routing of the cable bundles (pathways) and backbone cables on the floor plans shall also be shown. Provide master overall set plus one set for each TR/TE which will detail T/O's and CP's served by that TR/TE. As-built drawings will be provided to USPS IT by the installing Contractor electronically in a USPS compatible version of AutoCAD on a CD-ROM..
 - c. Labeling shall conform to the ANSI/TIA/EIA-606-A and USPS labeling guidelines.
 - d. A detailed cable termination record will be provided in sufficient detail, so that:
 - 1) Telephone Utility Company or telephone interconnect company can install cross connects.
 - 2) Postal Service users can install and maintain patch cords at patch panel fields.
 - 3) The location and size of the service entrance conduits are known.
3. Operations and Maintenance Data: Data including wiring diagrams, parts lists, shop drawings, product data, manufacturer's instructions for cables and equipment and certifications identified above shall be provided.

1.5 QUALITY ASSURANCE

- A. Single Source Responsibility: Furnish and install products of one manufacturer for each product type. Multiple manufacturers not permitted.
- B. Qualifications:
 1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of 5 years documented experience.
 2. Installer: Company specializing in the installation of Category 6 and fiber optic Structured Cabling Systems with a minimum of 5 years documented experience. Contractor must have a full time BICSI RCDD with current credentialing on staff. Contractor shall have a minimum of one BICSI certified Technician on the job site at all times with documented formal training in the installation of Category 6 and fiber optic cabling systems. Installers shall possess a certification for a total systems solution from the manufacturer of the cabling and terminating hardware. The contractor must present these certifications to the contracting officer before beginning work.
 3. Warranty: Total Systems Solution required providing a minimum 15 year warranty from both manufacturer of cabling as well as connecting hardware when installed together according to predetermined manufacturers' specifications. Installer shall possess certifications from manufacturers of the components installed as a total systems solution and must present said certifications to the contracting officer in advance of beginning the Work.
- C. Regulatory Requirements:
 1. Conform to requirements of NFPA 70.
 2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.
 3. Perform Work that interfaces with Telephone Utility Company in accordance with Telephone Utility Company rules and regulations.

4. Conform to current ANSI/TIA/EIA standards and BICSI TDMM for telecommunications installation.

D. Pre-Installation Meetings:

1. Convene a pre-installation meeting two weeks prior to commencing Work of this Section.
2. Require attendance of parties directly affecting Work of this Section. The USPS telecommunications system representative for Mail Processing Facilities projects will be the Raleigh Information Telecommunications Support Center (RITSC) and the District Telecommunication Specialist.
3. Review conditions of operations, procedures and coordination with related Work.
4. Agenda:
 - a. Tour, inspect, and discuss building conditions relating to communications cabling and equipment.
 - b. Coordination with Telephone Utility Company and the USPS telecommunications system representative will be through the Contracting Officer.
 - c. Review exact location of each item within building construction, casework, and fixtures and their requirements.
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review Drawings and Specifications.
 - f. Approve proposed equipment.
 - g. Review and finalize construction schedule related to voice and data installation, verify availability of materials, personnel, equipment and facilities needed to complete project and avoid delays.
 - h. Review required labeling process, inspections and testing.
 - i. Review cable routing and support.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 – Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

2.1 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

2.2 TELEPHONE HANDSETS: PROVIDED BY US POSTAL SERVICE UNDER SEPARATE CONTRACT.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

3.2 INSTALLATION

- A. Special Requirements For Cable Routing And Installation
 - 1. The majority of the structured cabling system wiring in this building will be installed above ceilings without conduit. All cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
 - 2. Sealing of openings between floors, through rated fire and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
- B. Support cables installed in ceiling spaces with cable tray and/or wide-base canvas loop Category 6 compliant suspension devices such as the Erico Caddy #425 loop, anchored to building ceiling structural steel (red iron). The use of wide-based J-hooks "Erico" Caddy Cable CAT series shall be permitted for no more than (3) category 6 cables.
 - 1. Minimum and maximum spacing between supports: 4 feet.
 - 2. Maximum Number of 4 Pair Cables per support: 25.
 - 3. Furnish and install additional supports as required.
 - 4. Install complete cable support device system before starting installation of cable.
 - a. Installation of cable before completion of support system not permitted.
 - b. Unsupported cable not permitted.
 - 5. Organize and group cables. Install cable group as single run through ceiling spaces following column and building lines. Do not install cable group runs diagonally across center of building.
 - 6. Install armored fiber optic cabling in cable tray or approved support solution.
 - 7. Cabling will not be suspended from any electrical conduits, sprinkler systems, gas, or water pipes, etc.
 - 8. Cabling will not be attached to suspended ceiling grid system.
 - 9. Cabling system shall be installed in approved suspension devices for telecommunications cabling.
 - 10. No element of the building structure (i.e. truss webbing) will be used to support any telecommunications cabling.
 - 11. Vertical runs of backbone and horizontal cabling (e.g.: cabling exiting thru-wall penetrations) shall be equipped with factory manufactured cable drop out fittings or kellums cord grips to properly support the cabling at the vertical bends.
- C. Cable trays shall be required for areas of heavy cable concentration including but not limited to CCRs, TR/TE's, and large administrative hallways.
 - 1. Maximum spacing between each cable tray support: Specified by manufacturer of cable tray.
 - 2. Maximum number of cables supported by cable tray: Specified by manufacturer of cable tray not-to-exceed 40% fill ratio.
 - 3. Furnish and install additional supports as required.
 - 4. Install complete cable tray system before starting installation of cable.
 - a. Installation of cable before completion of tray system not permitted.
 - b. Cabling shall not be bundled within cable tray.
 - c. Provide factory manufactured cable drop-out fittings for transportation of cabling entering or exiting the cable tray.
- D. Cabling routed underground, exterior of the building or through inaccessible ceilings shall be contained in conduit. Provide flush boxes within finished areas and surface mounted, cast aluminum, "FS" factory boxes in unfinished areas. Provide 1" conduit risers with 90 degree bend and bushing for all T/O's.
 - 1. Conduit/EMT and cable tray shall be used in the ceiling of the work room floor or wherever a suspended ceiling system is not present.
 - 2. All conduit stubs must have a plastic bushing installed at each end.
 - 3. The size of the conduit shall be a minimum of 1 inch in diameter. Larger conduits shall be sized for 40 per cent fill.
 - 4. No conduit is to be buried in the slab.

5. There shall be no more than 180 degrees of bend in a conduit longer than 30 feet. All conduits that are comprised of more than two (2) ninety degree bends or a reverse bend shall have a properly installed pull box. Pull boxes shall be 12"x 12" x 6" for up to 1" EMT, 18"x18"x8" for up to 1 ½" EMT. Ninety degree bends in fiber runs shall be installed using dual forty-five degree bends.
 6. Under no circumstances shall a pull box be used to change direction of a conduit. All conduits shall be installed in a manner so that cabling passes directly through the pull box without changing direction.
- E. Route cable for T/O (telecommunications outlets) as follows:
1. Wall Mounted: Through ceiling spaces to conduit stub-ups or junction boxes. Include drag lines.
 2. Furniture System Cable Raceway: Point of entry to outlet.
 3. Floor Outlet Box: Through under floor conduit to box. (This method is highly discouraged).
 4. Column Mounted-Workroom Floor: Through surface mount conduit stubs to junction box or cable tray.
 5. Consolidated Computer Room: Along ladder rack from rack to locations to be run in ladder tray / basket tray.
- F. Communications cabling and fixtures shall have minimum separation from the following devices:
1. Non-Shielded Electrical Cables: 12 inches.
 2. Fluorescent Light Fixtures: 12 inches.
- G. Cross electrical cables with communications cables at 90 degrees only.
- H. Comply with cable manufacturers minimum bend radius requirements. For Category 6, minimum bend radius shall be no less than 4 times diameter of outer sheath of cable. For Fiber Optic cabling, minimum bend radius shall be no less than 10 times diameter of outer sheath of cable.
1. Do not stretch, stress, tightly coil, bend or crimp cables.
 2. Replace cables that are severely stressed during installation at no additional cost to USPS.
- I. Cabling installed in plenum or non-plenum air returns.
1. Plenum Environments: If the majority of the area for the cabling installation is deemed to be a return air plenum, all components of the installation in those areas shall be rated for the plenum environment in which they are installed. There shall be no installation of any non-plenum component of this cabling system in the plenum environment unless those components are enclosed in such a manner as to maintain the integrity of the plenum environment. If the area beneath a raised floor is considered a plenum environment, there shall be no installation of any components of the cabling system that are not rated for a plenum environment unless they are completely enclosed in such a manner as to maintain the integrity of the plenum environment. This includes, outlets, jacks, patch cords, innerduct, copper and fiber optic cabling or any other components that are not rated for installation in a plenum environment.
 2. Non-Plenum Environments: The work room floor is considered a non-plenum environment and all components of the Structured Cabling System shall be rated for installation in non-plenum area. If, at any point, the non-plenum cabling or innerduct enters or passes through a plenum area, the cabling or innerduct shall be encased in a continuous EMT conduit pathway throughout the entire plenum area.
 3. A determination as to which areas at a USPS facility are plenum or non plenum shall be obtained by the installing Contractor prior to ordering any materials for the installation. It is the responsibility of the installing Contractor to verify the cable installation meets the EIA/TIA standards for installation in the environment in which it is installed.
- J. Identification: Section 260500 – Common Work Results for Electrical; furnish and install machine generated labels.
1. Patch Panels, CP1 Enclosures, and Outlet Faceplates: Display outlet or cable identification number in uppercase lettering on permanent machine generated adhesive label stock.

- a. Label the Consolidated Computer Room as CCR and Telecommunications Rooms/Enclosures as 01, 02, 03, etc.
- b. Label all copper patch panel ports in a horizontal fashion left to right in numerical sequence.
- c. Label all (TR/TE) Workroom Floor locations with 12 inch high, contrasting color, block letters mounted on all visible sides. Example: IDF1-02 on all visible sides in contrasting color to cabinet.
- d. Label all (WRF) Workroom Floor CP-1 Nema-12 housing units with a minimum of (3") three inch, black, block letters.
- e. All CP-1 type terminations will be labeled alphabetically per each TR/TE. Example: TR/TE-01 first CP-1 would be labeled 01-A, the second CP-1 would be labeled 01-B, the third 01-C, etc. TR/TE-02's first CP-1 would be labeled 02-A, the second 02-B, etc.
- f. CP-1s will have the following Patch Panel Port assignments. Example: (01-A Ports 1-12), (01-B Ports 13-24) (01-C Ports 25-36), (01-D Ports 37-48), (01-E Ports 49-60) * Note CP-1 01-E begins on the second patch panel numerically numbered ports 49 – 96.
- g. Label Copper Patch Panel ports in the order the cables were terminated beginning with all CP type terminations, then T/O terminations.
 - 1) CP-1 (TR/TE # - Zone A, B, C – Port#'s) i.e. 01A-1-12, 01B-13-24, 01C-25-36, 01D-37-48, 01E-49-60 etc.
 - 2) T/O (TR/TE # - T/O # - Port #) i.e. 1-T1-37, 38, 39, 1-T2-40, 41, 42, 1-T3-43, 44, 45, etc.
- h. Label telecommunications outlet faceplate and CP location in the same manner as the patch panel.
2. Communications Cables:
 - a. Display cable identification number in black uppercase lettering on machine generated permanent adhesive self laminating label of contrasting color from cable sheath.
 - b. Place labels on each end of cable, maximum 6 inches from cable termination.
 - c. Follow ANSI/TIA/EIA-606A – Administration Standard for Commercial Telecommunications Infrastructure (Current Edition).
3. Fiber Optic Interconnect Centers: Display TR/TE, and cable strand identification numbers in uppercase lettering, or numbers on machine generated permanent adhesive label stock. Applies to TR/TE applications only.
 - a. Follow ANSI/TIA/EIA-606A – Administration Standard for Commercial Telecommunications Infrastructure (Current Edition)
- K. Cable Run Lengths: Route cables so that cable run length does not exceed recommended maximum distance.
 1. UTP cabling from the back of the patch panel to the Telecommunications Outlet (T/O) is limited to a maximum total run of 90m (295 feet) in Admin. areas and 70m (230 feet) on the work room floor. Any work room floor T/O locations that will need to exceed 230 feet will require prior USPS approval.
 2. UTP cable between back of patch panel and Types 1, 2 and 3 Consolidation Points or Multi-User Telecommunications Outlet Assembly are limited to a maximum total run of 70m (230 feet) per ANSI/TIA/EIA-568-C. Minimum cable run length between back of patch panel and Types 1, 2 and 3 Consolidation Points or Multi-User Telecommunications Outlet Assembly shall be 15m (49 feet) per ANSI/TIA/EIA-568-C.
 3. Cable conductors shall be continuous ("Homerun") from originating termination equipment to destination termination equipment.

3.3 INSTALLATION - COMPONENTS

- A. Cables: Furnish and install communications cables as specified, in accordance with Cable Pulling Schedules, manufacturer's published instructions, ANSI/TIA/EIA-568-C including all addendums and as indicated on Drawings.
 1. Dress cable to final location, remove sheath to point allowing splaying of conductor, and terminate. Make each termination uniform and precise. Hook and Loop "velcro" cable ties shall

be used for bundling and dressing all cabling. No nylon zip ties shall be used for cable bundling or attachment.

2. Maintain sheath integrity. Remove minimum amount of sheath required for termination up to a maximum of 1 inch.
3. Maintain manufacturer's twisting of wire pairs to termination point. Do not attempt to restore, modify, or add to manufacturer's twisting of cable. Do not untwist more than ½ inch of the stripped cable.
4. Label each end with a machine generated, self laminating label.
5. Mechanical couplers or splices not permitted in copper cabling.
6. A fiber optic service loop of sheathed fiber no less than 10 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 3 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturer's instructions.
7. When installing Armored Fiber Optic cabling, proper grounding techniques to ground the metallic member of the Armored Fiber Optic Cable must be maintained.

B. Fire Stopping

1. Fire stop penetrations of fire-resistive rated assemblies as specified in Section 078400 – Fire Stopping.
 - a. No through wall penetrations or conduit sleeves used for communications cabling will be Firestop sealed with a Silicone foam or other non-removable type sealant. The penetrations shall be firestopped to allow for ease of future access using intumescent putty.

3.4 CONSTRUCTION

A. Interface with Other Work:

1. Provide information to affected trades regarding requirements and responsibilities for preparation of Work of a particular trade for installation of Work installed under this Section.
2. Coordinate with Telephone Utility Company for interface of systems and required interconnections.

3.5 FIELD QUALITY CONTROL

A. Section 014000 – Quality Requirements: Field testing and inspection.

B. Testing and Certification Overview

1. The Contractor shall provide equipment and materials for the testing of all installed copper and fiber transmission media. The supplier shall employ Level III compliant test equipment that stores the test results in internal memory and produces test result reports. The supplier shall provide the USPS, test results in test equipment format (raw electronic). Supplier prepared spread sheets and PDF files are NOT ACCEPTABLE. If the USPS does not have the software to view the test result files the supplier shall provide the necessary software to view the files at no charge to the USPS. The test reports shall provide complete listings of all tested parameters and provide optional plots and graphs of all parameters in the cable tests.
 - a. The USPS technical representative may conduct random tests of copper and fiber cable with USPS test equipment as part of the final inspection. The Contractor shall re-terminate and retest any cable found to be defective.

- b. The Contractor shall provide all equipment and services necessary to secure and provide the USPS a system warranty. Inspect installation of cables and equipment during and at completion of installation.
- C. Copper Cable Testing
1. The Contractor shall perform tests on all installed Category 6 data wiring. Contractor test equipment used shall be Level III compliant. The Category 6 copper cable tester must test for the copper cable being installed. A generic Category 6 cable setting is not acceptable. Example: If "Superior Essex" Cat.6 CMR cable is utilized, the tester shall be setup to test for "Superior Essex" Cat.6 CMR cable and not a generic CAT.6 cable. Test parameters include, but are not limited to:
 - NEXT, NEXT @ Remote
 - Wire Map
 - Characteristic Impedance
 - Length
 - DC Loop Resistance
 - Propagation Delay
 - Return Loss (RL), RL @ Remote
 - Delay Skew
 - Attenuation
 - Attenuation-to-Crosstalk Ratio (ACR), ACR @ Remote
 - Power Sum ACR, PSACR @ Remote
 - ELFEXT, ELFEXT @ Remote
 - Power Sum ELFEXT, PSELFEXT @ Remote
 - Power Sum NEXT, PSNEXT @ Remote
 2. Cable test parameters shall be set to correct values for NVP and Test Limit (ANSI/TIA/EIA 568-C Category 6, Permanent Link).
 3. The copper wiring to be tested includes, but is not limited to:
 - CP wiring from to the TR/TE patch panel
 - Communications Box wiring from the MPE to the TR/TE patch panel
 - Telecommunications wiring
 4. Perform end-to-end tests of each 4-pair cable as follows:
 - a. Pair/conductor for proper pinouts and continuity.
 - b. Ground fault.
 - c. Proper termination, shorts, and crossed pairs.
 - d. Channel attenuation per ANSI/TIA/EIA-568-C, including all addendums.
 - e. Channel bi-directional worst case near end cross talk (NEXT) at frequencies up to 250 MHz, per ANSI/TIA/EIA-568-C, including all addendums.
 - f. Measured effective cable run length.
- D. Fiber Optic Cable Testing
1. The supplier shall perform Bi-directional testing on all installed fiber optic cabling. Supplier test equipment shall perform testing of fiber in accordance with the fiber type being tested, 50 micron laser optimized using the procedures outlined in ANSI/TIA/EIA-568-C.1 and ANSI/TIA/EIA-526-14-A, Method B for Multimode fiber, ANSI/TIA/EIA-526-7 for Singlemode fiber.
 - a. The fiber testers and test heads shall have passed calibration within one year of test date. Any calibration in excess of one year is not acceptable.
 2. Multimode fiber optic cable shall be tested bi-directionally at wavelengths of 850nm and 1300nm. Singlemode fiber optic cable shall be tested bi-directionally at 1310nm and 1550 nm.
 3. Cable tester test parameter shall be set to correct values for:
 - Actual manufacturer of 10Gb LOMF. Tester cannot be a generic 10Gb fiber type and must be specific to the manufacturer's model of fiber cable being tested.
 - Index of Refraction based on manufacturer specifications for cable type being tested..

- Quantity of adapters (typically 2).
 - Fiber Type.
 - Test Limit (ANSI/TIA/EIA/568-C).
4. The Supplier shall review test settings with the USPS technical representative. Supplier shall have cable specifications on site for USPS technical review to verify settings are correct on test equipment.
 5. Fiber optic cables shall pass all attenuation tests referenced to formulas presented in the listed standards.
 6. Perform end-to-end tests of each fiber optic backbone cable as follows (applies to TR/TE applications only):
 - a. Power meter, and light source tests per ANSI/TIA/EIA-568-C specification.
 - b. Optical Time Domain Reflectometer (OTDR) tests per ANSI TIA/EIA-568-C specification including all addendums.
 - c. Measured effective cable run length.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised:8/29/2013

END OF SECTION 27 05 00 00

SECTION 27 11 00 00 - MPF COMMUNICATIONS EQUIPMENT ROOM FITTINGS

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured cabling system components:
 - 1. Consolidated Computer Room (CCR).
 - 2. Telecommunications Room (TR) / Telecommunications Enclosure (TE)
 - 3. Telephone service entrance.
- B. Related Documents:
 - 1. Specified in Section 270500 – Common Work Results for Communications.
- C. Related Sections:
 - 1. Specified in Section 270500 – Common Work Results for Communications

1.2 REFERENCES

- A. Specified in Section 270500 – Common Work Results for Communications.

1.3 SUBMITTALS

- 1. Specified in Section 270500 – Common Work Results for Communications.

1.4 QUALITY ASSURANCE

- A. Specified in Section 270500 – Common Work Results for Communications.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 – Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS**2.1 CATEGORY 6, PATCH CORDS AND STATION CABLES**

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948
 2. Hubbell, Inc., Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 8. Leviton, Bothell, WA (800) 977-0190.
 9. Panduit, Tinley Park, IL (800) 777-3300.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Conductors: Straight through type 4 twisted pair minimum 24 AWG, stranded copper.
1. Terminated with male 8-pin modular plugs.
 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C, and all addendums for Category 6 cable performance specification.
 3. Nominal Impedance: 100 ohms plus or minus 15 percent.
 4. Match performance and impedance characteristics of the installed horizontal unshielded twisted pair cable.
 5. Contractor shall provide one electronic switch patch panel cable for every T/O or one for every three 8-pin modular connector. Provide 50% of cables 7-foot long and 50% of cables 10-foot long. Contractor shall provide manufacturer terminated patch cables. All copper patch cord colors shall be determined by Raleigh ITSC personnel. Patch cords within the "CCR" shall be lengthened as necessary to compensate for the distance separation of neighboring racks and yet eliminate unwanted slack.
 6. In addition to patch cords at the racks, provide Category 6 station cables from the telecommunications outlets to USPS furnished telephone handsets and personal computers. Provide 75 percent of cables 9 ft. – 0 in. long and 25 percent of cables 15 ft. – 0 in. long. Contractor shall provide one manufacturer terminal station cable for every T/O. Station cable colors shall be determined by Raleigh ITSC personnel.

2.2 CATEGORY 6 8-PIN MODULAR INSULATION DISPLACEMENT CONNECTORS (IDC)

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948
 2. Hubbell, Inc., Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 8. Leviton, Bothell, WA (800) 977-0190.
 9. Panduit, Tinley Park, IL (800) 777-3300.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Connector:
1. 8-pin modular, Category 6, non-keyed.
 2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.

3. Color: Selected by Contracting Officer.

2.3 CATEGORY 6 8-PIN MODULAR IDC "110" STYLE PATCH PANELS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. CommScope Uniprise, Claremont, NC (800) 544-1948
 2. Hubbell, Inc., Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 8. Leviton, Bothell, WA (800) 977-0190.
 9. Panduit, Tinley Park, IL (800) 777-3300.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Panels:
 1. Rack mounted 48 port 8-pin modular, Category 6, non-keyed.
 2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.
 3. Provide strain relief bar assemblies for rear copper terminations. Secure Cat. 6 cable with velcro straps. Plastic tie wraps are not acceptable.

2.4 WIRE MANAGEMENT PANELS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Chatsworth Products, Chatsworth, CA (818) 882-8595.
 2. CommScope Uniprise, Claremont, NC (800) 544-1948
 3. Homaco, Chicago, IL (888) 445-6226.
 4. Hubbell, Inc., Milford, CT (203) 882-4800.
 5. Molex Premise Networks, Harvard, MA (987) 772-5630.
 6. Belden, Richmond, IN (800) 235-3361.
 7. Ortronics, New London, CT (800) 934-5432.
 8. Siemon Company, Watertown, CT (860) 274-2523.
 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 10. Leviton, Bothell, WA (800) 977-0190.
 11. Panduit, Tinley Park, IL (800) 777-3300.
 12. Product options and substitutions. Substitutions: Permitted.
- B. Management Panels: Rack mounted with horizontally and vertically mounted split D-rings.
 1. Each horizontal wire management panel will be 3 1/2 inch high (2 Rack unit) x 19 inch wide for use between 48-port Category 6 patch panels.
 2. Management panels for use at top of equipment rack will be 3.5 inches high x 19 inches wide.
 3. Management panels for use between fiber optic rack mount interconnect center and PFE components shall be 1 3/4 inches high x 19 inches wide.

2.5 EQUIPMENT (RELAY) AND SERVER RACKS WITH CABLE CHANNELS.

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Chatsworth Products, Inc., Chatsworth, CA (818) 882-8595.
 2. CommScope Uniprise, Claremont, NC (800) 544-1948.
 3. Homaco, Inc., Chicago, IL (888) 446-6226.

4. Hubbell, Inc., Milford, CT (203) 882-4800.
5. Molex Premise Networks, Harvard, MA (987) 772-5630.
6. Ortronics Corporation, New London, CT (800) 934-5432.
7. Siemon Company, Watertown, CT (860) 274-2523.
8. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
9. Leviton, Bothell, WA (800) 977-0190.
10. Panduit, Tinley Park, IL (800) 777-3300.
11. Product options and substitutions. Substitutions: Requires Approval.

- B. Constructed of aluminum extrusion framework. Dimensions: 84 inch high x 3 inch deep x 19 inch wide. Double sided, 12/24 tapped holes with universal EIA rack unit spacing. Black or Aluminum finish.
- C. Vertical Cable Channels: Dimensions: 6 inch x 5 1/2 inch x 78 11/16 inch. Black or Aluminum finish. Attach to sides of relay racks. Must be able to cover and conceal patch cabling.

2.6 FIBER OPTIC PATCH CORDS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Corning Cable Systems, Hickory, NC (800) 743-2671.
 3. Hubbell, Inc., Milford, CT (203) 882-4800.
 4. Molex Premise Networks, Harvard, MA (987) 772-5630.
 5. Belden, Richmond, IN (800) 235-3361.
 6. Ortronics, New London, CT (800) 934-5432.
 7. Siemon Company, Watertown, CT (860) 274-2523.
 8. 3M Telecommunications, Austin, TX (800) 695-0447.
 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 10. Leviton, Bothell, WA (800) 977-0190.
 11. Panduit, Tinley Park, IL (800) 777-3300.
 12. Product options and substitutions. Substitutions: Not permitted.
- B. Fiber optic duplex SC/LC to LC/LC patch cords: Two strand tight buffered 50/125 laser optimized, 10-Gigabit Ethernet Compliant, "1500/500" multi-mode fiber optic cord.
 1. USPS to specify connector type for patch cords.
 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C including all addendums for fiber optic patch cable performance specification.
 3. Patch cords will be factory made and tested
 4. Fiber optic patch cord terminations and quantities shall be specified by USPS prior to procurement.
 5. Match performance characteristics of installed fiber optic backbone.

2.7 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.2 INSTALLATION - COMPONENTS

- A. Patch Panels: Install 48-port, 8-pin module Category 6) patch panels at main cross-connect and horizontal cross-connect for termination of cables installed as part of Work of this Section.
 1. Install patch panels inside wall mounted data enclosure for retrofit column mounted TE applications. Install patch panels on floor mounted 19 inch wide by 84 inch high open relay racks at CCR and TR room locations.
 2. Furnish and install patch panels with cable designation strips.
 3. Furnish and install wire management panel on rack or cabinet mounting rails above and below each patch panel for all locations.
 4. Furnish and install termination and cable support bars sufficient to maintain UTP bend radius at rear of panels.
 5. Terminate all 4 pairs of each horizontal 4 pair cable to each 8 pin ("T568A") patch panel port.
 6. Consolidation Points (CP-1s) on the (WRF) workroom floor designated to provide LAN connectivity for Mail Processing Equipment (MPE) shall not be used in the calculation for the voice backbone cabling. Column T/Os and administrative area T/Os being serviced from WRF TR/TE's shall be used to determine if additional voice backbone requirements are needed.
 7. Consolidation Point cabling will terminate starting on the first Category 6 copper patch panel followed by a minimum of 24 spare ports for future CP locations. T/O cabling will terminate after the last spare port in consecutive order (1, 2, 3...)
 8. Consolidation Points (CP-1s, CP-2s, & CP-3s) used within the administrative (ADMIN) areas shall be counted to determine the number of voice backbone pairs required.
- B. CCR (Consolidated Computer Room):
 1. Furnish and install three each 4-pair Category 6 UTP cables from each office area and workroom column mounted T/O (telecommunications outlet) to Consolidated Computer Room as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Type 1 Consolidation Point as indicated on drawings. Terminate 48 each 4-pair Category 6 UTP cables from each Type 2 or Type 3 Consolidation Points as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Admin. area CP-1.
 2. Terminate each cable to 8-pin modular connector (568-A) at workstation and to rack mounted patch panels at Consolidated Computer Room. Provide a minimum of a 8 to 10 foot service loop, in figure eight coil, for all copper cables.
 3. Furnish, install, and ground, floor mounted, 84 inch high x 3 inch deep x 19 inch wide relay racks shoulder-to-shoulder separated by 6 inch vertical wire managers perpendicular to wall housing plywood backboards.
 - a. Mount relay racks in a "side by side" fashion with one vertical wire management channel between each rack, and one wire management channel on outside side rail of both end racks.
 - b. Allow minimum 2 empty racks for PFE (Postal Furnished Equipment) data components. If TR/TEs are present, place these racks on each side of the rack containing fiber optic patch panels. (Consult USPS for room exact rack placements.)
 - c. Sections of 12 inch wide ladder tray/basket tray shall be mounted to top of relay racks and extend to plywood backboard or other ladder rack/basket tray for each relay rack installed. This ladder rack serves as additional support for relay racks as well as cable routing from relay rack to backboard.
 - d. Each rack will receive a separate #6 AWG ground wire home run to the telecommunications main grounding busbar (TMGB).
 - e. Each rack shall be equipped with a factory manufactured power strip equipped with (10) NEMA5-15R receptacles.
 4. Furnish and install a maximum of two (2) 4 ft. x 8 ft. plywood backboards along walls behind and perpendicular to CCR racks.
 - a. Plywood: 48 inch x 96 inch x 3/4-inch, fire rated, void-free, smooth side out.
 - b. Install plywood with long dimension in vertical orientation.
 - c. Field paint with white or gray enamel fire resistant paint prior to installation of telephone equipment.

- d. Furnish and install an industry approved main grounding buss bar and attach #6 AWG ground using 2 hole compression type fittings. All metallic components of CCR shall be grounded to the installed Telecommunication Main Grounding Busbar (TMGB).
 5. Install 12 inch wide ladder rack/basket tray with 2 inch side bars the entire width of plywood back boards at 7'-6" to 8 feet AFF (Racks are 84 inches high).
 - a. Furnish and install 12 inch wide ladder rack/basket tray with 2 inch side bars at 7'-6" to 8 feet AFF between plywood backboards and relay racks (racks are 84 inches high). All sections of ladder rack and or basket tray shall be joined with manufacturer approved devices. No sections of ladder rack or basket tray shall be zip tied together. All sections of ladder rack and/or basket tray will be grounded or bonded.
 - b. Provide (2) factory manufactured cable drop out fittings at each rack within the "CCR".
 6. Install number of Category 6 48-port patch panels in relay rack(s) that the 4-pair cables serving only the CCR are to be terminated. It is recommended that Telecommunications Outlets within the CCR be installed using the ladder rack/basket tray system and terminated in work-boxes attached to the ladder rack/basket tray. USPS IT will specify final termination points.
 7. Patch Cords: Furnish 4-pair Category 6 UTP patch cords. Provide one patch cord for every triplex T/O or one cord for every three 8-pin modular connectors.
 8. Fiber Optic Patch Cords: Furnish duplex fiber optic patch cords for each TR/TE, terminations, quantities, and lengths are to be determined by USPS. Provide duplex cords for 2/3 of the fiber optic termination. Example: 24 strands of fiber terminated at each rack-mount fiber-optic interconnect center requires 8 duplex patch cords.
 9. A fiber optic service loop of sheathed fiber no less than 20 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 10 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturers' instructions.
 10. Fiber Optic Patch Cords: Furnish 50 percent two-meter and 50 percent five-meter duplex SC/LC and LC/LC fiber optic patch cords (Quantities and additional lengths are to be coordinated with USPS prior to procurement.) Provide duplex 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords for 2/3 of the fiber optic terminations. Example: 24 strands of fiber terminated at each rack-mount fiber-optic interconnect center requires 8 duplex patch cords.
 11. Provide central uninterruptible power supply correctly sized for the networking equipment utilized. All UPS outlets shall be red/orange in color.
 12. All metallic ladder tray, basket tray, equipment racks or enclosures shall be bonded and grounded using a #6 AWG stranded ground wire with green insulation using 2 hole compression type fittings or ground fitting approved for basket tray installation. All painted surfaces shall be burnished for paint removal to achieve maximum ground connection.
 13. All grounding in CCR shall be made at the telecommunications main grounding busbar (TMGB) installed by Contractor.
 14. Provide a minimum of (300) 12/24 mounting screws per CCR, TR, TE rack for the installation of USPS PFE active electronic components.
- C. Telecommunications Room (TR):
1. Furnish and install three each 4-pair Category 6 UTP cables from each office area and workroom column mounted T/O (telecommunications outlets) to Telecommunications Room as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Type 1 Consolidation Point to Telecommunications Room as indicated on drawings. Terminate 48 each 4-pair Category 6 UTP cables from each Type 2 or Type 3 Consolidation Points to Telecommunications Room as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Admin. area CP-1.
 2. Terminate each cable to 8-pin modular connector at workstation and to patch panels in Telecommunications Room.

3. Provide a minimum 8 to 10 foot service loop in a figure eight coil for all copper cables.
 4. Furnish, install, and ground, floor mounted, 84 inch high x 3 inch deep x 19 inch wide relay racks shoulder-to-shoulder, separated by 6 inch vertical wire managers, perpendicular to wall housing plywood backboards.
 - a. Racks will be used to house wiring, Contractor-provided rack mountable fiber interconnect center and U.S. Postal Service provided data interface equipment.
 - b. Allow a minimum (16) empty rack units for PFE data equipment.
 - c. Provide (1) factory manufactured cable drop out fitting at each rack within the "TR".
 - d. Each rack shall be equipped with a factory manufactured power strip equipped with (10) NEMA5-15R receptacles. Mount power strip above the UPS unit.
 5. Furnish and install one rack mounted, 24 strand fiber optic interconnect center at top of rack.
 6. Furnish and install one (1) plywood backboard on wall of Telecommunications Room.
 - a. Plywood: 48 inch x 96 inch x 3/4 inch, fire rated, void-free, smooth side out.
 - b. Field paint with white or gray enamel fire resistant paint prior to installation of telephone equipment.
 - c. Install plywood with long dimension in vertical orientation.
 - d. Each rack shall be equipped with separate #6 AWG ground conductor homerun to the Telecommunications Ground Bar (TGB).
 - e. Furnish and install an industry approved copper grounding busbar and attach #6 AWG ground conductor from approved electrical ground using 2 hole compression type fittings. All metallic components of the "TR" shall be grounded to the installed TGB.
 7. Patch Cords: Furnish 4-pair Category 6 UTP patch cords. 50 percent of cords will be 3 foot, 50 percent will be 5 foot in length, based on number of T/O (Telecommunications Outlets) in Project unless other lengths are determined necessary by the designer. Provide one patch cord for every triplex T/O or one cord for every three 8-pin modular connectors.
 8. Fiber Optic Patch Cords: Furnish 50 percent two-meter and 50 percent three-meter duplex SC/LC fiber optic patch cords. (Quantities and additional lengths are to be coordinated with USPS prior to procurement.) Provide duplex 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords for 2/3 of the fiber optic terminations. Example: 24 strands of fiber terminated at each rack-mount fiber-optic interconnect center requires 8 duplex patch cords. USPS will specify connector type.
 9. A fiber optic service loop of sheathed fiber no less than 20 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 10 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturers' instructions.
 10. Provide a minimum 1.5kVA uninterruptible rack mountable power supply with 30 minute battery reserve in each TR.
 11. Provide a minimum of (300) 12/24 screws per TR for the installation of USPS PFE active electronic components.
- D. Telecommunications Enclosure for Column Mounted Applications
1. Constructed of steel or aluminum with Plexiglas front doors. Cabinet must be rated NEMA-12, designed for front or rear access, have forced fan with filtration for intake and exhaust ventilation, and adjustable vertical mounting rails. The intake fan with filter will be mounted 5 inches from the top center of the rear metal door and a filtered louvered exhaust vent will be mounted 4 inches from the bottom center of the rear door. The fan must be oriented to blow filtered air into the cabinet to create a positive pressure within the cabinet and will be plugged into the power strip (min. 10 outlet NEMA 5-15R with power switch guard) mounted inside of the cabinet. Dimensions: 86 inches high x 24 inches deep x 24 inches wide with 19 inch EIA rack width. Include a rack mountable 1.5kVA uninterruptible power supply with 30 minute backup and a 6-foot power cord mounted on the back rail of the cabinet. The Telecommunications Enclosure and the installation of the enclosure must comply with area seismic zone rating.

2. Furnish and install three each 4-pair Category 6 UTP cables from each office area and workroom column mounted T/O (telecommunications outlet) to Telecommunications Enclosure as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Type 1 Consolidation Point to Telecommunications Enclosure as indicated on drawings. Terminate 48 each 4-pair Category 6 UTP cables from each Type 2 or Type 3 Consolidation Points to Telecommunications Enclosure as indicated on drawings. Terminate 12 each 4-pair Category 6 UTP cables from each Admin. area CP-1
3. Terminate each cable to 8-pin modular connector at workstation and to cabinet/rack mounted patch panels at TE.
4. Provide a minimum 8 to 10 foot service loop in a figure eight coil for all copper cables.
5. Furnish and install a NEMA 12 Cabinet: 86 inches high x 24 inches deep x 24 inches wide with 19 inch EIA rack width by bolting through of the cabinet to a platform which is attached to the building column at 9' AFF. Platform shall be designed to support a minimum of 1000 lbs., be firmly connected to the column and or the overhead building support structure and shall meet all codes and seismic requirements. A structural engineer approved platform solution shall be provided to the USPS by the vendor.
 - a. Cabinet will be used to house wiring, Contractor-provided rack mountable fiber interconnect center and U.S. Postal Service provided data interface equipment.
 - b. Allocate 16 RU's within the rack for PFE and provide a second rack if required. Two units can be "ganged" together (inner side panels removed and doors adjusted to open from center) to form one TE for workroom floor applications. The doors shall be adjusted to open in opposite directions from the center. Cabinets shall be bolted together in such a manner to maintain the NEMA-12 compliance, and the inner side panels will be removed from each unit creating an open pathway between cabinets. All copper connections will be placed in the left-most cabinet and the fiber along with the 1.5 kVA UPS will be installed in the right-most cabinet.
 - c. Provide appropriate number of conduit risers equipped with 90 degree bends and bushings for incoming backbone and outgoing horizontal cables. Conduit risers shall be minimum 2 inch diameter and sized for 40 percent fill.
6. Furnish and install one rack/cabinet mounted, 24 strand fiber optic interconnect center at top of cabinet.
7. Furnish and install a minimum #6 ground to TGB.
8. All metallic ladder tray, basket tray, equipment racks or enclosures shall be bonded and grounded using a #6 AWG stranded ground wire with green insulation using 2-hole compression type fittings or ground fitting approved for basket tray installation. All painted surfaces shall be burnished for paint removal to achieve maximum ground connection.
9. Grounding and bonding of all contractor-provided hardware and cabling must be completed in accordance with the TIA/EIA-607A specifications as well as the NFPA 70 NEC and any applicable codes. A #6 AWG THHN ground wire shall be installed from approved electrical ground to contractor supplied TGB. Attachment to busbar to be performed by Contractor.
10. A fiber optic service loop of sheathed fiber no less than 20 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 10 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturers' instructions.
11. Provide a minimum 1.5kVA uninterruptible power supply with 30 minute battery reserve rack mounted within each TE.
12. Install conduit/EMT through roof of cabinet to allow cable entry as needed. Seal openings with an intumescent fire-stop putty when all cables have been installed.
13. Patch Cords: Furnish 4-pair Category 6 UTP patch cords. 50 percent of cords will be 3 foot, 50 percent will be 5 foot in length, based on number of T/O (Telecommunications Outlets) in Project unless other lengths are determined necessary by the designer. Provide one patch cord for every triplex T/O or one cord for every three 8-pin modular connectors.

14. Fiber Optic Patch Cords: Furnish 50 percent two-meter and 50 percent three-meter duplex SC/LC fiber optic patch cords (Quantities and additional lengths are to be coordinated with USPS prior to procurement.) Provide duplex 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords for 2/3 of the fiber optic terminations. Example: 24 strands of fiber terminated at each rack-mount fiber-optic interconnect center requires 8 duplex patch cords. USPS will specify connector type.
15. Provide a minimum of (300) 12/24 screws for the installation of USPS PFE active electronic components.
16. Maximum horizontal cabling distances shall not exceed 230 feet for both standard Telecommunications Outlets and Consolidation Points. This horizontal distance is to include all vertical distances plus required service loops. Total workroom floor coverage is required when designing the TE placements throughout the workroom floor environment.

3.3 CONSTRUCTION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.4 FIELD QUALITY CONTROL

- A. Specified in Section 270500 – Common Work Results for Communications.

NOTE TO SPECIFIER

Use this Outline Specification Section for Customer Service Facilities only.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured wiring system components:
 - 1. Telecommunications Equipment Room (ER) Equipment Rack(s).
 - 2. Telecommunications Room (TR) Equipment Rack(s).
 - 3. Telephone service entrance.
- B. Related Documents:
 - 1. Specified in Section 270500 – Common Work Results for Communications.
- C. Related Sections:
 - 1. Specified in Section 270500 - Common Work Results For Communications.

1.2 REFERENCES

- A. Specified in Section 270500 – Common Work Results for Communications.

1.3 SUBMITTALS

- A. Specified in Section 270500 – Common Work Results for Communications.

1.4 QUALITY ASSURANCE

- A. Specified in Section 270500 – Common Work Results for Communications.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

2.1 CATEGORY 6, PATCH CORDS AND STATION CABLES

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. CommScope Uniprise, Claremont, NC (800) 544-1948
2. Hubbell, Inc., Milford, CT (203) 882-4800.
3. Molex Premise Networks, Harvard, MA (987) 772-5630.
4. Belden, Richmond, IN (800) 235-3361.
5. Ortronics, New London, CT (800) 934-5432.
6. Siemon Company, Watertown, CT (860) 274-2523.
7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
8. Leviton, Bothwell, WA (800) 977-0190.
9. Panduit, Tinley Park, IL (800) 777-3300.
10. Product options and substitutions. Substitutions: Not permitted.

B. Conductors: Straight through type 4 twisted pair -minimum 24 AWG, stranded copper.

1. Terminated with male 8-pin modular plugs.
2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C, and all addendums for Category 6 cable performance specification.
3. Nominal Impedance: 100 ohms plus or minus 15 percent.
4. Match performance and impedance characteristics of the installed horizontal unshielded twisted pair cable.
5. Contractor shall provide one electronic switch patch cable for every "T/O" or one for every three 8-pin modular connector. Provide 50% of cables 3'-0" long and 50% of cables 5'-0" long. Contractor shall provide manufacturer terminated patch cables. All copper patch cord colors shall be determined by Raleigh ITSC personnel.
6. In addition to patch cords at the racks, provide Category 6 station cables from the telecommunications outlets to USPS furnished telephone handsets and personal computers. Provide 75 percent of cables 9 ft. – 0 in. long and 25 percent of cables 15 ft. – 0 in. long. Contractor shall provide one manufacturer terminal station cable for every T/O. Station cable colors shall be determined by Raleigh ITSC personnel.

2.2 CATEGORY 6, 8-PIN MODULAR INSULATION DISPLACEMENT CONNECTORS (IDC)

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. CommScope Uniprise, Claremont, NC (800) 544-1948
2. Hubbell, Inc., Milford, CT (203) 882-4800.
3. Molex Premise Networks, Harvard, MA (987) 772-5630.
4. Belden, Richmond, IN (800) 235-3361.
5. Ortronics, New London, CT (800) 934-5432.
6. Siemon Company, Watertown, CT (860) 274-2523.
7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
8. Leviton, Bothwell, WA (800) 977-0190.
9. Panduit, Tinley Park, IL (800) 777-3300.
10. Product options and substitutions. Substitutions: Not permitted.

B. Connector:

1. 8-pin modular, Category 6, non-keyed.
2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.
3. Color: Selected by Contracting Officer.

2.3 CATEGORY 6, 8-PIN MODULAR IDC "110" STYLE PATCH PANELS

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. CommScope Uniprise, Claremont, NC (800) 544-1948
2. Hubbell, Inc., Milford, CT (203) 882-4800.

3. Molex Premise Networks, Harvard, MA (987) 772-5630.
4. Belden, Richmond, IN (800) 235-3361.
5. Ortronics, New London, CT (800) 934-5432.
6. Siemon Company, Watertown, CT (860) 274-2523.
7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
8. Leviton, Bothell, WA (800) 977-0190.
9. Panduit, Tinley Park, IL (800) 777-3300.
10. Product options and substitutions. Substitutions: Not permitted.

B. Panels:

1. Rack mounted 48 port 8-pin modular, Category 6, non-keyed.
2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.
3. Provide strain relief bar assemblies for rear copper terminations. Secure Cat. 6 cable with velcro straps. Plastic tie wraps are not acceptable.

2.4 WIRE MANAGEMENT PANELS

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following

1. Chatsworth Products, Inc., Chatsworth, CA (800) 834-4969.
2. CommScope Uniprise, Claremont, NC (800) 544-1948
3. Homaco, Chicago, IL (888) 445-6226.
4. Hubbell, Inc., Milford, CT (203) 882-4800.
5. Molex Premise Networks, Harvard, MA (987) 772-5630.
6. Belden, Richmond, IN (800) 235-3361.
7. Ortronics, New London, CT (800) 934-5432.
8. Siemon Company, Watertown, CT (860) 274-2523.
9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
10. Leviton, Bothell, WA (800) 977-0190.
11. Panduit, Tinley Park, IL (800) 777-3300.
12. Product options and substitutions. Substitutions: Permitted.

B. Management Panels: Rack mounted with horizontally and vertically mounted split D-rings.

1. Each horizontal wire management panel will be 3.5 inch high (2 Rack unit) x 19 inch wide for use between 48-port Category 6 patch panels.
2. Management panels for use at top of equipment rack will be 3.5 inches high x 19 inches wide.
3. Management panels for use between fiber optic rack mount interconnect center and PFE components shall be 1 3/4 inches high x 19 inches wide.

2.5 EQUIPMENT (RELAY) AND SERVER RACKS WITH CABLE CHANNELS

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. Chatsworth Products, Inc., Chatsworth, CA (800) 834-4969.
2. CommScope Uniprise, Claremont, NC (800) 544-1948.
3. Homaco, Inc., Chicago, IL (888) 446-6226.
4. Hubbell, Inc., Milford, CT (203) 882-4800.
5. Molex Premise Networks, Harvard, MA (987) 772-5630.
6. Ortronics Corporation, New London, CT (800) 934-5432.
7. Siemon Company, Watertown, CT (860) 274-2523.
8. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
9. Leviton, Bothell, WA (800) 977-0190.
10. Panduit, Tinley Park, IL (800) 777-3300.
11. Product options and substitutions. Substitutions: Permitted upon USPS approval.

- B. Constructed of aluminum extrusion framework. Dimensions: 84 inch high x 3 inch deep x 19 inch wide. Double sided, 12/24 tapped holes with universal EIA rack unit spacing. Black or Aluminum finish.
- C. Vertical Cable Channels: Dimensions: 6 inch x 5 1/2 inch x 78-11/16 inch. Black or Aluminum finish. Attach to sides of relay racks. Must be able to cover and conceal patch cabling.

2.6 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in 270500 – Common Work Results for Communications.

3.2 INSTALLATION - COMPONENTS

- A. Patch Panels: Install 48-port, 8-pin module, category 6 patch panels at main cross-connect and horizontal cross-connect for termination of cables installed as part of Work of this Section.
 1. Install patch panels on floor mounted 19 inch wide by 84 inch high racks.
 2. Furnish and install patch panels with cable designation strips.
 3. Furnish and install wire management panel on rack mounting rails above and below each patch panel for all locations.
 4. Furnish and install termination and cable support bars sufficient to maintain UTP bend radius at rear of panels.
 5. Terminate all 4 pairs of each horizontal 4 pair cable to each 8 pin "T568A" patch panel port.
- B. Telecommunications Equipment Room (ER):
 1. Furnish and install three each 4-pair Category 6 UTP cables from each office area and workroom column mounted T/O (telecommunications outlet) to Telecommunications Equipment Room as indicated on drawings.
 2. Terminate each cable to 8-pin modular connector (568-A) at workstation and to rack mounted patch panels at Telecommunications Equipment Room (ER). Provide a minimum 10 foot service loop, in figure eight coil, for all copper cables.
 3. Furnish, install, and ground, floor mounted, 84 inch high x 3 inch deep x 19 inch wide relay racks shoulder-to-shoulder separated by vertical patch cord managers perpendicular to wall housing plywood backboards.
 - a. Mount relay racks in a "side by side" fashion with one vertical wire management channel between each rack, and one wire management channel on outside side rail of both end racks.
 - b. Allow minimum of (24) empty rack units for PFE (Postal Furnished Equipment) data components. (Consult USPS for room exact rack placements.)
 - c. Sections of 12 inch wide ladder or basket tray shall be mounted to top of relay rack(s) and extend to plywood backboard. This tray serves as additional support for relay racks as well as cable routing from relay rack to backboard. All sections of ladder rack and or basket tray shall be joined with manufacturer approved devices.
 - d. Provide (2) factory manufactured cable drop out fittings at each rack within the "ER".
 - e. Each rack shall be equipped with separate #6 AWG ground conductor homerun to the TMGB.

- f. Each rack shall be equipped with a factory manufactured power strip equipped with (10) NEMA5-15R receptacles. Mount power strip above the UPS unit.
4. Furnish and install a maximum of two (2) 4 ft. x 8 ft. plywood backboard(s) along wall perpendicular to ER rack(s).
 - a. Plywood: 48-inch x 96-inch x 3/4-inch void-free, smooth side out.
 - b. Install plywood with long dimension in vertical orientation.
 - c. Field paint with white or gray enamel fire resistant paint prior to installation of telephone equipment.
 - d. Furnish and install an industry approved main grounding copper busbar and #6 AWG ground conductors using 2 hole compression type fittings. All metallic components of ER shall be grounded to installed (TMGB) Telecommunication Main Grounding Busbar..
5. Provide a minimum 3kVA uninterruptible power supply with 30 minute battery reserve rack mounted in the Telecommunications Equipment Room (ER).
6. All metallic ladder tray, basket tray, equipment racks and enclosures shall be bonded and grounded using a #6 AWG stranded ground wire with green insulation using 2 hole compression type fittings or ground fitting approved for the installation. All painted surfaces shall be burnished for paint removal to achieve maximum ground connection.
7. All grounding in ER shall be made at TMGB installed by the contractor.
8. Provide a minimum of (300) 12/24 screws per ER rack for the installation of USPS PFE active electronic components.

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 sq. ft. and will not require fiber-optic backbone cabling. Add paragraphs 3.2B.10., 11 & 12 below if Fiber-Optic Backbone Cabling is deemed necessary.

9. A fiber optic service loop of sheathed fiber no less than 20 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 10 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturers' instructions.
10. When installing Armored Fiber Optic cabling, proper grounding techniques to ground the metallic member of the Armored Fiber Optic Cable must be maintained.
11. Fiber Optic Patch Cords: Furnish 50 percent two-meter and 50 percent three-meter duplex SC/LC and LC/LC fiber optic patch cords (Quantities and additional lengths are to be coordinated with USPS prior to procurement.) Provide duplex 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords for 2/3 of the fiber optic terminations. Example: 24 strands of fiber terminated at each rack-mount fiber-optic interconnect center requires 8 duplex patch cords.

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 sq. ft. and will not require Satellite Telecommunication Rooms. Add Section 3.2C. below if Telecommunications Room(s) are deemed necessary.

C. Telecommunications Room (TR):

1. Furnish and install three each 4-pair Category 6 UTP cables from each office area and workroom column mounted T/O (telecommunications outlets) to Telecommunications Room (TR) as indicated on drawings.
2. Terminate each cable to 8-pin modular connector at workstation and to patch panels in Telecommunications Room. Provide a minimum 10 foot service loop for all copper cables.

3. Furnish, install, and ground, floor mounted, 84 inch high x 3 inch deep x 19 inch wide relay racks shoulder-to-shoulder, separated by 6 inch vertical wire managers, perpendicular to wall housing plywood backboards.
 - a. Rack used to house wiring Contractor-provided rack mounted 24 strand fiber interconnect center, and U.S. Postal Service provided data interface equipment.
 - b. Allow minimum 16 rack units empty space for PFE data equipment.
 - c. Provide (1) factory manufactured cable drop out fitting at each rack within the "TR".
 - d. Each rack shall be equipped with a factory manufactured power strip equipped with (10) NEMA5-15R receptacles. Mount power strip above the UPS unit.
4. Furnish and install one rack mounted, 24 strand, fiber optic interconnect center at top of rack.
- 5.
6. Furnish and install one (1) plywood backboard on one wall of Telecommunications Closet.
 - a. Plywood: 48-inch x 96-inch x 3/4-inch void-free, smooth side out.
 - b. Install plywood with long dimension in vertical orientation.
 - c. Field paint with white or gray enamel fire resistant paint prior to installation of telephone equipment.
 - d. Each rack shall be equipped with separate #6 AWG ground conductor homerun to the TGB.
 - e. Furnish and install an industry approved copper grounding busbar and attach #6 AWG ground conductor from approved electrical ground using 2 hole compression type fittings. All metallic components of the "TR" shall be grounded to the installed Telecommunications Ground Bar (TGB).
7. Patch Cords: Furnish 4-pair Category 6 UTP patch cords. 50 percent of cords will be three foot, 50 percent will be five foot in length, based on number of T/O (Telecommunications Outlets) in Project unless other lengths are determined necessary by the designer. Provide one patch cord for every triplex T/O or one cord for every three 8-pin modular connectors.
8. Fiber Optic Patch Cords: Furnish 50 percent two-meter and 50 percent three-meter duplex SC/LC fiber optic patch cords. (Quantities and additional lengths are to be coordinated with USPS prior to procurement.) Provide duplex 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords for 2/3 of the fiber optic terminations. Example: 24 strands of fiber terminated at rack-mount fiber-optic interconnect center requires 8 duplex patch cords.
9. A fiber optic service loop of sheathed fiber no less than 20 feet at each end of a fiber optic cable shall be installed at each termination point. All service loops shall be installed so that the minimum bend radius (10 times the outside diameter of the fiber) shall not be exceeded. All service loops shall be installed outside of the fiber optic termination housing. Once the fiber reaches the entrance point of the fiber optic enclosure, there shall be no less than 10 feet of unsheathed fiber installed neatly in the fiber optic storage tray prior to terminations being installed. Unsheathed fiber shall be installed in the storage tray per the fiber optic enclosures manufacturers' instructions.
10. Provide a minimum 1.5kVA uninterruptible power supply with 30 minute battery reserve rack mounted in each TR.
11. Provide a minimum of (300) 12/24 screws per TR for the installation of USPS PFE active electronic components.

3.3 CONSTRUCTION

- A. Specified in 270500 – Common Work Results for Communications.

3.4 FIELD QUALITY CONTROL

- A. Specified in 270500 – Common Work Results for Communications.

SECTION 27 13 00 00 - MPF COMMUNICATIONS BACKBONE CABLING**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured cabling system components:
 - 1. Communication cable.
 - 2. Termination equipment.
 - 3. Patching equipment.
- B. Related Documents:
 - 1. Specified in Section 270500 – Common Work Results for Communications.
- C. Related Sections:
 - 1. Specified in Section 270500 – Common Work Results for Communications

1.2 REFERENCES

- A. Specified in Section 270500 – Common Work Results for Communications.

1.3 SYSTEM DESCRIPTION

- A. Specified in Section 270500 – Common Work Results for Communications.

1.4 SUBMITTALS

- A. Specified in Section 270500 – Common Work Results for Communications.

1.5 QUALITY ASSURANCE

- A. Specified in Section 270500 – Common Work Results for Communications.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 – Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

2.1 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

2.2 NEMA-12 ENCLOSED DATA CABINETS FOR COLUMN MOUNTED TE APPLICATIONS ON WORKROOM FLOOR

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Rittal, Springfield, OH (800) 477-4000.
 2. Hoffman, 2100 Hoffman Way, Anoka, MN (763) 421-2240.
 3. Bud Industries, PO Box 998, Willoughby, OH (440) 946-3200.
 4. Damac Products, Inc., 1-888-949-2289.
 5. Product options and substitutions. Substitutions: Requires Approval.
- B. Constructed of steel or aluminum with Plexiglas front doors. Cabinet must be rated NEMA-12, designed for front or rear access, have forced fan with filtration for intake and exhaust ventilation, and adjustable vertical mounting rails. The intake fan with filter will be mounted 5 inches from the top center of the rear metal door and a filtered louvered exhaust vent will be mounted 4 inches from the bottom center of the rear door. The fan must be oriented to blow filtered air into the cabinet to create a positive pressure within the cabinet and will be plugged into the power strip (min. 6 outlet NEMA 5-15R with power switch guard) mounted inside of the cabinet. Dimensions: 86 inches high x 24 inches deep x 24 inches wide with 19 inch EIA rack width. Include a rack mountable 1.5kVA uninterruptible power supply with 30 minute backup and a 6-foot power cord mounted on the back rail of the cabinet. The installation of the Telecommunications Enclosure must comply with area seismic zone rating.
- C. If required, two units shall be "ganged" together to form one TE for work room floor applications. Cabinets shall be bolted through the bottom and mounted directly to the platform, which is attached to the building support column at minimum 9' AFF. The doors to be adjusted to open in opposite directions from the center. Cabinets shall be bolted together in such a manner to maintain NEMA 12 compliance, and the inner side panels will be removed from each unit creating an open pathway between cabinets. All copper connections will be placed in the left-most cabinet and the fiber along with the 1.5 KVA UPS will be installed in the right-most cabinet.

2.3 6, 12, 24, 48 AND 96 STRAND ARMORED TIGHT BUFFERED 50/125 MICRON, LASER-OPTIMIZED, 10-GIGABIT-ETHERNET-COMPLIANT, "1500/500", MULTI-MODE FIBER OPTIC BACKBONE CABLING.

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Berk-Tek, Inc., New Holland, PA (800) 237-5835.
 2. CommScope Uniprise, Claremont, NC (800) 544-1948.
 3. Corning Cable Systems, Hickory, NC (800) 743-2671.
 4. Draka Comteq, Franklin, MA (888) 541-7100.
 5. General Cable, Highland Heights, KY (800) 424-5666.
 6. Mohawk/CDT, Leominster, MA (978) 537-9961.
 7. Belden, Richmond, IN (800) 235-3361.
 8. Superior Essex, Atlanta, GA (800) 685-4887.
 9. Product options and substitutions. Substitutions: Substitutions require approval.

- B. Fiber Type: 6, 12, 24, 48 and 96 strand armored tight buffered 50/125 micron, laser-optimized, 10-Gigabit-Ethernet-Compliant, "1500/500" multi-mode fiber optic cable.
 - 1. Individually insulated plenum rated strands under common plenum rated sheath unless entire cable is contained within conduit/EMT or if area where cable is installed is not considered a return air plenum according to any applicable codes.
 - 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C including all addendums for fiber optic cable performance specification.

2.4 FIBER OPTIC RACK MOUNT INTERCONNECT CENTER

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 - 2. Corning Cable Systems, Hickory, NC (800) 743-2671.
 - 3. Hubbell, Inc., Milford, CT (203) 882-4800.
 - 4. Molex Premise Networks, Harvard, MA (987) 772-5630.
 - 5. Belden, Richmond, IN (800) 235-3361.
 - 6. Ortronics, New London, CT (800) 934-5432.
 - 7. Siemon Company, Watertown, CT (860) 274-2523.
 - 8. 3M Telecommunications, Austin, TX (800) 695-0447.
 - 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 - 10. Product options and substitutions. Substitutions: Not permitted.
- B. Enclosure connector and adapter panels:
 - 1. SC type Laser Optimized connectors
 - 2. 12 port coupler panels with laser optimized SC adapters.
 - 3. Each rack mount enclosure used in CCR will be 1.75 inches (1 RU) with (2) 12-Port SC/SC style laser optimized coupler panels and house the backbone fiber. Each individual TR/TE will receive a dedicated rack mount enclosure. Each enclosure will be separated by a 1RU wire manager.
 - 4. Rack mount enclosure used in TR/TE locations will be 1.75 inches (1 RU) with (2) 12-Port SC/SC style laser optimized coupler panels. Supply one (1) 1RU wire manager directly below the enclosure.
 - 5. Complies with ANSI/TIA/EIA-568-C specification.

2.5 FIBER OPTIC PATCH CORDS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 - 2. Corning Cable Systems, Hickory, NC (800) 743-2671.
 - 3. Hubbell, Inc., Milford, CT (203) 882-4800.
 - 4. Molex Premise Networks, Harvard, MA (987) 772-5630.
 - 5. Belden, Richmond, IN (800) 235-3361.
 - 6. Ortronics, New London, CT (800) 934-5432.
 - 7. Siemon Company, Watertown, CT (860) 274-2523.
 - 8. 3M Telecommunications, Austin, TX (800) 695-0447.
 - 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 - 10. Product options and substitutions. Substitutions: Not permitted.
- B. Fiber optic duplex tight buffered 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords.
 - 1. Terminated with SC/LC connectors
 - 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C including all addendums for fiber optic patch cable performance specification.

3. Fiber optic patch cord terminations and quantities shall be coordinated with U.S. Postal Service personnel prior to procurement.
4. Match performance characteristics of installed fiber optic backbone.

2.6 CATEGORY-6 12 PORT MODULAR SURFACE-MOUNTED "110"-STYLE PATCH PANELS TYPE 1 CONSOLIDATION POINTS (CP-1).

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Hubbell, Inc., Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 8. Leviton, Bothell, WA (800) 977-0190.
 9. Panduit, Tinley Park, IL (800) 777-3300.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Panels:
1. Capable of terminating (12) Category 6 cables.
 2. Equipped with an 89D surface mounting bracket.
 3. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.

2.7 TYPE 1 CONSOLIDATION POINT (CP-1) AND TYPE 1 FIBER OPTIC POINT (FP_1) FOR WORKROOM FLOOR ENCLOSURES

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Hoffman Enclosures, Inc., Anoka, MN (612) 421-2240.
 2. Rittal Corporation: (AE, or EB Series enclosures), Springfield, OH (800) 477-4000.
 3. Product options and substitutions. Substitutions: Permitted with approval.
- B. Enclosures:
1. 12 inches high x 12 inches wide x 8 inches deep sheet steel NEMA 12 enclosure with hinged, lockable door with rubber gasket, mounted at 20-23' AFF. Alternate size: 14 inches high x 16 inches wide x 6 inches deep.
 2. Door must be oriented so that it opens in a horizontal manner. Enclosure may not be mounted in a manner so that the door opens downward.

2.8 CATEGORY-6 12 PORT TYPE 1 CONSOLIDATION POINTS (CP-1). (THIS OPTION ONLY USED IN SPECIAL APPLICATIONS FOR LARGE OFFICE AND ADMINISTRATIVE AREAS).

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Hubbell, Inc., Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.

8. Leviton, Bothwell, WA (800) 977-0190.
9. Panduit, Tinley Park, IL (800) 777-3300.
10. Product options and substitutions. Substitutions: Not permitted.

B. Connector:

1. 8-pin modular, Category 6, non-keyed.
2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.
3. Color: Selected by Contracting Officer.
4. Attached to backboard of CP 1 with 89-D type bracket.

C. Housing

1. Wall or raceway mounted outlet enclosure, CP1.
2. Able to contain 12 modular 8-pin connectors
3. Installation over single gang junction box, double gang junction box, or raceway knockout as indicated on Drawings.
4. Color: Selected by Contracting Officer.

NOTE TO SPECIFIER

Delete the following two sections if CP-2 is not used.

2.9 48 PORT, CATEGORY 6, 8-PIN MODULAR RACK MOUNTED "110 STYLE" PATCH PANELS FOR TYPE 2 CONSOLIDATION POINT (CP-2)

A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. CommScope Uniprise, Claremont, NC (800) 544-1948.
2. Hubbell, Inc., Milford, CT (203) 882-4800.
3. Molex Premise Networks, Harvard, MA (987) 772-5630.
4. Belden, Richmond, IN (800) 235-3361.
5. Ortronics, New London, CT (800) 934-5432.
6. Siemon Company, Watertown, CT (860) 274-2523.
7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
8. Leviton, Bothell, WA (800) 977-0190.
9. Panduit, Tinley Park, IL (800) 777-3300.
10. Product options and substitutions. Substitutions: Not permitted.

B. Panels:

1. Rack mounted 48 port 8-pin modular, Category 6, non-keyed or insulation-displacement "110"-type.
2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.

2.10 TYPE 2 CONSOLIDATION POINT ENCLOSURES

A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. American Access Technologies, Inc., Altamonte Spring, FL (800) 285-2070.
2. American Cable Systems, New Bedford, MA (800) 426-3170.
3. Chatsworth Products, Chatsworth, CA (818) 882-8595.
4. Holocom Networks, Inc., Carlsbad, CA (888) 465-6266.
5. Siemon Company, Watertown, CT (860) 274-2523.
6. Product options and substitutions. Substitutions: Substitutions require approval.

B. Enclosures:

1. Metal, surface mountable to wall, or flush mountable into wall.
2. Gasketed lockable access door.
3. Room for 48-port patch panel or IDC panel, standoff brackets, and horizontal and vertical patch cord management.
4. Access knockouts in top/bottom and/or sides to allow egress of station cables to TR/TE and UTP Cable Assemblies to cubicle furniture.

NOTE TO SPECIFIER

Delete the following two sections if CP-3 is not used.

2.11 48 PORT, CATEGORY 6, 8-PIN MODULAR RACK MOUNTED "110 STYLE" PATCH PANELS FOR TYPE 3 CONSOLIDATION POINT CP-3

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Hubbell, Incorporated, Milford, CT (203) 882-4800.
 3. Molex Premise Networks, Harvard, MA (987) 772-5630.
 4. Belden, Richmond, IN (800) 235-3361.
 5. Ortronics, New London, CT (800) 934-5432.
 6. Siemon Company, Watertown, CT (860) 274-2523.
 7. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 8. Leviton, Bothell, WA (800) 977-0190.
 9. Panduit, Tinley Park, IL (800) 777-3300.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Panels:
 1. Rack mounted 48-port, 8-pin modular, Category 6, non-keyed or insulation-displacement "110"-type.
 2. Complies with ANSI/TIA/EIA-568-C "T568A" pinning configuration.

2.12 TYPE 3 CONSOLIDATION POINT ENCLOSURE

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. American Access Technologies, Inc., Altamonte Spring, FL (800) 285-2070.
 2. America Cable Systems, New Bedford, MA (800) 426-3170.
 3. Chatsworth Products, Chatsworth, CA (818) 882-8595.
 4. Holocom Networks, Inc., Carlsbad, CA (888) 465-6266.
 5. Product options and substitutions. Substitutions: Substitutions require approval.
- B. Enclosures:
 1. Plenum rated metal enclosure.
 2. Securable access panel.
 3. Room for 48-port patch panel, standoff brackets and horizontal and vertical patch cord management.
 4. Sufficient egress for station cables back to TR/TE and UTP Cable Assemblies out to cubicle furniture.
 5. Secure mounting hardware to attach to building steel while aligning into office suspended ceiling system.
 6. Fire stopping medium to seal cable egress passages to ensure compliance with all fire safety codes regarding return air plenums.

NOTE TO SPECIFIER

Delete the following section if FP-1 is not used.

2.13 LASER OPTIMIZED 50/125 MICRON FIBER TYPE 1 CONSOLIDATION POINT (FP-1)

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Berk-Tek, Inc., New Holland, PA (800) 237-5835.
 2. CommScope Uniprise, Claremont, NC (800) 544-1948.
 3. Corning Cable Systems, Hickory, NC (800) 743-2671.
 4. Draka Comteq, Franklin, MA (888) 541-7100.
 5. General Cable, Highland Heights, KY (800) 424-5666.
 6. Mohawk/CDT, Leominster, MA (978) 537-9961.
 7. Belden, Richmond, IN (800) 235-3361.
 8. Superior Essex, Atlanta, GA (800) 685-4887.
 9. Product options and substitutions. Substitutions: Substitutions require approval.
- B. Enclosure, connectors and adapter plates:
 1. SC type Laser Optimized connectors.
 2. 6 port coupler panel with laser optimized SC adapters for each FP.
 3. 6 Strands x Number of FPs = size of enclosure needed, and amount of SC adapters for CCR.
 4. Rack mount enclosure is 1.75 inches high. (1 Rack Unit)
 5. Complies with ANSI/TIA/EIA-568-C specification.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.2 INSTALLATION - COMPONENTS

- A. Type 1 Consolidation Point and Type 1 Fiber Optic Point: Furnish and install 12 port consolidation point (CP-1) or fiber optic enclosures (FP-1) at each location identified on Electrical Drawings using NEMA 12 rated enclosures. Mount consolidation points and fiber optic points with uni-strut or equivalent fastening devices to steel ceiling structure (red iron) so that box is vertical and installed between 20 to 23 feet above the finished floor. Door must be oriented so that it opens in a horizontal manner. Enclosure may not be mounted in a manner so that the door opens downward. Contractor must ensure all minimum bend radius specifications for cables can be achieved inside the enclosures. Install all cables between the Type 1 Consolidation Point and the telecommunications closet in conduit/EMT or enclose cables in conduit/EMT from multiple Consolidation Points to a common cable tray leading to the TR/TE. All terminating components shall match the requirements/performance specifications of the cable specified. Install cables from Fiber Optic Points to CCR in conduit/EMT or wire basket tray.
- B. Modular Patch Panel for Type 1 Consolidation Point: Install 12-port, "110 Style" punch-down block in each consolidation point enclosure, terminate 12 four pair Category 6 cables at each CP location.
 1. Furnish, and install blocks inside consolidation point enclosure for all consolidation point applications. Install patch panel blocks on "89D" bracket on box adapter plate, or plywood inside each consolidation point.
 2. Furnish and install patch panel blocks with cable designation strips.

3. Terminate all 4 pairs of each horizontal 4 pair cable, one 4 pair cable per port.
- C. Labeling for Type 1 Consolidation Point: Label each consolidation point with TR/TE #, CP zone letter (A, B, C, etc.), and port #'s (1-12). TR/TE and zone patch panel ports are labeled as follows: CP zone A equals ports 1-12, CP zone B equals ports 13-24, CP zone C equals ports 25-36, CP zone D equals ports 37-48 CP zone E equals ports 49-60, etc., or as identified on the Electrical Drawings. * Note CP-1 01-E begins on the second patch panel numerically numbered ports 49 – 96.
 1. Example: CP-1 (TR/TE # - Zone A, B, C...- Port #'s) i.e. 01A-1-12, 01B-13-24, 01C-25-36, 01D-37-48, 01E-49-60 etc .
 - D. Type 2 Consolidation Point: Furnish a 48-port consolidation point enclosures at each location identified on site drawings. Mount Type 2 Consolidation Points either recessed into or flush mounted onto a wall 54 inches AFF in accordance with particular manufacturer specifications. Contractor must ensure all minimum bend radius specifications for cables can be achieved inside consolidation point enclosures. NOTE: Usually, the UTP Cable Assemblies between the Type 2 Consolidation Point and the cubicle furniture will be provided by the USPS and will be installed at a later time. However, if the installation of cubicle furniture is included in the general contract for the facility, it will be the responsibility of the contractor to obtain and install the UTP Cable Assemblies to connect the Type 2 Consolidation Point and the cubicle furniture.
 - E. Panels for Type 2 Consolidation Point: Install 48-port, 8-pin modular “110 style” patch panel in each consolidation point enclosure and terminate 48 four-pair Category 6 cables, one 4 pair cable per port, to each 48 port patch panel. Once connected via UTP cable assemblies, each cubicle workstation will receive one standard triplex telecommunications outlet.
 - F. Labeling for Type 2 Consolidation Point: Label each consolidation point with TR/TE # (01, 02, 03, 04), CP zone letter (A, B, C, etc.), and port count. TR/TE and zone patch panel ports are labeled as follows: CP zone A equals ports 1-48, CP zone B equals ports 49-96, CP zone C equals ports 97-144, etc., or as identified on the Electrical Drawings.
 1. Example: CP-2 (TR/TE # - Zone A, B, C...- Port #'s) i.e. 01A-1-48, 01B-49-96, 01C-97-144, 01D-145-192, etc.
 - G. Type 3 Consolidation Point: Furnish 48-port consolidation point enclosure at each location identified on site drawings. Mount Type 3 Consolidation Points in suspended ceiling using threaded rod and appropriate fasteners to building steel ceiling structure (red iron). Fasten ceiling tile to face of enclosure according to manufacturer's specifications and align the enclosure with the suspended ceiling grid system to ensure that the access panel opens freely. Contractor must ensure all minimum bend radius specifications for cables can be achieved inside consolidation point enclosures. NOTE: Usually, the UTP Cable Assemblies between the Type 3 Consolidation Point and the cubicle furniture will be provided by the USPS and will be installed at a later time. However, if the installation of the cubicle furniture is included in the general contract for the facility, it will be the responsibility of the contractor to obtain and install the UTP Cable Assemblies between the Type 3 Consolidation Point and the cubicle furniture.
 - H. Panels for Type 3 Consolidation Point: Install 48-port, 8-pin modular “110 Style” patch panel in each consolidation point enclosure and terminate up to 48 four-pair Category 6 cables, one 4 pair cable per port. When connected via UTP cable assemblies, each cubicle workstation will receive one standard triplex telecommunications outlet.
 - I. Labeling for Type 3 Consolidation Point: Label each consolidation point box with TR/TE # (01, 02, 03, 04), CP zone letter (A, B, C, etc.), and port count. TR/TE and consolidation point patch panel ports are labeled as follows: CP zone A equals ports 1-48, CP zone B equals port 49-96, CP zone C equals ports 97-144, etc., or as identified on the Electrical Drawings.
 1. Example: CP-3 (TR/TE # - Zone A, B, C...- Port #'s) i.e. 01A-1-48, 01B-49-96, 01C-97-144, 01D-145-192, etc.

3.3 CONSTRUCTION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.4 FIELD QUALITY CONTROL

- A. Specified in 270500 – Common Work Results for Communications.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 8/29/2013.

SECTION 27 13 00 00 - CSF COMMUNICATIONS BACKBONE CABLING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Customer Service Facilities only.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured wiring system components:
 - 1. Communication cable.
 - 2. Termination equipment.
 - 3. Patching equipment.
- B. Related Documents:
 - 1. Specified in Section 270500 - Common Work Results For Communications.
- C. Related Sections:
 - 1. Specified in Section 270500 - Common Work Results For Communications

1.2 REFERENCES

- A. Specified in Section 270500 - Common Work Results For Communications.

1.3 SUBMITTALS

- A. Specified in Section 270500 - Common Work Results For Communications.

1.4 QUALITY ASSURANCE

- A. Specified in Section 270500 - Common Work Results For Communications.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 s.f. and will not require fiber optic backbone cabling. Add section 2.2, 2.3 and 2.4 below if fiber cabling is deemed necessary.

- 2.1 6, 12, and 24 STRAND ARMORED TIGHT BUFFERED 50/125 micron, laser-optimized, 10-Gigabit-Ethernet-Compliant, "1500/500", MULTI-MODE FIBER OPTIC BACKBONE CABLING.
- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Berk-Tek, Inc., New Holland, PA (800) 237-5835.
 2. CommScope Uniprise, Claremont, NC (800) 544-1948.
 3. Corning Cable Systems, Hickory, NC (800) 743-2671.
 4. Draka Comteq, Franklin, MA (888) 541-7100.
 5. General Cable, Highland Heights, KY (800) 424-5666.
 6. Mohawk/CDT, Leominster, MA (978) 537-9961.
 7. Belden, Richmond, IN (800) 235-3361.
 8. Superior Essex, Atlanta, GA (800) 685-4887.
 9. Product options and substitutions. Substitutions: Substitutions require approval.
- B. Fiber Type: 6, 12, and 24 strand armored tight buffered 50/125 micron, laser-optimized, 10-Gigabit-Ethernet-Compliant, "1500/500" multi-mode fiber optic cable.
1. Individually insulated plenum rated strands under common plenum rated sheath unless entire cable is contained within conduit/EMT or if area where cable is installed is not considered a return air plenum according to any applicable codes.
 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C including all addendums for fiber optic cable performance specification.
- 2.2 FIBER OPTIC RACK MOUNT INTERCONNECT CENTER
- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Corning Cable Systems, Hickory, NC (800) 743-2671.
 3. Hubbell, Inc., Milford, CT (203) 882-4800.
 4. Molex Premise Networks, Harvard, MA (987) 772-5630.
 5. Belden, Richmond, IN (800) 235-3361.
 6. Ortronics, New London, CT (800) 934-5432.
 7. Siemon Company, Watertown, CT (860) 274-2523.
 8. 3M Telecommunications, Austin, TX (800) 695-0447.
 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Enclosure connector and adapter panels:
1. SC type laser optimized connectors
 2. 24 port coupler panels with laser optimized SC adapters.
 3. Each rack mount enclosure used in ER/TR will be 1.75 inches (1 Rack Unit) with (2) 12-port SC/SC style laser optimized coupler panels to house the backbone fiber. The "ER" and each individual TR will receive a dedicated rack mount enclosure. Each enclosure will be separated by a 1 RU wire manager.
 4. Complies with ANSI/TIA/EIA-568-C specification.
- 2.3 FIBER OPTIC PATCH CORDS
- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CommScope Uniprise, Claremont, NC (800) 544-1948.
 2. Corning Cable Systems, Hickory, NC (800) 743-2671.
 3. Hubbell, Inc., Milford, CT (203) 882-4800.

4. Molex Premise Networks, Harvard, MA (987) 772-5630.
 5. Belden, Richmond, IN (800) 235-3361.
 6. Ortronics, New London, CT (800) 934-5432.
 7. Siemon Company, Watertown, CT (860) 274-2523.
 8. 3M Telecommunications, Austin, TX (800) 695-0447.
 9. Tyco Electronics AMP NETCONNECT, Berwyn, PA (800) 522-6752.
 10. Product options and substitutions. Substitutions: Not permitted.
- B. Fiber optic duplex tight buffered 50/125 micron Laser Optimized 10-Gigabit Ethernet compliant 1500/500 fiber optic patch cords.
1. Terminated with SC/LC connectors
 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C including all addendums for fiber optic patch cable performance specification.
 3. Fiber optic patch cord terminations and quantities shall be coordinated with U.S. Postal Service personnel prior to procurement.
 4. Match performance characteristics of installed fiber optic backbone.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.2 INSTALLATION

- A. Specified in Section 270500 – Common Work Results for Communications.
- B. Identification:
1. See Section 270500 – Common Work Results for Communications for additional requirements.

NOTE TO SPECIFIER

The majority of Customer Service Facilities (CSF) are less than 60,000 s.f. and will not require fiber optic backbone cabling. Add section 3.2,B. 2. below if fiber cabling is deemed necessary.

2. Fiber Optic Interconnect Centers: Display ER/TR and cable strand identification numbers in uppercase lettering, or numbers on permanent adhesive label stock.

3.3 INSTALLATION - COMPONENTS

1. Specified in Section 270500 – Common Work Results for Communications.

3.4 CONSTRUCTION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.5 FIELD QUALITY CONTROL

- A. Specified in Section 270500 – Common Work Results for Communications.

SECTION 27 15 00 00 - MPF COMMUNICATIONS HORIZONTAL CABLING**

NOTE TO SPECIFIER

Use this Specification section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes the following structured cabling system components:
 - 1. Communication cable.
 - 2. Termination equipment.
 - 3. Patching equipment.
- B. Related Documents:
 - 1. Specified in Section 270500 – Common Work Results for Communications.
- C. Related Sections:
 - 1. Specified in Section 270500 – Common Work Results for Communications.

1.2 REFERENCES

- A. Specified in Section 270500 – Common Work Results for Communications.

1.3 SYSTEM DESCRIPTION

- A. Specified in Section 270500 – Common Work Results for Communications.

1.4 SUBMITTALS

- A. Specified in Section 270500 – Common Work Results for Communications.

1.5 QUALITY ASSURANCE

- A. Specified in Section 270500 – Common Work Results for Communications.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 – Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver in accordance with NEMA WC 26.

PART 2 - PRODUCTS

2.1 4-PAIR CATEGORY 6 UNSHIELDED TWISTED PAIR CABLE

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Berk-Tek, Inc., New Holland, PA (800) 237-5835.
 - 2. CommScope Uniprise, Claremont, NC (800) 544-1948.
 - 3. Draka Comteq, Franklin, MA (888) 541-7100.
 - 4. Mohawk/CDT Leominster, MA (978) 537 9961.
 - 5. Belden, Richmond, IN (800) 235-3361.
 - 6. General Cable, Highland Heights, KY (800) 424-5666.
 - 7. Superior Essex, Atlanta, GA (800) 685-4887.
 - 8. Leviton, Bothell, WA (800) 977-0190.
 - 9. Panduit, Tinley Park, IL (800) 777-3300.
 - 10. Product options and substitutions. Substitutions: Not permitted.
- B. Conductors: 4 twisted pair minimum 24 AWG, solid copper.
 - 1. Individually insulated plenum rated conductors under common plenum rated sheath unless entire cable is installed within conduit/EMT or if area where cable is installed is not considered a return air plenum according to any applicable codes.
 - 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C, and all addendums for Category 6 cable performance specification.
 - 3. Nominal Impedance: 100 ohms plus or minus 15 percent.
 - 4. Certified and capable of performing to a minimum of 250 MHz.

2.2 OUTLET FACEPLATES/MOUNTING FRAMES

- A. Wall mounted, or raceway mounted outlet faceplates or mounting frames, suitable for the following:
 - 1. Mounting required number of 8-pin modular connectors.
 - 2. Use with approved 8-pin modular connectors.
 - 3. Installation over single gang junction box, double gang junction box, or raceway knockout as indicated on Drawings.
 - 4. All empty faceplate ports shall have blanks of matching color installed.
- B. Color: Selected by Contracting Officer.

2.3 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.2 INSTALLATION

- A. Cables: Furnish and install communications cables as specified, in accordance with Cable Pulling Schedules, manufacturer's published instructions, ANSI/TIA/EIA-568-C including all addendums and as indicated on Drawings.
 - 1. Dress cable to final location, remove sheath to point allowing splaying of conductors, and terminate. Make each termination uniform and precise. Hook and Loop "Velcro" cable ties shall be used for bundling and dressing all cabling. No nylon zip ties shall be used for cable bundling or attachment.
 - 2. Maintain sheath integrity. Remove minimum amount of sheath required for termination up to a maximum of 1 inch.
 - 3. Maintain manufacturer's twisting of wire pairs to termination point. Do not attempt to restore, modify, or add to manufacturer's twisting of cable. Do not untwist more than 1/2 inch of the stripped cable.
 - 4. Label each end with a machine generated, self laminating label.
 - 5. Mechanical couplers or splices not permitted in copper cabling.
 - 6. Cable conductors shall be continuous from originating termination equipment to destination termination equipment.
- B. Telecommunications Outlet: Furnish and install three female 8-pin modular jack connectors on one face plate at each T/O (telecommunications outlet) as indicated on Drawings.
 - 1. Install faceplate over duplex outlet box, double duplex outlet box, or raceway knockout, level and in alignment with adjacent faceplates.
 - 2. Except where entire cable run is in conduit/EMT, provide a minimum 10-foot service loop in the ceiling at the end of the conduit/EMT riser before the cable enters the outlet box.
 - 3. Coordinate color with Raleigh IT Service Center POC.

3.3 INSTALLATION COMPONENTS

- A. Specified in Section 270500 – Common Work Results for Communications.

3.4 CONSTRUCTION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.5 FIELD QUALITY CONTROL

- A. Specified in Section 270500 – Common Work Results for Communications.

 - 9. Superior Essex, Atlanta, GA (800) 685-4887.
 - 10. Leviton, Bothell, WA (800) 977-0190.
 - 11. Panduit, Tinley Park, IL (800) 777-3300.
 - 12. Product options and substitutions. Substitutions: Not permitted.
- B. Conductors: 4 twisted pair -minimum 24 AWG, solid copper.
 - 1. Individually insulated plenum rated conductors under common plenum rated sheath unless entire cable is installed within conduit/EMT or if area where cable is installed is not considered a return air plenum according to any applicable codes.
 - 2. Complies with individual characteristics established in ANSI/TIA/EIA-568-C and all addendums for Category 6 cable performance specification.
 - 3. Nominal Impedance: 100 ohms plus or minus 15 percent.
 - 4. Certified and capable of performing to a minimum of 250 MHz.

2.2 OUTLET FACEPLATES/MOUNTING FRAMES

- A. Wall mounted, or raceway mounted outlet faceplates or mounting frames, suitable for the following:
 - 1. Mounting required number of 8-pin modular connectors.
 - 2. Use with approved 8-pin modular connectors.
 - 3. Installation over single gang junction box, double gang junction box, or raceway knockout as indicated on Drawings.
 - 4. All empty faceplate ports shall have blanks of matching color installed.
- B. Color: Selected by Contracting Officer.

2.3 CONDUITS AND BOXES

- A. Specified in Section 260533 – Raceway and Boxes for Electrical Systems.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Specified in 270500– Common Work Results for Communications.

3.2 INSTALLATION

- A. Cables: Furnish and install communications cables as specified, in accordance with Cable Pulling Schedules, manufacturer's published instructions, ANSI/TIA/EIA-568-C including all addendums and as indicated on Drawings.

1. Dress cable to final location, remove sheath to point allowing splaying of conductors, and terminate. Make each termination uniform and precise. Hook and Loop "Velcro" cable ties shall be used for bundling and dressing all cabling. No nylon zip ties shall be used for cable bundling or attachment.
 2. Maintain sheath integrity. Remove minimum amount of sheath required for termination up to a maximum of 1 inch.
 3. Maintain manufacturer's twisting of wire pairs to termination point. Do not attempt to restore, modify, or add to manufacturer's twisting of cable. Do not untwist more than ½ inch of the stripped cable.
 4. Label each end with a machine generated, self laminating label.
 5. Mechanical couplers or splices not permitted.
 6. Cable conductors shall be continuous from originating termination equipment to destination termination equipment.
- B. Telecommunications Outlet: Furnish and install three female 8-pin modular jack connectors on one face plate at each T/O (telecommunications outlet) as indicated on Drawings.
1. Install faceplate over single duplex outlet box, double duplex outlet box, or raceway knockout, level and in alignment with adjacent faceplates.
 2. Provide a minimum of a 10-foot service loop in the ceiling at the end of the conduit/EMT riser before the cable enters the outlet box.
 3. Coordinate color with Raleigh IT Service Center POC.

3.3 INSTALLATION - COMPONENTS

- A. Specified in Section 270500 – Common Work Results for Communications.

3.4 CONSTRUCTION

- A. Specified in Section 270500 – Common Work Results for Communications.

3.5 FIELD QUALITY CONTROL

- A. Specified in Section 270500 – Common Work Results for Communications.

USPS CSF Specifications issued: 10/1/2013
Last revised: 8/29/2013

END OF SECTION 27 15 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 51 16 00 - MPF PUBLIC ADDRESS AND PAGING SYSTEMS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Paging system.
- B. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical:
 - 2. Section 260533 - Raceway and Boxes for Electrical Systems:
 - 3. Section 270500 - Common Work Results for Communications: Telecommunications cables, termination, and patching equipment.

1.2 REFERENCES

- A. Electronic Industries Association (EIA):
 - 1. ANSI/TIA/EIA-568-A - Commercial Building Wiring Standard.
- B. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.

1.3 SUBMITTALS

- A. Procedures for submittals.
 - 1. Product data: For each type of equipment.
 - 2. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, and location of each field connection.
 - 3. Control equipment.
 - 4. Rack arrangements.
 - 5. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Identify terminals to facilitate installation, operation, and maintenance. Include a single-line diagram showing cabling interconnection of components.
- B. Calculations: For sizing backup battery.
- C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements. Include record of final speaker-line matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.
- D. Maintenance Data: For equipment to include in maintenance manuals specified in Division 1.

- E. Assurance/Control Submittals:
 1. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 2. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- F. Procedures for closeout submittals.
 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience and an authorized representative of equipment manufacturer for both installation and maintenance of equipment.
- B. Regulatory Requirements:
 1. Conform to requirements of NFPA 70 and UL 50.
 2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Alpha Communications.
 2. Altec Lansing/University Sound.
 3. Atlas-Soundolier; Atapco Security & Communications Group.
 4. Bogen Communications, Incorporated.
 5. Dukane Corp.; Communications Systems Division.
 6. Electro-Voice, Incorporated.
 7. Executone Information Systems Incorporated.
 8. Federal Signal Corporation; Signal Div./Electrical Products.
 9. Lucent Technologies, Silver Spring, MD (301) 608-4765.
 10. Peavey Electronics Corporation.
 11. Rauland-Borg Corporation.
 12. Valcom, Incorporated, Roanoke, VA (540) 427-3900.
 13. Whelen Engineering Company, Incorporated.

2.2 SYSTEM FUNCTIONS

- A. Include the following:
1. Selectively connecting separate zones to different signal channels.
 2. Selectively amplifying sound among various microphone outlets and other inputs.
 3. Communicating simultaneously to all zones regardless of zone or channel switch settings.
 4. Paging, by dialing an extension from any local telephone instrument and speaking into the telephone.
 5. Producing a program-signal tone that is amplified and sounded over all speakers, overriding signals currently being distributed.
 6. Reproducing high-quality sound that is free from noise and distortion at all loudspeakers at all times during equipment operation, including standby mode with inputs off; and output free from non-uniform coverage of amplified sound.

NOTE TO SPECIFIER

Delete paragraph below if Postal Service will contract separately for this service.

7. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions. Provide up to three on-site assistance visits within one year of Substantial Completion.

2.3 EQUIPMENT

- A. Coordinate features to form an integrated system. Match components and interconnections for optimum performance of specified functions.
- B. Equipment: Modular type, using solid-state components, fully rated for continuous duty, unless otherwise indicated. Select equipment for normal operation on input power usually supplied at 110 to 130 V, 60 Hz.
- C. Waterproof Equipment: Listed and labeled for duty outdoors or in damp locations.

2.4 PREAMPLIFIERS

- A. Comply with EIA #SE-101-A; either separately mounted or as an integral part of power amplifier.
- B. Output Power: Plus 4 dB above 1 mW at matched power-amplifier load.
- C. Total Harmonic Distortion: Less than 1 percent.
- D. Frequency Response: Within plus or minus 2 dB from 20 to 20,000 Hz.
- E. Input Jacks: Minimum of two. One matched for low-impedance microphone; the other matchable to cassette deck, CD player, or radio tuner signals without external adapters.
- F. Minimum Noise Level: Minus 55 dB below rated output.
- G. Controls: On/off, input levels, and master gain.

2.5 POWER AMPLIFIERS

- A. Comply with EIA #SE-101-A.

- B. Mounting: Rack mounted.
- C. Output Power: 70-W balanced line.
- D. Frequency Response: Within plus or minus 2 dB from 50 to 12,000 Hz.
- E. Minimum Signal-to-Noise Ratio: 60 dB, at rated output.
- F. Total Harmonic Distortion: Less than 3 percent at rated power output from 50 to 12,000 Hz.
- G. Output Regulation: Less than 2 dB from full to no load.
- H. Controls: On/off, input levels, and low-cut filter.
- I. Input Sensitivity: Matched to preamplifier and providing full-rated output with a sound-pressure level of less than 10 dynes/sq. cm impinging on a speaker microphone or handset transmitter.

2.6 COMPONENTS

NOTE TO SPECIFIER

Edit paragraph below to suit Project. Console can vary from a small switch and pilot-light panel to a large, complex unit. Coordinate with Drawings for identification of items to be mounted and for console mounting provision: desk, counter, wall, etc.

- A. Control Equipment: Complying with EIA-310.
 - 1. Panel for Equipment and Controls: Each module is nominal 19 inches (48 cm) wide by 8-3/4 inches (22 cm) high for installation in equipment rack.
 - 2. Controls: Include the following:
 - a. Switching devices to select signal sources for distribution channels.
 - b. Program selector switch to select source for each program channel.
 - c. Switching devices to select zones for paging.
 - d. All-call selector switch.
 - 3. Indicators: A visual annunciation for each distribution channel to indicate source being used.
 - 4. Spare Positions: 20 percent spare zone control and annunciation positions on console.
 - 5. Microphone jack.
- B. Telephone Paging Adapter: Arranged to accept voice signals from telephone extension dialing access and to automatically provide amplifier input and program override for preselected zones.
 - 1. Minimum Frequency Response: Flat, 200 to 2500 Hz.
 - 2. Impedance Matching: Adapter matches telephone line to public address equipment input.
- C. Equipment Rack: Comply with EIA-310-D. House amplifiers, control equipment and auxiliary equipment in standard EIA 19-inch (483-mm) racks.
 - 1. Group items of same function together, either vertically or side by side, and arrange controls symmetrically.
 - 2. Power-Supply Connections: Approved plugs and receptacles.
 - 3. Arrange all inputs, outputs, interconnections, and test points so they are accessible at rear of rack for maintenance and testing, with each item removable from rack without disturbing other items or connections.
 - 4. Blank Panels: Cover empty space in equipment racks so entire front of rack is occupied by panels.
 - 5. Enclosure Panels: Ventilated rear and sides and solid top. Use louvers in panels to ensure adequate ventilation.
 - 6. Finish: Uniform, baked-enamel factory finish over rust-inhibiting primer.

7. Power-Control Panel: On front of equipment housing, with a master power on/off switch and pilot light, and socket for a 5-A, indicating, cartridge fuse for rack equipment power.
 8. Vertical Plug Strip: Metal wireway with integral grounded receptacles, 12 inches (30 cm) o.c. the full height of rack, to supply rack-mounted equipment.
 9. Spare Capacity: [20] [____] percent spare space capacity in rack for future equipment.
- D. Cone-Type Loudspeakers: Comply with EIA SE-103.
1. Minimum Axial Sensitivity: EIA pressure rating of 45 dB.
 2. Frequency Response: Within plus or minus 3 dB from 50 to 15,000 Hz.
 3. Size: 8 inches (200 mm) with 1-inch (25-mm) voice coil and minimum 5-oz. (140-g) ceramic magnet.
 4. Minimum Dispersion Angle: 100 degrees.
 5. Rated Output Level: 10 W.
 6. Matching Transformer: Comply with EIA-160. Full-power rated with four EIA standard taps. Maximum insertion loss of 0.5 dB.
 7. Surface-Mounting Units: Ceiling, wall, or pendant mounting, as indicated on drawings, in steel back boxes, acoustically dampened. Front face of at least 0.0478-inch (1.2-mm) steel and whole assembly rust proofed and shop primed for field painting.
 8. Flush-Ceiling Mounting Units: In steel back boxes, acoustically dampened. Metal ceiling grille with baked, white-enamel finish.
- E. Horn-Type Loudspeakers: Comply with EIA SE-103.
1. Type: Single-horn units, double-reentrant design, with minimum full-range power rating of 15 W.
 2. Matching Transformer: Comply with EIA-160. Full-power rated with four EIA standard taps. Maximum insertion loss of 0.5 dB.
 3. Frequency Response: Within plus or minus 3 dB from 250 to 12,000 Hz.
 4. Dispersion Angle: 130 by 110 degrees.
 5. Mounting: Integral bracket.
 6. Units in Hazardous (Classified) Locations: Listed and labeled for the environment in which they are located.
- F. Noise-Operated Gain Controller: Units continuously sense space noise level and automatically adjust signal level to local speakers.
1. Frequency Response: 20 to 20,000 Hz, plus or minus 1 dB.
 2. Level Adjustment Range: 20 dB minimum.
 3. Maximum Distortion: 1 percent.
 4. Control: Permits adjustment of sensing level of device.
- G. Volume Attenuator Stations: Wall-plate-mounted autotransformer type with paging priority feature.
1. Wattage Rating: 10 W, unless otherwise indicated.
 2. Attenuation per Step: 3 dB, with positive off position.
 3. Insertion Loss: 0.4 dB maximum.
 4. Attenuation Bypass Relay: Single pole, double throw. Connected to operate and bypass attenuation when all-call, paging, program signal, or prerecorded message features are used. Relay returns to normal position at end of priority transmission.
 5. Label: "PA Volume."
- H. Cable and Conductors: Jacketed, twisted-pair and twisted-multipair, untinned, solid-copper conductors.
1. Insulation for Wire without Conduit: Thermoplastic, not less than 1/32 inch (0.8 mm) thick.
 2. Microphone Cables: Neoprene jacketed, not less than 2/64 inch (0.8 mm) thick over shield with filled interstices. Shield No. 34 AWG tinned, soft-copper strands formed into a braid or approved equivalent foil. Shielding coverage on conductors is not less than 60 percent.
 3. Plenum Cable: Listed and labeled for plenum installation.
- I. Special Requirements For Cable Routing And Installation
1. The majority of paging system wiring in this building will be installed above ceilings without conduit. All communications cabling used throughout this project shall comply with the

- requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
2. Sealing of openings between floors, through rated fire and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
 3. Cabling routed underground, exterior of the building, through inaccessible ceilings or less than 10'-0" A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and factory boxes in unfinished areas. Provide 3/4" conduit risers with 90 degree bend and bushing for all wall mounted devices.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- B. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- C. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Verify that electrical connections are made correctly.
- C. Install exposed cables parallel and perpendicular to surfaces or exposed structural members, and follow surface contours. Secure and support cables by straps, staples, or similar fittings so designed and installed to avoid damage to cables. Secure cable at intervals not exceeding 30 inches (76 cm) and not more than 6 inches (15 cm) from cabinets, boxes, or fittings.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess. Use lacing bars in cabinets.
- E. Control-Circuit Wiring: Install number and size of conductors as recommended by system manufacturer for control functions indicated.
- F. Separation of Wires: Separate speaker-microphone, line-level, speaker-level, and power wiring runs. Where exposed or in same enclosure, separate conductors at least 12 inches (30 cm) for speaker microphones and adjacent parallel power and voice wiring. Separate other intercommunication equipment conductors as recommended by equipment manufacturer.
- G. Splices, Taps, and Terminations: Make splices, taps, and terminations on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- H. Match input and output impedances and signal levels at signal interfaces. Provide matching networks where required.

- I. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables to identify media in coordination with system wiring diagrams.
- J. Conductor Sizing: Unless otherwise indicated, size speaker circuit conductors from racks to loudspeaker outlets not smaller than number 14 AWG and conductors from microphone receptacles to amplifiers not smaller than number 20 AWG.
- K. Weatherproof Equipment: Install units that are mounted outdoors, in damp locations, or where exposed to weather consistent with requirements of weatherproof rating. Provide surge protection where required.
- L. Line Matching Transformer Connections: Make initial connections using tap settings indicated on Drawings.
- M. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- N. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installations, including connections. Report results in writing.
- B. Operational Test: Perform tests that include originating program and page material at microphone outlets, preamplifier program inputs, and other inputs. Verify proper routing and volume levels and freedom from noise and distortion.
- C. Signal-to-Noise Ratio Test: Measure the ratio of signal to noise of complete system at normal gain settings, using the following procedure:
 - 1. Disconnect a microphone at the connector or jack closest to it and replace it in the circuit with a signal generator using a 1000-Hz signal. Replace all other microphones at corresponding connectors with dummy loads, each equal in impedance to microphone it replaces. Measure the ratio of signal to noise.
 - 2. Repeat test for each separately controlled zone of loudspeakers.
 - 3. Minimum acceptance ratio is 50 dB.
- D. Distortion Test: Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 50, 200, 400, 1000, 3000, 8000, and 12,000 Hz into each preamplifier channel. For each frequency, measure the distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is 3 percent total harmonics.
- E. Acoustic Coverage Test: Feed pink noise into system using octaves centered at 500 and 4000 Hz. Use a sound-level meter with octave-band filters to measure level at five locations in each zone. For spaces with seated audiences, maximum permissible variation in level is plus or minus 2 dB. In addition, the levels between locations in the same zone and between locations in adjacent zones must not vary more than plus or minus 3 dB.
- F. Power Output Test: Measure electrical power output of each power amplifier at normal gain setting at 50, 1000, and 12,000 Hz. Maximum variation in power output at these frequencies must not exceed plus or minus 1 dB.
- G. Signal Ground Test: Measure and report ground resistance at public address equipment signal ground. Comply with testing requirements specified in Division 26.
- H. Retesting: Correct deficiencies, revising tap settings of speaker-line matching transformers where necessary to optimize volume and uniformity of sound levels, and retest. Prepare written record tests.

- I. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging speaker-line matching transformers.
- J. Schedule tests with at least seven days advance notice of test performance.

3.4 ADJUST AND CLEAN

- A. Adjust equipment for proper operation.

3.5 PROTECTION

- A. Protect finishes until substantial completion.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train maintenance personnel to adjust, operate, and maintain equipment as specified below:
 - 1. Train maintenance personnel on programming equipment for starting up and shutting down, troubleshooting, servicing, and maintaining equipment.
 - 2. Review data in maintenance manuals.
 - 3. Schedule training with Postal Service at least seven days in advance.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 9/4/2013

END OF SECTION 27 51 16 00

SECTION 27 51 16 00 - CSF PUBLIC ADDRESS PAGING SYSTEMS

NOTE TO SPECIFIER

Use this Outline Specification Section for larger Customer Service Facilities requiring a paging system. This Specification defines "level of quality" for Customer Service Facility construction and is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.27 51 16 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Public address paging system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical.
 - 2. Section 270500 - Common Work Results for Communications.

1.2 REFERENCES

- A. As specified in section 260500 – Common Work Results for Electrical.
- B. Electronic Industries Association (EIA):
 - 1. ANSI/TIA/EIA-568-A - Commercial Building Wiring Standard.

1.3 SUBMITTALS

- A. As specified in section 260500 – Common Work Results for Electrical.
- B. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product data: For each type of equipment.
 - 2. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, and location of each field connection.
 - 3. Control equipment.
 - 4. Rack arrangements.
 - 5. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Identify terminals to facilitate installation, operation, and maintenance. Include a single-line diagram showing cabling interconnection of components.

- C. Field Test Reports: Indicate and interpret test results for compliance with performance requirements. Include record of final speaker-line matching transformer-tap settings, and signal ground-resistance measurement certified by Installer.
- D. Maintenance Data: For equipment to include in maintenance manuals specified in Division 1.
- E. Assurance/Control Submittals:
 - 1. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - 2. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- F. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 - 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. As specified in section 260500 – Common Work Results for Electrical.
- B. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience and an authorized representative of equipment manufacturer for both installation and maintenance of equipment.
- C. Regulatory Requirements:
 - 1. Conform to requirements of NFPA 70 and UL 50.
 - 2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.6 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1.7 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Alpha Communications, Hauppauge, NY (800) 666-4800.
 2. Altec Lansing/University Sound, Oklahoma City, OK (800) 685-6386.
 3. Atlas Sound, Ennis, TX (800) 876-3333.
 4. Bogen Communications, Incorporated, Ramsey, NJ (800) 685-6386.
 5. Dukane Corp.; Communications Systems Division, St. Charles, IL (630) 584-2300.
 6. EVI Audio, Buchanan, MI (800) 234-6831.
 7. Federal Signal Corp., University Park, IL (800) 548-7229.
 8. Lowell Manufacturing Co., Pacific, MO (800) 325-9660.
 9. Peavey Electronics Corp., Meridian, MS (601) 483-5376.
 10. Rauland-Borg Corporation, Skokie, IL (847) 679-0900.
 11. Valcom, Incorporated, Roanoke, VA (540) 427-2400.

2.2 SYSTEM FUNCTIONS

- A. Include the following:
1. Selectively connecting separate zones to different signal channels.
 2. Selectively amplifying sound among various inputs.
 3. Communicating simultaneously to all zones regardless of zone or channel switch settings.
 4. Paging, by dialing an extension from any local telephone instrument and speaking into the telephone.
 5. Producing a program-signal tone that is amplified and sounded over all speakers, overriding signals currently being distributed.
 6. Reproducing high-quality sound that is free from noise and distortion at all loudspeakers at all times during equipment operation, including standby mode with inputs off; and output free from non-uniform coverage of amplified sound.
 7. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, resetting transformer taps, and adjusting controls to meet occupancy conditions. Provide up to three on-site assistance visits within one year of Substantial Completion.

2.3 EQUIPMENT

- A. Coordinate features to form an integrated system. Match components and interconnections for optimum performance of specified functions.
- B. Equipment: Modular type, using solid-state components, fully rated for continuous duty, unless otherwise indicated. Select equipment for normal operation on input power usually supplied at 110 to 130 V, 60 Hz.
- C. Waterproof Equipment: Listed and labeled for duty outdoors or in damp locations.

2.4 PREAMPLIFIERS

- A. Comply with EIA #SE-101-A; either separately mounted or as an integral part of power amplifier.
- B. Output Power: Plus 4 dB above 1 mW at matched power-amplifier load.

- C. Total Harmonic Distortion: Less than 1 percent.
- D. Frequency Response: Within plus or minus 2 dB from 20 to 20,000 Hz.
- E. Input Jacks: Minimum of four. One matched for low-impedance microphone; (2) matchable for CD player and radio tuner signals, and (1) spare. All shall be matchable without utilizing external adapters.
- F. Minimum Noise Level: Minus 55 dB below rated output.
- G. Controls: On/off, input levels, and master gain.

2.5 POWER AMPLIFIERS

- A. Comply with EIA #SE-101-A.
- B. Mounting: Rack mounted.
- C. Output Power: 70-W balanced line.
- D. Frequency Response: Within plus or minus 2 dB from 50 to 12,000 Hz.
- E. Minimum Signal-to-Noise Ratio: 60 dB, at rated output.
- F. Total Harmonic Distortion: Less than 3 percent at rated power output from 50 to 12,000 Hz.
- G. Output Regulation: Less than 2 dB from full to no load.
- H. Controls: On/off, input levels, and low-cut filter.
- I. Input Sensitivity: Matched to preamplifier and providing full-rated output with a sound-pressure level of less than 10 dynes/sq. cm impinging on a speaker microphone or handset transmitter.

2.6 COMPONENTS

NOTE TO SPECIFIER

Edit paragraph below to suit Project. Console can vary from a small switch and pilot-light wall mounted panel to a large, floor mounted unit. Coordinate with Drawings for identification of items to be mounted and for console mounting provision: desk, counter, wall, etc.

- A. Control Equipment: Complying with EIA-310.
 - 1. Panel for Equipment and Controls: Each module is nominal 19 inches (48 cm) wide by 8-3/4 inches (22 cm) high for installation in equipment rack.
 - 2. Controls: Include the following:
 - a. Switching devices to select signal sources for distribution channels.
 - b. Program selector switch to select source for each program channel.
 - c. Switching devices to select zones for paging.
 - d. All-call selector switch.
 - 3. Indicators: A visual annunciation for each distribution channel to indicate source being used.
 - 4. Spare Positions: 20 percent spare zone control and annunciation positions on console.

- B. Telephone Paging Adapter: Arranged to accept voice signals from telephone extension dialing access and to automatically provide amplifier input and program override for preselected zones.
1. Minimum Frequency Response: Flat, 200 to 2500 Hz.
 2. Impedance Matching: Adapter matches telephone line to public address equipment input.
- C. Equipment Rack: Comply with EIA-310-D. House amplifiers, control equipment and auxiliary equipment in standard EIA 19-inch (483-mm) racks.
1. Group items of same function together, either vertically or side by side, and arrange controls symmetrically.
 2. Power-Supply Connections: Approved plugs and receptacles.
 3. Arrange all inputs, outputs, interconnections, and test points so they are accessible at rear of rack for maintenance and testing, with each item removable from rack without disturbing other items or connections.
 4. Blank Panels: Cover empty space in equipment racks so entire front of rack is occupied by panels.
 5. Enclosure Panels: Ventilated rear and sides and solid top. Use louvers in panels to ensure adequate ventilation.
 6. Finish: Uniform, baked-enamel factory finish over rust-inhibiting primer.
 7. Power-Control Panel: On front of equipment housing, with a master power on/off switch and pilot light, and socket for a 5-A, indicating, cartridge fuse for rack equipment power.
 8. Vertical Plug Strip: Metal wireway with integral grounded receptacles, 12 inches (30 cm) o.c. the full height of rack, to supply rack-mounted equipment.
 9. Spare Capacity: [20] [____] percent spare space capacity in rack for future equipment.
- D. Cone-Type Loudspeakers: Comply with EIA SE-103.
1. Minimum Axial Sensitivity: EIA pressure rating of 45 dB.
 2. Frequency Response: Within plus or minus 3 dB from 50 to 15,000 Hz.
 3. Size: 8 inches (200 mm) with 1-inch (25-mm) voice coil and minimum 5-oz. (140-g) ceramic magnet.
 4. Minimum Dispersion Angle: 100 degrees.
 5. Rated Output Level: 10 W.
 6. Matching Transformer: Comply with EIA-160. Full-power rated with four EIA standard taps. Maximum insertion loss of 0.5 dB.
 7. Surface-Mounting Units: Ceiling, wall, or pendant mounting, as indicated on drawings, in steel back boxes, acoustically dampened. Front face of at least 0.0478-inch (1.2-mm) steel and whole assembly rust proofed and shop primed for field painting.
 8. Flush-Ceiling Mounting Units: In steel back boxes, acoustically dampened. Aluminum ceiling grille with baked, white-enamel finish.
- E. Horn-Type Loudspeakers: Comply with EIA SE-103.
1. Type: Single-horn units, double-reentrant design, with minimum full-range power rating of 15 W.
 2. Matching Transformer: Comply with EIA-160. Full-power rated with four EIA standard taps. Maximum insertion loss of 0.5 dB.
 3. Frequency Response: Within plus or minus 3 dB from 250 to 12,000 Hz.
 4. Dispersion Angle: 130 by 110 degrees.
 5. Mounting: Integral bracket.
 6. Units in Hazardous (Classified) Locations: Listed and labeled for the environment in which they are located.

NOTE TO SPECIFIER

Include paragraph below for CSF workrooms where ambient noise level varies greatly under different use conditions and manual level adjustment is impractical.

- F. Noise-Operated Gain Controller: Units continuously sense space noise level and automatically adjust signal level to local speakers.
1. Frequency Response: 20 to 20,000 Hz, plus or minus 1 dB.

2. Level Adjustment Range: 20 dB minimum.
 3. Maximum Distortion: 1 percent.
 4. Control: Permits adjustment of sensing level of device.
- G. Volume Attenuator Stations: Wall-plate-mounted autotransformer type with paging priority feature.
1. Wattage Rating: 10 W, unless otherwise indicated.
 2. Attenuation per Step: 3 dB, with positive off position.
 3. Insertion Loss: 0.4 dB maximum.
 4. Attenuation Bypass Relay: Single pole, double throw. Connected to operate and bypass attenuation when all-call, paging, program signal, or prerecorded message features are used. Relay returns to normal position at end of priority transmission.
 5. Label: "PA Volume."
- H. Cable and Conductors: Jacketed, twisted-pair and twisted-multipair, untinned, solid-copper conductors.
1. Insulation for Wire without Conduit: Thermoplastic, not less than 1/32 inch (0.8 mm) thick.
 2. Microphone Cables: Neoprene jacketed, not less than 2/64 inch (0.8 mm) thick over shield with filled interstices. Shield No. 34 AWG tinned, soft-copper strands formed into a braid or approved equivalent foil. Shielding coverage on conductors is not less than 60 percent.
 3. Plenum Cable: Listed and labeled for plenum installation.
- I. Special Requirements For Cable Routing And Installation
1. The majority of paging system wiring in this building will be installed above ceilings without conduit. All communications cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
 2. Sealing of openings between floors, through rated fire and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
 3. Cabling routed underground, exterior of the building, through inaccessible ceilings or less than 10'-0" A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and factory boxes in unfinished areas. Provide 3/4" conduit risers with 90 degree bend and bushing for all wall mounted devices.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 - Common Work Results for Electrical.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Verify that electrical connections are made correctly.
- C. Install exposed cables parallel and perpendicular to surfaces or exposed structural members, and follow surface contours. Secure and support cables by straps, staples, or similar fittings so designed and installed to avoid damage to cables. Secure cable at intervals not exceeding 30 inches (76 cm) and not more than 6 inches (15 cm) from cabinets, boxes, or fittings.

- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess. Use lacing bars in cabinets.
- E. Control-Circuit Wiring: Install number and size of conductors as recommended by system manufacturer for control functions indicated.
- F. Separation of Wires: Separate speaker-microphone, line-level, speaker-level, and power wiring runs. Where exposed or in same enclosure, separate conductors at least 12 inches (30 cm) for speaker microphones and adjacent parallel power and voice wiring. Separate other intercommunication equipment conductors as recommended by equipment manufacturer.
- G. Splices, Taps, and Terminations: Make splices, taps, and terminations on numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures.
- H. Match input and output impedances and signal levels at signal interfaces. Provide matching networks where required.
- I. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables to identify media in coordination with system wiring diagrams.
- J. Conductor Sizing: Unless otherwise indicated, size speaker circuit conductors from racks to loudspeaker outlets not smaller than number 14 AWG and conductors from microphone to amplifiers not smaller than number 20 AWG.
- K. Weatherproof Equipment: Install units that are mounted outdoors, in damp locations, or where exposed to weather consistent with requirements of weatherproof rating. Provide surge protection where required.
- L. Line Matching Transformer Connections: Make initial connections using tap settings indicated on Drawings.
- M. Ground cable shields and equipment to eliminate shock hazard and to minimize ground loops, common-mode returns, noise pickup, cross talk, and other impairments.
- N. Signal Ground Terminal: Locate at main equipment cabinet. Isolate from power system and equipment grounding.

3.3 FIELD QUALITY CONTROL

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Section 014000 - Quality Requirements: Field testing and inspection.
- C. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installations, including connections. Report results in writing.
- D. Operational Test: Perform tests that include originating program and page material at microphone outlets, preamplifier program inputs, and other inputs. Verify proper routing and volume levels and freedom from noise and distortion.
- E. Signal-to-Noise Ratio Test: Measure the ratio of signal to noise of complete system at normal gain settings, using the following procedure:
 - 1. Disconnect a microphone at the connector or jack closest to it and replace it in the circuit with a signal generator using a 1000-Hz signal. Replace all other microphones at corresponding connectors with dummy loads, each equal in impedance to microphone it replaces. Measure the ratio of signal to noise.
 - 2. Repeat test for each separately controlled zone of loudspeakers.

3. Minimum acceptance ratio is 50 dB.

- F. Distortion Test: Measure distortion at normal gain settings and rated power. Feed signals at frequencies of 50, 200, 400, 1000, 3000, 8000, and 12,000 Hz into each preamplifier channel. For each frequency, measure the distortion in the paging and all-call amplifier outputs. Maximum acceptable distortion at any frequency is 3 percent total harmonics.
- G. Acoustic Coverage Test: Feed pink noise into system using octaves centered at 500 and 4000 Hz. Use a sound-level meter with octave-band filters to measure level at five locations in each zone. For spaces with seated audiences, maximum permissible variation in level is plus or minus 2 dB. In addition, the levels between locations in the same zone and between locations in adjacent zones must not vary more than plus or minus 3 dB.
- H. Power Output Test: Measure electrical power output of each power amplifier at normal gain setting at 50, 1000, and 12,000 Hz. Maximum variation in power output at these frequencies must not exceed plus or minus 1 dB.
- I. Signal Ground Test: Measure and report ground resistance at public address equipment signal ground. Comply with testing requirements specified in Division 26.
- J. Retesting: Correct deficiencies, revising tap settings of speaker-line matching transformers where necessary to optimize volume and uniformity of sound levels, and retest. Prepare written record tests.
- K. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified. Prepare a list of final tap settings of paging speaker-line matching transformers.
- L. Schedule tests with at least seven days advance notice of test performance.

3.4 ADJUST AND CLEAN

- A. Adjust equipment for proper operation.

3.5 PROTECTION

- A. Protect finishes until substantial completion.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train maintenance personnel to adjust, operate, and maintain equipment as specified below:
 - 1. Train maintenance personnel on programming equipment for starting up and shutting down, troubleshooting, servicing, and maintaining equipment.
 - 2. Review data in maintenance manuals. Refer to Section 017704 - Closeout Procedures and Training.
 - 3. Schedule training with Postal Service at least seven days in advance.

SECTION 27 51 17 00 - MPF VIDEO INTERCOM AND EXTERIOR GATE CONTROL SYSTEM

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SCOPE

- A. Provide an integrated audio and video intercom system complete with door and gate controls for the exterior motorized gates and employee entrances. Provide multiple master control units and video door stations as shown on the drawings.

1.2 SUMMARY

- A. Section Includes:
 1. Audio and video master control station.
 2. Central exchange unit.
 3. Video door stations.
- B. Related Sections:
 1. Section 260500 - Common Work Results for Electrical.
 2. Section 270500 - Common Work Results for Communications.
 3. Section 281304 - Enterprise Physical Access Control System.

1.3 REFERENCES

- A. Electronic Industries Association (EIA):
 1. ANSI/TIA/EIA-568-A - Commercial Building Wiring Standard.
- B. National Fire Protection Association (NFPA):
 1. NFPA 70 - National Electrical Code.

1.4 SUBMITTALS

- A. Procedures for submittals.
 1. Product data: For each type of equipment.
 2. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, required clearances, method of field assembly, components, and location of each field connection.
 3. Control equipment.
 4. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Identify terminals to facilitate installation,

MPF VIDEO INTERCOM AND EXTERIOR GATE CONTROL

operation, and maintenance. Include a single-line diagram showing cabling interconnection of components.

- B. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.
- C. Maintenance Data: For equipment to include in maintenance manuals specified in Division 1.
- D. Assurance/Control Submittals:
 - 1. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - 2. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- E. Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 - 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience and an authorized representative of equipment manufacturer for both installation and maintenance of equipment.
- B. Regulatory Requirements:
 - 1. Conform to requirements of NFPA 70 and UL 50.
 - 2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Aiphone Corp., Bellevue, WA (800) 692-0200.
 - 2. Atlas-Soundolier; Atapco Security & Communications Group.
 - 3. Bogen Communications, Incorporated.
 - 4. Dukane Corp.; Communications Systems Division.
 - 5. Executone Information Systems Incorporated.
 - 6. Rauland-Borg Corporation.
 - 7. Valcom, Incorporated, Roanoke, VA (540) 427-3900.
 - 8.

NOTE TO SPECIFIER

Delete paragraph below if Postal Service will contract separately for this service.

- B. On-Site Assistance: Engage a factory-authorized service representative to provide on-site assistance in adjusting sound levels, video images and controls to meet occupancy conditions. Provide up to three on-site assistance visits within one year of Substantial Completion.

2.2 EQUIPMENT

- A. Coordinate features to form an integrated system. Match components and interconnections for optimum performance of specified functions.
- B. Equipment: Modular type, using solid-state components, fully rated for continuous duty, unless otherwise indicated. Select equipment for normal operation on input power usually supplied at 110 to 130 V, 60 Hz.
- C. Waterproof Equipment: Listed and labeled for duty outdoors or in damp locations.

2.3 AUDIO VIDEO MASTER CONTROL STATION(S)

- A. Master station(s) shall initiate and answer calls from up to (7) additional master units and up to (8) door substations. Master station(s) shall be expandable in increments of (16) channels, shall be wall or desk mounted and shall have the following features:
 1. 3.5 inch TFT color video monitor
 2. 8 master station channels
 3. 8 door / sub station channels
 4. LED and call tone annunciation for programmable length or infinite call-in
 5. Hands-free VOX communication or Push-to-Talk
 6. All call to other master stations
 7. Selective calling to any station in the system
 8. Add-on selectors in increments of 16 channels for max. capacity of 120 door / sub stations (CEU capacity also required)
 9. Privacy prevents other masters from listening in
 10. CO transfer allows calls to transfer to a telephone number (Viking K-1900-5 dialer required).
 11. Scan Monitor allows listening to door / sub stations in programmed time increments
 12. Door release button activates door strike or magnetic lock (selectable N/O or N/C contacts from CEU)
 13. 3.5mm speaker and mic jacks for computer-style headset or handset connection
 14. Tone and volume adjustments for open voice and headset communication
 15. Brightness and contrast adjustments for video
 16. Option connector for video output, call extension, or footswitch operation of TALK function
- B. Operation: When a video door station calls, a tremolo tone rings and the 3.5 inch color monitor comes on, displaying the image from the door station location. To answer the call, simply press the TALK button once and speak hands-free, or Press and Hold the TALK button to use as push-to-talk, release-to-listen. If access control is included, simply press the "key" button and the associated electric strike or magnetic lock will be activated.
- C. Wiring: Each master station shall be connected via CAT-5e cable homerun to the Central Exchange Unit. Feature and operation variables are set with the system set-up software and uploaded to the CEU.
- D. Basis of Design: Aiphone #AX-8MV.

2.4 CENTRAL EXCHANGE UNIT (CEU)

- A. The central exchange unit shall support a minimum of (8) master stations and up to (24) door / sub stations. Unit shall be expandable and shall have the following features:
 - 1. Wiring hub for system using CAT-5e cable
 - 2. Controls all functionality of AX system
 - 3. 8 Master station ports (RJ45)
 - 4. 24 Door / sub station ports (RJ45)
 - 5. 2 24V DC power supply input terminals
 - 6. 24 Door release dry contacts (24V AC/DC 500mA)
 - 7. 2 BNC composite video outputs and video switching triggers
 - 8. Outputs for add-on exchanges to support the maximum capacity of 120 doors
 - 9. CO line transfer output to Viking K-1900-5 programmable auto-dialer
 - 10. Programmable functionality via supplied software
 - 11. USB to serial adaptor and gender changer, software program and Installation and Operation Manual on CD, and QuikStart Guide
- B. Operation: The CEU handles the calling and communication signals for the system, as well as providing selective door release outputs, video outputs, DVR trigger outputs and CO line transfer output. System set-up and a variety of functions are programmed in the CEU with the use of the supplied software. Power is applied directly to the CEU via two PS-2420UL power supplies. The serial connection is for uploading the system programming, for raw RS232 data output, or for system monitoring via supplied program.
- C. Mounting: The unit shall be surface mounted to a wall, desk mounted, or mounted in a standard 19 inch EIA rack.
- D. Wiring: The audio/video master units and door stations shall be connected to the CEU via homerun CAT-5e wiring and RJ45 jacks.
- E. Basis of Design: Aiphone #AX-048C with Viking K-1900-5 dialer.
- F. Battery Backup: The CEU shall be provided with 30 minute, UPS battery reserve power. Provide 1500 Watt at 120Volt stand alone UPS unit.

2.5 AUDIO/VIDEO DOOR STATIONS

- A. The remote audio/video door stations shall include a color camera, microphone, speaker and call button with the following features:
 - 1. Color video camera with audio intercom
 - 2. 2-way hands-free voice communication with master station
 - 3. Call button to initiate call to master(s)
 - 4. White LED illuminator for low light conditions
 - 5. RJ45 jack for CAT-5e connection
 - 6. 980 ft. wiring distance from CEU using CAT-5e cable
- B. Operation: When the call button on the door station is pushed, the master station(s) ring and the video monitor comes on with the image from the door station's camera. The master station user then pushes the "TALK" button to initiate communication. The person at the door station speaks hands-free.
- C. Wiring: Each door station shall be connected to the CEU via CAT-5e cable. Door stations located more than 980 ft. from CEU shall be connected using fiber cabling.
- D. Basis of Design: Aiphone #AX-DV (surface mounted); Aiphone #AX-DVF (flush mounted).

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- B. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- C. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Verify that electrical connections are made correctly.
- C. Install exposed conduits and cables parallel and perpendicular to surfaces or exposed structural members, and follow surface contours. Secure and support cables by straps, staples, or similar fittings so designed and installed to avoid damage to cables. Secure cable at intervals not exceeding 30 inches (76 cm) and not more than 6 inches (15 cm) from cabinets, boxes, or fittings.
- D. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess. Use lacing bars in cabinets.
- E. Control-Circuit Wiring: Install number and size of conductors as recommended by system manufacturer for control functions indicated.
- F. Identification of Conductors and Cables: Apply wire and cable marking tape to designate wires and cables to identify media in coordination with system wiring diagrams.
- G. Weatherproof Equipment: Install units that are mounted outdoors, in damp locations, or where exposed to weather consistent with requirements of weatherproof rating. Provide surge protection where required.

3.3 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installations, including connections. Report results in writing.
- B. Operational Test: Verify proper routing and volume levels and freedom from noise and distortion.
- C. Inspection: Verify that units and controls are properly labeled and interconnecting wires and terminals are identified.
- D. Schedule tests with at least seven days advance notice of test performance.

3.4 ADJUST AND CLEAN

- A. Adjust equipment for proper operation.

3.5 PROTECTION

- A. Protect finishes until substantial completion.

3.6 DEMONSTRATION

- A. Engage a factory-authorized service representative to train maintenance personnel to adjust, operate, and maintain equipment as specified below:
 - 1. Train maintenance personnel on programming equipment for starting up and shutting down, troubleshooting, servicing, and maintaining equipment.
 - 2. Review data in maintenance manuals.
 - 3. Schedule training with Postal Service at least seven days in advance.

SECTION 27 51 23 00 - CSF INTERCOMMUNICATION AND PROGRAM SYSTEMS

NOTE TO SPECIFIER

Use this Outline Specification Section for larger Customer Service Facilities requiring a paging system. This Specification defines "level of quality" for Customer Service Facility construction and is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.27 51 23 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Doorbell call system.
 - 2. Assistance Buzzer.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical.

1.2 REFERENCES

- A. As specified in Section 260500 – Common Work Results for Electrical.

1.3 SUBMITTALS

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - a. Location and size of actual service entrance conduit.
 - b. Actual locations and sizes of pathways and outlets.

1.4 QUALITY ASSURANCE

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.

2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

C. Regulatory Requirements:

1. Conform to requirements of NFPA 70.
2. Products: Listed and classified by Underwriter's Laboratories Incorporated as suitable for the purpose specified and indicated.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with Project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Broan – Nutone, LLC. Hartford WI (800) 558-1711
 2. Carlon/Thomas & Betts, Cleveland OH (216) 464-3400
 3. Edwards Signaling and Security Systems, Plainville, CT (800) 336-4206.
 4. EZ Tone, Hermitage TN (800) 366-7235
 5. Federal Signal Corp., University Park, IL (800) 548-7229.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 DOORBELL CALL SYSTEM

- A. Description: Residential two tone chime type doorbell, pushbuttons, power transformer, conduits, chimes, and wiring as required for complete system.
- B. Materials:
 1. System with pushbutton, power transformer, conduits, and wiring as required for complete system.
 2. Provide chimes with audibly different and distinct sound from sound made by assistance buzzer.
 3. Color/finishes of pushbutton and faceplate to match other electrical devices.
- C. Transformer: 12 volts AC rated.
- D. Location:
 1. Wicket Door (set to two tone chime).
 2. Personnel Door (set to single chime).
 3. BMEU.

2.3 ASSISTANCE BUZZER

- A. Description: Commercial buzzer type doorbell, pushbuttons, power transformer, conduits, buzzer, and wiring as required for complete system.
- B. Materials:

1. System with pushbutton , power transformer, conduits, and wiring.
 2. Provide buzzer with audibly different and distinct sound from sound made by doorbell chimes.
 3. Color/finishes of pushbutton and faceplate to match other electrical devices.
- C. Transformer: 12 volts AC rated.
- D. Location:
1. IRT (one button) with buzzer near lunchroom.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 - Common Work Results for Electrical.

3.2 INSTALLATION

- A. Install system transformer at outlet box at accessible location.
- B. Install low voltage wiring in conduit.
- C. Flush mount wall outlets at 48 inches above finish floor unless otherwise noted on Drawings.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 53 13 00 - MPF WIRELESS, SYNCHRONIZED, GPS CLOCK SYSTEM

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification.

PART 1 - GENERAL

1.1 SUMMARY

- A. General Requirements and Scope: Furnish and install a complete new wireless, synchronized, GPS clock system, including equipment, accessories and materials in accordance with these specifications and drawings.
- B. This section addresses the needs and requirements of the wireless clock system, It includes requirements for the wireless clock system components including, but not limited to, the following:
 - 1. Master Clock with Wireless Transceiver
 - 2. Wireless Repeater
 - 3. Secondary Wireless Analog Clock
- C. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- D. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical.

1.2 REFERENCES

- A. As specified in Section 260500 - Common Work Results for Electrical.

1.3 SUBMITTALS

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. General: Submit the following in accordance with Conditions of Contract Sections:
 - 1. Submit equipment prints, full electronic wiring diagrams and specifications sheets for each item specified herein. Provide a tabulation of the specification clearly comparing the submitted item with the specified item, being able to refer to all written expressed functions and capabilities. Specification sheets shall be submitted on all items.
 - a. Shop drawings detailing wireless clock
 - 2. Wiring diagrams, detailing wiring for power, signal, and control.
 - 3. Submit wiring diagrams showing typical connections for all equipment.
 - 4. Submit a certificate of completion of installation and service training.

1.4 QUALITY ASSURANCE

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. All items of equipment shall be designed by the manufacturer to function as a complete system and shall be accompanied by the manufacturer's complete service notes and drawings detailing all interconnections.
- C. The contractor shall be an established communications and electronics contractor that has had and currently maintains a locally run and operated business for at least five (5) years. The contractor shall utilize a duly authorized distributor of the equipment supplied for this project location with full manufacturer's warranty privileges.
- D. The contractor shall show satisfactory evidence, upon request, that the supplier maintains a fully equipped service organization capable of furnishing adequate inspection and service to the system. The supplier shall maintain at his facility the necessary spare parts in the proper proportion as recommended by the manufacturer to maintain and service the equipment being supplied.
- E. Electrical Component Standard: Provide work complying with applicable requirements of NFPA 70 "National Electrical Code" including, but not limited to:
 - 1. Article 250, Grounding.
 - 2. Article 300, Part A. Wiring Method.
 - 3. Article 310, Conductors for General Wiring.
 - 4. Article 725, Remote Control, Signaling Circuits.
 - 5. Article 800, Communication Systems.
- F. Installation and start up of all systems shall be under the direct supervision of a local agency regularly engaged in installation, repair, and maintenance of such systems. The supplier shall be accredited by the proposed equipment manufacturers.
- G. The agency providing equipment shall be responsible for providing all specified equipment and mentioned services for all equipment as specified herein. The agency must be a local authorized distributor of all specified equipment for single source of responsibility and shall provide documents proving such. The agency must provide written proof that the agency is adequately staffed with factory-trained technicians for all of the specified equipment. The agency must have established business for and currently be providing all services for the equipment.
- H. The contractor shall guarantee availability of local service by factory-trained personnel of all specified equipment from an authorized distributor of all equipment specified under this section. Maintenance shall be provided at no cost to the purchaser for a period of one (1) year (parts and labor) from date of acceptance unless damage or failure is caused by misuse, abuse, neglect, or accident. Additionally, all manufacturer supplied products must be covered by three (3) year (parts only) limited warranty from the date of acceptance. The warranty period shall begin on the date of purchase by the Owner/engineer.
- I. The contractor shall, at the Owner's request, make available a service contract offering continuing factory authorized service of the system after the initial warranty period.
- J. The contractor is responsible for all cost associated with proper installation, termination, configuration, programming, impedance and load matching of all system components.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products in factory boxes. Store in clean, dry space in original boxes. Protect products from fumes and construction traffic. Handle carefully to avoid damage.

1.6 IN-SERVICE TRAINING

- A. The contractor shall provide training with this system. These sessions shall be broken into segments that will facilitate the training of individuals in the operation of this system. Operators Manuals and Users Guides shall be provided at the time of this training.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Sapling, Inc., Huntingdon, PA (215) 322-6063.
 2. Primex Wireless, Inc., Lake Geneva, WI (800) 537-0464.
 3. Substitutions permitted with approval from Contracting Officer.

- B. The "Basis of Design" manufacturer shall be:

Sapling, Inc.
 1633 Republic Road
 Huntingdon Valley, PA 19006
 Phone: 215.322.6063
 Fax: 215.322.8498
 Web: www.Sapling-Inc.com

- C. The intent of this specification is to establish a standard of quality, function and features. It is the responsibility of the contractor to insure that the proposed product meets or exceeds every standard set forth in these specifications.
- D. The functions and features specified are vital to the operation of this facility, therefore, the acceptance of alternate manufacturers does not release the contractor from strict compliance with the requirements of this specification.
- E. The contractor shall be responsible for providing a complete functional system including all necessary components whether included in this specification or not.
- F. Any approval of an alternate system does not automatically exempt the supplier from the intent of these specifications. Failure to comply with the operational and functional intent of these specifications may result in the total removal of the alternate system at the expense of the contractor.

2.2 SYSTEM REQUIREMENTS

- A. Wireless analog and/or digital clock system with interface capability to GPS, network, internet and existing systems such as: 58 minute, 59 minute, National Time & Rauland sync-wire, once a day reset, 2-wire digital communication and RS485 communication.

2.3 SYSTEM

- A. The system shall function as a stand alone system or in conjunction with an existing wired system and the system shall have interface capability to GPS, network, Internet and existing systems such as: 58 minute, 59 minute, National Time & Rauland sync-wire, once a day reset, 2-wire digital communication and RS485 communication.
- B. The system shall be capable of working in 915-928 MHz frequency-hopping technology. The system shall be capable of automatic transmission of data along 51 alternating frequencies that allows for an enhanced signal, even if there is interference in one of the frequencies.
 - 1. Contractor shall obtain a federal assignment for the transmit frequency that is to be utilized by the clock system. Frequency clearance shall be requested through Raleigh IT Service Center.
- C. Each secondary clock in the system shall be capable of receiving and transmitting the wireless signal which allows it to be used as a repeater while boosting the data stream and sending along the system. With this dual capability there shall be no limit on the number of clocks that can be used in the installation. The clocks shall be designed to automatically work together without interference with each other. The system shall be capable of increasing the quality of the signal while increasing the quantity of the clocks.
- D. The secondary analog clocks shall have the following option:
 - 1. Two (2) D cell batteries; the clock receives and transmits time every two (2) or four (4) hours, as selected by the user.
- E. The analog secondary clocks shall include automatic digital calibration for time base to minimize deviation from each other.
- F. The analog secondary clocks shall have a built-in close-loop system that will allow the clock to detect the position of the hands and bring the clock to the correct time even if the clock were manually or forcefully altered.
- G. The analog secondary clocks shall have the capability for diagnostic function that will allow the user to view the quality of the signal, how long since the last time the clock received a signal, as well as functional tests of the electronics and the gears.
- H. The system shall operate in a license-free frequency range where no license is required.

2.4 FCC APPROVAL

- A. This equipment shall be tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a commercial installation. This equipment shall not cause harmful interference to radio or television communications.

2.5 PRODUCTS

- A. SMA 2000 Master Clock/Transceiver/Transmitter: The Master Clock / Transmitter shall be the Sapling SMA 2000 Series. The master clock shall have a LED display and two push switches. The transmitter shall be capable of transmitting data to the SAL wireless analog clock. The master clock shall be capable of receiving a signal from any SNTP time server via the Internet. The master clock shall have up to ten pre-programmed SNTP servers to use in case the clock does not receive time from one of the servers via a web interface. The transmitter will be capable of receiving signals from all Sapling Master Clocks via RS485, as well as 59 minute correction, 58 minute correction, National Time and Rauland, and Dukane. The transmitter shall have the capability of transferring a wired system into a wireless

system. The transmitter shall contain two clock circuits that have the capability to run synchronous wire systems such as 59 minute correction, 58 minute correction, National Time/Rauland or a once a day pulse for intercom systems. The transmitter shall be capable of acting as a repeater while receiving a signal wired or wirelessly from the main transmitter. The master clock shall be programmed via the two push switches on the front panel. The transmitter shall be capable of interfacing with the wired analog clocks via the Converter Box. The transmitter shall utilize 915–928 MHz frequency–hopping technology. The master clock shall be powered by 110VAC/60 Hz or 220VAC/50 Hz.

1. SMA 2000 options
 - a. GPS – The master clock shall have the option of having a GPS receiver built into the unit for synchronization from the satellites via UTC.
 - b. Web Interface – The master clock shall be able to be programmed completely from a web interface that can be accessed through any typical web browser such as Microsoft Internet Explorer or Mozilla FireFox. The interface shall allow the user to program all display features, IP settings of the master clock and any system setting that the master clock has.
 - c. SNTP Server – The master clock shall have the capability to act as a SNTP server that other devices can point to in order to receive the time through SNTP protocol.
- B. SMA 1000 Wireless Repeater: The repeater shall be a Sapling Wireless Repeater. The repeater shall wirelessly transmit and receive data. The repeater shall be capable of transmitting to the wireless analog clocks. The repeater shall work on 915–928 MHz frequency–hopping technology. The repeater shall wirelessly transmit and receive data. The repeater is to have a maximum antenna size of seven (7) inches. The repeater shall have an RF input sensitivity of –103 dbm. The repeater is to have a RF power output of 27 dbm. The voltage input for the repeater shall be 110 volts/60 Hz or 220 volts/50 Hz.
- C. Analog Secondary Clock: The secondary clock shall be Sapling SAL-2 Series, 12 or 15 inch diameter, wireless type. The clock will be capable of receiving a signal from multiple clocks. The clock shall receive and transmit with 915–928 MHz frequency–hopping technology. The clock is to be capable of transmitting the time simultaneously without interfering with each other. The clocks shall include automatic calibration, as well as a diagnostic function that allows the user to view the quality of the signal, the last time the clock received a correction signal, a gearbox test and a comprehensive analysis of the entire clock. The clock shall have a maximum correction time of five (5) minutes. The clock shall be capable of receiving a signal every 2 or 4 hours. It shall be designed to be used with the Sapling SMA Series Master Clock (with transmitter option) or the Sapling Repeater, which can be regulated via Sapling wireless communication protocol. Upon receipt of the wireless signal, the clock will immediately self–correct. The clock shall have a semi–flush smooth surface ABS case. The dial is to be made of durable polystyrene material. The crystal is to be shatterproof, side molded polycarbonate. Glass and visible molding marks are unacceptable. The clock shall have black hour and minute hands as well as a red second hand. The clock shall be FCC compliant, part 15 Section 15, 247.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. Examine conditions, with the Installer present, for compliance with requirements and other conditions affecting the performance of the wireless clock system.
- C. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General:

1. Install system in accordance with applicable codes. Install equipment in accordance with manufacturer's written instructions.
2. Upon installation completion, a room-by-room test shall be conducted for every device in the system. A technician shall perform the test after school hours, and repairs shall be performed as needed at no cost to the Owner to any devices, which do not function correctly, including cable. A written room-by-room report following testing and repairs shall be prepared and submitted to the Engineer.

3.3 FIELD QUALITY CONTROL

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. Provide services of a service representative for this project location to supervise the field assembly and connection of components and the pre-testing, testing, and adjustment of the system.
- C. Make observations to verify that units and controls are properly labeled.
- D. Rectify deficiencies indicated by tests and completely re-test work affected by such deficiencies at the Contractor's expense. Verify by the system test that the total system meets the specifications and complies with applicable standards.

3.4 TRAINING

- A. Train Owner's maintenance personnel in the procedures and schedules involved in operating, troubleshooting, servicing, and preventative maintenance of the system. Operators Manuals and Users Guides shall be provided at the time of this training.
- B. Schedule training with Owner through the Architect, with at least seven (7) days advance notice.

3.5 CLEANING AND PROTECTION

- A. Prior to final acceptance, clean system components and protect from damage and deterioration.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/17/2013

END OF SECTION 27 53 13 00

Task	Specification	Specification Description

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 13 04 00 - MPF ENTERPRISE PHYSICAL ACCESS CONTROL SYSTEM**

NOTE TO SPECIFIER

Use this Specification section where a Enterprise Physical Access Control System (ePACS) is part of the Work. Verify ePACS requirements with USPS Contracting Officer and Inspection Services.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes specifications for an integrated security management system which shall perform the following general service
 - 1. Access control.
 - 2. Alarm monitoring.
 - 3. Reporting functions.
 - 4. Security management functions.
 - 5. Photo-ID badge issuing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 081100 – Metal Doors and Frames.
 - 2. Section 087100 – Door Hardware.
 - 3. Section 111415 – Turnstiles.
 - 4. Section 260500 – Common Work Results for Electrical.
 - 5. Section 270500 – Common Work Results for Communications.
 - 6. Section 275117 – Video Intercom and Exterior Gate Control System.
 - 7. Section 282305 – Integrated Security and Investigative Platform (ISIP) CCTV System.
 - 8. Section 283100 – Fire Detection and Alarm.

1.2 SYSTEM DESCRIPTION

- A. Enterprise Physical Access Control System:
 - 1. Access management system (System) shall monitor and control access to areas defined herein.
 - 2. The system will utilize proximity cards as its primary access device, but will support ISO 14443 Contactless smartcard technology, such as Mifare, and (keypad) technology at each door. It shall also support alarm inputs and control out puts.
 - 3. System shall consist of computers (servers/workstations), stand-alone microprocessor based controllers, card readers and/or Keypads and host software.

4. The microprocessor based controllers (FP) will be capable of controlling 16 card reader inputs and 16 door outputs. It will also be able to monitor a minimum of 92 alarm points, storing a minimum of 5000 events before down loading to the central computer. It will be able to store a minimum of 10,000 cardholders
5. System shall be capable of operating in a distributed processing environment with or without host connectivity.
6. Specific types of devices and their functions shall be addressed in relevant sections.
7. The system shall support an integrated electronic photo identification (photo-ID) system.
8. System will utilize an ODBC compliant database, such that it can share or retrieve information from a local database.
9. System shall be able to compare its list with the information from the USPS database and flag discrepancies of listed individuals in either database and have the ability to generate a report listing the discrepancies and records.
10. System will share its database with the electronic photo-ID system to eliminate redundant input of data to the databases for common data fields.
11. The operating system shall be USPS Windows applicable version (ACE standard operating system).
12. The system shall support true multi-user, multi-tasking with a minimum of 3 workstations.
13. The system shall include capability for remote access for off-site support and/or management workstations. Systems that connect to the network must provide remote access via the Postal Service business partner VPN connectivity. Dial-up phone connectivity is not permitted when systems are connected to the network.
14. The system shall utilize standard GUI interface allowing day-to-day operations to be performed using a standard mouse. All graphics shall be dynamic color alarm graphic maps (user definable) created with graphic drawing programs, not vector files. All device names shall be user programmable (minimum of 32 characters, full English).
15. The complete operator instruction manual shall be imbedded in the on-line help and shall be readily accessible using standard "Index," "Help Topics," "Keyword" and "Search" requests.
16. The client shall have the ability to define events for viewing in any one of multiple event viewer screens or any combination of screens. Events shall also be designated for printing to selectable printers.
17. Provide multiple levels of password protected system access with encryption. All passwords will use one-way encryption.
18. Provide operator with configurable reporting of event history and cardholder activity by authorized request only.
19. Provide reports for: Inputs (all or in groups), outputs (all or in groups), alarm messages, instructions, event action, card transaction history, field devices and panel reports, alarm history, alarm suppression.
20. Report generation shall allow for reports to be filtered by time and date as well as by device name, event category and definition and by card holder categories or individual record(s).
21. It will monitor all emergency egress doors and interface the alarms from these doors with the CCTV system.

B. Description of work:

1. The Systems Integrator shall include all necessary labor, tools, equipment, and ancillary materials required to furnish and install a complete and operational access control and alarm monitoring system.

NOTE TO SPECIFIER

Review the following lists with the Contracting Officer and Inspection Services. Note that coded keypads shall only be utilized upon approved exception by USPS. Modify Accordingly.

2. Enterprise Physical Access Control System will manage access to the following [building] [and] [selected areas] using [encoded cards.] [and/or] [coded Keypads.]
 - a. employee entrances/exits
 - b. access to administrative space
 - c. Registry Cage
 - d. Stamp Depository
 - e. Vehicular access (employee and USPS maneuvering area).
3. The extent of Enterprise Physical Access Control System work is defined to include, but not by way of limitation:
 - a. ePACS Controller.
 - b. Reader Interface Modules.
 - c. Card reading sensors.
 - d. Cards: Not In Contract, provided by local USPS facility. Contact USPS via email at PACS-SUPPORT@usps.gov for assistance in procuring cards.
 - e. ACE Standard Server/Workstations & software: Not In Contract, provided by USPS.
 - f. Photo-ID badge issuing software. Not In Contract, provided by local USPS facility. Contact USPS via email at PACS-SUPPORT@usps.gov for installation of software.
 - g. Photo-ID badge printer. Not In Contract, provided by local USPS facility. Contact USPS via email at PACS-SUPPORT@usps.gov for assistance in procuring printer.
 - h. Digital badge camera, backdrop, consumables and peripherals. Not In Contract, provided by local USPS facility. Contact USPS via email at PACS-SUPPORT@usps.gov for assistance in purchase.
 - i. Input monitoring modules.
 - j. Output relay modules.
 - k. Wiring, power supplies, switches and ancillary equipment.
4. Requirements are indicated elsewhere in these specifications for work including, but not limited to, raceways and electrical boxes and fittings required for installation of control equipment and wiring, not the work of this section.

1.3 REFERENCES

- A. NEC: All electrical wiring work shall comply with the latest edition of the NEC.
- B. NEMA: Electrical equipment shall comply with applicable portions of NEMA.
- C. FCC: All assemblies shall be in compliance with FCC emission standards.
 1. Proximity/Contactless Smartcard Card Reading Sensors: Part 15, Subpart F (field disturbance sensors).
 2. Dial-up modems: Part 68.
- D. UL-1012 and CSA: All power supplies shall be in compliance with Underwriters Laboratories standard 1012 and CSA standards for power supplies.
 1. UL-294: The system shall comply with Underwriters Laboratories standard 294 for Enterprise Physical Access Control Systems.

1.4 SUBMITTALS

- A. Product Data: Submit for prior approval, six (6) copies of manufacturer's data on Enterprise Physical Access Control System and components, including manufacturer's model numbers, catalog data sheets, power requirements, dimensions, layouts, installation details, single line riser diagram.
- B. Shop Drawings: Submit dimensioned drawings of Enterprise Physical Access Control System and accessories including: FP, proximity card reading sensors, keypads, power supplies, switches and ancillary equipment, photo-ID equipment including but not limited to card printer, digital camera,

MPF ENTERPRISE PHYSICAL ACCESS CONTROL
SYSTEM**

backdrop and light. Submit separate layout drawings of each equipment rack, control panel, interpanel and intrapanel wiring, power supplies, terminal strips, including labeling of all components, point-to-point wiring, and calculations for UPS power. Provide 1/8 inch scale floor plans showing locations of all devices.

- C. Security Riser Diagram: Shall detail the number and location of controllers, reader interface modules, power supplies, indicate all cabling and wiring, host equipment. Riser diagrams shall be submitted to the Contracting Officer for review and concurrence prior to execution.
- D. Operator's Manual: Submit for prior approval, six (6) copies of manufacturer's manual for programming and operating the system and its related components.
- E. Submit evidence of training from the manufacturer of the system proposed for installation. Evidence shall include written certificates of training or similar documentation on manufacturer's letterhead demonstrating the installer's qualifications.

1.5 QUALITY ASSURANCE

- A. Manufacturer: Manufacturer of products defined in this section must have:
 - 1. Industry experience: Company must have at least five (5) years experience in manufacturing and servicing integrated access control and alarm monitoring systems.
- B. Systems Integrator:
 - 1. Company with a minimum of five (5) years system design, engineering supervision, and installation experience in the alarm, building automation, or Access Control industry.
 - 2. The Integrator shall obtain a Sensitive Clearance from the USPS. This clearance will be coordinated by the Contracting Officer representative. Use the following email for assistance in obtaining this clearance: PACS-SUPPORT@usps.gov
 - a. An interim clearance will be issued to allow the Integrator to request an ACE logon from the Contracting Officer.
 - b. It will take a minimum of two weeks to obtain an interim clearance.
 - 3. Company that is trained and authorized to install manufacturer products.
 - 4. Company that has been successfully installing systems of equal size and complexity for a minimum of five (5) years. Submit a minimum of three (3) references. System references shall include projects where software and hardware installed is similar to the software and hardware proposed for this project.
 - 5. The systems integrator shall include all necessary labor, tools, equipment, and ancillary materials required to furnish and install a complete and operational access control and alarm monitoring system.
 - 6. The extent of Enterprise Physical Access Control System work is defined to include, but not be limited to:
 - a. Installation of and testing of system including: controllers, reader interface modules, proximity/contactless smartcard card readers, keypads, input modules and output modules, software and photo-ID badge issuing system equipment.
 - b. Wiring, power supplies, switches and ancillary equipment.
 - c. Programming of system, including creation/translation of database with USPS input, and access levels.
 - d. Operator Training for using and programming the system for up to six (6) operators and two (2) shift supervisors, provide in two (2) sessions of eight (8) hours each. Provide two (2) additional eight (8) hour training sessions three (3) months after acceptance. Provide separate training for photo-ID badge production operators.
 - e. Submitting procedures for installing system on USPS networks and performing cut-over and acceptance testing on the system. Coordinate procedures with USPS Information Technology to ensure no interference with USPS network or systems.

- f. Provide two (2) eight (8) hour maintenance training sessions.

C. System Checkout:

1. Burn-in: 1,000 hours at normal operating conditions or equivalency.
2. On-site testing: Manufacturer trained and authorized Systems Integrator shall functionally test each component in the system after installation to verify proper operation and confirm that the panel wiring and addressing conform to the wiring documentation.
3. Service facility: Systems Integrator shall have service facilities within 4 hours travel time of the installation. Any increase in this time shall be approved by the Contracting Officer.

1.6 WARRANTY

A. System Components: twelve (12) months from date of acceptance.

1. Systems Integrator shall provide twenty-four (24) hour emergency service for all reported system operational failures during such twelve (12) month warranty period. The system must be fully operational within forty-eight (48) hours. Include all necessary maintenance for the entire integrated system for the twelve (12) month warranty period. On-site service response shall be within four (4) hours of the initial request for service and shall be provided twenty-four (24) hours a day, seven (7) days a week inclusive of all holidays.
2. Service requests shall be reported via phone call to a designated service toll free phone number provided by the Systems Integrator.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project. Review and confirm system requirements with USPS Inspection Services. Modify following paragraphs accordingly. Vanderbilt Industries has been selected by the USPS as the sole source provider for the system controller. Revisions to or substitutions for the controller are not permitted. All other ePACS peripheral components can be provided by any of the manufacturers listed below.

2.1 MANUFACTURERS

A. Enterprise Physical Access Control System Controller:

1. Contract transfer to Vanderbilt Industries (sole source provider for controller).
 - a. Contact the following;
 - 1) G. Patrick Shadood, USPS Account Manager, 2 Cranberry Road, Parsippany NJ 07054, office 973-316-3910 ; mobile 908-432-8806; fax 973-334-4850; PatrickShadood@vanderbiltindustries.com
 - 2) THE CONTRACTOR IS REQUIRED TO INFORM THE MANUFACTURER THAT THE CONTROLLER IS FOR A U.S. POSTAL SERVICE PROJECT.
2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.

B. All other Enterprise Physical Access Control System peripheral components:

1. Subject to compliance with project requirements, manufacturer offering Products which may be incorporated in the Work, including the following:
 - a. GE Security (800)428-2733.
 - b. HID Corporation (800) 721-7336
 - c. Hirsch Electronics Corporation, Irvine, CA (714) 250-8888.
 - d. Honeywell Security (800)323-4576.

- e. Vanderbilt Industries: contact G. Patrick Shadood; Office - (973) 316-3910; Mobile – (908) 432-8806.
- f. Lenel Systems International (716) 248-9720.
- g. Software House (800)550-6660.
- h. XceedID Corporation (877) 671-7011.
- 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS AND COMPONENTS

- A. Enterprise Physical Access Control System Controller:
 - 1. The Enterprise Physical Access Control System shall include a microprocessor based controller by Vanderbilt Industries.
 - 2. The contractor is required to inform the manufacturer that the controller is for a U.S. Postal Service project.
 - 3. The controller shall be ordered in a metal enclosure for wall mounting and include integrated battery back up.
- B. Field Panel: provide complete hardware to operate with the following features:
 - 1. The field panel shall support a minimum of sixteen (16) card reading sensors and shall be capable of supporting additional input and output modules
 - 2. Database: Database shall store all user operating data and handle event reporting for all possible attached devices, and shall contain memory capacity for the following:
 - a. Minimum of 10,000 card holder records.
 - 3. Event activity: System shall designate activity as an alarm or non-alarm condition, dependent upon modules installed, and shall report activity for:
 - a. Supervised monitor points: ninety-two (92) minimum.
 - b. Outputs: forty-six (46) minimum.
 - 4. Relay outputs: System shall initiate relay output commands based on:
 - a. Card Access Activity.
 - b. Operator Keyboard Inputs.
 - c. Pre-programmed Time Periods.
 - d. Input activation.
 - 5. System diagnostics:
 - a. Automatic system diagnostics and automatic alarming based on detected faults in the field panel, card readers, wiring, and expansion modules. At a minimum, diagnostics shall include faults, card reader errors, input change of state, expansion module faults, host communications, power monitoring and reader communications errors. If a problem is detected, it shall be reported to the host (when communications is restored).
 - b. Each time the field panel is powered, the panel shall go through an automatic diagnostic cycle. If a problem is detected, it shall be reported to the host. Diagnostics cycle shall include indications for fault, reader error, card swipe, monitor point change of state, host communication, card reader communication, program watchdog and power.
 - 6. Transaction buffer: 5,000 transactions, minimum.
 - 7. Flash memory for real time program updates from the host and/or locally connected computer.
 - 8. Communication: Primary communications shall support TCP/IP protocols for Ethernet using the USPS structured wiring system via an on-board Ethernet port. In addition, the field panel shall have an on-board RS-232 port for local connection and emergency dial-up communications.
 - 9. Tamper Switch: enclosure shall include a SPDT tamper switch wired at the factory.
 - 10. UL-294 rated.
 - 11. Power:

- a. The field panel shall operate on 12 - 24VDC, powered from an external, regulated power supply with battery backup. The field panel shall provide necessary power to all card readers and expansion modules.
 - b. Memory Retention: The field panel shall maintain configuration and card holder information for up to seventy-two (72) hours when operating power is disconnected from the field panel.
- C. Card Reading Sensor:
 - 1. General:
 - a. Reader (CR) shall read both proximity card and contactless smartcard and send signal to Controller for processing. The CR shall be compatible with:
 - 1) 125 KHz proximity, such as HID Corp 1000, capable of direct image printing (PVC overlay for direct image printing is acceptable).
 - 2) Contactless smartcard (ISO 14443 Standard, such as Mifare, and FIPS 201 compliant) capable of direct image printing (PVC overlay for direct image printing is acceptable).
 - b. Reader shall be dual technology and be listed in the FIPS 201 Evaluation Program Approved Product list <http://fips201ep.cio.gov/apl.php>
 - c. CR shall comply with the Standards for Facility Accessibility by the Physically Handicapped (USPS Handbook RE-4).
 - d. CR shall have the means to be electrically isolated to prevent short circuits from disrupting other communications in the data line network.
 - 2. Capacities:
 - a. CR shall read digital proximity cards signals to a minimum distance of 2 inches and contactless smartcard to a minimum distance of 1.5 inches (5.08mm) and does not require contact with the sensor.
 - 3. Long Range Proximity Card Readers (CR) to be provided at:
 - a. High-speed rollup doors.
 - b. Automatic impact doors.
 - c. Inbound Truck Maneuvering Area Gates (a long range reader on top due to mirror on high vehicles and multi-format mounted low for cars).
 - d. These readers are exempt from the requirements of FIPS201.
 - 4. Specifications: Material shall be Polycarbonate UL94, and shall be UV resistant, sealed, water and weather resistant, and tamperproof.
 - 5. Environmental:
 - a. Humidity: 0 percent to 100 percent condensing.
 - b. Temperature: -50 degrees to +180 degrees F (-46 degrees to +82 degrees C).
 - 6. Regulatory: Controller shall be designed to meet the following regulatory requirements:
 - a. UL294 Listing Standard for Safety.
 - b. FCC EMI and EMC Class A.
 - c. EN55022 EMI and EMC Class A.
 - 7. Mounting:
 - a. CR shall have the capacity to be mounted and operated behind any non-metallic, non-conductive surface, including glass.
 - b. CR shall have the capability to be mounted on any metal door frame.
 - c. Long range proximity card readers (CR):
 - 1) At high-speed rollup and automatic impact doors mount per manufacturer's recommendations for industrial powered trucks and protect CR from vehicle impacts.
 - 2) At Inbound Truck Maneuvering Area Gate mount per Standard Details.
 - 8. Power:
 - a. Source: Via the wiegand interface cable to the field panel.
 - b. The sensor shall emit a low power (less than one microwatt) RF field in up to six (6) inches from surface.
 - 9. Wiring: Multiple conductor overall shielded cable (22 AWG minimum). Size cable gauge to meet distance requirements from the field panel.

10. Feedback:
 - a. Single tri-color LED (green/amber/red) shall provide capability for diagnostic feedback.
 - b. Green LED indicates valid card and red LED indicates invalid card.
 - c. An audio tone shall indicate successful digital proximity/contactless smartcard card read and access granted.
11. Diagnostics: CR and data-line integrity shall be monitored continuously and shall alarm if failure is detected and indicate device and location of fault.
12. Self-protection:
 - a. Physical damage, including breaking open sensor housing, shall not allow access to any circuitry which would allow the system to be compromised.
 - b. Transmission of any frequency (or set of frequencies) into the sensor at any power level shall not compromise the system.

NOTE TO SPECIFIER

Note that coded keypads shall only be utilized upon approved exception by USPS.

- D. Keypad:
 1. General:
 - a. The Keypad shall operate In conjunction with CR for an increased level of user authentication.
 - b. Where required, the keypad shall be integral to the CR and provided as a single card reader/keypad combination unit.
 - c. The system shall have the means to utilize a numeric keypad for entry of a Personal Identification Number (PIN).
 2. Capacities:
 - a. Keypad only reader shall provide a standard 10 digit numeric entry organized in the standard telephone pad layout.
 - b. The user shall be able to enter a 4-digit Personal Identification Number (PIN).
- E. Power Supplies with battery backup: Provide separate power supplies for controllers, associated electric locks and reader interface modules not powered by controllers.
 1. General:
 - a. Un-interruptable Power Supply shall provide continuous power to the field panel, card reader, expansion modules, annunciator devices, and electric locks and operate from a 120VAC/60Hz source.
 - b. Provide external rechargeable battery(s) to maintain all field panel, card reader, expansion module, and electric lock operation for at least four (4) hours in event of power failure.
 2. Capacities: The Power supply shall provide:
 - a. 12 volt DC output to the field panel; or 24 volt DC output to the electric locks.
 - b. Ampere output current at 12 VDC, 24 VDC – 6 amps continuous.
 - c. Power failure output and battery charger output.
 3. Environmental:
 - a. Humidity: 85 percent at 86 degrees F (30 degrees C).
 - b. Temperature: 32 degrees to +122 degrees F (-0 degrees to +50 degrees C).
 4. Regulatory: UL 294 and CSA.
 5. Power: 120VAC/60Hz source.
 6. Wiring:
 - a. The power supply shall be connected to the field panel via wiring of at least 16 AWG.
 - b. The power supply shall utilize phoenix type connectors to allow for ease of field wiring and unit replacement or as recommended by the manufacturer.
 7. Feedback: A single LED indicates power ON condition.
 8. Self-protection: The power supply shall provide the following signals to the Controller:

- a. Power fail.
 - b. Battery recharge signal.
- 9. The electric lock power supplies shall provide a fire alarm interface for emergency lock release.

PART 3 - EXECUTION

3.1 EQUIPMENT INSTALLATION AND DOCUMENTATION

A. Installation:

1. The Enterprise Physical Access Control System shall be installed and wired completely on the USPS structured wiring system as shown on the plans by factory trained and authorized employees of the Systems Integrator.
2. Systems Integrator shall make all necessary wiring connections to external devices and equipment. Systems integrator shall program anti-pass back modes into the system in accordance with USPS requirements. Use the following e-mail for assistance in obtaining information regarding current USPS requirements: PACS-SUPPORT@usps.gov
3. Systems Integrator employees shall carry proof of manufacturer's certification at all times.
4. Install systems to conform with the approved submittal data. Where coordination requirements conflict with the system requirements, refer conflicts to the Contracting Officer.
5. Install materials and equipment level and plumb, parallel and perpendicular to other building systems and components.
6. Install equipment to facilitate servicing, maintenance, and repair or replacement of equipment components.
7. Where mounting heights are not detailed, consult with and coordinate with the Architect.
8. Coordinate all cutting, patching and site work with the [Design Build Entity] [or] [General Contractor].
9. All Enterprise Physical Access Control System devices shall be securely mounted to the building structure and fastened with tamper resistant screws. Provide USPS with three sets of tamper screw removal tools to be stored locally for service and maintenance.
10. All wiring connections shall enter enclosures at one location and be neatly dressed.
11. Device Mounting:
 - a. The field panel shall be wall mounted in a secure area.
 - b. The power supplies shall be installed in a secure area adjacent to the field panel.
12. All DC operated locking hardware, relays, and all other inductive loads shall have a diode connected to them to prevent noise and/or any induced currents. All AC operated relays or electric strikes shall have a MOV connected to them to suppress any current induced noise. Diodes and MOVs shall be connected at the strike or relay and shall be of the type recommended by the device manufacturer.
13. Install PIR request-to-exit sensors such that "corridor pedestrian traffic" will not activate the sensor. Ceiling or wall mount shall be acceptable. Adjust the pattern and sensitivity such that detection is ensured for all egress attempts and such that detection cannot be achieved from the exterior side of the door.
14. Touch-up scratched and marred surfaces to match original finishes; remove all dirt and construction debris.
15. All work areas shall be left in a broom swept condition at the end of each day.

B. Network Communications:

1. Installer shall coordinate all network communications wiring requirements with the structured cabling system provider to insure transmission pathway through the structured wiring system.
2. Telecommunications outlets for equipment as shown on the plans will be provided under Section 270500.

C. Documentation:

1. Accurate "as built" drawings shall be furnished before final acceptance is requested, by the Systems Integrator to aid the USPS in programming. These shall indicate the door(s) controlled by each lock output, the monitoring points for the door controlled area, host server, workstation and badge issuing station location, all field panel locations, all electrical circuit and telecommunications outlet designations and any annunciator outputs or special inputs into the system in hard copy and electronic format (AutoCAD-coordinate version requirements with the USPS Contracting Officer).
2. The Systems Integrator shall supply six (6) copies of operating and maintenance manuals to aid the USPS in the programming of the system.

D. Special Requirements For Cable Routing And Installation

1. The majority of the ePACS wiring in this building will be installed above ceilings without conduit. All communications cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
2. Sealing of openings between floors, through rated fire and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
3. Cabling routed underground, on the exterior, through inaccessible ceilings or less than 10 ft. – 0 in. A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and factory boxes in unfinished areas. Provide 3/4 inch conduit risers with 90 degree bend and bushing for all wall mounted devices.

3.2 SERVICE AND SUPPORT

A. Startup:

1. The Systems Integrator shall coordinate all system database requirements with the USPS and build the system database for the host server and workstations. At a minimum the Systems Integrator shall:
 - a. Provide worksheets to the USPS with requested database information a minimum of four (4) weeks prior to anticipated system startup.
 - b. Load all system device names and system addresses.
 - c. Load basic access levels.
 - d. Load and test all applications and interfaces.
 - e. Load and test sample proximity cards compatible with USPS Standard Card.
2. After the system has been installed, the documentation delivered to the USPS and network communications is established in compliance with Sections 3.1 & 3.2, A above, the Systems Integrator shall verify correct operation of all system components and demonstrate and test the system for the USPS.
3. Final system acceptance testing shall be conducted by the USPS Contracting Officer or, at the option of USPS, their authorized representative. Acceptance testing shall demonstrate all aspects of the Enterprise Physical Access Control System as described in the contract documents. The Systems Integrator shall make provisions for testing (any simulations required for testing) and provide a final acceptance test plan a minimum of one week prior to the anticipated testing date.
4. Final acceptance testing shall be conducted on the completed system as described in this specification and configured to the satisfaction of the USPS Contracting Officer.
5. The Systems Integrator shall guarantee all material and workmanship involving the system for twelve (12) months after startup.

B. Training (in addition to the requirements of Section 1.5, B, 5):

1. After system startup, the Systems Integrator shall instruct USPS personnel in how to program the system and demonstrate a typical operating program for each type of access controlled area.
 2. Enterprise Physical Access Control System training sessions shall be arranged with the USPS at least one week prior to the training date. Training manuals shall be delivered for each trainee with one additional copy delivered for archiving on the project site.
 3. Training manuals shall consist of an agenda, defined objectives for each lesson, a detailed description of the subject matter of each lesson, and the manufacturer's written operation and system manuals. At a minimum, training agenda shall consist of the following.
 - a. An overview of the system components and features.
 - b. A detailed description of how the equipment will operate to meet the performance requirements of the Enterprise Physical Access Control System.
 - c. A description of the operating system and application software.
 - d. Start up and orderly shut down procedures for the system.
 - e. Hands on training on all Enterprise Physical Access Control System software and hardware features.
 - f. Basic troubleshooting guide intended to identify the source of system problems.
 - g. System configuration and data back-up and restoration procedures.
- C. Warranty Support:
1. The Authorized Systems Integrator shall be available during the warranty period to answer programming and application questions to support USPS personnel during this period.
 2. The Authorized Systems Integrator shall have the training and capability to provide additional support services including:
 - a. Regular testing and inspection of all system components and to submit reports on the results.
 - b. Emergency Service for repairs and adjustments to the system and part replacement if necessary

USPS Mail Processing Facility Specification issued: 10/1/2013

SECTION 28 16 00 00 - CSF INTRUSION DETECTION SYSTEM**

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only. This Specification is intended as a guide to the Architect/Engineer preparing the Construction Documents.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Intrusion detection devices.
 - 2. Alarm control panel.
 - 3. Signaling devices.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical.
 - 2. Section 264128 - Surge Protective Devices (SPDs).
 - 3. Section 270500 - Common Work Results for Communications.
 - 4. [Section 282304 - Security, Burglary and Robbery Countermeasures Analog CCTV System.]
 - 5. [Section 282305 - Integrated Security and Investigative Platform (ISIP)CCTV System.]

1.2 REFERENCES

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Underwriters Laboratories Incorporated (UL):
 - 1. UL 609 - Local Burglar Alarm Units.
 - 2. UL 634 - Connectors and Switches for Use with Burglar-Alarm Systems.
 - 3. UL 639 - Intrusion Detection Devices.
 - 4. UL 681 - Installation and Classification of Mercantile and Bank Burglar-Alarm Systems.
 - 5. UL 1023 - Household Burglar-Alarm Systems.
 - 6. UL 1076 - Proprietary Burglar Alarm Units and Systems.
 - 7. UL 1449; 3rd Edition - Transient Voltage Surge Suppressors.

1.3 DEFINITIONS

- A. Hard-Wired System: Alarm, supervisory, and detection devices directly connected, through individual dedicated conductors, to central control panel.

- B. Multiplex System: Communications link using signaling method characterized by simultaneous or sequential transmission, or both, and reception of multiple signals in a communication channel, including means for positively identifying each signal.
- C. Zone: A single initiating device or combination of devices connected to a single point/zone on the Intrusion Detection Device panel. Circuit showing the display of alarms point/zone.
- D. Dial-Up System: Communication link utilizing voice line which connects alarm to central station through dial-up circuit.

1.4 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. System: Central microprocessor, remote intrusion sensors and detection devices, and a communications link to perform monitoring and alarm functions. System physically and electronically modular with provision for field expansion. System self-monitoring and self-diagnostic.
 - 2. Communication Link: Voice grade dial-up line and dedicated to intrusion detection, alarm service, and control of security related functions.
 - 3. Environmental: Design to withstand the following environmental conditions without mechanical or electrical damage or degradation of operating capability.
 - a. Altitude: Sea level to 4000 feet.
 - b. Ambient Temperature for Interior Elements: 0 degrees C to plus 40 degrees C.
 - c. Relative Humidity for Interior Elements: 5 to 95 percent, noncondensing.
 - d. Ambient Temperature for Exterior Elements: Minus 25 degrees C to plus 50 degrees C.
 - e. Relative Humidity for Exterior Elements: 0 to 100 percent.
- B. Performance Requirements:
 - 1. Intrusion Detection: Performed by indicated intrusion detection devices. Devices are assigned to detection of points/zones as indicated.
 - 2. Alarm Indication: Audible signal sounds and alphanumeric display at the alarm keypad identifying the zone originating an alarm. An alarm displayed at the keypad will annunciate with an audible tone. Alarm keypad provides alpha text as to the location of the alarm zone.
 - 3. When alarm signal is unable to be sent by telephone; a local 110 decibel horn is to sound for 5 minutes after the last sensor activation. The horn is to be located in the workroom.

1.5 SUBMITTALS

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data for system components, including UL listing data and list of materials, dimensioned plans, sections, and elevations showing minimum clearances, mounting arrangements, and installed features and devices.
 - 2. Shop Drawings: Wiring diagrams for system, including devices, components, and auxiliary equipment. System diagram is unique to the Project system; manufacturer's generic system diagram not permitted. Diagrams differentiate between manufacturer-installed and field-installed wiring. Include diagrams for equipment and for system with all terminals and interconnections identified.
 - 3. Assurance/Control Submittals:
 - a. Design Data: System operation description indicating method of operation and supervision of each component and each type of circuit, and sequence of operations for all manually and automatically initiated system inputs for this specific Project. Manufacturer's standard descriptions for generic systems not permitted.

- b. Test Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector with, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Pre-test.
 - 2) Acceptance test.
 - c. Certificates: Manufacturer's certificate certifying that components and Products meet or exceed specified requirements.
 - d. Qualification Documentation: Submit documentation of manufacturer and installer experience indicating compliance with specified qualification requirements. Include lists of completed projects with project names and addresses, names of Engineers and Owners.
 - e. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspection.
 - 4) Final inspection.
- C. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operation and Maintenance Data: Include data for each type product, including features and operating sequences, both automatic and manual. Include user's software data and recommendations for spare parts to be stocked at the site. Provide names, addresses, and telephone numbers of service organizations that stock repair parts for the system.
 - 2. Project Record Documents: Record actual locations of equipment and devices, and routing of alarm wiring.

1.6 QUALITY ASSURANCE

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Manufacturer Qualifications: Firms experienced in manufacturing equipment of the types and capacities indicated that have record of successful in-service performance with minimum 5 years documented experience. Prime system manufacturer and manufacturers of major system components required to qualify separately.
 - 1. Service Center: Prime system manufacturer maintains a service center capable of providing training, parts, and emergency maintenance and repairs for overall system at Project site within 8 hour maximum response time.
- C. Installer Qualifications: Experience with systems of the type and scope indicated and certified as authorized service representative of the prime system manufacturer with minimum 5 years documented experience.
 - 1. System shall be installed by a single contractor that assumes responsibility for system components and their compatibility.
 - 2. Only manufacturer's certified installer shall be utilized.
 - 3. Installer shall be NFBA/SIA technical level #1 certified.
 - 4. Installer shall be licensed where required by state or county.
 - 5. Installer shall require a security clearance if the installation is accomplished after the facility starts processing the mail.
- D. Regulatory Requirements:
 - 1. Coordination and verification of standards and requirements with Postal Inspection Service through Contracting Officer is required throughout planning, design, construction phases, and final approval of alarm security system.
 - 2. Postal Inspection Service has sole responsibility for evaluating the need for any security related equipment.

- E. Comply with UL Standard 609, 1023, and 1076.
- F. FM Compliance: Provide FM-approved intrusion detection systems and components.

1.7 OWNER'S INSTRUCTION

- A. Postal Inspection Service will provide training to end user.
- B. Postal Inspection Service will provide final programming.

1.8 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Extra Materials: Furnish extra materials described below that match products installed, packaged with protective covering for storage and identified with labels clearly describing contents.
 - 2. Intrusion Detection Devices: Furnish quantity equal to 5 percent of the number of units of each type installed, but not less than 1 of each type.

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified Products which may be incorporated in the Work include the following:
 - 1. Bosch Security, Fairport, NY (800) 289-0096(alarm & keypad).
 - 2. Visonic, Inc., Bloomfield, CT (800) 223 0020.
- B. Section 016000 - Product Requirements: Product options and substitutions.
 - 1. Conflicts, deviations, or change requests shall be submitted in writing to Postal Inspection Service through Contracting Officer with supporting documentation. Include written justification, designs, manufacturer's specifications, cost benefits, and any special circumstances dictated by local conditions. Documentation package shall be submitted in sufficient time to minimize any adverse effects of the proposed changes to the project construction schedule. Postal Inspection Service through Contracting Officer reserves the right to reject substitute and other systems.
 - 2. Substitutions are not permitted for control panel, expansion boards and control stations.
- C. Specified Products:
 - 1. Door Switches: Sentrol: Magnetic Contacts, #1078CW with 1K ohm resistor.
 - 2. Dual-Technology Devices, Passive Infrared and Ultrasonic:
 - a. Wall Mounted
 - 1) Bosch DS860.
 - 2) Visonic DUO 220AM
 - b. Ceiling Mounted

- 1) Bosch DS9360.
- 2) Visonic DUO 240
3. Control Panel: Bosch: #G7412GV4-USA Control/Communicator.
4. Expansion Boards: Bosch: #D8128D OctoPOPIT.
5. Control Stations (Keypad): Bosch: #D1255 Command Center.

2.2 INTRUSION DETECTION EQUIPMENT

- A. Surge Protection: Comply with minimum requirements of UL Standard 1449, 3rd Edition, for each component using solid-state devices and having line voltage power source connection or exterior underground signal connection.
- B. Interference Resistance: Systems and equipment and their operation not affected by radiated radio frequency interference and electrical induction of 15 V/m over frequency range of 10 to 10,000 MHz and conducted interference signals up to 0.25 V rms injected into power supply lines at 10 to 10,000 MHz.

2.3 INTRUSION DETECTION DEVICES

- A. Types, features, accessories, and mounting conditions of individual devices are as indicated.
- B. Alarm Contact Arrangement: Contact-making intrusion detection devices are single-pole, double-throw type.

2.4 DOOR SWITCHES

- A. Comply with UL Standard 634.
- B. All door contacts will have 1 K resistors added or 1 K resistor built in
- C. Balanced magnetic type. Magnet part designed for installation in door; magnetically operated switch installed in door frame. Unit uses bias magnet and sensitive read switch to resist compromise by introduction of foreign magnetic fields.
 1. Flush-Mounted Units: Flush with surface of door frame and door.

2.5 SPACE INTRUSION DETECTION DEVICES

- A. Comply with UL Standard 639 and the following general requirements:
 1. Configuration: Devices consist of single component or two or more separately mounted components as indicated or as required to perform functions. Single-component devices may not be used where multiple-component devices are indicated.
 2. Power Source Characteristics: Devices are supplied by one or more dedicated 120 V 60 Hz supply circuits from alarm control panel.
 3. Detection Indicator: LED in unit housing, latching-type where indicated.
 4. Sensitivity: Units detect presence of an intruder within their specified detection patterns and are insensitive to influences outside the pattern.
 5. Self-Testing Capability: Devices indicated to have this feature automatically test themselves periodically, but not less than once per hour, to verify normal device functioning and alarm initiation capability. Test failure is signaled to control panel by a trouble signal.
 6. Anti-Masking Capability: Devices indicated to have this feature automatically check operation continuously or at intervals of a minute or less and use signal-processing logic to detect blocking, masking, jamming, tampering, or other operational dysfunction. Such detection is signaled to the control panel as an alarm signal.

7. Addressability: Indicated devices include communication transmitter and receiver with unique identification and status-reporting capability to system control panel.
8. Remote Controllability: Indicated devices are individually monitored at system control panel for calibration, sensitivity, and alarm condition and are individually adjustable for sensitivity from panel.

- B. Dual-Technology Devices, Passive Infrared and Ultrasonic: Combine the two detection modes described above into a single housing.
 1. Detection by both methods results in an alarm signal.

2.6 CONTROL PANEL

- A. Comply with UL Standard 1076.
- B. Cabinet: Lockable steel enclosure. Arrange panel so operations required for testing or for normal operation and maintenance are performed from front of enclosure. If more than single unit is required to form complete control panel, provide exact matching, keyed alike panels. Accommodate components and allow ample gutter space for interconnection of panels and field wiring. Identify each enclosure by engraved, laminated, phenolic resin nameplate. Lettering on enclosure nameplate shall not be less than 1 inch (25 mm) high. Identify individual components and modules within cabinets with permanent labels.
- C. Systems: Alarm and supervisory systems are separate and independent in control panel. Alarm-initiating zone boards in panel consist of plug-in cards. Arrangement requiring removal of field wiring for module replacement not permitted. Use Bosch D7412GV4-USA (complete) package containing the G7412GV4-USA control panel. The manufacturer has verified that the control panel will be produced for U.S. Postal Service Projects. **THE CONTRACTOR IS REQUIRED TO INFORM THE MANUFACTURER THAT THE CONTROL PANEL IS FOR A U.S. POSTAL SERVICE PROJECT**
- D. Control Modules: Types and capacities as required to perform functions of system. Visible and audible signals in control panel indicate alarm, supervisory, and trouble conditions for each zone. Each type of audible alarm has distinct sound.
- E. Expansion Boards: Provide and install as many expansion boards (D8128D OCTOPOPITS) as necessary to connect all door contacts and motion sensors. All expansion boards shall be installed in the control panel cabinet OR in a like cabinet immediately adjacent to the control panel cabinet. All unused points shall have EOL resistors installed. Popits are not allowed.
- F. Zones: Quantity of alarm and supervisory zones and zone assignment numbers as indicated. Provide expansion boards with capacity for expanding number of zones by minimum of 25 percent.
- G. Power Supply Circuits: Panel provides power for remote power-consuming detection devices. Provide adequate circuit capacity for at least a 25 percent increase in load. Transformer near the panel, minimum 18AWG copper wire. Earth ground, use #10AWG solid copper wire.
- H. Command center (keypad): Individual annunciation for each zone. Blue fluorescent vacuum. Alphanumeric display for each control panel section/area display devices on the keypad. Manual toggle test-switches or push test-buttons do not require key to operate. Alarm and supervisory signals displays for the associated zone.

NOTE TO SPECIFIER

Include the following paragraph if a Criminal Investigative Office is to be included.

1. The alarm keypad panel shall not display or annunciate the status of any IDS components (i.e., motion sensor, entry delay tone, etc.) associated with the Criminal Investigative Office.

- I. Resetting: Controls permit silencing audible signals for individual zones but prevent the resetting of alarm, supervisory, or trouble signals while condition still exists.
- J. Alphanumeric Display and System Controls: Arrange for basic interface between human operator at control panel and system components, including annunciation and supervision. A display with minimum of 18 characters displays alarm, supervisory, and component status messages. Arrange keypad to enter and execute control commands.

2.7 SECURE-ACCESS CONTROL STATIONS

- A. Keypad and display module is arranged for entering and executing commands for system-status changes and for displaying system status and command-related data.

2.8 HORN

- A. 110 decibel horn powered by control panel with battery backup.

2.9 WIRE AND CABLE

- A. Stranded copper. Size conductors as indicated but not less than recommended by system manufacturer.
- B. Comply with Section 260519, except as indicated.
- C. Cable for Low-Voltage Control and Signal Circuits: All sensors and keypads will have wiring concealed inside walls. Provide flush outlet boxes with ¾ inch conduit risers. All sensors and keypad shall have dedicated homerun wires to the D7412GV4-USA panel. Wire will be category 2, unshielded, four-pair twisted 22 AWG stranded wire (conductors), except where manufacturer recommends shielded cable. Use wire colors red, green, black, orange, yellow, blue, brown, and white.

2.10 SPECIAL REQUIREMENTS FOR CABLE ROUTING AND INSTALLATION

- A. The majority of IDS wiring in this building will be installed above ceilings without conduit. All communications cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
- B. Sealing of openings between floors, through fire rated and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
- C. Support cables installed in ceiling spaces with wide-base canvas loop suspension devices such as the Erico Caddy #425 Loop anchored to building structural steel (red iron).
 - 1. Minimum and Maximum Spacing Between Supports: 4 - 5 feet.
 - 2. Furnish and install additional supports as required.
 - 3. Install complete cable support device system before starting installation of cable.
 - a. Installation of cable before completion of support system not permitted.
 - b. Unsupported cable shall not be permitted.

4. Organize and group cables. Install cable group as single run through ceiling spaces following column and building lines. Do not install cable group runs diagonally across center of building.
5. Cabling shall not be suspended from any electrical conduits, sprinkler systems, gas, or water pipes, etc.
6. Cabling shall not be attached to suspended ceiling grid system.
7. No element of the building structure (i.e. webbing of trusses) shall be used to support any telecommunications cabling.

- D. Cabling routed underground, exterior of the building, through inaccessible ceilings or less than 10'-0" A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and surface mounted factory boxes in unfinished areas. Provide ¾ inch conduit risers with 90 degree bend and bushing for all wall mounted devices.

2.11 POWER REQUIREMENTS

- A. Normal System Power Supply: 120 V 60 Hz from locked disconnect device. System components are supplied with power through system control panel.
- B. Power Source Transfer: When normal power is interrupted, system is automatically switched to backup supply without degradation of critical system function or loss of signals or status data.
 1. Backup Source: Batteries in power supplies of individual system components. Such batteries are an integral part of power supplies of components. When system is in "Alarm" mode, power source shall provide a minimum of 4 hours of battery backup, with 8 to 12 hours in "Normal" mode.
 2. Annunciation: Switching of system or any system component to backup power is indicated on system control panel as a change in system condition.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 – Common Work Results for Electrical.

3.2 INSTALLATION

- A. Install system according to NFPA 70, applicable codes, and manufacturer's published instructions.
- B. Comply with UL Standard 681.
- C. Installer to be Bosch Security Certified. Installer will meter test the system to insure proper wiring and function. Do not leave installer lock code in panel. Lock code should be the Bosch Security default code. Alarm monitoring is done by the National Law Enforcement Control Center (NLECC), Tel: 1-877-MYNLECC or 1-877-696-5322, Fax: 1-651-306-6700. Postal Management must complete Burglary Alarm Information Form (BAIF) and send to NLECC. This needs to be done at least one week prior to the installer requesting programming. Leave all installation and operating instruction books inside cabinet.
 1. Questions regarding alarm monitoring at USPS sites should be directed to the following specialist:
 - a. Leonardo V. Martinez, Sr. Physical Security Specialist, Technical Services Division – NLECC, Dulles, Virginia, LVMartinez@uspis.gov

D. Connection and Programming Protocol:

1. The Contractor shall connect the panel to a voice line using a RJ31x wired for line seizure.
2. The Contractor shall call 877-696-5322 Mon – Fri between 8am and 8pm (Eastern Time) and request to speak with a USPIS Alarm Technician.
3. The Contractor shall provide descriptive text for each point (zone) covered, and the point it was landed to on the Alarm Panel.
4. The Contractor shall advise USPIS which points need a delay for Entry/Exit.
5. The Contractor shall have all keypads addressed individually. (USPIS can provide support for this).
6. The Contractor shall advise USPIS if any special code is needed to dial out on the Alarm Panel's phone line (9, 8, etc).
7. The Contractor shall provide USPIS with all system information necessary for the completion of the programming template by USPIS. Upon completion of the template, USPIS will transmit program to the panel for final testing.
8. Contractor will adjust the sensitivity of all sensors, adjust and mask if necessary to prevent false activations.
9. Sensors will not be mounted in close proximity to air handling vents, as this will cause false activations.
10. No panic, smoke, sprinkler flow control or fire alarm monitoring will be supervised at the intrusion panel. Panic system interface will not be permitted without advance special approval by HQ Security Group.

E. Wiring Within Enclosures: Bundle, lace, and train conductors to terminal points with no excess. Provide and use lacing bars and distribution spools.

F. Number of Conductors: As recommended by system manufacturer for functions indicated.

G. Tighten connections to comply with tightening torques specified in UL Standard 486A.

H. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables so media are identified and coordinated with system wiring diagrams as specified in Section 260500

I. Install power supplies and other auxiliary components for detection devices at alarm control panel or at a data-gathering panel except as otherwise indicated. Do not install such items in vicinity of devices they serve.

J. Install panel and keypad at locations indicated on Drawings and verified by Postal Inspection Service through Contracting Officer.

K. Grounding: Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common mode returns, noise pickup, cross talk, and other impairments.

L. All IDS system wiring shall be homerun from each individual device back to IDS control panel.

M. At IDS control panel consolidate individual cable runs at a junction box located above ceiling near the IDS control panel with a single conduit down to the IDS control panel. Splicing within any cable run is not acceptable.

3.3 CONSTRUCTION

A. Interface with Other Work: Interface installation of intrusion detection system with closed circuit television system.

3.4 FIELD QUALITY CONTROL

- A. As specified in Section 260500 - Common Work Results for Electrical.
- B. Inspection:
 - 1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 - 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- C. Pretesting: Align and adjust system and perform pretesting of components, wiring, and functions to verify conformance with specified requirements. Correct deficiencies by replacing malfunctioning or damaged items with new items. Retest until satisfactory performance and conditions are achieved.
- D. Acceptance Operational Tests:
 - 1. Perform operational system tests to verify conformance with specifications. Test modes of system operation and intrusion detection. Methodically test for false alarms in each zone of space intrusion detection devices by simulating activities outside indicated detection patterns.
 - 2. Provide minimum 10 days notice of acceptance test performance schedule to Contracting Officer who will coordinate with Postal Inspection Service.
- E. Retesting: Correct deficiencies and retest until total system meets the requirements of Specifications and complies with applicable standards.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within 1 year of date of Final Acceptance, provide on-site assistance in adjusting and reprogramming to suit actual occupied conditions. Provide up to 2 visits to site for this purpose at no additional cost to United States Postal Service.

USPS CSF Specifications issued: 10/1/2013
Last revised: 9/16/2013

END OF SECTION 28 16 00 00

SECTION 28 16 00 00 - MPF INTRUSION DETECTION**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Intrusion detection devices.
 - 2. Alarm control panel.
 - 3. Signaling devices.
- B. Related Sections:
 - 1. Section 282304 – Integrated Security and Investigative Platform (ISIP) CCTV System
 - 2. Section 260500 - Common Work Results for Electrical: Supporting devices and electrical identification.
 - 3. Section 260533 – Raceway and Boxes for Electrical Systems. Conduit for system wiring.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.
- B. Underwriters Laboratories Incorporated (UL):
 - 1. UL 609 - Local Burglar Alarm Units.
 - 2. UL 634 - Connectors and Switches for Use with Burglar-Alarm Systems.
 - 3. UL 639 - Intrusion Detection Devices.
 - 4. UL 681 - Installation and Classification of Mercantile and Bank Burglar-Alarm Systems.
 - 5. UL 1023 - Household Burglar-Alarm Systems.
 - 6. UL 1076 - Proprietary Burglar Alarm Units and Systems.
 - 7. UL 1449 - Transient Voltage Surge Suppressors.

1.3 DEFINITIONS

- A. Hard-Wired System: Alarm, supervisory, and detection devices directly connected, through individual dedicated conductors, to central control panel.

- B. Multiplex System: Communications link using signaling method characterized by simultaneous or sequential transmission, or both, and reception of multiple signals in a communication channel, including means for positively identifying each signal.
- C. Zone: A single initiating device or combination of devices connected to a single point/zone on the Intrusion Detection Device panel. Circuit showing the display of alarms point/zone.
- D. Dial-Up System: Communication link utilizing PSTN line which connects alarm to central station through dial-up circuit.

1.4 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. System: Central microprocessor, remote intrusion sensors and detection devices, and a communications link to perform monitoring and alarm functions. System physically and electronically modular with provision for field expansion. System self-monitoring and self-diagnostic.
 - 2. Communication Link: Voice grade dial-up line and dedicated to intrusion detection, alarm service, and control of security related functions.
 - 3. Environmental: Design to withstand the following environmental conditions without mechanical or electrical damage or degradation of operating capability.
 - a. Altitude: Sea level to 4000 feet.
 - b. Ambient Temperature for Interior Elements: 0 degrees C to plus 40 degrees C.
 - c. Relative Humidity for Interior Elements: 5 to 95 percent, noncondensing.
 - d. Ambient Temperature for Exterior Elements: Minus 25 degrees C to plus 50 degrees C.
 - e. Relative Humidity for Exterior Elements: 0 to 100 percent.
- B. Performance Requirements:
 - 1. Intrusion Detection: Performed by indicated intrusion detection devices. Devices are assigned to detection points/zones as indicated.
 - 2. Alarm Indication: Audible signal sounds and alphanumeric display at the alarm keypad identifying the zone originating an alarm. An alarm displayed at the keypad will annunciate with an audible tone. Alarm keypad provides alpha text as to the location of the alarm zone.
 - 3. When alarm signal is unable to be sent by telephone; a local 110 decibel horn is to sound for 5 minutes after the last sensor activation. The horn is to be located in the workroom.

1.5 SUBMITTALS

- A. Submittal Procedures:
 - 1. Product Data: Data for system components, including UL listing data and list of materials, dimensioned plans, sections, and elevations showing minimum clearances, mounting arrangements, and installed features and devices.
 - 2. Shop Drawings: Wiring diagrams for system, including devices, components, and auxiliary equipment. System diagram is unique to the Project system; manufacturer's generic system diagram not permitted. Diagrams differentiate between manufacturer-installed and field-installed wiring. Include diagrams for equipment and for system with all terminals and interconnections identified.
 - 3. Assurance/Control Submittals:
 - a. Design Data: System operation description indicating method of operation and supervision of each component and each type of circuit, and sequence of operations for all manually and automatically initiated system inputs for this specific Project. Manufacturer's standard descriptions for generic systems not permitted.
 - b. Test Reports: Submit pre-test and acceptance test reports directly to Contracting Officer from Manufacturer's Quality Control Inspector with, with copy to Contractor.

- c. Certificates: Manufacturer's certificate certifying that components and Products meet or exceed specified requirements.
 - d. Qualification Documentation: Submit documentation of manufacturer and installer experience indicating compliance with specified qualification requirements. Include lists of completed projects with project names and addresses, names of Engineers and Owners.
 - e. Manufacturer's Field Reports: Submit preparatory inspection, initial inspection, follow-up inspection, and final inspection reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor.
- B. Procedures for closeout submittals.
- 1. Operation and Maintenance Data: Include data for each type product, including features and operating sequences, both automatic and manual. Include user's software data and recommendations for spare parts to be stocked at the site. Provide names, addresses, and telephone numbers of service organizations that stock repair parts for the system.
 - 2. Project Record Documents: Record actual locations of equipment and devices, and routing of alarm wiring.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Firms experienced in manufacturing equipment of the types and capacities indicated that have record of successful in-service performance with minimum 5 years documented experience. Prime system manufacturer and manufacturers of major system components required to qualify separately.
- 1. Service Center: Prime system manufacturer maintains a service center capable of providing training, parts, and emergency maintenance and repairs for overall system at Project site within 8 hour maximum response time.
- B. Installer Qualifications: Experience with systems of the type and scope indicated and certified as authorized service representative of the prime system manufacturer with minimum 5 years documented experience.
- 1. System shall be installed by a single contractor that assumes responsibility for system components and their compatibility.
 - 2. Only manufacturer's certified installer shall be utilized.
 - 3. Installer shall be NFBA/SIA technical level #1 certified.
 - 4. Installer shall be licensed where required by state or county.
 - 5. Installer shall require a security clearance if the installation is accomplished after the facility starts processing the mail.
- C. Regulatory Requirements:
- 1. Coordination and verification of standards and requirements with Postal Inspection Service through Contracting Officer is required throughout planning, design, construction phases, and final approval of alarm security system.
 - 2. Postal Inspection Service has sole responsibility for evaluating the need for any security related equipment.
- D. Comply with requirements of NFPA 70.
- E. Comply with UL Standard 609, 1023, and 1076.
- F. FM Compliance: Provide FM-approved intrusion detection systems and components.

1.7 OWNER'S INSTRUCTION

- A. Installer will provide training to end user.

- B. Postal Inspection Service will provide final programming.

1.8 MAINTENANCE

- A. Extra Materials: Furnish extra materials described below that match products installed, packaged with protective covering for storage and identified with labels clearly describing contents.
 - 1. Intrusion Detection Devices: Furnish quantity equal to 5 percent of the number of units of each type installed, but not less than 1 of each type.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified Products which may be incorporated in the Work include the following:
 - 1. Bosch Security, Fairport, NY (800) 289-0096 (alarm & keypad).
 - 2. Visonic, Inc., Bloomfield, CT (888) 223-0020.
- B. Section 016000 - Product Requirements: Product options and substitutions.
 - 1. Conflicts, deviations, or change requests shall be submitted in writing to Postal Inspection Service through Contracting Officer with supporting documentation. Include written justification, designs, manufacturer's specifications, cost benefits, and any special circumstances dictated by local conditions. Documentation package shall be submitted in sufficient time to minimize any adverse effects of the proposed changes to the project construction schedule. Postal Inspection Service through Contracting Officer reserves the right to reject substitute and other systems.
 - 2. Substitutions are not permitted for control panel, expansion boards, and control stations.
- C. Specified Products:
 - 1. Door Switches: Sentrol Magnetic Contacts, #1078CW with 1K ohm resistor.
 - 2. Dual-Technology Devices, Passive Infrared and Microwave:
 - a. Wall Mounted
 - 1) Bosch DS860
 - 2) Visonic DUO 220AM
 - b. Ceiling Mounted
 - 1) Bosch DS9360
 - 2) Visonic DUO 240
 - 3. Control Panel: Bosch: # G7412GV4-USA Control/Communicator.
 - 4. Expansion Boards: Bosch: #D8128D OctoPOPIT.
 - 5. Control Stations (Keypad): Bosch: #D1255 Command Center.

2.2 INTRUSION DETECTION EQUIPMENT

- A. Surge Protection: Comply with minimum requirements of UL Standard 1449 for each component using solid-state devices and having line voltage power source connection or exterior underground signal connection.
- B. Interference Resistance: Systems and equipment and their operation not affected by radiated radio frequency interference and electrical induction of 15 V/m over frequency range of 10 to 10,000 MHz and conducted interference signals up to 0.25 V rms injected into power supply lines at 10 to 10,000 MHz.

2.3 INTRUSION DETECTION DEVICES

- A. Types, features, accessories, and mounting conditions of individual devices are as indicated.
- B. Alarm Contact Arrangement: Contact-making intrusion detection devices are single-pole, double-throw type.

2.4 DOOR SWITCHES

- A. Comply with UL Standard 634.
- B. All door contacts will have 1 K resistors added or 1 K resistor built in
- C. Balanced magnetic type. Magnet part designed for installation in door; magnetically operated switch installed in door frame. Unit uses bias magnet and sensitive read switch to resist compromise by introduction of foreign magnetic fields.
 - 1. Flush-Mounted Units: Flush with surface of door frame and door.

2.5 SPACE INTRUSION DETECTION DEVICES

- A. Comply with UL Standard 639 and the following general requirements:
 - 1. Configuration: Devices consist of single component or two or more separately mounted components as indicated or as required to perform functions. Single-component devices may not be used where multiple-component devices are indicated.
 - 2. Power Source Characteristics: Devices are supplied by one or more dedicated 120 V 60 Hz supply circuits from alarm control panel.
 - 3. Detection Indicator: LED in unit housing, latching-type where indicated.
 - 4. Sensitivity: Units detect presence of an intruder within their specified detection patterns and are insensitive to influences outside the pattern.
 - 5. Self-Testing Capability: Devices indicated to have this feature automatically test themselves periodically, but not less than once per hour, to verify normal device functioning and alarm initiation capability. Test failure is signaled to control panel by a trouble signal.
 - 6. Anti-Masking Capability: Devices indicated to have this feature automatically check operation continuously or at intervals of a minute or less and use signal-processing logic to detect blocking, masking, jamming, tampering, or other operational dysfunction. Such detection is signaled to the control panel as an alarm signal.
 - 7. Addressability: Indicated devices include communication transmitter and receiver with unique identification and status-reporting capability to system control panel.
 - 8. Remote Controllability: Indicated devices are individually monitored at system control panel for calibration, sensitivity, and alarm condition and are individually adjustable for sensitivity from panel.
- B. Passive Infrared (PIR) Devices: Detects intrusion by monitoring infrared energy emitted within protected zone. Units are sensitive to infrared wavelengths emitted by human body and are insensitive to general area thermal variations.
 - 1. Wall-Mounted Units: Maximum detection range for individual units exceeds scheduled distance by 25 percent, but is not less than 50 feet (15m).
 - 2. Ceiling-Mounted Units: Full 360 degree conical spot-detection pattern. With device mounted at 8 feet (2500mm) above floor the pattern at floor level is minimum diameter of 7 feet (2000mm). With device mounted at 25 feet (7600mm) above floor the pattern at floor level is minimum diameter of 18 feet (5500mm).
- C. Dual-Technology Devices, Passive Infrared and Microwave: Combine the two detection methods described above in a single housing.

1. Detection by either or both methods results in an alarm signal. A control in device selects operating mode.

2.6 CONTROL PANEL

- A. Comply with UL Standard 1076.
- B. Cabinet: Lockable steel enclosure. Arrange panel so operations required for testing or for normal operation and maintenance are performed from front of enclosure. If more than single unit is required to form complete control panel, provide exact matching, keyed alike panels. Accommodate components and allow ample gutter space for interconnection of panels and field wiring. Identify each enclosure by engraved, laminated, phenolic resin nameplate. Lettering on enclosure nameplate shall not be less than 1 inch (25 mm) high. Identify individual components and modules within cabinets with permanent labels.
- C. Systems: Alarm and supervisory systems are separate and independent in control panel. Alarm-initiating zone boards in panel consist of plug-in cards. Arrangement requiring removal of field wiring for module replacement not permitted. Use Bosch D7412GV4-C-USA (complete) package containing the G7412GV4-USA control panel. The manufacturer has verified that the control panel will be produced for U.S. Postal Service Projects. **THE CONTRACTOR IS REQUIRED TO INFORM THE MANUFACTURER THAT THE CONTROL PANEL IS FOR A U.S. POSTAL SERVICE PROJECT.**
- D. Control Modules: Types and capacities as required to perform functions of system. Visible and audible signals in control panel indicate alarm, supervisory, and trouble conditions for each zone. Each type of audible alarm has distinct sound.
- E. Expansion Boards: Provide and install as many expansion boards (D8128D OCTOPOPITS) as necessary to connect all door contacts and motion sensors. All expansion boards shall be installed in the control panel cabinet or in a like cabinet immediately adjacent to the control panel cabinet. All unused points shall have EOL resistors installed. Popits are not allowed.
- F. Zones: Quantity of alarm and supervisory zones as indicated with capacity for expanding number of zones by minimum of 25 percent.
- G. Power Supply Circuits: Panel provides power for remote power-consuming detection devices. Provide adequate circuit capacity for at least a 25 percent increase in load. Transformer near the panel, minimum 18AWG copper wire. Earth ground, use 14-16AWG solid copper wire.
- H. Command center (keypad): Individual annunciation for each zone. Blue fluorescent vacuum alphanumeric display for each control panel section/area display devices on the keypad. Manual toggle test-switches or push test-buttons do not require key to operate. Alarm and supervisory signals display the associated zone.
 1. The alarm keypad shall not display or annunciate the status of any IDS components (i.e., motion sensor, entry delay tone, etc.) associated with the Criminal Investigative Office.
- I. Resetting: Controls permit silencing audible signals for individual zones but prevent the resetting of alarm, supervisory, or trouble signals while condition still exists.
- J. Alphanumeric Display and System Controls: Arrange for basic interface between human operator at control panel and system components, including annunciation and supervision. A display with minimum of 18 characters displays alarm, supervisory, and component status messages. Arrange keypad to enter and execute control commands.

2.7 SECURE-ACCESS CONTROL STATIONS

- A. Keypad and display module is arranged for entering and executing commands for system-status changes and for displaying system status and command-related data.

2.8 HORN

- A. 110 decibel horn powered by control panel with battery backup.

2.9 WIRE AND CABLE

- A. Stranded copper. Size conductors as indicated but not less than recommended by system manufacturer.
- B. Cable for Low-Voltage Control and Signal Circuits: All sensors and keypads will have wiring concealed inside walls or above ceiling in conduit. All sensors and keypad will be dedicated homerun wires to the D7412GV4-USA panel. Wire will be category2, unshielded, four-pair twisted 22 AWG stranded wire (conductors), except where manufacturer recommends shielded cable. Use wire colors red, green, black, orange, yellow, blue, brown, and white.

2.10 SPECIAL REQUIREMENTS FOR CABLE ROUTING AND INSTALLATION

- A. The majority of IDS wiring in this building will be installed above ceilings without conduit. All communications cabling used throughout this project shall comply with the requirements as outlined in the National Electric Code (NEC) article 725. All cabling shall bare CMP and/or appropriate markings for the environment in which they are installed.
- B. Sealing of openings between floors, through fire rated and smoke walls, existing or created by the contractor for cable pass through shall be the responsibility of the contractor. Creation of such openings as are necessary for cable passage between locations as shown on the drawings shall be the responsibility of the contractor's work. Any openings created by or for this contractor and left unused shall also be sealed as part of this work.
- C. Cabling routed exterior of the building, underground, through inaccessible ceilings or less than 10'-0" A.F.F. in the workroom shall be contained in conduit. Provide flush boxes within finished areas and factory boxes in unfinished areas. Provide 3/4" conduit risers with 90 degree bend and bushing for all wall mounted devices.

2.11 POWER REQUIREMENTS

- A. Normal System Power Supply: 120 V 60 Hz from locked disconnect device. System components are supplied with power through system control panel.
- B. Power Source Transfer: When normal power is interrupted, system is automatically switched to backup supply without degradation of critical system function or loss of signals or status data.
 - 1. Backup Source: Batteries in power supplies of individual system components. Such batteries are an integral part of power supplies of components. When system is in "Alarm" mode, power source shall provide a minimum of 4 hours of battery backup, with 8 to 12 hours in "Normal" mode.
 - 2. Annunciation: Switching of system or any system component to backup power is indicated on system control panel as a change in system condition.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Execution Requirements: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install system according to NFPA 70, applicable codes, and manufacturer's published instructions.
- B. Comply with UL Standard 681.
- C. Installer to be Bosch Security Certified. Installer will meter test the system to insure proper wiring and function. Do not leave installer lock code in panel. Lock code should be the Bosch Security default code. Alarm monitoring is done by the National Law Enforcement Control Center (NLECC), Tel: 1-877-MYNLECC or 1-877-696-5322, Fax: 1-651-306-6700. Postal Management must complete Burglary Alarm Information Form (BAIF) and send to NLECC. This needs to be done at least one week prior to the installer requesting programming. Leave all installation and operating instruction books inside cabinet.
 - 1. Questions regarding alarm monitoring at USPS sites should be directed to the following specialist:
 - a. Leonardo V. Martinez, Sr. Physical Security Specialist, Technical Services Division – NLECC, Dulles, Virginia, LVMartinez@uspis.gov
- D. Connection and Programming Protocol:
 - 1. The Contractor shall connect the panel to a telephone line using a RJ31x wired for line seizure.
 - 2. The Contractor shall call 877-696-5322 Mon – Fri between 8am and 8pm (Eastern Time) and request to speak with a USPIS Alarm Technician.
 - 3. The Contractor shall provide descriptive text for each point (zone) covered, and the point it was landed to on the Alarm Panel.
 - 4. The Contractor shall advise USPIS which points need a delay for Entry/Exit.
 - 5. The Contractor shall have all keypads addressed individually. (USPIS can provide support for this).
 - 6. The Contractor shall advise USPIS if any special code is needed to dial out on the Alarm Panel's phone line (9, 8, etc).
 - 7. The Contractor shall provide USPIS with all system information necessary for the completion of the programming template by USPIS. Upon completion of the template, USPIS will transmit program to the panel for final testing.
 - 8. Contractor will adjust the sensitivity of all sensors, adjust and mask if necessary to prevent false activations.
 - 9. Sensors will not be mounted in close proximity to air handling vents, as this will cause false activations.

10. No panic, smoke, sprinkler flow control or fire alarm monitoring will be supervised at the intrusion panel. Panic system device interface will not be permitted without advance special approval by HQ Security Group.
- E. Wiring Within Enclosures: Bundle, lace, and train conductors to terminal points with no excess. Provide and use lacing bars and distribution spools.
- F. Number of Conductors: As recommended by system manufacturer for functions indicated.
- G. Tighten connections to comply with tightening torques specified in UL Standard 486A.
- H. Identification of Conductors and Cables: Color-code conductors and apply wire and cable marking tape to designate wires and cables so media are identified and coordinated with system wiring diagrams as specified in Section 260500.
- I. Install power supplies and other auxiliary components for detection devices at alarm control panel or at a data-gathering panel except as otherwise indicated. Do not install such items in vicinity of devices they serve.
- J. Install panel and keypad at locations indicated on Drawings and verified by Postal Inspection Service through Contracting Officer.
- K. Grounding: Ground system components and conductor and cable shields to eliminate shock hazard and to minimize ground loops, common mode returns, noise pickup, cross talk, and other impairments.
- L. All IDS system wiring shall be homerun from each individual device back to IDS control panel.
- M. At IDS control panel consolidate individual cable runs at a junction box located above ceiling near the IDS control panel with a single conduit down to the IDS control panel. Splicing within any cable run is not acceptable.

3.3 CONSTRUCTION

- A. Interface with Other Work: Interface installation of intrusion detection system with closed circuit television system.

3.4 FIELD QUALITY CONTROL

- A. Inspection:
 1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- B. Pretesting: Align and adjust system and perform pretesting of components, wiring, and functions to verify conformance with specified requirements. Correct deficiencies by replacing malfunctioning or damaged items with new items. Retest until satisfactory performance and conditions are achieved.
- C. Acceptance Operational Tests:
 1. Perform operational system tests to verify conformance with specifications. Test modes of system operation and intrusion detection. Methodically test for false alarms in each zone of space intrusion detection devices by simulating activities outside indicated detection patterns.
 2. Provide minimum 10 days notice of acceptance test performance schedule to Contracting Officer who will coordinate with Postal Inspection Service.

- D. Retesting: Correct deficiencies and retest until total system meets the requirements of Specifications and complies with applicable standards.

3.5 ADJUSTING

- A. Occupancy Adjustments: When requested within 1 year of date of Final Acceptance, provide on-site assistance in adjusting and reprogramming to suit actual occupied conditions. Provide up to 2 visits to site for this purpose at no additional cost to United States Postal Service.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 9/03/2013

END OF SECTION 28 16 00 00

SECTION 28 23 00 00 - VIDEO SURVEILLANCE

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for video surveillance. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes a video surveillance system consisting of cameras, digital video recorder, data transmission wiring, and a control station with its associated equipment.
2. Video surveillance system shall be integrated with monitoring and control system specified in Division 13 Section "Perimeter Security", "Intrusion Detection", "Security Access", and PLC Electronic Detention Monitoring and Control Systems", which specifies systems integration.

C. Definitions

1. AGC: Automatic gain control.
2. BNC: Bayonet Neill-Concelman - type of connector.
3. B/W: Black and white.
4. CCD: Charge-coupled device.
5. FTP: File transfer protocol.
6. IP: Internet protocol.
7. LAN: Local area network.
8. MPEG: Moving picture experts group.
9. NTSC: National Television System Committee.
10. PC: Personal computer.
11. PTZ: Pan-tilt-zoom.
12. RAID: Redundant array of independent disks.
13. TCP: Transmission control protocol - connects hosts on the Internet.
14. UPS: Uninterruptible power supply.
15. WAN: Wide area network.

D. Performance Requirements

1. Seismic Performance: Video surveillance system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event."

E. Submittals

1. Product Data: For each type of product indicated. Include dimensions and data on features, performance, electrical characteristics, ratings, and finishes.
2. Shop Drawings: For video surveillance. Include plans, elevations, sections, details, and attachments to other work.
 - a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - b. Functional Block Diagram: Show single-line interconnections between components for signal transmission and control. Show cable types and sizes.
 - c. Dimensioned plan and elevations of equipment racks, control panels, and consoles. Show access and workspace requirements.
 - d. UPS: Sizing calculations.
 - e. Wiring Diagrams: For power, signal, and control wiring.

3. Equipment List: Include every piece of equipment by model number, manufacturer, serial number, location, and date of original installation. Add pretesting record of each piece of equipment, listing name of person testing, date of test, set points of adjustments, name and description of the view of preset positions, description of alarms, and description of unit output responses to an alarm.
4. Seismic Qualification Certificates: For video surveillance, cameras, camera-supporting equipment, accessories, and components, from manufacturer.
 - a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
 - d. Field quality-control reports.
 - e. Operation and Maintenance Data: For cameras, power supplies, infrared illuminators, monitors, videotape recorders, digital video recorders, video switches, and control-station components to include in emergency, operation, and maintenance manuals. Include the following:
 - 1) Lists of spare parts and replacement components recommended to be stored at the site for ready access.
5. Warranty: Sample of special warranty.

F. Quality Assurance

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
2. Comply with NECA 1.
3. Comply with NFPA 70.
4. Electronic data exchange between video surveillance system with an access-control system shall comply with SIA TVAC.

G. Project Conditions

1. Environmental Conditions: Capable of withstanding the following environmental conditions without mechanical or electrical damage or degradation of operating capability:
 - a. Control Station: Rated for continuous operation in ambient temperatures of 60 to 85 deg F (16 to 29 deg C) and a relative humidity of 20 to 80 percent, noncondensing.
 - b. Interior, Controlled Environment: System components, except central-station control unit, installed in air-conditioned **OR** temperature-controlled, **as directed**, interior environments shall be rated for continuous operation in ambient temperatures of 36 to 122 deg F (2 to 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 1 enclosures.
 - c. Interior, Uncontrolled Environment: System components installed in non-air-conditioned **OR** non-temperature-controlled, **as directed**, interior environments shall be rated for continuous operation in ambient temperatures of 0 to 122 deg F (minus 18 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, noncondensing. Use NEMA 250, Type 3R **OR** Type 4 **OR** Type 12 **OR** Type 12K, **as directed**, enclosures.
 - d. Exterior Environment: System components installed in locations exposed to weather shall be rated for continuous operation in ambient temperatures of minus 30 to plus 122 deg F (minus 34 to plus 50 deg C) dry bulb and 20 to 90 percent relative humidity, condensing. Rate for continuous operation when exposed to rain as specified in NEMA 250, winds up to 85 mph (137 km/h) and snow cover up to 24 inches (610 mm) thick, **as directed**. Use NEMA 250, Type 3 **OR** Type 3R **OR** Type 3S **OR** Type 4 **OR** Type 4X, **as directed**, enclosures.
 - e. Hazardous Environment: System components located in areas where fire or explosion hazards may exist because of flammable gases or vapors, flammable liquids, combustible dust, or ignitable fibers shall be rated, listed, and installed according to NFPA 70.

- f. Corrosive Environment: System components subject to corrosive fumes, vapors, and wind-driven salt spray in coastal zones. Use NEMA 250, Type 4X **OR** Type 6P, **as directed**, enclosures.
- g. Security Environment: Camera housing for use in high-risk areas where surveillance equipment may be subject to physical violence.

H. Warranty

- 1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of cameras, equipment related to camera operation, and control-station equipment that fail in materials or workmanship within specified warranty period.
 - a. Warranty Period: Three years from date of Final Completion.

1.2 PRODUCTS

A. System Requirements

- 1. Video-signal format shall comply with NTSC standard, composite interlaced video. Composite video-signal termination shall be 75 ohms.
- 2. Surge Protection: Protect components from voltage surges originating external to equipment housing and entering through power, communication, signal, control, or sensing leads. Include surge protection for external wiring of each conductor's entry connection to components.
 - a. Minimum Protection for Power Connections 120 V and More: Auxiliary panel suppressors complying with requirements in Division 16 Section "Transient Voltage Suppression."
 - b. Minimum Protection for Communication, Signal, Control, and Low-Voltage Power Connections: Comply with requirements in Division 16 Section "Transient Voltage Suppression" as recommended by manufacturer for type of line being protected.
- 3. Tamper Protection: Tamper switches on enclosures, control units, pull boxes, junction boxes, cabinets, and other system components shall initiate a tamper-alarm signal when unit is opened or partially disassembled. Control-station, control-unit alarm display shall identify tamper alarms and indicate locations.

B. Standard Cameras

- 1. B/W Camera:
 - a. Comply with UL 639.
 - b. Pickup Device: CCD interline transfer, 252,000 512(H) by 492(V) pixels, **unless directed otherwise**.
 - c. Horizontal Resolution: 380 lines.
 - d. Signal-to-Noise Ratio: Not less than 46 dB.
 - e. With AGC, manually selectable on or off.
 - f. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination, as directed by the Owner, with camera AGC off, **as directed**.
 - OR**
 - Sensitivity: Camera shall deliver 1-V peak-to-peak video signal at the minimum specified light level. Illumination for the test shall be with lamps rated at approximately 2200-K color temperature, and with camera AGC off.
 - g. Manually selectable modes for backlight compensation or normal lighting.
 - h. Scanning Synchronization: Determined by external synch over the coaxial cable. Camera shall revert to internally generated synchronization on loss of external synch signal.
 - i. Motion Detector: Built-in digital.
- 2. Color Camera:
 - a. Comply with UL 639.
 - b. Pickup Device: CCD interline transfer, 380,000 771(H) by 492(V) pixels, **unless directed otherwise**.
 - c. Horizontal Resolution: 480 lines.
 - d. Signal-to-Noise Ratio: Not less than 50 dB, with camera AGC off.

- e. With AGC, manually selectable on or off.
- f. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination, as directed by the Owner, with camera AGC off, **as directed.**
OR
Sensitivity: Camera shall deliver 1-V peak-to-peak video signal at the minimum specified light level. Illumination for the test shall be with lamps rated at approximately 2200-K color temperature, and with camera AGC off.
- g. Manually selectable modes for backlight compensation or normal lighting.
- h. Scanning Synchronization: Determined by external synch over the coaxial cable. Camera shall revert to internally generated synchronization on loss of external synch signal.
- i. White Balance: Auto-tracing white balance, with manually settable fixed balance option.
- j. Motion Detector: Built-in digital.
- 3. Automatic Color Dome Camera: Assembled and tested as a manufactured unit, containing dome assembly, color camera, motorized pan and tilt, zoom lens, and receiver/driver.
 - a. Comply with UL 639.
 - b. Pickup Device: CCD interline transfer, 380,000 768(H) by 494(V) pixels, **unless directed otherwise.**
 - c. Horizontal Resolution: 480 lines.
 - d. Signal-to-Noise Ratio: Not less than 50 dB, with camera AGC off.
 - e. With AGC, manually selectable on or off.
 - f. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination, as directed by the Owner, with camera AGC off, **as directed.**
OR
Sensitivity: Camera shall deliver 1-V peak-to-peak video signal at the minimum specified light level. Illumination for the test shall be with lamps rated at approximately 2200-K color temperature, and with camera AGC off.
 - g. Manually selectable modes for backlight compensation or normal lighting.
 - h. Pan and Tilt: Direct-drive motor, 360-degree rotation angle, and 180-degree tilt angle. Pan-and-tilt speed shall be controlled by operator. Movement from preset positions shall be not less than 300 degrees per second.
 - i. Preset Positioning: Eight user-definable scenes, each allowing 16-character titles. Controls shall include the following:
 - 1) In "sequence mode," camera shall continuously sequence through preset positions, with dwell time and sequencing under operator control.
 - 2) Motion detection shall be available at each camera position.
 - 3) Up to four preset positions may be selected to be activated by an alarm. Each of the alarm positions may be programmed to output a response signal.
 - j. Scanning Synchronization: Determined by external synch over the coaxial cable. Camera shall revert to internally generated synchronization on loss of external synch signal.
 - k. White Balance: Auto-tracing white balance, with manually settable fixed balance option.
 - l. Motion Detector: Built-in digital.
 - m. Dome shall support multiplexed control communications using coaxial cable recommended by manufacturer.

C. Submersible Cameras

- 1. Camera: Color, designed for underwater monitoring and for inspecting pipes and storm drains. Attributes as follows:
 - a. Infrared LEDs to provide illumination in zero-light conditions.
 - b. 60-foot (18.3-m) factory-installed cable with BNC connector for video and a 2.1-mm jack for 12-V dc power supply.
 - c. An adjustable swivel mount and attachment base.
 - d. Pickup Device: CCD interline transfer, 290,000 500(H) by 580(V) pixels, **unless directed otherwise.**

- e. Horizontal Resolution: 380 lines.
 - f. Signal-to-Noise Ratio: Not less than 50 dB.
 - g. With AGC, from 4 to 39 dB.
 - h. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination of 0.1 lux at f/2.0.
 - i. Scanning Synchronization: Internal.
 - j. White Balance: Auto-tracing white balance, for colors ranging from 2800 to 8200 deg K.
- D. Reinforced Dome Cameras
- 1. Camera: Designed for high-abuse locations, with a weathertight semirecessed **OR** surface, **as directed**, mounting, impact-resistance polycarbonate dome, and heavy-gage, 6061 T6 aluminum body.
 - a. Suitable for exterior environment, rated for continuous operation in ambient temperatures of minus 40 to plus 122 deg F (minus 40 to plus 50 deg C) dry bulb and up to 85 percent relative humidity.
 - b. Pickup Device: CCD interline transfer, 290,000 510(H) by 492(V) pixels, **unless directed otherwise**.
 - c. Horizontal Resolution: 350 lines.
 - d. Signal-to-Noise Ratio: Not less than 46 dB.
 - e. With AGC and automatic backlight compensation.
 - f. Sensitivity: Camera shall provide usable images in low-light conditions, delivering an image at a scene illumination of 6 lux at f/2.0.
 - g. Scanning Synchronization: Determined by external synch over the coaxial cable. Camera shall revert to internally generated synchronization on loss of external synch signal.
 - h. White Balance: Auto-tracing white balance.
- E. Lenses
- 1. Description: Optical-quality coated lens, designed specifically for video-surveillance applications and matched to specified camera. Provide color-corrected lenses with color cameras.
 - a. Auto-Iris Lens: Electrically controlled iris with circuit set to maintain a constant video level in varying lighting conditions.
 - b. Fixed Lens: With calibrated focus ring.
 - c. Zoom Lens: Motorized, remote-controlled unit, rated as "quiet operating." Features include the following:
 - 1) Electrical Leads: Filtered to minimize video signal interference.
 - 2) Motor Speed: Variable.
 - 3) Lens shall be available with preset positioning capability to recall the position of specific scenes.
- F. Power Supplies
- 1. Low-voltage power supplies matched for voltage and current requirements of cameras and accessories, and of type as recommended by manufacturer of camera, infrared illuminator, **as directed**, and lens.
 - a. Enclosure: NEMA 250, Type 1 **OR** Type 3 **OR** Type 4X, **as directed**.
- G. Infrared Illuminators
- 1. Description: Lighting fixtures that emit light only in the infrared spectrum, suitable for use with cameras indicated, for nighttime surveillance, without emitting visible light.
 - a. Field-Selectable Beam Patterns: Narrow, medium, and wide.
 - b. Rated Lamp Life: More than 8000 hours.
 - c. Power Supply: 12-V ac/dc **OR** 120-V ac, **as directed**.
 - 2. Area Coverage: Illumination to 150 feet (50 m) in a narrow beam pattern.
 - 3. Exterior housings shall be suitable for same environmental conditions as the associated camera.
- H. Camera-Supporting Equipment

1. Minimum Load Rating: Rated for load in excess of the total weight supported times a minimum safety factor of two.
2. Pan Units: Motorized automatic-scanning units arranged to provide remote-controlled manual and automatic camera panning action, and equipped with matching mounting brackets.
 - a. Scanning Operation: Silent, smooth, and positive.
 - b. Stops: Adjustable without disassembly, to limit the scanning arc.
3. Pan-and-Tilt Units: Motorized units arranged to provide remote-controlled aiming of cameras with smooth and silent operation, and equipped with matching mounting brackets.
 - a. Panning Rotation: 0 to 355 degrees, with adjustable stops.
 - b. Tilt Movement: 90 degrees, plus or minus 5 degrees, with adjustable stops.
 - c. Speed: 12 degrees per second in both horizontal and vertical planes.
 - d. Wiring: Factory prewired for camera and zoom lens functions and pan-and-tilt power and control.
 - e. Built-in encoders or potentiometers for position feedback, and thermostat-controlled heater, **as directed**.
 - f. Pan-and-tilt unit shall be available with preset positioning capability to recall the position of a specific scene.
4. Mounting Brackets for Fixed Cameras: Type matched to items supported and mounting conditions. Include manual pan-and-tilt adjustment.
5. Protective Housings for Fixed and Movable Cameras: Steel or 6061 T6 aluminum, **as directed**, enclosures with internal camera mounting and connecting provisions that are matched to camera/lens combination and mounting and installing arrangement of camera to be housed.
 - a. Tamper switch on access cover sounds an alarm signal when unit is opened or partially disassembled. Central-control unit shall identify tamper alarms and indicate location in alarm display. Tamper switches and central-control unit are specified in Division 13 Section "Intrusion Detection."
 - b. Camera Viewing Window: Polycarbonate **OR** Lexan, **as directed**, window, aligned with camera lens.
 - c. Duplex Receptacle: Internally mounted.
 - d. Alignment Provisions: Camera mounting shall provide for field aiming of camera and permit removal and reinstallation of camera lens without disturbing camera alignment.
 - e. Built-in, thermostat-activated heater and blower units. Units shall be automatically controlled so the environmental limits of the camera equipment are not exceeded.
 - f. Sun shield shall not interfere with normal airflow around the housing.
 - g. Mounting bracket and hardware for wall or ceiling mounting of the housing. Bracket shall be of same material as the housing; mounting hardware shall be stainless steel.
 - h. Finish: Housing and mounting bracket shall be factory finished using manufacturer's standard finishing process suitable for the environment.
 - i. Enclosure Rating: as directed by the Owner.

I. Monitors

1. Monochrome:
 - a. Metal cabinet units designed for continuous operation.
 - b. Screen Size (Diagonal Dimension): as directed by the Owner.
 - c. Horizontal Resolution: 600 lines, minimum, at center.
 - d. Minimum Front Panel Devices and Controls: Power switch; power-on indicator; and brightness, horizontal-hold, vertical-hold, and contrast controls.
 - e. Mounting: Adjustable tilting and training.
 - f. Mounting: Single, 14-inch (356-mm) **OR** Dual, 9-inch (229-mm), **as directed**, vertical, EIA 19-inch (483-mm) electronic equipment rack or cabinet complying with CEA 310-E.
 - g. Electrical: 120-V ac, 60 Hz.
2. Color:
 - a. Metal cabinet units designed for continuous operation.
 - b. Screen Size (Diagonal Dimension): as directed by the Owner.
 - c. Horizontal Resolution: 300 lines.

- d. Minimum Front Panel Devices and Controls: Power switch; power-on indicator; and brightness, contrast, color, and tint controls.
- e. Degaussing: Automatic.
- f. Mounting: Single, 14-inch (356-mm) **OR** Dual, 9-inch (229-mm), **as directed**, vertical, EIA 19-inch (483-mm) electronic equipment rack or cabinet complying with CEA 310-E.
- g. Electrical: 120-V ac, 60 Hz.

J. Videotape Recorders

- 1. Description: Industrial, time-lapse type recorder, designed for continuous operation. Tape format is 1/2 inch (13 mm) using industrial-grade, T-120 cassettes.
 - a. Horizontal Resolution: 400 lines, minimum.
 - b. Recording Heads: Rotary-scan type.
 - c. Integral Timer: Permits programming of recording operation for adjustable daily and weekly periods.
 - d. Time-Lapse Operating Modes: Multiple, covering 24 to 240 hours, minimum.
 - e. Other Operating Modes:
 - 1) Manual play and recording at two- and six-hour speeds.
 - 2) Forward and reverse high-speed search.
 - 3) Reverse, slow, and single-frame play.
 - f. Alarm Recording: Operating mode is automatically switched from time-lapse to two- or six-hour recording mode when an externally generated alarm signal is received.
 - g. Audio Recording: 70 to 7000 Hz. Phono and microphone input; phono output.
 - h. Time and Date Generator: Records time and date legend in corner of recorded scenes.
 - i. Tape Counter: Displays tape position.
 - j. Manual Recording Lock: Key or keypad operated. Prevents unauthorized tampering or control changes during preset operation.
 - k. Signal-to-Noise Ratio: 45 dB for video output in standard play mode.
 - l. Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E, or freestanding desktop.

K. Digital Video Recorders

- 1. Description: Digital, time-lapse type, full-frame and motion recorder, with removable hard drive.
 - a. Recording Time: 400 hours minimum.
 - b. Resolution: 720 by 480 lines, minimum.
 - c. Programming shall be from trackball and push buttons on face of the recorder, settings shall be displayed on any video monitor connected to the recorder. Programming shall include the following:
 - 1) Motion analysis graph.
 - 2) Password protection.
 - 3) Alarm and timer controls.
 - 4) Continuous recording option.
 - 5) Time-lapse operating modes.
 - 6) Search video by time, event, or motion.
 - d. Programming: SmartMedia card for software updating, image archiving, and image transfer to a PC.
 - e. Storage: 80-GB, **unless directed otherwise**, removable hard drive. Software shall permit hot-swapping drives.
 - f. Compression: MPEG-2.
 - g. Time and Date Generator: Records time (hr:min:sec) and date legend of each frame.
 - h. Audio Recording: 70 to 7000 Hz. Phono and microphone input; phono output.
 - i. Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E, or freestanding desktop.

L. Network Video Recorders

- 1. External storage or internal 250-1, 500-GB hard disk drive.
 - a. Video and audio recording over TCP/IP network.

- b. Video recording of MPEG-2 and MPEG-4 streams.
- c. Video recording up to 48 Mbps for internal storage and up to 100 Mbps for external storage.
- d. Duplex Operation: Simultaneous recording and playback.
- e. Continuous and alarm-based recording.
- f. Full-Featured Search Capabilities: Search based on camera, time, or date.
- g. Automatic data replenishment to ensure recording even if network is down.
- h. Digital certification by watermarking.
- i. Internal RAID storage or non-RAID storage of up to 1500 GB.
- j. Capable of adding external RAID storage up to 7000 GB for models with no internal storage.
- k. Full integration with LAN, Intranet, or Internet through standard Web browser or video management software.
- l. Integrated Web server FTP server functionality.
- m. Supports up to 16, 32, or 64 devices.

M. Digital Switchers

1. Quad Switch: For displaying images from four cameras on a single monitor. Provide color switcher if one or more cameras or monitors are in color.
 - a. Controls: Unit-mounted front panel.
 - b. Resolution: 720 by 480 lines, **unless directed otherwise**.
 - c. Modes: Auto, manual, and alarm. In manual mode, each channel can also be viewed in single display mode. In the event of an alarm, alarming channel shall automatically switch to full screen. If several alarms are activated, channels in alarm shall be in auto-switching mode.
 - d. Channel Loss Alarm: Audible buzzer; occurrence details shall be recorded.
 - e. Time: Indicate date and time.
 - f. Timing of Auto-Switcher: 1 to 30 seconds, selectable.
 - g. Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E, or freestanding desktop.
2. Manual Switch Bank: Low-loss, high-isolation, multiple-video switch to allow manual switching of multiple quad switches and cameras to a single output. Switches shall be illuminated.
3. Sequential Switchers: Automatically sequence outputs of multiple cameras to single monitor and videotape recorder.
 - a. Switching Time Interval: Continuously adjustable, 5 to 20 seconds minimum, with manual override.
 - b. Skip-Sequential-Hold Switch: One for each camera, with LED to indicate active camera.
 - c. Camera Identification Legend: Either on-screen message or label at skip-sequential switch.
 - d. Alarm Switching: In the event of an alarm, alarming channel shall automatically switch the monitor to full screen.
 - e. Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E.
4. PTZ Controls: Arranged for multiple-camera control, with switches to select camera to be controlled.
 - a. Pan-and-Tilt Control: Joystick type.
 - b. Zoom Control: Momentary-contact, "in-out" push button.
 - c. Automatic-Scan Control: A push button for each camera with pan capability that places camera in automatic-scanning mode.

N. IP Video Systems

1. Description:
 - a. System shall provide high-quality delivery and processing of IP-based video, audio, and control data using standard Ethernet-based networks.
 - b. System shall have seamless integration of all video surveillance and control functions.

- c. Graphical user interface software shall manage all IP-based video matrix switching and camera control functions, two-way audio communication, alarm monitoring and control, and recording and archive/retrieval management. IP system shall also be capable of integrating into larger system environments.
 - d. System design shall include all necessary compression software for high-performance, dual-stream, MPEG-2/MPEG-4 video. Unit shall provide connections for all video cameras, camera PTZ control data, bidirectional audio, discreet sensor inputs, and control system outputs.
 - e. All camera signals shall be compressed, encoded, and delivered onto the network for processing and control by the IP video-management software.
 - f. Camera system units shall be ruggedly built and designed for extreme adverse environments, complying with NEMA Type environmental standards.
 - g. Encoder/decoder combinations shall place video, audio, and data network stream that can be managed from multiple workstations on the user's LAN or WAN.
 - h. All system interconnect cables, workstation PCs, PTZ joysticks, and network intermediate devices shall be provided for full performance of specified system.
- O. Video Motion Sensors (Interior)
- 1. Device Performance: Detect changes in video signal within a user-defined protected zone. Video inputs shall be composite video as defined in SMPTE 170M. Provide an alarm output for each video input.
 - a. Detect movement within protected zone of intruders wearing clothing with a reflectivity that differs from that of background scene by a factor of two. Reject all other changes in video signal.
 - b. Modular design that allows for expansion or modification of number of inputs.
 - c. Controls:
 - 1) Size of detection zones.
 - 2) Sensitivity of detection of each protected zone.
 - d. Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E.
- P. Control Stations
- 1. Description: Heavy-duty, freestanding, modular, metal furniture units arranged to house electronic equipment. Coordinate component arrangement and wiring with components and wiring of other systems.
 - 2. Equipment Mounting: Standard 19-inch (483-mm) rack complying with CEA 310-E.
 - 3. Normal System Power Supply: 120 V, 60 Hz, through a locked disconnect device and an isolation transformer in central-station control unit. Central-station control unit shall supply power to all components connected to it unless otherwise indicated.
 - 4. Power Continuity for Control Station: Batteries in power supplies of central-station control units and individual system components shall maintain continuous system operation during outages of both normal and backup ac system supply.
 - a. Batteries: Rechargeable, valve-regulated, recombinant, sealed, lead-acid type with nominal 10-year life expectancy. Capacity adequate to operate portions of system served including audible trouble signal devices for up to four hours and audible and visual alarm devices under alarm conditions for an additional 10 minutes.
 - b. Battery Charger: Solid-state, fully automatic, variable-charging-rate type. Charger shall recharge fully discharged battery within 24 hours.
 - 5. Annunciation: Indicate change in system condition and switching of system or component to backup power.
- Q. Signal Transmission Components
- 1. Cable: Coaxial cable elements have 75-ohm nominal impedance. Comply with requirements in Division 16 Section "Conductors and Cables for Electronic Safety and Security."
 - 2. Video Surveillance Coaxial Cable Connectors: BNC type, 75 ohms. Comply with requirements in Division 16 Section "Conductors and Cables for Electronic Safety and Security."

1.3 EXECUTION

A. Examination

1. Examine pathway elements intended for cables. Check raceways and other elements for compliance with space allocations, installation tolerance, hazards to camera installation, and other conditions affecting installation.
2. Examine roughing-in for LAN, WAN, and IP network before device installation.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Wiring

1. Comply with requirements in Division 16 Section "Raceways and Boxes."
OR
Wiring Method: Install cables in raceways unless otherwise indicated.
 - a. Except raceways are not required in accessible indoor ceiling spaces and attics.
OR
Except raceways are not required in hollow gypsum board partitions.
 - b. Conceal raceways and wiring except in unfinished spaces.
2. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.
3. Splices, Taps, and Terminations: For power and control wiring, use numbered terminal strips in junction, pull, and outlet boxes; terminal cabinets; and equipment enclosures. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.
4. For LAN connection and fiber-optic and copper communication wiring, comply with Division 16 Sections "Communications Backbone Cabling" and "Communications Horizontal Cabling."
5. Grounding: Provide independent-signal circuit grounding recommended in writing by manufacturer.

C. Video Surveillance System Installation

1. Install cameras and infrared illuminators level and plumb.
2. Install cameras with 84-inch- (2134-mm-) minimum clear space below cameras and their mountings. Change type of mounting to achieve required clearance.
3. Set pan unit and pan-and-tilt unit stops to suit final camera position and to obtain the field of view required for camera. Connect all controls and alarms, and adjust.
4. Install power supplies and other auxiliary components at control stations unless otherwise indicated.
5. Install tamper switches on components indicated to receive tamper switches, arranged to detect unauthorized entry into system-component enclosures and mounted in self-protected, inconspicuous positions.
6. Avoid ground loops by making ground connections only at the control station.
 - a. For 12- and 24-V dc cameras, connect the coaxial cable shields only at the monitor end.
7. Identify system components, wiring, cabling, and terminals according to Division 16 Section "Electrical Identification."

D. Field Quality Control

1. Perform tests and inspections.
2. Tests and Inspections:
 - a. Inspection: Verify that units and controls are properly installed, connected, and labeled, and that interconnecting wires and terminals are identified.
 - b. Pretesting: Align and adjust system and pretest components, wiring, and functions to verify that they comply with specified requirements. Conduct tests at varying lighting levels, including day and night scenes as applicable. Prepare video-surveillance equipment for acceptance and operational testing as follows:
 - 1) Prepare equipment list described in "Submittals" Article.

- 2) Verify operation of auto-iris lenses.
 - 3) Set back-focus of fixed focal length lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Adjust until image is in focus with and without the filter.
 - 4) Set back-focus of zoom lenses. At focus set to infinity, simulate nighttime lighting conditions by using a dark glass filter of a density that produces a clear image. Additionally, set zoom to full wide angle and aim camera at an object 50 to 75 feet (17 to 23 m) away. Adjust until image is in focus from full wide angle to full telephoto, with the filter in place.
 - 5) Set and name all preset positions; consult Owner's personnel.
 - 6) Set sensitivity of motion detection.
 - 7) Connect and verify responses to alarms.
 - 8) Verify operation of control-station equipment.
 - c. Test Schedule: Schedule tests after pretesting has been successfully completed and system has been in normal functional operation for at least 14 days. Provide a minimum of 10 days' notice of test schedule.
 - d. Operational Tests: Perform operational system tests to verify that system complies with Specifications. Include all modes of system operation. Test equipment for proper operation in all functional modes.
 3. Video surveillance system will be considered defective if it does not pass tests and inspections.
 4. Prepare test and inspection reports.
- E. Adjusting
1. Occupancy Adjustments: When requested within 12 months of date of Final Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose. Tasks shall include, but are not limited to, the following:
 - a. Check cable connections.
 - b. Check proper operation of cameras and lenses. Verify operation of auto-iris lenses and adjust back-focus as needed.
 - c. Adjust all preset positions; consult Owner's personnel.
 - d. Recommend changes to cameras, lenses, and associated equipment to improve Owner's use of video surveillance system.
 - e. Provide a written report of adjustments and recommendations.
- F. Cleaning
1. Clean installed items using methods and materials recommended in writing by manufacturer.
 2. Clean video-surveillance-system components, including camera-housing windows, lenses, and monitor screens.
- G. Demonstration
1. Train Owner's maintenance personnel to adjust, operate, and maintain video-surveillance equipment.

END OF SECTION 28 23 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 23 04 00 - CSF SECURITY, BURGLARY AND ROBBERY COUNTERMEASURES ANALOG CCTV

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only. This specification may be used for small CCTV projects that are independent from an existing, or planned, IP CCTV system when 16 or fewer cameras are required. Typical use would be for small access control projects, retail, security, burglary and robbery countermeasures projects and replacement of failed components in existing analog CCTV systems.

**** THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Provide and install a complete analog CCTV System including, but not limited to;
 - a. Video Surveillance Cameras, housings, power supplies, cabling, and related equipment.
 - b. Video control equipment.
 - c. Video monitoring and recording equipment.
 - d. Equipment enclosures.

B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents including:

1. System Installation Manuals

C. Related Sections:

1. Section 260500 - Common Work Results for Electrical.
2. Section 260533 - Raceway and Boxes for Electrical Systems.
3. Section 270500 - Common Work Results for Communications.
4. Section 281304 - Enterprise Physical Access Control System.
5. Section 281600 - Intrusion Detection.

D. Prompt Payments. In accordance with the Contractor Certification on Postal Service Form 4211B, "Project Contract Payment Authorization", the contractor certifies that prompt payment, (within 30 days) to the subcontractor (CCTV Provider) will be made.

1.2 REFERENCES

A. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electrical Code.

1.3 SYSTEM DESCRIPTION

- ##### A. Design Requirements: Closed circuit television (CCTV) analog video communication system for no more than 16 analog cameras between points of surveillance indicated on Drawings and central monitoring station consisting of video cameras, camera outlets, camera controls, monitors, video switcher, signal-processing equipment, control stations, distribution components, video recorders, and accessories.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures:

1. Product Data: Manufacturer's specification sheets for each component shall not be required.
2. Due to USPS security requirements, submittals will be limited to one electronic copy of the block diagram and one copy of the shop drawings to be provided to the General Contractor.
3. Final As-Built Drawings, Operation and Installations Manual, will be supplied directly to USPS and stored within the rack per USPS COTR.

B. Shop Drawings:

1. The CCTV Provider will provide a Standard Drawing Package (Red Book) that shall be utilized for the installation of the CCTV system. This package shall include:
 - a. Block Diagram: System block diagrams noting major system components and interrelationships of each component.
 - b. Console and Equipment Racks: Rack elevation drawings showing console/equipment arrangement.

C. Sequence and Scheduling Plan: Installer shall provide installation scheduling plan for review and approval. Coordinate scheduling of software and revisions with the USPS.

D. Qualifications:

1. Installer: Factory Certified Dealer specializing in CCTV systems installation. Installer shall be capable of performing the Work specified in this Section with minimum 3 years documented experience in the field and authorized and approved by the CCTV Provider to install Postal Service systems.

E. Section 017704 - Closeout Procedures and Training:

1. Operation and Maintenance Data: Include data for each type of product, including features and operating sequences, both automatic and manual. This information shall be supplied directly to the USPS by the Direct Vendor.
2. Product Quick Reference cards for the operation of all key system components.
3. Project Record Documents: Installer shall provide field-accurate drawings that reflect actual locations of cameras and routing of signal cable, indicating cable identifiers, layout, location and numbering of system devices to reflect as-built conditions.
4. Provide a final materials list of equipment installed and spare parts on hand. Materials list shall include model number, serial number, and date installed.
5. Project Completion Certification: Document signed by the installing integrator and a Postal Service representative indicating that the project is fully complete with all punch-listed items resolved.
6. OPERATING INSTRUCTION
 - a. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation.
 - b. Provide one complete set of equipment operating, installation, and programming manuals that will remain at the installed location.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Keep devices and equipment in manufacturer's packaging in a secured location until system is ready for installation.
- C. Comply with manufacturer's requirements. Coordinate storage location with the Postal Service.
- D. The equipment delivered must be insured at the contractor's expense through acceptance.

1.6 CCTV PROVIDER WARRANTY/SERVICE/TECHNICAL SUPPORT PLAN

A. Warranty:

1. Provide manufacturer warranty for three (3) years after facility acceptance and project completion certification for materials and labor.
 - a. Warranty shall include all parts and labor, and shall include return shipping. Failed equipment shall be repaired or replaced at no charge to the Postal Service during the warranty period.
 - b. USPS shall not be required to process any paperwork in order to be entitled to service plan coverage. It is the CCTV Provider's sole responsibility to monitor and comply with warranty eligibility.
 - c. Where operational performance is substantially affected, all software and firmware shall be upgraded to the latest version supported by the purchased hardware platform throughout the service plan period and be provided at no cost to USPS. Such upgrades shall be covered under the warranty/service plan and are at the discretion of the Postal Inspector or Station Manager.
 - (i) Any software bugs identified by the USPS and mutually agreed upon as 'level one' bugs (impacting operation with no work-around) shall be rectified within two (2) weeks of their being reported.
 - (ii) Any software bugs identified by the USPS and mutually agreed upon as 'level two' bugs (impacting operation but with a work-around) shall be rectified within 90 days of their being reported.
 - d. Turnaround time for all repairs (warranty and out-of-warranty) shall not exceed 72 hours.
 - (i) CCTV Provider shall make advance replacement units available in cases where USPS operational issues require immediate replacement of a unit while minimizing down time.
 - (ii) In situations where a complete facility system is not being supplied but only replacements for certain aged equipment, the warranty will only apply to the equipment being replaced

B. Technical Support

1. CCTV Provider shall provide toll-free 24/7 technical support at no charge throughout the warranty period.
2. Data Recovery — CCTV Provider shall provide a service to assist the USPS in recovering data from digital recording system hard drives and removable storage media in the event of a failure.
 - a. Turnaround time for data recovery shall be less than seven (7) days from receipt of hard drives at CCTV Provider's data recovery center.

PART 2 PRODUCTS

2.1 PROVIDERS

A. DIEBOLD, INC.

Michael Tracey, USPS Account Manager
 44845 Falcon Place Suite 106
 Sterling, VA 20166
 Cell: 571-451-7629
 email: michael.tracey@diebold.com

1. Contract to Diebold should be addressed to:
 Diebold Inc.
 3 Westchester Plaza
 Elmsford, NY 10523

B. VICON INDUSTRIES, INC.

Christine Stone, USPS Program Manager
 89 Arkay Drive
 Hauppauge, NY 11788
 (800) 645-9116 or (631) 952-2288

Fax (631) 951-2288

Email: USPS@vicon-cctv.com

C. Section 016000 - Product Requirements:

1. Product options and substitutions are not permitted without a written and USPS approved deviation.
2. All equipment to be supplied under this specification shall be new and the current model of the Provider.
3. Systems and components shall have been thoroughly tested and proven in actual use.

2.2 VIDEO MONITORS

A. Provide 17-inch LCD flat-panel color monitors with the following minimum capabilities.

1. Product Requirements:
 - a. Video Input Connections: VGA (DB15), and Composite (BNC).
 - (i) Switching between inputs shall be performed using a front panel control.
 - (ii) VGA resolution shall be equal to the native resolution of the installed Digital Video Recorder, if applicable.
 - b. Input Power: 120VAC, 60Hz (a power adaptor may be used to provide this voltage).
 - c. Mounting: Each monitor shall be desktop mounted. VESA mounting holes shall be provided and a series of optional VESA compliant mounts shall be made available at extra cost.
 - d. Operating Temperature: Range shall be equal to or greater than 10 to 40 degrees Celsius.
 - e. Humidity: Withstand a minimum of 10% to 80% humidity.
 - f. Resolution: At least 420 TV lines of composite video.
 - g. Adjustments: Must support on-screen display for setup and adjustment of monitor parameters.
 - h. Colors: Must support a minimum of 16 million colors.

2.3 VIDEO CAMERAS

A. Provide solid-state color cameras for video surveillance and monitoring of specific areas as shown on the drawings and confirmed with Postal Inspection Service through Contracting Officer with the following minimum capacities:

1. FIXED POSITION INDOOR/OUTDOOR IMPACT/VANDAL RESISTANT DOME TYPE VIDEO CAMERAS: Shall meet or exceed the following minimum requirements:
 - a. CCD Image Sensor: High resolution color with digital image processing.
 - b. Horizontal Resolution: 480 or greater TVL.
 - c. Auto Iris Control.
 - d. White Balance: Automatic.
 - e. Input Power: 24VAC, 60Hz with line locking.
 - f. Automatic Gain Control.
 - g. Backlight Compensation.
 - h. BNC or UTP (screw terminal) video connector, as required.
 - (i) If UTP connection is used, unit must be in full compliance with UTP specifications outlined in Section 2.8.
 - i. Lens: 3.3-12mm manual varifocal lens, application permitting.
 - (i) Lens substitution may be required to provide an acceptable image based on camera position, field of view, and distance to subject..(ii).Three axis adjustment (pan, tilt & roll)
2. REMOTELY POSITIONABLE (PTZ) VIDEO CAMERAS: Integrated camera/lens packages in a dome type housing, shall be remotely positionable (pan/tilt/zoom/focus/iris) shall meet or exceed the following minimum requirements:
 - a. Horizontal Resolution: 470 TVL or greater.
 - b. Optical Zoom: Minimum 22X.
 - c. Automatic Focus / Iris Control with manual override.

- d. Rotation Speed: Shall range from 0.1 degrees/second to 120 degrees/second with a minimum of 32 speeds in any direction.
 - e. Tilt Speed: 0.2 degrees per second to 90 degrees per second.
 - f. Proportional Pan-Tilt: Yes.
 - g. Presets: At least 32 Individual presets.
 - h. Alarm Inputs: At least one programmable high or low input.
 - i. Alarm Outputs: At least one auxiliary relay output or one open collector driver.
 - j. Operating Voltage: 24VAC nominal, with an operating range of 18 to 32VAC.
 - k. Programming Backup: Dome shall retain all programmed parameters for a minimum of thirty (30) days.
 - l. Lower Dome:
 - (i) Interior Domes – Gradient tint required to obscure the movement of camera.
 - (ii) Exterior Domes – Gradient tint required to obscure the movement of camera.
- B. Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.

2.4 CAMERA POWER SUPPLIES:

- A. Interior Cameras: Camera power supplies shall be located within 500' of the camera, either in the CIO (distance permitting) or in another suitable protected area. Provide multiple outlet (4, 8, or 16) fused power supplies as required for interior fixed and PTZ cameras. See drawings G5-7-1a or G5-8-3b. Power supplies shall be rated to support 200% of the actual (nominal) power loading.
 - 1. A minimum of two (2) power supplies shall be used on each project, regardless of camera count.
 - 2. Cameras must be on separate power supplies, such that the failure of a single power supply shall not impact two adjacent cameras.
- B. Exterior Cameras: Provide individual power supplies located at the camera.
 - 1. Enclosures shall be weatherproof and sealed to prevent water and/or insect infiltration.
- C. Provide a means for disconnecting camera power supplies from mains power at the power supply enclosure, either through a detachable power cord, master fuse or circuit breaker, or other UL approved switching device.

2.5 VIDEO CAMERA HOUSINGS AND MOUNTS

- A. Provide indoor housings as required for all camera types with the following minimum capabilities:
 - 1. Interior Cameras:
 - a. All cameras shall be in a housing that is coordinated with adjacent finishes with the appropriate mounting hardware. Selection of housings and mounts, including incremental changes to paint colors, dome materials, and cosmetic finishes shall be approved by the USPS or their authorized agent.
 - b. All housings shall be sufficiently dust and moisture resistant to withstand normal environmental conditions in their chosen installation location.
 - c. Hardware shall be provided to ensure tamper-resistant mounting in a variety of locations without modification to the integrity of the housing.
 - d. Where used, pendant mounts shall be suitable for use as wall, ceiling and column mounts. Pendant mounts shall attach to the appropriate camera housing using installer provided standard threaded schedule 40 rigid iron pipes. Pipe lengths of 10 feet or less are to be a minimum of 1-inch diameter. Pipe lengths exceeding 10 feet are to be a minimum of 1-1/2 inch in diameter. Exterior pipe shall be galvanized.
 - e. All mounts shall incorporate installer provided safety chain or cable of sufficient endurance to support 2 times the weight of the equipment.
 - 2. Exterior Cameras:
 - a. Environmental: Thermostatically controlled heaters and blowers with defrosting capabilities.
 - b. Moisture: Rainproof seals and gaskets.

- c. Wind Resistance: Rated for 80mph sustained winds.
- d. Ambient Temperature Rating: -10 to 60 degrees Celsius.
 - (i) Areas with more demanding environmental conditions will be granted a deviation from this specification.

2.6 DIGITAL VIDEO RECORDERS

A. ROBBERY, BURGLARY AND COUNTERMEASURES, SECURITY (SITE AND ACCESS CONTROL) ANALOG CCTV SYSTEMS

1. Recording must be continuous in nature, with a series of "key frames" which periodically refresh the entire video image. The frequency of these key frames must be sufficient to allow the full range of motion to be visible.
2. Video images shall be recorded with sufficient resolution, color depth, and quality of image compression as to make the recorded image indistinguishable from a DVD sourced original.
3. The DVR shall support event driven recording. Events may be internally generated (motion analysis, video loss or presence), or externally triggered (contact closure).
4. Image Exporting — The system shall have the ability to export video images as follows:
 - a. Video Printing — The system shall allow for easy printing of still images.
 - (i) Images may be printed to standard, Windows™ based printer that does not require proprietary drivers.
 - (ii) Printer may be directly connected to the DVR or may be connected to a workstation to view the image via USP or Parallel port.
 - b. Still Images — Still images may be saved using the JPEG file format, for printing at a later time or electronic distribution.
 - c. CD-R and DVD recordable formats — Image shall be archived to DVD and CD in each of the following formats.
 - (i) *Proprietary* — Image may be saved in a format that provides authentication to ensure that the image has not been altered in any way. Such authentication must not alter the quality of the video image. Software to allow viewing of this proprietary format that may be freely copied and distributed at no further cost to the USPS must be provided.
 - (ii) *Standard* — Image may be saved in an open source format which may be distributed and played using a commonly available media player, such as Apple™ QuickTime™ or Microsoft™ Media Player™.
 - (iii) *Analog Out* — An analog output shall be provided that may be connected to a video monitor, VCR, or other analog recording or display device. The use of an external device to perform this function is acceptable.
5. The DVR shall auto restart on power failure.
 - a. The unit will automatically begin recording upon restoration of power.
 - b. The system must maintain all camera name and scheduling information and must return in the state it was programmed to be in at the time of the power failure.
 - c. The system must retain correct time and date information.
6. Input Connections
 - a. The system must support a minimum of 4 cameras.
 - b. All video inputs shall use a BNC connection.
 - c. Capability shall be provided to loop each video input signal to an additional device, through the use of an adaptor cable.
7. Output Connections
 - a. Composite video outputs (internal to the DVR or via an external device) shall be NTSC utilizing BNC connectors.
 - b. The system must utilize a VGA computer monitor for main screen user navigation and video viewing.
8. Record Duration – The DVR shall include online storage of 72 hours with less than 30 seconds required to retrieve a video clip.

- a. In order to calculate storage capacity, the following assumption may be used: All cameras are in high activity areas. These cameras will experience a large number of frequent image changes such as busy areas with many people walking or movement of heavy equipment.
 - b. Manufacturer shall make units available with greater recording duration which may be substituted through the USPS deviation process.
- 9. Frame Rate
 - a. ROBBERY, BURGLARY, AND COUNTERMEASURES, SECURITY (SITE AND ACCESS CONTROL) –
 - (i) 4 to 16 total cameras shall utilize an embedded 16 channel digital video recorder each channel capable of 15fps @ 4CIF with one terabyte of storage.
- 10. Duplex Operation — The system shall be capable of simultaneously performing a minimum of any two of the following functions:
 - a. recording video
 - b. displaying live video
 - c. playing back recorded video
 - d. exporting stored video
- 11. Video Monitoring
 - a. Images being played back may be synchronized or stopped (frozen) individually.
 - b. Provide multiple views on the same screen during playback or live video view.
 - c. Display software shall provide for multi-camera viewing using a variety of multi-screen display modes.
 - (i) These multiple images may be exported in such a manner as to allow later synchronized playback of the same series of images.
 - d. Provide the ability to digitally enhance video images, to increase or decrease contrast and brightness, correct image color characteristics, and digitally zoom in on the image.
 - e. Provide a full suite of search tools to allow the search and retrieval of images based on time, date, motion (within pre-defined screen areas), alarm, video loss, and video presence.
 - f. Provide the ability to sequence a number of individual video segments such that a composite video clip can be made of a series of individual clips or incidents.
 - g. Frame rate shall be adjustable on an individual camera basis in a range that extends from ~3 images per second (ips) to real-time which shall be indistinguishable from NTSC 30 ips video.

2.7 UNSHIELDED TWISTED PAIR (UTP) MODULES

- A. Unshielded twisted pair (UTP) modules will be used for cable runs where a signal must be transmitted further than 50 feet unless Fiber Optic transmission is a requirement (see Section 2.9).
 - 1. Passive Transceivers:
 - a. Signal Transmission: Units shall be used at the signal transmission end for all distances under 1,200 linear feet or less, unless the specific conditions outlined in Section 2.9 exist. Signal transmission end is defined as the end of the cable run where a signal is generated (camera or video output).
 - b. Signal Reception: Units shall be used at the signal reception end for all distances less than or equal to 500 feet. Signal reception end is defined as the end of the cable where a signal is received (monitor or video input).
 - c. Specifications:
 - (i) Passive UTP Transceivers shall be capable of transmitting and receiving baseband type monochrome or color video signals over unshielded twisted pair Category 5e or better (UTP) cable, up to a maximum cable distance of 500 feet with a transceiver device connected at each end of the cable.
 - (ii) The transceiver device shall be capable of driving a color video signal of NTSC standard 525 lines with an operating frequency range of DC to 10 MHz and common mode rejection to be greater than 60 dB.
 - (iii) The transceiver devices shall not require power to operate as specified.
 - (iv) The transceiver used as a transmitting device shall be designed to accept a baseband video signal from a 75 ohm impedance source and the transceiver used as a receiving

CSF SECURITY, BURGLARY AND ROBBERY
COUNTERMEASURES ANALOG CCTV

- device shall deliver a baseband video signal capable of driving a 75 ohm impedance load.
- (v) The transceiver device shall support bi-directional signal transmission, i.e.; video from the video source to the receiving equipment and control from the receiving end to the video source equipment over a single unshielded twisted pair (UTP) using equipment that provides such bi-directional operation during the vertical interval.
 - (vi) Video connection to the transceiver device shall be by means of a BNC type female connector and connection to UTP cable shall be by means of two Phillips type head screw terminals. The screw terminals shall be plated with a rust preventive material to prevent corrosion.
 - (vii) The transceiver device shall be capable of driving an active (powered) companion UTP receiver, operating at a distance of up to 1,200 feet over cables specified for that unit.
 - (viii) The combination of the transceiver device and the active receiver shall provide a minimum of 500 lines of video resolution.
 - (ix) The transceiver devices shall operate within specifications without causing interference or interfering with any other base band video, communication, data and/or other low-voltage signals operating in multi-twisted pair UTP cables.
- d. Receivers (transceivers used at the receiving end) shall be four-channel units and shall be secured to a rack panel or other permanent surface. Individual, loose receivers are not acceptable.
2. Active Receivers:
- a. Signal Reception: Units shall be used at the signal reception end for all distances greater than 500 feet, or where environmental conditions dictate the use of signal equalization. Signal reception end is defined as the end of the cable where a signal is received (monitor or video input).
 - b. Specifications:
 - (i) Active UTP receivers shall be capable of receiving baseband type monochrome or color video signals over Category 5e or better (UTP) cable, up to a maximum cable length of 1,200 feet, when connected to a passive video transceiver.
 - 1. With a symmetrical and balanced composite input from the transmitter unit and using cables as specified at a cable length of 1,200 feet, the output shall be a 1 Vpp composite video signal into 75 ohms.
 - (ii) The active receiver shall be capable of equalizing and delivering a baseband color video signal of NTSC standard 525 lines at the maximum specified distance with an operating frequency range of DC to 10 MHz and common mode rejection to be greater than 60 dB.
 - (iii) The active receiver shall be provided with a companion power supply, which shall have provisions to plug directly into an AC wall outlet and connect to the receiver power terminals.
 - (iv) The active receiver shall provide frequency equalization by means of eight dual in-line (DIP) switches which shall provide compensation for varying cable lengths. The effect of the frequency compensation shall be to both equalize and to amplify the video signal thereby providing loss compensation for video as cable length is increased.
 - (v) The active receiver shall have built-in transient protection, with a screw connection for earth ground.
 - (vi) Video connection to the active receiver shall be by means of a BNC type female connector. A five screw terminal block shall provide connection to the UTP cable (2), 12 VDC power supply (2) and earth ground (1).
 - (vii) The active receiver shall operate within specifications without causing interference or interfering with any other base band video, communication, data and/or other low-voltage signals operating in multi-twisted pair UTP cables.
 - c. If four (4) or more active receivers are used in close proximity to each other, rack-mounted receivers with identical performance characteristics shall be substituted in their place.

2.8 FIBER OPTIC MODULES

- A. Fiber Optic transmission equipment shall be used when one or more of the following conditions are met:
 - 1. Camera cable runs exceed 1,200 linear feet.
 - 2. The camera is located outdoors and is exposed to the elements.
 - a. Cameras protected by canopies or other architectural elements that shield them from direct view of the overhead sky are excluded from this requirement.
 - 3. The cable path is within 20 feet of a TIME or MIMS aerial.
- B. Modules located at field devices shall be low profile "miniaturized" type, and shall be mounted in the camera housing for both fixed and PTZ cameras.
 - 1. Fiber optic transmit modules shall derive power from the camera power supply, eliminating the need for an additional power supply.
- C. Modules located at head-end locations shall be standalone modular units unless four (4) or more modules are required, in which case they shall be enclosed in a fiber-optic sub rack.
 - 1. If more than one fiber optic sub rack is used, modules shall be distributed as evenly as possible among the sub racks to reduce the load on the sub rack power supply and minimize the impact of a failed sub rack.
- D. Fiber optic modules shall conform to the following minimum specifications:
 - 1. Fixed Position Camera Location:
 - a. Transmission Type: single channel video.
 - b. Video Format: Color, NTSC RS-170A.
 - c. Bandwidth: 10MHz.
 - d. Signal to Noise Ratio: 60dB.
 - e. Maximum Optical Attenuation (with 62.5-um cable): 12dB.
 - f. Mounting: BNC "balun" type.
 - 2. PTZ Camera Location:
 - a. Transmission Type: single channel video & bi-directional "up the coax" data.
 - b. Video Format: Color, NTSC RS-170A.
 - c. Bandwidth: 8MHz.
 - d. Maximum Optical Attenuation (with 62.5-um cable): 12dB.
 - e. Mounting: Surface mount module or in-line connection as described in 2.9 B (above).

2.9 CABLING

- A. Video:
 - 1. Where UTP video modules are used, all video shall be run utilizing the brown/brown-white pair of a CAT-5e unshielded twisted pair (UTP) cable. The remaining conductors shall be left open as spares.
 - 2. Each cable shall be individually home run from the device to the control room.
- B. Power:

Power cable shall be appropriately sized to ensure that any signal loss as a function of cable length does not prohibit the delivery of sufficient voltage and current from the power supply to the powered device.
- C. Control Data
 - a. For cable runs of 500 feet or less, control data for remotely positionable cameras shall be combined with the video signal and shall not require the use of an additional cable or conductors. Such data signals must be fully compatible with the UTP modules specified in Section 2.8.

- b. For cable runs greater than 500 feet but less than 1200 feet, control data shall utilize the orange/orange-white pair of the CAT-5e unshielded twisted pair (UTP) cable that is used for the video signal. The remaining conductors shall be left open as spares.
- D. Fiber Optic - When fiber optic modules are required, provide fiber optic cable appropriate for the application. Cable shall conform to the following specifications:
1. 62.5 micron glass multimode fiber.
 2. "ST" type connectors shall be used on all cable terminations, including junction boxes and breakout trays.
 3. Performance characteristics (including optical attenuation) shall be such that the Fiber Optic modules specified in Section 2.9 function to deliver signals end-to-end with sufficient bandwidth and quality to meet the specified application.
 4. Physical characteristics such that the cable has sufficient strength and endurance to withstand installation and environmental conditions without adversely affecting optical performance.

Cable Type	Signal	Use
RG-59/U (Belden # 8241B or Approved Equal)	Video	Video cable runs up to 50 feet
Micro-Coax (Belden # 9221 or Approved Equal)	Video	Internal console and rack connections
Fiber Optic (Multi-Mode)	Video / Data	See Section 2.9
CAT5e (Belden# 1583A or Approved Equal)	UTP Video	UTP video signals (see Section 2.8)
22AWG 2-Pair individually shielded stranded copper (Belden # 872306 or Approved Equal)	Matrix Keypad/Controller	Connection of Keypad/Controller to Matrix Switch or PTZ Camera Data Distribution Unit
16AWG 2-conductor stranded, twisted pair, tinned copper with overall jacket (Belden #8471 or Approved Equal). Plenum version may require shielding to meet specification. (Belden #83702)	Camera Power	Low voltage power to cameras, 500' or less (see drawing G5-7-1a or G5-8-3b).

2.10 ACCESSORIES

- A. Lightning/Surge Protection: Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.
- B. All DVR's shall utilize a standalone UPS sized for a minimum of 15 minutes of battery run-time. The UPS shall be provided by the CCTV Provider.
1. the use of a single UPS to support multiple devices is acceptable provided that this run-time requirement is met.
- C. Upright Racks: Furnish and install upright equipment racks to provide sufficient mounting space for the required equipment. Upright racks and associated hardware shall be provided by the CCTV Provider.
1. Racks shall be all metal construction conforming to EIA standards with 19" equipment mounting opening and 1-3/4" vertical spacing of equipment. Rack rails shall be punched with captive nuts, 10-32 screws and nylon washers.
- D. DVR Cabinet:

1. Station Managers Office or Mechanical Room Application (Wall Rack): In applications where equipment is located in the station manager's office or the mechanical room and a DVR is used (16 cameras or less), a lockable, appropriately vented, DVR cabinet shall be used.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive Work.
 1. Verify that power and video outlets are in correct locations.
 2. Verify that building structure for attachment of equipment mounting devices is in place.
- C. Report in writing to Contracting Officer any prevailing conditions that will adversely affect satisfactory execution of Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the Postal Service.
- E. Provide required power outlets, low voltage power supplies, interconnecting cables, hardware and equipment for a complete and operable system.
- F. Camera locations are to be reviewed and approved by a Postal Inspector, through the Contracting Officer, prior to installation.

3.2 INSTALLATION

- A. Install all equipment in accordance with CCTV Provider's published instructions. Installation must be done by a CCTV Provider's certified dealer to assure proper installation and accountability. This includes, but is not limited to the following:
 1. All hardware used to secure equipment to racking shall include a nylon or other non-metallic washer or grommet between the screw head and equipment panel to prevent any damage to the equipment.
 - a. Rack mount screws shall be self-centering Philips-head configuration unless specialized tamper-resistant hardware has been specified.
 - b. Screws shall be tightened in such a manner as to allow their removal with common hand tools.
 2. Any equipment placed on shelving mounted on an incline of greater than 2 degrees shall be secured to the rack or shelving in such a manner as to prevent movement of the equipment in the direction of the incline. Such fastening shall be done in a manner as to preserve the integrity of the equipment case and chassis, and shall in no way jeopardize warranty coverage of the device.
 3. All equipment cabling shall be dressed in such a manner as to ensure a neat and clean appearance.
 4. Cable break-outs shall be at 90-degree angles from the harness or chase, and all chases shall be parallel to or at 90-degree angles from the rack frame.
 5. Cables are to be secured to the rack frames at sufficient intervals to ensure that the weight of the cable will not contribute to fatigue or early failure of that cable or the device and connector to which it is attached.
 6. Sufficient excess cable shall be provided in "service loop locations" to ensure that the cable may be re-connected without requiring the addition of extension pieces.
 7. All permanent cabling shall be mechanically numbered in a manner consistent with written system documentation.

8. Wiring for all equipment shall be tie-wrapped (except as indicated below) or secured with Velcro straps so that all connectors in a bundle can be removed and re-installed without the possibility of cross connecting.
 9. CAT-5e and Fiber Optic cables shall utilize Velcro fasteners in place of tie wraps to eliminate the risk of over-tightening cable bundles and affecting the strength or rated performance of the cable.
 10. Where wiring is routed through sheet metal or over frame members, the metal edges shall be covered with flexible grommeting or edge dressing (such as automobile door edge trim).
 11. Double-sided foam tape shall not be used to secure any equipment, terminal blocks, or accessory devices. All device mounting shall be of a permanent nature.
 12. All excess length AC cords are to be tie-wrapped out of the way. Where possible, they shall be routed in a separate bundle a minimum of 6 inches away from any signal or control cable.
 13. Exposed wires run to wall mounted cameras shall be fed through tubing or the body of the mount to present a professional appearance.
 - a. Any accessible cables that can be reached by an individual standing on the floor, a stool, or a small stepladder shall be encased in protective tubing or armored sheathing to prevent tampering or cutting with common hand tools.
 14. Care shall be exercised at all times to protect Postal Service property. For example, ladders shall not be placed against wallpapered or finished surfaces, equipment or furnishings; desks or countertops shall not be used in lieu of ladders.
 15. On pendant mounted cameras, label each camera on all four sides with three-inch numbers supplied by the Certified Dealer. Numbers shall be stenciled or laminated vinyl in a contrasting color to the camera housing. Camera number shall match and correspond to the camera input number, any on screen numeric identifier and/or printed map provided by the switches and/or multiplexer or DVR. Numbers shall not be placed on lower dome or any area that would obstruct camera viewing.
 16. Ensure that pendant mounted cameras are hung from stable, vibration free mounting platforms, using guy-wires or other support mechanisms to ensure stability where required. Mount cameras below any suspended lighting to avoid glare or reflection on camera dome and/or lens.
 17. Perform complete programming of the system, in coordination with the Contracting Officer and Postal Inspector, or designated representative. Programming shall include, but not be limited to, elimination of duplicate or redundant titling information, synchronization of system clocks, camera sequences, dome presets, salvos and tours. Programming of any system passwords or limiting of accessibility prior to commissioning and training is prohibited.
- B. Power requirements shall be determined by actual equipment used.
- C. Ensure that:
1. All applicable statutes, ordinances, regulations, license requirements and codes are fully complied with.
 2. All required permits are obtained.
 3. All required inspections are conducted.
 4. All necessary certificates are issued, obtained, and delivered to the Postal Service.
 5. All equipment installations and mounting are in strict accordance with requirements for applicable seismic classification.
- D. Arrange all components to be mounted in the console(s)/rack(s) in accordance with CCTV Provider and/or Postal Service provided System Elevation drawings. Design shall provide a neat appearance and accessibility for servicing equipment.
- E. Provide required power outlets, interconnecting cables, hardware and equipment for a complete and operable system.
1. Power, 120VAC: As required by codes and standards for the facility.

2. Where conduit is used, a minimum of 40% excess capacity shall be provided for future use.
- F. Install cameras in the general vicinity of locations indicated on Drawings at final locations defined by camera location test.
 1. Provide 84-inch minimum headroom below cameras and their mountings. Where necessary modify mounting type to maintain clearance, except as noted on drawings (behind counter) and along slat wall.
- G. All coaxial video connections must be made with crimp-type BNC connectors. Twist-on connectors are not acceptable.
- H. When not installed in cable trays, cable (CAT-5e, fiber optic, and low voltage power) shall be supported with wide base cable hangers rated for proper support of CAT-5e, fiber optic, and innerduct cables (compliant with UL and NEC requirements for structured cabling).
 1. Cable hangers shall be installed every 3 to 6 feet and shall be rated to support the weight of the cable multiplied by a factor of three (3).
 2. All Fiber Optic cables shall be installed in appropriately sized innerduct cabling.

3.3 CONSTRUCTION

- A. Interface with Other Work: Interface installation of CCTV System with Intrusion Detection System specified in Section 281600 and Enterprise Physical Access Control specified in Section 281304.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection:
 1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- C. Testing:
 1. Perform tests and provide test equipment, tools, and personnel required to conduct system tests and inspections. These tests shall include video quality and PTZ operation (where applicable) for all cameras.
 2. Provide an actual demonstration of each system function.
 3. Conduct system acceptance test upon completion of installation using pre-approved procedures. Test shall consist of system, subsystem, and device level acceptance tests, including software.
 4. Prepare all test procedures and submit the procedures for review by the Postal Service facility manager. Obtain test procedure approval prior to actual system tests.
 5. Ensure that test procedures confirm each specification statement and manufacturer requirement has been met or exceeded. An actual demonstration of each system function and a simulation of each system failure shall be provided.
 6. An acceptance test period of thirty days shall begin at the start of the acceptance test. Any system failure during the acceptance test period will suspend the acceptance test. The thirty-day test period will restart when the required repairs have been made and certified.
 7. Perform all tests in the presence of the Postal Service facility manager or authorized agent. The Postal Service reserves the right to accept any portion or activate any phase prior to acceptance of entire system.

3.5 OPERATING INSTRUCTION

- A. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance steps that are required to ensure normal operation.
- B. Provide one complete set of equipment operating, installation, and programming manuals that will remain in the installed location.

3.6 CLEANING AND ADJUSTING

- A. Clean installed items using methods and materials recommended by equipment manufacturers just before conducting acceptance test.
- B. Adjust manual lens irises to meet lighting conditions.
- C. Adjust field of view for each camera per Inspection Service direction.

USPS CSF Specifications issued: 10/1/2013
Last revised: 8/29/13

END OF SECTION 28 23 04 00

SECTION 28 23 04 00 - MPF SECURITY, BURGLARY AND ROBBERY COUNTERMEASURES ANALOG CCTV

NOTE TO SPECIFIER

Use this Specification section for Mail Processing Facilities only. This specification may be used for small CCTV projects that are independent from an existing, or planned, IP CCTV system when 16 or fewer cameras are required. Typical use would be for small access control projects, retail, security, burglary and robbery countermeasures projects and replacement of failed components in existing analog CCTV systems.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Provide and install a complete analog CCTV System including, but not limited to;
 - a. Video Surveillance Cameras, housings, power supplies, cabling, and related equipment.
 - b. Video control equipment.
 - c. Video monitoring and recording equipment.
 - d. Equipment enclosures.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents including:
 - 1. System Installation Manuals
- C. Related Sections:
 - 1. Section 260500 - Common Work Results for Electrical.
 - 2. Section 260533 - Raceway and Boxes for Electrical Systems.
 - 3. Section 270500 - Common Work Results for Communications.
 - 4. Section 281304 - Enterprise Physical Access Control System.
 - 5. Section 281600 - Intrusion Detection.
- D. Prompt Payments. In accordance with the Contractor Certification on Postal Service Form 4211B, "Project Contract Payment Authorization", the contractor certifies that prompt payment, (within 30 days) to the subcontractor (CCTV Provider) will be made.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Closed circuit television (CCTV) analog video communication system for no more than 16 analog cameras between points of surveillance indicated on Drawings and central monitoring station consisting of video cameras, camera outlets, camera controls, monitors, video switcher,

signal-processing equipment, control stations, distribution components, video recorders, and accessories.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures:

1. Product Data: Manufacturer's specification sheets for each component shall not be required.
2. Due to USPS security requirements, submittals will be limited to one electronic copy of the block diagram and one copy of the shop drawings to be provided to the General Contractor.
3. Final As-Built Drawings, Operation and Installations Manual, will be supplied directly to USPS and stored within the rack per USPS COTR.

B. Shop Drawings:

1. The CCTV Provider will provide a Standard Drawing Package (Red Book) that shall be utilized for the installation of the CCTV system. This package shall include:
 - a. Block Diagram: System block diagrams noting major system components and interrelationships of each component.
 - b. Console and Equipment Racks: Rack elevation drawings showing console/equipment arrangement.

C. Sequence and Scheduling Plan: Installer shall provide installation scheduling plan for review and approval. Coordinate scheduling of software and revisions with the USPS.

D. Qualifications:

1. Installer: Factory Certified Dealer specializing in CCTV systems installation. Installer shall be capable of performing the Work specified in this Section with minimum 3 years documented experience in the field and authorized and approved by the CCTV Provider to install Postal Service systems.

E. Section 017704 - Closeout Procedures and Training:

1. Operation and Maintenance Data: Include data for each type of product, including features and operating sequences, both automatic and manual. This information shall be supplied directly to the USPS by the Direct Vendor.
2. Product Quick Reference cards for the operation of all key system components.
3. Project Record Documents: Installer shall provide field-accurate drawings that reflect actual locations of cameras and routing of signal cable, indicating cable identifiers, layout, location and numbering of system devices to reflect as-built conditions.
4. Provide a final materials list of equipment installed and spare parts on hand. Materials list shall include model number, serial number, and date installed.
5. Project Completion Certification: Document signed by the installing integrator and a Postal Service representative indicating that the project is fully complete with all punch-listed items resolved.
6. OPERATING INSTRUCTION
 - a. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation.
 - b. Provide one complete set of equipment operating, installation, and programming manuals that will remain at the installed location.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.

B. Keep devices and equipment in manufacturer's packaging in a secured location until system is ready for installation.

C. Comply with manufacturer's requirements. Coordinate storage location with the Postal Service.

- D. The equipment delivered must be insured at the contractor's expense through acceptance.

1.6 CCTV PROVIDER WARRANTY/SERVICE/TECHNICAL SUPPORT PLAN

A. Warranty:

1. Provide manufacturer warranty for three (3) years after facility acceptance and project completion certification for materials and labor.
 - a. Warranty shall include all parts and labor, and shall include return shipping. Failed equipment shall be repaired or replaced at no charge to the Postal Service during the warranty period.
 - b. USPS shall not be required to process any paperwork in order to be entitled to service plan coverage. It is the CCTV Provider's sole responsibility to monitor and comply with warranty eligibility.
 - c. Where operational performance is substantially affected, all software and firmware shall be upgraded to the latest version supported by the purchased hardware platform throughout the service plan period and be provided at no cost to USPS. Such upgrades shall be covered under the warranty/service plan and are at the discretion of the Postal Inspector or Station Manager.
 - (i) Any software bugs identified by the USPS and mutually agreed upon as 'level one' bugs (impacting operation with no work-around) shall be rectified within two (2) weeks of their being reported.
 - (ii) Any software bugs identified by the USPS and mutually agreed upon as 'level two' bugs (impacting operation but with a work-around) shall be rectified within 90 days of their being reported.
 - d. Turnaround time for all repairs (warranty and out-of-warranty) shall not exceed 72 hours.
 - (i) CCTV Provider shall make advance replacement units available in cases where USPS operational issues require immediate replacement of a unit while minimizing down time.
 - (ii) In situations where a complete facility system is not being supplied but only replacements for certain aged equipment, the warranty will only apply to the equipment being replaced

B. Technical Support

1. CCTV Provider shall provide toll-free 24/7 technical support at no charge throughout the warranty period.
2. Data Recovery — CCTV Provider shall provide a service to assist the USPS in recovering data from digital recording system hard drives and removable storage media in the event of a failure.
 - a. Turnaround time for data recovery shall be less than seven (7) days from receipt of hard drives at CCTV Provider's data recovery center.

PART 2 PRODUCTS

2.1 PROVIDERS

A. DIEBOLD, INC.

1. Michael Tracey, USPS Account Manager
44845 Falcon Place Suite 106 Sterling, VA 20166
Cell: 571-451-7629 Fax 703-467-8650 email: michael.tracey@diebold.com
Contract to Diebold should be addressed to:
Diebold Enterprise Security Solutions
3 Westchester Plaza
Elmsford, NY 10523

B. VICON INDUSTRIES, INC. Christine Stone, USPS Program Manager 89 Arkay Drive

Hauppauge, NY 11788
 (800) 645-9116 or (631) 952-2288
 Fax (631) 951-2288
 Email: USPS@vicon-cctv.com

C. Section 016000 - Product Requirements:

1. Product options and substitutions are not permitted without a written and USPS approved deviation.
2. All equipment to be supplied under this specification shall be new and the current model of the Provider.
3. Systems and components shall have been thoroughly tested and proven in actual use.

2.2 VIDEO MONITORS

A. Provide 17-inch LCD flat-panel color monitors with the following minimum capabilities.

1. Product Requirements:
 - a. Video Input Connections: VGA (DB15), and Composite (BNC).
 - (i) Switching between inputs shall be performed using a front panel control.
 - (ii) VGA resolution shall be equal to the native resolution of the installed Digital Video Recorder, if applicable.
 - b. Input Power: 120VAC, 60Hz (a power adaptor may be used to provide this voltage).
 - c. Mounting: Each monitor shall be desktop mounted. VESA mounting holes shall be provided and a series of optional VESA compliant mounts shall be made available at extra cost.
 - d. Operating Temperature: Range shall be equal to or greater than 10 to 40 degrees Celsius.
 - e. Humidity: Withstand a minimum of 10% to 80% humidity.
 - f. Resolution: At least 420 TV lines of composite video.
 - g. Adjustments: Must support on-screen display for setup and adjustment of monitor parameters.
 - h. Colors: Must support a minimum of 16 million colors.

2.3 VIDEO CAMERAS

A. Provide solid-state color cameras for video surveillance and monitoring of specific areas as shown on the drawings and confirmed with Postal Inspection Service through Contracting Officer with the following minimum capacities:

1. FIXED POSITION INDOOR/OUTDOOR IMPACT/VANDAL RESISTANT DOME TYPE VIDEO CAMERAS: Shall meet or exceed the following minimum requirements:
 - a. CCD Image Sensor: High resolution color with digital image processing.
 - b. Horizontal Resolution: 480 or greater TVL.
 - c. Auto Iris Control.
 - d. White Balance: Automatic.
 - e. Input Power: 24VAC, 60Hz with line locking.
 - f. Automatic Gain Control.
 - g. Backlight Compensation.
 - h. BNC or UTP (screw terminal) video connector, as required.
 - (i) If UTP connection is used, unit must be in full compliance with UTP specifications outlined in Section 2.8.
 - i. Lens: 3.3-12mm manual varifocal lens, application permitting.
 - (i) Lens substitution may be required to provide an acceptable image based on camera position, field of view, and distance to subject..(ii).Three axis adjustment (pan, tilt & roll)
2. REMOTELY POSITIONABLE (PTZ) VIDEO CAMERAS: Integrated camera/lens packages in a dome type housing, shall be remotely positionable (pan/tilt/zoom/focus/iris) shall meet or exceed the following minimum requirements:
 - a. Horizontal Resolution: 470 TVL or greater.

- b. Optical Zoom: Minimum 22X.
- c. Automatic Focus / Iris Control with manual override.
- d. Rotation Speed: Shall range from 0.1 degrees/second to 120 degrees/second with a minimum of 32 speeds in any direction.
- e. Tilt Speed: 0.2 degrees per second to 90 degrees per second.
- f. Proportional Pan-Tilt: Yes.
- g. Presets: At least 32 Individual presets.
- h. Alarm Inputs: At least one programmable high or low input.
- i. Alarm Outputs: At least one auxiliary relay output or one open collector driver.
- j. Operating Voltage: 24VAC nominal, with an operating range of 18 to 32VAC.
- k. Programming Backup: Dome shall retain all programmed parameters for a minimum of thirty (30) days.
- l. Lower Dome:
 - (i) Interior Domes – Gradient tint required to obscure the movement of camera.
 - (ii) Exterior Domes – Gradient tint required to obscure the movement of camera.
- B. Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.

2.4 CAMERA POWER SUPPLIES:

- A. Interior Cameras: Camera power supplies shall be located within 500' of the camera, either in the CIO (distance permitting) or in another suitable protected area. Provide multiple outlet (4, 8, or 16) fused power supplies as required for interior fixed and PTZ cameras. See drawings G5-7-1a or G5-8-3b. Power supplies shall be rated to support 200% of the actual (nominal) power loading.
 - 1. A minimum of two (2) power supplies shall be used on each project, regardless of camera count.
 - 2. Cameras must be on separate power supplies, such that the failure of a single power supply shall not impact two adjacent cameras.
- B. Exterior Cameras: Provide individual power supplies located at the camera.
 - 1. Enclosures shall be weatherproof and sealed to prevent water and/or insect infiltration.
- C. Provide a means for disconnecting camera power supplies from mains power at the power supply enclosure, either through a detachable power cord, master fuse or circuit breaker, or other UL approved switching device.

2.5 VIDEO CAMERA HOUSINGS AND MOUNTS

- A. Provide indoor housings as required for all camera types with the following minimum capabilities:
 - 1. Interior Cameras:
 - a. All cameras shall be in a housing that is coordinated with adjacent finishes with the appropriate mounting hardware. Selection of housings and mounts, including incremental changes to paint colors, dome materials, and cosmetic finishes shall be approved by the USPS or their authorized agent.
 - b. All housings shall be sufficiently dust and moisture resistant to withstand normal environmental conditions in their chosen installation location.
 - c. Hardware shall be provided to ensure tamper-resistant mounting in a variety of locations without modification to the integrity of the housing.
 - d. Where used, pendant mounts shall be suitable for use as wall, ceiling and column mounts. Pendant mounts shall attach to the appropriate camera housing using installer provided standard threaded schedule 40 rigid iron pipes. Pipe lengths of 10 feet or less are to be a minimum of 1-inch diameter. Pipe lengths exceeding 10 feet are to be a minimum of 1-1/2 inch in diameter. Exterior pipe shall be galvanized.
 - e. All mounts shall incorporate installer provided safety chain or cable of sufficient endurance to support 2 times the weight of the equipment.
 - 2. Exterior Cameras:

- a. Environmental: Thermostatically controlled heaters and blowers with defrosting capabilities.
- b. Moisture: Rainproof seals and gaskets.
- c. Wind Resistance: Rated for 80mph sustained winds.
- d. Ambient Temperature Rating: -10 to 60 degrees Celsius.
 - (i) Areas with more demanding environmental conditions will be granted a deviation from this specification.

2.6 DIGITAL VIDEO RECORDERS

A. ROBBERY, BURGLARY AND COUNTERMEASURES, SECURITY (SITE AND ACCESS CONTROL) ANALOG CCTV SYSTEMS

1. Recording must be continuous in nature, with a series of "key frames" which periodically refresh the entire video image. The frequency of these key frames must be sufficient to allow the full range of motion to be visible.
2. Video images shall be recorded with sufficient resolution, color depth, and quality of image compression as to make the recorded image indistinguishable from a DVD sourced original.
3. The DVR shall support event driven recording. Events may be internally generated (motion analysis, video loss or presence), or externally triggered (contact closure).
4. Image Exporting — The system shall have the ability to export video images as follows:
 - a. Video Printing — The system shall allow for easy printing of still images.
 - (i) Images may be printed to standard, Windows™ based printer that does not require proprietary drivers.
 - (ii) Printer may be directly connected to the DVR or may be connected to a workstation to view the image via USP or Parallel port.
 - b. Still Images — Still images may be saved using the JPEG file format, for printing at a later time or electronic distribution.
 - c. CD-R and DVD recordable formats — Image shall be archived to DVD and CD in each of the following formats.
 - (i) *Proprietary* — Image may be saved in a format that provides authentication to ensure that the image has not been altered in any way. Such authentication must not alter the quality of the video image. Software to allow viewing of this proprietary format that may be freely copied and distributed at no further cost to the USPS must be provided.
 - (ii) *Standard* — Image may be saved in an open source format which may be distributed and played using a commonly available media player, such as Apple™ QuickTime™ or Microsoft™ Media Player™.
 - (iii) *Analog Out* — An analog output shall be provided that may be connected to a video monitor, VCR, or other analog recording or display device. The use of an external device to perform this function is acceptable.
5. The DVR shall auto restart on power failure.
 - a. The unit will automatically begin recording upon restoration of power.
 - b. The system must maintain all camera name and scheduling information and must return in the state it was programmed to be in at the time of the power failure.
 - c. The system must retain correct time and date information.
6. Input Connections
 - a. The system must support a minimum of 4 cameras.
 - b. All video inputs shall use a BNC connection.
 - c. Capability shall be provided to loop each video input signal to an additional device, through the use of an adaptor cable.
7. Output Connections
 - a. Composite video outputs (internal to the DVR or via an external device) shall be NTSC utilizing BNC connectors.
 - b. The system must utilize a VGA computer monitor for main screen user navigation and video viewing.

8. Record Duration – The DVR shall include online storage of 72 hours with less than 30 seconds required to retrieve a video clip.
 - a. In order to calculate storage capacity, the following assumption may be used: All cameras are in high activity areas. These cameras will experience a large number of frequent image changes such as busy areas with many people walking or movement of heavy equipment.
 - b. Manufacturer shall make units available with greater recording duration which may be substituted through the USPS deviation process.
9. Frame Rate
 - a. ROBBERY, BURGLARY, AND COUNTERMEASURES, SECURITY (SITE AND ACCESS CONTROL) –
 - (i) 4 to 16 total cameras shall utilize an embedded 16 channel digital video recorder each channel capable of 15fps @ 4CIF with one terabyte of storage.
10. Duplex Operation — The system shall be capable of simultaneously performing a minimum of any two of the following functions:
 - a. recording video
 - b. displaying live video
 - c. playing back recorded video
 - d. exporting stored video
11. Video Monitoring
 - a. Images being played back may be synchronized or stopped (frozen) individually.
 - b. Provide multiple views on the same screen during playback or live video view.
 - c. Display software shall provide for multi-camera viewing using a variety of multi-screen display modes.
 - (i) These multiple images may be exported in such a manner as to allow later synchronized playback of the same series of images.
 - d. Provide the ability to digitally enhance video images, to increase or decrease contrast and brightness, correct image color characteristics, and digitally zoom in on the image.
 - e. Provide a full suite of search tools to allow the search and retrieval of images based on time, date, motion (within pre-defined screen areas), alarm, video loss, and video presence.
 - f. Provide the ability to sequence a number of individual video segments such that a composite video clip can be made of a series of individual clips or incidents.
 - g. Frame rate shall be adjustable on an individual camera basis in a range that extends from ~3 images per second (ips) to real-time which shall be indistinguishable from NTSC 30 ips video.

2.7 UNSHIELDED TWISTED PAIR (UTP) MODULES

- A. Unshielded twisted pair (UTP) modules will be used for cable runs where a signal must be transmitted further than 50 feet unless Fiber Optic transmission is a requirement (see Section 2.9).
 1. Passive Transceivers:
 - a. Signal Transmission: Units shall be used at the signal transmission end for all distances under 1,200 linear feet or less, unless the specific conditions outlined in Section 2.9 exist. Signal transmission end is defined as the end of the cable run where a signal is generated (camera or video output).
 - b. Signal Reception: Units shall be used at the signal reception end for all distances less than or equal to 500 feet. Signal reception end is defined as the end of the cable where a signal is received (monitor or video input).
 - c. Specifications:
 - (i) Passive UTP Transceivers shall be capable of transmitting and receiving baseband type monochrome or color video signals over unshielded twisted pair Category 5e or better (UTP) cable, up to a maximum cable distance of 500 feet with a transceiver device connected at each end of the cable.
 - (ii) The transceiver device shall be capable of driving a color video signal of NTSC standard 525 lines with an operating frequency range of DC to 10 MHz and common mode rejection to be greater than 60 dB.
 - (iii) The transceiver devices shall not require power to operate as specified.

- (iv) The transceiver used as a transmitting device shall be designed to accept a baseband video signal from a 75 ohm impedance source and the transceiver used as a receiving device shall deliver a baseband video signal capable of driving a 75 ohm impedance load.
- (v) The transceiver device shall support bi-directional signal transmission, i.e.; video from the video source to the receiving equipment and control from the receiving end to the video source equipment over a single unshielded twisted pair (UTP) using equipment that provides such bi-directional operation during the vertical interval.
- (vi) Video connection to the transceiver device shall be by means of a BNC type female connector and connection to UTP cable shall be by means of two Phillips type head screw terminals. The screw terminals shall be plated with a rust preventive material to prevent corrosion.
- (vii) The transceiver device shall be capable of driving an active (powered) companion UTP receiver, operating at a distance of up to 1,200 feet over cables specified for that unit.
- (viii) The combination of the transceiver device and the active receiver shall provide a minimum of 500 lines of video resolution.
- (ix) The transceiver devices shall operate within specifications without causing interference or interfering with any other base band video, communication, data and/or other low-voltage signals operating in multi-twisted pair UTP cables.
- d. Receivers (transceivers used at the receiving end) shall be four-channel units and shall be secured to a rack panel or other permanent surface. Individual, loose receivers are not acceptable.
- 2. Active Receivers:
 - a. Signal Reception: Units shall be used at the signal reception end for all distances greater than 500 feet, or where environmental conditions dictate the use of signal equalization. Signal reception end is defined as the end of the cable where a signal is received (monitor or video input).
 - b. Specifications:
 - (i) Active UTP receivers shall be capable of receiving baseband type monochrome or color video signals over Category 5e or better (UTP) cable, up to a maximum cable length of 1,200 feet, when connected to a passive video transceiver.
 - 1. With a symmetrical and balanced composite input from the transmitter unit and using cables as specified at a cable length of 1,200 feet, the output shall be a 1 Vpp composite video signal into 75 ohms.
 - (ii) The active receiver shall be capable of equalizing and delivering a baseband color video signal of NTSC standard 525 lines at the maximum specified distance with an operating frequency range of DC to 10 MHz and common mode rejection to be greater than 60 dB.
 - (iii) The active receiver shall be provided with a companion power supply, which shall have provisions to plug directly into an AC wall outlet and connect to the receiver power terminals.
 - (iv) The active receiver shall provide frequency equalization by means of eight dual in-line (DIP) switches which shall provide compensation for varying cable lengths. The effect of the frequency compensation shall be to both equalize and to amplify the video signal thereby providing loss compensation for video as cable length is increased.
 - (v) The active receiver shall have built-in transient protection, with a screw connection for earth ground.
 - (vi) Video connection to the active receiver shall be by means of a BNC type female connector. A five screw terminal block shall provide connection to the UTP cable (2), 12 VDC power supply (2) and earth ground (1).
 - (vii) The active receiver shall operate within specifications without causing interference or interfering with any other base band video, communication, data and/or other low-voltage signals operating in multi-twisted pair UTP cables.

- c. If four (4) or more active receivers are used in close proximity to each other, rack-mounted receivers with identical performance characteristics shall be substituted in their place.

2.8 FIBER OPTIC MODULES

- A. Fiber Optic transmission equipment shall be used when one or more of the following conditions are met:
 - 1. Camera cable runs exceed 1,200 linear feet.
 - 2. The camera is located outdoors and is exposed to the elements.
 - a. Cameras protected by canopies or other architectural elements that shield them from direct view of the overhead sky are excluded from this requirement.
 - 3. The cable path is within 20 feet of a TIME or MIMS aerial.
- B. Modules located at field devices shall be low profile "miniaturized" type, and shall be mounted in the camera housing for both fixed and PTZ cameras.
 - 1. Fiber optic transmit modules shall derive power from the camera power supply, eliminating the need for an additional power supply.
- C. Modules located at head-end locations shall be standalone modular units unless four (4) or more modules are required, in which case they shall be enclosed in a fiber-optic sub rack.
 - 1. If more than one fiber optic sub rack is used, modules shall be distributed as evenly as possible among the sub racks to reduce the load on the sub rack power supply and minimize the impact of a failed sub rack.
- D. Fiber optic modules shall conform to the following minimum specifications:
 - 1. Fixed Position Camera Location:
 - a. Transmission Type: single channel video.
 - b. Video Format: Color, NTSC RS-170A.
 - c. Bandwidth: 10MHz.
 - d. Signal to Noise Ratio: 60dB.
 - e. Maximum Optical Attenuation (with 62.5-um cable): 12dB.
 - f. Mounting: BNC "balun" type.
 - 2. PTZ Camera Location:
 - a. Transmission Type: single channel video & bi-directional "up the coax" data.
 - b. Video Format: Color, NTSC RS-170A.
 - c. Bandwidth: 8MHz.
 - d. Maximum Optical Attenuation (with 62.5-um cable): 12dB.
 - e. Mounting: Surface mount module or in-line connection as described in 2.9 B (above).

2.9 CABLING

- A. Video:
 - 1. Where UTP video modules are used, all video shall be run utilizing the brown/brown-white pair of a CAT-5e unshielded twisted pair (UTP) cable. The remaining conductors shall be left open as spares.
 - 2. Each cable shall be individually home run from the device to the control room.
- B. Power:

Power cable shall be appropriately sized to ensure that any signal loss as a function of cable length does not prohibit the delivery of sufficient voltage and current from the power supply to the powered device.
- C. Control Data
 - a. For cable runs of 500 feet or less, control data for remotely positionable cameras shall be combined with the video signal and shall not require the use of an additional cable or conduc-

- tors. Such data signals must be fully compatible with the UTP modules specified in Section 2.8.
- b. For cable runs greater than 500 feet but less than 1200 feet, control data shall utilize the orange/orange-white pair of the CAT-5e unshielded twisted pair (UTP) cable that is used for the video signal. The remaining conductors shall be left open as spares.
- D. Fiber Optic - When fiber optic modules are required, provide fiber optic cable appropriate for the application. Cable shall conform to the following specifications:
1. 62.5 micron glass multimode fiber.
 2. "ST" type connectors shall be used on all cable terminations, including junction boxes and breakout trays.
 3. Performance characteristics (including optical attenuation) shall be such that the Fiber Optic modules specified in Section 2.9 function to deliver signals end-to-end with sufficient bandwidth and quality to meet the specified application.
 4. Physical characteristics such that the cable has sufficient strength and endurance to withstand installation and environmental conditions without adversely affecting optical performance.

Cable Type	Signal	Use
RG-59/U (Belden # 8241B or Approved Equal)	Video	Video cable runs up to 50 feet
Micro-Coax (Belden # 9221 or Approved Equal)	Video	Internal console and rack connections
Fiber Optic (Multi-Mode)	Video / Data	See Section 2.9
CAT5e (Belden# 1583A or Approved Equal)	UTP Video	UTP video signals (see Section 2.8)
22AWG 2-Pair individually shielded stranded copper (Belden # 872306 or Approved Equal)	Matrix Keypad/Controller	Connection of Keypad/Controller to Matrix Switch or PTZ Camera Data Distribution Unit
16AWG 2-conductor stranded, twisted pair, tinned copper with overall jacket (Belden #8471 or Approved Equal). Plenum version may require shielding to meet specification. (Belden #83702)	Camera Power	Low voltage power to cameras, 500' or less (see drawing G5-7-1a or G5-8-3b).

2.10 ACCESSORIES

- A. Lightning/Surge Protection: Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.
- B. All DVR's shall utilize a standalone UPS sized for a minimum of 15 minutes of battery run-time. The UPS shall be provided by the CCTV Provider.
 1. the use of a single UPS to support multiple devices is acceptable provided that this run-time requirement is met.
- C. Upright Racks: Furnish and install upright equipment racks to provide sufficient mounting space for the required equipment. Upright racks and associated hardware shall be provided by the CCTV Provider.

1. Racks shall be all metal construction conforming to EIA standards with 19" equipment mounting opening and 1-3/4" vertical spacing of equipment. Rack rails shall be punched with captive nuts, 10-32 screws and nylon washers.
- D. DVR Cabinet:
 1. Station Managers Office or Mechanical Room Application (Wall Rack): In applications where equipment is located in the station manager's office or the mechanical room and a DVR is used (16 cameras or less), a lockable, appropriately vented, DVR cabinet shall be used.

PART 3 EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive Work.
 1. Verify that power and video outlets are in correct locations.
 2. Verify that building structure for attachment of equipment mounting devices is in place.
- C. Report in writing to Contracting Officer any prevailing conditions that will adversely affect satisfactory execution of Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the Postal Service.
- E. Provide required power outlets, low voltage power supplies, interconnecting cables, hardware and equipment for a complete and operable system.
- F. Camera locations are to be reviewed and approved by a Postal Inspector, through the Contracting Officer, prior to installation.

3.2 INSTALLATION

- A. Install all equipment in accordance with CCTV Provider's published instructions. Installation must be done by a CCTV Provider's certified dealer to assure proper installation and accountability. This includes, but is not limited to the following:
 1. All hardware used to secure equipment to racking shall include a nylon or other non-metallic washer or grommet between the screw head and equipment panel to prevent any damage to the equipment.
 - a. Rack mount screws shall be self-centering Philips-head configuration unless specialized tamper-resistant hardware has been specified.
 - b. Screws shall be tightened in such a manner as to allow their removal with common hand tools.
 2. Any equipment placed on shelving mounted on an incline of greater than 2 degrees shall be secured to the rack or shelving in such a manner as to prevent movement of the equipment in the direction of the incline. Such fastening shall be done in a manner as to preserve the integrity of the equipment case and chassis, and shall in no way jeopardize warranty coverage of the device.
 3. All equipment cabling shall be dressed in such a manner as to ensure a neat and clean appearance.
 4. Cable break-outs shall be at 90-degree angles from the harness or chase, and all chases shall be parallel to or at 90-degree angles from the rack frame.

5. Cables are to be secured to the rack frames at sufficient intervals to ensure that the weight of the cable will not contribute to fatigue or early failure of that cable or the device and connector to which it is attached.
 6. Sufficient excess cable shall be provided in "service loop locations" to ensure that the cable may be re-connected without requiring the addition of extension pieces.
 7. All permanent cabling shall be mechanically numbered in a manner consistent with written system documentation.
 8. Wiring for all equipment shall be tie-wrapped (except as indicated below) or secured with Velcro straps so that all connectors in a bundle can be removed and re-installed without the possibility of cross connecting.
 9. CAT-5e and Fiber Optic cables shall utilize Velcro fasteners in place of tie wraps to eliminate the risk of over-tightening cable bundles and affecting the strength or rated performance of the cable.
 10. Where wiring is routed through sheet metal or over frame members, the metal edges shall be covered with flexible grommeting or edge dressing (such as automobile door edge trim).
 11. Double-sided foam tape shall not be used to secure any equipment, terminal blocks, or accessory devices. All device mounting shall be of a permanent nature.
 12. All excess length AC cords are to be tie-wrapped out of the way. Where possible, they shall be routed in a separate bundle a minimum of 6 inches away from any signal or control cable.
 13. Exposed wires run to wall mounted cameras shall be fed through tubing or the body of the mount to present a professional appearance.
 - a. Any accessible cables that can be reached by an individual standing on the floor, a stool, or a small stepladder shall be encased in protective tubing or armored sheathing to prevent tampering or cutting with common hand tools.
 14. Care shall be exercised at all times to protect Postal Service property. For example, ladders shall not be placed against wallpapered or finished surfaces, equipment or furnishings; desks or countertops shall not be used in lieu of ladders.
 15. On pendant mounted cameras, label each camera on all four sides with three-inch numbers supplied by the Certified Dealer. Numbers shall be stenciled or laminated vinyl in a contrasting color to the camera housing. Camera number shall match and correspond to the camera input number, any on screen numeric identifier and/or printed map provided by the switches and/or multiplexer or DVR. Numbers shall not be placed on lower dome or any area that would obstruct camera viewing.
 16. Ensure that pendant mounted cameras are hung from stable, vibration free mounting platforms, using guy-wires or other support mechanisms to ensure stability where required. Mount cameras below any suspended lighting to avoid glare or reflection on camera dome and/or lens.
 17. Perform complete programming of the system, in coordination with the Contracting Officer and Postal Inspector, or designated representative. Programming shall include, but not be limited to, elimination of duplicate or redundant titling information, synchronization of system clocks, camera sequences, dome presets, salvos and tours. Programming of any system passwords or limiting of accessibility prior to commissioning and training is prohibited.
- B. Power requirements shall be determined by actual equipment used.
- C. Ensure that:
1. All applicable statutes, ordinances, regulations, license requirements and codes are fully complied with.
 2. All required permits are obtained.
 3. All required inspections are conducted.
 4. All necessary certificates are issued, obtained, and delivered to the Postal Service.
 5. All equipment installations and mounting are in strict accordance with requirements for applicable seismic classification.

- D. Arrange all components to be mounted in the console(s)/rack(s) in accordance with CCTV Provider and/or Postal Service provided System Elevation drawings. Design shall provide a neat appearance and accessibility for servicing equipment.
- E. Provide required power outlets, interconnecting cables, hardware and equipment for a complete and operable system.
 - 1. Power, 120VAC: As required by codes and standards for the facility.
 - 2. Where conduit is used, a minimum of 40% excess capacity shall be provided for future use.
- F. Install cameras in the general vicinity of locations indicated on Drawings at final locations defined by camera location test.
 - 1. Provide 84-inch minimum headroom below cameras and their mountings. Where necessary modify mounting type to maintain clearance, except as noted on drawings (behind counter) and along slat wall.
- G. All coaxial video connections must be made with crimp-type BNC connectors. Twist-on connectors are not acceptable.
- H. When not installed in cable trays, cable (CAT-5e, fiber optic, and low voltage power) shall be supported with wide base cable hangers rated for proper support of CAT-5e, fiber optic, and innerduct cables (compliant with UL and NEC requirements for structured cabling).
 - 1. Cable hangers shall be installed every 3 to 6 feet and shall be rated to support the weight of the cable multiplied by a factor of three (3).
 - 2. All Fiber Optic cables shall be installed in appropriately sized innerduct cabling.

3.3 CONSTRUCTION

- A. Interface with Other Work: Interface installation of CCTV System with Intrusion Detection System specified in Section 281600 and Enterprise Physical Access Control System specified in Section 281304.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection:
 - 1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 - 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- C. Testing:
 - 1. Perform tests and provide test equipment, tools, and personnel required to conduct system tests and inspections. These tests shall include video quality and PTZ operation (where applicable) for all cameras.
 - 2. Provide an actual demonstration of each system function.
 - 3. Conduct system acceptance test upon completion of installation using pre-approved procedures. Test shall consist of system, subsystem, and device level acceptance tests, including software.
 - 4. Prepare all test procedures and submit the procedures for review by the Postal Service facility manager. Obtain test procedure approval prior to actual system tests.
 - 5. Ensure that test procedures confirm each specification statement and manufacturer requirement has been met or exceeded. An actual demonstration of each system function and a simulation of each system failure shall be provided.

6. An acceptance test period of thirty days shall begin at the start of the acceptance test. Any system failure during the acceptance test period will suspend the acceptance test. The thirty-day test period will restart when the required repairs have been made and certified.
7. Perform all tests in the presence of the Postal Service facility manager or authorized agent. The Postal Service reserves the right to accept any portion or activate any phase prior to acceptance of entire system.

3.5 OPERATING INSTRUCTION

- A. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance steps that are required to ensure normal operation.
- B. Provide one complete set of equipment operating, installation, and programming manuals that will remain in the installed location.

3.6 CLEANING AND ADJUSTING

- A. Clean installed items using methods and materials recommended by equipment manufacturers just before conducting acceptance test.
- B. Adjust manual lens irises to meet lighting conditions.
- C. Adjust field of view for each camera per Inspection Service direction.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 8/29/2013

END OF SECTION 28 23 04 00

SECTION 28 23 05 00 - MPF INTEGRATED SECURITY AND INVESTIGATIVE PLATFORM (ISIP) CCTV SYSTEM**

NOTE TO SPECIFIER

Use this Specification Section for Mail Processing Facilities only.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

This is a Direct Vendor supplied system used by the Postal Inspection Service for Security, Criminal Investigative, Burglary, and Robbery Countermeasure purposes in Postal facilities.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Provide and install a complete IP Video System including, but not limited to;
 - a. IP Video Surveillance Cameras, housings, power supplies, cabling, and related equipment.
 - b. Video management software.
 - c. Video monitoring and recording equipment.
 - d. Equipment enclosures.
 - e. Network equipment including routers and switches

B. Direct Vendor

1. All equipment including the servers, monitors, network switch, etc. are to be procured directly from the Direct Vendor (Diebold) utilizing the pass through pricing process.
2. The cameras, servers, monitors and associated equipment shall be supplied and installed by DIEBOLD, INC the sole approved USPS CCTV Direct Vendor. The Direct Vendor is to provide a Bill of Materials, pricing, and installation costs. The General Contractor is responsible for power, conduit, cable tray, cable and cable pulling. For assistance contact the Direct Vendor at:

DIEBOLD, INC.
 Michael Tracey, USPS Account Manager
 44845 Falcon Place Suite 106
 Sterling, VA 20166
 Cell: 571-451-7629
 email: michael.tracey@diebold.com

3. Contract to Diebold should be addressed to:

Diebold Inc.
 3 Westchester Plaza
 Elmsford, NY 10523

C. General Contractor

1. Responsible for providing power, conduit, cable tray, cable, and cable pulling and NEMA Enclosures to be used as part of the installation.

2. Provide camera placement drawings with field of view requirements to the Direct Vendor and any request documentation. This will include head end and remote node locations and any monitors requested.
 3. Verify customer location has 56 network available for installation of system via USPS site project manager or USPS IT.
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents including:
1. System Installation Manuals (provided by the Direct Vendor) shall be left on-site during the final acceptance. Manuals will not be provided prior to installation completion.
- E. Prompt Payments. In accordance with the Contractor Certification on Postal Service Form 4211B, "Project Contract Payment Authorization", the contractor certifies that prompt payment, (within 30 days) to the subcontractor (Direct Vendor) will be made.
- F. Related Sections:
1. Section 260500 – Common Work Results for Electrical
 2. Section 260533 – Raceway and Boxes for Electrical Systems
 3. Section 281600 – Intrusion Detection.
 4. Section 281304 – Physical Access Control System.
 5. Section 270500 – Common Work Results for Communications.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
1. NFPA 70 - National Electrical Code.
 2. ANSI / TIA / EIA 568-C Commercial Building Telecommunications Cabling Standard (2009)
 3. ANSI / TIA / EIA 569-B Commercial Building Standard for Telecommunications Pathways

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: IP video system between points of surveillance indicated on Drawings and the central monitoring station consists of video IP cameras, camera outlets, camera controls, monitors, control stations, distribution components, video servers, Network Connections and accessories.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures:
1. Product Data: Manufacturer's specification sheets for each component shall not be required for all products provided as part of this Direct Vendor agreement.
 2. Due to USPS security requirements, submittals will be limited to one electronic copy of the block diagram and one copy of the shop drawings to be provided to the General Contractor.
 3. Final As-Built Drawings, Operation and Installations Manual, will be supplied directly to USPS and stored within the rack per USPS COTR.
- B. Shop Drawings:
1. The Direct Vendor will provide a Standard Drawing Package that shall be utilized for the installation of the CCTV system. This package shall include:
 - a. Block Diagram: System block diagrams noting major system components and interrelationships of each component.

- b. Console and Equipment Racks: Rack elevation drawings showing console/equipment arrangement.
 - c. The shop drawings shall include camera placement (camera placements shall be provided by the project specific design entity).
- C. Sequence and Scheduling Plan: Direct Vendor shall provide installation scheduling plan for review and approval. Coordinate scheduling of software and revisions with the USPS.
- D. Section 017704 - Closeout Procedures and Training:
 - 1. Operation and Maintenance Data: Include data for each type of product, including features and operating sequences, both automatic and manual. This information shall be supplied directly to the USPS by the Direct Vendor.
 - 2. Product Quick Reference cards for the operation of all key system components.
 - 3. Project Record Documents: Direct vendor shall provide field-accurate drawings that reflect actual locations of cameras and, indicating cable identifiers, layout, location and numbering of system devices to reflect as-built conditions. The General Contractor shall provide routing of cabling information.
 - 4. Provide a final materials list of equipment installed and spare parts on hand. Materials list shall include model number, serial number, and date installed.
 - 5. Project Completion Certification: Document signed by the direct vender and a Postal Service representative indicating that the project is fully complete with all punch-listed items resolved. IN NEW CONSTRUCTION, THE GENERAL CONTRACTOR WILL SIGN THE PROJECT COMPLETION CERTIFICATION.
 - 6. OPERATING INSTRUCTION
 - a. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation. Authorized USPS (USPSIS & USPS OIG) Representatives will receive this training.
 - b. Provide one complete set of equipment operating, installation.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Keep devices and equipment in manufacturer's packaging in a secured location until system is ready for installation.
- C. Comply with Direct Vendor requirements. Coordinate storage location with the Postal Service.
- D. The equipment delivered must be insured at the contractor's expense through acceptance.

1.6 DIRECT VENDOR WARRANTY/SERVICE/TECHNICAL SUPPORT PLAN

- A. Warranty:
 - 1. Direct Vendor to include manufacturer warranty for three (3) years after facility acceptance and project completion certification for materials and labor.
 - a. Service plan shall include all parts and labor, and shall include return shipping. Failed equipment shall be repaired or replaced at no charge to the Postal Service during the Direct Vendor warranty period.
 - b. USPS shall not be required to process any paperwork in order to be entitled to service plan coverage. It is the Direct Vendor's sole responsibility to monitor and comply with warranty eligibility.
 - c. Where operational performance is substantially affected, all software and firmware shall be upgraded to the latest version supported by the purchased hardware platform throughout the service plan period and be provided at no cost to USPS. Such upgrades shall be

covered under the warranty/service plan and are at the discretion of the Contracting Officers Technical Representative.

- d. Any software bugs identified by the USPS and mutually agreed upon as 'level one' bugs (impacting operation with no work-around) shall be rectified within two (2) weeks of their being reported.
- e. Any software bugs identified by the USPS and mutually agreed upon as 'level two' bugs (impacting operation but with a work-around) shall be rectified within 90 days of their being reported.
- f. Turnaround time for all repairs (warranty and out-of-warranty) shall not exceed 72 hours.
- g. Direct Vendor shall make advance replacement units available in cases where USPS operational issues require immediate replacement of a unit while minimizing down time.

B. Technical Support

- 1. Direct Vendor shall provide toll-free 24/7 technical support at no charge throughout the warranty period.
- 2. Direct Vendor shall provide on-site installation support for systems with more than 40 total cameras. These visits shall include pre-construction site survey and project review, punch-list generation, and final inspection and system certification.
- 3. Data Recovery — Direct Vendor shall provide a service to assist the USPS in recovering data from digital recording system hard drives and removable storage media in the event of a failure.
 - a. Turnaround time for data recovery shall be less than seven (7) days from receipt of hard drives at Direct Vendor's data recovery center.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Selected Direct Vendor

DIEBOLD, INC.
 Michael Tracey, USPS Account Manager
 44845 Falcon Place Suite 106
 Sterling, VA 20166
 Cell: 571-451-7629
 email: michael.tracey@diebold.com

B. Section 016000 - Product Requirements:

- 1. Product options and substitutions are not permitted without a written and USPS approved deviation.
- 2. All equipment to be supplied under this specification shall be new and the current model of the Direct Vendor listed above.
- 3. Systems and components shall have been thoroughly tested and proven in actual use.

2.2 VIDEO SERVER AND STORAGE

A. Based on the Construction Documents, the General Contractor shall purchase all equipment from the Direct Vendor.

B. Server :

- 1. Server/Storage Requirements: Server storage, processor, and RAM requirements will be based off a mathematical formula from the information obtained during the site survey process. Once the number, type and classification of cameras are approved by all parties, it will calculate the

required server(s) fit for the site. These servers are all HP Servers that contain USPS IT ACE images. These are approved CLINS and Assets by USPS.

- a. Storage for 30 Days of Video with 30 % Expansion Capability. Depending on size of system storage may be either internal to the sever or external iSCSI attached NAS device.
- b. Dual Network Interface Cards on board and 4 additional GB NIC ports via PCIe card per USPS requirements. The system also contains HP's integrated Lights Out management cards. This requires 1 connection on the USPS network per server. Thus each server will have (at minimum) 2 USPS 56 Network connections.
- c. UPS Power Supplies for Server and Storage
- d. Input Power: 120VAC, 60Hz (a power adaptor may be used to provide this voltage).
- e. Operating Temperature: Range shall be equal to or greater than 10 to 40 degrees Celsius.
- f. Humidity: Withstand a minimum of 10% to 80% humidity.
- g. Current Build of Ip Configure Network Video recording Software
- h. 17" Monitor
- i. Mouse
- j. Keyboard
- k. All items rack mounted

2.3 IP VIDEO SWITCH

A. CISCO NETWORK SWITCH (IP Video)

1. Based on the Construction Documents, the CISCO Switch is to be procured by the General Contractor from the Direct Vendor.

2.4 VIDEO ENCODER

A. Direct Vendor shall provide video encoders

- B. The video encoder blade shall be equipped with six (6) analog video inputs and shall be able to provide simultaneous Motion JPEG and MPEG-4 video streams. Furthermore the blade shall, for each video channel, support resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels in full frame rate (25/30fps). The Encoder Shall meet or Exceed the following requirements:

1. Be equipped with 6 analog composite video inputs with PAL/NTSC auto sensing
2. Provide resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels at 25/30 frames per second for each video channel
3. Support simultaneous Motion JPEG, MPEG-4 and H264 individually configurable for each video channel
4. Support both unicast and multicast MPEG-4, individually configurable for each video channel
5. Provide the ability to control PTZ devices from third party manufacturer
6. Support both IPv4 and IPv6
7. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
8. Be equipped with 4 alarm inputs and 4 alarm outputs
9. Include embedded event functionality, which may be triggered by alarm input, video loss or by video motion detection
10. Be supported by an open and published API
11. Be equipped with a 1000BaseT Gigabit Ethernet interface

- C. The desktop Video Encoder shall be equipped with one analog video input and one channel of audio, provide simultaneous Motion JPEG and MPEG-4 video streams and shall support resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels in full frame rate (25/30fps). The Encoder Shall meet or Exceed the following requirements:

1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
2. Be equipped with 1 analog video input, supporting composite and Y/C signals
3. Provide resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels at 25/30 frames per second
4. Support simultaneous Motion JPEG, MPEG-4 and H264
5. Support both unicast and multicast MPEG-4
6. Provide full duplex audio and be equipped with Line In and Line Out
7. Provide the ability to control PTZ devices from third party manufacturer
8. Support both IPv4 and IPv6
9. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
10. Be equipped with 4 alarm inputs and 4 alarm outputs
11. Include embedded event functionality, which may be triggered by alarm input, video loss or by video motion or audio detection
12. Be supported by an open and published API

- D. The Video Encoder Blade and Video Encoder Shall be available as Rack Mountable or Desk-top versions.

2.5 VIDEO DECODERS

- A. Video Decoders will support single monitor with full screen camera view or a Quad Decoder with multiple single screen display with sequence of full screen or Quad cameras.
- B. Camera displays approved only by OIG and IS
1. Video output- Analog PAL or NTSC or HDMI
 2. Video decoding- motion JPEG and MPEG-4 Unicast and Multicast
 3. Security – Password protected user access HTTPS encryption

2.6 VIDEO CAMERAS

- A. Direct Vendor Shall provide Cameras
- B. IP Color cameras for video surveillance and monitoring of specific areas as shown on the drawings and confirmed with Postal Inspection Service through Contracting Officer Technical Representative with the following minimum capacities
- C. Fixed H.264, indoor, dome type camera shall be a network camera with WDR, light finder, remote focus and zoom and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a vandal proof resistant casing with smoked transparent cover where required.
 3. Equipped with pixel counter.
 4. Image sensor: Progressive scan RGB CMOS 1/3 inch (effective).
 5. Lens: 6MM; 2.5 – 12MM, 105 degree – 49 degree view, F1.2 DC-IRIS.
 6. Minimum illumination:
 - a. Color: 0.1 LUX, F1.2.
 - b. B/W: 0.2 LUX, F1.2.
 7. Shutter time: 1/29500 to 2 seconds; 60 Hz.
 8. Pan/Tilt/Zoom: Digital PTZ, preset positions, guard tour.
 9. Angle Adjustment: Pan 360 degrees, tilt 170 degrees, rotation 340 degrees.
 10. Resolution: 1280x960 (1 MP) 160x90.
 11. Support simultaneous Motion JPEG, MPEG-4 and H264.
 12. Frame Rate:

- a. H.264; 30 fps in all resolutions; 60 Hz.
 - b. Motion JPEG; 30 fps in all resolutions; 60 Hz.
 13. Support both unicast and multicast MPEG-4.
 14. Support Power over Ethernet according to IEEE802.3af.
 15. Support both IPv4 and IPv6.
 16. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 17. Be equipped with 1 alarm input and 1 alarm output.
 18. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 19. Be supported by an open and published API.
 20. Casing: Indoor; aluminum inner camera module with encapsulated electronics (1.4 lbs).
 21. Processor and Memory: ARTPEC-3, 256 MB RAM, 128 MB Flash.
 22. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 23. Operating Conditions: Indoor; 32 – 122 degrees F; 10 – 85 percent RH.
 24. Accessories: Indoor; mounting bracket, smoked transparent cover. Provide ceiling or pendant mounting kits.
 25. Basis of Design: Indoor, Axis #P3364.
- D. Standard Resolution camera shall be a network camera, providing simultaneous Motion JPEG, MPEG-4 and H264 video streams, support resolutions up to 640x480 pixels in full frame rate (30fps), be equipped with full duplex audio and incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a tamper resistant casing
 3. Feature a progressive scan sensor
 4. Provide images down to 1 LUX at F1.3
 5. Provide resolutions up to 640x480 pixels at 30 frames per second
 6. Support simultaneous Motion JPEG, MPEG-4 and H264
 7. Support both unicast and multicast MPEG-4
 8. Support Power over Ethernet according to IEEE802.3af
 9. Support both IPv4 and IPv6
 10. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
 11. Be equipped with 1 alarm input and 1 alarm output
 12. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection
 13. Be supported by an open and published API
- E. PTZ camera shall be a network dome camera and shall incorporate 29x optical zoom, day/night functionality, and simultaneous Motion JPEG and MPEG-4 video streams. Camera Shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a vandal proof resistant casing with smoked transparent cover.
 3. Feature a progressive scan CCD sensor with Wide Dynamic Range (WDR), electronic image stabilizer and day/night functionality.
 4. Be equipped with 29x optical zoom.
 5. Image Sensor: 1/4 Progressive scan CCD.
 6. Lens: F1.43, 3.67 – 104 mm angle of view – horizontal – 53.1 to 2.0 degrees.
 7. Minimum Illumination: 0.5 LUX @ 30IRE F1.4.
 8. Shutter Time: 1/30,000s to 1s.
 9. PTZ
 - a. E-Flip, 100 preset positions
 - b. 29x optical zoom and 12x digital zoom, total 348x zoom.

- c. Pan: 360 degrees, 0.2 – 300 degrees/s.
 - d. Tilt: 180 degrees, 0.2 – 300 degrees/s
 - 10. Video Compression: H264 (MPEG – 4 part 10/AVC), motion J-PEG and H264.
 - 11. Resolution: D1 720x480 to 176x120.
 - 12. Frame Rate: H.264 – Up to 30 fps in VGA at max zoom.
 - 13. Frame Rate Motion: J-PEG – Up to 30 fps at max zoom.
 - 14. Support simultaneous Motion JPEG, MPEG-4 and H264.
 - 15. Support both unicast and multicast MPEG-4.
 - 16. Support Power over Ethernet according to IEEE802.3af.
 - 17. Support both IPv4 and IPv6.
 - 18. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 - 19. Be equipped with full memory card for alarm triggers.
 - 20. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 - 21. Be supported by an open and published API.
 - 22. Casing:
 - a. Indoor; IK10 impact – resistant aluminum.
 - 23. Processor and Memory: 256 MB RAM, 128 MB Flash.
 - 24. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (2) alarm input and (2) alarm output.
 - 25. Operating Conditions:
 - a. Indoor; 32 – 122 degrees F; 20 – 80 percent RH.
 - 26. Security: Password protection, IP address filtering, HTTPS encryption, IEEE 8021x network access control.
 - 27. Power: 24 to 34 VDC max 15W indoor; power over Ethernet IEEE 802.3at.
 - 28. Accessories:
 - a. Indoor; ceiling or pendant mounting and connector kits. Provide pendant wall or pole attachment.
 - 29. Basis of Design: Indoor, Axis #P5532.
- F. Registry cage, Network Virtual PTZ camera shall be indoor dome type with remote focus and instant zoom, shall be equipped with full duplex audio and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
- 1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
 - 2. Include a vandal proof resistant casing with smoked transparent cover.
 - 3. Equipped with pixel counter.
 - 4. Image Sensor -1/2 "Progressive scan C-MOS 3.1 mega-pixel
 - 5. Lens – F1.8 fixed iris, 2.7 mm, angle of view – horizontal -44 to 140 degrees, vertical 35 to 105 degrees.
 - 6. Minimum illumination – 10 LUX wide mode, 20 LUX tele-mode
 - 7. Shutter time 1/1000 s to 1/5 s
 - 8. PTZ – 3x zoom, .1 s wide to tele, 20 preset positions, + 70 degrees pan, +52 degrees tilt, max speed 400 degrees /s, Guard tour, designed for continuous movement
 - 9. Video Compression, MPEG-4 part 2, (ISO/ IEC 14496-2) motion J-PEG and H264
 - 10. Resolutions- 160x 90 to 640x 480
 - 11. Frame Rate MPEG-4 – Up to 30 fps in VGA at max zoom
 - 12. Frame Rate Motion J-PEG – Up to 30 fps at max zoom
 - 13. Video Streaming – Simultaneous M-PEG 4 and motion J-PEG controllable frame rate and band width, VBR/ CBR MPEG-4.
 - 14. Support both unicast and multicast MPEG-4.
 - 15. Support Power over Ethernet according to IEEE802.3af.
 - 16. Support both IPv4 and IPv6.
 - 17. Be equipped with 1 alarm input and 1 alarm output.

18. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
19. Be supported by an open and published API.
20. Casing: Indoor; aluminum inner camera module with encapsulated electronics.
21. Processor and Memory: ARTPEC-A, 32 MB RAM, 8 MB Flash.
22. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
23. Security – Password protection, IP address filtering, HTTPS encryption, IEEE 802.1x network access control
24. Power – 4.9 to 5.1 VDC max 3.1 W power over Ethernet IEEE 802.3 af class 1
25. Operating Conditions – 5 to 40 degrees C.
26. Accessories: Indoor; pendant mounting bracket with smoked transparent cover.
27. Basis of Design: Indoor, Axis #212PTZ

NOTE TO SPECIFIER

The choice of exterior gate cameras shall be based on the viewing distance and the size of the area to be monitored. In general, utilize the AXIS #3364-VE dome type camera for non-blue sky, wall mounted applications and for blue sky applications requiring shorter viewing distances. Specifier to select the appropriate paragraph 2.6 G.

- G. Gate camera shall be fixed (1) mega pixel, outdoor, non-blue sky dome type camera shall be a network camera with WDR, light finder, remote focus and zoom, shall be equipped with full duplex audio and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
 1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
 2. Include a vandal proof resistant casing smoked transparent cover.
 3. Equipped with pixel counter.
 4. Image sensor: Progressive scan RGB CMOS 1/3 inch (effective).
 5. Lens: 2.5 – 12MM, 105 degree – 49 degree view, F1.2 P-IRIS.
 6. Day and Night: Automatically removable infrared-cut filter.
 7. Minimum illumination:
 - a. Color: 0.15 LUX, F1.4.
 - b. B/W: 0.03 LUX, F1.4.
 8. Shutter time: 1/29500 to 2 seconds; 60 Hz.
 9. Pan/Tilt/Zoom: Digital PTZ, preset positions, guard tour.
 10. Angle Adjustment: Pan 360 degrees, tilt 170 degrees, rotation 340 degrees.
 11. Resolution: 1280x960 (1 MP) 160x90.
 12. Support simultaneous Motion JPEG, MPEG-4 and H264.
 13. Frame Rate: H264; 30 fps in all resolutions; 60 Hz.
 14. Support both unicast and multicast MPEG-4.
 15. Support Power over Ethernet according to IEEE802.3af.
 16. Support both IPv4 and IPv6.
 17. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 18. Be equipped with 1 alarm input and 1 alarm output.
 19. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 20. Be supported by an open and published API.
 21. Casing: Outdoor; IP66 and NEMA 4X, IK10 impact resistant aluminum with integrated dehumidifying membrane.
 22. Processor and Memory: 256 MB RAM, 128 MB Flash.
 23. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 24. Operating Conditions: Outdoor; -40 – 131 degrees F; 10 – 100 percent RH.

25. Accessories: Outdoor; Weather shield, cable shield, 16 ft. network cable with pre-mounted gasket. Provide pendant wall or pole attachment.
26. Basis of Design: Outdoor, Axis #P3364-VE.

G. Gate camera shall be fixed (1) mega pixel, outdoor, network type with WDR, light finder, remote focus and zoom and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:

1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
2. Include a vandal proof resistant casing with fan and heater.
3. Equipped with pixel counter.
4. Image Sensor- 1/4" Sony Wfine progressive scan RGB CCD.
5. Lens – F1.2 varifocal, 3 to 8 mm, DC iris.
6. Day and Night - automatic IR filter removal in low light conditions.
7. Angle of view – 66 to 27 degrees horizontal.
8. Camera angle adjustment – Pan 360, tilt 170 rotation 430 degrees.
9. Minimum Illumination – Color mode 0.3 lux at F1.2, black and white mode 0.5 lux at F1.2
10. Video compression – H264 (MPEG-4 part 10/AVC), Motion J-PEG.
11. Resolutions –1280x800 to 160x90.
12. Frame rate – Up to 30 fps in all resolutions.
13. Video Streaming – Simultaneous motion J-PEG, MPEG-4 and H264 controllable frame rate and band width, constant and variable bit rate (MPEG-4).
14. Support both unicast and multicast MPEG-4.
15. Support Power over Ethernet according to IEEE802.3af.
16. Support both IPv4 and IPv6.
17. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
18. Be equipped with 1 alarm input and 1 alarm output.
19. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
20. Be supported by an open and published API.
21. Casing: Outdoor; IP66 and NEMA 4X, IK10 impact resistant aluminum with integrated humidifying membrane.
22. Processor and Memory: 256 MB RAM, 128 MB Flash.
23. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output. Shutter time – 1/24500s to 1/6s.
24. Power – Camera and built in fan, 9-24VDC, max 5.5 watts, 10-24 VAC, max 8VA, PoE (IEEE802.3af) class 2, When using built in heater, 12 VDC max 20 watts, 24 VAC max 25VA.
25. Operating Conditions – 5 to -50 C, with heater -20 to -50 C, Humidity 20-80 percent RH (non-condensating).
26. Accessories: Outdoor, weather shield, cable shield, 16 ft. network cable with pre-mounted gasket. Provide pole attachment.
27. Basis of Design: Outdoor Axis #P1344 with Pelco #EH3515/BK3512-1 blower, Pelco #HD3515-1 heater, Pelco #SS3515 sun shroud

H. Fixed (1) Mega pixel, outdoor, non-blue sky dome type camera shall be a network camera with WDR, light finder, remote focus and zoom, shall be equipped with full duplex audio and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:

1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
2. Include a vandal proof resistant casing smoked transparent cover.
3. Equipped with pixel counter.
4. Image sensor: Progressive scan RGB CMOS 1/3 inch (effective).
5. Lens: 2.5 –12MM, 105 degree – 49 degree view, F1.2 P-IRIS.
6. Day and Night: Automatically removable infrared-cut filter.

7. Minimum illumination:
 - a. Color: 0.15 LUX, F1.4.
 - b. B/W: 0.03 LUX, F1.4.
 8. Shutter time: 1/29500 to 2 seconds; 60 Hz.
 9. Pan/Tilt/Zoom: Digital PTZ, preset positions, guard tour.
 10. Angle Adjustment: Pan 360 degrees, tilt 170 degrees, rotation 340 degrees.
 11. Resolution: 1280x960 (1 MP) 160x90.
 12. Support simultaneous Motion JPEG, MPEG-4 and H264.
 13. Frame Rate: H264; 30 fps in all resolutions; 60 Hz.
 14. Support both unicast and multicast MPEG-4.
 15. Support Power over Ethernet according to IEEE802.3af.
 16. Support both IPv4 and IPv6.
 17. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 18. Be equipped with 1 alarm input and 1 alarm output.
 19. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 20. Be supported by an open and published API.
 21. Casing: Outdoor; IP66 and NEMA 4X, IK10 impact resistant aluminum with integrated dehumidifying membrane.
 22. Processor and Memory: 256 MB RAM, 128 MB Flash.
 23. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 24. Operating Conditions: Outdoor; -40 – 131 degrees F; 10 – 100 percent RH.
 25. Accessories: Outdoor; Weather shield, cable shield, 16 ft. network cable with pre-mounted gasket. Provide pendant wall or pole attachment.
 26. Basis of Design: Outdoor, Axis #P3364-VE.
- I. Exterior PTZ camera shall be a network dome camera and shall incorporate 36x optical zoom, day/night functionality, and simultaneous Motion JPEG and MPEG-4 video streams. Camera shall meet or exceed the following requirements:
1. Be equipped with a 10BASE-T/100BASE-TX Ethernet interface
 2. Include a vandal proof resistant casing with smoked transparent cover.
 3. Feature a progressive scan CCD sensor with Wide Dynamic Range, Electronic Image Stabilizer and day/night functionality
 4. Be equipped with 36x optical zoom
 5. Image Sensor – 1/4 ExView HAD Progressive scan CCD.
 6. Lens – f=3.3 - 119mm, F1.4 – 4.2, autofocus, automatic day/night, horizontal – 57.2 to 1.7 degrees.
 7. Minimum Illumination:
 - a. Color: 0.5 LUX at 30 IRE F1.4.
 - b. B/W: 0.008 LUX at 30 IRE F1.4.
 8. Shutter Time – 1/30,000s to 0.5s
 9. PTZ
 - a. E-Flip, 100 preset positions
 - b. 36x optical zoom and 12x digital zoom, total 240x zoom.
 - c. Pan; 360 degrees endless, 0.05 – 450 degrees/s
 - d. Tilt; 220 degrees, 0.05 – 450 degrees/s.
 10. Video Compression, H.264 (MPEG-4 part 10/AVC) motion J-PEG.
 11. Resolutions – Extended D1 752x480 to 176x120.
 12. Frame Rate – H.264 – Up to 30 fps in all resolutions.
 13. Frame Rate Motion J-PEG – Up to 30 fps at all resolutions.
 14. Support simultaneous motion JPEG, MPEG-4 and H264.
 15. Support both unicast and multicast MPEG-4.
 16. Support Power over Ethernet according to IEEE802.3af

17. Support both IPv4 and IPv6
18. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
19. Be equipped with full memory card for alarm triggers.
20. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection
21. Be supported by an open and published API.
22. Casing:
 - a. Outdoor; IP66 and NEMA 4X, IK10 impact-resistant aluminum with integrated dehumidifying membrane and sun shield.
23. Processor and Memory: 256 MB RAM, 128 MB Flash.
24. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (2) alarm input and (2) alarm output.
25. Operating Conditions:
 - a. Outdoor; -40 – 131 degrees F; 20 – 80 percent RH.
26. Security – Password protection, IP address filtering, HTTPS encryption, IEEE 802.1x network access control.
27. Power – 24 to 34 VDC max; 60W outdoor: power over Ethernet IEEE 802.3 af class 1.
28. Accessories:
 - a. Outdoor; required mounting bracket, weather shield, cable shield, 16 ft. network cable with pre-mounted gasket. Provide pendant mounting kits and pole attachment.
29. Basis of Design:
 - a. Outdoor; Axis #Q6032-E.

- J. Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty

2.7 CAMERA POWER SUPPLIES:

- A. Based on the Construction Documents, the Direct Vendor will identify Camera power source. When required the Direct Vendor will provide Power Supplies for Camera
- B. Interior Fixed Cameras: Camera shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft.
 1. Network switch shall be equipped with UPS power supply
- C. Interior PTZ Cameras: Camera shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft. A mid-span device is required.
 1. Network switch shall be equipped with UPS power supply.
- D. Exterior Fixed Cameras (non "Blue Sky"):
 1. Camera and enclosure shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft.
 2. Wall mounted Environmental Enclosure power supplies (where necessary) shall be located in a suitably protected area near the camera. Provide individually fused power supplies.
 3. Pole mounted Environmental Enclosure power supplies shall be located within a NEMA 4 enclosure at the pole. Provide individually fused power supplies.
- E. Exterior PTZ Cameras:

1. PTZ Exterior Cameras shall be powered from individually fused power supplies located within a NEMA 4 enclosure at the pole. Other options for powering these cameras are available based on site design.
- F. Fixed and PTZ cameras requiring cable runs in excess of 800 ft. and all exterior cameras exposed to the elements ("Blue Sky" type) shall utilize fiber optic transmission equipment and shall be powered by individually fused power supplies.
- G. Provide a means for disconnecting camera power supplies from main power at the power supply enclosure, either through a detachable power cord, master fuse or circuit breaker located in the power supply cabinet, or other UL approved switching device.
 1. Power supplies shall be rated to support 200 percent of the actual (nominal) power loading.
 2. Each power supply shall be fed from a dedicated 120Volt circuit.
 3. Adjacent cameras shall be fed from different power supplies.
 4. Multiple camera power supplies are available in the correct application.

2.8 VIDEO CAMERA HOUSINGS AND MOUNTS

- A. Direct Vendor shall Provide indoor housings as required for all camera types with the following minimum capabilities:
 1. Interior Cameras:
 - a. All cameras shall be in a housing that is coordinated with adjacent finishes with the appropriate mounting hardware. Selection of housings and mounts, including incremental changes to paint colors, dome materials, and cosmetic finishes shall be approved by the USPS or their authorized agent.
 - b. All housings shall be sufficiently dust and moisture resistant to withstand normal environmental conditions in their chosen installation location.
 - c. Hardware shall be provided to ensure tamper-resistant mounting in public access areas after normal business hours without modification to the integrity of the housing.
 - d. Where used, pendant mounts shall be suitable for use as wall, ceiling and column mounts. Pendant mounts shall attach to the appropriate camera housing using Direct Dealer provided standard threaded schedule 40 rigid iron pipes. Pipe lengths of 10 feet or less are to be a minimum of 1-1/2 inch diameter. Pipe lengths exceeding 10 feet are to be a minimum of 1-1/2 inch in diameter. Exterior pipe shall be galvanized.
 - e. All mounts shall incorporate installer provided safety chain or cable of sufficient endurance to support 2 times the weight of the equipment
 - f. The General Contractor shall terminate the Ethernet, camera power and fiber optic cabling to the patch panels provided by the Direct Vendor and located in the upright racks.
 2. Exterior Cameras:
 - a. Environmental: Thermostatically controlled heaters and blowers with defrosting capabilities.
 - b. Moisture: Rainproof seals and gaskets.
 - c. Wind Resistance: Rated for 80mph sustained winds, minimum.
 - d. Ambient Temperature Rating: -10 to 60 degrees Celsius.
 - e. Areas with more demanding environmental conditions will be granted a deviation from this specification.

2.9 FIBER OPTIC MEDIA CONVERTER MODULES

- A. Direct Vendor Shall Provide fiber optic media converters
- B. Fiber Optic transmission equipment shall be used when one or more of the following conditions are met:
 1. Camera cable runs exceed 800 linear feet.
 2. The camera is located outdoors and is exposed to the elements ("Blue Sky" type).

MPF INTEGRATED SECURITY AND INVESTIGATIVE
PLATFORM (ISIP) CCTV SYSTEM**

3. Cameras protected by canopies or other architectural elements that shield them from direct view of the overhead sky are excluded from this requirement.
 4. The cable path is within 20 feet of a TIME or MIMS aerial.
- C. Modules located at field devices shall be low profile “miniaturized” type, and shall be mounted in the Power Supply/PoE Injector housing for both fixed and PTZ cameras.
1. Fiber optic transmit modules shall derive power from the camera power supply, eliminating the need for an additional power supply. AC power is required for PoE injector and media converter.
- D. Modules located at head-end locations shall be standalone modular units unless four (4) or more modules are required, in which case they shall be enclosed in a fiber-optic rack mount.
1. If more than one fiber optic rack is used, modules shall be distributed as evenly as possible among the racks to reduce the load on the rack power supply and minimize the impact of a failed rack.
- E. Fiber optic modules shall conform to the following minimum specifications:
1. 10/100 Mbps RJ-45 Ethernet port, ST Fiber Port
 2. 62.5/125 Multi-mode fiber
 3. PoE (PD) device or locally powered
 4. Protocol independent
 5. -31 to 158 deg operating Temperature
 6. IEEE 802.3, IEEE 803.2u and IEEE 803.2af Compliant
- F. Remote Node Cabinet
1. Remote Node Cabinet will house an IP video system network switch, patch panel, UPS and camera power supply.
 - a. The GC shall provide dedicated 110volt power, hang remote node cabinet, terminate fiber optic and CAT-6 cables.
- G. Patch Cables
1. Direct Vendor will provide CAT-6 and fiber optic patch cables for connections, CAT-6, fiber optic patch pushed to devices.
- 2.10 ETHERNET CABLE EXTENDERS
- A. Direct Vender shall provide Ethernet Cable Extenders as required
- B. Cable Extenders, or fiber optics, shall be used at the discretion of the design engineer or when one or more of the following conditions are met:
1. Camera Cable run exceeds 300 ‘ but is not more than 800’. It is not practical to use a remote switch and bridge to the head-end switch
- C. Modules located at the field devices shall be located in the camera enclosure or junction box close to the device Field device module derives power from the head end module and does require local power.
- D. Modules located at the head-end are standalone modules mounted in the equipment rack
- 2.11 CABLING
- A. Camera Ethernet Data Cabling:
1. 4-Pair Category 6 Unshielded Twisted Pair Cable shall be provided and installed by the General Contractor.

2. The General Contractor shall provide and install the RJ-45 jack as shown on the drawings. The General Contractor shall terminate and test the Cat 6 cable and RJ 45 jacks.
 3. Complies with individual characteristics established in ANSI/TIA/EIA-568-B terminated to T568A and all addendums for Category 6 cable performance specification.
 4. Cabling and wire ways shall be installed in accordance to sections 260533 and 270500
 - a. Power:
- B. Power cable shall be appropriately sized to ensure that any signal loss as a function of cable length does not prohibit the delivery of sufficient voltage and current from the power supply to the powered device. A separate power cable may be required by the design engineer as shown on the drawings.
- C. Cable shall have footage markings to Identify CCTV system Cable lengths.
- D. Fiber Optic - When fiber optic modules are required, the General Contractor shall provide fiber optic cable appropriate for the application. Cable shall conform to the following specifications:
1. 62.5 micron glass multimode fiber.
 2. "ST" type connectors shall be used on all cable terminations, including junction boxes and break-out trays.
 3. Performance characteristics (including optical attenuation) shall be such that the Fiber Optic modules specified in Section 2.9 function to deliver signals end-to-end with sufficient bandwidth and quality to meet the specified application.
 4. Physical characteristics such that the cable has sufficient strength and endurance to withstand installation and environmental conditions without adversely affecting optical performance.

Cable Type	Signal	Use
Fiber Optic (Multi-Mode) General Cable CG0021ANU.BK or Approved Equal	Data	See Section 2.9
CAT6 Plenum with footage markings (General Cable 7131769 or Approved Equal)	Camera Data	Camera Data (see Section 2.8)

2.12 ACCESSORIES

- A. Lightning/Surge Protection: Products shall utilize internal or external (power and low voltage) surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.
- B. All Servers and workstations shall utilize a standalone UPS sized for a minimum of 20 minutes of battery run-time. The UPS shall be provided by the Direct Vendor. GC contractor will provide dedicated 120VAC or 220 VAC power determined by the Direct Vendor based on the construction documents
- C. Upright Racks: The Direct Vender shall provide and install upright equipment racks to provide sufficient mounting space for the required equipment.
 1. Racks shall be all metal construction conforming to EIA standards with 19" equipment mounting opening and 1-3/4" vertical spacing of equipment. Rack rails shall be punched with captive nuts, 10-32 screws and nylon washers.
- D. The General Contractor shall terminate the Ethernet, camera power and Fiber Optic cabling to the patch panels provided by the Direct Vender and located in the Upright Racks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive Work.
 - 1. Verify that power and video outlets are in correct locations.
 - 2. Verify that building structure for attachment of equipment mounting devices is in place.
- C. Report in writing to Contracting Officer any prevailing conditions that will adversely affect satisfactory execution of Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the Postal Service.
- E. Provide required power outlets, low voltage power supplies, interconnecting cables, hardware and equipment for a complete and operable system.
- F. Camera locations are to be reviewed and approved by a Postal Inspector, through the Contracting Officer, prior to installation.

3.2 INSTALLATION

- A. Install all equipment in accordance with Direct Vendor's published instructions. Installation must be done by the Direct Vendor to assure proper installation and accountability. This includes, but is not limited to the following:
 - 1. All hardware used to secure equipment to racking shall include nylon or other non-metallic washer or grommet between the screw head and equipment panel to prevent any damage to the equipment.
 - a. Rack mount screws shall be self-centering Philips-head configuration unless specialized tam-per-resistant hardware has been specified.
 - b. Screws shall be tightened in such a manner as to allow their removal with common hand tools.
 - 2. Any equipment placed on shelving mounted on an incline of greater than 2 degrees shall be secured to the rack or shelving in such a manner as to prevent movement of the equipment in the direction of the incline. Such fastening shall be done in a manner as to preserve the integrity of the equipment case and chassis, and shall in no way jeopardize warranty coverage of the device.
 - 3. All equipment cabling shall be dressed in such a manner as to ensure a neat and clean appearance.
 - 4. Cable break-outs shall be at 90-degree angles from the harness or chase, and all chases shall be parallel to or at 90-degree angles from the rack frame.
 - 5. Cables are to be secured to the rack frames at sufficient intervals to ensure that the weight of the cable will not contribute to fatigue or early failure of that cable or the device and connector to which it is attached.
 - 6. Sufficient excess cable shall be provided in "service loop locations" to ensure that the cable may be re-connected without requiring the addition of extension pieces.
 - 7. All permanent cabling shall be mechanically numbered in a manner consistent with Direct Vendors written system documentation.
 - 8. Wiring for all equipment shall be tie-wrapped (except as indicated below) so that all connectors in a bundle can be removed and re-installed without the possibility of cross connecting.

9. CAT-6 and Fiber Optic cables shall utilize Velcro fasteners in place of tie wraps to eliminate the risk of over-tightening cable bundles and affecting the strength or rated performance of the cable.
 10. Where wiring is routed through sheet metal or over frame members, the metal edges shall be covered with flexible grommeting or edge dressing (such as automobile door edge trim).
 11. Double-sided foam tape shall not be used to secure any equipment, terminal blocks, or accessory devices. All device mounting shall be of a permanent nature.
 12. All excess length AC cords are to be tie-wrapped out of the way. Where possible, they shall be routed in a separate bundle a minimum of 6 inches away from any signal or control cable.
 13. Exposed wires run to wall mounted cameras shall be fed through tubing or the body of the mount to present a professional appearance.
 - a. Any accessible cables that can be reached by an individual standing on the floor, a stool, or a small stepladder shall be encased in protective tubing or armored sheathing to prevent tampering or cutting with common hand tools.
 14. Care shall be exercised at all times to protect Postal Service property. For example, ladders shall not be placed against wallpapered or finished surfaces, equipment or furnishings; desks or countertops shall not be used in lieu of ladders.
 15. On pendant mounted cameras, label each camera on all four sides with three-inch numbers supplied by the Direct Vendor. Numbers shall be stenciled or laminated vinyl in a contrasting color to the camera housing. Camera number shall match and correspond to the Last Octet of camera IP Address and/or printed map provided by the Direct Vendor. Numbers shall not be placed on lower dome or any area that would obstruct camera viewing.
 16. Ensure that pendant mounted cameras are hung from stable, vibration free mounting platforms, using guy-wires or other support mechanisms to ensure stability where required. Mount cameras below any suspended lighting to avoid glare or reflection on camera dome and/or lens.
 17. Perform complete programming of the system, in coordination with the Contracting Officer and Postal Inspector, or designated representative. Programming shall include, but not be limited to, elimination of duplicate or redundant titling information, synchronization of system clocks, camera sequences, dome presets, salvos and tours. Programming of any system passwords or limiting of accessibility prior to commissioning and training is prohibited.
 18. Provide the Direct Vendor Red Line drawings with job condition changes required to provide accurate close-out documentation
- B. Power requirements shall be determined by actual equipment used.
- C. Ensure that:
1. All applicable statutes, ordinances, regulations, license requirements and codes are fully complied with.
 2. All required permits are obtained.
 3. All required inspections are conducted.
 4. All necessary certificates are issued, obtained, and delivered to the Postal Service.
 5. All equipment installations and mounting are in strict accordance with requirements for applicable seismic classification.
- D. Arrange all components to be mounted in the console(s)/rack(s) in accordance with Direct Vendor and/or Postal Service provided System Elevation drawings. Design shall provide a neat appearance and accessibility for servicing equipment.
- E. Provide required power outlets, interconnecting cables, hardware and equipment for a complete and operable system.
1. Power, 120VAC: As required by codes and standards for the facility.
 2. Where conduit is used, a minimum of 40% excess capacity shall be provided for future use.
- F. Install cameras as shown on the drawings and in accordance with the USPS specifications.
1. Provide 84-inch minimum headroom below cameras and their mountings. Where necessary modify mounting type to maintain clearance, except as noted on drawings (behind counter) and along slat wall.

- G. All Cat6 cable connections must be made to 8 pin modular jacks or plugs at the device and to 8 pin modular patch panel at the head end to the T568A standard. Patch panel shall be terminated per direct vendors documentation/drawings by the General Contractor.
- H. When not installed in cable trays, cable (CAT-6, fiber optic, and low voltage power) shall be supported with wide base cable hangers rated for proper support of CAT-6, fiber optic, and inner-duct cables (compliant with UL and NEC requirements for structured cabling).
 - 1. Cable hangers shall be installed every 3 to 6 feet and shall be rated to support the weight of the cable multiplied by a factor of three (3).
 - 2. Cable tray for camera wiring shall not include any low voltage AC wiring.

3.3 CONSTRUCTION COORDINATION

- A. The Direct Vender shall interface with Other Work: Interface installation of CCTV System with the Physical Access Control System specified in Section 281304.
 - 1. Interface shall be a contact closure provided by the Physical Access Control System vendor.
 - 2. The interface shall be done at a central location.
 - 3. The quantity of inputs shall be provided by the Physical Access Control System vendor.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection:
 - 1. The Direct Vender shall inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 - 2. The Direct Vender shall verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- C. Testing:
 - 1. The Direct Vender shall Perform tests and provide test equipment, tools, and personnel required to conduct system tests and inspections. These tests shall include video quality and PTZ operation (where applicable) for all cameras.
 - 2. The Direct Vender shall provide an actual demonstration of each system function.
 - 3. The Direct Vender shall conduct system acceptance test upon completion of installation using pre-approved procedures. Test shall consist of system, subsystem, and device level acceptance tests, including software.
 - 4. The Direct Vender shall use accepted Checklist for system testing.
 - 5. The Direct Vender shall ensure that test procedures confirm each specification statement and manufacturer requirement has been met or exceeded. An actual demonstration of each system function and a simulation of each system failure shall be provided.
 - 6. An acceptance test period of thirty days shall begin at the start of the acceptance test. Any system failure during the acceptance test period will suspend the acceptance test. The thirty-day test period will restart when the required repairs have been made and certified.
 - 7. Perform all tests in the presence of the Postal Service COTR. The Postal Service reserves the right to accept any portion or activate any phase prior to acceptance of entire system.

3.5 OPERATING INSTRUCTION

- A. The Direct Vender shall provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance steps that are required to ensure normal operation to the USPS COTR.

- B. The Direct Vender shall provide two complete sets of equipment operating, installation, and programming manuals that will remain in the installed location.

3.6 CLEANING AND ADJUSTING

- A. Adjust manual lens irises to meet lighting conditions.
- B. Adjust field of view for each camera per USPS COTR direction.

USPS Mail Processing Facility Specification issued: 5/1/2014

Last revised: 9/4/2013

END OF SECTION 28 23 05 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 23 05 00 - CSF INTEGRATED SECURITY AND INVESTIGATIVE PLATFORM (ISIP) CCTV SYSTEM**

NOTE TO SPECIFIER

Use this Specification Section for Customer Service Facilities only.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

This is a Direct Vendor supplied system used by the Postal Inspection Service for Security, Criminal Investigative, Burglary, and Robbery Countermeasure purposes in Postal facilities.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Provide and install a complete IP Video System including, but not limited to:
 - a. IP Video Surveillance Cameras, housings, power supplies, cabling, and related equipment.
 - b. Video management software.
 - c. Video monitoring and recording equipment.
 - d. Equipment enclosures.
 - e. Network equipment including routers and switches

B. Direct Vendor

1. All equipment including the servers, monitors, network switch, etc. are to be procured directly from the Direct Vendor (Diebold) utilizing the pass through pricing process.
2. The cameras, servers, monitors and associated equipment shall be supplied and installed by DIEBOLD, INC the sole approved USPS CCTV Direct Vendor. The Direct Vendor is to provide a Bill of Materials, pricing, and installation costs. The General Contractor is responsible for power, conduit, cable tray, cable and cable pulling. For assistance contact the Direct Vendor at:

DIEBOLD, INC.
 Michael Tracey, USPS Account Manager
 44845 Falcon Place Suite 106
 Sterling, VA 20166
 Cell: 571-451-7629
 email: michael.tracey@diebold.com

3. Contract to Diebold should be addressed to:
 Diebold Inc.
 3 Westchester Plaza
 Elmsford, NY 10523

C. General Contractor

1. Responsible for providing power, conduit, cable tray, cable, and cable pulling and NEMA Enclosures to be used as part of the installation.
2. Provide camera placement drawings with field of view requirements to the Direct Vendor and any request documentation. This will include head end location and any monitors requested.
3. Verify customer location has 56 network available for installation of system via USPS site project manager or USPS IT.

CSF INTEGRATED SECURITY AND INVESTIGATIVE
 PLATFORM (ISIP) CCTV SYSTEM**

- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents including:
 - 1. System Installation Manuals (provided by the Direct Vendor) shall be left on-site during the final acceptance. Manuals will not be provided prior to installation completion.
- E. Prompt Payments. In accordance with the Contractor Certification on Postal Service Form 4211B, "Project Contract Payment Authorization", the contractor certifies that prompt payment, (within 30 days) to the subcontractor (Direct Vendor) will be made.
- F. Related Sections:
 - 1. Section 260500 – Common Work Results for Electrical
 - 2. Section 260533 – Raceway and Boxes for Electrical Systems
 - 3. Section 281600 - Intrusion Detection.
 - 4. Section 270500 - Common Work Results for Communications.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 70 - National Electrical Code.
 - 2. ANSI / TIA / EIA 568-C Commercial Building Telecommunications Cabling Standard (2009)
 - 3. ANSI / TIA / EIA 569-B Commercial Building Standard for Telecommunications Pathways

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: IP video system between points of surveillance indicated on Drawings and the central monitoring station consists of video IP cameras, camera outlets, camera controls, monitors, control stations, distribution components, video servers, Network Connections and accessories.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures:
 - 1. Product Data: Manufacturer's specification sheets for each component shall not be required for all products provided as part of this Direct Vendor agreement.
 - 2. Due to USPS security requirements, submittals will be limited to one electronic copy of the block diagram and one copy of the shop drawings to be provided to the General Contractor.
 - 3. Final As-Built Drawings, Operation and Installations Manual, will be supplied directly to USPS and stored within the rack per USPS COTR.
- B. Shop Drawings:
 - 1. The Direct Vendor will provide a Standard Drawing Package that shall be utilized for the installation of the CCTV system. This package shall include:
 - a. Block Diagram: System block diagrams noting major system components and interrelationships of each component.
 - b. Console and Equipment Racks: Rack elevation drawings showing console/equipment arrangement.
 - c. The shop drawings shall include camera placement (camera placements shall be provided by the project specific design entity).
- C. Sequence and Scheduling Plan: Direct Vendor shall provide installation scheduling plan for review and approval. Coordinate scheduling of software and revisions with the USPS.

- D. Section 017704 - Closeout Procedures and Training:
1. Operation and Maintenance Data: Include data for each type of product, including features and operating sequences, both automatic and manual. This information shall be supplied directly to the USPS by the Direct Vendor.
 2. Product Quick Reference cards for the operation of all key system components.
 3. Project Record Documents: Direct vendor shall provide field-accurate drawings that reflect actual locations of cameras and, indicating cable identifiers, layout, location and numbering of system devices to reflect as-built conditions. The General Contractor shall provide routing of cabling information.
 4. Provide a final materials list of equipment installed and spare parts on hand. Materials list shall include model number, serial number, and date installed.
 5. Project Completion Certification: Document signed by the direct vendor and a Postal Service representative indicating that the project is fully complete with all punch-listed items resolved. In new construction, the General Contractor will sign the project completion certification.
 6. OPERATING INSTRUCTION
 - a. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation. Authorized USPS (USPSIS & USPS OIG) Representatives will receive this training.
 - b. Provide one complete set of equipment operating, installation.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Keep devices and equipment in manufacturer's packaging in a secured location until system is ready for installation.
- C. Comply with Direct Vendor requirements. Coordinate storage location with the Postal Service.
- D. The equipment delivered must be insured at the contractor's expense through acceptance.

1.6 DIRECT VENDOR WARRANTY/SERVICE/TECHNICAL SUPPORT PLAN

- A. Warranty:
 1. Direct Vendor to include manufacturer warranty for three (3) years after facility acceptance and project completion certification for materials and labor.
 - a. Service plan shall include all parts and labor, and shall include return shipping. Failed equipment shall be repaired or replaced at no charge to the Postal Service during the Direct Vendor warranty period.
 - b. USPS shall not be required to process any paperwork in order to be entitled to service plan coverage. It is the Direct Vendor's sole responsibility to monitor and comply with warranty eligibility.
 - c. Where operational performance is substantially affected, all software and firmware shall be upgraded to the latest version supported by the purchased hardware platform throughout the service plan period and be provided at no cost to USPS. Such upgrades shall be covered under the warranty/service plan and are at the discretion of the Contracting Officers Technical Representative.
 - d. Any software bugs identified by the USPS and mutually agreed upon as 'level one' bugs (impacting operation with no work-around) shall be rectified within two (2) weeks of their being reported.
 - e. Any software bugs identified by the USPS and mutually agreed upon as 'level two' bugs (impacting operation but with a work-around) shall be rectified within 90 days of their being reported.
 - f. Turnaround time for all repairs (warranty and out-of-warranty) shall not exceed 72 hours.

CSF INTEGRATED SECURITY AND INVESTIGATIVE
PLATFORM (ISIP) CCTV SYSTEM**

- g. Direct Vendor shall make advance replacement units available in cases where USPS operational issues require immediate replacement of a unit while minimizing down time.
- B. Technical Support
 - 1. Direct Vendor shall provide toll-free 24/7 technical support at no charge throughout the warranty period.
 - 2. Direct Vendor shall provide on-site installation support for systems with more than 40 total cameras. These visits shall include pre-construction site survey and project review, punch-list generation, and final inspection and system certification.
 - 3. Data Recovery — Direct Vendor shall provide a service to assist the USPS in recovering data from digital recording system hard drives and removable storage media in the event of a failure.
 - a. Turnaround time for data recovery shall be less than seven (7) days from receipt of hard drives at Direct Vendor's data recovery center.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Selected Direct Vendor

DIEBOLD, INC.
 Michael Tracey, USPS Account Manager
 44845 Falcon Place Suite 106
 Sterling, VA 20166
 Cell: 571-451-7629
 email: michael.tracey@diebold.com
- B. Section 016000 - Product Requirements:
 - 1. Product options and substitutions are not permitted without a written and USPS approved deviation.
 - 2. All equipment to be supplied under this specification shall be new and the current model of the Direct Vendor listed above.
 - 3. Systems and components shall have been thoroughly tested and proven in actual use.

2.2 VIDEO SERVER AND STORAGE

- A. Based on the Construction Documents, the General Contractor shall purchase all equipment from the Direct Vendor.
- B. Server:
 - 1. Server/Storage Requirements: Server storage, processor, and RAM requirements will be based off a mathematical formula from the information obtained during the site survey process. Once the number, type and classification of cameras are approved by all parties, it will calculate the required server(s) fit for the site. These servers are all HP Servers that contain USPS IT ACE images. These are approved CLINS and Assets by USPS.
 - a. Storage for 30 Days of Video with 30 % Expansion Capability. Depending on size of system storage may be either internal to the sever or external iSCSI attached NAS device.
 - b. Dual Network Interface Cards on board and 4 additional GB NIC ports via PCIe card per USPS requirements. The system also contains HP's integrated Lights Out management cards. This requires 1 connection on the USPS network per server. Thus each server will have (at minimum) 2 USPS 56 Network connections.

- c. UPS Power Supplies for Server and Storage
- d. Input Power: 120VAC, 60Hz (a power adaptor may be used to provide this voltage).
- e. Operating Temperature: Range shall be equal to or greater than 10 to 40 degrees Celsius.
- f. Humidity: Withstand a minimum of 10% to 80% humidity.
- g. Current Build of IpConfigure Network Video recording Software
- h. 17" Monitor
- i. Mouse
- j. Keyboard
- k. All items rack mounted

2.3 IP VIDEO SWITCH

A. CISCO NETWORK SWITCH (IP Video)

1. Based on the Construction Documents, the CISCO Switch is to be procured by the General Contractor from the Direct Vendor.

2.4 VIDEO ENCODER

A. Direct Vendor shall provide video encoders

B. The video encoder blade shall be equipped with six (6) analog video inputs and shall be able to provide simultaneous Motion JPEG and MPEG-4 video streams. Furthermore the blade shall, for each video channel, support resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels in full frame rate (25/30fps). The Encoder Shall meet or Exceed the following requirements:

1. Be equipped with 6 analog composite video inputs with PAL/NTSC auto sensing
2. Provide resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels at 25/30 frames per second for each video channel
3. Support simultaneous Motion JPEG, MPEG-4 and H264 individually configurable for each video channel
4. Support both unicast and multicast MPEG-4, individually configurable for each video channel
5. Provide the ability to control PTZ devices from third party manufacturer
6. Support both IPv4 and IPv6
7. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
8. Be equipped with 4 alarm inputs and 4 alarm outputs
9. Include embedded event functionality, which may be triggered by alarm input, video loss or by video motion detection
10. Be supported by an open and published API
11. Be equipped with a 1000BaseT Gigabit Ethernet interface

C. The desktop Video Encoder shall be equipped with one analog video input and one channel of audio, provide simultaneous Motion JPEG and MPEG-4 video streams and shall support resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels in full frame rate (25/30fps). The Encoder Shall meet or Exceed the following requirements:

1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
2. Be equipped with 1 analog video input, supporting composite and Y/C signals
3. Provide resolutions up to 704x576 (PAL) / 704x480 (NTSC) pixels at 25/30 frames per second
4. Support simultaneous Motion JPEG, MPEG-4 and H264
5. Support both unicast and multicast MPEG-4
6. Provide full duplex audio and be equipped with Line In and Line Out
7. Provide the ability to control PTZ devices from third party manufacturer
8. Support both IPv4 and IPv6

9. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
 10. Be equipped with 4 alarm inputs and 4 alarm outputs
 11. Include embedded event functionality, which may be triggered by alarm input, video loss or by video motion or audio detection
 12. Be supported by an open and published API
- D. The Video Encoder Blade and Video Encoder Shall be available as Rack Mountable or Desk-top versions.

2.5 VIDEO DECODERS

- A. Video Decoders will support single monitor with full screen camera view or a Quad Decoder with multiple single screen display with a sequence of full screen or Quad cameras.
- B. Camera displays approved only by OIG and IS
 1. Video output- Analog PAL or NTSC or HDMI
 2. Video decoding- motion JPEG and MPEG-4 Unicast and Multicast
 3. Security – Password protected user access HTTPS encryption

2.6 VIDEO CAMERAS

- A. Direct Vendor Shall provide Cameras
- B. IP Color cameras for video surveillance and monitoring of specific areas as shown on the drawings and confirmed with Postal Inspection Service through Contracting Officer Technical Representative with the following minimum capacities
- C. Fixed H.264, indoor, dome type camera shall be a network camera with WDR, light finder, remote focus and zoom and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
 1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a vandal proof resistant casing with smoked transparent cover where required.
 3. Equipped with pixel counter.
 4. Image sensor: Progressive scan RGB CMOS 1/3 inch (effective).
 5. Lens: 6MM; 2.5 – 12MM, 105 degree – 49 degree view, F1.2 DC-IRIS.
 6. Minimum illumination:
 - a. Color: 0.1 LUX, F1.2.
 - b. B/W: 0.2 LUX, F1.2.
 7. Shutter time: 1/29500 to 2 seconds; 60 Hz.
 8. Pan/Tilt/Zoom: Digital PTZ, preset positions, guard tour.
 9. Angle Adjustment: Pan 360 degrees, tilt 170 degrees, rotation 340 degrees.
 10. Resolution: 1280x960 (1 MP) 160x90.
 11. Support simultaneous Motion JPEG, MPEG-4 and H264.
 12. Support both unicast and multicast MPEG-4.
 13. Support Power over Ethernet according to IEEE802.3af.
 14. Support both IPv4 and IPv6.
 15. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 16. Be equipped with 1 alarm input and 1 alarm output.
 17. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 18. Be supported by an open and published API.

19. Casing: Indoor; aluminum inner camera module with encapsulated electronics (1.4 lbs).
 20. Processor and Memory: ARTPEC-3, 256 MB RAM, 128 MB Flash.
 21. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 22. Operating Conditions: Indoor; 32 – 122 degrees F; 10 – 85 percent RH.
 23. Accessories: Indoor; mounting bracket, smoked transparent cover. Provide ceiling or pendant mounting kits.
 24. Basis of Design: Indoor, Axis #P3364.
- D. Standard Resolution camera shall be a network camera, providing simultaneous Motion JPEG, MPEG-4 and H264 video streams, support resolutions up to 640x480 pixels in full frame rate (30fps), be equipped with full duplex audio and incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a tamper resistant casing
 3. Feature a progressive scan sensor
 4. Provide images down to 1 lux at F1.3
 5. Provide resolutions up to 640x480 pixels at 30 frames per second
 6. Support simultaneous Motion JPEG, MPEG-4
 7. Support both unicast and multicast MPEG-4
 8. Support Power over Ethernet according to IEEE802.3af
 9. Support both IPv4 and IPv6
 10. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication
 11. Be equipped with 1 alarm input and 1 alarm output
 12. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection
 13. Be supported by an open and published API
- E. PTZ camera shall be a network dome camera and shall incorporate 29x optical zoom, day/night functionality, and simultaneous Motion JPEG and MPEG-4 video streams. Camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface
 2. Include a vandal proof resistant casing with smoked transparent cover.
 3. Feature a progressive scan CCD sensor with Wide Dynamic Range (WDR), Electronic Image Stabilizer and day/night functionality
 4. Be equipped with 29x optical zoom
 5. Image Sensor: ¼ Progressive scan CCD.
 6. Lens: F1.43, 3.67 – 104 mm angle of view – horizontal – 53.1 to 2.0 degrees.
 7. Minimum Illumination: 0.5 LUX @ 30IRE F1.4.
 8. Shutter Time: 1/30,000s to 1s.
 9. PTZ
 - a. E-Flip, 100 preset positions
 - b. 29x optical zoom and 12x digital zoom, total 348x zoom.
 - c. Pan: 360 degrees, 0.2 – 300 degrees/s.
 - d. Tilt: 180 degrees, 0.2 – 300 degrees/s
 10. Video Compression: H264 (MPEG – 4 part 10/AVC), motion J-PEG and H264.
 11. Resolution: D1 720x480 to 176x120
 12. Frame Rate: H.264 – Up to 30 fps in VGA at max zoom.
 13. Frame Rate Motion: J-PEG – Up to 30 fps at max zoom.
 14. Support simultaneous Motion JPEG, MPEG-4 and H264.
 15. Support both unicast and multicast MPEG-4.
 16. Support Power over Ethernet according to IEEE802.3af.
 17. Support both IPv4 and IPv6.

18. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 19. Be equipped with full memory card for alarm triggers.
 20. Include embedded event functionality, which may be triggered by alarm input, camera temperature or by video motion or audio detection.
 21. Be supported by an open and published API.
 22. Casing:
 - a. Indoor; IK10 impact – resistant aluminum.
 23. Processor and Memory: 256 MB RAM, 128 MB Flash.
 24. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (2) alarm input and (2) alarm output.
 25. Operating Conditions:
 - a. Indoor; 32 – 122 degrees F; 20 – 80 percent RH.
 26. Security: Password protection, IP address filtering, HTTPS encryption, IEEE 8021x network access control.
 27. Power: 24 to 34 VDC max 15W indoor; power over Ethernet IEEE 802.3at.
 28. Accessories:
 - a. Indoor; ceiling or pendant mounting and connector kits. Provide pendant wall or pole attachment.
 29. Basis of Design: Indoor, Axis #P5532.
- F. Registry cage, Network Virtual PTZ camera shall be indoor dome type with remote focus and instant zoom, shall be equipped with full duplex audio and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
 2. Include a vandal proof resistant casing with smoked transparent cover.
 3. Equipped with pixel counter.
 4. Image Sensor -1/2 "Progressive scan C-MOS 3.1 mega-pixel.
 5. Lens – F1.8 fixed iris, 2.7 mm, angle of view – horizontal -44 to 140 degrees, vertical 35 to 105 degrees.
 6. Minimum illumination – 10 lux wide mode, 20 lux tele-mode.
 7. Shutter time 1/1000 s to 1/5 s.
 8. PTZ – 3x zoom, .1 s wide to tele, 20 preset positions, + 70 degrees pan, +52 degrees tilt, max speed 400 degrees /s, Guard tour, designed for continuous movement.
 9. Video Compression, MPEG-4 part 2, (ISO/ IEC 14496-2) motion J-PEG and H264.
 10. Resolutions- 160x 90 to 640x 480.
 11. Frame Rate MPEG-4 – Up to 30 fps in VGA at max zoom.
 12. Frame Rate Motion J-PEG – Up to 30 fps at max zoom.
 13. Video Streaming – Simultaneous M-PEG 4 and motion J-PEG controllable frame rate and band width, VBR/ CBR MPEG-4.
 14. Support both unicast and multicast MPEG-4.
 15. Support Power over Ethernet according to IEEE802.3af.
 16. Support both IPv4 and IPv6.
 17. Be equipped with 1 alarm input and 1 alarm output.
 18. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 19. Be supported by an open and published API.
 20. Casing: Indoor; aluminum inner camera module with encapsulated electronics.
 21. Processor and Memory: ARTPEC-A, 32 MB RAM, 8 MB Flash.
 22. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 23. Security – Password protection, IP address filtering, HTTPS encryption, IEEE 802.1x network access control.
 24. Power – 4.9 to 5.1 VDC max 3.1 W power over Ethernet IEEE 802.3 af class 1

25. Operating Conditions – 5 to 40 degrees C.
 26. Accessories: Indoor; pendant mounting bracket with smoked transparent cover.
 27. Basis of Design: Indoor, Axis #212PTZ.
- G. Fixed (1) Mega pixel, outdoor, non-blue sky dome type camera shall be a network camera with WDR, light finder, remote focus and zoom, shall be equipped with full duplex audio and shall incorporate Power over Ethernet. The camera shall meet or exceed the following requirements:
1. Be equipped with a 10BaseT/100BaseTX Ethernet interface.
 2. Include a vandal proof resistant casing smoked transparent cover.
 3. Equipped with pixel counter.
 4. Image sensor: Progressive scan RGB CMOS 1/3 inch (effective).
 5. Lens: 2.5 – 12MM, 105 degree – 49 degree view, F1.2 P-IRIS.
 6. Day and Night: Automatically removable infrared-cut filter.
 7. Minimum illumination:
 - a. Color: 0.15 LUX, F1.4.
 - b. B/W: 0.03 LUX, F1.4.
 8. Shutter time: 1/29500 to 2 seconds; 60 Hz.
 9. Pan/Tilt/Zoom: Digital PTZ, preset positions, guard tour.
 10. Angle Adjustment: Pan 360 degrees, tilt 170 degrees, rotation 340 degrees.
 11. Resolution: 1280x960 (1 MP) 160x90.
 12. Support simultaneous Motion JPEG, MPEG-4 and H264.
 13. Frame Rate: H264; 30 fps in all resolutions; 60 Hz.
 14. Support both unicast and multicast MPEG-4.
 15. Support Power over Ethernet according to IEEE802.3af.
 16. Support both IPv4 and IPv6.
 17. Provide multiple user passwords, support for HTTPS and SSL/TLS and incorporate IEEE802.1X authentication.
 18. Be equipped with 1 alarm input and 1 alarm output.
 19. Include embedded event functionality, which may be triggered by alarm input or by video motion or audio detection.
 20. Be supported by an open and published API.
 21. Casing: Outdoor; IP66 and NEMA 4X, IK10 impact resistant aluminum with integrated dehumidifying membrane.
 22. Processor and Memory: 256 MB RAM, 128 MB Flash.
 23. Connectors: RJ45 10 BASE – T/100BASE-TX PoE terminal block for (1) alarm input and (1) alarm output.
 24. Operating Conditions: Outdoor; -40 – 131 degrees F; 10 – 100 percent RH.
 25. Accessories: Outdoor; Weather shield, cable shield, 16 ft. network cable with pre-mounted gasket. Provide pendant wall or pole attachment.
 26. Basis of Design: Outdoor, Axis #P3364-VE.
- H. Products shall utilize internal or external surge protection such that a normally occurring power surge shall not void any manufacturer's warranty

2.7 CAMERA POWER SUPPLIES:

- A. Based on the Construction Documents, the Direct Vendor will identify Camera power source. When required the Direct Vendor will provide Power Supplies for Camera
- B. Interior Fixed Cameras: Camera shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft.
 1. Network switch shall be equipped with UPS power supply

- C. Interior PTZ Cameras: Camera shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft. A mid-span device is required.
 - 1. Network switch shall be equipped with UPS power supply
- D. Exterior Fixed Cameras (non "Blue Sky"):
 - 1. Camera and enclosure shall be powered by PoE from network switch. Maximum cable distance from switch to camera is 300 ft. Provide ethernet cable extenders for cable runs exceeding 300 ft., but less than 800 ft.
 - 2. Wall mounted Environmental Enclosure power supplies (where necessary) shall be located in a suitably protected area near the camera. Provide individually fused power supplies.
 - 3. Pole mounted Environmental Enclosure power supplies shall be located within a NEMA 4 enclosure at the pole. Provide individually fused power supplies.
- E. Exterior PTZ Cameras:
 - 1. PTZ Exterior Cameras shall be powered from individually fused power supplies located within a NEMA 4 enclosure at the pole. Other options for powering these cameras are available based on the site design.
- F. Exterior fixed and PTZ cameras exposed to the elements ("Blue Sky" type) shall utilize fiber optic transmission equipment and shall be powered by individually fused power supplies.
- G. Provide a means for disconnecting camera power supplies from main power at the power supply enclosure, either through a detachable power cord, master fuse or circuit breaker located in the power supply cabinet, or other UL approved switching device.
 - 1. Power supplies shall be rated to support 200% of the actual (nominal) power loading.
 - 2. Each power supply shall be fed from a dedicated 120Volt circuit.
 - 3. Adjacent cameras shall be fed from different power supplies.
 - 4. Multiple camera power supplies are available in the correct application.

2.8 VIDEO CAMERA HOUSINGS AND MOUNTS

- A. Direct Vendor shall Provide indoor housings as required for all camera types with the following minimum capabilities:
 - 1. Interior Cameras:
 - a. All cameras shall be in a housing that is coordinated with adjacent finishes with the appropriate mounting hardware. Selection of housings and mounts, including incremental changes to paint colors, dome materials, and cosmetic finishes shall be approved by the USPS or their authorized agent.
 - b. All housings shall be sufficiently dust and moisture resistant to withstand normal environmental conditions in their chosen installation location.
 - c. Hardware shall be provided to ensure tamper-resistant mounting in public access areas after normal business hours without modification to the integrity of the housing.
 - d. Where used, pendant mounts shall be suitable for use as wall, ceiling and column mounts. Pendant mounts shall attach to the appropriate camera housing using Direct Dealer provided standard threaded schedule 40 rigid iron pipes. Pipe lengths of 10 feet or less are to be a minimum of 1-inch diameter. Pipe lengths exceeding 10 feet are to be a minimum of 1-1/2 inch in diameter. Exterior pipe shall be galvanized.
 - e. All mounts shall incorporate installer provided safety chain or cable of sufficient endurance to support 2 times the weight of the equipment
 - f. The General Contractor shall terminate the Ethernet, camera power and fiber optic cabling to the patch panels provided by the Direct Vendor and located in the upright racks.
 - 2. Exterior Cameras:

- a. Environmental: Thermostatically controlled heaters and blowers with defrosting capabilities.
- b. Moisture: Rainproof seals and gaskets.
- c. Wind Resistance: Rated for 80mph sustained winds, minimum.
- d. Ambient Temperature Rating: -10 to 60 degrees Celsius.
- e. Areas with more demanding environmental conditions will be granted a deviation from this specification.

2.9 FIBER OPTIC MEDIA CONVERTER MODULES

- A. Direct Vendor Shall Provide fiber optic media converters
- B. Fiber Optic transmission equipment shall be used when one or more of the following conditions are met:
 - 1. Camera cable runs exceed 800 linear feet.
 - 2. The camera is located outdoors and is exposed to the elements ("Blue Sky" type).
 - 3. Cameras protected by canopies or other architectural elements that shield them from direct view of the overhead sky are excluded from this requirement.
 - 4. The cable path is within 20 feet of a TIME or MIMS aerial.
- C. Modules located at field devices shall be low profile "miniaturized" type, and shall be mounted in the Power Supply/PoE Injector housing for both fixed and PTZ cameras.
 - 1. Fiber optic transmit modules shall derive power from the camera power supply, eliminating the need for an additional power supply. AC power is required for PoE injector and media converter.
- D. Modules located at head-end locations shall be standalone modular units unless four (4) or more modules are required, in which case they shall be enclosed in a fiber-optic rack mount.
 - 1. If more than one fiber optic rack is used, modules shall be distributed as evenly as possible among the racks to reduce the load on the rack power supply and minimize the impact of a failed rack.
- E. Fiber optic modules shall conform to the following minimum specifications:
 - 1. 10/100 Mbps RJ-45 Ethernet port, ST Fiber Port
 - 2. 62.5/125 Multi-mode fiber
 - 3. PoE (PD) device or locally powered
 - 4. Protocol independent
 - 5. -31 to 158 deg operating Temperature
 - 6. IEEE 802.3, IEEE 803.2u and IEEE 803.2af Compliant
- F. Remote Node Cabinet
 - 1. Remote Node Cabinet will house an IP video system network switch, patch panel, UPS and camera power supply.
 - a. The GC shall provide dedicated 110volt power, hang remote node cabinet, terminate fiber optic and CAT-6 cables.
- G. Patch Cables
 - 1. Direct Vendor will provide CAT-6 and fiber optic patch cables for connections, CAT-6, fiber optic patch pushed to devices.

2.10 ETHERNET CABLE EXTENDERS

- A. Direct Vender shall provide Ethernet Cable Extenders as required
- B. Cable Extenders, or fiber optics, shall be used at the discretion of the design engineer or when one or more of the following conditions are met:

1. Camera Cable run exceeds 300 ft. but is not more than 800 ft. It is not practical to use a remote switch and bridge to the head-end switch
- C. Modules located at the field devices shall be located in the camera enclosure or junction box close to the device. Field device module derives power from the head end module and does not require local power.
- D. Modules located at the head-end are standalone modules mounted in the equipment rack

2.11 CABLING

- A. Camera Ethernet Data Cabling:
 1. 4-Pair Category 6 Unshielded Twisted Pair Cable shall be provided and installed by the General Contractor.
 2. The General Contractor shall provide and install the RJ-45 jack as shown on the drawings. The General Contractor shall terminate and test the Cat 6 cable and RJ 45 jacks.
 3. Complies with individual characteristics established in ANSI/TIA/EIA-568-B terminated to T568A and all addendums for Category 6 cable performance specification.
 4. Cabling and wire ways shall be installed in accordance to sections 260533 and 270500
 - a. Power:
- B. Power cable shall be appropriately sized to ensure that any signal loss as a function of cable length does not prohibit the delivery of sufficient voltage and current from the power supply to the powered device. A separate power cable may be required by the design engineer as shown on the drawings.
- C. Cable shall have footage markings to identify CCTV system cable lengths.
- D. Fiber Optic - When fiber optic modules are required, the General Contractor shall provide fiber optic cable appropriate for the application. Cable shall conform to the following specifications:
 1. 62.5 micron glass multimode fiber.
 2. "ST" type connectors shall be used on all cable terminations, including junction boxes and break-out trays.
 3. Performance characteristics (including optical attenuation) shall be such that the Fiber Optic modules specified in Section 2.9 function to deliver signals end-to-end with sufficient bandwidth and quality to meet the specified application.
 4. Physical characteristics such that the cable has sufficient strength and endurance to withstand installation and environmental conditions without adversely affecting optical performance.

Cable Type	Signal	Use
Fiber Optic (Multi-Mode) General Cable CG0021ANU.BK or Approved Equal	Data	See Section 2.9
CAT6 Plenum with footage markings (General Cable 7131769 or Approved Equal)	Camera Data	Camera Data (see Section 2.8)

2.12 ACCESSORIES

- A. Lightning/Surge Protection: Products shall utilize internal or external (power and low voltage) surge protection such that a normally occurring power surge shall not void any manufacturer's warranty.

- B. All Servers and workstations shall utilize a standalone UPS sized for a minimum of 20 minutes of battery run-time. The UPS shall be provided by the Direct Vendor. GC contractor will provide dedicated 120VAC or 220 VAC power determined by the Direct Vendor based on the construction documents
- C. Upright Racks: The Direct Vender shall provide and install upright equipment racks to provide sufficient mounting space for the required equipment.
 - 1. Racks shall be all metal construction conforming to EIA standards with 19 inch equipment mounting opening and 1-3/4 inch vertical spacing of equipment. Rack rails shall be punched with captive nuts, 10-32 screws and nylon washers.
- D. The General Contractor shall terminate the Ethernet, camera power and Fiber Optic cabling to the patch panels provided by the Direct Vender and located in the Upright Racks.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive Work.
 - 1. Verify that power and video outlets are in correct locations.
 - 2. Verify that building structure for attachment of equipment mounting devices is in place.
- C. Report in writing to Contracting Officer any prevailing conditions that will adversely affect satisfactory execution of Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the Postal Service.
- E. Provide required power outlets, low voltage power supplies, interconnecting cables, hardware and equipment for a complete and operable system.
- F. Camera locations are to be reviewed and approved by a Postal Inspector, through the Contracting Officer, prior to installation.

3.2 INSTALLATION

- A. Install all equipment in accordance with Direct Vendor's published instructions. Installation must be done by the Direct Vendor to assure proper installation and accountability. This includes, but is not limited to the following:
 - 1. All hardware used to secure equipment to racking shall include nylon or other non-metallic washer or grommet between the screw head and equipment panel to prevent any damage to the equipment.
 - a. Rack mount screws shall be self-centering Philips-head configuration unless specialized tam-per-resistant hardware has been specified.
 - b. Screws shall be tightened in such a manner as to allow their removal with common hand tools.
 - 2. Any equipment placed on shelving mounted on an incline of greater than 2 degrees shall be secured to the rack or shelving in such a manner as to prevent movement of the equipment in the direction of the incline. Such fastening shall be done in a manner as to preserve the integrity of the equipment case and chassis, and shall in no way jeopardize warranty coverage of the device.

3. All equipment cabling shall be dressed in such a manner as to ensure a neat and clean appearance.
4. Cable break-outs shall be at 90-degree angles from the harness or chase, and all chases shall be parallel to or at 90-degree angles from the rack frame.
5. Cables are to be secured to the rack frames at sufficient intervals to ensure that the weight of the cable will not contribute to fatigue or early failure of that cable or the device and connector to which it is attached.
6. Sufficient excess cable shall be provided in "service loop locations" to ensure that the cable may be re-connected without requiring the addition of extension pieces.
7. All permanent cabling shall be mechanically numbered in a manner consistent with Direct Vendors written system documentation.
8. Wiring for all equipment shall be tie-wrapped (except as indicated below) so that all connectors in a bundle can be removed and re-installed without the possibility of cross connecting.
9. CAT-6 and Fiber Optic cables shall utilize Velcro fasteners in place of tie wraps to eliminate the risk of over-tightening cable bundles and affecting the strength or rated performance of the cable.
10. Where wiring is routed through sheet metal or over frame members, the metal edges shall be covered with flexible grommeting or edge dressing (such as automobile door edge trim).
11. Double-sided foam tape shall not be used to secure any equipment, terminal blocks, or accessory devices. All device mounting shall be of a permanent nature.
12. All excess length AC cords are to be tie-wrapped out of the way. Where possible, they shall be routed in a separate bundle a minimum of 6 inches away from any signal or control cable.
13. Exposed wires run to wall mounted cameras shall be fed through tubing or the body of the mount to present a professional appearance.
 - a. Any accessible cables that can be reached by an individual standing on the floor, a stool, or a small stepladder shall be encased in protective tubing or armored sheathing to prevent tampering or cutting with common hand tools.
14. Care shall be exercised at all times to protect Postal Service property. For example, ladders shall not be placed against wallpapered or finished surfaces, equipment or furnishings; desks or countertops shall not be used in lieu of ladders.
15. On pendant mounted cameras, label each camera on all four sides with three-inch numbers supplied by the Direct Vendor. Numbers shall be stenciled or laminated vinyl in a contrasting color to the camera housing. Camera number shall match and correspond to the Last Octet of camera IP Address and/or printed map provided by the Direct Vendor. Numbers shall not be placed on lower dome or any area that would obstruct camera viewing.
16. Ensure that pendant mounted cameras are hung from stable, vibration free mounting platforms, using guy-wires or other support mechanisms to ensure stability where required. Mount cameras below any suspended lighting to avoid glare or reflection on camera dome and/or lens.
17. Perform complete programming of the system, in coordination with the Contracting Officer and Postal Inspector, or designated representative. Programming shall include, but not be limited to, elimination of duplicate or redundant titling information, synchronization of system clocks, camera sequences, dome presets, salvos and tours. Programming of any system passwords or limiting of accessibility prior to commissioning and training is prohibited.
18. Provide the Direct Vendor Red Line drawings with job condition changes required to provide accurate close-out documentation

B. Power requirements shall be determined by actual equipment used.

C. Ensure that:

1. All applicable statutes, ordinances, regulations, license requirements and codes are fully complied with.
2. All required permits are obtained.
3. All required inspections are conducted.
4. All necessary certificates are issued, obtained, and delivered to the Postal Service.

5. All equipment installations and mounting are in strict accordance with requirements for applicable seismic classification.
 - D. Arrange all components to be mounted in the console(s)/rack(s) in accordance with Direct Vendor and/or Postal Service provided System Elevation drawings. Design shall provide a neat appearance and accessibility for servicing equipment.
 - E. Provide required power outlets, interconnecting cables, hardware and equipment for a complete and operable system.
 1. Power, 120VAC: As required by codes and standards for the facility.
 2. Where conduit is used, a minimum of 40% excess capacity shall be provided for future use.
 - F. Install cameras as shown on the drawings and in accordance with the USPS specifications.
 1. Provide 84-inch minimum headroom below cameras and their mountings. Where necessary modify mounting type to maintain clearance, except as noted on drawings (behind counter) and along slat wall.
 - G. All Cat6 cable connections must be made to 8 pin modular jacks or plugs at the device and to 8 pin modular patch panel at the head end to the T568A standard. Patch panel shall be terminated per direct vendors documentation/drawings by the General Contractor.
 - H. When not installed in cable trays, cable (CAT-6, fiber optic, and low voltage power) shall be supported with wide base cable hangers rated for proper support of CAT-6, fiber optic, and inner-duct cables (compliant with UL and NEC requirements for structured cabling).
 1. Cable hangers shall be installed every 3 to 6 feet and shall be rated to support the weight of the cable multiplied by a factor of three (3).
 2. Cable tray for camera wiring shall not include any low voltage AC wiring.
- 3.3 CONSTRUCTION COORDINATION
1. The Direct Vender shall interface with Other Work.
- 3.4 FIELD QUALITY CONTROL
- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
 - B. Inspection:
 1. The Direct Vender shall inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 2. The Direct Vender shall verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
 - C. Testing:
 1. The Direct Vender shall Perform tests and provide test equipment, tools, and personnel required to conduct system tests and inspections. These tests shall include video quality and PTZ operation (where applicable) for all cameras.
 2. The Direct Vender shall provide an actual demonstration of each system function.
 3. The Direct Vender shall conduct system acceptance test upon completion of installation using pre-approved procedures. Test shall consist of system, subsystem, and device level acceptance tests, including software.
 4. The Direct Vender shall use accepted Checklist for system testing.
 5. The Direct Vender shall ensure that test procedures confirm each specification statement and manufacturer requirement has been met or exceeded. An actual demonstration of each system function and a simulation of each system failure shall be provided.

6. An acceptance test period of thirty days shall begin at the start of the acceptance test. Any system failure during the acceptance test period will suspend the acceptance test. The thirty-day test period will restart when the required repairs have been made and certified.
7. Perform all tests in the presence of the Postal Service COTR. The Postal Service reserves the right to accept any portion or activate any phase prior to acceptance of entire system.

3.5 OPERATING INSTRUCTION

- A. The Direct Vender shall provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance steps that are required to ensure normal operation to the USPS COTR.
- B. The Direct Vender shall provide two complete sets of equipment operating, installation, and programming manuals that will remain in the installed location.

3.6 CLEANING AND ADJUSTING

- A. Adjust manual lens irises to meet lighting conditions.
- B. Adjust field of view for each camera per USPS COTR direction.

USPS CSF Specifications issued: 10/1/2013
Last revised: 9/3/13

END OF SECTION 28 23 05 00

SECTION 28 31 00 00 - CSF FIRE DETECTION AND ALARM

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this Outline Specification Section for Customer Service Facilities only. This Specification defines "level of quality" for Customer Service Facility construction and is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. This specification provides the minimum requirements for the Life Safety System. The system shall include, but not limited to all equipment, materials, labor, documentation and services necessary to furnish and install a complete, operational system to include but not limited to the following functions:
 - 1. Protected premises fire alarm systems.
 - 2. Initiating devices.
 - 3. Notification appliances.
 - 4. Inspection and testing.
 - 5. Auxiliary fire alarm equipment.
- B. Related Sections:
 - 1. [Section 210000 - Fire Suppression.]
 - 2. Section 260500 - Common Work Results for Electrical.
 - 3. [Section 281304 - Physical Access Control System.]

1.2 REFERENCES

- A. All work and materials shall conform to all applicable federal, state and local codes and regulations governing the installation. The equipment and installation shall comply with the current provisions of the following codes and standards.
- B. American National Standards Institute (ANSI):
 - 1. ANSIS3.411, Audible Emergency Evacuation Signals.
 - 2. ANSI/UL 1971, Standard for Safety Signaling devices for Hearing Impaired.
- C. National Fire Protection Association (NFPA):
 - 1. [NFPA 13, Installation of Sprinkler Systems.]

NOTE TO SPECIFIER

Use item #2 if Fire Pump Required

2. [NFPA 20, Installation of Centrifugal Fire Pumps.]
3. NFPA 70, National Electrical Code.
4. NFPA 72, National Fire Alarm Code.
5. NFPA 101, Life Safety Code.

D. Underwriters Laboratories, Inc.(UL):

1. UL864 – Control Units for Fire Protective Signaling Systems.
2. UL 268 - Smoke Detectors for Fire Protective Signaling Systems.
3. UL 268A - Smoke Detectors for Duct Applications.
4. UL 217 - Single and Multiple Station Smoke Alarms.
5. UL 521 - Heat Detectors for Fire Protective Signaling Systems.
6. [UL 228 - Door Closers-Holders, With or Without Integral Smoke Detectors.]
7. UL 464 - Audible Signaling Appliances.
8. UL 38 - Manually Actuated Signaling Boxes for Use with Fire-Protective Signaling Systems.
9. [UL 346 - Waterflow Indicators for Fire Protective Signaling Systems.]
10. [UL 1971 - Signaling Devices for the Hearing-Impaired.]
11. UL 1481 - Power Supplies for Fire Protective Signaling Systems.
12. UL 1635 - Digital Alarm Communicator System Units.

E. Federal Codes and Regulations

1. Americans with Disabilities Act (ADA)

F. International Standards Organization (ISO)

1. ISO-9000
2. ISO-9001

G. Factory Mutual (FM)

1. Provide factory mutual approval.

1.3 Definitions:

- A. Authority Having Jurisdiction: See Public Authorities.
- B. Engineer of Record: A Professional Engineer Registered in the State where the project is located who undertakes final design of the fire protection system.
- C. Owner: Building/facility owner, landlord/lessor, tenant/lessee, Insurance Carrier or any designated representative of these entities.
- D. Public Authorities: Local, State or Federal government body having jurisdiction over any portion of the project. This includes, but is not limited to: building departments, Fire Departments, Fire Marshals Offices, Aviation Authorities, Insurance Regulatory Boards, etc.

1.4 SYSTEM DESCRIPTION

A. General

1. The Contractor shall furnish all labor, services and materials necessary to furnish and install a complete, functional protected premises fire alarm system (System). The System shall comply in

- all respects with the requirements of the specifications, manufacturer's recommendations and Underwriters Laboratories Inc. (ULI) listings.
2. Certification that the entire system has been inspected and tested, is installed entirely in accordance with the applicable codes, standards, manufacturer's recommendations and UL listings, and is in proper working order. Contractor shall use "Fire Alarm System Certification and Description" as required by NFPA 72.
- B. 24VDC NACs
1. Provide and install a new fire detection and alarm system that shall consist of:
 - a. Fire Alarm Control Panel.
 - b. [LCD remote annunciator(s).]
 - c. [Area heat detectors.]
 - d. Duct smoke detectors.
 - e. [Sprinkler system waterflow(s) and valve supervisory switch(s).]
 - f. [Interface ancillary shutdown system(s)].
 - g. Audible notification appliances.
 - h. Synchronized visual notification appliances.
 - i. [Magnetic door holders.]
 - j. [Provide elevator recall functions for primary and alternate floors and elevator power shunt trip activation.]
 - k. Connection to a central station. The Owner shall arrange for two dedicated phone lines to be terminated as directed by the installing contractor.

1.5 Sequence of Operations

A. General 24 VDC NACs

1. The alarm activation of any area smoke detector, heat detector, manual pull station, [sprinkler waterflow], the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the alarm condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented in system history.
 - d. [Any remote or local annunciator LCD/LED's associated with the alarm shall be illuminated.]
 - e. Activate notification audible appliances throughout the building.
 - f. Activate visual strobes notification appliances throughout the building. The visual strobe shall continue to flash until the system has been reset. The visual strobe shall not stop operating when the "Alarm Silence" is pressed.
 - g. Transmit an alarm signal to the central station.
 - h. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.
 - i. [All exit doors shall unlock throughout the building.]
 - j. [All self-closing fire/smoke doors held open shall be released.]

B. Duct Smoke Operation

1. The Alarm activation of any duct smoke detector, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the alarm condition including; device type, device location and time/date.
 - c. All system activity/events shall be recorded in the system history file.
 - d. [Any remote or local annunciator LED's associated with the alarm shall be illuminated.]
 - e. Transmit an alarm signal to the central station.
 - f. Shutdown the local air handling unit.
 - g. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.

**NOTE TO SPECIFIER**

Include paragraph 1.5C below if the facility is equipped with a fire suppression sprinkler system.

C. Supervisory Operation

1. Upon supervisory activation of any sprinkler valve supervisory switch, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the supervisory condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented in the system history file.
 - d. [Any remote or local annunciator LCD/LED's associated with the supervisory activation shall be illuminated.]
 - e. Transmit a supervisory signal to the central station.

D. Trouble Operation

1. Upon activation of a trouble condition or signal from any device on the system, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the trouble condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented on the system printer and system history file.
 - d. Any remote or local annunciator LCD/LED's associated with the trouble zone shall be illuminated.
 - e. Transmit a trouble signal to the central station.

1.6 System Configuration**A. General**

1. All Life Safety System equipment shall be arranged and programmed to provide a system for the early detection of fire, the notification of building occupants, the automatic summoning of the local fire department, the override of the HVAC system operation, and the activation of other auxiliary systems to inhibit the spread of smoke and fire, and to facilitate the safe evacuation of building occupants.
2. The System shall utilize independently addressed, smoke detectors, heat detectors and input/output modules as described elsewhere in this specification.

B. Power Supply

1. The power supply shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 VDC at 4.5A continuous for notification appliance circuits. All outputs shall be power limited. The battery shall be sized to support the system for 60 hours of supervisory and trouble signal current plus general alarm for 5 minutes.
2. [Auxiliary power supplies shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 VDC at 6.4 continuous for notification appliance circuits. The power supply shall be capable of providing 8A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for 60 hours of supervisory and trouble signal current plus general alarm for 5 minutes. All supervision of the auxiliary supply shall be transmitted via addressable analog loop without additional equipment.]

C. Display

1. The display module shall be of membrane style construction with a 4 line by 20 character Liquid Crystal Display. The LCD shall use super-twist technology and backlighting for high contrast visual clarity. In the normal mode display the time, the total number of active events and the total number of disable points. In the alarm mode display the total number of events and the type of event on display. Reserve 40 characters of display space for user custom messages. The module shall have visual indicators for the following common control functions; AC Power, alarm, supervisory, monitor, trouble, disable, ground fault, CPU fail, and test. There shall be common control keys and visual indicators for; reset, alarm silence, trouble silence, drill, and one custom programmable key/indicator. Provide four pairs of display control keys for selection of event display by type (alarm, supervisory, monitor and trouble) and forward / backward scrolling through event listings. The operation of these keys shall be integrated with the related common control indicator that lights when an event of its type is active. Allow the first event of the highest priority to capture the LCD for display so that arriving fire fighters can view the first alarm event "hands free". Provide system function keys; status, reports, enable, disable, activate, restore, program, and test. The module shall have a numeric keypad, zero through nine with delete and enter keys.
- D. Initiating Device Circuits
1. The Initiating device circuits (IDC) used to monitor manual fire alarm stations, smoke and heat detectors, [waterflow switches, valve supervisory switches,] [and fire pump functions] shall be Class B.
- E. 24 VDC Notification Appliance Circuits
1. 24 VDC Notification appliance circuits (NAC) shall be Class B. All notification appliance circuits shall have a minimum circuit output rating of 2 amp @ 24 VDC. The notification circuits shall be power limited. Non-power limited circuits are not acceptable.
- F. Signaling Line Circuits (SLC-Data Circuits)
1. The signaling line circuit shall communicate from a panel/node to analog/addressable detectors, input modules, output modules, isolation modules and notification appliance circuits.
 2. Each signaling circuit connected to addressable/analog devices shall provide a minimum of 20 spare addresses.
 3. [When a signaling line circuit covers more than one fire/smoke compartments, a wire-to-wire short shall not effect the operation of the circuit from the other fire/smoke compartments.]
 4. The signaling line circuit (SLC) connecting all components Class B (style 4).
- G. DACT
1. The panel shall contain a dialer (alarm communicator transmitter (DACT)) module to transmit alarm, supervisory and trouble signals to a Central Monitoring Station (CMS). The DACT shall support dual telephone lines, 20 PPS 4/2 communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and site program using a touch tone phone and password.
- 1.7 SUBMITTALS
- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Product Data:
 - a. Provide electrical characteristics and connection requirements.
 - b. Power and battery calculation.
 2. Shop Drawings: Provide [annunciator layout and] system wiring diagram showing each device and wiring connection required. Prior to commencement of installation, submit licensed Professional Engineer's system drawings (signed and sealed by Delegated Engineer) specified in "Quality Assurance" Article to Designated Reviewers. Include system calculations and equipment data. Submittals shall be complete and in bound sets. System drawings, prepared according to

Contract Documents. Submittals shall be made to Designated reviewers. Designated Reviewers are:

- a. Additional Submittal: Submit shop drawings, product data, and calculations to Public Authorities for approval. Submit proof of approval to Contracting Officer.
- b. Submittals to Contracting Officer:
- c. Submittals to Engineer of Record:
3. Assurance/Control Submittals:
 - a. Design Data: System operation description indicating method of operation and supervision of each component and each type of circuit, and sequence of operations for all manually and automatically initiated system inputs for this specific Project. Manufacturer's standard descriptions for generic systems not permitted.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Pre-test.
 - 2) Acceptance test.
 - c. Certificates: Manufacturer's certificate certifying that components and Products meet or exceed specified requirements.
 - d. Qualification Documentation:
 - 1) Submit documentation of manufacturer and installer experience indicating compliance with specified qualification requirements. Include lists of completed projects with project names and addresses, and names of Engineers and Owners.
 - 2) Fire alarm contractor license issued by State or local authority having jurisdiction.
 - e. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspection.
 - 4) Final inspection.
 - f. All drawings shall be reviewed and signed off by an individual having a minimum of a NICET certification in fire protection engineering technology, subfield of fire alarm systems.
 - g. A copy of the installing technician's NICET certification shall be provided.
 - h. System Calculations: Complete calculations shall be provided which show the electrical load on the following system components:
 - 1) Each system power supply[, including stand alone booster supplies].
 - 2) Each standby power supply (batteries).
 - 3) Each notification appliance circuit.
 - 4) Each auxiliary control circuit that draws power from any system power supply.
- C. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
 1. Operation and Maintenance Data: Project specific operating manuals covering the installed Life Safety System. A generic or typical owner's instruction and operation manual shall not be acceptable to fulfill this requirement. Include user's software data and recommendations for spare parts to be stocked at the site. Provide names, addresses, and telephone numbers of service organizations that stock repair parts for the system.
 2. Project Record Documents: As-Built drawings consisting of: a scaled plan of entire building showing the placement of each individual item of the Life Safety System equipment as well as cable and/or raceway sizes and routings. All drawings must reflect point to point wiring, device address and programmed characteristics. All drawings shall be provided in AutoCad format. A vellum plot of each sheet shall also be provided. Provide the application program listing for the system as installed at the time of acceptance (disk, hard copy printout, and all required passwords).
 3. Record of Completion: Figure 4.5.2.1 NFPA 72.

1.8 QUALITY ASSURANCE

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Manufacturer Qualifications: Firm experienced in manufacturing equipment of the types and capacities indicated that have record of successful in-service performance with minimum 5 years documented experience. Prime system manufacturer and manufacturers of major system components required to qualify separately.
 - 1. Service Center: The System Supplier shall maintain a service organization with adequate spare parts stock within 75 miles of the installation. Any defects that render the system inoperative shall be repaired within 24 hours of the Owner notifying the contractor.
- C. Installer Qualifications: Experience with systems of the type and scope indicated and certified as authorized service representative of the prime system manufacturer with minimum 5 years documented experience.
 - 1. System shall be installed by a single contractor that assumes responsibility for system components and their compatibility.
 - 2. Only manufacturer's certified installers with NICET Level III or higher shall be utilized.

NOTE TO SPECIFIER

Edit standards

- D. Regulatory Requirements:
 - 1. Calculations, Product Data, Shop Drawings: Provide stamp of approval from Public Authorities.
 - 2. Comply with requirements of Public Authorities for submittals, approvals, materials, installation, inspections, and testing.
 - 3. Comply with requirements of Contracting Officer and Owner's insurance underwriter for submittals, approvals, materials, installation, inspections, and testing.
 - 4. Provide certificate of compliance from Public Authorities indicating approval of field acceptance tests.
 - 5. Conform to applicable code for submission of design and calculations, reviewed shop and erection drawings and as required for acquiring permits.
 - 6. Cooperate with regulatory agency or authority and provide data as requested.
 - 7. Provide Smoke detector in room containing Fire Alarm Control Panel per NFPA 72, section 4.4.5.
- E. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of operations, procedures and coordination with related Work.
 - 4. Agenda:
 - a. Tour, inspect, and discuss conditions of building and building structure.
 - b. Review system design and requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review system Drawings and data.
 - e. Review and finalize construction schedule related to system and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.

1.9 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials: Furnish extra materials described below that match products installed, packaged with protective covering for storage and identified with labels clearly describing contents.

1. Fire Alarm Devices: Furnish quantity equal to 5 percent of the number of units of each type installed but not less than 1 of each type.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. All equipment and components shall be the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approval agency for use as part of a protected premises protective signaling (fire alarm) system. The authorized representative of the manufacturer of the major equipment, such as control panels, shall be responsible for the satisfactory installation of the complete system.
- B. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Siemens, (800) 262-7976.
 2. Edwards (EST), (800) 655-4497.
 3. Honeywell/Notifier, (973) 455-2000.
 4. Simplex/Grinnell, (978) 731-2500
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted subject to approval of Contracting Officer.
 1. Conflicts, deviations, or change requests shall be submitted in writing to Contracting Officer with supporting documentation. Include written justification, designs, manufacturer's specifications, cost benefits, and any special circumstances dictated by local conditions. Documentation package shall be submitted in sufficient time to minimize any adverse effects of the proposed changes to the project construction schedule. Contracting Officer reserves the right to reject substitute and other systems.

2.2 PANEL COMPONENTS AND FUNCTIONS

- A. General
 1. The control panel(s) shall be a multi-processor-based system designed specifically for fire and releasing system applications. The control panel shall be listed and approved for the application standard(s) as listed under the General section.
 2. The control panel(s) shall include all required hardware, software and system programming to provide a complete and operational system. The control panel(s) shall assure that life safety takes precedence among all panel activities.
 3. The control panel(s) shall include the following capacities:
 - a. Support up to [250] [380] [500] analog/addressable points per panel (1,900 total with 5 networked panels)
 - b. [Support up to 5 fully supervised network remote annunciators.]
 - c. Support a DACT (dialer) for off premise notification
 - d. Support up to 576 chronological events in history.
 4. The control panel(s) shall include the following features:
 - a. Provide autoprogramming and electronic addressing and mapping of analog/addressable devices.

- b. Provide an operator interface display that shall include functions required for annunciation, command and control system functions.
- c. Provide a discreet system control switch provided for reset, alarm silence, local silence, drill switch, up/down switches, status switch, program switch, enable and disable switches, activate and restore switches, reports switch and test switch.
- d. Provide an authorized operator with the ability to operate or modify system functions like system time, date, passwords; and autoprogram, enable mapping, restart the system and clear control panel event history file.
- 5. Supervision of system components, wiring, initiating devices and software shall be provided by the control panel(s). Failure or fault of system component or wiring shall be indicated by type and location on the LCD display. Software and processor operation shall be independently monitored for failure. Control Panel:

NOTE TO SPECIFIER

Basis of Design for Customer Service Facilities under 20,000 sq. ft. shall be the "EST" io500 Series control panel. Facilities over 20,000 sq. ft. shall utilize the Edwards "EST3 Series panel. Edit sentence 2.2A.6. below accordingly.

- 6. Basis of Design: Edwards [io500] [EST3] Series.

B. Annunciation

- 1. The system shall be designed and equipped to receive, monitor, and annunciate signals from devices and circuits installed throughout the building. Manufacturer's standard control switches shall be acceptable if they provide the required operation, including performance, supervision and position indication. If the manufacturers' standard switches do not comply with these requirements, fabrication of custom manual controls acceptable to the contracting officer is required.
- 2. Receipt of alarm, trouble, and supervisory signals shall activate integral audible devices at the control panel(s) and at each remote annunciator panel.
- 3. The control panel(s) [and remote annunciator(s)] shall contain the following system status indicators:
 - a. 80 character Backlit Liquid Crystal Display.
 - b. System Power Indicator - green LED.
 - c. System Common Alarm - red LED.
 - d. System Common Trouble - yellow LED.
 - e. System Common Supervisory - yellow LED.
 - f. System Common Monitor - yellow LED.
 - g. System Ground Fault - yellow LED.
 - h. System CPU Fault - yellow LED.
 - i. System Disabled - yellow LED.
 - j. System Test Point(s) - yellow LED.
 - k. System Reset Switch with Integral yellow LED.
 - l. System Alarm Silence Switch with Integral yellow LED.
 - m. System Local Silence Switch with Integral yellow LED.
 - n. System Drill Switch with Integral yellow LED
 - o. System Message Queue Scroll Switches.
 - p. Additional buttons as required to provide system control and operator functions.
- 4. Basis of Design: Edwards [io500] [EST3] series.

C. Power Supply

- 1. Each system power supply shall be a minimum of 6 amps @ 24 VDC.
- 2. Upon failure of normal (AC) power, the affected portion(s) of the system shall automatically switch over to secondary power without losing any alarm, trouble or operator acknowledgment signals.
- 3. Each system power supply shall be individually annunciated and shall identify the inoperable power supply in the event of a trouble condition.

4. All standby batteries shall be continuously monitored by the system. Low battery and disconnection of battery power supply conditions shall immediately annunciate as a trouble signal, identifying the deficient batteries.
5. All system power supplies shall be capable of recharging their associated batteries, from a fully discharged condition to a capacity sufficient to allow the system to perform consistent with the requirements of this section, in 48 hours maximum.
6. All AC power connections shall be to the building's designated emergency electrical power circuit and shall meet the requirements of Section 4.4.1.4 of NFPA 72. The AC power circuit shall be installed in conduit raceway. The power circuit disconnect means shall be clearly labeled FIRE ALARM CIRCUIT CONTROL and shall have a red marking. The location of the circuit disconnect shall be labeled permanently inside the each control panel.
7. Basis of Design: Edwards model 2-PPS/6A.

D. Display

1. System Message Processing and Display Operations:
 - a. [The system shall allow message routing to be configured to any or all annunciators.]
 - b. All system printer port(s) shall be configurable to output any combination of alarm, supervisory, trouble, or monitor, event messages.
 - c. [Each LCD display on each annunciator shall be configurable to display the status of any combination of alarm, supervisory, trouble, or monitor, event messages.]
 - d. Clear distinction shall be provided between alarm, supervisory, trouble, and monitor status messages.
2. The system shall provide the ability to retrieve data from the analog/addressable detectors to a PC while the system is on-line and operational in the protected premises. The uploaded data may then be analyzed in a diagnostic program supplied by the system manufacturer.

E. Dialer -- DACT

1. The system shall provide an off premise Digital Alarm Communications Transmitter (DACT) capable of transmitting system alarm, trouble and supervisory events to a central monitoring station (CMS). The DACT shall support dual telephone lines, 20 PPS 4/2 communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and site program the DACT using a touch tone phone and password.
2. Basis of Design: Edwards model DL2

F. Pager Interface

1. The system shall provide a module capable of transmitting alphanumeric system activity, by event, to a commercial paging system using TAP pager protocol. The system module shall be equipped with a high speed (V.32BIS or greater 14.4Kbaud) modem.
2. Basis of Design: Edwards model API-8/232ME

G. Reports

1. The system shall provide the operator the ability to attain system reports that give detailed chronological description of the last 576 system events. The system shall provide a listing of the sensitivity and environmental compensation usage of all of the detectors on the system, or specified analog/addressable circuit.
2. The system report shall include facility name, compiled date, compiler revision, project revision and report date. The system shall output these reports via the main LCD, and reports shall be capable of being printed on a remote printer, (not part of this work).

2.3 FIELD-MOUNTED SYSTEM COMPONENTS

A. Smoke Detectors and Accessories

1. Analog Addressable Smoke General

- a. Each analog addressable smoke detector's sensitivity shall be capable of being programmed individually as: most sensitive, more sensitive, normal, less sensitive or least sensitive.
 - b. An alternate alarm sensitivity level shall be provided for each detector, which can be set to any of the five (5) sensitivity settings manually or automatically using a time of day event.
 - c. The detector's sensing element reference point shall automatically adjust, compensating for background environmental conditions such as dust, temperature, and pressure. Periodically, the sensing element real-time analog value shall be compared against its reference value. The detector shall provide a maintenance alert signal that 80 percent to 99 percent compensation has been used. The detector shall provide a dirty fault signal that 100 percent compensation has been used.
 - d. The system shall allow for changing of detector types for service replacement purposes without the need to reprogram the system. The replacement detector type shall automatically continue to operate with the same programmed sensitivity levels and functions as the detector it replaced. System shall display an off-normal condition until the proper detector type has been installed or change in the application program profile has been made.
2. Smoke Detector - Multi-Sensor Photo Thermal (Ceiling Mounted)
 - a. Provide analog/addressable multisensor combination photoelectric, thermal smoke detectors for all ceiling mounted locations. Alarm condition shall be based upon the combined input from the photoelectric and thermal detection elements. Separately mounted photoelectric detectors and heat detectors in the same location, clustered at the manufacturer's listed spacing is not an acceptable alternative. The system shall have the ability to set the sensitivity and alarm verification of each individual detector on the circuit. It shall be possible to automatically set the sensitivity of individual analog/addressable detectors for the day and night periods.
 - b. Each smoke detector shall be capable of transmitting alarm signals as well as normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm that identifies and sets ambient environmental thresholds approximately six times an hour. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80 percent and 100 percent of the allowable environmental compensation value.
 - c. Basis of Design: Edwards model SIGA-PHS.
 3. Smoke Detector - Photoelectric (Duct Mounted)
 - a. Provide analog/addressable photoelectric smoke detectors at all duct applications. The system shall have the ability to set the sensitivity and alarm verification of each of the individual detectors on the circuit. It shall be possible to automatically change the sensitivity of individual analog/addressable detectors for the day and night periods. Each smoke detector shall be capable of transmitting alarm signals as well as normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm that identifies and sets ambient environmental thresholds approximately six times an hour. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80 percent and 100 percent of the allowable environmental compensation value.
 - b. Provide key operated "normal-reset-test" switch at each duct smoke detector.
 - c. Basis of Design: Edwards model SIGA-PS.
 4. Duct Detector Mounting Plate
 - a. Where smoke detectors are directly inserted into a low velocity ducts 3 ft (0.91m) high x 3 ft (0.91m) wide, ceiling plenums, or raised floors, provide factory supplied mounting plate assemblies to facilitate mounting the detectors. The mounting plate shall be code gauge steel with corrosion resistant red enamel finish. The detector mounting plate shall support an analog/addressable detector along with a standard, relay or isolator detector-mounting base.

- b. Basis of Design: Edwards model SIGA-DMP.
 - 5. Duct Detector Housing
 - a. Provide smoke detector duct housing assemblies to mount an analog/addressable detector along with a standard, relay or isolator detector mounting base. The housing shall also protect the measuring chamber from damage and insects. The housing shall utilize an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet. Drilling templates and gaskets to facilitate locating and mounting the housing shall also be provided. The housing shall be finished in baked red enamel. Remote alarm LED indicators and remote test stations shall be provided.
 - b. Basis of Design: Edwards model SIGA-DH.
- B. Heat Detectors
 - 1. Fixed Temperature Heat Detector (Equipment Rooms)
 - a. Provide analog/addressable fixed temperature heat detectors within all equipment rooms. The heat detector shall have a nominal fixed temperature alarm point rating of 135°F (57°C). The heat detector shall be rated for ceiling installation at a minimum of 70 ft (21.3m) centers and be suitable for wall mount applications.
 - b. Basis of Design: Edwards model SIGA-HFS.
 - 2. Fixed Temperature-ROR Heat Detector (Ceiling Mounted)
 - a. Provide analog/addressable combination fixed temperature / rate-of-rise detectors for all ceiling mounted locations. The heat detector shall have a nominal fixed temperature alarm point rating of 135°F (57°C) and a rate of rise alarm point of 15°F(9°C) per minute. The heat detector shall be rated for ceiling installation at a minimum of 70 ft (21.3m) centers and be suitable for wall mount applications.
 - b. Basis of Design: Edwards model SIGA-HRS.
- C. Detector Bases
 - 1. Detector Base - Standard
 - a. Provide detector mounting base suitable for mounting on single gang, 3½ or 4 inch octagon box or 4 inch square box. The base shall, contain no electronics and support all series detector types.
 - b. Basis of Design: Edwards model SIGA-SB.
 - 2. Detector Base - Relay
 - a. Provide relay detector mounting base suitable for mounting on single gang, 3½ or 4 inch octagon box and 4 inch square box. The relay base shall support all detector types and have the following minimal requirements.
 - b. The relay shall be a bi-stable type and selectable for normally open or normally closed operation.
 - 1) The position of the contact shall be supervised.
 - 2) The relay shall automatically de-energize when a detector is removed.
 - 3) The operation of the relay base shall be controlled by its respective detector processor. Detectors operating standalone mode shall operate the relay upon changing to alarm state. Relay bases not controlled by the detector microprocessor shall not be acceptable.
 - 4) Form "C" Relay contacts shall have a minimum rating of 1 amp @ 30 VDC and be listed for pilot duty.
 - 5) Removal of the respective detector shall not affect communications with other detectors.
 - c. Basis of Design: Edwards model SIGA-RB.
- D. Manual Stations
 - 1. Manual Station - Double Action Single Stage
 - a. Provide analog/addressable double action, single stage fire alarm stations at the locations shown on the drawings. The fire alarm station shall be of polycarbonate construction and incorporate an internal toggle switch. A locked test feature shall be provided. The station shall be finished in red with silver "PULL IN CASE OF FIRE" lettering. The manual station

shall be suitable for mounting on 2 ½ (64mm) deep single gang boxes and 1 ½ (38mm) deep 4 square boxes with single gang covers.

- b. Provide factory manufactured boxes for all surface mounted applications.
- c. Basis of Design: Edwards model SIGA-278.

E. Notification Appliances

1. General

- a. All appliances which are supplied for the requirements of this specification shall be UL Listed for Fire Protective Service, and shall be capable of providing the "equivalent facilitation" which is allowed under the Americans with Disabilities Act Accessibilities Guidelines (ADA(AG)), and shall be UL 1971 Listed.
- b. All appliances shall be of the same manufacturer as the fire alarm control panel specified to insure absolute compatibility between the appliances and the control panels, and to insure that the application of the appliances are done in accordance with the single manufacturer's instructions.
- c. All notification appliances shall be [red][white] unless noted otherwise on the drawings.

2. Heavy Duty Horns (Exterior Locations)

- a. Provide heavy duty electronic horns for exterior locations. Horns shall be selectable for high or low dBA output and steady or temporal output. At the high output setting, the horn shall provide a 85 dBA continuous sound output or a 82 dBA temporal sound output, when measured in reverberation room per UL-464. In and out screw terminals shall be provided for wiring. Weatherproof wall boxes shall be provided for outdoor applications.
- b. Basis of Design: Edwards Integrity series.

3. Low Profile Horns (Interior Locations)

- a. Provide low profile wall mount horns within interior locations. The low profile horn shall not extend more than 1 inch (2.5cm) past the finished wall surface.
- b. When the cover is installed, no mounting hardware shall be visible. In and out screw terminals shall be provided for all wiring. The low profile speaker shall mount in a 4 inch x 2 1/8 inch square electrical box, without trims or extension rings.
- c. Provide factory manufactured boxes for all surface mounted applications.
- d. Basis of Design: Edwards Genesis series.

4. Low Profile Horn-Strobe

- a. Provide low profile wall mount horn/strobes at the locations shown on the drawings. The low profile horn/strobe shall not extend more than 1 inch (2.5cm) past the finished wall surface.
- b. Strobes shall provide synchronized flash output, that shall be switch selectable for output values of 15cd, 30cd, 75cd & 110cd. Wattage and candela settings shall be visible with the cover installed. When the cover is installed, no mounting hardware shall be visible. In and out screw terminals shall be provided for all wiring. The low profile horn/strobes shall mount in a 4 inch x 2 1/8 inch square electrical box, without trims or extension rings.
- c. Provide factory manufactured boxes for all surface mounted applications.
- d. Basis of Design: Edwards Genesis series.

5. Low Profile Strobes

- a. Provide low profile wall mounted strobes at the locations shown on the drawings. In and out screw terminals shall be provided for wiring. Strobes shall provide synchronized flash outputs. Strobe output shall be determined as required by its specific location and application from a family of 15cd, 30cd, 60cd, 75cd, or 110cd devices. Low profile strobes shall mount in a single gang box.
- b. Provide factory manufactured boxes for all surface mounted applications.
- c. Basis of Design: Edwards Genesis series.

2.4 INITIATION AND CONTROL MODULES

A. General

- 1. It shall be possible to address each intelligent module without the use of DIP or rotary switches. Devices using DIP switches for addressing shall not be acceptable. The personality of

multifunction modules shall be programmable at site to suit conditions and may be changed at any time using a personality code downloaded from the Analog Loop Controller. Modules requiring EPROM, PROM, ROM changes or DIP switch and/or jumper changes shall not be acceptable. The modules shall have a minimum of 2 diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment:

- a. Temperature: 32oF to 120oF (0oC to 49oC)
- b. Humidity: 0-93 percent RH, non-condensing.

B. Control Relay Module

1. Provide intelligent control relay modules at the locations shown on the drawings. The Control Relay Module shall provide one form "C" dry relay contact rated at 2 amps @ 24 VDC to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware. The control relay module shall be suitable for mounting on 2 ½ inch (64mm) deep single gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with single gang covers.
2. Basis of Design: Edwards model SIGA-CR.

C. Dual Input Module

1. Provide intelligent dual input modules at the locations shown on the drawings. The Dual Input Module shall provide two (2) supervised Class B input circuits each capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on 2 ½ inch (64mm) deep single gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with single gang covers. The dual input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - d. Normally-Open Active Latching (Supervisory, Tamper Switches)
2. Basis of Design: Edwards model SIGA-CT2.

D. Dual Input Signal Module

1. Provide intelligent dual input signal modules at the locations shown on the drawings. The Dual Input (Dual Riser Select) Signal Module shall provide a means to selectively connect one of two (2) signaling circuit power risers to one (1) supervised output circuit. The module shall be suitable for mounting on 2 ½ inch (64mm) deep 2-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 2-gang covers. The dual input signal module shall support the following operation:
2. Audible/Visible Signal Power Selector (Polarized 24 VDC @ 2A, 25 Vrms @ 50w or 70 Vrms @ 35w of Audio).
3. Basis of Design: Edwards model SIGA-CC2.

E. Isolator Module

1. Provide intelligent fault isolators modules at the locations shown on the drawings. The Isolator Module shall be capable of isolating and removing a fault from a class A data circuit while allowing the remaining data loop to continue operating. The module shall be suitable for mounting on 2 ½ inch (64mm) deep 2-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 2-gang covers.
2. Basis of Design: Edwards model SIGA-IM.

F. Monitor Module

1. Provide intelligent monitor modules at the locations shown on the drawings. The Monitor Module shall be factory set to support one (1) supervised Class B Normally-Open Active Non-Latching Monitor circuit. The monitor module shall be suitable for mounting on 2 ½ inch (64mm) deep 1-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 1-gang covers.

2. Basis of Design: Edwards model SIGA-MM1.
- G. Single Input Module
1. Provide intelligent single input modules at the locations shown on the drawings. The Single Input Module shall provide one (1) supervised Class B input circuit capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on 2 ½ inch (64mm) deep 1-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 1-gang covers. The single input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - d. Normally-Open Active Latching (Supervisory, Tamper Switches)
 2. Basis of Design: Edwards model SIGA-CT1.
- H. Single Input Signal Module
1. Provide intelligent single input signal modules at the locations shown on the drawings. The Single Input (Single Riser Select) Signal Module shall provide one (1) supervised Class B output circuit capable of a minimum of 2 personalities, each with a distinct operation. When selected as a telephone power selector, the module shall be capable of generating its own "ring tone". The module shall be suitable for mounting on 2 ½ inch (64mm) deep 2-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 2-gang covers. The single input signal module shall support the following operations:
 - a. Audible/Visible Signal Power Selector (Polarized 24 VDC @ 2A, 25Vrms @50w or 70 Vrms @ 35 Watts of Audio)
 2. Basis of Design: Edwards model SIGA-CC1.
- I. [Suppression System Releasing Module]
1. Provide addressable suppression system releasing interface modules at the locations shown on the drawings. The interface shall be suitable for preaction and deluge sprinkler systems and clean extinguishing agent release. The interface shall provide supervised Class B circuits required for solenoid activation, manual release, system abort, and audible and visible notification of pending release. The interface shall provide all required release and abort timing functions. The interface shall be listed for use with solenoid releasing valves that has both ULI listing and FM approval. The solenoid release circuit shall be provided with a manual disconnect switch for system maintenance.
 2. Basis of Design: Edwards model SIGA-REL.
- J. [Universal Class AB Module]
1. Provide intelligent class A/B modules at the locations shown on the drawings. The Universal Class A/B Module shall be capable of a minimum of fifteen (15) distinct operations. The module shall be suitable for mounting on 2 ½ inch (64mm) deep 2-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 2-gang covers. The universal class A/B module shall support the following circuit types:
 - a. Two (2) supervised Class B Normally-Open Alarm Latching.
 - b. Two (2) supervised Class B Normally-Open Alarm Delayed Latching.
 - c. Two (2) supervised Class B Normally-Open Active Non-Latching.
 - d. Two (2) supervised Class B Normally-Open Active Latching.
 - e. One (1) form "C" dry relay contact rated at 2 amps @ 24 VDC.
 - f. One (1) supervised Class A Normally-Open Alarm Latching.
 - g. One (1) supervised Class A Normally-Open Alarm Delayed Latching.
 - h. One (1) supervised Class A Normally-Open Active Non-Latching.
 - i. One (1) supervised Class A Normally-Open Active Latching.
 - j. One (1) supervised Class A 2-wire Smoke Alarm Non-Verified.
 - k. One (1) supervised Class B 2-wire Smoke Alarm Non-Verified.
 - l. One (1) supervised Class A 2-wire Smoke Alarm Verified
 - m. One (1) supervised Class B 2-wire Smoke Alarm Verified
 - n. One (1) supervised Class A Signal Circuit, 24VDC @ 2A.

- o. One (1) supervised Class B Signal Circuit, 24VDC @ 2A.
- 2. Basis of Design: Edwards model SIGA-UM.

K. [Waterflow-Tamper Module]

- 1. Provide intelligent waterflow/tamper modules at the locations shown on the drawings. The Waterflow/Tamper Module shall be factory set to support two (2) supervised Class B input circuits. Channel A shall support a Normally-Open Alarm Delayed Latching Waterflow Switch circuit. Channel B shall support a Normally-Open Active Latching Tamper Switch. The waterflow/tamper module shall be suitable for mounting on 2 ½ inch (64mm) deep 1-gang boxes or 1 ½ inch (38mm) deep 4 inch square boxes with 1-gang covers.
- 2. Basis of Design: Edwards Model SIGA-WTM.

2.5 CONDUCTORS

- A. The requirement of this section apply to all system conductors, including all signaling line, initiating device, notification appliance, auxiliary function, remote signaling, AC and DC power and grounding/shield drain circuits, and any other wiring installed by the Contractor pursuant to the requirements of these Specifications.
- B. All circuits shall be rated power limited in accordance with NEC Article 760.
- C. [Installed in conduit or enclosed raceway.]
- D. All new system conductors shall be of the type(s) specified herein.
 - 1. All initiating circuit, signaling line circuit, AC power conductors, shield drain conductors and grounding conductors, shall be solid copper, stranded or bunch tinned (bonded) stranded copper.
 - 2. All signaling line circuits, including all addressable initiating device circuits shall be 18 AWG minimum multi-conductor jacketed twisted cable or twisted shielded or as per manufacturer's requirements.
 - 3. All non-addressable initiating device circuits, 24 VDC auxiliary function circuits shall be 18 AWG minimum or per manufacturer's requirements.
 - 4. All notification appliance circuit conductors shall be solid copper or bunch tinned (bonded) stranded copper. Where stranded conductors are utilized, a maximum of 19 strands shall be permitted for #12/AWG and larger conductors. Minimum size conductor shall be #12 AWG.
 - 5. All visual notification appliance circuits shall be #12 AWG minimum THHN or twisted pairs or twisted shielded pairs or per manufacturer's requirements.
 - 6. Color code fire alarm conductors as follows:

ITEM	COLOR
Initiating Device	Orange/Brown
Horn (Exterior)	Blue and Yellow
Flashing Lights	Blue and Yellow
Control Panel Power	[Black,] White and Green
Air Handler Shutdown	Purple
[Door Holders]	White

- 7. All conductors shall be terminated with crimp type, open end, space lugs using tool approved by lug manufacturer. Terminal cabinets shall be provided with screw type terminal strips and plywood backboards.

2.6 CONDUCTORS [AND RACEWAY]

- A. Except as otherwise required by Code and/or these Specifications, the installation of all system circuits shall conform to the requirements of Article 760 and raceway installation to the applicable sections of NFPA 70, National Electrical Code. Fire alarm circuit wiring shall include all circuits described in Section 760.1 including Fine Print Note No. 1 (FPN No. 1), and as defined by the manufacturer's UL listing.
- B. The entire system shall be installed in a skillful manner in accordance with approved manufacturer's installation manuals, shop drawings and wiring diagrams. The contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation. All wiring shall be of the type required by the NEC and approved by local authorities having jurisdiction for the purpose.
- C. Any shorts, opens, or grounds found on new or existing wiring shall be corrected prior to the connection of these wires to any panel component or field device.
- D. The contractor shall neatly tie-wrap all field-wiring conductors in the gutter spaces of the control panels and secure the wiring away from all circuit boards and control equipment components. All field-wiring circuits shall be neatly and legibly labeled in the control panel. No wiring except home runs from life safety system circuits and system power supply circuits shall be permitted in the control panel enclosures. No wiring splices shall be permitted in a control panel enclosure.
- E. All penetration of floor slabs and firewalls shall be fire stopped in accordance with all local fire codes.

2.7 [OPEN CABLE]

- A. Power-limited cable in accordance with NEC Article 760, where used, not installed in UL listed metal conduit or raceway shall be mechanically protected by building construction features:
- B. Installation shall be in areas not subjected to mechanical injury.
- C. All circuits shall be supported by the building structure. Cable shall be attached by straps to the building structure at intervals not greater than 10 feet. Wiring installed above drop ceilings, cable shall not be laid on ceiling tiles. Cable shall not be fastened in a manner that puts tension on the cable.
- D. Cable type shall be FPLP, FPLR or FPL, or permitted substitutions, selected for the installation application as required by NEC 70, Section 760-61.
- E. All cable that is not enclosed by conduit shall be supported and anchored with nylon straps or clamps. The use of staples is prohibited.]

2.8 [CONDUIT RACEWAY]

- A. All systems and system components listed to UL864 Control Units for Fire Protective Signaling Systems maybe installed within a common conduit raceway system, in accordance with the manufacture's recommendations. System(s) or system components not listed to the UL864 standard shall utilize a separate conduit raceway system for each of the sub-systems.
- B. The requirements of this section apply to all system conduits, raceways, electrical enclosures, junction boxes, pull boxes and device back boxes.
- C. All system conduits shall be of the sizes and types specified.
- D. All system conduits shall be EMT, 3/4 -inch minimum, except for flexible metallic conduit used for whips to devices only, maximum length 6 feet, 3/4-inch diameter, minimum.
- E. All system conduits, which are installed in areas, which may be subject to physical damage or weather, shall be IMC or rigid steel, 3/4 -inch minimum.

- F. Conduits shall be sized according to the conductors contained therein. Cross sectional area percentage fill for system conduits shall not exceed 40 percent.
- G. All fire alarm conduit systems shall be routed and installed to minimize the potential for physical, mechanical or by fire damage, and so as not to interfere with existing building systems, facilities or equipment, and to facilitate service and minimize maintenance.
- H. All conduits, except flexible conduit whips to devices, shall be solidly attached to building structural members, ceiling slabs or permanent walls. Conduits shall not be attached to existing conduit, duct work, cable trays, other ceiling equipment, drop ceiling hangers/grids or partition walls, except where necessary to connect to initiating, notification, or auxiliary function devices.
- I. All system conduits, junction boxes, pull boxes, terminal cabinets, electrical enclosures and device back boxes shall be readily accessible for inspection, testing, service and maintenance.]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 - Common Work Results for Electrical.

3.2 INSTALLATION

- A. General
 - 1. All equipment shall be attached to walls and ceiling/floor assemblies and shall be mounted firmly in place. Detectors shall not be supported solely by suspended ceilings. Fasteners and supports shall be sized to support the required load.
- B. Installation Sequence
 - 1. Installation of the systems shall be conducted in stages and phased such that circuits and equipment are installed in the following order:
 - a. Riser conduits, AC power conduits and control cabinets.
 - b. Control panel(s), control component(s), remote annunciator(s), and printer(s).
 - c. [Conduits and] wiring for complete notification circuits and appliance installation throughout facility.
 - d. Pre-test the audible and visual notification appliance circuits.
 - e. Install all new detection devices.
 - f. Terminate between field devices and the associated control equipment.
 - g. Complete the interface to all suppression and ancillary shutdown systems.
 - h. Complete contractor pre-test of system.
 - i. Complete system testing
- C. Install products in accordance with NFPA Standards and manufacturer's published instructions.
- D. Install manual station with operating handle 48 inches (1.22 m) above floor. Install audible and visual signal devices in accordance with NFPA 72 and ANSI/UL 1971.
- E. Mount end-of-line device at the last easily accessible device or within separate box adjacent to the last device.
- F. [Flush mount outlet box for electric door holder to withstand 80 pounds pulling force.]

- G. Make wiring connections to [door release devices,] [sprinkler flow switches,] [sprinkler valve tamper switches,] [fire suppression system control panels,] and other devices. Conduct all testing, including HVAC Equipment shutdown, initiated by fire alarm devices.
- H. Automatic Detector Installation: Conform to NFPA 72.

3.3 PREPARATION

- A. Coordinate work of this Section with other affected work and construction schedule.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Test in accordance with NFPA 72 and local fire department requirements. Use "Record of Completion" Figure 4.5.2.1 (NFPA 72).
- C. Manufacturer's Field Services: Provide services of NICET certified Level III technician to supervise installation, adjustments, final connections, and system testing. Submit written certification on manufacturers letterhead to Contracting Officer that system has been installed in accordance with applicable codes and is functioning properly. Provide copy of "Certificate of Completion" and place inside plastic envelope at Fire Alarm Control Panel.
- D. Inspection:
 - 1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 - 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- E. Pretesting: Align and adjust system and perform pretesting of components, wiring, and functions to verify conformance with specified requirements. Correct deficiencies by replacing malfunctioning or damaged items with new items. Retest until satisfactory performance and conditions are achieved.
- F. Acceptance Operational Tests:
 - 1. Perform operational system tests to verify conformance with specifications:
 - a. Each alarm initiating device installed shall be operationally tested in the presence of a contracting officer's representative. Each device shall be tested for alarm and trouble conditions. Contractor shall submit a written certification that the Fire Alarm System installation is complete including all punch-list items. Test battery operated emergency power supply. Test emergency power supply to minimum durations specified. Test Remote Station Signal Transmitter. Coordinate testing with the Public Authority and Remote Station monitoring firm/entity. Submit written documentation from Remote Station monitoring firm/entity that Fire Alarm Signal Transmitter is operating properly.
 - b. Test each Signal Appliance installed for proper operation. Submit written report indicating sound levels at specified distances.
 - c. Test Fire Alarm Control Panel [and Remote Annunciator].
 - 2. Provide minimum [10] days notice of acceptance test performance schedule to Contracting Officer, Remote Station monitoring firm/entity, and local fire authorities having jurisdiction.
 - 3. The Contractor shall provide certification that the system is installed entirely in accordance with the system manufacturer's recommendations and within the limitations of the required listings and approvals, that all system hardware and software has been visually inspected and functionally tested by a manufacturer's certified representative, and that the system is in proper working order.

- G. Retesting: Correct deficiencies and retest until total system meets the requirements of Specifications and complies with applicable standards.

3.5 WARRANTY AND MAINTENANCE

- A. Warranty: The contractor shall warranty all materials, installation and workmanship for [12 months][18 months] year from date of acceptance, unless otherwise specified. A copy of the manufacturer's warranty shall be provided with close-out documentation and included with the operation and installation manuals.
- B. Spare Parts
 - 1. The Contractor shall supply the following spare parts:
 - a. Automatic detection devices -Five (5) percent of the installed quantity of each type.
 - b. Manual fire alarm stations - Five (5) percent of the installed quantity of each type.
 - c. Glass rods or panels for break glass manual fire alarm stations (if used) – [Ten] percent of the installed quantity, but no less than [ten (10)] devices.
 - d. Audible and visible devices - Five (5) percent of the installed quantity of each type.
 - e. Keys - A minimum of [four (4)] sets of keys shall be provided and appropriately identified.

3.6 TRAINING

- A. The System Supplier shall schedule and present a minimum of [four (4)] hours of documented formalized instruction for the building owner, detailing the proper operation of the installed System.
- B. The instruction shall be presented in an organized and professional manner by a person factory trained in the operation and maintenance of the equipment and who is also thoroughly familiar with the installation.
- C. The instruction shall cover the schedule of maintenance required by NFPA 72 and any additional maintenance recommended by the system manufacturer.
- D. Instruction shall be made available to the Local Municipal Fire Department if requested by the Public Authority

USPS CSF Specifications issued: 10/1/2013
Last revised: 5/10/2011

END OF SECTION 28 31 00 00

SECTION 28 31 00 00 - MPF FIRE DETECTION AND ALARM

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. This specification provides the minimum requirements for the Life Safety System. The system shall include, but not limited to all equipment, materials, labor, documentation and services necessary to furnish and install a complete, operational system to include but not limited to the following functions:
 - 1. Protected premises fire alarm systems.
 - 2. Initiating devices.
 - 3. Notification appliances.
 - 4. Inspection and testing.
 - 5. Auxiliary fire alarm equipment.
- B. Related Sections:
 - 1. Section 281304 – Physical Access Control System.
 - 2. Section 210000 - Fire Suppression.
 - 3. Section 260500 - Common Work Results for Electrical.
 - 4. Section 260519 - Low-Voltage Electrical Power Conductors and Cables.
 - 5. Section 260533 – Raceway & Boxes for Electrical Systems.
 - 6. Section 260800 – Commissioning of Electrical Systems.

1.2 REFERENCES

- A. All work and materials shall conform to all applicable federal, state and local codes and regulations governing the installation. The equipment and installation shall comply with the current provisions of the following codes and standards.
- B. American National Standards Institute (ANSI):
 - 1. ANSI S3.411, Audible Emergency Evacuation Signals.
 - 2. ANSI/UL 1971, Standard for Safety Signaling devices for Hearing Impaired.
- C. National Fire Protection Association (NFPA):
 - 1. NFPA 13, Installation of Sprinkler Systems.
 - 2. [NFPA 20, Installation of Centrifugal Fire Pumps.]
 - 3. NFPA 70, National Electrical Code.
 - 4. NFPA 72, National Fire Alarm Code.
 - 5. NFPA 101, Life Safety Code.
- D. Underwriters Laboratories, Inc.(UL):
 - 1. UL 864 - Control Units for Fire Protective Signaling Systems.
 - 2. UL 268 - Smoke Detectors for Fire Protective Signaling Systems.
 - 3. UL 268A - Smoke Detectors for Duct Applications.

4. UL 217 - Single and Multiple Station Smoke Alarms.
5. UL 521 - Heat Detectors for Fire Protective Signaling Systems.
6. UL 228 - Door Closers-Holders, With or Without Integral Smoke Detectors.
7. UL 464 - Audible Signaling Appliances.
8. UL 38 - Manually Actuated Signaling Boxes for Use with Fire-Protective Signaling Systems.
9. UL 346 - Waterflow Indicators for Fire Protective Signaling Systems.
10. UL 1971 - Signaling Devices for the Hearing-Impaired.
11. UL 1481 - Power Supplies for Fire Protective Signaling Systems.
12. UL 1635 - Digital Alarm Communicator System Units.

- E. Federal Codes and Regulations
 1. Americans with Disabilities Act (ADA)
- F. International Standards Organization (ISO)
 1. ISO-9000
 2. ISO-9001
- G. Factory Mutual (FM)
 1. Provide factory mutual approval.

1.3 DEFINITIONS:

- A. Authority Having Jurisdiction: See Public Authorities.
- B. Engineer of Record: A Professional Engineer Registered in the State where the project is located who undertakes design of the fire protection system.
- C. Owner: Building/facility owner, landlord/lessor, tenant/lessee, Insurance Carrier or any designated representative of these entities.
- D. Public Authorities: Local, State or Federal government body having jurisdiction over any portion of the project. This includes, but is not limited to: Fire Departments, Fire Marshal Offices, Aviation Authorities, Insurance Regulatory Boards, etc.

1.4 SYSTEM DESCRIPTION

- A. General
 1. The Contractor shall furnish all labor, services and materials necessary to furnish and install a complete, functional protected premises fire alarm system (System). The System shall comply in all respects with the requirements of the specifications, manufacturer's recommendations and Underwriters Laboratories Inc. (ULI) listings.
 2. Certification that the entire system(s) has/have been inspected and tested, is/are installed entirely in accordance with the applicable codes, standards, manufacturer's recommendations and ULI listings, and is/are in proper working order. Contractor shall use "Fire Alarm System Certification and Description" as required by NFPA 72.
- B. 24VDC NACs
 1. Provide and install a new fire detection and alarm system that shall consist of:
 - a. Fire Alarm Control Panel.
 - b. LCD remote annunciator(s).
 - c. A system printer.
 - d. Manual pull stations.
 - e. Area smoke detectors.
 - f. Area heat detectors.
 - g. Duct smoke detectors.

- h. Sprinkler system waterflow(s) and valve supervisory switch(s).
- i. [Interface with suppression, smoke control and ancillary shutdown system(s)].
- j. Audible notification appliances.
- k. Synchronized visual notification appliances.
- l. Magnetic door holders.
- m. [Provide elevator recall functions for primary and alternate floors and elevator power shunt trip activation.]
- n. Connection to a central station. The Owner shall arrange for two dedicated phone lines to be terminated as directed by the installing contractor.

1.5 SEQUENCE OF OPERATIONS

A. General 24 VDC NACs

1. The alarm activation of any area smoke detector, heat detector, manual pull station, sprinkler waterflow, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the alarm condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented in system history and on the system printer.
 - d. Any remote or local annunciator LCD/LED's associated with the alarm shall be illuminated.
 - e. Activate notification audible appliances throughout the building.
 - f. Activate visual strobes notification appliances throughout the building. The visual strobe shall continue to flash until the system has been reset. The visual strobe shall not stop operating when the "Alarm Silence" is pressed.
 - g. Transmit an alarm signal to the central station.
 - h. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.
 - i. All exit doors shall unlock throughout the building.
 - j. All self-closing fire/smoke doors held open shall be released.

B. Duct Smoke Operation

1. The Alarm activation of any duct smoke detector, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the alarm condition including; device type, device location and time/date.
 - c. All system activity/events shall be recorded on the system printer and system history file.
 - d. Any remote or local annunciator LED's associated with the alarm shall be illuminated.
 - e. Transmit an alarm signal to the central station.
 - f. Shutdown the local air handling unit.
 - g. All automatic events programmed to the alarm point shall be executed and the associated outputs activated.

C. Supervisory Operation

1. Upon supervisory activation of any sprinkler valve supervisory switch, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the supervisory condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented on the system printer and system history file.
 - d. Any remote or local annunciator LCD/LED's associated with the supervisory activation shall be illuminated.
 - e. Transmit a supervisory signal to the central station.

D. Trouble Operation

1. Upon activation of a trouble condition or signal from any device on the system, the following functions shall automatically occur:
 - a. The internal audible device shall sound at the control panel and remote annunciator.
 - b. The LCD display shall indicate all applicable information associated with the trouble condition including; device type, device location and time/date.
 - c. All system activity/events shall be documented on the system printer and system history file.
 - d. Any remote or local annunciator LCD/LED's associated with the trouble zone shall be illuminated.
 - e. Transmit a trouble signal to the central station.

1.6 SYSTEM CONFIGURATION

A. General

1. All Life Safety System equipment shall be arranged and programmed to provide a system for the early detection of fire, the notification of building occupants, the automatic summoning of the local fire department, the override of the HVAC system operation, and the activation of other auxiliary systems to inhibit the spread of smoke and fire, and to facilitate the safe evacuation of building occupants.
2. The System shall utilize independently addressed, smoke detectors, heat detectors and input/output modules as described elsewhere in this specification.

B. Power Supply

1. The power supply shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 Vdc at 4.5A continuous for notification appliance circuits. All outputs shall be power limited. The battery shall be sized to support the system for [24] [60] hours of supervisory and trouble signal current plus general alarm for 5 minutes.
2. Auxiliary power supplies shall be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger shall have low battery discharge protection. The power supply shall provide internal power and 24 Vdc at 6.4 continuous for notification appliance circuits. The power supply shall be capable of providing 8A to output circuits for a maximum period of 100 ms. All outputs shall be power limited. The battery shall be sized to support the system for [24] [60] hours of supervisory and trouble signal current plus general alarm for 5 minutes. All supervision of the auxiliary supply shall be transmitted via addressable analog loop without additional equipment.

C. Display

1. The display module shall be of membrane style construction with a 4 line by 20 character Liquid Crystal Display. The LCD shall use super-twist technology and backlighting for high contrast visual clarity. In the normal mode display the time, the total number of active events and the total number of disable points. In the alarm mode display the total number of events and the type of event on display. Reserve 40 characters of display space for user custom messages. The module shall have visual indicators for the following common control functions; AC Power, alarm, supervisory, monitor, trouble, disable, ground fault, CPU fail, and test. There shall be common control keys and visual indicators for; reset, alarm silence, trouble silence, drill, and one custom programmable key/indicator. Provide four pairs of display control keys for selection of event display by type (alarm, supervisory, monitor and trouble) and forward / backward scrolling through event listings. The operation of these keys shall be integrated with the related common control indicator that lights when an event of its type is active. Allow the first event of the highest priority to capture the LCD for display so that arriving fire fighters can view the first alarm event "hands free". Provide system function keys; status, reports, enable, disable, activate, restore, program, and test. The module shall have a numeric keypad, zero through nine with delete and enter keys.

- D. Initiating Device Circuits
 - 1. The Initiating device circuits (IDC) used to monitor manual fire alarm stations, smoke and heat detectors, waterflow switches, valve supervisory switches, fire pump functions, and air pressure supervisory switches shall be Class B.
- E. 24 VDC Notification Appliance Circuits
 - 1. 24 VDC Notification appliance circuits (NAC) shall be Class B. All notification appliance circuits shall have a minimum circuit output rating of 2 amp @ 24 vdc. The notification circuits shall be power limited. Non-power limited circuits are not acceptable.
- F. Audio Notification Appliance Circuits
 - 1. One-way audio notification appliance circuits (NAC) shall be Class B. All notification appliance circuits shall have a minimum circuit output rating of 35W @70Vrms. The notification circuits shall be power limited. Non-power limited circuits are not acceptable.
- G. Signaling Line Circuits (SLC-Data Circuits)
 - 1. The signaling line circuit shall communicate from a panel/node to analog/addressable detectors, input modules, output modules, isolation modules and notification appliance circuits.
 - 2. Each signaling circuit connected to addressable/analog devices shall provide a minimum of 20 spare addresses.
 - 3. [When a signaling line circuit covers more than one fire/smoke compartments, a wire-to-wire short shall not effect the operation of the circuit from the other fire/smoke compartments.]
 - 4. The signaling line circuit (SLC) connecting all components Class B (style 4).
- H. DACT
 - 1. The panel shall contain a dialer (alarm communicator transmitter (DACT)) module to transmit alarm, supervisory and trouble signals to a Central Monitoring Station (CMS). The DACT shall support dual telephones lines, 20 PPS 4/2 communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC power failure reports, auto test call, and site program using a touch tone phone and password

1.7 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data:
 - a. Provide electrical characteristics and connection requirements.
 - b. Power and battery calculation.
 - 2. Shop Drawings: Provide (graphic) annunciator layout and system wiring diagram showing each device and wiring connection required. Prior to commencement of installation, submit licensed Professional Engineer's system drawings (signed and sealed by Delegated Engineer) specified in "Quality Assurance" Article to Designated Reviewers. Include system calculations and equipment data. Submittals shall be complete and in bound sets. System drawings, prepared according to Contract Documents. Submittals shall be made to Designated reviewers. Designated Reviewers are:
 - a. Additional Submittal: Submit shop drawings, product data, and calculations to Public Authorities for approval. Submit proof of approval to Contracting Officer.
 - b. Submittals to Contracting Officer:
 - c. Submittals to Engineer of Record:
 - 3. Assurance/Control Submittals:
 - a. Design Data: System operation description indicating method of operation and supervision of each component and each type of circuit, and sequence of operations for all manually and automatically initiated system inputs for this specific Project. Manufacturer's standard descriptions for generic systems not permitted.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:

- 1) Pre-test.
 - 2) Acceptance test.
 - c. Certificates: Manufacturer's certificate certifying that components and Products meet or exceed specified requirements.
 - d. Qualification Documentation:
 - 1) Submit documentation of manufacturer and installer experience indicating compliance with specified qualification requirements. Include lists of completed projects with project names and addresses, and names of Engineers and Owners.
 - 2) Fire alarm contractor license issued by State or local authority having jurisdiction.
 - e. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspection.
 - 4) Final inspection.
 - f. All drawings shall be reviewed and signed off by an individual having a minimum of a NICET certification in fire protection engineering technology, subfield of fire alarm systems.
 - g. A copy of the installing technician's NICET certification shall be provided.
 - h. System Calculations: Complete calculations shall be provided which show the electrical load on the following system components:
 - 1) Each system power supply, including stand alone booster supplies.
 - 2) Each standby power supply (batteries).
 - 3) Each notification appliance circuit.
 - 4) Each auxiliary control circuit that draws power from any system power supply.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
- 1. Operation and Maintenance Data: Project specific operating manuals covering the installed Life Safety System. A generic or typical owner's instruction and operation manual shall not be acceptable to fulfill this requirement. Include user's software data and recommendations for spare parts to be stocked at the site. Provide names, addresses, and telephone numbers of service organizations that stock repair parts for the system.
 - 2. Project Record Documents: As-Built drawings consisting of: a scaled plan of each building showing the placement of each individual item of the Life Safety System equipment as well as raceway size and routing, junction boxes, and conductor size, quantity, and color in each raceway. All drawings must reflect point to point wiring, device address and programmed characteristics. All drawings shall be provided in AutoCad format. A vellum plot of each sheet shall also be provided. Provide the application program listing for the system as installed at the time of acceptance (disk, hard copy printout, and all required passwords).
 - 3. Record of Completion: Figure 4.5.2.1 NFPA 72.

1.8 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Firm experienced in manufacturing equipment of the types and capacities indicated that have record of successful in-service performance with minimum 10 years documented experience. Prime system manufacturer and manufacturers of major system components required to qualify separately.
 - 1. Service Center: The System Supplier shall maintain a service organization with adequate spare parts stock within 75 miles of the installation. Any defects that render the system inoperative shall be repaired within 24 hours of the Owner notifying the contractor.
- B. Installer Qualifications: Experience with systems of the type and scope indicated and certified as authorized service representative of the prime system manufacturer with minimum 5 years documented experience.

1. System shall be installed by a single contractor that assumes responsibility for system components and their compatibility.
2. Only manufacturer's certified installers with NICET Level III or higher shall be utilized.

C. Regulatory Requirements:

1. Calculations, Product Data, Shop Drawings: Provide stamp of approval from Public Authorities.
2. Comply with requirements of Public Authorities for submittals, approvals, materials, installation, inspections, and testing.
3. Comply with requirements of Contracting Officer and Owner's insurance underwriter for submittals, approvals, materials, installation, inspections, and testing.
4. Provide certificate of compliance from Public Authorities indicating approval of field acceptance tests.
5. Conform to applicable code for submission of design and calculations, reviewed shop and erection drawings and as required for acquiring permits.
6. Cooperate with regulatory agency or authority and provide data as requested.

D. Pre-Installation Meetings:

1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
2. Require attendance of parties directly affecting Work of this Section.
3. Review conditions of operations, procedures and coordination with related Work.
4. Agenda:
 - a. Tour, inspect, and discuss conditions of building and building structure.
 - b. Review system design and requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review system Drawings and data.
 - e. Review and finalize construction schedule related to system and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.

1.9 POSITIVE ALARM SEQUENCE

- A. Positive Alarm Sequence: If permitted by the public authority, the fire alarm system shall be equipped with positive alarm sequence feature (per NFPA 72, 9.6.3.4) that allows initial fire alarm signals to be received at the constantly attended control panel location and for which human action is subsequently required to delay the general alarm by 180 seconds after the start of the alarm processing. The transmission of the alarm signal to the central station shall activate upon the initial alarm signal.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. All equipment and components shall be the manufacturer's current model. The materials, appliances, equipment and devices shall be tested and listed by a nationally recognized approval agency for use as part of a protected premises protective signaling (fire alarm) system. The authorized representative of the manufacturer of the major equipment, such as control panels, shall be responsible for the satisfactory installation of the complete system.
- B. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. UTC Fire and Security/Edward Systems Technologies, Inc. (EST), (800) 655-4497
 2. Siemens, 800-262-7976.
 3. Honeywell/Notifier, 973- 455-2000.
 4. Simplex/Grinnell, 978-731-2500

C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted subject to approval of Contracting Officer.

1. Conflicts, deviations, or change requests shall be submitted in writing to Contracting Officer with supporting documentation. Include written justification, designs, manufacturer's specifications, cost benefits, and any special circumstances dictated by local conditions. Documentation package shall be submitted in sufficient time to minimize any adverse effects of the proposed changes to the project construction schedule. Contracting Officer reserves the right to reject substitute and other systems.

2.2 PANEL COMPONENTS AND FUNCTIONS

A. General

1. The control panel(s) shall be a multi-processor-based system designed specifically for fire and releasing system applications. The control panel shall be listed and approved for the application standard(s) as listed under the General section.
2. The control panel(s) shall include all required hardware, software and system programming to provide a complete and operational system. The control panel(s) shall assure that life safety takes precedence among all panel activities.
3. The control panel(s) shall include the following capacities:
 - a. Support up to 380 analog/addressable points per panel (1,900 total with 5 networked panels)
 - b. Support up to 5 fully supervised network remote annunciators.
 - c. Support a DACT (dialer) for off premise notification
 - d. Support up to 576 chronological events in history.
4. The control panel(s) shall include the following features:
 - a. Provide autoprogramming and electronic addressing and mapping of analog/addressable devices.
 - b. Provide an operator interface display that shall include functions required for annunciation, command and control system functions.
 - c. Provide a discreet system control switch provided for reset, alarm silence, local silence, drill switch, up/down switches, status switch, program switch, enable and disable switches, activate and restore switches, reports switch and test switch.
 - d. Provide system reports that provide sensitivity and history details.
 - e. Provide an authorized operator with the ability to operate or modify system functions like system time, date, passwords; and autoprogram, enable mapping, restart the system and clear control panel event history file.
 - f. Provide an authorized operator to perform test functions within the installed system.
5. Supervision of system components, wiring, initiating devices and software shall be provided by the control panel(s). Failure or fault of system component or wiring shall be indicated by type and location on the LCD display. Software and processor operation shall be independently monitored for failure. Control Panel:
6. Basis of Design: EST, EST2 Series.

B. Annunciation

1. The system shall be designed and equipped to receive, monitor, and annunciate signals from devices and circuits installed throughout the building. Manufacturer's standard control switches shall be acceptable if they provide the required operation, including performance, supervision and position indication. If the manufacturers' standard switches do not comply with these requirements, fabrication of custom manual controls acceptable to the contracting officer is required.
2. Receipt of alarm, trouble, and supervisory signals shall activate integral audible devices at the control panel(s) and at each remote annunciator panel.
3. The control panel(s) and remote annunciator(s) shall contain the following system status indicators:
 - a. 80 character Backlit Liquid Crystal Display.

- b. System Power Indicator - green LED.
 - c. System Common Alarm - red LED.
 - d. System Common Trouble - yellow LED.
 - e. System Common Supervisory - yellow LED.
 - f. System Common Monitor - yellow LED.
 - g. System Ground Fault - yellow LED.
 - h. System CPU Fault - yellow LED.
 - i. System Disabled - yellow LED.
 - j. System Test Point(s) - yellow LED.
 - k. System Reset Switch with Integral yellow LED.
 - l. System Alarm Silence Switch with Integral yellow LED.
 - m. System Local Silence Switch with Integral yellow LED.
 - n. System Drill Switch with Integral yellow LED
 - o. System Message Queue Scroll Switches.
 - p. Additional buttons as required to provide system control and operator functions.
- 4. Basis of Design: EST EST2 series.
- C. Power Supply
 - 1. Each system power supply shall be a minimum of 6 amps @ 24 vdc.
 - 2. Upon failure of normal (AC) power, the affected portion(s) of the system shall automatically switch over to secondary power without losing any alarm, trouble or operator acknowledgment signals.
 - 3. Each system power supply shall be individually annunciated and shall identify the inoperable power supply in the event of a trouble condition.
 - 4. All standby batteries shall be continuously monitored by the system. Low battery and disconnection of battery power supply conditions shall immediately annunciate as a trouble signal, identifying the deficient batteries.
 - 5. All system power supplies shall be capable of recharging their associated batteries, from a fully discharged condition to a capacity sufficient to allow the system to perform consistent with the requirements of this section, in 48 hours maximum.
 - 6. All AC power connections shall be to the building's designated emergency electrical power circuit and shall meet the requirements of Section 4.4.1.4 of NFPA 72. The AC power circuit shall be installed in conduit raceway. The power circuit disconnect means shall be clearly labeled FIRE ALARM CIRCUIT CONTROL and shall have a red marking. The location of the circuit disconnect shall be labeled permanently inside the each control panel.
 - 7. Basis of Design: EST model 2-PPS/6A.
- D. Display
 - 1. System Message Processing and Display Operations:
 - a. The system shall allow message routing to be configured to any or all annunciators.
 - b. All system printer port(s) shall be configurable to output any combination of alarm, supervisory, trouble, or monitor, event messages.
 - c. Each LCD display on each annunciator shall be configurable to display the status of any combination of alarm, supervisory, trouble, or monitor, event messages.
 - d. Clear distinction shall be provided between alarm, supervisory, trouble, and monitor status messages.
 - 2. The system shall provide the ability to retrieve data from the analog/addressable detectors to a PC while the system is on-line and operational in the protected premises. The uploaded data may then be analyzed in a diagnostic program supplied by the system manufacturer.
 - 3. A standby power supply shall automatically supply electrical energy to the system upon primary power supply failure
- E. Dialer -- DACT
 - 1. The system shall provide an off premise Digital Alarm Communications Transmitter (DACT) capable of transmitting system alarm, trouble and supervisory events to a central monitoring station (CMS). The DACT shall support dual telephone lines, 20 PPS 4/2 communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It shall be possible to delay AC

power failure reports, auto test call, and site program the DACT using a touch tone phone and password.

2. Basis of Design: EST model DL2

F. One-Way Emergency Audio Communications

1. A supervised one-way dual-channel emergency communications system shall be provided in the main control panel located within the maintenance operation's office. The main one-way audio controller shall provide a push-to-talk microphone with coiled cord, and switches that allow the emergency user to page to the evacuation channel, page to the alert channel or quickly place evacuation or alert tones on the selected channels. Switches shall also be provided to permit paging on the evacuation or alert channel using the firefighters telephone system as the paging source.
2. Each channel shall have the capability to output a different tone or prerecorded message independent of each other. Each supervised branch audio circuit shall provide a connect/disconnect switch and indicators for active circuit selection and circuit trouble.
3. Basis of Design: One-way emergency audio communications module EST model 2-MIC/2-AAC; pre-recorded digital message unit EST model SIGA-MDM.

G. One-Way Emergency Audio Amplifiers

1. The One-Way amplifiers shall be high-efficiency switch-mode audio amplifiers. Each amplifier must support dual channel audio. The audio output shall be configurable as 25VRMS or 70VRMS in Class B wiring, rated at [30][50] watts. The amplifiers shall support speakers connected directly to the output of the amplifier or the amplifier output shall be capable of being run as an audio riser to switching modules where speaker zone selection is made.
2. Each amplifier shall have a built in back up 1kHz tone generator that automatically activates with loss of input signal. Each amplifier shall have provision for a back up amplifier. It shall be possible to default to back up tone or standby amplifier in the event of the loss of input signals. System remote amplifiers must communicate their status directly to the main control panel. External monitoring is not acceptable. Onboard status LEDs shall be provided for quick visual indication of amplifier status
3. Basis of Design: EST model SIGA-AAxx.

H. System Printer

1. The event and status printer shall be a 9-pin, impact, dot matrix printer with a minimum print speed of 232 characters per second. The printer shall be capable of serial communications protocol. The printer shall list the time, date, type and user defined message for each event printed.
2. Basis of Design: EST model PT-1S.

I. Pager Interface

1. The system shall provide a module capable of transmitting alphanumeric system activity, by event, to a commercial paging system using TAP pager protocol. The system module shall be equipped with a high speed (V.32BIS or greater 14.4Kbaud) modem.
2. Basis of Design: EST model API-8/232ME

J. Reports

1. The system shall provide the operator with system reports that give detailed chronological description of the last 576 system events. The system shall provide a report that gives a listing of the sensitivity and environmental compensation usage of all of the detectors on the system, or specified analog/addressable circuit.
2. The system report shall also include facility name, compiled date, compiler revision, project revision and report date. The system shall output these reports via the main LCD, and reports shall be capable of being printed on the system printer..

2.3 FIELD-MOUNTED SYSTEM COMPONENTS

A. Smoke Detectors and Accessories

1. Analog Addressable Smoke General
 - a. Each analog addressable smoke detector's sensitivity shall be capable of being programmed individually as: most sensitive, more sensitive, normal, less sensitive or least sensitive.
 - b. An alternate alarm sensitivity level shall be provided for each detector, which can be set to any of the five (5) sensitivity settings manually or automatically using a time of day event.
 - c. The detector's sensing element reference point shall automatically adjust, compensating for background environmental conditions such as dust, temperature, and pressure. Periodically, the sensing element real-time analog value shall be compared against its reference value. The detector shall provide a maintenance alert signal that 80% to 99% compensation has been used. The detector shall provide a dirty fault signal that 100% compensation has been used.
 - d. The system shall allow for changing of detector types for service replacement purposes without the need to reprogram the system. The replacement detector type shall automatically continue to operate with the same programmed sensitivity levels and functions as the detector it replaced. System shall display an off-normal condition until the proper detector type has been installed or change in the application program profile has been made.
2. Smoke Detector - Multi-Sensor Photo Thermal (Ceiling Mounted)
 - a. Provide analog/addressable multisensor combination photoelectric, thermal smoke detectors for all ceiling mounted locations. Alarm condition shall be based upon the combined input from the photoelectric and thermal detection elements. Separately mounted photoelectric detectors and heat detectors in the same location, clustered at the manufacturer's listed spacing is not an acceptable alternative. The system shall have the ability to set the sensitivity and alarm verification of each individual detector on the circuit. It shall be possible to automatically set the sensitivity of individual analog/addressable detectors for the day and night periods.
 - b. Each smoke detector shall be capable of transmitting alarm signals as well as normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm that identifies and sets ambient environmental thresholds approximately six times an hour. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80% and 100% of the allowable environmental compensation value.
 - c. Basis of Design: EST model SIGA-PHS.
3. Smoke Detector - Photoelectric (Duct Mounted)
 - a. Provide analog/addressable photoelectric smoke detectors at all duct applications. The system shall have the ability to set the sensitivity and alarm verification of each of the individual detectors on the circuit. It shall be possible to automatically change the sensitivity of individual analog/addressable detectors for the day and night periods. Each smoke detector shall be capable of transmitting alarm signals as well as normal, trouble and need cleaning information. It shall be possible to program control panel activity to each level. Each smoke detector may be individually programmed to operate at any one of five (5) sensitivity settings. Each detector microprocessor shall contain an environmental compensation algorithm that identifies and sets ambient environmental thresholds approximately six times an hour. The microprocessor shall monitor the environmental compensation value and alert the system operator when the detector approaches 80% and 100% of the allowable environmental compensation value.
 - b. Provide key operated "normal-reset-test" switch at each duct smoke detector.
 - c. Basis of Design: EST model SIGA-PS.
4. Duct Detector Mounting Plate
 - a. Where smoke detectors are directly inserted into a low velocity ducts 3 ft (0.91m) high x 3 ft (0.91m) wide, ceiling plenums, or raised floors, provide factory supplied mounting plate

assemblies to facilitate mounting the detectors. The mounting plate shall be code gauge steel with corrosion resistant red enamel finish. The detector mounting plate shall support an analog/addressable detector along with a standard, relay or isolator detector-mounting base.

- b. Basis of Design: EST model SIGA-DMP.
- 5. Duct Detector Housing
 - a. Provide smoke detector duct housing assemblies to mount an analog/addressable detector along with a standard, relay or isolator detector mounting base. The housing shall also protect the measuring chamber from damage and insects. The housing shall utilize an air exhaust tube and an air sampling inlet tube that extends into the duct air stream up to ten feet. Drilling templates and gaskets to facilitate locating and mounting the housing shall also be provided. The housing shall be finished in baked red enamel. Remote alarm LED indicators and remote test stations shall be provided.
 - b. Basis of Design: EST model SIGA-DH.

B. Heat Detectors

- 1. Fixed Temperature Heat Detector (Equipment Rooms)
 - a. Provide analog/addressable fixed temperature heat detectors within all equipment rooms. The heat detector shall have a nominal fixed temperature alarm point rating of 135°F (57°C). The heat detector shall be rated for ceiling installation at a minimum of 70 ft (21.3m) centers and be suitable for wall mount applications.
 - b. Basis of Design: EST model SIGA-HFS.
- 2. Fixed Temperature-ROR Heat Detector (Ceiling Mounted)
 - a. Provide analog/addressable combination fixed temperature / rate-of-rise detectors for all ceiling mounted locations. The heat detector shall have a nominal fixed temperature alarm point rating of 135°F (57°C) and a rate of rise alarm point of 15°F(9°C) per minute. The heat detector shall be rated for ceiling installation at a minimum of 70 ft (21.3m) centers and be suitable for wall mount applications.
 - b. Basis of Design: EST model SIGA-HRS..

C. Detector Bases

- 1. Detector Base - Standard
 - a. Provide detector mounting base suitable for mounting on single gang, 3½ or 4 inch octagon box or 4 inch square box. The base shall, contain no electronics and support all series detector types.
 - b. Basis of Design: EST model SIGA-SB.
- 2. Detector Base - Relay
 - a. Provide relay detector mounting base suitable for mounting on single gang, 3½ or 4 inch octagon box and 4 inch square box. The relay base shall support all detector types and have the following minimal requirements.
 - b. The relay shall be a bi-stable type and selectable for normally open or normally closed operation.
 - 1) The position of the contact shall be supervised.
 - 2) The relay shall automatically de-energize when a detector is removed.
 - 3) The operation of the relay base shall be controlled by its respective detector processor. Detectors operating standalone mode shall operate the relay upon changing to alarm state. Relay bases not controlled by the detector microprocessor shall not be acceptable.
 - 4) Form "C" Relay contacts shall have a minimum rating of 1 amp @ 30 Vdc and be listed for pilot duty.
 - 5) Removal of the respective detector shall not affect communications with other detectors.
 - c. Basis of Design: EST model SIGA-RB

D. Manual Stations

- 1. Manual Station - Double Action Single Stage

- a. Provide analog/addressable double action, single stage fire alarm stations at the locations shown on the drawings. The fire alarm station shall be of polycarbonate construction and incorporate an internal toggle switch. A locked test feature shall be provided. The station shall be finished in red with silver "PULL IN CASE OF FIRE" lettering. The manual station shall be suitable for mounting on 2 ½ (64mm) deep single gang boxes and 1 ½ (38mm) deep 4 square boxes with single gang covers.
 - b. Provide factory manufactured boxes for all surface mounted applications.
 - c. Basis of Design: EST model SIGA-278
- E. Notification Appliances
 - 1. General
 - a. All appliances which are supplied for the requirements of this specification shall be UL Listed for Fire Protective Service, and shall be capable of providing the "equivalent facilitation" which is allowed under the Americans with Disabilities Act Accessibilities Guidelines (ADA(AG)), and shall be UL 1971 Listed.
 - b. All appliances shall be of the same manufacturer as the fire alarm control panel specified to insure absolute compatibility between the appliances and the control panels, and to insure that the application of the appliances are done in accordance with the single manufacturer's instructions.
 - c. All notification appliances shall be [red][white] unless noted otherwise on the drawings.
 - 2. Heavy Duty Horns (Exterior Locations)
 - a. Provide heavy duty electronic horns for exterior locations. Horns shall be selectable for high or low dBA output and steady or temporal output. At the high output setting, the horn shall provide a 85 dBA continuous sound output or a 82 dBA temporal sound output, when measured in reverberation room per UL-464. In and out screw terminals shall be provided for wiring. Weatherproof wall boxes shall be provided for outdoor applications.
 - b. Basis of Design: EST Integrity series.
 - 3. Low Profile Speaker (Interior Locations)
 - a. Provide low profile wall mount speakers within interior locations. The low profile speaker shall not extend more than 1" (2.5cm) past the finished wall surface, and provide a switch selectable audible output of 2W (90dBA), 1W (87dBA), 1/2W (84dBA), or 1/4W (81dBA) at 10 ft. when measured in reverberation room per UL-464.
 - b. Wattage setting shall be visible with the cover installed. When the cover is installed, no mounting hardware shall be visible. In and out screw terminals shall be provided for all wiring. The low profile speaker shall mount in a 4" x 2 1/8" square electrical box, without trims or extension rings.
 - c. Provide factory manufactured boxes for all surface mounted applications.
 - d. Basis of Design: EST Genesis G4 series.
 - 4. Speaker-Ceiling Mount-8in
 - a. Provide 8" ceiling mounted speakers at the locations shown on the drawings. In and out screw terminals shall be provided for wiring. Speaker baffles shall be round <square> steel with white finish as required. Provide square surface mount boxes with matching finish where required. Speakers shall provide 1/2W, 1W, 2W, and 4W power taps for use with 25V or 70V systems. At the 4 watt setting, the speaker shall provide a 94 dBA sound output a frequency of 1000 Hz. when measured in an anechoic chamber at 10 ft.
 - b. Basis of Design: EST Integrity series.
 - 5. Low Profile Speaker-Strobe
 - a. Provide low profile wall mount speaker/strobes at the locations shown on the drawings. The low profile speaker/strobe shall not extend more than 1" (2.5cm) past the finished wall surface, and provide a switch selectable audible output of 2W (90dBA), 1W (87dBA), 1/2W (84dBA), or 1/4W (81dBA) at 10 ft. when measured in reverberation room per UL-464.
 - b. Strobes shall provide synchronized flash output, that shall be switch selectable for output values of 15cd, 30cd, 75cd & 110cd. Wattage and candela settings shall be visible with the cover installed. When the cover is installed, no mounting hardware shall be visible. In and out screw terminals shall be provided for all wiring. The low profile speaker/strobes shall mount in a 4" x 2 1/8" square electrical box, without trims or extension rings.
 - c. Provide factory manufactured boxes for all surface mounted applications.

- d. Basis of Design: EST Genesis G4 series.
- 6. Speaker-Strobe Ceiling Mount-8in
 - a. Provide 8" ceiling mounted speaker/strobes at the locations shown on the drawings. In and out screw terminals shall be provided for wiring. Speaker baffles shall be round or square, steel with white finish as required. Provide square surface mount boxes with matching white finish as required. Speakers shall provide 1/2w, 1w, 2w, and 4W power taps for use with 25V or 70V systems. At the 4 watt setting, the speaker shall provide a 94 dBA sound output a frequency of 1000 Hz. when measured in an anechoic chamber at 10 ft. Strobes shall provide synchronized flash outputs. Strobe output shall be determined as required by its specific location and application from a family of 15cd, 30cd, 75cd, and 110cd devices.
 - b. Basis of Design: EST Integrity series.
- 7. Low Profile Strobes
 - a. Provide low profile wall mounted strobes at the locations shown on the drawings. In and out screw terminals shall be provided for wiring. Strobes shall provide synchronized flash outputs. Strobe output shall be determined as required by its specific location and application from a family of 15cd, 30cd, 60cd, 75cd, or 110cd devices. Low profile strobes shall mount in a single gang box.
 - b. Provide factory manufactured boxes for all surface mounted applications.
 - c. Basis of Design: EST Genesis series.

2.4 INITIATION AND CONTROL MODULES

A. General

- 1. It shall be possible to address each intelligent module without the use of DIP or rotary switches. Devices using DIP switches for addressing shall not be acceptable. The personality of multifunction modules shall be programmable at site to suit conditions and may be changed at any time using a personality code downloaded from the Analog Loop Controller. Modules requiring EPROM, PROM, ROM changes or DIP switch and/or jumper changes shall not be acceptable. The modules shall have a minimum of 2 diagnostic LEDs mounted behind a finished cover plate. A green LED shall flash to confirm communication with the loop controller. A red LED shall flash to display alarm status. The module shall be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input and output circuit wiring shall be supervised for open and ground faults. The module shall be suitable for operation in the following environment:
 - a. Temperature: 32oF to 120oF (0oC to 49oC)
 - b. Humidity: 0-93% RH, non-condensing

B. Control Relay Module

- 1. Provide intelligent control relay modules at the locations shown on the drawings. The Control Relay Module shall provide one form "C" dry relay contact rated at 2 amps @ 24 Vdc to control external appliances or equipment shutdown. The control relay shall be rated for pilot duty and releasing systems. The position of the relay contact shall be confirmed by the system firmware. The control relay module shall be suitable for mounting on 2 ½" (64mm) deep single gang boxes or 1 ½" (38mm) deep 4" square boxes with single gang covers.
- 2. Basis of Design: EST model SIGA-CR.

C. Dual Input Module

- 1. Provide intelligent dual input modules at the locations shown on the drawings.. The Dual Input Module shall provide two (2) supervised Class B input circuits each capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on 2 ½" (64mm) deep single gang boxes or 1 ½" (38mm) deep 4" square boxes with single gang covers. The dual input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)

- d. Normally-Open Active Latching (Supervisory, Tamper Switches)
 2. Basis of Design: EST model SIGA-CT2.
- D. Dual Input Signal Module
 1. Provide intelligent dual input signal modules at the locations shown on the drawings. The Dual Input (Dual Riser Select) Signal Module shall provide a means to selectively connect one of two (2) signaling circuit power risers to one (1) supervised output circuit. The module shall be suitable for mounting on 2 ½" (64mm) deep 2-gang boxes or 1 ½" (38mm) deep 4" square boxes with 2-gang covers. The dual input signal module shall support the following operation:
 2. Audible/Visible Signal Power Selector (Polarized 24 Vdc @ 2A, 25 Vrms @ 50w or 70 Vrms @ 35w of Audio).
 3. Basis of Design: EST model SIGA-CC2.
- E. Isolator Module
 1. Provide intelligent fault isolators modules at the locations shown on the drawings. The Isolator Module shall be capable of isolating and removing a fault from a class A data circuit while allowing the remaining data loop to continue operating. The module shall be suitable for mounting on 2 ½" (64mm) deep 2-gang boxes or 1 ½" (38mm) deep 4" square boxes with 2-gang covers.
 2. Basis of Design: EST model SIGA-IM.
- F. Monitor Module
 1. Provide intelligent monitor modules at the locations shown on the drawings. The Monitor Module shall be factory set to support one (1) supervised Class B Normally-Open Active Non-Latching Monitor circuit. The monitor module shall be suitable for mounting on 2 ½" (64mm) deep 1-gang boxes or 1 ½" (38mm) deep 4" square boxes with 1-gang covers.
 2. Basis of Design: EST model SIGA-MM1.
- G. Single Input Module
 1. Provide intelligent single input modules at the locations shown on the drawings. The Single Input Module shall provide one (1) supervised Class B input circuit capable of a minimum of 4 personalities, each with a distinct operation. The module shall be suitable for mounting on 2 ½" (64mm) deep 1-gang boxes or 1 ½" (38mm) deep 4" square boxes with 1-gang covers. The single input module shall support the following circuit types:
 - a. Normally-Open Alarm Latching (Manual Stations, Heat Detectors, etc.)
 - b. Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - c. Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - d. Normally-Open Active Latching (Supervisory, Tamper Switches)
 2. Basis of Design: EST model SIGA-CT1.
- H. Single Input Signal Module
 1. Provide intelligent single input signal modules at the locations shown on the drawings. The Single Input (Single Riser Select) Signal Module shall provide one (1) supervised Class B output circuit capable of a minimum of 2 personalities, each with a distinct operation. When selected as a telephone power selector, the module shall be capable of generating its own "ring tone". The module shall be suitable for mounting on 2 ½" (64mm) deep 2-gang boxes or 1 ½" (38mm) deep 4" square boxes with 2-gang covers. The single input signal module shall support the following operations:
 - a. Audible/Visible Signal Power Selector (Polarized 24 Vdc @ 2A, 25Vrms @50w or 70 Vrms @ 35 Watts of Audio)
 2. Basis of Design: EST model SIGA-CC1.
- I. Suppression System Releasing Module
 1. Provide addressable suppression system releasing interface modules at the locations shown on the drawings. The interface shall be suitable for preaction and deluge sprinkler systems and clean extinguishing agent release. The interface shall provide supervised Class B circuits required for solenoid activation, manual release, system abort, and audible and visible notification of pending release. The interface shall provide all required release and abort timing functions. The interface shall be listed for use with solenoid releasing valves that has both ULI listing and FM approval.

The solenoid release circuit shall be provided with a manual disconnect switch for system maintenance.

2. Basis of Design: EST model SIGA-REL.

J. Universal Class AB Module

1. Provide intelligent class A/B modules at the locations shown on the drawings. The Universal Class A/B Module shall be capable of a minimum of fifteen (15) distinct operations. The module shall be suitable for mounting on 2 ½" (64mm) deep 2-gang boxes or 1 ½" (38mm) deep 4" square boxes with 2-gang covers. The universal class A/B module shall support the following circuit types:
 - a. Two (2) supervised Class B Normally-Open Alarm Latching.
 - b. Two (2) supervised Class B Normally-Open Alarm Delayed Latching.
 - c. Two (2) supervised Class B Normally-Open Active Non-Latching.
 - d. Two (2) supervised Class B Normally-Open Active Latching.
 - e. One (1) form "C" dry relay contact rated at 2 amps @ 24 Vdc.
 - f. One (1) supervised Class A Normally-Open Alarm Latching.
 - g. One (1) supervised Class A Normally-Open Alarm Delayed Latching.
 - h. One (1) supervised Class A Normally-Open Active Non-Latching.
 - i. One (1) supervised Class A Normally-Open Active Latching.
 - j. One (1) supervised Class A 2-wire Smoke Alarm Non-Verified.
 - k. One (1) supervised Class B 2-wire Smoke Alarm Non-Verified.
 - l. One (1) supervised Class A 2-wire Smoke Alarm Verified
 - m. One (1) supervised Class B 2-wire Smoke Alarm Verified
 - n. One (1) supervised Class A Signal Circuit, 24Vdc @ 2A.
 - o. One (1) supervised Class B Signal Circuit, 24Vdc @ 2A.
2. Basis of Design: EST model SIGA-UM.

K. Waterflow-Tamper Module

1. Provide intelligent waterflow/tamper modules at the locations shown on the drawings. The Waterflow/Tamper Module shall be factory set to support two (2) supervised Class B input circuits. Channel A shall support a Normally-Open Alarm Delayed Latching Waterflow Switch circuit. Channel B shall support a Normally-Open Active Latching Tamper Switch. The waterflow/tamper module shall be suitable for mounting on 2 ½" (64mm) deep 1-gang boxes or 1 ½" (38mm) deep 4" square boxes with 1-gang covers.
2. Basis of Design: EST Model SIGA-WTM.

2.5 CONDUCTORS

- A. The requirement of this section apply to all system conductors, including all signaling line, initiating device, notification appliance, auxiliary function, remote signaling, AC and DC power and grounding/shield drain circuits, and any other wiring installed by the Contractor pursuant to the requirements of these Specifications.
- B. All circuits shall be rated power limited in accordance with NEC Article 760.
- C. [Installed in conduit or enclosed raceway.]
- D. All new system conductors shall be of the type(s) specified herein.
 1. All initiating circuit, signaling line circuit, AC power conductors, shield drain conductors and grounding conductors, shall be solid copper, stranded or bunch tinned (bonded) stranded copper.
 2. All signaling line circuits, including all addressable initiating device circuits shall be 18 AWG minimum multi-conductor jacketed twisted cable or twisted shielded or as per manufacturer's requirements.
 3. All non-addressable initiating device circuits, 24 VDC auxiliary function circuits shall be 18 AWG minimum or per manufacturer's requirements.

4. All notification appliance circuit conductors shall be solid copper or bunch tinned (bonded) stranded copper. Where stranded conductors are utilized, a maximum of 19 strands shall be permitted for #12/AWG and larger conductors. Minimum size conductor shall be #12 AWG.
5. All audible notification appliance circuits shall be 14 AWG minimum twisted pairs or twisted pairs shielded or per manufacturer's requirements.
6. All visual notification appliance circuits shall be #12 AWG minimum THHN or twisted pairs or twisted shielded pairs or per manufacturer's requirements.
7. Color code fire alarm conductors as follows:

<u>ITEM</u>	<u>COLOR</u>
Initiating Device	Orange/Brown
Horn (Exterior)	Blue and Yellow
Flashing Lights	Blue and Yellow
Control Panel Power	[Black,] White and Green
Air Handler Shutdown	Purple
Door Holders	White

8. All conductors shall be terminated with crimp type, open end, space lugs using tool approved by lug manufacturer. Terminal cabinets shall be provided with screw type terminal strips and plywood backboards.

2.6 CONDUCTORS [AND RACEWAY]

- A. Except as otherwise required by Code and/or these Specifications, the installation of all system circuits shall conform to the requirements of Article 760 and raceway installation to the applicable sections of NFPA 70, National Electrical Code. Fire alarm circuit wiring shall include all circuits described in Section 760.1 including Fine Print Note No. 1 (FPN No. 1), and as defined by the manufacturer's UL listing..
- B. The entire system shall be installed in a skillful manner in accordance with approved manufacturer's installation manuals, shop drawings and wiring diagrams. The contractor shall furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation. All wiring shall be of the type required by the NEC and approved by local authorities having jurisdiction for the purpose.
- C. Any shorts, opens, or grounds found on new or existing wiring shall be corrected prior to the connection of these wires to any panel component or field device.
- D. The contractor shall neatly tie-wrap all field-wiring conductors in the gutter spaces of the control panels and secure the wiring away from all circuit boards and control equipment components. All field-wiring circuits shall be neatly and legibly labeled in the control panel. No wiring except home runs from life safety system circuits and system power supply circuits shall be permitted in the control panel enclosures. No wiring splices shall be permitted in a control panel enclosure.
- E. All penetration of floor slabs and firewalls shall be fire stopped in accordance with all local fire codes.

2.7 [OPEN CABLE]

- A. Power-limited cable in accordance with NEC Article 760, where used, not installed in UL listed metal conduit or raceway shall be mechanically protected by building construction features:
- B. Installation shall be in areas not subjected to mechanical injury.
- C. All circuits shall be supported by the building structure. Cable shall be attached by straps to the building structure at intervals not greater than 10 feet. Wiring installed above drop ceilings, cable shall not be laid on ceiling tiles. Cable shall not be fastened in a manner that puts tension on the cable.

- D. Cable type shall be FPLP, FPLR or FPL, or permitted substitutions, selected for the installation application as required by NEC 70, Section 760-61.
- E. All cable that is not enclosed by conduit shall be supported and anchored with nylon straps or clamps. The use of staples is prohibited.]

2.8 [CONDUIT RACEWAY

- A. All systems and system components listed to UL864 Control Units for Fire Protective Signaling Systems maybe installed within a common conduit raceway system, in accordance with the manufacture's recommendations. System(s) or system components not listed to the UL864 standard shall utilize a separate conduit raceway system for each of the sub-systems.
- B. The requirements of this section apply to all system conduits, raceways, electrical enclosures, junction boxes, pull boxes and device back boxes.
- C. All system conduits shall be of the sizes and types specified.
- D. All system conduits shall be EMT, 3/4 -inch minimum, except for flexible metallic conduit used for whips to devices only, maximum length 6 feet, 3/4-inch diameter, minimum.
- E. All system conduits, which are installed in areas, which may be subject to physical damage or weather, shall be IMC or rigid steel, 3/4 -inch minimum.
- F. Conduits shall be sized according to the conductors contained therein. Cross sectional area percentage fill for system conduits shall not exceed 40%.
- G. All fire alarm conduit systems shall be routed and installed to minimize the potential for physical, mechanical or by fire damage, and so as not to interfere with existing building systems, facilities or equipment, and to facilitate service and minimize maintenance.
- H. All conduits, except flexible conduit whips to devices, shall be solidly attached to building structural members, ceiling slabs or permanent walls. Conduits shall not be attached to existing conduit, duct work, cable trays, other ceiling equipment, drop ceiling hangers/grids or partition walls, except where necessary to connect to initiating, notification, or auxiliary function devices.
- I. All system conduits, junction boxes, pull boxes, terminal cabinets, electrical enclosures and device back boxes shall be readily accessible for inspection, testing, service and maintenance.]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Examine areas in which Work of this Section is to be performed.
 - 2. Verify that surfaces and site conditions are ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. General
 - 1. All equipment shall be attached to walls and ceiling/floor assemblies and shall be mounted firmly in place. Detectors shall not be supported solely by suspended ceilings. Fasteners and supports shall be sized to support the required load.
- B. Installation Sequence
 - 1. Installation of the systems shall be conducted in stages and phased such that circuits and equipment are installed in the following order:
 - a. Riser conduits, AC power conduits and control cabinets.
 - b. Control panel(s), control component(s), remote annunciator(s), and printer(s).
 - c. [Conduits and] wiring for complete notification circuits and appliance installation throughout facility.
 - d. Pre-test the audible and visual notification appliance circuits.
 - e. Install all new detection devices.
 - f. Terminate between field devices and the associated control equipment.
 - g. Complete the interface to all suppression and ancillary shutdown systems.
 - h. Complete contractor pre-test of system.
 - i. Complete system testing
- C. Install products in accordance with NFPA standards and manufacturer's published instructions.
- D. Install manual station with operating handle 48 inches (1.22 m) above floor. Install audible and visual signal devices in accordance with NFPA 72 and ANSI/UL 1971.
- E. End-of-line resistor device at the last easily accessible mount device or separate box adjacent to last device.
- F. Flush mount outlet box for electric door holder to withstand 80 pounds pulling force.
- G. Make wiring connections to [door release devices,] [sprinkler flow switches,] [sprinkler valve tamper switches,] [fire suppression system control panels,] and all other devices.

3.3 PREPARATION

- A. Coordinate work of this Section with other affected work and construction schedule.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Test in accordance with NFPA 72 and local fire department requirements. Use "Record of Completion" Figure 4.5.2.1 (NFPA 72).
- C. Manufacturer's Field Services: Provide services of NICET certified Level III technician to supervise installation, adjustments, final connections, and system testing. Submit written certification on manufacturers letterhead to Contracting Officer that system has been installed in accordance with applicable codes and is functioning properly. Provide copy of "Certificate of Completion" and place inside plastic envelope at Fire Alarm Control Panel.
- D. Inspection:

1. Inspect equipment installation, interconnection with system devices, mounting locations, and mounting methods.
 2. Verify that units and controls are properly installed, connected, and labeled and that interconnecting wires and terminals are identified.
- E. Pretesting: Align and adjust system and perform pretesting of components, wiring, and functions to verify conformance with specified requirements. Correct deficiencies by replacing malfunctioning or damaged items with new items. Retest until satisfactory performance and conditions are achieved.
- F. Acceptance Operational Tests:
1. Perform operational system tests to verify conformance with specifications:
 - a. Each alarm initiating device installed shall be operationally tested in the presence of a contracting officer's representative. Each device shall be tested for alarm and trouble conditions. Contractor shall submit a written certification that the Fire Alarm System installation is complete including all punch-list items. Test battery operated emergency power supply. Test emergency power supply to minimum durations specified. Test Remote Station Signal Transmitter. Coordinate testing with the Public Authority and Remote Station monitoring firm/entity. Submit written documentation from Remote Station monitoring firm/entity that Fire Alarm Signal Transmitter is operating properly.
 - b. Test each Signal Appliance installed for proper operation. Submit written report indicating sound levels at specified distances.
 - c. Test Fire Alarm Control Panel(s) and Remote Annunciator(s).
 2. Provide minimum [10] days notice of acceptance test performance schedule to Contracting Officer, Remote Station monitoring firm/entity, and local fire authorities having jurisdiction.
 3. The Contractor shall provide certification that the system is installed entirely in accordance with the system manufacturer's recommendations and within the limitations of the required listings and approvals, that all system hardware and software has been visually inspected and functionally tested by a manufacturer's certified representative, and that the system is in proper working order.
- G. Retesting: Correct deficiencies and retest until total system meets the requirements of Specifications and complies with applicable standards.

3.5 WARRANTY AND MAINTENANCE

- A. Warranty: The contractor shall warranty all materials, installation and workmanship for [12 months][18 months] year from date of acceptance, unless otherwise specified. A copy of the manufacturer's warranty shall be provided with close-out documentation and included with the operation and installation manuals.
- B. Spare Parts
1. The Contractor shall supply the following spare parts:
 - a. Automatic detection devices -Five (5) percent of the installed quantity of each type.
 - b. Manual fire alarm stations - Five (5) percent of the installed quantity of each type.
 - c. Glass rods or panels for break glass manual fire alarm stations (if used) – [Ten] percent of the installed quantity, but no less than [ten (10)] devices.
 - d. Audible and visible devices - Five (5) percent of the installed quantity of each type.
 - e. Keys - A minimum of [four (4)] sets of keys shall be provided and appropriately identified.

3.6 TRAINING

- A. The System Supplier shall schedule and present a minimum of [four (4)] hours of documented formalized instruction for the building owner, detailing the proper operation of the installed System.

- B. The instruction shall be presented in an organized and professional manner by a person factory trained in the operation and maintenance of the equipment and who is also thoroughly familiar with the installation.
- C. The instruction shall cover the schedule of maintenance required by NFPA 72 and any additional maintenance recommended by the system manufacturer.
- D. Instruction shall be made available to the Local Municipal Fire Department if requested by the Public Authority

USPS Mail Processing Facility Specifications issued: 10/1/2013

END OF SECTION 28 31 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 31 23 00 - DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for digital, addressable fire alarm system. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Fire-alarm control unit.
 - b. Manual fire-alarm boxes.
 - c. System smoke detectors.
 - d. Nonsystem smoke detectors.
 - e. Heat detectors.
 - f. Notification appliances.
 - g. Firefighters' two-way telephone communication service.
 - h. Magnetic door holders.
 - i. Remote annunciator.
 - j. Addressable interface device.
 - k. Digital alarm communicator transmitter.
 - l. Radio alarm transmitter.
 - m. System printer.

C. Definitions

1. LED: Light-emitting diode.
2. NICET: National Institute for Certification in Engineering Technologies.

D. System Description

1. Noncoded, UL-certified **OR** FMG-placarded, **as directed**, addressable system, with multiplexed signal transmission, dedicated to fire-alarm service only.
2. Noncoded addressable system, with automatic sensitivity control of certain smoke detectors and multiplexed signal transmission, dedicated to fire-alarm service only.

E. Performance Requirements

1. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
 - a. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified and the unit will be fully operational after the seismic event," **as directed**.

F. Submittals

1. General Submittal Requirements:
 - a. Submittals shall be approved by authorities having jurisdiction prior to submitting them to the Owner.
 - b. Shop Drawings shall be prepared by persons with the following qualifications:
 - 1) Trained and certified by manufacturer in fire-alarm system design.
 - 2) NICET-certified fire-alarm technician, Level III **OR** Level IV, **as directed**, minimum.
 - 3) Licensed or certified by authorities having jurisdiction.
2. Product Data: For each type of product indicated.
3. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.

- a. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
- b. Include voltage drop calculations for notification appliance circuits.
- c. Include battery-size calculations.
- d. Include performance parameters and installation details for each detector, verifying that each detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
- e. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.
- f. Include voice/alarm signaling-service equipment rack or console layout, grounding schematic, amplifier power calculation, and single-line connection diagram.
- g. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits.
4. Delegated-Design Submittal: For smoke and heat detectors indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
 - a. Drawings showing the location of each smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the detector.
 - b. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72.
5. Qualification Data: For qualified Installer.
6. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.
 - a. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
 - b. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
 - c. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
7. Field quality-control reports.
8. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. Deliver copies to authorities having jurisdiction and include the following:
 - a. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - b. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
 - c. Record copy of site-specific software.
 - d. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
 - 1) Frequency of testing of installed components.
 - 2) Frequency of inspection of installed components.
 - 3) Requirements and recommendations related to results of maintenance.
 - 4) Manufacturer's user training manuals.
 - e. Manufacturer's required maintenance related to system warranty requirements.
 - f. Abbreviated operating instructions for mounting at fire-alarm control unit.
 - g. Copy of NFPA 25.
9. Software and Firmware Operational Documentation:
 - a. Software operating and upgrade manuals.
 - b. Program Software Backup: On magnetic media or compact disk, complete with data files.
 - c. Device address list.
 - d. Printout of software application and graphic screens.

G. Quality Assurance

1. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.
2. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm Level II **OR** Level III **OR** Level IV, **as directed**, technician.
3. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.
4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
5. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL.
6. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.
7. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FMG-approved alarm company.
8. NFPA Certification: Obtain certification according to NFPA 72 by agency having jurisdiction.

H. Project Conditions

1. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:
 - a. Notify the Owner no fewer than two days in advance of proposed interruption of fire-alarm service.
 - b. Do not proceed with interruption of fire-alarm service without the Owner written permission.

I. Sequencing And Scheduling

1. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.
2. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

J. Software Service Agreement

1. Comply with UL 864.
2. Technical Support: Beginning with Final Completion, provide software support for two years.
3. Upgrade Service: Update software to latest version at Project completion. Install and program software upgrades that become available within two years from date of Final Completion. Upgrading software shall include operating system. Upgrade shall include new or revised licenses for use of software.
 - a. Provide 30 days' notice to Owner to allow scheduling and access to system and to allow Owner to upgrade computer equipment if necessary.

1.2 PRODUCTS

A. Systems Operational Description

1. Fire-alarm signal initiation shall be by one or more of the following devices and systems, **as directed**:
 - a. Manual stations.
 - b. Heat detectors.
 - c. Flame detectors.
 - d. Smoke detectors.
 - e. Duct smoke detectors.
 - f. Verified automatic alarm operation of smoke detectors.
 - g. Automatic sprinkler system water flow.
 - h. Heat detectors in elevator shaft and pit.

- i. Fire-extinguishing system operation.
- j. Fire standpipe system.
- 2. Fire-alarm signal shall initiate the following actions:
 - a. Continuously operate alarm notification appliances.
 - b. Identify alarm at fire-alarm control unit and remote annunciators, **as directed**.
 - c. Transmit an alarm signal to the remote alarm receiving station.
 - d. Unlock electric door locks in designated egress paths.
 - e. Release fire and smoke doors held open by magnetic door holders.
 - f. Activate voice/alarm communication system.
 - g. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.
 - h. Activate smoke-control system (smoke management) at firefighter smoke-control system panel.
 - i. Activate stairwell and elevator-shaft pressurization systems.
 - j. Close smoke dampers in air ducts of designated air-conditioning duct systems.
 - k. Recall elevators to primary or alternate recall floors.
 - l. Activate emergency lighting control.
 - m. Activate emergency shutoffs for gas and fuel supplies.
 - n. Record events in the system memory.
 - o. Record events by the system printer.
- 3. Supervisory signal initiation shall be by one or more of the following devices and actions:
 - a. Valve supervisory switch.
 - b. Low-air-pressure switch of a dry-pipe sprinkler system.
 - c. Elevator shunt-trip supervision.
- 4. System trouble signal initiation shall be by one or more of the following devices and actions:
 - a. Open circuits, shorts, and grounds in designated circuits.
 - b. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
 - c. Loss of primary power at fire-alarm control unit.
 - d. Ground or a single break in fire-alarm control unit internal circuits.
 - e. Abnormal ac voltage at fire-alarm control unit.
 - f. Break in standby battery circuitry.
 - g. Failure of battery charging.
 - h. Abnormal position of any switch at fire-alarm control unit or annunciator.
 - i. Fire-pump power failure, including a dead-phase or phase-reversal condition.
 - j. Low-air-pressure switch operation on a dry-pipe or preaction sprinkler system.
- 5. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at fire-alarm control unit and remote annunciators, **as directed**. Record the event on system printer.

B. Fire-Alarm Control Unit

- 1. General Requirements for Fire-Alarm Control Unit:
 - a. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864 and listed and labeled by an NRTL.
 - 1) System software and programs shall be held in flash electrically erasable programmable read-only memory (EEPROM), retaining the information through failure of primary and secondary power supplies.
 - 2) Include a real-time clock for time annotation of events on the event recorder and printer.
 - b. Addressable initiation devices that communicate device identity and status.
 - 1) Smoke sensors shall additionally communicate sensitivity setting and allow for adjustment of sensitivity at fire-alarm control unit, **as directed**.
 - 2) Temperature sensors shall additionally test for and communicate the sensitivity range of the device.
 - c. Addressable control circuits for operation of mechanical equipment.

2. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.
 - a. Annunciator and Display: Liquid-crystal type, 1 **OR** 2 **OR** 3, **as directed**, line(s) of 40 **OR** 80, **as directed**, characters, minimum.
 - b. Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters, **as directed**.
3. Circuits:
 - a. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class A.
 - 1) Initiating Device Circuits: Style D **OR** Style E, **as directed**.
 - 2) Notification Appliance Circuits: Style Z.
 - 3) Signaling Line Circuits: Style 2 **OR** Style 5 **OR** Style 6 **OR** Style 7, **as directed**.
 - 4) Install no more than 50 addressable devices on each signaling line circuit.
 - b. Initiating Device, Notification Appliance, and Signaling Line Circuits: NFPA 72, Class B.
 - 1) Initiating Device Circuits: Style A **OR** Style B **OR** Style C, **as directed**.
 - 2) Notification Appliance Circuits: Style W **OR** Style X **OR** Style Y, **as directed**.
 - 3) Signaling Line Circuits: Style 0.5 **OR** Style 1 **OR** Style 3 **OR** Style 3.5 **OR** Style 4 **OR** Style 4.5, **as directed**.
 - 4) Install no more than 50 addressable devices on each signaling line circuit.
 - c. Serial Interfaces: Two RS-232 ports for printers.
4. Stairwell Pressurization: Provide an output signal using an addressable relay to start the stairwell pressurization system. Signal shall remain on until alarm conditions are cleared and fire-alarm system is reset. Signal shall not stop in response to alarm acknowledge or signal silence commands.
 - a. Pressurization starts when any alarm is received at fire-alarm control unit.
 - b. Alarm signals from smoke detectors at pressurization air supplies have a higher priority than other alarm signals that start the system.
5. Smoke-Alarm Verification:
 - a. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.
 - b. Activate an NRTL-listed and -approved "alarm-verification" sequence at fire-alarm control unit and detector.
 - c. Record events by the system printer.
 - d. Sound general alarm if the alarm is verified.
 - e. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.
6. Notification Appliance Circuit: Operation shall sound in a <Insert pattern>.
7. Elevator Recall:
 - a. Smoke detectors at the following locations shall initiate automatic elevator recall. Alarm-initiating devices, except those listed, shall not start elevator recall, **as directed**.
 - 1) Elevator lobby detectors except the lobby detector on the designated floor.
 - 2) Smoke detector in elevator machine room.
 - 3) Smoke detectors in elevator hoistway.
 - b. Elevator lobby detectors located on the designated recall floors shall be programmed to move the cars to the alternate recall floor.
 - c. Water-flow alarm connected to sprinkler in an elevator shaft and elevator machine room shall shut down elevators associated with the location without time delay.
 - 1) Water-flow switch associated with the sprinkler in the elevator pit may have a delay to allow elevators to move to the designated floor.
8. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be **OR** not be, **as directed**, connected to fire-alarm system.
9. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-

- adjustment schedule changes in system memory, and print out the final adjusted values on system printer.
10. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.
 11. Voice/Alarm Signaling Service: Central emergency communication system with redundant microphones, preamplifiers, amplifiers, and tone generators provided in a separate cabinet located in the fire command center **OR** as a special module that is part of fire-alarm control unit, **as directed**.
 - a. Indicated number of alarm channels for automatic, simultaneous transmission of different announcements to different zones or for manual transmission of announcements by use of the central-control microphone. Amplifiers shall comply with UL 1711 and be listed by an NRTL.
 - 1) Allow the application of and evacuation signal to indicated number of zones and, at same time, allow voice paging to the other zones selectively or in any combination.
 - 2) Programmable tone and message sequence selection.
 - 3) Standard digitally recorded messages for "Evacuation" and "All Clear."
 - 4) Generate tones to be sequenced with audio messages of type recommended by NFPA 72 and that are compatible with tone patterns of notification appliance circuits of fire-alarm control unit.
 - b. Status Annunciator: Indicate the status of various voice/alarm speaker zones and the status of firefighters' two-way telephone communication zones.
 - c. Preamplifiers, amplifiers, and tone generators shall automatically transfer to backup units, on primary equipment failure.
 12. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from all other printed indications. Also print system reset event, including same information for device, location, date, and time. Commands initiate the printing of a list of existing alarm, supervisory, and trouble conditions in the system and a historical log of events.
 13. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals **OR** supervisory and digital alarm communicator transmitters **OR** digital alarm radio transmitters, **as directed**, shall be powered by 24-V dc source.
 - a. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.
 14. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
 - a. Batteries: Sealed lead calcium **OR** Sealed, valve-regulated, recombinant lead acid **OR** Vented, wet-cell pocket, plate nickel cadmium, **as directed**.
 15. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

C. Manual Fire-Alarm Boxes

1. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
 - a. Single-action mechanism, breaking-glass or plastic-rod **OR** pull-lever, **as directed**, type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
 - b. Double-action mechanism requiring two actions to initiate an alarm, breaking-glass or plastic-rod **OR** pull-lever, **as directed**, type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.

- c. Station Reset: Key- or wrench-operated switch.
 - d. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
 - e. Weatherproof Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.
- D. System Smoke Detectors
1. General Requirements for System Smoke Detectors:
 - a. Comply with UL 268; operating at 24-V dc, nominal.
 - b. Detectors shall be four **OR** two, **as directed**, -wire type.
 - c. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
 - d. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
 - e. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
 - f. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status, **as directed**.
 - g. Remote Control: Unless otherwise indicated, detectors shall be analog-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by fire-alarm control unit.
 - 1) Rate-of-rise temperature characteristic shall be selectable at fire-alarm control unit for 15 or 20 deg F (8 or 11 deg C) per minute.
 - 2) Fixed-temperature sensing shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg F (57 or 68 deg C).
 - 3) Provide multiple levels of detection sensitivity for each sensor.
 2. Photoelectric Smoke Detectors:
 - a. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 - b. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - 1) Primary status.
 - 2) Device type.
 - 3) Present average value.
 - 4) Present sensitivity selected.
 - 5) Sensor range (normal, dirty, etc.).
 3. Ionization Smoke Detector:
 - a. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 - b. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - 1) Primary status.
 - 2) Device type.
 - 3) Present average value.
 - 4) Present sensitivity selected.
 - 5) Sensor range (normal, dirty, etc.).
 4. Duct Smoke Detectors: Photoelectric type complying with UL 268A.
 - a. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.
 - b. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:
 - 1) Primary status.
 - 2) Device type.
 - 3) Present average value.

- 4) Present sensitivity selected.
- 5) Sensor range (normal, dirty, etc.).
- c. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
- d. Each sensor shall have multiple levels of detection sensitivity.
- e. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
- f. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

E. Nonsystem Smoke Detectors

1. Single-Station Smoke Detectors:

- a. Comply with UL 217; suitable for NFPA 101, residential occupancies; operating at 120-V ac with 9-V dc battery as the secondary power source. Provide with "low" or "missing" battery chirping-sound device, **as directed**.
- b. Auxiliary Relays: One Form C rated at 0.5 A **OR** Form A and one Form C, both rated at 0.5 A, **as directed**.
- c. Audible Notification Appliance: Piezoelectric sounder rated at 90 dBA at 10 feet (3 m) according to UL 464.
- d. Visible Notification Appliance: 177-cd strobe.
- e. Heat sensor, 135 deg F (57 deg C) combination rate-of-rise, **as directed**, and fixed temperature.
- f. Test Switch: Push to test; simulates smoke at rated obscuration.
- g. Tandem Connection: Allow tandem connection of number of indicated detectors; alarm on one detector shall actuate notification on all connected detectors.
- h. Plug-in Arrangement: Detector and associated electronic components shall be mounted in a plug-in module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
- i. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
- j. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status, **as directed**.

2. Single-Station Duct Smoke Detectors:

- a. Comply with UL 268A; operating at 120-V ac.
- b. Sensor: LED or infrared light source with matching silicon-cell receiver.
 - 1) Detector Sensitivity: Smoke obscuration between 2.5 and 3.5 percent/foot (0.008 and 0.011 percent/mm) when tested according to UL 268A.
- c. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. The fixed base shall be designed for mounting directly to air duct. Provide terminals in the fixed base for connection to building wiring.
 - 1) Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
- d. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
- e. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

F. Heat Detectors

- 1. General Requirements for Heat Detectors: Comply with UL 521.
- 2. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F (57 deg C) or a rate of rise that exceeds 15 deg F (8 deg C) per minute unless otherwise indicated.
 - a. Mounting: Adapter plate for outlet box mounting **OR** Twist-lock base interchangeable with smoke-detector bases, **as directed**.
 - b. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

3. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F (88 deg C).
 - a. Mounting: Adapter plate for outlet box mounting **OR** Twist-lock base interchangeable with smoke-detector bases, **as directed**.
 - b. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
 4. Continuous Linear Heat-Detector System:
 - a. Detector Cable: Rated detection temperature 155 deg F (68 deg C). NRTL listed for "regular" service and a standard environment. Cable includes two steel actuator wires twisted together with spring pressure, wrapped with protective tape, and finished with PVC outer sheath. Each actuator wire is insulated with heat-sensitive material that reacts with heat to allow the cable twist pressure to short-circuit wires at the location of elevated temperature.
 - b. Control Unit: Two-zone or multizone unit as indicated. Provide same system power supply, supervision, and alarm features as specified for fire-alarm control unit.
 - c. Signals to Fire-Alarm Control Unit: Any type of local system trouble shall be reported to fire-alarm control unit as a composite "trouble" signal. Alarms on each detection zone shall be individually reported to central fire-alarm control unit as separately identified zones.
 - d. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.
- G. Notification Appliances
1. General Requirements for Notification Appliances: Individually addressed, connected to a signaling line circuit, equipped for mounting as indicated and with screw terminals for system connections.
 2. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.
 - a. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.
 3. Chimes, Low-Level Output: Vibrating type, 75-dBA minimum rated output.
 4. Chimes, High-Level Output: Vibrating type, 81-dBA minimum rated output.
 5. Horns: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet (3 m) from the horn, using the coded signal prescribed in UL 464 test protocol.
 6. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.
 - a. Rated Light Output:
 - 1) 15 **OR** 30 **OR** 75 **OR** 110 **OR** 177, **as directed**, cd.
OR
15/30/75/110 cd, selectable in the field.
 - b. Mounting: Wall mounted unless otherwise indicated.
 - c. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
 - d. Flashing shall be in a temporal pattern, synchronized with other units.
 - e. Strobe Leads: Factory connected to screw terminals.
 - f. Mounting Faceplate: Factory finished, red **OR** white, **as directed**.
 7. Voice/Tone Notification Appliances:
 - a. Appliances shall comply with UL 1480 and shall be listed and labeled by an NRTL.
 - b. High-Range Units: Rated 2 to 15 W.
 - c. Low-Range Units: Rated 1 to 2 W.
 - d. Mounting: Flush **OR** Semirecessed **OR** Surface mounted and bidirectional, **as directed**.

- e. Matching Transformers: Tap range matched to acoustical environment of speaker location.
- H. Firefighters' Two-Way Telephone Communication Service
1. Dedicated, two-way, supervised, telephone voice communication links between fire-alarm control unit, the fire command center, **as directed**, and remote firefighters' telephone stations. Supervised telephone lines shall be connected to talk circuits by controls in a control module. Provide the following:
 - a. Common-talk type for firefighter use only.
 - b. Selective-talk type for use by firefighters and fire wardens.
 - c. Controls to disconnect phones from talk circuits if too many phones are in use simultaneously.
 - d. Audible Pulse and Tone Generator, and High-Intensity Lamp: When a remote telephone is activated, it causes audible signal to sound and high-intensity lamp to flash.
 - e. Selector panel controls shall provide for simultaneous operation of up to six telephones in selected zones. Indicate ground faults and open or shorted telephone lines on the panel front by individual LEDs.
 - f. Display: Graphic **OR** Liquid-crystal digital, **as directed**, to indicate location of caller.
 - g. Remote Telephone Cabinet: Flush- or surface-mounted cabinet as indicated, factory-standard red finish, with handset.
 - 1) Install one-piece handset to cabinet with vandal-resistant armored cord. Silk-screened or engraved label on cabinet door, designating "Fire Warden Phone" **OR** "Fire Emergency Phone", **as directed**.
 - 2) With "break-glass" type door access lock.
 - h. Remote Telephone Jack Stations: Single-gang, stainless-steel-plate mounted plug, engraved "Fire Warden Phone" **OR** "Fire Emergency Phone", **as directed**.
 - i. Handsets: **<Insert number>** push-to-talk-type sets with noise-canceling microphone, **as directed**, stored in a cabinet adjacent to fire-alarm control unit **OR** in the fire command center, **as directed**.
- I. Magnetic Door Holders
1. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.
 - a. Electromagnet: Requires no more than 3 W to develop 25-lbf (111-N) holding force.
 - b. Wall-Mounted Units: Flush mounted unless otherwise indicated.
 - c. Rating: 24-V ac or dc.
 - d. Rating: 120-V ac.
 2. Material and Finish: Match door hardware.
- J. Remote Annunciator
1. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
 - a. Mounting: Flush **OR** Surface, **as directed**, cabinet, NEMA 250, Type 1.
 2. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.
- K. Addressable Interface Device
1. Description: Microelectronic monitor module, NRTL listed for use in providing a system address for alarm-initiating devices for wired applications with normally open contacts.
 2. Integral Relay: Capable of providing a direct signal to elevator controller to initiate elevator recall **OR** to circuit-breaker shunt trip for power shutdown, **as directed**.
- L. Digital Alarm Communicator Transmitter

1. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.
2. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture one **OR** two, **as directed**, telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either, **as directed**, line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
3. Local functions and display at the digital alarm communicator transmitter shall include the following:
 - a. Verification that both telephone lines are available.
 - b. Programming device.
 - c. LED display.
 - d. Manual test report function and manual transmission clear indication.
 - e. Communications failure with the central station or fire-alarm control unit.
4. Digital data transmission shall include the following:
 - a. Address of the alarm-initiating device.
 - b. Address **OR** Zone, **as directed**, of the supervisory signal.
 - c. Address **OR** Zone, **as directed**, of the trouble-initiating device.
 - d. Loss of ac supply or loss of power.
 - e. Low battery.
 - f. Abnormal test signal.
 - g. Communication bus failure.
5. Secondary Power: Integral rechargeable battery and automatic charger.
6. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

M. Radio Alarm Transmitter

1. Transmitter shall comply with NFPA 1221 and shall be listed and labeled by an NRTL.
2. Comply with 47 CFR 90.
3. Description: Manufacturer's standard commercial product; factory assembled, wired, tested, and ready for installation and operation.
 - a. Packaging: A single, modular, NEMA 250, Type 1 metal enclosure with a tamper-resistant flush tumbler lock.
 - b. Signal Transmission Mode and Frequency: VHF or UHF 2-W power output, coordinated with operating characteristics of the established remote alarm receiving station designated by Owner.
 - c. Normal Power Input: 120-V ac.
 - d. Secondary Power: Integral-sealed, rechargeable, 12-V battery and charger. Comply with NFPA 72 requirements for battery capacity; submit calculations.
 - e. Antenna: Omnidirectional, coaxial half-wave, dipole type with driving point impedance matched to transmitter and antenna cable output impedance. Wind-load strength of antenna and mounting hardware and supports shall withstand 100 mph (160 km/h), **as directed**, with a gust factor of 1.3 without failure.
 - f. Antenna Cable: Coaxial cable with impedance matched to the transmitter output impedance.
 - g. Antenna-Cable Connectors: Weatherproof.
 - h. Alarm Interface Devices: Circuit boards, modules, and other auxiliary devices, integral to the transmitter, matching fire-alarm and other system outputs to message-generating inputs of the transmitter that produce required message transmissions.
4. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit or from its own internal sensors or controls and shall automatically transmit signal along with a unique code that identifies the transmitting station to the remote alarm receiving station. Transmitted messages shall correspond to standard designations for fire-

reporting system to which the signal is being transmitted and shall include separately designated messages in response to the following events or conditions:

- a. Transmitter Low-Battery Condition: Sent when battery voltage is below 85 percent of rated value.
- b. System Test Message: Initiated manually by a test switch within the transmitter cabinet, or automatically at an optionally preselected time, once every 24 hours, with transmission time controlled by a programmed timing device integral to transmitter controls.
- c. Transmitter Trouble Message: Actuated by failure, in excess of one-minute duration, of the transmitter normal power source, derangement of the wiring of the transmitter, or any alarm input interface circuit or device connected to it.
- d. Local Fire-Alarm-System Trouble Message: Initiated by events or conditions that cause a trouble signal to be indicated on the building system.
- e. Local Fire-Alarm-System Alarm Message: Actuated when the building system goes into an alarm state. Identifies device that initiated the alarm.
- f. Local Fire-Alarm-System Supervisory-Alarm Message: Actuated when the building alarm system indicates a supervisory alarm, **as directed**.

N. System Printer

1. Printer shall be listed and labeled by an NRTL as an integral part of fire-alarm system.

O. Device Guards

1. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
 - a. Factory fabricated and furnished by manufacturer of device.
 - b. Finish: Paint of color to match the protected device.

1.3 EXECUTION

A. Equipment Installation

1. Comply with NFPA 72 for installation of fire-alarm equipment.
2. Equipment Mounting: Install fire-alarm control unit on concrete base with tops of cabinets not more than 72 inches (1830 mm) above the finished floor. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-place Concrete".
 - a. Install seismic bracing. Comply with requirements in Division 26 Section "Vibration And Seismic Controls For Electrical Systems".
 - b. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - c. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - d. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - e. Install anchor bolts to elevations required for proper attachment to supported equipment.
3. Equipment Mounting: Install fire-alarm control unit on finished floor with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
 - a. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration And Seismic Controls For Electrical Systems".
4. Install wall-mounted equipment, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
 - a. Comply with requirements for seismic-restraint devices specified in Division 26 Section "Vibration And Seismic Controls For Electrical Systems".
5. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.
 - a. Connect new equipment to existing control panel in existing part of the building.
 - b. Connect new equipment to existing monitoring equipment at the supervising station.

- c. Expand, modify, and supplement existing control **OR** monitoring, **as directed**, equipment as necessary to extend existing control **OR** monitoring, **as directed**, functions to the new points. New components shall be capable of merging with existing configuration without degrading the performance of either system.
 - 6. Smoke- or Heat-Detector Spacing:
 - a. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
 - b. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
 - c. Smooth ceiling spacing shall not exceed 30 feet (9 m)
 - d. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A or Appendix B in NFPA 72.
 - e. HVAC: Locate detectors not closer than 3 feet (1 m) **OR** 5 feet (1.5 m), **as directed**, from air-supply diffuser or return-air opening.
 - f. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture.
 - 7. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.
 - 8. Heat Detectors in Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location.
 - 9. Single-Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms to sound.
 - 10. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.
 - 11. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.
 - 12. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches (150 mm) below the ceiling.
 - 13. Device Location-Indicating Lights: Locate in public space near the device they monitor.
 - 14. Fire-Alarm Control Unit: Surface mounted, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
 - 15. Annunciator: Install with top of panel not more than 72 inches (1830 mm) above the finished floor.
 - 16. Antenna for Radio Alarm Transmitter: Mount to building structure where indicated. Use mounting arrangement and substrate connection that will resist 100-mph (160-km/h), **as directed**, wind load with a gust factor of 1.3 without damage.
- B. Connections
- 1. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Division 08 Section "Door Hardware". Connect hardware and devices to fire-alarm system.
 - a. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.
 - 2. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 3 feet (1 m) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.
 - a. Alarm-initiating connection to smoke-control system (smoke management) at firefighter smoke-control system panel.
 - b. Alarm-initiating connection to stairwell and elevator-shaft pressurization systems.
 - c. Smoke dampers in air ducts of designated air-conditioning duct systems.
 - d. Alarm-initiating connection to elevator recall system and components.
 - e. Alarm-initiating connection to activate emergency lighting control.
 - f. Alarm-initiating connection to activate emergency shutoffs for gas and fuel supplies.

- g. Supervisory connections at valve supervisory switches.
 - h. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.
 - i. Supervisory connections at elevator shunt trip breaker.
 - j. Supervisory connections at fire-pump power failure including a dead-phase or phase-reversal condition.
 - k. Supervisory connections at fire-pump engine control panel.
- C. Identification
 - 1. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification For Electrical Systems".
 - 2. Install framed instructions in a location visible from fire-alarm control unit.
- D. Grounding
 - 1. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.
- E. Field Quality Control
 - 1. Field tests shall be witnessed by authorities having jurisdiction.
 - 2. Tests and Inspections:
 - a. Visual Inspection: Conduct visual inspection prior to testing.
 - 1) Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
 - 2) Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
 - b. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - c. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
 - d. Test audible appliances for the private operating mode according to manufacturer's written instructions.
 - e. Test visible appliances for the public operating mode according to manufacturer's written instructions.
 - f. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - 3. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
 - 4. Fire-alarm system will be considered defective if it does not pass tests and inspections.
 - 5. Prepare test and inspection reports.
 - 6. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.
 - 7. Annual Test and Inspection: One year after date of Final Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

END OF SECTION 28 31 23 00

SECTION 28 31 23 00a - ZONED (DC LOOP) FIRE-ALARM SYSTEM

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for zoned (DC loop) fire alarm system. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Fire-alarm control unit.
 - b. Manual fire-alarm boxes.
 - c. System smoke detectors.
 - d. Nonsystem smoke detectors.
 - e. Heat detectors.
 - f. Notification appliances.
 - g. Magnetic door holders.
 - h. Remote annunciator.
 - i. Digital alarm communicator transmitter.
 - j. Radio alarm transmitter.

C. Definitions

1. LED: Light-emitting diode.
2. NICET: National Institute for Certification in Engineering Technologies.

D. System Description

1. Noncoded system, dedicated to fire-alarm service only.

E. Submittals

1. General Submittal Requirements:
 - a. Submittals shall be approved by authorities having jurisdiction prior to submitting them to the Owner.
 - b. Shop Drawings shall be prepared by persons with the following qualifications:
 - 1) Trained and certified by manufacturer in fire-alarm system design.
 - 2) NICET-certified fire-alarm technician, Level III **OR** Level IV, **as directed**, minimum.
 - 3) Licensed or certified by authorities having jurisdiction.
2. Product Data: For each type of product indicated.
3. Shop Drawings: For fire-alarm system. Include plans, elevations, sections, details, and attachments to other work.
 - a. Comply with recommendations in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72.
 - b. Include voltage drop calculations for notification appliance circuits.
 - c. Include battery size calculations.
 - d. Include performance parameters and installation details for each detector, verifying that each detector is listed for the complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
 - e. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale and coordinating installation of duct smoke detectors and access to them. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators. Locate detectors according to manufacturer's written recommendations.

- f. Include floor plans to indicate final outlet locations showing zone designation of each device. Show size and route of cable and conduits.
 4. Delegated-Design Submittal: For smoke and heat detectors indicated to comply with performance requirements and design criteria, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.
 - a. Drawings showing the location of each smoke and heat detector, the ratings of each, and installation details as needed to comply with the listing conditions of the detector.
 - b. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72.
 5. Qualification Data: For qualified Installer.
 6. Field quality-control reports.
 7. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals. Deliver copies to authorities having jurisdiction, **as directed**, and include the following:
 - a. Comply with the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 - b. Provide "Record of Completion Documents" according to NFPA 72 article "Permanent Records" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter.
 - c. Record copy of site-specific software.
 - d. Provide "Maintenance, Inspection and Testing Records" according to NFPA 72 article of the same name and include the following:
 - 1) Frequency of testing of installed components.
 - 2) Frequency of inspection of installed components.
 - 3) Requirements and recommendations related to results of maintenance.
 - 4) Manufacturer's user training manuals.
 - e. Manufacturer's required maintenance related to system warranty requirements.
 - f. Abbreviated operating instructions for mounting at fire-alarm control unit.
 - g. Copy of NFPA 25.
- F. Quality Assurance
 1. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.
 2. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm Level II **OR** Level III **OR** Level IV, **as directed**, technician.
 3. Source Limitations for Fire-Alarm System and Components: Obtain fire-alarm system from single source from single manufacturer. Components shall be compatible with, and operate as, an extension of existing system.
 4. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- G. Project Conditions
 1. Interruption of Existing Fire-alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:
 - a. Notify the Owner no fewer than two days in advance of proposed interruption of fire-alarm service.
 - b. Do not proceed with interruption of fire-alarm service without the Owner 's written permission.
- H. Sequencing And Scheduling
 1. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.

2. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

1.2 PRODUCTS

A. Systems Operational Description

1. Fire-alarm signal initiation shall be by one or more of the following devices and systems, **as directed**:
 - a. Manual stations.
 - b. Heat detectors.
 - c. Smoke detectors.
 - d. Duct smoke detectors.
 - e. Automatic sprinkler system water flow.
 - f. Fire-extinguishing system operation.
 - g. Fire standpipe system.
2. Fire-alarm signal shall initiate the following actions:
 - a. Continuously operate alarm notification appliances.
 - b. Identify alarm zone at fire-alarm control unit and remote annunciators, **as directed**.
 - c. Transmit an alarm signal to the remote alarm receiving station.
3. Supervisory signal initiation shall be by one or more of the following devices and systems:
 - a. Valve supervisory switch.
4. System trouble signal initiation shall be by one or more of the following devices and actions:
 - a. Open circuits, shorts, and grounds in designated circuits.
 - b. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.
 - c. Loss of primary power at fire-alarm control unit.
 - d. Ground or a single break in fire-alarm control unit internal circuits.
 - e. Abnormal ac voltage at fire-alarm control unit.
 - f. Break in standby battery circuitry.
 - g. Failure of battery charging.
 - h. Abnormal position of any switch at fire-alarm control unit or annunciator, **as directed**.
5. System Trouble and Supervisory Signal Actions: Initiate notification appliance and annunciate at fire-alarm control unit and remote annunciators, **as directed**.

B. Fire-Alarm Control Unit

1. General Requirements for Fire-Alarm Control Unit:
 - a. Modular, power-limited design with electronic modules, UL 864 listed.
 - 1) Include a real-time clock for time annotation of events.
2. Alphanumeric Display and System Controls: Display alarm, supervisory, and component status messages and the programming and control menu.
 - a. Annunciator and Display: Liquid-crystal type, one line of 40 **OR** 80, **as directed**, characters, minimum.
3. Circuits:
 - a. No Fewer Than Five Initiating Device Circuits:
 - 1) Four circuits, NFPA 72, Class B.
 - 2) One circuit(s), NFPA 72, Class A, Style 6
 - b. No Fewer Than Two Notification Appliance Circuits: NFPA 72, Class B, Style Y.
4. Notification Appliance Circuit: Operation shall sound in a **<Insert pattern>**.
5. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke barrier walls shall be **OR** not be, **as directed**, connected to fire-alarm system.
6. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to a remote alarm station.
7. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory signals **OR**

supervisory and digital alarm communicator transmitters **OR** digital alarm radio transmitters, **as directed**, shall be powered by the 24-V dc source.

- a. Alarm current draw of the entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.
8. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.
 - a. Batteries: Sealed lead calcium **OR** Sealed, valve-regulated, recombinant lead acid **OR** Vented, wet-cell pocket, plate nickel cadmium, **as directed**.
9. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

C. Manual Fire-Alarm Boxes

1. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
 - a. Single-action mechanism, breaking-glass or plastic-rod **OR** pull-lever, **as directed**, type.
 - b. Double-action mechanism requiring two actions to initiate an alarm, breaking-glass or plastic-rod **OR** pull-lever, **as directed**, type.
 - c. Station Reset: Key- or wrench-operated switch.
 - d. Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.
 - e. Weatherproof Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

D. System Smoke Detectors

1. General Requirements for System Smoke Detectors:
 - a. Operating at 24-V dc, nominal.
 - b. Detectors shall be four **OR** two, **as directed**, -wire type.
 - c. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
 - d. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
 - e. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status, **as directed**.
 - f. Provide multiple levels of detection sensitivity for each sensor, with alarm-verification feature, **as directed**.
2. Photoelectric Smoke Detectors: Comply with UL 268.
3. Ionization Smoke Detector: Comply with UL 268.
4. Duct Smoke Detectors: Photoelectric type complying with UL 268A.
 - a. Remote indication and test, **as directed**, station. Operating key switch initiates an alarm test, **as directed**.
 - b. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
 - c. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
 - d. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.

E. Nonsystem Smoke Detectors

1. Single-Station Smoke Detectors:

- a. Comply with UL 217; suitable for NFPA 101, residential occupancies; operating at 120-V ac with 9-V dc battery as the secondary power source. Provide with "low" or "missing" battery chirping-sound device, **as directed**.
- b. Auxiliary Relays: One Form C rated at 0.5 A **OR** Form A and one Form C, both rated at 0.5 A, **as directed**.
- c. Audible Notification Appliance: Piezoelectric sounder rated at 90 dBA at 10 feet (3 m) according to UL 464.
- d. Visible Notification Appliance: 177-cd strobe.
- e. Heat sensor, 135 deg F (57 deg C) combination rate-of-rise and fixed temperature, **as directed**.
- f. Test Switch: Push-to-test; simulates smoke at rated obscuration.
- g. Tandem Connection: Allow tandem connection of number of indicated detectors; alarm on one detector shall actuate notification on all connected detectors.
- h. Plug-in Arrangement: Detector and associated electronic components shall be mounted in a plug-in module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.
- i. Self-Restoring: Detectors shall not require resetting or readjustment after actuation to restore them to normal operation.
- j. Integral Visual-Indicating Light: LED type indicating detector has operated and power-on status, **as directed**.
- 2. Single-Station Duct Smoke Detectors:
 - a. Comply with UL 268A; operating at 120-V ac.
 - b. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. The fixed base shall be designed for mounting directly to air duct. Provide terminals in the fixed base for connection to building wiring.
 - 1) Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector.
 - c. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
 - d. Relay Fan Shutdown: Rated to interrupt fan motor-control circuit.
- F. Heat Detectors
 - 1. General Requirements for Heat Detectors: Comply with UL 521.
 - 2. Heat Detector, Combination Type: Actuated by either a fixed temperature of 135 deg F (57 deg C) or a rate of rise that exceeds 15 deg F (8 deg C) per minute unless otherwise indicated.
 - a. Mounting: Adapter plate for outlet box mounting **OR** Twist-lock base interchangeable with smoke-detector bases, **as directed**.
 - 3. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of 190 deg F (88 deg C).
 - a. Mounting: Adapter plate for outlet box mounting **OR** Twist-lock base interchangeable with smoke-detector bases, **as directed**.
- G. Notification Appliances
 - 1. General Requirements for Notification Appliances: Connected to notification appliance signal circuits, zoned as indicated, equipped for mounting as indicated and with screw terminals for system connections.
 - a. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated and with screw terminals for system connections.
 - 2. Chimes, High-Level Output: Vibrating type, 81-dBA minimum rated output.
 - 3. Horns: Electric-vibrating-polarized type, 24-V dc; with provision for housing the operating mechanism behind a grille. Comply with UL 464. Horns shall produce a sound-pressure level of 90 dBA, measured 10 feet (3 m) from the horn, using the coded signal prescribed in UL 464 test protocol.

4. Visible Notification Appliances: Xenon strobe lights comply with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.
 - a. Rated Light Output:
 - 1) Indicated on Drawings.
 - 2) **15 OR 30 OR 75 OR 110 OR 177, as directed**, cd.
OR
15/30/75/110 cd, selectable in the field.
 - b. Mounting: Indicated on Drawings **OR** Wall mounted, **as directed**.
 - c. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.
 - d. Flashing shall be in a temporal pattern, synchronized with other units.
 - e. Strobe Leads: Factory connected to screw terminals.
 - f. Mounting Faceplate: Factory finished, red **OR** white, **as directed**.
- H. Magnetic Door Holders
 1. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.
 - a. Electromagnet: Requires no more than 3 W to develop 25-lbf (111-N) holding force.
 - b. Wall-Mounted Units: Flush mounted unless otherwise indicated.
 - c. Rating: 24-V ac or dc.
 - d. Rating: 120-V ac.
 2. Material and Finish: Match door hardware.
- I. Remote Annunciator
 1. Description: Annunciator functions shall match those of fire-alarm control unit for alarm, supervisory, and trouble indications. Manual switching functions shall match those of fire-alarm control unit, including acknowledging, silencing, resetting, and testing.
 - a. Mounting: Flush **OR** Surface, **as directed**, cabinet, NEMA 250, Type 1.
 2. Display Type and Functional Performance: Alphanumeric display and LED indicating lights shall match those of fire-alarm control unit. Provide controls to acknowledge, silence, reset, and test functions for alarm, supervisory, and trouble signals.
- J. Digital Alarm Communicator Transmitter
 1. Digital alarm communicator transmitter shall be acceptable to the remote central station and shall comply with UL 632 and be listed and labeled by an NRTL.
 2. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit and automatically capture one **OR** two, **as directed**, telephone line(s) and dial a preset number for a remote central station. When contact is made with central station(s), signals shall be transmitted. If service on either, **as directed**, line is interrupted for longer than 45 seconds, transmitter shall initiate a local trouble signal and transmit the signal indicating loss of telephone line to the remote alarm receiving station over the remaining line. Transmitter shall automatically report telephone service restoration to the central station. If service is lost on both telephone lines, transmitter shall initiate the local trouble signal.
 3. Local functions and display at the digital alarm communicator transmitter shall include the following:
 - a. Verification that both telephone lines are available.
 - b. Programming device.
 - c. LED display.
 - d. Manual test report function and manual transmission clear indication.
 - e. Communications failure with the central station or fire-alarm control unit.
 4. Digital data transmission shall include the following:
 - a. Zone of the alarm initiating device.
 - b. Zone of the supervisory signal.
 - c. Zone of the trouble initiating device.

- d. Loss of ac supply or loss of power.
 - e. Low battery.
 - f. Abnormal test signal.
 - g. Communication bus failure.
 - 5. Secondary Power: Integral rechargeable battery and automatic charger.
 - 6. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.
- K. Radio Alarm Transmitter
- 1. Transmitter shall comply with NFPA 1221 and shall be listed and labeled by an NRTL.
 - 2. Comply with 47 CFR 90.
 - 3. Description: Manufacturer's standard commercial product; factory assembled, wired, tested, and ready for installation and operation.
 - a. Packaging: A single, modular, NEMA 250, Type 1 metal enclosure with a tamper-resistant flush tumbler lock.
 - b. Signal Transmission Mode and Frequency: VHF or UHF 2-W power output, coordinated with operating characteristics of the established remote alarm receiving station designated by Owner.
 - c. Normal Power Input: 120-V ac.
 - d. Secondary Power: Integral-sealed, rechargeable, 12-V battery and charger. Comply with NFPA 72 requirements for battery capacity; submit calculations.
 - e. Antenna: Omnidirectional, coaxial half-wave, dipole type with driving point impedance matched to transmitter and antenna cable output impedance. Wind-load strength of antenna and mounting hardware and supports shall withstand 100 mph (160 km/h) with a gust factor of 1.3 without failure.
 - f. Antenna Cable: Coaxial cable with impedance matched to the transmitter output impedance.
 - g. Antenna-Cable Connectors: Weatherproof.
 - h. Alarm Interface Devices: Circuit boards, modules, and other auxiliary devices, integral to the transmitter, matching fire-alarm and other system outputs to message-generating inputs of the transmitter that produce required message transmissions.
 - 4. Functional Performance: Unit shall receive an alarm, supervisory, or trouble signal from fire-alarm control unit or from its own internal sensors or controls and shall automatically transmit signal along with a unique code that identifies the transmitting station to the remote alarm receiving station. Transmitted messages shall correspond to standard designations for fire-reporting system to which the signal is being transmitted and shall include separately designated messages in response to the following events or conditions:
 - a. Transmitter Low-Battery Condition: Sent when battery voltage is below 85 percent of rated value.
 - b. System Test Message: Initiated manually by a test switch within the transmitter cabinet, or automatically at an optionally preselected time, once every 24 hours, with transmission time controlled by a programmed timing device integral to transmitter controls.
 - c. Transmitter Trouble Message: Actuated by failure, in excess of one-minute duration, of the transmitter normal power source, derangement of the wiring of the transmitter, or any alarm input interface circuit or device connected to it.
 - d. Local Fire-Alarm-System Trouble Message: Initiated by events or conditions that cause a trouble signal to be indicated on the building system.
 - e. Local Fire-Alarm-System Alarm Message: Actuated when the building system goes into an alarm state. Identifies device that initiated the alarm.
 - f. Local Fire-Alarm-System Supervisory-Alarm Message: Actuated when the building alarm system indicates a supervisory alarm, **as directed**.
- L. Device Guards
- 1. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.
 - a. Factory fabricated and furnished by manufacturer of the device.
 - b. Finish: Paint of color to match the protected device.

1.3 EXECUTION

A. Equipment Installation

1. Comply with NFPA 72 for installation of fire-alarm equipment.
2. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.
 - a. Connect new equipment to the existing control panel in the existing part of the building.
 - b. Connect new equipment to the existing monitoring equipment at the supervising station.
 - c. Expand, modify, and supplement the existing control **OR** monitoring, **as directed**, equipment as necessary to extend the existing control **OR** monitoring, **as directed**, functions to the new points. New components shall be capable of merging with the existing configuration without degrading the performance of either system.
3. Smoke- or Heat-Detector Spacing:
 - a. Comply with NFPA 72, "Smoke-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for smoke-detector spacing.
 - b. Comply with NFPA 72, "Heat-Sensing Fire Detectors" Section in the "Initiating Devices" Chapter, for heat-detector spacing.
 - c. Smooth ceiling spacing shall not exceed 30 feet (9 m), **as directed**.
 - d. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Appendix A or Appendix B, **as directed**, in NFPA 72.
 - e. HVAC: Locate detectors not closer than 3 feet (1 m) **OR** 5 feet (1.5 m), **as directed**, from air-supply diffuser or return-air opening.
 - f. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture.
4. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct.
5. Heat Detectors in Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location.
6. Single-Station Smoke Detectors: Where more than one smoke alarm is installed within a dwelling or suite, they shall be connected so that the operation of any smoke alarm causes the alarm in all smoke alarms to sound.
7. Remote Status and Alarm Indicators: Install near each smoke detector and each sprinkler water-flow switch and valve-tamper switch that is not readily visible from normal viewing position.
8. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille.
9. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches (150 mm) below the ceiling.
10. Device Location-Indicating Lights: Locate in public space near the device they monitor.
11. Fire-Alarm Control Unit: Surface mounting, with tops of cabinets not more than 72 inches (1830 mm) above the finished floor.
12. Annunciator: Install with top of panel not more than 72 inches (1830 mm) above the finished floor.
13. Antenna for Radio Alarm Transmitter: Mount to building structure where indicated. Use mounting arrangement and substrate connection that will resist 100-mph (160-km/h), **as directed**, wind load with a gust factor of 1.3 without damage.

B. Connections

1. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Division 08 Section "Door Hardware". Connect hardware and devices to fire-alarm system.
 - a. Verify that hardware and devices are NRTL listed for use with fire-alarm system in this Section before making connections.

2. Connect supervised interface devices to the following devices and systems. Install the interface device less than 3 feet (1 m) from the device controlled.
 - a. Smoke dampers in air ducts of designated air-conditioning duct systems.
 - b. Supervisory connections at valve supervisory switches.
 - c. Supervisory connections at fire-pump power failure including a dead-phase or phase-reversal condition.
 - d. Supervisory connections at fire-pump engine control panel.
- C. Identification
 1. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Division 26 Section "Identification For Electrical Systems".
 2. Install framed instructions in a location visible from fire-alarm control unit.
- D. Grounding
 1. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.
- E. Field Quality Control
 1. Field tests shall be witnessed by authorities having jurisdiction.
 2. Tests and Inspections:
 - a. Visual Inspection: Conduct the visual inspection prior to testing.
 - 1) Inspection shall be based on completed Record Drawings and system documentation that is required by NFPA 72 in its "Completion Documents, Preparation" Table in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter.
 - 2) Comply with "Visual Inspection Frequencies" Table in the "Inspection" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.
 - b. System Testing: Comply with "Test Methods" Table in the "Testing" Section of the "Inspection, Testing, and Maintenance" Chapter in NFPA 72.
 - c. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.
 - d. Test visible appliances for the public operating mode according to manufacturer's written instructions.
 - e. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" Section of the "Fundamentals of Fire Alarm Systems" Chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" Section of the "Inspection, Testing and Maintenance" Chapter in NFPA 72.
 3. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.
 4. Fire-alarm system will be considered defective if it does not pass tests and inspections.
 5. Prepare test and inspection reports.
 6. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.
 7. Annual Test and Inspection: One year after date of Final Completion, test fire-alarm system complying with the visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

END OF SECTION 28 31 23 00a

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 00 00 00 - EARTHWORK

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for earthwork. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Preparing subgrades for slabs-on-grade, walks, pavements, turf and grasses, and plants.
 - b. Excavating and backfilling for buildings and structures.
 - c. Drainage course for concrete slabs-on-grade.
 - d. Subbase course for concrete walks and pavements.
 - e. Subbase course and base course for asphalt paving.
 - f. Subsurface drainage backfill for walls and trenches.
 - g. Excavating and backfilling trenches for utilities and pits for buried utility structures.
 - h. Excavating well hole to accommodate elevator-cylinder assembly.

C. Definitions

1. Backfill: Soil material or controlled low-strength material used to fill an excavation.
 - a. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.
 - b. Final Backfill: Backfill placed over initial backfill to fill a trench.
2. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.
3. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.
4. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.
5. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.
6. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.
 - a. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by the Owner. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
 - b. Bulk Excavation: Excavation more than 10 feet (3 m) in width and more than 30 feet (9 m) in length.
 - c. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by the Owner. Unauthorized excavation, as well as remedial work directed by the Owner, shall be without additional compensation.
7. Fill: Soil materials used to raise existing grades.
8. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material that exceed 1 cu. yd. (0.76 cu. m) for bulk excavation or 3/4 cu. yd. (0.57 cu. m) for footing, trench, and pit excavation that cannot be removed by rock excavating equipment equivalent to the following in size and performance ratings, without systematic drilling, ram hammering, ripping, or blasting, when permitted:
 - a. Excavation of Footings, Trenches, and Pits: Late-model, track-mounted hydraulic excavator; equipped with a 42-inch- (1065-mm-) wide, maximum, short-tip-radius rock bucket; rated at not less than 138-hp (103-kW) flywheel power with bucket-curling force of not less than 28,700 lbf (128 kN) and stick-crowd force of not less than 18,400 lbf (82 kN) with extra-long reach boom; measured according to SAE J-1179.

- b. Bulk Excavation: Late-model, track-mounted loader; rated at not less than 230-hp (172-kW) flywheel power and developing a minimum of 47,992-lbf (213.3-kN) breakout force with a general-purpose bare bucket; measured according to SAE J-732.
- 9. If Standard Penetration Values are used to Define Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material 3/4 cu. yd. (0.57 cu. m) or more in volume that exceed a standard penetration resistance of 100 blows/2 inches (97 blows/50 mm) when tested by a geotechnical testing agency, according to ASTM D 1586.
- 10. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.
- 11. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.
- 12. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.
- 13. Utilities: On-site underground pipes, conduits, ducts, and cables, as well as underground services within buildings.

D. Submittals

- 1. Product Data: For each type of the following manufactured products required:
 - a. Geotextiles.
 - b. Controlled low-strength material, including design mixture.
 - c. Geofoam.
 - d. Warning tapes.
- 2. Samples: For the following products, in sizes indicated below:
 - a. Geotextile: 12 by 12 inches (300 by 300 mm).
 - b. Warning Tape: 12 inches (300 mm) long; of each color.
- 3. Qualification Data: For qualified testing agency.
- 4. Material Test Reports: For each on-site and borrow soil material proposed for fill and backfill as follows:
 - a. Classification according to ASTM D 2487.
 - b. Laboratory compaction curve according to ASTM D 698 **OR** ASTM D 1557, **as directed**.
- 5. Blasting plan approved by authorities having jurisdiction.
- 6. Seismic survey report from seismic survey agency.
- 7. Pre-excavation Photographs or Videotape: Show existing conditions of adjoining construction and site improvements, including finish surfaces, that might be misconstrued as damage caused by earth moving operations. Submit before earth moving begins.

E. Quality Assurance

- 1. Blasting:
 - a. Blasting will not be allowed.

OR

Comply with applicable requirements in NFPA 495, "Explosive Materials Code," and prepare a blasting plan reporting the following:

 - 1) Types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.
 - 2) Seismographic monitoring during blasting operations.
- 2. Seismic Survey Agency: An independent testing agency, acceptable to authorities having jurisdiction, experienced in seismic surveys and blasting procedures to perform the following services:
 - a. Report types of explosive and sizes of charge to be used in each area of rock removal, types of blasting mats, sequence of blasting operations, and procedures that will prevent damage to site improvements and structures on Project site and adjacent properties.

- b. Seismographic monitoring during blasting operations.
- 3. Geotechnical Testing Agency Qualifications: Qualified according to ASTM E 329 and ASTM D 3740 for testing indicated.
- 4. Pre-excavation Conference: Conduct conference at Project site.

F. Project Conditions

- 1. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth moving operations.
 - a. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
 - b. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.
- 2. Improvements on Adjoining Property: Authority for performing earth moving indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.
- 3. Do not proceed with work on adjoining property until directed by the Owner.
- 4. Utility Locator Service: Notify utility locator service **OR** "Miss Utility" **OR** "Call Before You Dig" **OR** "Dig Safe System" **OR** "One Call", **as directed**, for area where Project is located before beginning earth moving operations.
- 5. Do not commence earth moving operations until temporary erosion- and sedimentation-control measures, specified in Division 01 Section(s) "Temporary Facilities And Controls" **OR** Division 31 Section(s) "Site Clearing", **as directed**, are in place.
- 6. Do not commence earth moving operations until plant-protection measures specified in Division 01 Section "Temporary Tree And Plant Protection" are in place.
- 7. The following practices are prohibited within protection zones:
 - a. Storage of construction materials, debris, or excavated material.
 - b. Parking vehicles or equipment.
 - c. Foot traffic.
 - d. Erection of sheds or structures.
 - e. Impoundment of water.
 - f. Excavation or other digging unless otherwise indicated.
 - g. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.
- 8. Do not direct vehicle or equipment exhaust towards protection zones.
- 9. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

1.2 PRODUCTS

A. Soil Materials

- 1. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations.
- 2. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D 2487 **OR** Groups A-1, A-2-4, A-2-5, and A-3 according to AASHTO M 145, **as directed**, or a combination of these groups; free of rock or gravel larger than 3 inches (75 mm) in any dimension, debris, waste, frozen materials, vegetation, and other deleterious matter.
- 3. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D 2487 **OR** Groups A-2-6, A-2-7, A-4, A-5, A-6, and A-7 according to AASHTO M 145, **as directed**, or a combination of these groups.
 - a. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.
- 4. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 12 percent passing a No. 200 (0.075-mm) sieve.
- 5. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 95 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

6. Engineered Fill: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; with at least 90 percent passing a 1-1/2-inch (37.5-mm) sieve and not more than 12 percent passing a No. 200 (0.075-mm) sieve.
7. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D 2940; except with 100 percent passing a 1-inch (25-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.
8. Drainage Course: Narrowly graded mixture of washed, **as directed**, crushed stone, or crushed or uncrushed gravel; ASTM D 448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch (37.5-mm) sieve and 0 to 5 percent passing a No. 8 (2.36-mm) sieve.
9. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D 448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch (25-mm) sieve and 0 to 5 percent passing a No. 4 (4.75-mm) sieve.
10. Sand: ASTM C 33; fine aggregate.
11. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

B. Geotextiles

1. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 - a. Survivability: Class 2; AASHTO M 288.
 - b. Apparent Opening Size: No. 40 (0.425-mm) **OR** No. 60 (0.250-mm) **OR** No. 70 (0.212-mm), **as directed**, sieve, maximum; ASTM D 4751.
 - c. Permittivity: 0.5 **OR** 0.2 **OR** 0.1, **as directed**, per second, minimum; ASTM D 4491.
 - d. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.
2. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 - a. Survivability: Class 2; AASHTO M 288.
 - b. Apparent Opening Size: No. 60 (0.250-mm) sieve, maximum; ASTM D 4751.
 - c. Permittivity: 0.02 per second, minimum; ASTM D 4491.
 - d. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.

C. Controlled Low-Strength Material

1. Controlled Low-Strength Material: Self-compacting, low-density, **as directed**, flowable concrete material produced from the following:
 - a. Portland Cement: ASTM C 150, Type I **OR** Type II **OR** Type III, **as directed**.
 - b. Fly Ash: ASTM C 618, Class C or F.
 - c. Normal-Weight Aggregate: ASTM C 33, 3/4-inch (19-mm) **OR** 3/8-inch (10-mm), **as directed**, nominal maximum aggregate size.
 - d. Foaming Agent (if low-density, controlled low-strength material is required): ASTM C 869.
 - e. Water: ASTM C 94/C 94M.
 - f. Air-Entraining Admixture (not required for low-density, controlled low-strength material using foaming agent): ASTM C 260.
2. Produce low-density, controlled low-strength material with the following physical properties:
 - a. As-Cast Unit Weight: 30 to 36 lb/cu. ft. (480 to 576 kg/cu. m) **OR** 36 to 42 lb/cu. ft. (576 to 675 kg/cu. m), **as directed**, at point of placement, when tested according to ASTM C 138/C 138M.
 - b. Compressive Strength: 80 psi (550 kPa) **OR** 140 psi (965 kPa), **as directed**, when tested according to ASTM C 495.

OR

Produce conventional-weight, controlled low-strength material with 80-psi (550-kPa) **OR** 140-psi (965-kPa), **as directed**, compressive strength when tested according to ASTM C 495.

D. Geofoam

1. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.55-lb/cu. ft. (25-kg/cu. m) density, 25-psi (173-kPa) compressive strength **OR** Type X, 1.30-lb/cu. ft. (21-kg/cu. m) density, 15-psi (104-kPa) compressive strength **OR** Type VI, 1.80-lb/cu. ft. (29-kg/cu. m) density, 40-psi (276-kPa) compressive strength **OR** Type VII, 2.20-lb/cu. ft. (35-kg/cu. m) density, 60-psi (414-kPa) compressive strength **OR** Type V, 3.00-lb/cu. ft. (48-kg/cu. m) density, 100-psi (690-kPa) compressive strength, **as directed**.
 2. Molded-Polystyrene Board Insulation: ASTM C 578, Type I, 0.90-lb/cu. ft. (15-kg/cu. m) density, 10-psi (69-kPa) compressive strength **OR** Type VIII, 1.15-lb/cu. ft. (18-kg/cu. m) density, 13-psi (90-kPa) compressive strength **OR** Type II, 1.35-lb/cu. ft. (22-kg/cu. m) density, 15-psi (104-kPa) compressive strength, **as directed**.
 - a. Manufacture molded polystyrene with an inorganic mineral registered with the EPA and suitable for application as a termite deterrent.
 3. Rigid Cellular Polystyrene Geofoam: ASTM D 6817, Type EPS 19, 1.15-lb/cu. ft. (18.4-kg/cu. m) density, 5.8-psi (40-kPa) compressive strength at 1 percent deformation; 16-psi (110-kPa) compressive strength at 10 percent deformation **OR** Type EPS 39, 2.40-lb/cu. ft. (38.4-kg/cu. m) density, 15-psi (103-kPa) compressive strength at 1 percent deformation; 40-psi (276-kPa) compressive strength at 10 percent deformation, **as directed**.
 4. Connectors: Geofoam manufacturer's multibarbed, galvanized-steel sheet connectors **OR** Deformed steel reinforcing bars, 3/4 inch (19 mm) in diameter, **as directed**.
- E. Accessories
1. Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of the utility; colored as follows:
 - a. Red: Electric.
 - b. Yellow: Gas, oil, steam, and dangerous materials.
 - c. Orange: Telephone and other communications.
 - d. Blue: Water systems.
 - e. Green: Sewer systems.

OR

Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (150 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of the utility, with metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (750 mm) deep; colored as follows:

 - f. Red: Electric.
 - g. Yellow: Gas, oil, steam, and dangerous materials.
 - h. Orange: Telephone and other communications.
 - i. Blue: Water systems.
 - j. Green: Sewer systems.

1.3 EXECUTION

- A. Preparation
1. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth moving operations.
 2. Protect and maintain erosion and sedimentation controls during earth moving operations.
 3. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.
- B. Dewatering
1. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

2. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.
 - a. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

C. Explosives

1. Explosives: Do not use explosives.

OR

Explosives: Obtain written permission from authorities having jurisdiction before bringing explosives to Project site or using explosives on Project site.

- a. Perform blasting without damaging adjacent structures, property, or site improvements.
- b. Perform blasting without weakening the bearing capacity of rock subgrade and with the least-practicable disturbance to rock to remain.

D. Excavation, General

1. Unclassified Excavation: Excavate to subgrade elevations regardless of the character of surface and subsurface conditions encountered. Unclassified excavated materials may include rock, soil materials, and obstructions. No changes in the Contract Sum or the Contract Time will be authorized for rock excavation or removal of obstructions.
 - a. If excavated materials intended for fill and backfill include unsatisfactory soil materials and rock, replace with satisfactory soil materials.
 - b. Remove rock to lines and grades indicated to permit installation of permanent construction without exceeding the following dimensions:
 - 1) 24 inches (600 mm) outside of concrete forms other than at footings.
 - 2) 12 inches (300 mm) outside of concrete forms at footings.
 - 3) 6 inches (150 mm) outside of minimum required dimensions of concrete cast against grade.
 - 4) Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
 - 5) 6 inches (150 mm) beneath bottom of concrete slabs-on-grade.
 - 6) 6 inches (150 mm) beneath pipe in trenches, and the greater of 24 inches (600 mm) wider than pipe or 42 inches (1065 mm) wide.
2. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified and cross sectioned by the Owner. The Contract Sum will be adjusted for rock excavation according to unit prices included in the Contract Documents. Changes in the Contract Time may be authorized for rock excavation.
 - a. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; together with soil, boulders, and other materials not classified as rock or unauthorized excavation.
 - 1) Intermittent drilling; blasting, if permitted; ram hammering; or ripping of material not classified as rock excavation is earth excavation.
 - b. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:
 - 1) 24 inches (600 mm) outside of concrete forms other than at footings.
 - 2) 12 inches (300 mm) outside of concrete forms at footings.
 - 3) 6 inches (150 mm) outside of minimum required dimensions of concrete cast against grade.
 - 4) Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.
 - 5) 6 inches (150 mm) beneath bottom of concrete slabs-on-grade.
 - 6) 6 inches (150 mm) beneath pipe in trenches, and the greater of 24 inches (600 mm) wider than pipe or 42 inches (1065 mm) wide.

E. Excavation For Structures

1. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch (25 mm). If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.
 - a. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.
 - b. Pile Foundations: Stop excavations 6 to 12 inches (150 to 300 mm) above bottom of pile cap before piles are placed. After piles have been driven, remove loose and displaced material. Excavate to final grade, leaving solid base to receive concrete pile caps.
 - c. Excavation for Underground Tanks, Basins, and Mechanical or Electrical Utility Structures: Excavate to elevations and dimensions indicated within a tolerance of plus or minus 1 inch (25 mm). Do not disturb bottom of excavations intended as bearing surfaces.
2. Excavations at Edges of Tree- and Plant-Protection Zones:
 - a. Excavate by hand to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.
 - b. Cut and protect roots according to requirements in Division 01 Section "Temporary Tree And Plant Protection".

F. Excavation For Walks And Pavements

1. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

G. Excavation For Utility Trenches

1. Excavate trenches to indicated gradients, lines, depths, and elevations.
 - a. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.
2. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches (300 mm) higher than top of pipe or conduit unless otherwise indicated.
 - a. Clearance: 12 inches (300 mm) each side of pipe or conduit **OR** As indicated, **as directed**.
3. Trench Bottoms (if a bedding course is not required under pipe and conduit): Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.
 - a. For pipes and conduit less than 6 inches (150 mm) in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.
 - b. For pipes and conduit 6 inches (150 mm) or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.
 - c. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.
 - d. Excavate trenches 6 inches (150 mm) deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.
4. Trench Bottoms (if a bedding course is required under pipe and conduit): Excavate trenches 4 inches (100 mm) deeper than bottom of pipe and conduit elevations to allow for bedding course. Hand-excavate deeper for bells of pipe.
 - a. Excavate trenches 6 inches (150 mm) deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.
5. Trenches in Tree- and Plant-Protection Zones:
 - a. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.

- b. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.
 - c. Cut and protect roots according to requirements in Division 01 Section "Temporary Tree And Plant Protection".
- H. Excavation For Elevator Cylinder
 - 1. Drill well hole plumb in elevator pit to accommodate installation of elevator-cylinder assembly. Coordinate with applicable requirements for diameter and tolerances in Division 14 Section(s) "Hydraulic Elevators" OR "Hydraulic Freight Elevators", **as directed**.
 - 2. Provide well casing as necessary to retain walls of well hole.
- I. Subgrade Inspection
 - 1. Notify the Owner when excavations have reached required subgrade.
 - 2. If the Owner determines that unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed.
 - 3. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes) to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
 - a. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph (5 km/h).
 - b. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by the Owner, and replace with compacted backfill or fill as directed.
 - 4. Authorized additional excavation and replacement material will be paid for according to Contract provisions for changes in the Work.
 - 5. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by the Owner, without additional compensation.
- J. Unauthorized Excavation
 - 1. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi (17.2 MPa), may be used when approved by the Owner.
 - a. Fill unauthorized excavations under other construction, pipe, or conduit as directed by the Owner.
- K. Storage Of Soil Materials
 - 1. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
 - a. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.
- L. Backfill
 - 1. Place and compact backfill in excavations promptly, but not before completing the following:
 - a. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.
 - b. Surveying locations of underground utilities for Record Documents.
 - c. Testing and inspecting underground utilities.
 - d. Removing concrete formwork.
 - e. Removing trash and debris.
 - f. Removing temporary shoring and bracing, and sheeting.
 - g. Installing permanent or temporary horizontal bracing on horizontally supported walls.
 - 2. Place backfill on subgrades free of mud, frost, snow, or ice.
- M. Utility Trench Backfill
 - 1. Place backfill on subgrades free of mud, frost, snow, or ice.

2. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.
3. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches (450 mm) of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Division 03 Section "Cast-in-place Concrete".
4. Trenches under Roadways: Provide 4-inch- (100-mm-) thick, concrete-base slab support for piping or conduit less than 30 inches (750 mm) below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches (100 mm) of concrete before backfilling or placing roadway subbase course. Concrete is specified in Division 03 Section "Cast-in-place Concrete".
5. Backfill voids with satisfactory soil while removing shoring and bracing.
6. If soil material is required as initial backfill, place and compact initial backfill of subbase material **OR** satisfactory soil, **as directed**, free of particles larger than 1 inch (25 mm) in any dimension, to a height of 12 inches (300 mm) over the pipe or conduit.
 - a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.
7. Controlled Low-Strength Material: If controlled low-strength material is permitted or required as initial backfill, place initial backfill of controlled low-strength material to a height of 12 inches (300 mm) over the pipe or conduit. Coordinate backfilling with utilities testing.
8. If satisfactory soil material is required as final backfill, place and compact final backfill of satisfactory soil to final subgrade elevation.
9. Controlled Low-Strength Material: If controlled low-strength material is permitted or required as final backfill, place final backfill of controlled low-strength material to final subgrade elevation.
10. Install warning tape directly above utilities, 12 inches (300 mm) below finished grade, except 6 inches (150 mm) below subgrade under pavements and slabs.

N. Soil Fill

1. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.
2. Place and compact fill material in layers to required elevations as follows:
 - a. Under grass and planted areas, use satisfactory soil material.
 - b. Under walks and pavements, use satisfactory soil material.
 - c. Under steps and ramps, use engineered fill.
 - d. Under building slabs, use engineered fill.
 - e. Under footings and foundations, use engineered fill.
3. Place soil fill on subgrades free of mud, frost, snow, or ice.

O. Geofoam Fill

1. Place a leveling course of sand, 2 inches (50 mm) thick, over subgrade. Finish leveling course to a tolerance of 1/2 inch (13 mm) when tested with a 10-foot (3-m) straightedge.
 - a. Place leveling course on subgrades free of mud, frost, snow, or ice.
 - b. Install geofoam blocks in layers with abutting edges and ends and with the long dimension of each block at right angles to blocks in each subsequent layer. Offset joints of blocks in successive layers.
 - c. Install geofoam connectors at each layer of geofoam to resist horizontal displacement according to geofoam manufacturer's written instructions.
2. Cover geofoam with subdrainage **OR** separation, **as directed**, geotextile before placing overlying soil materials.

P. Soil Moisture Control

1. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.
 - a. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.

- b. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry unit weight.

Q. Compaction Of Soil Backfills And Fills

1. Place backfill and fill soil materials in layers not more than 8 inches (200 mm) in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches (100 mm) in loose depth for material compacted by hand-operated tampers.
2. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.
3. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D 698 **OR** ASTM D 1557, **as directed**:
 - a. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches (300 mm) of existing subgrade and each layer of backfill or fill soil material at 95 percent.
 - b. Under walkways, scarify and recompact top 6 inches (150 mm) below subgrade and compact each layer of backfill or fill soil material at 92 percent.
 - c. Under turf or unpaved areas, scarify and recompact top 6 inches (150 mm) below subgrade and compact each layer of backfill or fill soil material at 85 percent.
 - d. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.

R. Grading

1. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.
 - a. Provide a smooth transition between adjacent existing grades and new grades.
 - b. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.
2. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to required elevations within the following tolerances:
 - a. Turf or Unpaved Areas: Plus or minus 1 inch (25 mm).
 - b. Walks: Plus or minus 1 inch (25 mm).
 - c. Pavements: Plus or minus 1/2 inch (13 mm).
3. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch (13 mm) when tested with a 10-foot (3-m) straightedge.

S. Subsurface Drainage

1. Subdrainage Pipe: Specified in Division 33 Section "Storm Utility Drainage Piping".
2. Subsurface Drain: If nonwoven geotextile is used in subsurface drainage applications, place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6-inch (150-mm) course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches (300 mm) of filter material, placed in compacted layers 6 inches (150 mm) thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).
 - a. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D 698 **OR** with a minimum of two passes of a plate-type vibratory compactor, **as directed**.
3. Drainage Backfill: If using free-draining granular backfill against walls, place and compact filter material over subsurface drain, in width indicated, to within 12 inches (300 mm) of final subgrade, in compacted layers 6 inches (150 mm) thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches (150 mm).
 - a. Compact each filter material layer to 85 percent of maximum dry unit weight according to ASTM D 698 **OR** with a minimum of two passes of a plate-type vibratory compactor, **as directed**.

- b. Place and compact impervious fill over drainage backfill in 6-inch- (150-mm-) thick compacted layers to final subgrade.
- T. Subbase And Base Courses Under Pavements And Walks
 1. Place subbase course and base course, **as directed**, on subgrades free of mud, frost, snow, or ice.
 2. On prepared subgrade, place subbase course and base course, **as directed**, under pavements and walks as follows:
 - a. Install separation geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
 - b. Place base course material over subbase course under hot-mix asphalt pavement.
 - c. Shape subbase course and base course, **as directed**, to required crown elevations and cross-slope grades.
 - d. Place subbase course and base course, **as directed**, 6 inches (150 mm) or less in compacted thickness in a single layer.
 - e. Place subbase course and base course, **as directed**, that exceeds 6 inches (150 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (150 mm) thick or less than 3 inches (75 mm) thick.
 - f. Compact subbase course and base course, **as directed**, at optimum moisture content to required grades, lines, cross sections, and thickness to not less than 95 percent of maximum dry unit weight according to ASTM D 698 **OR** ASTM D 1557, **as directed**.
 3. Pavement Shoulders: Place shoulders along edges of subbase course and base course, **as directed**, to prevent lateral movement. Construct shoulders, at least 12 inches (300 mm) wide, of satisfactory soil materials and compact simultaneously with each subbase and base, **as directed**, layer to not less than 95 percent of maximum dry unit weight according to ASTM D 698 **OR** ASTM D 1557, **as directed**.
- U. Drainage Course Under Concrete Slabs-On-Grade
 1. Place drainage course on subgrades free of mud, frost, snow, or ice.
 2. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:
 - a. Install subdrainage geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.
 - b. Place drainage course 6 inches (150 mm) or less in compacted thickness in a single layer.
 - c. Place drainage course that exceeds 6 inches (150 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (150 mm) thick or less than 3 inches (75 mm) thick.
 - d. Compact each layer of drainage course to required cross sections and thicknesses to not less than 95 percent of maximum dry unit weight according to ASTM D 698.
- V. Field Quality Control
 1. Special Inspections: If special inspections are required by code, engage a qualified special inspector to perform the following special inspections:
 - a. Determine prior to placement of fill that site has been prepared in compliance with requirements.
 - b. Determine that fill material and maximum lift thickness comply with requirements.
 - c. Determine, at the required frequency, that in-place density of compacted fill complies with requirements.
 2. Testing Agency: Engage a qualified geotechnical engineering testing agency to perform tests and inspections.
 3. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.
 4. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing

subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by the Owner.

5. Testing agency will test compaction of soils in place according to ASTM D 1556, ASTM D 2167, ASTM D 2922, and ASTM D 2937, as applicable. Tests will be performed at the following locations and frequencies:
 - a. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every 2000 sq. ft. (186 sq. m) or less of paved area or building slab, but in no case fewer than three tests.
 - b. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every 100 feet (30 m) or less of wall length, but no fewer than two tests.
 - c. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every 150 feet (46 m) or less of trench length, but no fewer than two tests.
6. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

W. Protection

1. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.
2. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.
 - a. Scarify or remove and replace soil material to depth as directed by the Owner; reshape and recompact.
3. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.
 - a. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

X. Disposal Of Surplus And Waste Materials

1. Remove surplus satisfactory soil and waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.
OR
Transport surplus satisfactory soil to designated storage areas on Owner's property. Stockpile or spread soil as directed by the Owner.
 - a. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

SECTION 31 10 00 00 - CSF SITE CLEARING**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where clearing of existing site is necessary.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.31 10 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleaning site of debris, grass, trees and other plant life in preparation for site or building excavation Work.
 - 2. Protection of existing structures, trees or vegetation indicated to remain.
 - 3. Stripping topsoil from areas indicated.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 013543 - Environmental Procedures: Recycling and reuse of waste materials.
 - 2. Section 024113 - Selective Site Demolition: Demolition and removal of site structures.
 - 3. Section 312000 - Earth Moving: Cutting, filling, and grading for proposed site improvements.

1.2 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Obtain required permits and licenses in accordance with requirements of Federal Clean Water Act (CWA) and Water Quality Act (WQA). File Notice of Intent (NOI) with United States Environmental Protection Agency, or appropriate state agency where project is located.
 - 2. Provide temporary erosion control systems as indicated on Drawings or as directed by Owner's Representative to protect adjacent properties and water resources from erosion and sedimentation.
 - 3. CWA (1972) and WQA (1987) Requirements:
 - a. Where Work on this project will disturb 5 or more acres, do not start Work without obtaining a "National Pollution Discharge Elimination System" (NPDES) permit governing discharge of storm water from project site for duration of Contract. Prepare and obtain approval of a

"Storm Water Pollution Prevention Plan" (SWP³) that includes monitoring of erosion control measures for duration of Contract.

- b. Provide storm water management in accordance with NPDES permit, SWP³ and for any enforcement action taken or imposed by Federal or State agencies, including cost of fines, construction delays and remedial actions resulting from failure to comply with all provisions of NPDES permit and SWP³.
- c. Keep SWP³ on site and make available for inspection by appropriate authority having jurisdiction at any time.

1.3 PROJECT CONDITIONS OR SITE CONDITIONS

A. Existing Conditions:

- 1. Notify the Contracting Officer of variations to conditions or discrepancies in actual site conditions prior to start of site preparation Work.
- 2. Traffic: Conduct operations and removal of debris with minimum interference to roads, streets, walks, and other adjacent facilities. Do not close or obstruct streets, walks or other facilities without permission from authorities having jurisdiction.
- 3. Protections: Provide protection for safe passage of persons around area of site preparation. Take precautions and conduct operations to prevent injury to adjacent buildings, structures, other facilities, and persons.
 - a. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement or collapse of structures to be demolished and adjacent facilities to remain.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

OPTION 1: Use "Not Used" where NO TOPSOIL material used for Site Preparation.

NOTE TO SPECIFIER

OPTION 2: Use MATERIALS when topsoil material is used for Site Preparation. Edit paragraph "Topsoil" for the specific conditions of the project site.

2.1 MATERIALS

- A. Topsoil: Friable clay loam surface soil containing humus, organic matter, found in a depth of not less than 4 inches free of subsoil, clay lumps, stones, and other objects over 2 inches in diameter, and without weeds, roots, and other unsuitable material.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

1. Locate existing utilities as specified in Section 312000.
 2. Verify that survey benchmark and intended elevations for the Work are as indicated and are not located in an area that may be damaged.
 3. Verify that existing plant life and clearing limits are clearly tagged, identified and marked in such a manner as to insure their safety throughout construction operations.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide temporary erosion control systems as indicated on Drawings or as directed by Contracting Officer to protect project site and adjacent properties and water resources from erosion and sedimentation.

3.3 CLEARING

- A. Clear areas required for access to site and execution of Work.
- B. Remove trees, shrubs, grass, other vegetation, improvements, or obstructions interfering with installation of Work as indicated on Drawings. Removal includes digging out stumps and roots. Fill depressions caused by clearing and grubbing operations to subgrade elevation. Prevent water ponding. Place suitable fill material in horizontal layers not exceeding 8 inches loose depth, and compact as specified herein and in Section 312000.

NOTE TO SPECIFIER

*“**REQUIRED Article follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.”*

- C. Remove grass, trees, plant life, stumps and all other construction debris from site.
1. Collect, recycle, reuse, and dispose of demolished materials as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.
 - a. Mulch: Identify organic debris that is free of disease, pest infestation, and chemical contamination and that is suitable for recycling on site. Chip and compost suitable organic debris for use as mulch on site. Stockpile where indicated on Drawings or directed by Contracting Officer. Coordinate with mulch requirements of Section 329200 - Turf and Grasses and Section 329300 - Plants.

3.4 TOPSOIL EXCAVATION

- A. Strip topsoil from areas that are indicated to be filled, excavated, landscaped, or re-graded to depth that prevents contact with underlying subsoil or unsuitable material. Where trees are indicated to remain, stop topsoil stripping sufficient distance from tree to prevent damage to main root system.
- B. Cut heavy growths of grass from areas prior to start of stripping. Remove heavy growths of grass along with clearing of other vegetation materials.
- C. Topsoil: Organic surface soil found in depth not less than 6 inches.

- D. Satisfactory Topsoil: Soil reasonably free of subsoil, clay lumps, stones and other objects over 2 inches in diameter, weeds, roots, and other unsuitable material.
- E. Stockpile topsoil where indicated on Drawings or directed by Contracting Officer. Construct stockpile areas to positively drain surface water. Cover stockpile areas as required to prevent windblown dust. Dispose of unsuitable topsoil off-site as specified clearing, unless directed otherwise by Contracting Officer. Dispose of excess topsoil off-site as specified for clearing, unless directed otherwise by Contracting Officer.

3.5 REMOVAL

- A. Remove debris, rock, extracted plant life, paving, curbs, and other structures indicated on Drawings as specified in Section 024113.
 - 1. Collect, recycle, reuse, and dispose of demolished materials as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

3.6 PROTECTION

- A. Protect existing streets, structures, and utilities as specified in Section 312000.
- B. Protect trees, plant growth, and features indicated to remain.
- C. Protect natural resources as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 31 10 00 00 - MPF SITE CLEARING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where clearing of existing site is necessary.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.31 10 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Cleaning site of debris, grass, trees and other plant life in preparation for site or building excavation Work.
 - 2. Protection of existing structures, trees or vegetation indicated to remain.
 - 3. Stripping topsoil from areas indicated.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 013543 - Environmental Procedures: Recycling and reuse of waste materials.
 - 2. Section 024113 - Selective Site Demolition: Demolition and removal of site structures.
 - 3. Section 312000 - Earth Moving: Cutting, filling, and grading for proposed site improvements.

1.2 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Obtain required permits and licenses in accordance with requirements of Federal Clean Water Act (CWA) and Water Quality Act (WQA). File Notice of Intent (NOI) with United States Environmental Protection Agency, or appropriate state agency where project is located.
 - 2. Provide temporary erosion control systems as indicated on Drawings or as directed by Owner's Representative to protect adjacent properties and water resources from erosion and sedimentation.
 - 3. CWA (1972) and WQA (1987) Requirements:
 - a. Where Work on this project will disturb 5 or more acres, do not start Work without obtaining a "National Pollution Discharge Elimination System" (NPDES) permit governing discharge of storm water from project site for duration of Contract. Prepare and obtain approval of a

"Storm Water Pollution Prevention Plan" (SWP³) that includes monitoring of erosion control measures for duration of Contract.

- b. Provide storm water management in accordance with NPDES permit, SWP³ and for any enforcement action taken or imposed by Federal or State agencies, including cost of fines, construction delays and remedial actions resulting from failure to comply with all provisions of NPDES permit and SWP³.
- c. Keep SWP³ on site and make available for inspection by appropriate authority having jurisdiction at any time.

1.3 PROJECT CONDITIONS OR SITE CONDITIONS

A. Existing Conditions:

- 1. Notify the Contracting Officer of variations to conditions or discrepancies in actual site conditions prior to start of site preparation Work.
- 2. Traffic: Conduct operations and removal of debris with minimum interference to roads, streets, walks, and other adjacent facilities. Do not close or obstruct streets, walks or other facilities without permission from authorities having jurisdiction.
- 3. Protections: Provide protection for safe passage of persons around area of site preparation. Take precautions and conduct operations to prevent injury to adjacent buildings, structures, other facilities, and persons.
 - a. Provide interior and exterior shoring, bracing, or support to prevent movement, settlement or collapse of structures to be demolished and adjacent facilities to remain.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

OPTION 1: Use "Not Used" where NO TOPSOIL material used for Site Preparation.

NOTE TO SPECIFIER

OPTION 2: Use MATERIALS when topsoil material is used for Site Preparation. Edit paragraph "Topsoil" for the specific conditions of the project site.

2.1 MATERIALS

- A. Topsoil: Friable clay loam surface soil containing humus, organic matter, found in a depth of not less than 4 inches free of subsoil, clay lumps, stones, and other objects over 2 inches in diameter, and without weeds, roots, and other unsuitable material.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

1. Locate existing utilities as specified in Section 312000.
 2. Verify that survey benchmark and intended elevations for the Work are as indicated and are not located in an area that may be damaged.
 3. Verify that existing plant life and clearing limits are clearly tagged, identified and marked in such a manner as to insure their safety throughout construction operations.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide temporary erosion control systems as indicated on Drawings or as directed by Contracting Officer to protect project site and adjacent properties and water resources from erosion and sedimentation.

3.3 CLEARING

- A. Clear areas required for access to site and execution of Work.
- B. Remove trees, shrubs, grass, other vegetation, improvements, or obstructions interfering with installation of Work as indicated on Drawings. Removal includes digging out stumps and roots. Fill depressions caused by clearing and grubbing operations to subgrade elevation. Prevent water ponding. Place suitable fill material in horizontal layers not exceeding 8 inches loose depth, and compact as specified herein and in Section 312000.

NOTE TO SPECIFIER

*“**REQUIRED Article follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.”*

- C. Remove grass, trees, plant life, stumps and all other construction debris from site.
1. Collect, recycle, reuse, and dispose of demolished materials as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.
 - a. Mulch: Identify organic debris that is free of disease, pest infestation, and chemical contamination and that is suitable for recycling on site. Chip and compost suitable organic debris for use as mulch on site. Stockpile where indicated on Drawings or directed by Contracting Officer. Coordinate with mulch requirements of Section 329200 - Turf and Grasses and Section 329300 - Plants.

3.4 TOPSOIL EXCAVATION

- A. Strip topsoil from areas that are indicated to be filled, excavated, landscaped, or re-graded to depth that prevents contact with underlying subsoil or unsuitable material. Where trees are indicated to remain, stop topsoil stripping sufficient distance from tree to prevent damage to main root system.
- B. Cut heavy growths of grass from areas prior to start of stripping. Remove heavy growths of grass along with clearing of other vegetation materials.
- C. Topsoil: Organic surface soil found in depth not less than 6 inches.

- D. Satisfactory Topsoil: Soil reasonably free of subsoil, clay lumps, stones and other objects over 2 inches in diameter, weeds, roots, and other unsuitable material.
- E. Stockpile topsoil where indicated on Drawings or directed by Contracting Officer. Construct stockpile areas to positively drain surface water. Cover stockpile areas as required to prevent windblown dust. Dispose of unsuitable topsoil off-site as specified clearing, unless directed otherwise by Contracting Officer. Dispose of excess topsoil off-site as specified for clearing, unless directed otherwise by Contracting Officer.

3.5 REMOVAL

- A. Remove debris, rock, extracted plant life, paving, curbs, and other structures indicated on Drawings as specified in Section 024113.
 - 1. Collect, recycle, reuse, and dispose of demolished materials as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

3.6 PROTECTION

- A. Protect existing streets, structures, and utilities as specified in Section 312000.
- B. Protect trees, plant growth, and features indicated to remain.
- C. Protect natural resources as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION

SECTION 31 20 00 00 - MPF EARTH MOVING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Earthwork is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for earthwork into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE. The degree of complexity of this section is related to the amount of earthwork required for a particular Project Site. Engineer of Record editing this section must make decisions on the amount of detail for earthwork requirements remaining in completed section based on conditions of the Project Site.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of subgrade for building, slabs, walks, pavements, and other sitework.
2. Rough and finish grading.
3. Excavation for filling and grading.
4. Filling and subgrade preparation.
5. Geotechnical Data

B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 013543 - Environmental Procedures: Recycling and reuse of waste materials, and protection of natural resources
2. Section 024113 - Selective Site Demolition: Demolition and removal of designated existing site items.
3. Section 311000 - Site Clearing: Clearing site of debris, grass, trees, and other plant life.
4. Section 312300 - Excavation and Fill: Earthwork for structures, utilities, and pavement.
5. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.
6. Section 312500 - Erosion and Sedimentation Controls: Temporary and permanent erosion control and slope protection systems.
7. Section 312317 - Rock Excavation: Removal of rock during excavation.
8. Section 329113 - Soil Preparation: Placing topsoil and fine grading.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C 136 - Method for Sieve Analysis of Fine and Course Aggregates.
 2. ASTM D 698 - Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
 3. ASTM D 1556 - Test Method for Density of Soil in Place by the Sand-Cone Method.
 4. ASTM D 1557 - Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.
 5. ASTM D 2167 - Test Method for Density and Unit Weight of Soil In-Place by the Rubber Balloon Method.
 6. ASTM D 2487 - Classification of Soils for Engineering Purposes (Unified Soil Classification System).
 7. ASTM D 2922 - Test Methods for Density of Soil and Soil- Aggregate in Place by Nuclear Methods (Shallow Depth).
 8. ASTM D 3017 - Test Method for Moisture Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth)
 9. STM D 4318 - Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
- B. American Association of State Highway and Transportation Officials (AASHTO):
 1. AASHTO T 88 - Particle Size Analysis of Soils

1.3 DEFINITIONS

- A. Building Area Subgrade Pad: Portion of site directly beneath and within a line 10 feet 0 inches beyond building and appurtenances including limits of any future building expansion areas indicated on Drawings.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Shop Drawings:
 - a. Submit drawings or details indicating proposed alternate earthwork procedures or proposed procedures not indicated in Contract Documents.
 - b. Submit drawings or details of design for use of fabrics or geogrids.
 2. Assurance/Control Submittals:
 - a. Material Source: Submit name of imported materials suppliers. Provide materials from same source throughout the Work. Change of source requires Contracting Officer approval.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Test reports on borrow material.
 - 2) Verification of each footing subgrade.
 - 3) Field density test reports.
 - 4) Optimum moisture-maximum density curve for each type of soil encountered.
 - 5) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
 - c. Certificates: Gradation and certification of aggregate material for Testing Laboratory review.
 - d. Qualification Documentation: Submit earthwork company documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Project Record Documents: Accurately record final grade contours, spot elevations, and slope gradients.

1.5 QUALITY ASSURANCE

- A. Qualifications: Earthwork company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Regulatory Requirements: Perform earthwork in accordance with applicable requirements of governing authorities having jurisdiction.
- C. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of earthwork operations, earthwork procedures and coordination with related Work.
 4. Agenda:
 - a. Tour, inspect, and discuss conditions of existing soils and soil substrates.
 - b. Review dust control measures and their requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Survey and Civil sitework Drawings.
 - e. Approve proposed earthwork equipment.
 - f. Approve excess material dump location.
 - g. Approve import material storage location.
 - h. Review and finalize construction schedule related to earthwork and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - i. Review required inspections, testing, certifying, and material usage accounting procedures.
 - j. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - k. Review safety precautions relating to earthwork operations.
 - l. Review environmental procedures.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Existing Conditions:
 1. Geotechnical Data:
 - a. Soils investigation reports and data are not a part of Contract Documents.
 - b. Soil and subsurface investigations were conducted at site by an Independent Testing Laboratory and a report with log of borings prepared. Report was obtained for Architect and Engineer design use only.

NOTE TO SPECIFIER

"Report of Substance Investigation" may not be available. Verify that Report is available from Contracting Officer. If not, delete sub-paragraph below. A copy of the report is available from Contracting Officer.

- c. Soils investigation data is not warranted to indicate actual conditions. U.S. Postal Service, Architect, and Engineer do not assume responsibility for variations in kind, depth, quantity and condition of soils. U.S. Postal Service, Architect and Engineer disclaim responsibility for accuracy, true location, and extent of soils investigation prepared by others; and further disclaim responsibility for interpretation of data by Contractor such as projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
- d. Contractor may make additional test borings and other exploratory operations at no additional cost to U.S. Postal Service. Coordinate tests with Contracting Officer.

2. Classification of Excavations: Contractor acknowledges that Contractor has investigated project site to determine type, quantity, quality, and character of excavation work to be performed. Consider excavation as unclassified excavation, except where Rock Excavation is required. Rock Excavation criteria is as follows:

NOTE TO SPECIFIER

Edit below to indicate conditions for specific site as indicated in "Report of Subsurface Investigation."

- a. Rock Excavation: [Igneous, metamorphic, or sedimentary rock that cannot be removed by rippers or other mechanical methods requiring drilling and blasting] [____]
 - b. Rock Excavation Indicated by Report of Subsurface Exploration: _____]
 - c. Rock Excavation Not Indicated in Report of Subsurface Exploration:
 - 1) Notify Contracting Officer immediately, and in writing, prior to start of Rock Excavation operations.
 - 2) Contracting Officer will visit Project Site, verify requirement for Rock Excavation, determine estimated quantity Rock Excavation required, and provide Contractor written authorization to proceed.
 - 3) Contracting Officer will verify measurements and quantities of actual Rock Excavation required and make adjustments to Contract as specified in Section 012600.
 - d. Rock excavation specified in Section 312317.
3. Existing Utilities: Contact local utility companies and make arrangements to obtain utility company location and marking service prior to start of Earthwork operations.
- a. Locate existing underground utilities in areas of Work. If utilities are to remain in place, provide means of support and protection during Earthwork operations.
 - 1) Pothole and locate existing underground utilities at locations to assure that no conflict with Work of this Contract will occur and required clearance is available to prevent damage to existing utilities.
 - 2) Perform potholing minimum 10 days before start of excavation or underground work.
 - b. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility company and Contracting Officer immediately for directions.
 - c. Coordinate with Contracting Officer and utility companies to keep existing utility services and facilities in operation.
 - d. Repair damaged utilities to satisfaction of utility company, at no additional cost to U.S. Postal Service.
 - e. Do not interrupt existing utilities serving facilities occupied and used by U.S. Postal Service or others, during occupied hours, except when permitted in writing by Contracting Officer and then only after acceptable temporary utility services have been provided and approved by Contracting Officer.
 - f. Demolish and completely remove from site existing underground utilities indicated on Drawings to be removed as specified in Section 024113. Coordinate with utility companies for shut-off of services if lines are active.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

The following is for information only; from ASTM D 2487 Table 1 "Soil Classification Chart."

COARSE-GRAINED SOILS		FINE-GRAINED SOILS	
GW	Well-Graded Gravel	CL	Lean Clay
GP	Poorly Graded Gravel	ML	Silt

GM	Silty Gravel	OL	Organic Clay or Silt
GC	Clayey Gravel		
SW	Well-Graded Sand	CH	Fat Clay
SP	Poorly Graded Sand	MH	Elastic Silt
SM	Silty Sand	OH	Organic Clay or Silt
SC	Clayey Sand	PT	Peat

2.1 MATERIALS

NOTE TO SPECIFIER

Edit below for appropriate subsoil type.

- A. Subsoil: Approved by Testing Laboratory and Contracting Officer.
1. [Excavated and re-used material] [Imported Borrow] [Select or local borrow] [Structural].
 2. Graded.
 3. Free of lumps larger than [3] [____] inches, rocks larger than [2] [____] inches, and debris.
 4. Conforming to ASTM D 2487 [CL] [OL] [____].

NOTE TO SPECIFIER

Edit below for appropriate aggregate type.

- B. Aggregate: Approved by Testing Laboratory and Contracting Officer.
1. Coarse Aggregate: [Recycled Concrete] [Coarse Stone] [Crushed] [Gravel] [Pit Run] [Angular Crushed] [Natural] [Washed] [____] stone; free of shale, clay, friable material and debris; graded in accordance with ASTM D 2487 Group Symbol [GW] [GP] [GM] [GC]; within the following limits:

SIEVE SIZE	PERCENT PASSING
2 inches	100
1 inch	95
3/4 inch	95 to 100
5/8 inch	75 to 100
3/8 inch	55 to 85
No. 4	35 to 60
No. 16	15 to 35
No. 40	10 to 25
No. 200	5 to 10
 2. Pea Gravel: Natural Stone; washed, free of clay, shale, organic matter; graded in accordance with ASTM D 2487 Group Symbol [GM] [GC] [____]; to the following limits:
 - a. Minimum Size: 1/4 inch.
 - b. Maximum Size: 5/8 inch.
 3. Fine Sand: Natural river or bank sand; washed; free of silt, clay, loam, friable or soluble materials, and organic matter; graded in accordance with ASTM D 2487 Group Symbol [SW] [SP] [SM] [SC] [____]; within the following limits:

SIEVE SIZE	PERCENT PASSING
No. 4	100
No. 14	10 to 100
No. 50	5 to 90
No. 100	4 to 30
No. 200	0

**NOTE TO SPECIFIER**

OPTION 1: Use below for re-use of existing, select, or unclassified topsoil.

- C. Topsoil: Approved by Testing Laboratory and Contracting Officer.
1. [Excavated and reused material.] [Select] [Unclassified].
 2. Graded.
 3. Free of roots, rocks larger than 1/2 inch, subsoil, debris, large weeds, and foreign matter.
 4. Conforming to ASTM D 2487 Group Symbol [OH] [PT] [____].

NOTE TO SPECIFIER

OPTION 2: Use below for imported borrow topsoil.

- D. Topsoil: Approved by Testing Laboratory and Contracting Officer.
1. Imported borrow.
 2. Friable loam.
 3. Free of roots, rocks larger than 1/2 inch, subsoil, debris, large weeds, and foreign matter.
 4. Acidity range (pH) of [5.5 to 7.5] [____ to ____].
 5. Containing a minimum of [4] [____] percent and a maximum of [25] [____] percent inorganic matter.
 6. Conforming to ASTM D 2487 Group Symbol [OH] [PT] [____].
 7. Limit decaying matter to [____] percent of total content by volume.
- E. Filter/Drainage Fabrics:
1. Mirafi 140N.
 2. Amoco Style #4546.
 3. DuPont Typar 3341.
- F. Soil Stabilization Materials: Specified in Section 313200.

2.2 SOURCE QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Testing Laboratory services.

NOTE TO SPECIFIER

Edit below for appropriate ASTM test method for the specified material type in accordance with the "Report of Subsurface Investigation."

- B. Testing and Analysis:
1. Soil: Perform in accordance with [ASTM D 698], [ASTM D 1557], [ASTM D 2167], [ASTM D 2922], and [ASTM D 3017].
 2. Aggregate: Perform in accordance with [ASTM D 698], [ASTM D 1557], [ASTM D 2167], [ASTM D 2922], [ASTM D 3017], [ASTM D 4318], and [ASTM C 136].
- C. If tests indicate materials do not meet specified requirements, change material and retest.
- D. Provide materials from same source throughout the Work.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify that existing site soils and soil conditions encountered are as indicated in Geotechnical Data.
 - 2. Verify quantity and type of each soil material before start of material installation.
 - 3. Backfilling:
 - a. Verify imported fill and stockpiled fill to be reused is approved.
 - b. Verify foundation perimeter drainage installation has been inspected and approved.
 - c. Verify foundation or basement walls are braced to support surcharge forces imposed by backfilling operations.
 - d. Verify areas to be backfilled are free of debris, snow, ice, or water, and ground surfaces are not frozen.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Clear site as specified in Section 311000.
- B. Identify required lines, elevations, levels, contours, grades, and datum necessary to perform earthwork operations as indicated on Drawings.
- C. Examine Project Site with Contracting Officer before start of earthwork operations. Identify areas and prepare to brace or shore areas of adjacent property subject to rotation, slumping, or cave-in to prevent dislocation of adjacent soil, pavement, utilities, structures, or other items to remain.
- D. Verify that survey benchmark and intended elevations for Work are as indicated on Drawings. Short form contour designations are intended to be a continuing of the long form bench mark.
- E. Locate, identify, and protect existing utilities to remain and previously installed utilities that may be damaged by construction operations.
 - 1. Notify Contracting Officer and utility company immediately of utilities, not indicated on Drawings, encountered.
 - 2. Maintain existing utilities, active utilities, and drainage systems in operating condition.
 - 3. Comply with utility company requirements and directions of Contracting Officer to keep utilities in operation.
 - 4. Repair damage to utilities as directed by Contracting Officer.
- F. Protect plant life, lawns, fences, existing structures, sidewalks, paving and curbs from earthwork operations, excavating equipment, and vehicular traffic.
- G. Protect benchmarks, property corners, and other survey monuments from damage or displacement. Where markers are required to be removed, provide removal and reinstallation by licensed land surveyor licensed in State where project is located.

- H. Remove material encountered in grading operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and as directed by Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
- I. Prior to placing fill in low areas, such as previously existing creeks, ponds, or lakes, perform following procedures:
 - 1. Drain water out by gravity with ditch having flow line lower than lowest elevation in low area. If drainage cannot be performed by gravity ditch, use pumping equipment.
 - 2. After drainage of low area is complete, remove mulch, mud, debris, and other unsuitable material by using equipment and methods keeping natural soils underlying low areas dry and undisturbed.
 - 3. If proposed for fill, dry muck, mud, and other materials removed from low areas on-site by spreading in thin layers for inspection by Testing Laboratory and Contracting Officer. Place material determined by the Testing Laboratory and contracting Officer suitable for use as fill material into lowest elevation of site filling operation. Do not place under building subgrade pad or paving subgrade. If material is determined by the Testing Laboratory and Contracting Officer to be unsuitable, remove material from site.

3.3 EXCAVATION FOR FILLING AND GRADING

- A. Provide dewatering, drainage, and ground water management to control moisture of soils when performing grading operations during periods of wet weather.
- B. Shore, brace, and drain excavations to maintain excavations safe, secure, and free of water at all times.
- C. Provide protection for workers within trench areas in accordance with local, State, and Federal Occupational Safety and Health requirements and regulations.
- D. Unacceptable Fill Material for Building and Paving Areas: Excavated material containing rock or stone greater than 6 inches in largest dimension.
- E. Acceptable Fill Material:
 - 1. Rock or stone less than 6 inches in largest dimension as fill to within 24 inches of surface of proposed subgrade when mixed with suitable material.
 - 2. Rock or stone less than 2 inches in largest dimension mixed with suitable material as fill within the upper 24 inches of proposed subgrade.

3.4 FILLING AND SUBGRADE PREPARATION

- A. Fill areas to contours and elevations as indicated on Drawings with materials specified herein.
- B. Place fill in continuous lifts as specified herein.
- C. Refer to Section 312300 for filling requirements for structures, utilities, and pavements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- D. Areas Exposed by Excavation or Stripping:
 - 1. Scarify areas exposed by excavation or stripping on which building subgrade preparations are to be performed to minimum [8] [____] inch depth.

2. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557 at minimum moisture content [1] [____] percent below and maximum [3] [____] percent above optimum moisture content.
3. Proofroll to detect any areas of insufficient compaction by making minimum of [2] [____] complete passes with fully-loaded tandem-axle dump truck, or Contracting Officer approved equivalent, in each of two perpendicular directions under supervision and direction of Testing Laboratory and Contracting Officer.
4. Excavate and recompact areas failing to meet specified requirements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- E. Fill Material Placement:
 1. Place in [8] [____] inch maximum lifts compacted minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557 at minimum moisture content of [1] [____] percent below and maximum moisture content [3] [____] percent above optimum moisture content.
- F. Provide material imported from off-site with CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) value equal to or above pavement design subgrade CBR or LBR value indicated on Drawings.

3.5 MAINTENANCE OF SUBGRADE

- A. Verify finished subgrades for conformance to elevations as indicated on Drawings and for specified conditions for subgrade.
- B. Protect subgrade from excessive wheel loading during construction, including concrete trucks and dump trucks.
- C. Remove areas of finished subgrade with compaction density below specified density to depth required as directed by Testing Laboratory and Contracting Officer. Fill removed areas and compact to specified compaction density
- D. Provide surface of subgrade after compaction hard, uniform, smooth, stable, and true to grade and cross-section.

3.6 FINISH GRADING

- A. Grade areas other than paved areas and building pad areas to finish grade elevations or contours as indicated on Drawings including the following:
 1. Excavated areas.
 2. Filled and transition areas.
 3. Landscaped areas.
- B. Provide finish graded areas uniform and smooth, free from rocks, debris, or irregular surface changes with maximum tolerance of 0.10 feet above or below established finish subgrade elevation. Provide graded surfaces sloping uniformly between indicated elevations.
- C. Provide drainage ditches graded with uniform slope to allow drainage without ponding, minimizing potential for erosion. Refer to Section 312500 for procedures to protect slopes and control erosion.
- D. Refer to Section 313200 for soil stabilization using lime, cement, fly ash and geotextile fabric methods for subbase materials.
- E. Refer to Section 329113 for placing topsoil and fine grading in landscaped areas.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Excavation: Notify Testing Laboratory and Contracting Officer for visual inspection of bearing surfaces, 48 hours prior to backfilling and other subsequent Work.

NOTE TO SPECIFIER

Edit below for extent of earthwork testing in accordance with the "Report of Subsurface Investigation." Engineer of Record will determine if Site Testing of earthwork is required based on conditions at Project Site and revise or delete Site Testing accordingly.

- C. Site Tests - Quantity:
 - 1. Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [_____] compaction test for every [2500] [_____] square feet.
 - b. Fill Areas: Minimum [one] [_____] compaction test for every [2500] [_____] square feet for each [8] [_____] inch lift, measured loose.
 - 2. Areas Outside Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [_____] compaction test for every [10,000] [_____] square feet.
 - b. Fill Areas: Minimum [one] [_____] compaction test for every [10,000] [_____] square feet for each [8] [_____] inch lift, measured loose.
- D. Site Tests - Methods:
 - 1. Perform tests on each type of existing on-site or imported off-site material used for compacted fill.
 - a. Moisture and Density Relationship: ASTM D 698 or ASTM D 1557.
 - b. Mechanical Analysis: AASHTO T-88
 - c. Plasticity Index: ASTM D 4318
 - 1) One optimum moisture-maximum density curve for each type of soil encountered.
 - 2) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
 - 2. Perform field density tests for in-place materials in accordance to one of the following standards:
 - a. Sand-Cone Method: ASTM D 1556
 - b. Balloon Method: ASTM D 2167
 - c. Nuclear Method: ASTM D 2922 (Method B-Direct Transmission)
 - 3. Perform a CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) test for each type of imported off-site material in areas where pavement will be placed.
- E. If tests indicate the Work does not meet specified requirements, remove Work, replace, compact, and retest at no additional cost to United States Postal Service.

3.8 PROTECTION

- A. Protect building subgrade pad and building related earthwork from damage by construction operations and erosion.
- B. Prohibit vehicles from entering building subgrade pad area. Vehicles not permitted.
- C. Scarify surface, reshape, and compact areas damaged by construction operations or weather erosion.

END OF SECTION 31 20 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 20 00 00 - CSF EARTH MOVING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Earthwork is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for earthwork into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE. The degree of complexity of this section is related to the amount of earthwork required for a particular Project Site. Engineer of Record editing this section must make decisions on the amount of detail for earthwork requirements remaining in completed section based on conditions of the Project Site.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Preparation of subgrade for building, slabs, walks, pavements, and other sitework.
 2. Rough and finish grading.
 3. Excavation for filling and grading.
 4. Filling and subgrade preparation.
 5. Geotechnical Data
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 013543 - Environmental Procedures: Recycling and reuse of waste materials, and protection of natural resources
 2. Section 024113 - Selective Site Demolition: Demolition and removal of designated existing site items.
 3. Section 311000 - Site Clearing: Clearing site of debris, grass, trees, and other plant life.
 4. Section 312300 - Excavation and Fill: Earthwork for structures, utilities, and pavement.
 5. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.
 6. Section 312500 - Erosion and Sedimentation Controls: Temporary and permanent erosion control and slope protection systems.
 7. Section 312317 - Rock Excavation: Removal of rock during excavation.
 8. Section 329113 - Soil Preparation: Placing topsoil and fine grading.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM C 136 - Method for Sieve Analysis of Fine and Course Aggregates.
 - 2. ASTM D 698 - Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
 - 3. ASTM D 1556 - Test Method for Density of Soil in Place by the Sand-Cone Method.
 - 4. ASTM D 1557 - Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.
 - 5. ASTM D 2167 - Test Method for Density and Unit Weight of Soil In-Place by the Rubber Balloon Method.
 - 6. ASTM D 2487 - Classification of Soils for Engineering Purposes (Unified Soil Classification System).
 - 7. ASTM D 2922 - Test Methods for Density of Soil and Soil- Aggregate in Place by Nuclear Methods (Shallow Depth).
 - 8. ASTM D 3017 - Test Method for Moisture Content of Soil and Rock in Place by Nuclear Methods (Shallow Depth)
 - 9. STM D 4318 - Test Method for Liquid Limit, Plastic Limit, and Plasticity Index of Soils.
- B. American Association of State Highway and Transportation Officials (AASHTO):
 - 1. AASHTO T 88 - Particle Size Analysis of Soils

1.3 DEFINITIONS

- A. Building Area Subgrade Pad: Portion of site directly beneath and within a line 10 feet 0 inches beyond building and appurtenances including limits of any future building expansion areas indicated on Drawings.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings:
 - a. Submit drawings or details indicating proposed alternate earthwork procedures or proposed procedures not indicated in Contract Documents.
 - b. Submit drawings or details of design for use of fabrics or geogrids.
 - 2. Assurance/Control Submittals:
 - a. Material Source: Submit name of imported materials suppliers. Provide materials from same source throughout the Work. Change of source requires Contracting Officer approval.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Test reports on borrow material.
 - 2) Verification of each footing subgrade.
 - 3) Field density test reports.
 - 4) Optimum moisture-maximum density curve for each type of soil encountered.
 - 5) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
 - c. Certificates: Gradation and certification of aggregate material for Testing Laboratory review.
 - d. Qualification Documentation: Submit earthwork company documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Project Record Documents: Accurately record final grade contours, spot elevations, and slope gradients.

1.5 QUALITY ASSURANCE

- A. Qualifications: Earthwork company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Regulatory Requirements: Perform earthwork in accordance with applicable requirements of governing authorities having jurisdiction.
- C. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of earthwork operations, earthwork procedures and coordination with related Work.
 4. Agenda:
 - a. Tour, inspect, and discuss conditions of existing soils and soil substrates.
 - b. Review dust control measures and their requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Survey and Civil sitework Drawings.
 - e. Approve proposed earthwork equipment.
 - f. Approve excess material dump location.
 - g. Approve import material storage location.
 - h. Review and finalize construction schedule related to earthwork and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - i. Review required inspections, testing, certifying, and material usage accounting procedures.
 - j. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - k. Review safety precautions relating to earthwork operations.
 - l. Review environmental procedures.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Existing Conditions:
 1. Geotechnical Data:
 - a. Soils investigation reports and data are not a part of Contract Documents.
 - b. Soil and subsurface investigations were conducted at site by an Independent Testing Laboratory and a report with log of borings prepared. Report was obtained for Architect and Engineer design use only.

NOTE TO SPECIFIER

"Report of Substance Investigation" may not be available for CSF Small. Verify that Report is available from Contracting Officer. If not, delete sub-paragraph below. A copy of the report is available from Contracting Officer.

- c. Soils investigation data is not warranted to indicate actual conditions. U.S. Postal Service, Architect, and Engineer do not assume responsibility for variations in kind, depth, quantity and condition of soils. U.S. Postal Service, Architect and Engineer disclaim responsibility for accuracy, true location, and extent of soils investigation prepared by others; and further disclaim responsibility for interpretation of data by Contractor such as projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
- d. Contractor may make additional test borings and other exploratory operations at no additional cost to U.S. Postal Service. Coordinate tests with Contracting Officer.

2. Classification of Excavations: Contractor acknowledges that Contractor has investigated project site to determine type, quantity, quality, and character of excavation work to be performed. Consider excavation as unclassified excavation, except where Rock Excavation is required. Rock Excavation criteria is as follows:

NOTE TO SPECIFIER

Edit below to indicate conditions for specific site as indicated in "Report of Subsurface Investigation."

- a. Rock Excavation: [Igneous, metamorphic, or sedimentary rock that cannot be removed by rippers or other mechanical methods requiring drilling and blasting] []
 - b. Rock Excavation Indicated by Report of Subsurface Exploration: []
 - c. Rock Excavation Not Indicated in Report of Subsurface Exploration:
 - 1) Notify Contracting Officer immediately, and in writing, prior to start of Rock Excavation operations.
 - 2) Contracting Officer will visit Project Site, verify requirement for Rock Excavation, determine estimated quantity Rock Excavation required, and provide Contractor written authorization to proceed.
 - 3) Contracting Officer will verify measurements and quantities of actual Rock Excavation required and make adjustments to Contract as specified in Section 012600.
 - d. Rock excavation specified in Section 312317.
3. Existing Utilities: Contact local utility companies and make arrangements to obtain utility company location and marking service prior to start of Earthwork operations.
- a. Locate existing underground utilities in areas of Work. If utilities are to remain in place, provide means of support and protection during Earthwork operations.
 - 1) Pothole and locate existing underground utilities at locations to assure that no conflict with Work of this Contract will occur and required clearance is available to prevent damage to existing utilities.
 - 2) Perform potholing minimum 10 days before start of excavation or underground work.
 - b. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility company and Contracting Officer immediately for directions.
 - c. Coordinate with Contracting Officer and utility companies to keep existing utility services and facilities in operation.
 - d. Repair damaged utilities to satisfaction of utility company, at no additional cost to U.S. Postal Service.
 - e. Do not interrupt existing utilities serving facilities occupied and used by U.S. Postal Service or others, during occupied hours, except when permitted in writing by Contracting Officer and then only after acceptable temporary utility services have been provided and approved by Contracting Officer.
 - f. Demolish and completely remove from site existing underground utilities indicated on Drawings to be removed as specified in Section 024113. Coordinate with utility companies for shut-off of services if lines are active.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

The following is for information only; from ASTM D 2487 Table 1 "Soil Classification Chart."

COARSE-GRAINED SOILS		FINE-GRAINED SOILS	
GW	Well-Graded Gravel	CL	Lean Clay
GP	Poorly Graded Gravel	ML	Silt

GM	Silty Gravel	OL	Organic Clay or Silt
GC	Clayey Gravel		
SW	Well-Graded Sand	CH	Fat Clay
SP	Poorly Graded Sand	MH	Elastic Silt
SM	Silty Sand	OH	Organic Clay or Silt
SC	Clayey Sand	PT	Peat

2.1 MATERIALS

NOTE TO SPECIFIER

Edit below for appropriate subsoil type.

- A. Subsoil: Approved by Testing Laboratory and Contracting Officer.
1. [Excavated and re-used material] [Imported Borrow] [Select or local borrow] [Structural].
 2. Graded.
 3. Free of lumps larger than [3] [____] inches, rocks larger than [2] [____] inches, and debris.
 4. Conforming to ASTM D 2487 [CL] [OL] [____].

NOTE TO SPECIFIER

Edit below for appropriate aggregate type.

- B. Aggregate: Approved by Testing Laboratory and Contracting Officer.
1. Coarse Aggregate: [Recycled Concrete] [Coarse Stone] [Crushed] [Gravel] [Pit Run] [Angular Crushed] [Natural] [Washed] [____] stone; free of shale, clay, friable material and debris; graded in accordance with ASTM D 2487 Group Symbol [GW] [GP] [GM] [GC]; within the following limits:

SIEVE SIZE	PERCENT PASSING
2 inches	100
1 inch	95
3/4 inch	95 to 100
5/8 inch	75 to 100
3/8 inch	55 to 85
No. 4	35 to 60
No. 16	15 to 35
No. 40	10 to 25
No. 200	5 to 10
 2. Pea Gravel: Natural Stone; washed, free of clay, shale, organic matter; graded in accordance with ASTM D 2487 Group Symbol [GM] [GC] [____]; to the following limits:
 - a. Minimum Size: 1/4 inch.
 - b. Maximum Size: 5/8 inch.
 3. Fine Sand: Natural river or bank sand; washed; free of silt, clay, loam, friable or soluble materials, and organic matter; graded in accordance with ASTM D 2487 Group Symbol [SW] [SP] [SM] [SC] [____]; within the following limits:

SIEVE SIZE	PERCENT PASSING
No. 4	100
No. 14	10 to 100
No. 50	5 to 90
No. 100	4 to 30
No. 200	0

**NOTE TO SPECIFIER**

OPTION 1: Use below for re-use of existing, select, or unclassified topsoil.

- C. Topsoil: Approved by Testing Laboratory and Contracting Officer.
1. [Excavated and reused material.] [Select] [Unclassified].
 2. Graded.
 3. Free of roots, rocks larger than 1/2 inch, subsoil, debris, large weeds, and foreign matter.
 4. Conforming to ASTM D 2487 Group Symbol [OH] [PT] [____].

NOTE TO SPECIFIER

OPTION 2: Use below for imported borrow topsoil.

- D. Topsoil: Approved by Testing Laboratory and Contracting Officer.
1. Imported borrow.
 2. Friable loam.
 3. Free of roots, rocks larger than 1/2 inch, subsoil, debris, large weeds, and foreign matter.
 4. Acidity range (pH) of [5.5 to 7.5] [____ to ____].
 5. Containing a minimum of [4] [____] percent and a maximum of [25] [____] percent inorganic matter.
 6. Conforming to ASTM D 2487 Group Symbol [OH] [PT] [____].
 7. Limit decaying matter to [____] percent of total content by volume.
- E. Filter/Drainage Fabrics:
1. Mirafi 140N.
 2. Amoco Style #4546.
 3. DuPont Typar 3341.
- F. Soil Stabilization Materials: Specified in Section 313200.

2.2 SOURCE QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Testing Laboratory services.

NOTE TO SPECIFIER

Edit below for appropriate ASTM test method for the specified material type in accordance with the "Report of Subsurface Investigation."

- B. Testing and Analysis:
1. Soil: Perform in accordance with [ASTM D 698], [ASTM D 1557], [ASTM D 2167], [ASTM D 2922], and [ASTM D 3017].
 2. Aggregate: Perform in accordance with [ASTM D 698], [ASTM D 1557], [ASTM D 2167], [ASTM D 2922], [ASTM D 3017], [ASTM D 4318], and [ASTM C 136].
- C. If tests indicate materials do not meet specified requirements, change material and retest.
- D. Provide materials from same source throughout the Work.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify that existing site soils and soil conditions encountered are as indicated in Geotechnical Data.
 - 2. Verify quantity and type of each soil material before start of material installation.
 - 3. Backfilling:
 - a. Verify imported fill and stockpiled fill to be reused is approved.
 - b. Verify foundation perimeter drainage installation has been inspected and approved.
 - c. Verify foundation or basement walls are braced to support surcharge forces imposed by backfilling operations.
 - d. Verify areas to be backfilled are free of debris, snow, ice, or water, and ground surfaces are not frozen.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Clear site as specified in Section 311000.
- B. Identify required lines, elevations, levels, contours, grades, and datum necessary to perform earthwork operations as indicated on Drawings.
- C. Examine Project Site with Contracting Officer before start of earthwork operations. Identify areas and prepare to brace or shore areas of adjacent property subject to rotation, slumping, or cave-in to prevent dislocation of adjacent soil, pavement, utilities, structures, or other items to remain.
- D. Verify that survey benchmark and intended elevations for Work are as indicated on Drawings. Short form contour designations are intended to be a continuing of the long form bench mark.
- E. Locate, identify, and protect existing utilities to remain and previously installed utilities that may be damaged by construction operations.
 - 1. Notify Contracting Officer and utility company immediately of utilities, not indicated on Drawings, encountered.
 - 2. Maintain existing utilities, active utilities, and drainage systems in operating condition.
 - 3. Comply with utility company requirements and directions of Contracting Officer to keep utilities in operation.
 - 4. Repair damage to utilities as directed by Contracting Officer.
- F. Protect plant life, lawns, fences, existing structures, sidewalks, paving and curbs from earthwork operations, excavating equipment, and vehicular traffic.
- G. Protect benchmarks, property corners, and other survey monuments from damage or displacement. Where markers are required to be removed, provide removal and reinstallation by licensed land surveyor licensed in State where project is located.

- H. Remove material encountered in grading operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and as directed by Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
- I. Prior to placing fill in low areas, such as previously existing creeks, ponds, or lakes, perform following procedures:
 - 1. Drain water out by gravity with ditch having flow line lower than lowest elevation in low area. If drainage cannot be performed by gravity ditch, use pumping equipment.
 - 2. After drainage of low area is complete, remove mulch, mud, debris, and other unsuitable material by using equipment and methods keeping natural soils underlying low areas dry and undisturbed.
 - 3. If proposed for fill, dry muck, mud, and other materials removed from low areas on-site by spreading in thin layers for inspection by Testing Laboratory and Contracting Officer. Place material determined by the Testing Laboratory and contracting Officer suitable for use as fill material into lowest elevation of site filling operation. Do not place under building subgrade pad or paving subgrade. If material is determined by the Testing Laboratory and Contracting Officer to be unsuitable, remove material from site.

3.3 EXCAVATION FOR FILLING AND GRADING

- A. Provide dewatering, drainage, and ground water management to control moisture of soils when performing grading operations during periods of wet weather.
- B. Shore, brace, and drain excavations to maintain excavations safe, secure, and free of water at all times.
- C. Provide protection for workers within trench areas in accordance with local, State, and Federal Occupational Safety and Health requirements and regulations.
- D. Unacceptable Fill Material for Building and Paving Areas: Excavated material containing rock or stone greater than 6 inches in largest dimension.
- E. Acceptable Fill Material:
 - 1. Rock or stone less than 6 inches in largest dimension as fill to within 24 inches of surface of proposed subgrade when mixed with suitable material.
 - 2. Rock or stone less than 2 inches in largest dimension mixed with suitable material as fill within the upper 24 inches of proposed subgrade.

3.4 FILLING AND SUBGRADE PREPARATION

- A. Fill areas to contours and elevations as indicated on Drawings with materials specified herein.
- B. Place fill in continuous lifts as specified herein.
- C. Refer to Section 312300 for filling requirements for structures, utilities, and pavements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- D. Areas Exposed by Excavation or Stripping:
 - 1. Scarify areas exposed by excavation or stripping on which building subgrade preparations are to be performed to minimum [8] [____] inch depth.

2. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557 at minimum moisture content [1] [____] percent below and maximum [3] [____] percent above optimum moisture content.
3. Proofroll to detect any areas of insufficient compaction by making minimum of [2] [____] complete passes with fully-loaded tandem-axle dump truck, or Contracting Officer approved equivalent, in each of two perpendicular directions under supervision and direction of Testing Laboratory and Contracting Officer.
4. Excavate and recompact areas failing to meet specified requirements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- E. Fill Material Placement:
 1. Place in [8] [____] inch maximum lifts compacted minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557 at minimum moisture content of [1] [____] percent below and maximum moisture content [3] [____] percent above optimum moisture content.
- F. Provide material imported from off-site with CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) value equal to or above pavement design subgrade CBR or LBR value indicated on Drawings.

3.5 MAINTENANCE OF SUBGRADE

- A. Verify finished subgrades for conformance to elevations as indicated on Drawings and for specified conditions for subgrade.
- B. Protect subgrade from excessive wheel loading during construction, including concrete trucks and dump trucks.
- C. Remove areas of finished subgrade with compaction density below specified density to depth required as directed by Testing Laboratory and Contracting Officer. Fill removed areas and compact to specified compaction density
- D. Provide surface of subgrade after compaction hard, uniform, smooth, stable, and true to grade and cross-section.

3.6 FINISH GRADING

- A. Grade areas other than paved areas and building pad areas to finish grade elevations or contours as indicated on Drawings including the following:
 1. Excavated areas.
 2. Filled and transition areas.
 3. Landscaped areas.
- B. Provide finish graded areas uniform and smooth, free from rocks, debris, or irregular surface changes with maximum tolerance of 0.10 feet above or below established finish subgrade elevation. Provide graded surfaces sloping uniformly between indicated elevations.
- C. Provide drainage ditches graded with uniform slope to allow drainage without ponding, minimizing potential for erosion. Refer to Section 312500 for procedures to protect slopes and control erosion.
- D. Refer to Section 313200 for soil stabilization using lime, cement, fly ash and geotextile fabric methods for subbase materials.
- E. Refer to Section 329113 for placing topsoil and fine grading in landscaped areas.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Excavation: Notify Testing Laboratory and Contracting Officer for visual inspection of bearing surfaces, 48 hours prior to backfilling and other subsequent Work.

NOTE TO SPECIFIER

Edit below for extent of earthwork testing in accordance with the "Report of Subsurface Investigation." Engineer of Record will determine if Site Testing of earthwork is required based on conditions at Project Site and revise or delete Site Testing accordingly.

- C. Site Tests - Quantity:
1. Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [] compaction test for every [2500] [] square feet.
 - b. Fill Areas: Minimum [one] [] compaction test for every [2500] [] square feet for each [8] [] inch lift, measured loose.
 2. Areas Outside Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [] compaction test for every [10,000] [] square feet.
 - b. Fill Areas: Minimum [one] [] compaction test for every [10,000] [] square feet for each [8] [] inch lift, measured loose.
- D. Site Tests - Methods:
1. Perform tests on each type of existing on-site or imported off-site material used for compacted fill.
 - a. Moisture and Density Relationship: ASTM D 698 or ASTM D 1557.
 - b. Mechanical Analysis: AASHTO T-88
 - c. Plasticity Index: ASTM D 4318
 - 1) One optimum moisture-maximum density curve for each type of soil encountered.
 - 2) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
 2. Perform field density tests for in-place materials in accordance to one of the following standards:
 - a. Sand-Cone Method: ASTM D 1556
 - b. Balloon Method: ASTM D 2167
 - c. Nuclear Method: ASTM D 2922 (Method B-Direct Transmission)
 3. Perform a CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) test for each type of imported off-site material in areas where pavement will be placed.
- E. If tests indicate the Work does not meet specified requirements, remove Work, replace, compact, and retest at no additional cost to United States Postal Service.

3.8 PROTECTION

- A. Protect building subgrade pad and building related earthwork from damage by construction operations and erosion.
- B. Prohibit vehicles from entering building subgrade pad area. Vehicles not permitted.
- C. Scarify surface, reshape, and compact areas damaged by construction operations or weather erosion.

END OF SECTION 31 20 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 23 00 00 - MPF EXCAVATION AND FILL

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Excavation and Fill is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for excavation and fill into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE. The degree of complexity of this section is related to the amount of excavation and fill required for a particular Project Site. Engineer of Record editing this section must make decisions on the amount of detail for excavation and fill requirements remaining in completed section based on conditions of the Project Site.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Excavating and backfilling for structures, utilities, and pavement.
 - 2. Pipe bedding.
 - 3. Compacting fill materials.
 - 4. Borings and casings under roads.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Cutting, filling, and grading for proposed site improvements.
 - 2. Section 312317 - Rock Excavation: Removal of rock during excavation.
 - 3. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D698 - Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
 - 2. ASTM D1557 - Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.
- B. American Association of State Highway and Transportation Officials (AASHTO):

1. AASHTO T 180 - Moisture-Density relations of Soils Using a 10 Pound Rammer and an 18 Inch Drop.

C. American Water Works Association (AWWA):

1. AWWA C 200 - Steel Water Pipe, 6 Inch and Larger.
2. AWWA C 206 - Field Welding of Steel Water Pipe.

D. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electric code.

1.3 DEFINITIONS

- A. Building Area Subgrade Pad: Portion of site directly beneath and within a line 10 feet beyond building and appurtenances including limits of any future building expansion areas indicated on Drawings.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings:
 - a. Submit drawings or details indicating proposed alternate earthwork procedures or proposed procedures not indicated in Contract Documents.
 - b. Shop Drawings or details pertaining to Site Utilities are not required unless required by regulatory authorities or unless use of materials, methods, equipment, or procedures are contrary to Drawings or these specifications are proposed. Do not perform work until required shop drawings have been approved by Contracting Officer.
2. Assurance/Control Submittals:
 - a. Material Source: Submit name of imported materials suppliers. Provide materials from same source throughout the work. Change of source requires Contracting Officer approval.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor:
 - 1) Test reports on borrow material.
 - 2) Verification of each footing subgrade.
 - 3) Field density test reports.
 - 4) Optimum moisture-maximum density curve for each type of soil encountered.
 - 5) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
 - c. Certificates: Gradation and certification of aggregate material for Testing Laboratory review.
 - d. Qualification Documentation: Submit earthwork company documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Project Record Documents: Accurately record the following.
 - a. Spot elevations for building area subgrade pad.
 - b. Location of existing utilities remaining, re-routed utilities, new utilities by horizontal dimensions, elevations or inverts, and slope gradients.

1.5 QUALITY ASSURANCE

- A. Qualifications: Earthwork company specializing in performing the Work of this Section with minimum 5 years documented experience.

- B. Regulatory Requirements: Perform earthwork in accordance with applicable requirements of governing authorities having jurisdiction.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Existing Conditions: Requirements specified in Section 312000.
- B. Existing Utilities: Requirements specified in Section 312000.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stockpiled on-site fill and backfill material specified in Section 312000, tested by Testing Laboratory and approved by Contracting Officer.
- B. Imported off-site fill and backfill material specified in Section 312000, tested by Testing Laboratory and approved by Contracting Officer.
- C. Pipe Bedding Material: Processed sand and gravel free from clay lumps, organic, or other deleterious material complying with the following gradation requirements:

SIEVE SIZE	PERCENT PASSING
1 Inch	100
3/4 Inch	90 to 100
3/8 Inch	20 to 55
No. 4	0 to 10
No. 8	0 to 5

- D. Steel Casing Pipe: AWWA C 200, minimum grade B; size and wall thickness as indicated on Drawings.
- E. Stabilization Fabrics and Geogrids:
 - 1. Mirafi 500X or 600X.
 - 2. Amoco Style #2002 Woven.
 - 3. Reemay Typar 3401 and 3601.
 - 4. Trevira S1114 and S1120.
 - 5. Tensar 1100 and 1200.
- F. Filter/Drainage Fabrics:
 - 1. Mirafi 140 N.
 - 2. Amoco Style #4546.
 - 3. Reemay Typar 3341.
 - 4. Carthage Mills, Carthage 6%.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Identify required lines, elevations, levels, contours, grades, and datum necessary to perform earthwork operations as indicated on Drawings.
- B. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings.
- C. Locate, identify, and protect existing utilities to remain and previously installed utilities that may be damaged by construction operations.
 - 1. Notify Contracting Officer, municipality, and utility company immediately of utilities, not indicated on Drawings, encountered.
 - 2. Maintain existing utilities, active utilities, and drainage systems in operating condition.
 - 3. Comply with utility company requirements and directions of Construction Manager to keep utilities in operation.
 - 4. Repair damage to utilities as directed by Contracting Officer.
- D. Protect plant life, lawns, fences, existing structures, sidewalks, paving and curbs from earthwork operations, excavating equipment, and vehicular traffic.
- E. Protect bench marks, property corners, and other survey monuments from damage or displacement. Where markers are required to be removed, provide removal and reinstallation by licensed land surveyor licensed in State where project is located.
- F. Overexcavate areas of building subgrade found consisting of unsuitable materials as determined by Testing Laboratory and Contracting Officer. Prepare, fill with suitable material, and compact as specified. Stabilize areas as specified in Section 313200.

3.3 EXCAVATION

- A. Excavation for filling and grading specified in Section 312000.
- B. Rock excavation specified in Section 312317.
- C. Excavation for Structures:
 - 1. Excavate subbase for building foundations, slabs-on-grade and site structures to width and depth indicated on Drawings.
 - a. Cut excavation banks vertically.
 - b. Remove rocks, loose soil, and debris from bottom of excavation.
 - c. Overexcavate wet or unsuitable soil from bottom of excavation.
 - d. Provide stable base for concrete reinforcing installation and concrete placement.
 - e. Hand trim to indicated lines and grades just prior to concrete reinforcing installation.
 - 2. Provide protection for workers within trench areas in accordance with local, state, and national Occupational Safety and Health requirements and regulations.
 - a. Trenches minimum 4 feet in depth.

3. During excavation, stockpile materials suitable for backfilling away from excavation to prevent overloading, slides, or cave-ins.
 4. Remove material encountered in excavating operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
 5. Prevent surface water from flowing into excavations by temporary grading or other approved methods.
 - a. Do not allow water to accumulate in excavations.
 - b. Remove accumulated water in excavations.
 - c. Provide and maintain pumps, well points, sumps, suction and discharge lines, and other dewatering system components required to remove water from excavations.
- D. Excavation for Utilities:
1. Excavate trench width and depth required for laying pipe, conduit, or cable. Cut trench banks vertical. Remove stones from bottom of trench as required to avoid point-bearing. Over excavate wet or unstable soil, if encountered, from trench bottom as required to provide suitable base for continuous and uniform bedding.
 2. During excavation, stockpile materials suitable for backfilling away from trench bank to prevent overloading, slides, or cave-ins.
 3. Remove material encountered in trenching operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
 4. Prevent surface water from flowing into trenches or other excavations by temporary grading or other approved methods.
 - a. Do not allow water to accumulate in excavations.
 - b. Remove accumulated water in excavations.
 - c. Provide and maintain pumps, well points, sumps, suction and discharge lines and other dewatering system components required to remove water from excavations.
 5. Open cut excavation using trenching machine or backhoe. Do not use dirt clods for backfill created by use of machines other than ladder or wheel-type trenching machines.
 6. Grade trench bottom to provide uniform bearing and support for each section of pipe on bedding material along entire trench length, except where necessary to excavate for bell holes, proper sealing of pipe joints, or other required connections. Dig bell holes and depressions for joints after trench bottom has been graded. Do not excavate trench deeper, longer, or wider than required to make proper joint connection.
 7. Excavate trench width below the top of pipe minimum 300 mm wide and maximum 460 mm wider than outside surface of pipe or conduit installed to elevations and grades indicated on Drawings. Excavate trench width for other pipe, conduit, or cable to least practical width allowing for proper compaction of trench backfill.
 8. Excavate trench depth measured from finished grade or paved surface to the following requirements or applicable codes and ordinances:
 - a. Water Mains: 30 inches to top of pipe barrel or 6 inches below frost line established by local building official, whichever is deeper.
 - b. Sanitary Sewer: Elevations, and grades indicated on Drawings.
 - c. Storm Sewer: Depths, elevations, and grades indicated on Drawings.
 - d. Electrical Conduits: 24 inches minimum to top of conduit or as required by NFPA 70, or local utility company requirements, whichever is deeper.
 - e. TV Conduits: 18 inches minimum to top of conduit or as required by local utility company, whichever is deeper.
 - f. Telephone Conduits: 18 inches minimum to top of conduit, or as required by local utility company, whichever is deeper.
 - g. Gas Mains and Service: 30 inches minimum to top of pipe, or as required by local utility company, whichever is deeper.

9. Provide shoring, sheeting, and bracing, as required, in trenches and other excavations where protection of construction personnel is required. Sheeting may be removed after sufficient backfilling to protect against damaging or injurious caving.

E. Excavation for Pavement:

1. Excavate roadway and pavement areas to line and grade indicated on Drawings.
2. Stockpile excavated material suitable for backfilling on-site.
3. Remove excavated materials not required or not suitable for backfill from site.
4. Overexcavate areas of pavement subgrade found to contain unsuitable material. Prepare, fill with suitable material, and compact as specified. Stabilize areas as specified in Section 313200.

3.4 PIPE BEDDING

- A. Excavate trenches, for pipe or conduit installed to elevations indicated on Drawings, 4 inches below bottom of pipe and to width as specified. Place 4 inches of bedding material, compact in bottom of trench, and shape to conform to lower portion of pipe barrel. After pipe installation, backfill and compact to top of trench.
- B. Place geotextile fabric as indicated on Drawings.

3.5 BACKFILLING AND SUBGRADE PREPARATION

- A. Backfilling:
 1. Verify that imported off-site fill and stockpiled on-site fill is tested and approved.
 2. Verify that foundation perimeter drainage installation is inspected and approved.
 3. Verify that foundation or below grade structure walls are braced to support surcharge forces imposed by backfilling operations.
 4. Verify that backfill areas are free of debris, snow, ice, or water, and that ground surfaces are not frozen.
- B. Prepare building area subgrade pad in accordance with foundation subsurface preparation information indicated on Drawings and specified herein. Do not use rock larger than 6 inches for building subgrade fill.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- C. Areas Exposed by Excavation or Stripping:
 1. Scarify areas exposed by excavation or stripping on which building subgrade preparations are to be performed to minimum [8] [____] inch depth.
 2. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D1557 (Modified Proctor) at minimum moisture content [1] [____] percent below and maximum [3] [____] percent above optimum moisture content.
 3. Proofroll to detect any areas of insufficient compaction by making minimum of 2 complete passes with fully-loaded tandem-axle dump truck, or Contracting Officer approved equivalent, in each of two perpendicular directions under supervision and direction of Contracting Officer.
 4. Excavate and recompact areas failing to meet specified requirements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, moisture content, and plasticity index in accordance with the "Report of Subsurface Investigation."

D. Fill Material Placement:

1. Place in [8] [____] inch maximum lifts compacted minimum [95] [____] percent optimum density in accordance with ASTM D1557 (Modified Proctor) at minimum moisture content of [1] [____] percent below and maximum moisture content [3] [____] percent above optimum moisture content.
2. Maximum allowable values for plasticity index (PI) and liquid limit (LL) of suitable fill materials to be used as fill in the specified areas, unless indicated otherwise on Drawings:

a. LOCATION	PI	LL
b. Building area, below upper 4 feet	[30] [____]	[40] [____]
c. of proposed subgrade elevation		
d. Building area, upper 4 feet	[20] [____]	[30] [____]
e. of proposed subgrade elevation		
f. Paving area, below upper 4 feet	[30] [____]	[40] [____]
g. of proposed subgrade elevation		
h. Paving area, upper 4 feet	[20] [____]	[30] [____]
i. of proposed subgrade elevation		

- E. Provide material imported from off-site with CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) value equal to or above pavement design subgrade CBR or LBR value indicated on Drawings.

3.6 MAINTENANCE OF SUBGRADE

- A. Verify finished subgrades for elevations indicated on Drawings and specified conditions for construction above subgrade.
- B. Protect subgrade from excessive wheel loading during construction, including concrete trucks and dump trucks.
- C. Remove areas of finished subgrade found to have insufficient compaction density. Replace in a manner that will comply with compaction requirements as directed by Contracting Officer. Provide hard, uniform, smooth, stable surface, true to grade and cross-section after completion of compaction.

3.7 BORINGS AND CASINGS UNDER ROADS

- A. Install street, road, or highway crossings for utility mains by jacking and boring method in accordance with requirements of governing authorities having jurisdiction.
- B. Locate approach pits and trenches within right- of-way of street, road, highway, or railroad distance from paving permitting traffic to pass without interference. Tamp backfill for approach pits and trenches within right- of-way in layers not greater than 6 inches thick for entire length and depth of trench or pit. Compact backfill to 95 percent of maximum density obtained at optimum moisture as determined by AASHTO T 180, Method A (Modified Proctor). Mechanical tampers may be used after cover of 6 inches has been obtained over top of pipe barrel.
- C. Use commercial type boring rig providing hole bored to proper alignment and grade within 2 inches of same diameter as largest outside joint diameter of pipe installed. Install pipe in hole immediately after bore has been made, and in no instance shall hole be left open while unattended.
- D. Clean and prime interior and exterior of casing pipe; apply two coats of asphalt in accordance with requirements of governing authorities having jurisdiction.
- E. Butt weld steel casing. Weld using full penetration single butt-welds in accordance with AWWA C 206.

- F. Install casing and utility pipe with end seals, vent pipe, and other special equipment in accordance with requirements of governing authorities having jurisdiction.
- G. Paving Damage Caused by Contractor Construction Operations:
 - 1. Repair paving where cracks occur on either side of line where pipe was installed by removing damaged paving between cracks, sawcutting paving in straight line at a point sufficiently beyond location of cracks for repair, and placing new paving to match existing in areas where paving removed.
 - 2. Make repairs to the satisfaction of paving owner.
 - 3. Make repairs at no additional cost to United States Postal Service within one year from Date of Substantial Completion.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Excavation: Notify Testing Laboratory and Contracting Officer for visual inspection of bearing surfaces, 48 hours prior to backfilling and other subsequent Work.

NOTE TO SPECIFIER

Edit below for extent of earthwork testing accordance with the "Report of Subsurface Investigation." Engineer of Record will determine if Site Testing of earthwork is required based on conditions at Project Site and revise or delete Site Testing accordingly.

- C. Site Tests:
 - 1. Specified in Section 312000.
 - 2. Tests for Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [____] compaction test for every [2500] [____] square feet.
 - b. Fill Areas: Minimum [one] [____] compaction test for every [2500] [____] square feet for each [8] [____] inch lift measured loose.
 - 3. Tests for areas outside building area subgrade pad specified in Section 312000.
- D. If tests indicate the Work does not meet specified requirements, remove Work, replace, compact and retest at no additional cost to United States Postal Service.

3.9 PROTECTION

- A. Protect building subgrade pad and building related earthwork from damage by construction operations and erosion.
- B. Prohibit vehicles from entering building subgrade pad area. Vehicles not permitted.
- C. Scarify surface, reshape, and compact areas damaged by construction operations or weather erosion.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 31 23 00 00

SECTION 31 23 00 00 - CSF EXCAVATION AND FILL

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Excavation and Fill is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for excavation and fill into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE. The degree of complexity of this section is related to the amount of excavation and fill required for a particular Project Site. Engineer of Record editing this section must make decisions on the amount of detail for excavation and fill requirements remaining in completed section based on conditions of the Project Site.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Excavating and backfilling for structures, utilities, and pavement.
 2. Pipe bedding.
 3. Compacting fill materials.
 4. Borings and casings under roads.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 312000 - Earth Moving: Cutting, filling, and grading for proposed site improvements.
 2. Section 312317 - Rock Excavation: Removal of rock during excavation.
 3. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM D698 - Test Method for Laboratory Compaction Characteristics of Soil Using Standard Effort.
 2. ASTM D1557 - Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort.
- B. American Association of State Highway and Transportation Officials (AASHTO):

1. AASHTO T 180 - Moisture-Density relations of Soils Using a 10 Pound Rammer and an 18 Inch Drop.

C. American Water Works Association (AWWA):

1. AWWA C 200 - Steel Water Pipe, 6 Inch and Larger.
2. AWWA C 206 - Field Welding of Steel Water Pipe.

D. National Fire Protection Association (NFPA):

1. NFPA 70 - National Electric code.

1.3 DEFINITIONS

- A. Building Area Subgrade Pad: Portion of site directly beneath and within a line 10 feet beyond building and appurtenances including limits of any future building expansion areas indicated on Drawings.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings:

- a. Submit drawings or details indicating proposed alternate earthwork procedures or proposed procedures not indicated in Contract Documents.
- b. Shop Drawings or details pertaining to Site Utilities are not required unless required by regulatory authorities or unless use of materials, methods, equipment, or procedures are contrary to Drawings or these specifications are proposed. Do not perform work until required shop drawings have been approved by Contracting Officer.

2. Assurance/Control Submittals:

- a. Material Source: Submit name of imported materials suppliers. Provide materials from same source throughout the work. Change of source requires Contracting Officer approval.
- b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor:
 - 1) Test reports on borrow material.
 - 2) Verification of each footing subgrade.
 - 3) Field density test reports.
 - 4) Optimum moisture-maximum density curve for each type of soil encountered.
 - 5) Report of actual unconfined compressive strength and bearing tests/results for each strata tested. Give "three-dimensional" description of each test location.
- c. Certificates: Gradation and certification of aggregate material for Testing Laboratory review.
- d. Qualification Documentation: Submit earthwork company documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Project Record Documents: Accurately record the following.

- a. Spot elevations for building area subgrade pad.
- b. Location of existing utilities remaining, re-routed utilities, new utilities by horizontal dimensions, elevations or inverts, and slope gradients.

1.5 QUALITY ASSURANCE

- A. Qualifications: Earthwork company specializing in performing the Work of this Section with minimum 5 years documented experience.

- B. Regulatory Requirements: Perform earthwork in accordance with applicable requirements of governing authorities having jurisdiction.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Existing Conditions: Requirements specified in Section 312000.
- B. Existing Utilities: Requirements specified in Section 312000.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Stockpiled on-site fill and backfill material specified in Section 312000, tested by Testing Laboratory and approved by Contracting Officer.
- B. Imported off-site fill and backfill material specified in Section 312000, tested by Testing Laboratory and approved by Contracting Officer.
- C. Pipe Bedding Material: Processed sand and gravel free from clay lumps, organic, or other deleterious material complying with the following gradation requirements:

SIEVE SIZE	PERCENT PASSING
1 Inch	100
3/4 Inch	90 to 100
3/8 Inch	20 to 55
No. 4	0 to 10
No. 8	0 to 5

- D. Steel Casing Pipe: AWWA C 200, minimum grade B; size and wall thickness as indicated on Drawings.
- E. Stabilization Fabrics and Geogrids:
 - 1. Mirafi 500X or 600X.
 - 2. Amoco Style #2002 Woven.
 - 3. Reemay Typar 3401 and 3601.
 - 4. Trevira S1114 and S1120.
 - 5. Tensar 1100 and 1200.
- F. Filter/Drainage Fabrics:
 - 1. Mirafi 140 N.
 - 2. Amoco Style #4546.
 - 3. Reemay Typar 3341.
 - 4. Carthage Mills, Carthage 6%.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Identify required lines, elevations, levels, contours, grades, and datum necessary to perform earthwork operations as indicated on Drawings.
- B. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings.
- C. Locate, identify, and protect existing utilities to remain and previously installed utilities that may be damaged by construction operations.
 - 1. Notify Contracting Officer, municipality, and utility company immediately of utilities, not indicated on Drawings, encountered.
 - 2. Maintain existing utilities, active utilities, and drainage systems in operating condition.
 - 3. Comply with utility company requirements and directions of Construction Manager to keep utilities in operation.
 - 4. Repair damage to utilities as directed by Contracting Officer.
- D. Protect plant life, lawns, fences, existing structures, sidewalks, paving and curbs from earthwork operations, excavating equipment, and vehicular traffic.
- E. Protect bench marks, property corners, and other survey monuments from damage or displacement. Where markers are required to be removed, provide removal and reinstallation by licensed land surveyor licensed in State where project is located.
- F. Overexcavate areas of building subgrade found consisting of unsuitable materials as determined by Testing Laboratory and Contracting Officer. Prepare, fill with suitable material, and compact as specified. Stabilize areas as specified in Section 313200.

3.3 EXCAVATION

- A. Excavation for filling and grading specified in Section 312000.
- B. Rock excavation specified in Section 312317.
- C. Excavation for Structures:
 - 1. Excavate subbase for building foundations, slabs-on-grade and site structures to width and depth indicated on Drawings.
 - a. Cut excavation banks vertically.
 - b. Remove rocks, loose soil, and debris from bottom of excavation.
 - c. Overexcavate wet or unsuitable soil from bottom of excavation.
 - d. Provide stable base for concrete reinforcing installation and concrete placement.
 - e. Hand trim to indicated lines and grades just prior to concrete reinforcing installation.
 - 2. Provide protection for workers within trench areas in accordance with local, state, and national Occupational Safety and Health requirements and regulations.
 - a. Trenches minimum 4 feet in depth.

3. During excavation, stockpile materials suitable for backfilling away from excavation to prevent overloading, slides, or cave-ins.
 4. Remove material encountered in excavating operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
 5. Prevent surface water from flowing into excavations by temporary grading or other approved methods.
 - a. Do not allow water to accumulate in excavations.
 - b. Remove accumulated water in excavations.
 - c. Provide and maintain pumps, well points, sumps, suction and discharge lines, and other dewatering system components required to remove water from excavations.
- D. Excavation for Utilities:
1. Excavate trench width and depth required for laying pipe, conduit, or cable. Cut trench banks vertical. Remove stones from bottom of trench as required to avoid point-bearing. Over excavate wet or unstable soil, if encountered, from trench bottom as required to provide suitable base for continuous and uniform bedding.
 2. During excavation, stockpile materials suitable for backfilling away from trench bank to prevent overloading, slides, or cave-ins.
 3. Remove material encountered in trenching operations that is unsuitable for backfilling, subgrade or foundation purposes as determined by Testing Laboratory and Contracting Officer. Dispose of materials off-site in an approved manner in accordance with requirements of authorities having jurisdiction.
 4. Prevent surface water from flowing into trenches or other excavations by temporary grading or other approved methods.
 - a. Do not allow water to accumulate in excavations.
 - b. Remove accumulated water in excavations.
 - c. Provide and maintain pumps, well points, sumps, suction and discharge lines and other dewatering system components required to remove water from excavations.
 5. Open cut excavation using trenching machine or backhoe. Do not use dirt clods for backfill created by use of machines other than ladder or wheel-type trenching machines.
 6. Grade trench bottom to provide uniform bearing and support for each section of pipe on bedding material along entire trench length, except where necessary to excavate for bell holes, proper sealing of pipe joints, or other required connections. Dig bell holes and depressions for joints after trench bottom has been graded. Do not excavate trench deeper, longer, or wider than required to make proper joint connection.
 7. Excavate trench width below the top of pipe minimum 300 mm wide and maximum 460 mm wider than outside surface of pipe or conduit installed to elevations and grades indicated on Drawings. Excavate trench width for other pipe, conduit, or cable to least practical width allowing for proper compaction of trench backfill.
 8. Excavate trench depth measured from finished grade or paved surface to the following requirements or applicable codes and ordinances:
 - a. Water Mains: 30 inches to top of pipe barrel or 6 inches below frost line established by local building official, whichever is deeper.
 - b. Sanitary Sewer: Elevations, and grades indicated on Drawings.
 - c. Storm Sewer: Depths, elevations, and grades indicated on Drawings.
 - d. Electrical Conduits: 24 inches minimum to top of conduit or as required by NFPA 70, or local utility company requirements, whichever is deeper.
 - e. TV Conduits: 18 inches minimum to top of conduit or as required by local utility company, whichever is deeper.
 - f. Telephone Conduits: 18 inches minimum to top of conduit, or as required by local utility company, whichever is deeper.
 - g. Gas Mains and Service: 30 inches minimum to top of pipe, or as required by local utility company, whichever is deeper.

9. Provide shoring, sheeting, and bracing, as required, in trenches and other excavations where protection of construction personnel is required. Sheeting may be removed after sufficient backfilling to protect against damaging or injurious caving.

E. Excavation for Pavement:

1. Excavate roadway and pavement areas to line and grade indicated on Drawings.
2. Stockpile excavated material suitable for backfilling on-site.
3. Remove excavated materials not required or not suitable for backfill from site.
4. Overexcavate areas of pavement subgrade found to contain unsuitable material. Prepare, fill with suitable material, and compact as specified. Stabilize areas as specified in Section 313200.

3.4 PIPE BEDDING

- A. Excavate trenches, for pipe or conduit installed to elevations indicated on Drawings, 4 inches below bottom of pipe and to width as specified. Place 4 inches of bedding material, compact in bottom of trench, and shape to conform to lower portion of pipe barrel. After pipe installation, backfill and compact to top of trench.
- B. Place geotextile fabric as indicated on Drawings.

3.5 BACKFILLING AND SUBGRADE PREPARATION

- A. Backfilling:
 1. Verify that imported off-site fill and stockpiled on-site fill is tested and approved.
 2. Verify that foundation perimeter drainage installation is inspected and approved.
 3. Verify that foundation or below grade structure walls are braced to support surcharge forces imposed by backfilling operations.
 4. Verify that backfill areas are free of debris, snow, ice, or water, and that ground surfaces are not frozen.
- B. Prepare building area subgrade pad in accordance with foundation subsurface preparation information indicated on Drawings and specified herein. Do not use rock larger than 6 inches for building subgrade fill.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, and moisture content in accordance with the "Report of Subsurface Investigation."

- C. Areas Exposed by Excavation or Stripping:
 1. Scarify areas exposed by excavation or stripping on which building subgrade preparations are to be performed to minimum [8] [____] inch depth.
 2. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D1557 (Modified Proctor) at minimum moisture content [1] [____] percent below and maximum [3] [____] percent above optimum moisture content.
 3. Proofroll to detect any areas of insufficient compaction by making minimum of 2 complete passes with fully-loaded tandem-axle dump truck, or Contracting Officer approved equivalent, in each of two perpendicular directions under supervision and direction of Contracting Officer.
 4. Excavate and recompact areas failing to meet specified requirements.

NOTE TO SPECIFIER

Edit below for appropriate minimum depths, percentages, moisture content, and plasticity index in accordance with the "Report of Subsurface Investigation."

D. Fill Material Placement:

1. Place in [8] [____] inch maximum lifts compacted minimum [95] [____] percent optimum density in accordance with ASTM D1557 (Modified Proctor) at minimum moisture content of [1] [____] percent below and maximum moisture content [3] [____] percent above optimum moisture content.
2. Maximum allowable values for plasticity index (PI) and liquid limit (LL) of suitable fill materials to be used as fill in the specified areas, unless indicated otherwise on Drawings:

a. LOCATION	PI	LL
b. Building area, below upper 4 feet	[30] [____]	[40] [____]
c. of proposed subgrade elevation		
d. Building area, upper 4 feet	[20] [____]	[30] [____]
e. of proposed subgrade elevation		
f. Paving area, below upper 4 feet	[30] [____]	[40] [____]
g. of proposed subgrade elevation		
h. Paving area, upper 4 feet	[20] [____]	[30] [____]
i. of proposed subgrade elevation		

- E. Provide material imported from off-site with CBR (California Bearing Ratio) or LBR (Limerock Bearing Ratio) value equal to or above pavement design subgrade CBR or LBR value indicated on Drawings.

3.6 MAINTENANCE OF SUBGRADE

- A. Verify finished subgrades for elevations indicated on Drawings and specified conditions for construction above subgrade.
- B. Protect subgrade from excessive wheel loading during construction, including concrete trucks and dump trucks.
- C. Remove areas of finished subgrade found to have insufficient compaction density. Replace in a manner that will comply with compaction requirements as directed by Contracting Officer. Provide hard, uniform, smooth, stable surface, true to grade and cross-section after completion of compaction.

3.7 BORINGS AND CASINGS UNDER ROADS

- A. Install street, road, or highway crossings for utility mains by jacking and boring method in accordance with requirements of governing authorities having jurisdiction.
- B. Locate approach pits and trenches within right- of-way of street, road, highway, or railroad distance from paving permitting traffic to pass without interference. Tamp backfill for approach pits and trenches within right- of-way in layers not greater than 6 inches thick for entire length and depth of trench or pit. Compact backfill to 95 percent of maximum density obtained at optimum moisture as determined by AASHTO T 180, Method A (Modified Proctor). Mechanical tampers may be used after cover of 6 inches has been obtained over top of pipe barrel.
- C. Use commercial type boring rig providing hole bored to proper alignment and grade within 2 inches of same diameter as largest outside joint diameter of pipe installed. Install pipe in hole immediately after bore has been made, and in no instance shall hole be left open while unattended.
- D. Clean and prime interior and exterior of casing pipe; apply two coats of asphalt in accordance with requirements of governing authorities having jurisdiction.
- E. Butt weld steel casing. Weld using full penetration single butt-welds in accordance with AWWA C 206.

- F. Install casing and utility pipe with end seals, vent pipe, and other special equipment in accordance with requirements of governing authorities having jurisdiction.
- G. Paving Damage Caused by Contractor Construction Operations:
 - 1. Repair paving where cracks occur on either side of line where pipe was installed by removing damaged paving between cracks, sawcutting paving in straight line at a point sufficiently beyond location of cracks for repair, and placing new paving to match existing in areas where paving removed.
 - 2. Make repairs to the satisfaction of paving owner.
 - 3. Make repairs at no additional cost to United States Postal Service within one year from Date of Substantial Completion.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Excavation: Notify Testing Laboratory and Contracting Officer for visual inspection of bearing surfaces, 48 hours prior to backfilling and other subsequent Work.

NOTE TO SPECIFIER

Edit below for extent of earthwork testing accordance with the "Report of Subsurface Investigation." Engineer of Record will determine if Site Testing of earthwork is required based on conditions at Project Site and revise or delete Site Testing accordingly.

- C. Site Tests:
 - 1. Specified in Section 312000.
 - 2. Tests for Building Area Subgrade Pad:
 - a. Cut Areas: Minimum [one] [____] compaction test for every [2500] [____] square feet.
 - b. Fill Areas: Minimum [one] [____] compaction test for every [2500] [____] square feet for each [8] [____] inch lift measured loose.
 - 3. Tests for areas outside building area subgrade pad specified in Section 312000.
- D. If tests indicate the Work does not meet specified requirements, remove Work, replace, compact and retest at no additional cost to United States Postal Service.

3.9 PROTECTION

- A. Protect building subgrade pad and building related earthwork from damage by construction operations and erosion.
- B. Prohibit vehicles from entering building subgrade pad area. Vehicles not permitted.
- C. Scarify surface, reshape, and compact areas damaged by construction operations or weather erosion.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 31 23 00 00

SECTION 31 23 16 13 - EXCAVATION SUPPORT AND PROTECTION**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for excavation support and protection. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Performance Requirements

1. Design, **as directed**, furnish, install, monitor, and maintain excavation support and protection system capable of supporting excavation sidewalls and of resisting soil and hydrostatic pressure and superimposed and construction loads.
 - a. Delegated Design: Design excavation support and protection system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - b. Prevent surface water from entering excavations by grading, dikes, or other means.
 - c. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.
 - d. Monitor vibrations, settlements, and movements.

C. Submittals

1. Shop Drawings: For excavation support and protection system.
2. Delegated-Design Submittal: For excavation support and protection system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

D. Quality Assurance

1. Preinstallation Conference: Conduct conference at Project site.

E. Project Conditions

1. Interruption of Existing Utilities: Do not interrupt any utility serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:
 - a. Notify the Owner no fewer than two days in advance of proposed interruption of utility.
 - b. Do not proceed with interruption of utility without the Owner's written permission.
2. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks and record existing elevations.
 - a. During installation of excavation support and protection systems, regularly resurvey benchmarks, maintaining an accurate log of surveyed elevations and positions for comparison with original elevations and positions. Promptly notify the Owner if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

1.2 PRODUCTS**A. Materials**

1. General: Provide materials that are either new or in serviceable condition.
2. Structural Steel: ASTM A 36/A 36M, ASTM A 690/A 690M, or ASTM A 992/A 992M.
3. Steel Sheet Piling: ASTM A 328/A 328M, ASTM A 572/A 572M, or ASTM A 690/A 690M; with continuous interlocks.

- a. Corners: Site-fabricated mechanical interlock **OR** Roll-formed corner shape with continuous interlock, **as directed**.
- 4. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application, **OR** 3 inches (75 mm) **OR** 4 inches (100 mm), **as directed**.
- 5. Shotcrete: Comply with Division 03 Section "Shotcrete" for shotcrete materials and mixes, reinforcement, and shotcrete application.
- 6. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.
- 7. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.
- 8. Tiebacks: Steel bars, ASTM A 722/A 722M.
- 9. Tiebacks: Steel strand, ASTM A 416/A 416M.

1.3 EXECUTION

A. Preparation

- 1. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.
 - a. Shore, support, and protect utilities encountered.
- 2. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.
 - a. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.
- 3. Locate excavation support and protection systems clear of permanent construction so that forming and finishing of concrete surfaces are not impeded.
- 4. Monitor excavation support and protection systems daily during excavation progress and for as long as excavation remains open. Promptly correct bulges, breakage, or other evidence of movement to ensure that excavation support and protection systems remain stable.
- 5. Promptly repair damages to adjacent facilities caused by installing excavation support and protection systems.

B. Soldier Piles And Lagging

- 1. Install steel soldier piles before starting excavation. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging. Accurately align exposed faces of flanges to vary not more than 2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment.
- 2. Install wood lagging within flanges of soldier piles as excavation proceeds. Trim excavation as required to install lagging. Fill voids behind lagging with soil, and compact.
- 3. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

C. Sheet Piling

- 1. Before starting excavation, install one-piece sheet piling lengths and tightly interlock to form a continuous barrier. Accurately place the piling, using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer. Limit vertical offset of adjacent sheet piling to 60 inches (1500 mm). Accurately align exposed faces of sheet piling to vary not more than 2 inches (50 mm) from a horizontal line and not more than 1:120 out of vertical alignment. Cut tops of sheet piling to uniform elevation at top of excavation.

D. Tiebacks

- 1. Tiebacks: Drill, install, grout, and tension tiebacks. Test load-carrying capacity of each tieback and replace and retest deficient tiebacks.
 - a. Test loading shall be observed by a qualified professional engineer responsible for design of excavation support and protection system.

- b. Maintain tiebacks in place until permanent construction is able to withstand lateral soil and hydrostatic pressures.
- E. Bracing
 - 1. Bracing: Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.
 - a. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by the Owner.
 - b. Install internal bracing, if required, to prevent spreading or distortion of braced frames.
 - c. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.
- F. Removal And Repairs
 - 1. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and bear soil and hydrostatic pressures. Remove in stages to avoid disturbing underlying soils or damaging structures, pavements, facilities, and utilities.
 - a. Remove excavation support and protection systems to a minimum depth of 48 inches (1200 mm) below overlaying construction and abandon remainder.
 - b. Fill voids immediately with approved backfill compacted to density specified in Division 31 Section "Earth Moving".
 - c. Repair or replace, as approved by the Owner, adjacent work damaged or displaced by removing excavation support and protection systems.
 - 2. Leave excavation support and protection systems permanently in place.

SECTION 31 23 17 00 - MPF ROCK EXCAVATION

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Rock Excavation is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Rock Excavation into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Removal of identified and discovered rock during excavation.
 - 2. Incorporating removed rock into fills and embankments.

NOTE TO SPECIFIER

Use subparagraph below when EXPLOSIVES are PERMITTED.

- 3. Use of explosives to assist rock removal.

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Cutting, Filling, and grading for site improvements.

- 2. Section 312300 - Excavation and Fill: Earthwork for structures, utilities and pavement.

NOTE TO SPECIFIER

Use REFERENCES below when EXPLOSIVES are PERMITTED.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
 - 1. NFPA 495 - Code For Explosive Materials.

NOTE TO SPECIFIER

Use *SUBMITTALS* below when *EXPLOSIVES* are *PERMITTED*.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Explosives: Indicate proposed method of blasting, delay pattern, explosive types, type of blasting mat or cover, and intended rock recovery method.
 2. Assurance/Control Submittals.
 - a. Qualification Documentation: Submit seismic survey firm and explosives firm documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

NOTE TO SPECIFIER

Use *QUALIFICATIONS FOR EXPLOSIVES* below when *EXPLOSIVES* are *PERMITTED*.

- A. Qualifications for Explosives:
1. Seismic Survey Firm: Company specializing in seismic surveys with five years documented experience.
 2. Explosives Firm: Company specializing in explosives for destruction for removal of subsurface rock with five years documented experience.
- B. Regulatory Requirements:
1. Perform rock removal in accordance with applicable requirements of governing authorities having jurisdiction.

NOTE TO SPECIFIER

Use subparagraphs 2 & 3 below when *EXPLOSIVES* are *PERMITTED*.

2. Comply with all laws, rules, and regulations of Federal, State and local authorities which govern storage, use, manufacture, sale, handling, transportation, licensing, or other disposition of explosives. Take special precautions for proper use of explosives to prevent harm to human life and damage to surface structures, all utility lines, or other subsurface structures. Do not conduct blasting operations until persons in vicinity have had ample notice and have reached positions of safety.
3. Obtain permits from authorities having jurisdiction before explosives are brought to site or drilling for setting of explosives is started.
 - a. Notify Contracting Officer of schedule and procedures prior to explosive use.

NOTE TO SPECIFIER

Use *PRE-INSTALLATION MEETING* below when *EXPLOSIVES* are *PERMITTED*.

- C. Pre-Installation Meeting:
1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions for use of explosives in rock removal operations, explosive rock removal procedures and coordination with related Work.

4. Agenda:
 - a. Tour, inspect and discuss conditions of existing soils and rock encountered.
 - b. Review blast control measures and requirements.
 - c. Review safety precautions relating to use of explosives
 - d. Review types of explosives to be used.
 - e. Review required submittals, both completed and yet to be completed.
 - f. Review and finalize construction schedule relating to explosive rock removal, and verify availability of materials, personnel, equipment and facilities needed to make progress and avoid delays.
 - g. Review required inspections, certifying, and material usage accounting procedures.
 - h. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.

1.5 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Determine all environmental effects associated with proposed rock removal Work and safeguard those concerns as regulated by law and authorities having jurisdiction by approved methods.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when EXPLOSIVES are NOT Permitted.

- B. Explosives: Not permitted.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when EXPLOSIVES are PERMITTED.

- C. Explosives: Do not bring explosives onto site or use in Work without prior written permission from Contracting Officer and authorities having jurisdiction. Comply with requirements of NFPA 495. Contractor is solely responsible for handling, storage, and use of explosive materials when their use is permitted.
 1. Hold harmless the Architect, Engineer and United States Postal Service from any claim resulting from use of explosives. Removal of materials of any nature by blasting shall be done in such a manner and such time as to avoid damage affecting the integrity of design and to avoid damage to any new or existing structure included in or adjacent to work. It shall be contractors responsibility to determine method of operation to ensure desired results and integrity of completed work.
- D. Existing Conditions:
 1. Geotechnical Data:
 - a. Reports of Subsurface Investigation and data are not a part of Contract Documents.
 - b. Soil and subsurface investigations were conducted at the site by an independent testing laboratory and a report with log of borings prepared. This report was obtained for USPS design use only.
 - c. A copy of the report is provided by Contracting Officer and is made available for convenience of the Contractor.
 - d. Soils investigation data is not warranted to indicate actual conditions. Owner and Architect/Engineer do not assume responsibility for variations in kind, depth, quantity and condition of soils; they disclaim responsibility for accuracy, true location, and extent of soils investigation that has been prepared by others; and they further disclaim responsibility for interpretation of that data by Contractor as in projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
 - e. Additional test borings and other exploratory operations may be made by Contractor at no additional cost to United States Postal Service.

2. Immediately report any discrepancy between Contract Documents and amount and type of rock to be removed to Contracting Officer.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

OPTION 1: Use "Not Used" below when EXPLOSIVES are NOT Permitted.

NOTE TO SPECIFIER

OPTION 2: Use MATERIALS below when EXPLOSIVES are PERMITTED.

2.1 MATERIALS

- A. Explosives, Detonator/Delay Devices and Blasting Mat Materials: NFPA 495; Type recommended by explosive firm following a seismic survey and required by authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for rock excavation to begin.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 ROCK EXCAVATION

- A. Perform rock excavation in a manner that will produce material of such size as to permit it being placed in embankments in accordance with Section 312000. Remove rock to limits indicated. Remove loose or shattered rock, overhanging ledges and boulders which might dislodge.
- B. Rock Excavation - Mechanical Method:
 1. Excavate for and remove rock by mechanical method. Drill holes and utilize expansive tools and wedges to fracture rock.
 2. Cut away rock at excavation bottom to form level bearing. Remove shaled layers to provide sound and unshattered base for foundations.
 3. In utility trenches, excavate to 6 inches below invert elevation of pipe and 24 inches wider than pipe diameter.
 4. Remove shaled layers to provide sound unshattered base for footings and foundations.

5. Re-use excavated rock materials on-site in accordance with Section 312000.
6. Remove excavated rock materials not re-used off-site.

NOTE TO SPECIFIER

Use ROCK EXCAVATION - EXPLOSIVES METHOD below when EXPLOSIVES are PERMITTED.

- C. Rock Excavation - Explosives Method:
 1. Where igneous, metamorphic, or sedimentary rock is encountered that cannot be removed by rippers or other mechanical methods, remove rock by explosives method.
 2. Comply with requirements of NFPA 495.
- D. Use lean concrete or suitable materials to replace rock overblast or overexcavation in building area and in expansion area to facilitate placement of utilities and future footings.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspection: Contracting Officer will inspect bearing surfaces and cavities formed by removed rock.

SECTION 31 23 17 00 - CSF ROCK EXCAVATION

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Rock Excavation is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Rock Excavation into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
1. Removal of identified and discovered rock during excavation.
 2. Incorporating removed rock into fills and embankments.

NOTE TO SPECIFIER

Use subparagraph below when EXPLOSIVES are PERMITTED.

3. Use of explosives to assist rock removal.

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 312000 - Earth Moving: Cutting, Filling, and grading for site improvements.

2. Section 312300 - Excavation and Fill: Earthwork for structures, utilities and pavement.

NOTE TO SPECIFIER

Use REFERENCES below when EXPLOSIVES are PERMITTED.

1.2 REFERENCES

- A. National Fire Protection Association (NFPA):
1. NFPA 495 - Code For Explosive Materials.

NOTE TO SPECIFIER

Use *SUBMITTALS* below when *EXPLOSIVES* are *PERMITTED*.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Explosives: Indicate proposed method of blasting, delay pattern, explosive types, type of blasting mat or cover, and intended rock recovery method.
 2. Assurance/Control Submittals.
 - a. Qualification Documentation: Submit seismic survey firm and explosives firm documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

NOTE TO SPECIFIER

Use *QUALIFICATIONS FOR EXPLOSIVES* below when *EXPLOSIVES* are *PERMITTED*.

- A. Qualifications for Explosives:
1. Seismic Survey Firm: Company specializing in seismic surveys with five years documented experience.
 2. Explosives Firm: Company specializing in explosives for destruction for removal of subsurface rock with five years documented experience.
- B. Regulatory Requirements:
1. Perform rock removal in accordance with applicable requirements of governing authorities having jurisdiction.
- *****

NOTE TO SPECIFIER

Use subparagraphs 2 & 3 below when *EXPLOSIVES* are *PERMITTED*.

2. Comply with all laws, rules, and regulations of Federal, State and local authorities which govern storage, use, manufacture, sale, handling, transportation, licensing, or other disposition of explosives. Take special precautions for proper use of explosives to prevent harm to human life and damage to surface structures, all utility lines, or other subsurface structures. Do not conduct blasting operations until persons in vicinity have had ample notice and have reached positions of safety.
 3. Obtain permits from authorities having jurisdiction before explosives are brought to site or drilling for setting of explosives is started.
 - a. Notify Contracting Officer of schedule and procedures prior to explosive use.
- *****

NOTE TO SPECIFIER

Use *PRE-INSTALLATION MEETING* below when *EXPLOSIVES* are *PERMITTED*.

- C. Pre-Installation Meeting:
1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions for use of explosives in rock removal operations, explosive rock removal procedures and coordination with related Work.

4. Agenda:
 - a. Tour, inspect and discuss conditions of existing soils and rock encountered.
 - b. Review blast control measures and requirements.
 - c. Review safety precautions relating to use of explosives
 - d. Review types of explosives to be used.
 - e. Review required submittals, both completed and yet to be completed.
 - f. Review and finalize construction schedule relating to explosive rock removal, and verify availability of materials, personnel, equipment and facilities needed to make progress and avoid delays.
 - g. Review required inspections, certifying, and material usage accounting procedures.
 - h. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.

1.5 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Determine all environmental effects associated with proposed rock removal Work and safeguard those concerns as regulated by law and authorities having jurisdiction by approved methods.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when EXPLOSIVES are NOT Permitted.

- B. Explosives: Not permitted.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when EXPLOSIVES are PERMITTED.

- C. Explosives: Do not bring explosives onto site or use in Work without prior written permission from Contracting Officer and authorities having jurisdiction. Comply with requirements of NFPA 495. Contractor is solely responsible for handling, storage, and use of explosive materials when their use is permitted.
 1. Hold harmless the Architect, Engineer and United States Postal Service from any claim resulting from use of explosives. Removal of materials of any nature by blasting shall be done in such a manner and such time as to avoid damage affecting the integrity of design and to avoid damage to any new or existing structure included in or adjacent to work. It shall be contractors responsibility to determine method of operation to ensure desired results and integrity of completed work.
- D. Existing Conditions:
 1. Geotechnical Data:
 - a. Reports of Subsurface Investigation and data are not a part of Contract Documents.
 - b. Soil and subsurface investigations were conducted at the site by an independent testing laboratory and a report with log of borings prepared. This report was obtained for USPS design use only.
 - c. A copy of the report is provided by Contracting Officer and is made available for convenience of the Contractor.
 - d. Soils investigation data is not warranted to indicate actual conditions. Owner and Architect/Engineer do not assume responsibility for variations in kind, depth, quantity and condition of soils; they disclaim responsibility for accuracy, true location, and extent of soils investigation that has been prepared by others; and they further disclaim responsibility for interpretation of that data by Contractor as in projecting soil bearing values, rock profiles, soil stability, and presence, level, and extent of underground water.
 - e. Additional test borings and other exploratory operations may be made by Contractor at no additional cost to United States Postal Service.

2. Immediately report any discrepancy between Contract Documents and amount and type of rock to be removed to Contracting Officer.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

OPTION 1: Use "Not Used" below when EXPLOSIVES are NOT Permitted.

NOTE TO SPECIFIER

OPTION 2: Use MATERIALS below when EXPLOSIVES are PERMITTED.

2.1 MATERIALS

- A. Explosives, Detonator/Delay Devices and Blasting Mat Materials: NFPA 495; Type recommended by explosive firm following a seismic survey and required by authorities having jurisdiction.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for rock excavation to begin.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 ROCK EXCAVATION

- A. Perform rock excavation in a manner that will produce material of such size as to permit it being placed in embankments in accordance with Section 312000. Remove rock to limits indicated. Remove loose or shattered rock, overhanging ledges and boulders which might dislodge.
- B. Rock Excavation - Mechanical Method:
 1. Excavate for and remove rock by mechanical method. Drill holes and utilize expansive tools and wedges to fracture rock.
 2. Cut away rock at excavation bottom to form level bearing. Remove shaled layers to provide sound and unshattered base for foundations.
 3. In utility trenches, excavate to 6 inches below invert elevation of pipe and 24 inches wider than pipe diameter.
 4. Remove shaled layers to provide sound unshattered base for footings and foundations.

5. Re-use excavated rock materials on-site in accordance with Section 312000.
6. Remove excavated rock materials not re-used off-site.

NOTE TO SPECIFIER

Use ROCK EXCAVATION - EXPLOSIVES METHOD below when EXPLOSIVES are PERMITTED.

- C. Rock Excavation - Explosives Method:
 1. Where igneous, metamorphic, or sedimentary rock is encountered that cannot be removed by rippers or other mechanical methods, remove rock by explosives method.
 2. Comply with requirements of NFPA 495.
- D. Use lean concrete or suitable materials to replace rock overblast or overexcavation in building area and in expansion area to facilitate placement of utilities and future footings.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspection: Contracting Officer will inspect bearing surfaces and cavities formed by removed rock.

SECTION 31 25 00 00 - MPF EROSION AND SEDIMENTATION CONTROLS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Slope Protection and Erosion Control is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Slope Protection and Erosion Control (if any) into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Temporary and permanent erosion control systems.
 - 2. Slope protection systems.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for Quality Assurance/Control submittals.
 - 1. Material Source: Submit name of material suppliers.
 - 2. Provide materials from same source throughout Work. Change of source requires Contracting Officer approval.

1.3 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Protect adjacent properties and water resources from erosion and sediment damage throughout Work.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Quick Growing Grasses: Wheat, rye, or oats.
- B. Straw Bales: Free of weed seed.
- C. Fencing for Siltation Control: Indicated on Drawings.
- D. Erosion Control Blankets and/or Erosion Control Geotextiles.
- E. Bale Stakes:
 - 1. Minimum 4 feet length.
 - 2. 2 No. 4 steel reinforcing bars or,
 - 3. 2 steel pickets or,
 - 4. 2 - 2x2 inch hardwood stakes driven 18 inches to 24 inches into ground.
- F. Temporary Mulches: Loose straw, netting, wood cellulose, or agricultural silage free of seed.
- G. Metal Fence Stakes: Minimum 8 foot length.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to U.S. Postal Service.

3.2 PREPARATION

- A. Review Stormwater Pollution Prevention Plan SWP³.
- B. Notify Contracting Officer of deficiencies or changes in Stormwater Pollution Prevention Plan SWP³ required by current site conditions. Revisions of plan will be made as determined by Contracting Officer.

3.3 EROSION CONTROL AND SLOPE PROTECTION IMPLEMENTATION

- A. Contracting Officer may direct Contractor to limit surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and embankment operations and may direct Contractor to provide immediate permanent or temporary pollution control measures.

- B. Provide permanent erosion control measures at earliest practical time to minimize requirement for temporary erosion controls. Permanently seed and mulch cut slopes as excavation proceeds.
- C. Maintain temporary erosion control systems installed by Contractor as directed by Contracting Officer to control siltation at all times throughout Work. Provide maintenance or additional Work directed by Contracting Officer within 48 hours of notification by Contracting Officer.
- D. Apply soil stabilization as specified in Section 313200 or seed slopes that may be easily eroded with wheat, rye or oat grasses.

SECTION 31 25 00 00 - CSF EROSION AND SEDIMENTATION CONTROLS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Slope Protection and Erosion Control is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Slope Protection and Erosion Control (if any) into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Temporary and permanent erosion control systems.
 - 2. Slope protection systems.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 313200 - Soil Stabilization: Lime, cement, fly ash, and geotextile subgrade stabilizers.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for Quality Assurance/Control submittals.
 - 1. Material Source: Submit name of material suppliers.
 - 2. Provide materials from same source throughout Work. Change of source requires Contracting Officer approval.

1.3 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Protect adjacent properties and water resources from erosion and sediment damage throughout Work.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Quick Growing Grasses: Wheat, rye, or oats.
- B. Straw Bales: Free of weed seed.
- C. Fencing for Siltation Control: Indicated on Drawings.
- D. Erosion Control Blankets and/or Erosion Control Geotextiles.
- E. Bale Stakes:
 - 1. Minimum 4 feet length.
 - 2. 2 No. 4 steel reinforcing bars or,
 - 3. 2 steel pickets or,
 - 4. 2 - 2x2 inch hardwood stakes driven 18 inches to 24 inches into ground.
- F. Temporary Mulches: Loose straw, netting, wood cellulose, or agricultural silage free of seed.
- G. Metal Fence Stakes: Minimum 8 foot length.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting Work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to U.S. Postal Service.

3.2 PREPARATION

- A. Review Stormwater Pollution Prevention Plan SWP³.
- B. Notify Contracting Officer of deficiencies or changes in Stormwater Pollution Prevention Plan SWP³ required by current site conditions. Revisions of plan will be made as determined by Contracting Officer.

3.3 EROSION CONTROL AND SLOPE PROTECTION IMPLEMENTATION

- A. Contracting Officer may direct Contractor to limit surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and embankment operations and may direct Contractor to provide immediate permanent or temporary pollution control measures.

- B. Provide permanent erosion control measures at earliest practical time to minimize requirement for temporary erosion controls. Permanently seed and mulch cut slopes as excavation proceeds.
- C. Maintain temporary erosion control systems installed by Contractor as directed by Contracting Officer to control siltation at all times throughout Work. Provide maintenance or additional Work directed by Contracting Officer within 48 hours of notification by Contracting Officer.
- D. Apply soil stabilization as specified in Section 313200 or seed slopes that may be easily eroded with wheat, rye or oat grasses.

SECTION 31 31 00 00 - MPF SOIL TREATMENT

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Project is located in an area subject to termite damage and Termite Control is a part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Soil treatment for termite control.
 - 2. Application below grade and at interior and exterior foundation perimeter.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 REFERENCES

- A. United States Environmental Protection Agency (EPA):
 - 1. EPA - Federal Insecticide, Fungicide, and Rodenticide Act.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - a. Product Data: Indicate toxicants to be used, composition by percentage, dilution schedule, and intended application rate.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record moisture content of soil before treatment, date and rate of application, areas of application, diary of meter readings and corresponding soil coverage.
 - 2. Warranty: Submit manufacturer warranty with forms completed in United States Postal Service name and registered with manufacturer.

1.4 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience and licensed in accordance with regulations of authorities having jurisdiction for application of chemical toxicant.
- B. Regulatory Requirements: Conform to applicable code for application requirements, application licensing, authority to use toxicant chemicals, and in accordance with EPA regulations.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver products in manufacturer's original unopened containers with labels intact, identifying Product and manufacturer, application instructions, and EPA federal registration number.
- C. Do not store Products on site. Deliver Products to site at time of application.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Do not apply soil treatment to frozen or wet soils or during rain or snow.

1.7 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Submit written warranty signed by soil treatment applicator and Contractor certifying that applied chemical toxicant treatment will prevent infestation of subterranean termites.
 - a. State that application was made at concentration, rates, and methods as specified.
 - b. State that if subterranean termite activity is discovered during warranty period, Contractor will retreat soil and repair damage caused by termite infestation at no additional cost to United States Postal Service.
 - 2. Cover against invasion or propagation of subterranean termites, damage to building or building contents caused by termites; repairs to building or building contents so caused.
 - 3. Provide for inspection of Work annually; report in writing to designated U.S. Postal Service personnel.
 - 4. Warranty Period: 5 years.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. EPA and local authority having jurisdiction approved chemical toxicant; water based emulsion, uniform composition, with synthetic dye to permit visual identification of treated soil, bearing Federal registration number of the EPA.
- B. Specially formulated to prevent infestation by termites.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MIX DILUTION

- A. Dilute and mix toxicant chemical to manufacturer's published instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify the soil surfaces are unfrozen, sufficiently dry to absorb toxicant, ready to receive treatment.
 - 2. Verify final grading is complete.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Remove foreign matter, loosen, rake, and level soil to be treated, except previously compacted areas under slabs and foundations.

3.3 APPLICATION

- A. Apply toxicant within 12 hours before installation of vapor retardant under slab-on-grade.
- B. Apply toxicant to soil in strict accordance with federal and local jurisdiction requirements and manufacturer's printed application rates.
- C. Apply toxicant as a coarse spray; provide uniform metered distribution.
- D. Post signs in areas of application to warn workers that toxicant has been applied to soil. Remove signs after areas are covered by other construction.
- E. Reapply toxicant to areas disturbed by subsequent excavation, landscape grading, or other construction activities occurring after initial toxicant application.

3.4 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate application of toxicant at foundation perimeter with finish grading and landscaping work; avoid disturbance of treated soil.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect and test soil areas where toxicant was applied to determine the presence of any remaining termites before covering with subsequent construction.
- C. Reapply toxicant to areas where inspection or testing identifies the presence of termites. Use same toxicant as for original treatment.

SECTION 31 32 00 00 - CSF SOIL STABILIZATION

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Soil Stabilization of Soil Stabilization is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Soil Stabilization into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Lime stabilized subgrade.
 2. Cement stabilized subgrade.
 3. Fly ash stabilized subgrade.
 4. Geotextile fabric stabilized subgrade.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 312000 - Earth Moving: Cutting, filling, and grading for site improvements.
 2. Section 313200 - Excavation and Fill: Earthwork for structures., utilities, and pavement.

1.2 REFERENCES

- A. American Society for Testing Materials (ASTM):
 1. ASTM C 150 - Specification for Portland Cement
 2. ASTM C 618 - Specification for Fly Ash and Raw of Calcinated Natural Pozzolan for Use as a Mineral Admixture in Portland Cement Concrete.
 3. ASTM C 977 - Specification for Quicklime and Hydrated Lime for Soil Stabilization
 4. ASTM D 698 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures, Using 5.5 Pound Rammer and 12 Inch Drop.
 5. ASTM D 1557 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures, Using 10 Pound Rammer and 18 Inch Drop.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Requirements for submittals.
 - 1. Material Source:
 - a. Submit name of imported materials suppliers.
 - b. Provide materials from same source throughout the work. Change of source requires Contracting Officer approval.
 - 2. Samples: Submit two samples of each type of imported off-site fill material in air-tight, 10 pound container for Contracting Officer testing or submit gradation and certification of aggregate material for Contracting Officer review.
 - 3. Mix Design: Submit mix design and materials mix ratio that will achieve specified requirements for soil stabilization by state and local agencies.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform soil stabilization work in accordance with applicable requirements of governing authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Examine soil stabilization materials upon delivery to site. Verify that materials are as specified and match approved samples. Remove non-complying materials from site.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not begin mixing operation when subgrade is frozen or when air temperature is less than 40 degrees F.
 - 2. Do not install mixed materials in wind above 10 miles per hour.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Quicklime or Hydrated Lime: ASTM C 977.
- B. Portland Cement: ASTM C 150.
- C. Fly Ash: ASTM C 618.
- D. Fine and Coarse Aggregate: In accordance with applicable State Highway Standard Specification regarding source, quality, gradation, liquid limit, plasticity index, and mix proportioning.
- E. Subsoil: Existing reused.

NOTE TO SPECIFIER

Provide brief description of subsoil type where applicable and appropriate.

- 1. [_____].

2. [_____].

- F. Degradable natural fiber erosion control blankets
 1. Provide and install materials in accordance with applicable state highway standard specification.

2.2 EQUIPMENT

- A. Perform operations using suitable, well maintained equipment capable of excavating subsoil, mixing and placing materials, wetting, consolidation and compaction of material.

2.3 SOIL MIX

NOTE TO SPECIFIER

OPTION 1: Use reference to State Highway Standard Specification where applicable and appropriate.

- A. Mix materials in accordance with referenced State Highway Standard Specification.

NOTE TO SPECIFIER

OPTION 2: Specify mix based on recommendations included in "Report of Subsurface Exploration" for areas of application.

- B. Mix materials as follows:

1. [_____].
2. [_____].
3. [_____].
4. [_____].

- C. Add water to mix to achieve a consistent mixture without lumping yet not create a wet plastic consistency.
- D. Addition of lime may be specified or approved to facilitate mixing fly ash with soil materials. When specified, or directed by Contracting Officer in writing, use lime to prevent fly ash "flash set" or retard soil-fly ash reactivity occurring during final mixing.
1. Uniformly blend lime additive with fly ash on surface for incorporation with soil materials during first mixing operations unless other methods of application are approved.
 2. Proportion of lime additive with the fly ash will be based on laboratory testing and field trial procedures necessary to determine proper soil modification.
 3. Addition of lime will permit a reduction of fly ash requirement on a replacement basis as approved by Contracting Officer.
- E. Obtain Contracting Officer approval of mix before proceeding with placement.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

1. Verify that existing site soils and soil conditions encountered are as indicated in Geotechnical Data.
 2. Verify quantity and type of soil stabilization materials before beginning material installation.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval of mix design before proceeding with placement.
- B. Do not start stabilization without weather and soil conditions being favorable for successful application of proposed material.
- C. Proof roll subgrade to identify areas in need of stabilization.
- D. Prior to stabilization of soils, prepare surface areas in accordance with applicable State Highway Standard Specifications.

3.3 EXCAVATION

- A. Excavate subsoil to a depth sufficient to accommodate soil stabilization.
- B. Remove lumped subsoil, boulders and rock that interfere with achieving uniform subsoil conditions.

3.4 SOIL TREATMENT AND BACKFILLING

- A. Do not backfill over frozen or spongy subgrade surfaces.
- B. Lime Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with hydrated lime in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557.
- C. Cement Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with Portland cement in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557.
- D. Fly Ash Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with fly ash in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density as determined by ASTM D 698 or [92] [____] percent optimum density, in accordance with ASTM D 1557.
- E. Fine and Course Aggregates: Treat prepared subgrade with fine or course aggregates in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density as determined by ASTM D 698 or [92] [____] percent optimum density, in accordance with ASTM D 1557.

- F. Maintain optimum moisture of mix materials to attain required stabilization and compaction.
- G. Finish subgrade surface as specified in Section 312000.

3.5 GEOTEXTILE FABRIC

- A. Place fabric in areas indicated on Drawings or in areas requiring additional stabilization prior to placement of base course.
- B. Place fabric in accordance with manufacturers published instructions.

USPS CSF Specifications issued: 10/1/2013

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 32 00 00 - MPF SOIL STABILIZATION

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Soil Stabilization of Soil Stabilization is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Soil Stabilization into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Lime stabilized subgrade.
 2. Cement stabilized subgrade.
 3. Fly ash stabilized subgrade.
 4. Geotextile fabric stabilized subgrade.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 312000 - Earth Moving: Cutting, filling, and grading for site improvements.
 2. Section 313200 - Excavation and Fill: Earthwork for structures., utilities, and pavement.

1.2 REFERENCES

- A. American Society for Testing Materials (ASTM):
 1. ASTM C 150 - Specification for Portland Cement
 2. ASTM C 618 - Specification for Fly Ash and Raw of Calcinated Natural Pozzolan for Use as a Mineral Admixture in Portland Cement Concrete.
 3. ASTM C 977 - Specification for Quicklime and Hydrated Lime for Soil Stabilization
 4. ASTM D 698 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures, Using 5.5 Pound Rammer and 12 Inch Drop.
 5. ASTM D 1557 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures, Using 10 Pound Rammer and 18 Inch Drop.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Requirements for submittals.
1. Material Source:
 - a. Submit name of imported materials suppliers.
 - b. Provide materials from same source throughout the work. Change of source requires Contracting Officer approval.
 2. Samples: Submit two samples of each type of imported off-site fill material in air-tight, 10 pound container for Contracting Officer testing or submit gradation and certification of aggregate material for Contracting Officer review.
 3. Mix Design: Submit mix design and materials mix ratio that will achieve specified requirements for soil stabilization by state and local agencies.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform soil stabilization work in accordance with applicable requirements of governing authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Examine soil stabilization materials upon delivery to site. Verify that materials are as specified and match approved samples. Remove non-complying materials from site.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
1. Do not begin mixing operation when subgrade is frozen or when air temperature is less than 40 degrees F.
 2. Do not install mixed materials in wind above 10 miles per hour.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Quicklime or Hydrated Lime: ASTM C 977.
- B. Portland Cement: ASTM C 150.
- C. Fly Ash: ASTM C 618.
- D. Fine and Coarse Aggregate: In accordance with applicable State Highway Standard Specification regarding source, quality, gradation, liquid limit, plasticity index, and mix proportioning.
- E. Subsoil: Existing reused.

NOTE TO SPECIFIER

Provide brief description of subsoil type where applicable and appropriate.

1. [_____].

2. [_____].

- F. Degradable natural fiber erosion control blankets
 1. Provide and install materials in accordance with applicable state highway standard specification.

2.2 EQUIPMENT

- A. Perform operations using suitable, well maintained equipment capable of excavating subsoil, mixing and placing materials, wetting, consolidation and compaction of material.

2.3 SOIL MIX

NOTE TO SPECIFIER

OPTION 1: Use reference to State Highway Standard Specification where applicable and appropriate.

- A. Mix materials in accordance with referenced State Highway Standard Specification.

NOTE TO SPECIFIER

OPTION 2: Specify mix based on recommendations included in "Report of Subsurface Exploration" for areas of application.

- B. Mix materials as follows:

1. [_____].
2. [_____].
3. [_____].
4. [_____].

- C. Add water to mix to achieve a consistent mixture without lumping yet not create a wet plastic consistency.
- D. Addition of lime may be specified or approved to facilitate mixing fly ash with soil materials. When specified, or directed by Contracting Officer in writing, use lime to prevent fly ash "flash set" or retard soil-fly ash reactivity occurring during final mixing.
1. Uniformly blend lime additive with fly ash on surface for incorporation with soil materials during first mixing operations unless other methods of application are approved.
 2. Proportion of lime additive with the fly ash will be based on laboratory testing and field trial procedures necessary to determine proper soil modification.
 3. Addition of lime will permit a reduction of fly ash requirement on a replacement basis as approved by Contracting Officer.
- E. Obtain Contracting Officer approval of mix before proceeding with placement.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

1. Verify that existing site soils and soil conditions encountered are as indicated in Geotechnical Data.
 2. Verify quantity and type of soil stabilization materials before beginning material installation.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval of mix design before proceeding with placement.
- B. Do not start stabilization without weather and soil conditions being favorable for successful application of proposed material.
- C. Proof roll subgrade to identify areas in need of stabilization.
- D. Prior to stabilization of soils, prepare surface areas in accordance with applicable State Highway Standard Specifications.

3.3 EXCAVATION

- A. Excavate subsoil to a depth sufficient to accommodate soil stabilization.
- B. Remove lumped subsoil, boulders and rock that interfere with achieving uniform subsoil conditions.

3.4 SOIL TREATMENT AND BACKFILLING

- A. Do not backfill over frozen or spongy subgrade surfaces.
- B. Lime Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with hydrated lime in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557.
- C. Cement Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with Portland cement in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density in accordance with ASTM D 698 or [92] [____] percent optimum density in accordance with ASTM D 1557.
- D. Fly Ash Stabilized Subgrade: Where indicated on Drawings, treat prepared subgrade with fly ash in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density as determined by ASTM D 698 or [92] [____] percent optimum density, in accordance with ASTM D 1557.
- E. Fine and Course Aggregates: Treat prepared subgrade with fine or course aggregates in accordance with applicable State Highway Standard Specification. Compact to minimum [95] [____] percent optimum density as determined by ASTM D 698 or [92] [____] percent optimum density, in accordance with ASTM D 1557.

- F. Maintain optimum moisture of mix materials to attain required stabilization and compaction.
- G. Finish subgrade surface as specified in Section 312000.

3.5 GEOTEXTILE FABRIC

- A. Place fabric in areas indicated on Drawings or in areas requiring additional stabilization prior to placement of base course.
- B. Place fabric in accordance with manufacturers published instructions.

END OF SECTION 31 32 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 32 13 16 - SOIL STABILIZATION-LIME**1.1 GENERAL****A. Description Of Work**

1. This specification covers furnishing of materials and the preparation and production of a stabilized subgrade by the addition of hydrated lime to the native material.

1.2 PRODUCTS**A. Hydrated lime material requirements shall be as follows:**

1. Available Lime Index as Calcium Hydroxide: 90 percent minimum.
2. Residue retained on No. 30 Sieve: 1 percent maximum.
3. Residue retained on No. 200 Sieve: 20 percent maximum.

1.3 EXECUTION:

- A. Preparation: Scarify the subgrade to the depth required and pulverize the material until it is substantially free of lumps greater than three inches in diameter.
- B. Installation: Lime shall be applied to the pulverized material as a slurry, unless otherwise directed. Water shall be added as needed to provide a moisture content of not less than 20 percent. Surface-applied lime slurry shall be plowed and/or disked into the soil as necessary. The resulting mixture shall be aged for not less than 48 hours before compaction.

SECTION 31 62 19 00 - CSF TIMBER PILES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section for Medium Standard Buildings where pile and grade beam foundation system is required and Timber Piles are a part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Pile and Grade Beam foundation system into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Preservative treated wood piles.
 - 2. Pile inspection and load tests.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 012200 - Unit Prices: Procedures related to Work performed under unit price method.
 - 2. Section 033000 - Cast-In-Place Concrete: Pile caps and grade beams.
- D. Unit Prices:
 - 1. Base proposals on the number and spacing of piles and on length from point to cut-off as indicated on Structural Drawings. Provide test piles two feet longer than pile lengths indicated on Structural Drawings.
 - 2. Determine number and lengths of piles based on Project Record Documents.
 - 3. Adjustment in price due to changes in number or length of piles will be based on unit prices established as specified in Section 012200 - Unit Prices.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D 25 - Specification for Round Timber Piles.

NOTE TO SPECIFIER

Include ASTM D 1143, D 3689 and D 3966 when used in body of Specification. Delete if not used.

2. ASTM D 1143 - Method of Testing Piles Under Static Axial Compressive Load.
3. ASTM D 3689 - Method of Testing Individual Piles Under Static and Axial Tensile Load.
4. ASTM D 3966 - Method of Testing Piles under Lateral Loads.

B. American Wood-Preservers' Association (AWPA):

1. AWPA C3 - Preservative Treatment of Piles by Pressure Processes.
2. AWPA M4 - Standard for the Care of Pressure Treated Wood Products.

1.3 DEFINITIONS

- A. Refusal: 12 blows per foot or more as specified by project structural engineer.
- B. Non-Conforming Piles: Piles that fail field tests, are driven out of position, are driven below cut-off elevation, or are damaged.

1.4 SYSTEM DESCRIPTION

- A. Design Requirements
 1. Load Carrying Capacity: Indicated on Structural Drawings.

1.5 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Pile tip and collar.
 2. Shop Drawings:
 - a. Details and schedule of pile installation sequence and testing.
 - b. Pile lengths and diameters.
 3. Assurance/Control Submittals:
 - a. Certificate: Provide certification from pile fabrication shop that each pile meets or exceeds specified requirements.
 - b. Qualification Documentation: Submit installer documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
 1. Project Record Documents: Submit log of the following, recorded at time of pile placement.
 - a. Sizes, lengths, and locations of piles.
 - b. Sequence of placing.
 - c. Number of blows per foot for entire length of pile and measured set for last 10 blows.
 - d. Final base and top of pile elevations.
 - e. Driving force of each hammer blow.
 - f. Time and load settlement measurements of load tested piles.
 - g. Difficulties encountered during pile driving.
 - h. Type and size of equipment.
 - i. Alignment deviations.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing Work of this Section with minimum 10 years documented experience.

- B. Pile Component Selection: Under supervision of professional Structural Engineer experienced in pile design licensed in State where project is located.
- C. Pre-Installation Meeting:
 - 1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of installation, installation procedures, and coordination with related work.
 - 4. Agenda:
 - a. Tour, inspect and discuss condition of soil substrate, pile locations and other preparatory work performed by other trades.
 - b. Review structural loading requirements.
 - c. Review pile system requirements (drawings, specifications and other contract documents).
 - d. Review pile driving methods and equipment.
 - e. Review and finalize construction schedule related to pile work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, and certifying procedures.
 - g. Review weather and forecasted weather conditions, and procedures for resolving unfavorable conditions.
 - h. Review safety precautions relating to timber pile installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Preservative treated, clean-peeled Southern Pine, ASTM D 25, pressure impregnated with Grade 1, AWPAC P1 creosote in accordance with AWPAC C3 for land and fresh water piles with minimum retention of 8 pounds per cubic foot.
- B. One-piece friction piles with minimum butt diameter and minimum tip diameter as indicated on Structural Drawings. Splices not permitted.

2.2 SOURCE QUALITY CONTROL

- A. Certification: Provide shop inspection and certification of wood piles.
- B. Inspection: Inspect wood piles at source of supply for conformance with ASTM D 25. Hammer mark pile butt to indicate conformance with specified requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support pile driving equipment for performance of pile driving operations and testing.

2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval for pile driving hammer.
- B. Use driving method which will not cause damage to existing adjacent structures and site improvements.
- C. Notify adjacent property owners with written notice, approved by Contracting Officer, prior to start of Work.
- D. Protect adjacent structures and site improvements from damage.

3.3 INSTALLATION

- A. Protect pile head during driving, using cushion cap. Provide full bearing on piles for distribution of hammer blow. Do not damage piles during driving operations.
- B. Deliver hammer blows on central axis of pile.
- C. Drive piles to length indicated on Structural Drawings. Avoid damaging piles by over driving.
- D. If driving is interrupted before refusal, drive pile an additional 6 inches before resuming recording of performance data.
- E. Re-drive piles which have lifted due to driving adjacent piles, or by soil uplift.
- F. Cut off tops of piles to elevations indicated on Structural Drawings and prepare pile top to receive pile cap or grade beams.
- G. Prevent surface damage to piles.
- H. Apply preservative to exposed ends of cut-off piles, compatible with preservative treatment and in accordance with pile manufacturer's recommendation.

3.4 CONSTRUCTION

- A. Site Tolerances:
 1. Maximum Variation From Vertical For Plumb Piers: 1 in 48.
 2. Minimum Variation From Required Angle for Batter Piers: 1 in 24.
 3. Maximum Variation From Top of Pier Elevation: 2 inches.
 4. Maximum Out-of Position: 4 inches.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection of pile installations, locations, and elevations.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piles required to determine acceptability of pile and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
 2. Verify site conditions will support cribbing and load for testing purposes.
 3. Establish stable working elevation for test equipment.
 4. Provide materials and equipment for testing except hydraulic jack.
 5. Provide test piles same diameter and type specified for piles, constructed in same manner.
 6. Test [6] [____] indicator piles at locations as directed by Contracting Officer.
 7. Subject piles to [1-3/4] [2] [____] times design load.
 8. Document test equipment used and method of calibrating and recording.
- D. Acceptable Permanent Set of Piles After Load Testing: [1/8] [1/4] [____] inch.
 - E. Accepted test piers may be used in Work.
 - F. Non-Conforming Piles: Provide additional piles or supplement piles to conform to specified requirements at non-conforming piles.

3.6 PROTECTION

- A. Prevent surface damage to treated piles.
- B. Treat repairs to treated piles in accordance with AWP4 M4.

 - 3. Review conditions of installation, installation procedures, and coordination with related work.
 - 4. Agenda:
 - a. Tour, inspect and discuss condition of soil substrate, pile locations and other preparatory work performed by other trades.
 - b. Review structural loading requirements.
 - c. Review pile system requirements (drawings, specifications and other contract documents).
 - d. Review pile driving methods and equipment.
 - e. Review and finalize construction schedule related to pile work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, and certifying procedures.
 - g. Review weather and forecasted weather conditions, and procedures for resolving unfavorable conditions.
 - h. Review safety precautions relating to timber pile installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Preservative treated, clean-peeled Southern Pine, ASTM D 25, pressure impregnated with Grade 1, AWPAC P1 creosote in accordance with AWPAC C3 for land and fresh water piles with minimum retention of 8 pounds per cubic foot.
- B. One-piece friction piles with minimum butt diameter and minimum tip diameter as indicated on Structural Drawings. Splices not permitted.

2.2 SOURCE QUALITY CONTROL

- A. Certification: Provide shop inspection and certification of wood piles.
- B. Inspection: Inspect wood piles at source of supply for conformance with ASTM D 25. Hammer mark pile butt to indicate conformance with specified requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support pile driving equipment for performance of pile driving operations and testing.

2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval for pile driving hammer.
- B. Use driving method which will not cause damage to existing adjacent structures and site improvements.
- C. Notify adjacent property owners with written notice, approved by Contracting Officer, prior to start of Work.
- D. Protect adjacent structures and site improvements from damage.

3.3 INSTALLATION

- A. Protect pile head during driving, using cushion cap. Provide full bearing on piles for distribution of hammer blow. Do not damage piles during driving operations.
- B. Deliver hammer blows on central axis of pile.
- C. Drive piles to length indicated on Structural Drawings. Avoid damaging piles by over driving.
- D. If driving is interrupted before refusal, drive pile an additional 6 inches before resuming recording of performance data.
- E. Re-drive piles which have lifted due to driving adjacent piles, or by soil uplift.
- F. Cut off tops of piles to elevations indicated on Structural Drawings and prepare pile top to receive pile cap or grade beams.
- G. Prevent surface damage to piles.
- H. Apply preservative to exposed ends of cut-off piles, compatible with preservative treatment and in accordance with pile manufacturer's recommendation.

3.4 CONSTRUCTION

- A. Site Tolerances:
 1. Maximum Variation From Vertical For Plumb Piers: 1 in 48.
 2. Minimum Variation From Required Angle for Batter Piers: 1 in 24.
 3. Maximum Variation From Top of Pier Elevation: 2 inches.
 4. Maximum Out-of Position: 4 inches.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection of pile installations, locations, and elevations.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piles required to determine acceptability of pile and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
 2. Verify site conditions will support cribbing and load for testing purposes.
 3. Establish stable working elevation for test equipment.
 4. Provide materials and equipment for testing except hydraulic jack.
 5. Provide test piles same diameter and type specified for piles, constructed in same manner.
 6. Test [6] [____] indicator piles at locations as directed by Contracting Officer.
 7. Subject piles to [1-3/4] [2] [____] times design load.
 8. Document test equipment used and method of calibrating and recording.
- D. Acceptable Permanent Set of Piles After Load Testing: [1/8] [1/4] [____] inch.
 - E. Accepted test piers may be used in Work.
 - F. Non-Conforming Piles: Provide additional piles or supplement piles to conform to specified requirements at non-conforming piles.

3.6 PROTECTION

- A. Prevent surface damage to treated piles.
- B. Treat repairs to treated piles in accordance with AWP4 M4.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 31 62 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 62 23 00 - CSF COMPOSITE PILES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where pile and grade beam foundation system is required and Composite Piles are a part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Pile and Grade Beam foundation system into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood concrete composite piles.
 - 2. Pile inspection and load tests.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 012200 - Unit Prices: Procedures related to Work performed under unit price method.
 - 2. Section 033000 - Cast-In-Place Concrete: Pile caps, grade beams and concrete pile section.
- D. Unit Prices:
 - 1. Base proposals on number and spacing of piles and on length from point to cut-off as indicated on Structural Drawings. Provide test piles two feet longer than pile lengths indicated on Structural Drawings.
 - 2. Determine number and length of piles based on Project Record Documents.
 - 3. Adjustment in price due to changes in number or length of piles will be based on unit prices established as specified in Section 012200 – Unit Prices.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D25 - Specification for Round Timber Piles.

1.3 DEFINITIONS

- A. Refusal: 12 blows per foot or more as specified by project structural engineer.
- B. Non-Conforming Piles: Piles that fail field tests, are driven out of position, are driven below cut-off elevation, or are damaged.

1.4 DESIGN REQUIREMENTS

- A. Load Carrying Capacity: Indicated on Structural Drawings.

1.5 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Connector and drive shoe.
 - 2. Shop Drawings:
 - a. Details and schedule of pile installation sequence and testing.
 - b. Pile lengths and diameters.
 - c. Reinforcing quantities, sizes, and lengths for each pile.
 - 3. Assurance/Control Submittals:
 - a. Mix Design: Pile concrete as specified herein for Section 033000 mix design.
 - b. Qualification Documentation: Submit installer documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
 - 1. Project Record Documents: Submit log of the following, recorded at time of pile placement.
 - a. Sizes, lengths, and locations of piles.
 - b. Sequence of placing.
 - c. Number of blows per foot for entire length of pile and measured set for last 10 blows.
 - d. Final base and top of pile elevations.
 - e. Driving force of each hammer blow.
 - f. Time and load settlement measurements of load tested piles.
 - g. Difficulties encountered during pile driving.
 - h. Type and size of equipment.
 - i. Alignment deviations.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing Work of this Section with minimum 10 years documented experience.
- B. Pile Component Selection: Under supervision of professional Structural Engineer experienced in pile design licensed in State where project is located.
- C. Pre-Installation Meeting:
 - 1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of installation, installation procedures and coordination with related work.
 - 4. Agenda:
 - a. Tour, inspect, and discuss condition of soil substrate, pile locations, and other preparatory work.
 - b. Review structural loading requirements.

- c. Review pile system requirements (drawings, specifications, and other contract documents).
- d. Review pile driving methods and equipment.
- e. Review and finalize construction schedule related to pile work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
- f. Review required inspections, testing and certifying procedures.
- g. Review weather and forecasted weather conditions, and procedures for resolving unfavorable conditions.
- h. Review safety precautions relating to composite pile installation.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Wood-concrete composite type consisting of concrete upper section untreated Southern Pine, ASTM D2 5, timber lower section.
- B. Untreated Timber Section: Round timber piles, rough peeled, Southern Pine, with minimum butt diameter and minimum tip diameter as indicated on Structural Drawings. Splices not permitted.
- C. Concrete Section Casing: Steel of strength and gage to prevent distortion during driving of pile and adjacent piles; water tight to exclude water and foreign matter during placing of concrete. Minimum inside diameter as indicated on Structural Drawings.
- D. Connector; Drive-Shoe:
 - 1. Structural grade steel with drive-shoe minimum 12 gage or material firmly attached to steel casing.
 - 2. Drive-shoe penetrating capability: Minimum of 4 inches into timber section.
 - 3. Other connector requirements: Conform to local building code.
 - 4. Design splice to withstand minimum moment capacity of 4 foot kips, with no applied axial load, and to withstand minimum tensile force of 20 tons.

NOTE TO SPECIFIER

Select concrete type, aggregate size, strength, and slump requirements as required by project site conditions.

- E. Concrete Materials and Mix: Specified in Section 033000 using Type [I] [____] cement, [3/4] [____] inch aggregate size, [3000] [____] psi 28 day strength, [6] [____] inch slump.

2.2 SOURCE QUALITY CONTROL

- A. Certification: Provide shop inspection and certification of timber pile sections.
- B. Timber Section Inspection: Inspect at source of supply and hammer mark in the butt to indicate conformance with specified requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution Requirements: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support pile driving equipment for performance of pile driving operations and testing.
 - 2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval for pile driving hammer.
- B. Use driving method which will not cause damage to existing adjacent structures, and site improvements.
- C. Notify adjacent property owners with written notice, approved by Contracting Officer, prior to start of Work.
- D. Protect adjacent structures and site improvements from damage.
- E. Clean casing of debris and dry casing prior to placing concrete.

3.3 INSTALLATION

- A. Protect pile head during driving, using cushion cap. Provide full bearing on piles for distribution of hammer blow. Do not damage piles during driving operations.
- B. Deliver hammer blows to central axis of pile.
- C. Drive piles to length indicated on Structural Drawings. Avoid damaging piles by overdriving.
- D. Refusal: Contact Contracting Officer for instructions when refusal is encountered.
- E. If driving is interrupted before refusal, drive pile an additional 6 inches before resuming recording of performance data.
- F. Re-drive piles which have lifted due to driving adjacent piles, or by soil uplift.
- G. Cut off tops of piles to elevations indicated on Structural Drawings and prepare pile top to receive pile cap or grade beams.
- H. Prevent surface damage to piles.

3.4 CONSTRUCTION

- A. Site Tolerances:

1. Maximum Variation From Vertical For Plumb Piles: 1 in 48.
2. Minimum Variation From Required Angle for Batter Piles: 1 in 24.
3. Maximum Variation From Top of Pile Elevation: 2 inches.
4. Maximum Out-of Position: 4 inches.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Control: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection of pile installations, locations, and elevations.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piles required to determine acceptability of pile and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
2. Verify site conditions will support cribbing and load for testing purposes.
3. Establish stable working elevation for test equipment.
4. Provide materials and equipment for testing except hydraulic jack.
5. Provide test piles same diameter and type specified for piles, constructed in same manner.
6. Test [6] [____] indicator piles at locations as directed by Contracting Officer.
7. Subject piles to [1-3/4] [2] [____] times design load.
8. Document test equipment used and method of calibrating and recording.

NOTE TO SPECIFIER

Select acceptable permanent set.

- D. Acceptable Permanent Set of Piles After Load Testing: [1/8] [1/4] [____] inch.
- E. Accepted test piles may be used in Work.
- F. Non-Conforming Piles: Provide additional piles or supplement piles to conform to specified requirements at non-conforming piles.

SECTION 31 62 23 00 - MPF COMPOSITE PILES

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where pile and grade beam foundation system is required and Composite Piles are a part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Pile and Grade Beam foundation system into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Wood concrete composite piles.
 - 2. Pile inspection and load tests.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

 - 3. Other connector requirements: Conform to local building code.
 - 4. Design splice to withstand minimum moment capacity of 4 foot kips, with no applied axial load, and to withstand minimum tensile force of 20 tons.

NOTE TO SPECIFIER

Select concrete type, aggregate size, strength, and slump requirements as required by project site conditions.

- E. Concrete Materials and Mix: Specified in Section 033000 using Type [I] [____] cement, [3/4] [____] inch aggregate size, [3000] [____] psi 28 day strength, [6] [____] inch slump.

2.2 SOURCE QUALITY CONTROL

- A. Certification: Provide shop inspection and certification of timber pile sections.
- B. Timber Section Inspection: Inspect at source of supply and hammer mark in the butt to indicate conformance with specified requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution Requirements: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support pile driving equipment for performance of pile driving operations and testing.
 - 2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Obtain Contracting Officer approval for pile driving hammer.
- B. Use driving method which will not cause damage to existing adjacent structures, and site improvements.
- C. Notify adjacent property owners with written notice, approved by Contracting Officer, prior to start of Work.
- D. Protect adjacent structures and site improvements from damage.
- E. Clean casing of debris and dry casing prior to placing concrete.

3.3 INSTALLATION

- A. Protect pile head during driving, using cushion cap. Provide full bearing on piles for distribution of hammer blow. Do not damage piles during driving operations.
- B. Deliver hammer blows to central axis of pile.
- C. Drive piles to length indicated on Structural Drawings. Avoid damaging piles by overdriving.
- D. Refusal: Contact Contracting Officer for instructions when refusal is encountered.
- E. If driving is interrupted before refusal, drive pile an additional 6 inches before resuming recording of performance data.
- F. Re-drive piles which have lifted due to driving adjacent piles, or by soil uplift.
- G. Cut off tops of piles to elevations indicated on Structural Drawings and prepare pile top to receive pile cap or grade beams.
- H. Prevent surface damage to piles.

3.4 CONSTRUCTION

- A. Site Tolerances:

1. Maximum Variation From Vertical For Plumb Piles: 1 in 48.
2. Minimum Variation From Required Angle for Batter Piles: 1 in 24.
3. Maximum Variation From Top of Pile Elevation: 2 inches.
4. Maximum Out-of Position: 4 inches.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Control: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection of pile installations, locations, and elevations.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piles required to determine acceptability of pile and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
2. Verify site conditions will support cribbing and load for testing purposes.
3. Establish stable working elevation for test equipment.
4. Provide materials and equipment for testing except hydraulic jack.
5. Provide test piles same diameter and type specified for piles, constructed in same manner.

SECTION 31 63 29 00 - MPF DRILLED CONCRETE PIERS AND SHAFTS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where pile and grade beam foundation system is required and Drilled Concrete Piers are a part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Pier and Grade Beam foundation system into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bored end bearing belled cast-in-place concrete piers with reinforcing steel.
 - 2. Pier inspection and load tests.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 032000 - Concrete Reinforcement: Drilled pier reinforcing.
 - 2. Section 033000 - Cast-In-Place Concrete: Concrete for drilled piers, pier caps, and grade beams.
- D. Unit Prices:
 - 1. Base bids on number, spacing, and length of piers indicated on Structural Drawings. Provide test piers two feet longer than pier lengths indicated on Structural Drawings.
 - 2. Determine number and length of piers based on Project Record Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 252 - Specification for Welded and Seamless Steel Pipe Piles.

NOTE TO SPECIFIER

Include ASTM D 1143, D 3689 and D 3966 when used in body of Specification. Delete if not used.

2. ASTM D 1143 - Method of Testing Piles Under Static Axial Compressive Load.
3. ASTM D 3689 - Method of Testing Individual Piles Under Static and Axial Tensile Load.
4. ASTM D 3966 - Method of Testing Piles under Lateral Loads.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
 1. Load Carrying Capacities: Indicated on Structural Drawings.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Shop Drawings:
 - a. Details and schedule of pier installation and testing.
 - b. Pier lengths and diameters.
 - c. Reinforcing quantities, sizes, and lengths for each pier.
 2. Section 014000 - Quality Requirements: Procedures for Quality Assurance/Control submittals.
 - a. Mix Design: Pier concrete as specified herein for Section 033000 mix design.
 - b. Qualification Documentation: Submit installer documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
 1. Project Record Documents : Submit log of the following, recorded at time of pier placement.
 - a. Top of pier elevation.
 - b. Pier shaft and under ream diameters.
 - c. Depth of bottom of pier.
 - d. Date pier was drilled and poured.
 - e. Soil stratum at bottom of pier.
 - f. Sequence of pier placing.
 - g. Alignment deviations.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing Work of this Section with minimum 10 years documented experience.
- B. Pre-Installation Meeting:
 1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of installation, installation procedures and coordination with related work.
 4. Agenda:
 - a. Tour, inspect and discuss condition of soil substrate, pier locations and other preparatory work performed by other trades.
 - b. Review structural loading requirements.
 - c. Review pier system requirements (drawings, specifications and other contract documents).
 - d. Review pier drilling methods and equipment.
 - e. Review and finalize construction schedule related to pier work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing and certifying procedures.

- g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
- h. Review safety precautions relating to drilled concrete pier and shaft installation.

PART 2 - PRODUCTS

2.1 MATERIALS

NOTE TO SPECIFIER

Verify casing material type and specifics. Modify as required for project site requirements.

- A. Casing: ASTM A 252, Grade 1, Grade 2, and Grade 3 single length steel pipe.
 - 1. Wall: Plain.
 - 2. Ends: Plain.
 - 3. Diameter: Indicated on Structural Drawings.
 - 4. Wall Thickness: Indicated on Structural Drawings.

NOTE TO SPECIFIER

Select concrete type, aggregate, size, strength, and slump requirements as required by project site conditions.

- B. Concrete Materials and Mix: Specified in Section 033000 using Type [I] [____] cement, [3/4] [____] inch aggregate size, [3000] [____] psi 28 day strength, [6] [____] inch slump.
- C. Reinforcement: Specified in Section 032000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support drilling equipment for performance of pier drilling operations.
 - 2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Drill vertical concentric pier shafts to diameters and depths indicated on Structural Drawings.

- B. Provide shaft liners as drilling progresses or immediately after drilling and inspection of pier shafts as indicated on Structural Drawings.
- C. Clean shaft bottom of loose material. Maintain shafts free of water.
- D. Obtain Contracting Officer inspection and approval of pier shafts prior to reinforcing and concrete placement. Prevent foreign matter from falling into shaft.
- E. Set tops of piers to elevations indicated on Structural Drawings.
- F. Place reinforcing steel as specified in Section 032000.
- G. Place concrete in single pour, in accordance with Section 033000. Use equipment designed for vertical placement of concrete. Vibrate concrete full depth of pier.
- H. Progressively raise shaft liner during concrete placement. Do not permit top of pier to deform to a mushroom shape due to premature removal of liner.
- I. Install dowels at top of pier as indicated on Structural Drawings for connection to grade beams.
- J. Install anchor bolts with setting templates at top of pier as indicated on Structural Drawings.
- K. Place concrete through tremie if an inflow of subsurface water occurs. Place concrete to height sufficient to effect seal.
- L. Provide protection for open pier holes. Do not leave pier holes open overnight.

3.3 CONSTRUCTION

- A. Site Tolerances:
 1. Maximum Variation From Vertical For Plumb Piers: 1 in 48.
 2. Minimum Variation From Required Angle for Batter Piers: 1 in 24.
 3. Maximum Variation From Top of Pier Elevation: 2 inches.
 4. Maximum Out-of Position: 4 inches.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection and approval of pier shafts before reinforcing and concrete placement.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piers required to determine acceptability of pier and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
2. Verify site conditions will support cribbing and load for testing purposes.
3. Establish stable working elevation for test equipment.

4. Provide materials and equipment for testing except hydraulic jack.
5. Provide test piers same diameter and type specified for piers, constructed in same manner.
6. Test [6] [____] indicator piers at locations as directed by Contracting Officer.
7. Subject piers to [1 3/4] [2] [____] times design load.
8. Perform concrete testing for pier concrete as specified in Section 033000.
9. Document test equipment used and method of calibrating and recording.

NOTE TO SPECIFIER

Select acceptable permanent set.

- D. Acceptable Permanent Set of Piers After Load Testing: [1/8] [1/4] [____] inch.
- E. Accepted test piers may be used in Work.
- F. Non-Conforming Piers: Provide additional piers or supplement piers to conform to specified requirements at non-conforming piers.

SECTION 31 63 29 00 - CSF DRILLED CONCRETE PIERS AND SHAFTS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where pile and grade beam foundation system is required and Drilled Concrete Piers are a part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Pier and Grade Beam foundation system into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bored end bearing belled cast-in-place concrete piers with reinforcing steel.
 - 2. Pier inspection and load tests.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 032000 - Concrete Reinforcement: Drilled pier reinforcing.
 - 2. Section 033000 - Cast-In-Place Concrete: Concrete for drilled piers, pier caps, and grade beams.
- D. Unit Prices:
 - 1. Base bids on number, spacing, and length of piers indicated on Structural Drawings. Provide test piers two feet longer than pier lengths indicated on Structural Drawings.
 - 2. Determine number and length of piers based on Project Record Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 252 - Specification for Welded and Seamless Steel Pipe Piles.

NOTE TO SPECIFIER

Include ASTM D 1143, D 3689 and D 3966 when used in body of Specification. Delete if not used.

2. ASTM D 1143 - Method of Testing Piles Under Static Axial Compressive Load.
3. ASTM D 3689 - Method of Testing Individual Piles Under Static and Axial Tensile Load.
4. ASTM D 3966 - Method of Testing Piles under Lateral Loads.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
1. Load Carrying Capacities: Indicated on Structural Drawings.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Shop Drawings:
 - a. Details and schedule of pier installation and testing.
 - b. Pier lengths and diameters.
 - c. Reinforcing quantities, sizes, and lengths for each pier.
 2. Section 014000 - Quality Requirements: Procedures for Quality Assurance/Control submittals.
 - a. Mix Design: Pier concrete as specified herein for Section 033000 mix design.
 - b. Qualification Documentation: Submit installer documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals:
1. Project Record Documents : Submit log of the following, recorded at time of pier placement.
 - a. Top of pier elevation.
 - b. Pier shaft and under ream diameters.
 - c. Depth of bottom of pier.
 - d. Date pier was drilled and poured.
 - e. Soil stratum at bottom of pier.
 - f. Sequence of pier placing.
 - g. Alignment deviations.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing Work of this Section with minimum 10 years documented experience.
- B. Pre-Installation Meeting:
1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of installation, installation procedures and coordination with related work.
 4. Agenda:
 - a. Tour, inspect and discuss condition of soil substrate, pier locations and other preparatory work performed by other trades.
 - b. Review structural loading requirements.
 - c. Review pier system requirements (drawings, specifications and other contract documents).
 - d. Review pier drilling methods and equipment.
 - e. Review and finalize construction schedule related to pier work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing and certifying procedures.

- g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
- h. Review safety precautions relating to drilled concrete pier and shaft installation.

PART 2 - PRODUCTS

2.1 MATERIALS

NOTE TO SPECIFIER

Verify casing material type and specifics. Modify as required for project site requirements.

- A. Casing: ASTM A 252, Grade 1, Grade 2, and Grade 3 single length steel pipe.
 - 1. Wall: Plain.
 - 2. Ends: Plain.
 - 3. Diameter: Indicated on Structural Drawings.
 - 4. Wall Thickness: Indicated on Structural Drawings.

NOTE TO SPECIFIER

Select concrete type, aggregate, size, strength, and slump requirements as required by project site conditions.

- B. Concrete Materials and Mix: Specified in Section 033000 using Type [I] [____] cement, [3/4] [____] inch aggregate size, [3000] [____] psi 28 day strength, [6] [____] inch slump.
- C. Reinforcement: Specified in Section 032000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify site conditions will support drilling equipment for performance of pier drilling operations.
 - 2. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings and are not located in an area that may be damaged.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Drill vertical concentric pier shafts to diameters and depths indicated on Structural Drawings.

- B. Provide shaft liners as drilling progresses or immediately after drilling and inspection of pier shafts as indicated on Structural Drawings.
- C. Clean shaft bottom of loose material. Maintain shafts free of water.
- D. Obtain Contracting Officer inspection and approval of pier shafts prior to reinforcing and concrete placement. Prevent foreign matter from falling into shaft.
- E. Set tops of piers to elevations indicated on Structural Drawings.
- F. Place reinforcing steel as specified in Section 032000.
- G. Place concrete in single pour, in accordance with Section 033000. Use equipment designed for vertical placement of concrete. Vibrate concrete full depth of pier.
- H. Progressively raise shaft liner during concrete placement. Do not permit top of pier to deform to a mushroom shape due to premature removal of liner.
- I. Install dowels at top of pier as indicated on Structural Drawings for connection to grade beams.
- J. Install anchor bolts with setting templates at top of pier as indicated on Structural Drawings.
- K. Place concrete through tremie if an inflow of subsurface water occurs. Place concrete to height sufficient to effect seal.
- L. Provide protection for open pier holes. Do not leave pier holes open overnight.

3.3 CONSTRUCTION

- A. Site Tolerances:
 1. Maximum Variation From Vertical For Plumb Piers: 1 in 48.
 2. Minimum Variation From Required Angle for Batter Piers: 1 in 24.
 3. Maximum Variation From Top of Pier Elevation: 2 inches.
 4. Maximum Out-of Position: 4 inches.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection and testing procedures.
- B. Inspection: Obtain Contracting Officer inspection and approval of pier shafts before reinforcing and concrete placement.
- C. Site Tests:

NOTE TO SPECIFIER

Select appropriate ASTM testing specifications for specific site conditions. Indicate number of test piers required to determine acceptability of pier and grade beam foundation system for the specific site conditions. Select loading factor for tests.

1. Perform testing using equipment, load carrying device, load, and instrumentation in conformance with [ASTM D 1143] [and] [ASTM D 3689, and ASTM D 3966].
2. Verify site conditions will support cribbing and load for testing purposes.
3. Establish stable working elevation for test equipment.

4. Provide materials and equipment for testing except hydraulic jack.
5. Provide test piers same diameter and type specified for piers, constructed in same manner.
6. Test [6] [____] indicator piers at locations as directed by Contracting Officer.
7. Subject piers to [1 3/4] [2] [____] times design load.
8. Perform concrete testing for pier concrete as specified in Section 033000.
9. Document test equipment used and method of calibrating and recording.

NOTE TO SPECIFIER

Select acceptable permanent set.

- D. Acceptable Permanent Set of Piers After Load Testing: [1/8] [1/4] [____] inch.
- E. Accepted test piers may be used in Work.
- F. Non-Conforming Piers: Provide additional piers or supplement piers to conform to specified requirements at non-conforming piers.

SECTION 32 01 11 53 - CEMENT CONCRETE PAVEMENT

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for cement concrete pavement. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Driveways.
 - b. Roadways.
 - c. Parking lots.
 - d. Curbs and gutters.
 - e. Walks.

C. Definitions

1. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash and other pozzolans, and ground granulated blast-furnace slag.

D. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
 - b. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as a replacement for portland cement or other portland cement replacements. For each design mixture submitted, include an equivalent concrete mixture that does not contain portland cement replacements, to determine amount of portland cement replaced.
3. Shop Drawings: Indicate pavement markings, lane separations, and defined parking spaces. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.
4. Samples: For each type of product or exposed finish, prepared as Samples of size indicated below:
 - a. Exposed Aggregate: 10-lb (4.5-kg) Sample of each mix.
 - b. Wheel Stops: 6 inches (150 mm) long showing cross section; with fasteners.
 - c. Preformed Traffic-Calming Devices: 6 inches (150 mm) long showing cross section; with fasteners.
5. Other Action Submittals:
 - a. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.
6. Qualification Data: For qualified Installer of detectable warnings, ready-mix concrete manufacturer and testing agency.
7. Material Certificates: For the following, from manufacturer:
 - a. Cementitious materials.
 - b. Steel reinforcement and reinforcement accessories.
 - c. Fiber reinforcement.
 - d. Admixtures.
 - e. Curing compounds.
 - f. Applied finish materials.

- g. Bonding agent or epoxy adhesive.
- h. Joint fillers.
- 8. Material Test Reports: For each of the following:
 - a. Aggregates. Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.
- 9. Field quality-control reports.

E. Quality Assurance

- 1. Detectable Warning Installer Qualifications: An employer of workers trained and approved by manufacturer of stamped concrete paving systems.
- 2. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.
 - a. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").
- 3. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.
 - a. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
- 4. Concrete Testing Service: Engage a qualified testing agency to perform material evaluation tests and to design concrete mixtures.
- 5. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.
- 6. Preinstallation Conference: Conduct conference at Project site.

F. Project Conditions

- 1. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.
- 2. Pavement-Marking Paint: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 deg F (4.4 deg C) for oil-based materials **OR** 55 deg F (12.8 deg C) for water-based materials, **as directed**, and not exceeding 95 deg F (35 deg C).

1.2 PRODUCTS

A. Forms

- 1. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.
 - a. Use flexible or uniformly curved forms for curves with a radius of 100 feet (30.5 m) or less. Do not use notched and bent forms.
- 2. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

B. Steel Reinforcement

- 1. Recycled Content: Provide steel reinforcement with an average recycled content of steel so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- 2. Plain-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, fabricated from as-drawn steel **OR** galvanized-steel, **as directed**, wire into flat sheets.
- 3. Deformed-Steel Welded Wire Reinforcement: ASTM A 497/A 497M, flat sheet.
- 4. Epoxy-Coated Welded Wire Reinforcement: ASTM A 884/A 884M, Class A, plain steel.
- 5. Reinforcing Bars: ASTM A 615/A 615M, Grade 60 (Grade 420); deformed.
- 6. Galvanized Reinforcing Bars: ASTM A 767/A 767M, Class II zinc coated, hot-dip galvanized after fabrication and bending; with ASTM A 615/A 615M, Grade 60 (Grade 420) deformed bars.

7. Epoxy-Coated Reinforcing Bars: ASTM A 775/A 775M or ASTM A 934/A 934M; with ASTM A 615/A 615M, Grade 60 (Grade 420) deformed bars.
8. Steel Bar Mats: ASTM A 184/A 184M; with ASTM A 615/A 615M, Grade 60 (Grade 420), deformed bars; assembled with clips.
9. Plain-Steel Wire: ASTM A 82/A 82M, as drawn **OR** galvanized, **as directed**.
10. Deformed-Steel Wire: ASTM A 496/A 496M.
11. Epoxy-Coated-Steel Wire: ASTM A 884/A 884M, Class A coated, plain **OR** deformed, **as directed**.
12. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 (Grade 420) plain-steel bars; zinc coated (galvanized) after fabrication according to ASTM A 767/A 767M, Class I coating, **as directed**. Cut bars true to length with ends square and free of burrs.
13. Epoxy-Coated, Joint Dowel Bars: ASTM A 775/A 775M; with ASTM A 615/A 615M, Grade 60 (Grade 420), plain-steel bars.
14. Tie Bars: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed.
OR
Hook Bolts: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), internally and externally threaded. Design hook-bolt joint assembly to hold coupling against paving form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.
15. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:
 - a. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
 - b. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.
16. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.
17. Zinc Repair Material: ASTM A 780.

C. Concrete Materials

1. Cementitious Material: Use the following cementitious materials, of same type, brand, and source throughout Project:
 - a. Portland Cement: ASTM C 150, gray **OR** white, **as directed**, portland cement Type I **OR** Type II **OR** Type I/II **OR** Type III **OR** Type V, **as directed**. Supplement with the following, **as directed**:
 - 1) Fly Ash: ASTM C 618, Class C or Class F.
 - 2) Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.
 - b. Blended Hydraulic Cement: ASTM C 595, Type IS, portland blast-furnace slag **OR** Type IP, portland-pozzolan, **as directed**, cement.
2. Normal-Weight Aggregates: ASTM C 33, Class 4S **OR** Class 4M **OR** Class 1N, **as directed**, uniformly graded. Provide aggregates from a single source with documented service-record data of at least 10 years' satisfactory service in similar paving applications and service conditions using similar aggregates and cementitious materials, **as directed**.
 - a. Maximum Coarse-Aggregate Size: 1-1/2 inches (38 mm) **OR** 1 inch (25 mm) **OR** 3/4 inch (19 mm), **as directed**, nominal.
 - b. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.
3. Exposed Aggregate: Selected, hard, and durable; washed; free of materials with deleterious reactivity to cement or that cause staining; from a single source, with gap-graded coarse aggregate as follows:
 - a. Aggregate Sizes: 3/4 to 1 inch (19 to 25 mm) **OR** 1/2 to 3/4 inch (13 to 19 mm) **OR** 3/8 to 5/8 inch (10 to 16 mm), **as directed**, nominal.
 - b. Aggregate Source, Shape, and Color: **As required to meet Project requirements**.
4. Water: Potable and complying with ASTM C 94/C 94M.
5. Air-Entraining Admixture: ASTM C 260.

6. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.
 - a. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
 - b. Retarding Admixture: ASTM C 494/C 494M, Type B.
 - c. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
 - d. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
 - e. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
 - f. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.
7. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, **as directed**, nonfading, and resistant to lime and other alkalis.

D. Fiber Reinforcement

1. Synthetic Fiber: Monofilament or fibrillated polypropylene fibers engineered and designed for use in concrete paving, complying with ASTM C 1116/C 1116M, Type III, 1/2 to 1-1/2 inches (13 to 38 mm) long.

E. Curing Materials

1. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305 g/sq. m) dry or cotton mats.
2. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.
3. Water: Potable.
4. Evaporation Retarder: Waterborne, monomolecular, film forming, manufactured for application to fresh concrete.
5. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.
6. White, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 2, Class B, dissipating.

F. Related Materials

1. Joint Fillers: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork or self-expanding cork in preformed strips.
2. Slip-Resistive Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of fused aluminum-oxide granules or crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials.
3. Bonding Agent: ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene.
4. Epoxy Bonding Adhesive: ASTM C 881/C 881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:
 - a. Types I and II, non-load bearing **OR** Types IV and V, load bearing, **as directed**, for bonding hardened or freshly mixed concrete to hardened concrete.
5. Chemical Surface Retarder: Water-soluble, liquid, set retarder with color dye, for horizontal concrete surface application, capable of temporarily delaying final hardening of concrete to a depth of 1/8 to 1/4 inch (3 to 6 mm).
6. Pigmented Mineral Dry-Shake Hardener: Factory-packaged, dry combination of portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.
7. Rock Salt: Sodium chloride crystals, kiln dried, coarse gradation with 100 percent passing 3/8-inch (9.5-mm) sieve and 85 percent retained on a No. 8 (2.36-mm) sieve.

G. Detectable Warning Materials

1. Detectable Warning Stamp: Semirigid polyurethane mats with formed underside capable of imprinting detectable warning pattern on plastic concrete; perforated with a vent hole at each dome.
 - a. Size of Stamp: One piece matching detectable warning area shown on Drawings **OR** 24 by 24 inches (610 by 610 mm) **OR** 24 by 36 inches (610 by 914 mm) **OR** 24 by 48 inches (610 by 1220 mm) **OR** 26 by 26 inches (660 by 660 mm) **OR** 26 by 36 inches (660 by 914 mm), **as directed**.
 2. Liquid Release Agent: Manufacturer's standard, clear, evaporating formulation designed to facilitate release of stamp mats.
- H. Pavement Markings
1. Pavement-Marking Paint: Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, Type N **OR** Type F **OR** Type S, **as directed**; colors complying with FS TT-P-1952.
 - a. Color: White **OR** Yellow **OR** Blue **OR** As indicated, **as directed**.
 2. Pavement-Marking Paint: MPI #32 Alkyd Traffic Marking Paint.
 - a. Color: White **OR** Yellow **OR** Blue **OR** As indicated, **as directed**.
 3. Pavement-Marking Paint: Latex, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952, Type II, with drying time of less than three **OR** 45, **as directed**, minutes.
 - a. Color: White **OR** Yellow **OR** Blue **OR** As indicated, **as directed**.
 4. Pavement-Marking Paint: MPI #97 Latex Traffic Marking Paint.
 - a. Color: White **OR** Yellow **OR** Blue **OR** As indicated, **as directed**.
 5. Glass Beads: AASHTO M 247, Type 1 **OR** FS TT-B-1325, Type 1A, **as directed**.
- I. Wheel Stops
1. Wheel Stops: Precast, air-entrained concrete, 2500-psi (17.2-MPa) minimum compressive strength, 4-1/2 inches (115 mm) high by 9 inches (225 mm) wide by 72 inches (1820 mm) long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.
 - a. Dowels: Galvanized steel, 3/4 inch (19 mm) in diameter, 10-inch (254-mm) minimum length.
 2. Wheel Stops: Solid, integrally colored, 96 percent recycled HDPE, or commingled postconsumer and postindustrial recycled rubber or plastic; UV stabilized; 4 inches (100 mm) high by 6 inches (150 mm) wide by 72 inches (1820 mm) long. Provide chamfered corners and drainage slots on underside and holes for anchoring to substrate.
 - a. Color: Black **OR** Yellow **OR** Gray **OR** Green **OR** Blue, **as directed**.
 - b. Dowels: Galvanized steel, 3/4 inch (19 mm) in diameter, 10-inch (254-mm) minimum length.
 - c. Adhesive: As recommended by wheel stop manufacturer for application to concrete pavement.
- J. Preformed Traffic-Calming Devices
1. Speed Bumps **OR** Humps **OR** Cushions, **as directed**: Solid, integrally colored, 100 percent postconsumer or commingled postconsumer and postindustrial recycled rubber or plastic; UV stabilized. Provide holes for anchoring to substrate.
 - a. Bump Size: Modular 2 inches (50 mm) high by 10 inches (254 mm) wide by 72 inches (1800 mm) long, with overall length as dimensioned on Drawings.
 - b. Hump **OR** Cushion, **as directed**, Size: Modular assemblies 3 inches (75 mm) high by 12 feet (3.7 m) in overall width **OR** 4 inches (100 mm) high by 14 feet (4.3 m) in overall width, **as directed**, with overall length as dimensioned on Drawings.
 - c. Color: Black **OR** Yellow, **as directed**.
 - d. Mounting Hardware: Galvanized-steel lag screw, shield, and washers; 1/2-inch (13-mm) diameter, 8-inch (200-mm) minimum length **OR** hardware as standard with device manufacturer for use with concrete paving, **as directed**.
 - e. Adhesive: As recommended by device manufacturer.

K. Concrete Mixtures

1. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.
 - a. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method.
 - b. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that meet or exceed requirements.
2. Proportion mixtures to provide normal-weight concrete with the following properties:
 - a. Compressive Strength (28 Days): 4500 psi (31 MPa) **OR** 4000 psi (27.6 MPa) **OR** 3500 psi (24.1 MPa) **OR** 3000 psi (20.7 MPa), **as directed**.
 - b. Maximum Water-Cementitious Materials Ratio at Point of Placement: 0.45 **OR** 0.50, **as directed**.
 - c. Slump Limit: 4 inches (100 mm) **OR** 5 inches (125 mm) **OR** 8 inches (200 mm), **as directed**, plus or minus 1 inch (25 mm).
3. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:
 - a. Air Content: 5-1/2 **OR** 4-1/2 **OR** 2-1/2, **as directed**, percent plus or minus 1.5 percent for 1-1/2-inch (38-mm) nominal maximum aggregate size.
 - b. Air Content: 6 **OR** 4-1/2 **OR** 3, **as directed**, percent plus or minus 1.5 percent for 1-inch (25-mm) nominal maximum aggregate size.
 - c. Air Content: 6 **OR** 5 **OR** 3-1/2, **as directed**, percent plus or minus 1.5 percent for 3/4-inch (19-mm) nominal maximum aggregate size.
4. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 **OR** 0.30, **as directed**, percent by weight of cement.
5. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.
 - a. Use water-reducing admixture **OR** high-range, water-reducing admixture **OR** high-range, water-reducing and retarding admixture **OR** plasticizing and retarding admixture, **as directed**, in concrete as required for placement and workability.
 - b. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
6. Cementitious Materials: Limit percentage by weight of cementitious materials other than portland cement according to ACI 301 (ACI 301M) requirements for concrete exposed to deicing chemicals **OR** as follows, **as directed**:
 - a. Fly Ash or Pozzolan: 25 percent.
 - b. Ground Granulated Blast-Furnace Slag: 50 percent.
 - c. Combined Fly Ash or Pozzolan, and Ground Granulated Blast-Furnace Slag: 50 percent, with fly ash or pozzolan not exceeding 25 percent.
7. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.0 lb/cu. yd. (0.60 kg/cu. m) **OR** 1.5 lb/cu. yd. (0.90 kg/cu. m), **as directed**.
8. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

L. Concrete Mixing

1. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M and ASTM C 1116/C 1116M, **as directed**. Furnish batch certificates for each batch discharged and used in the Work.
 - a. When air temperature is between 85 and 90 deg F (30 and 32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.
2. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.
 - a. For concrete batches of 1 cu. yd. (0.76 cu. m) or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.

- b. For concrete batches larger than 1 cu. yd. (0.76 cu. m), increase mixing time by 15 seconds for each additional 1 cu. yd. (0.76 cu. m).
- c. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

1.3 EXECUTION

A. Examination

- 1. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.
- 2. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.
 - a. Completely proof-roll subbase in one direction and repeat in perpendicular direction, **as directed**. Limit vehicle speed to 3 mph (5 km/h).
 - b. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).
 - c. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch (13 mm) according to requirements in Division 31 Section "Earth Moving".
- 3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

- 1. Remove loose material from compacted subbase surface immediately before placing concrete.

C. Edge Forms And Screed Construction

- 1. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.
- 2. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

D. Steel Reinforcement

- 1. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.
- 2. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.
- 3. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.
- 4. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.
- 5. Zinc-Coated Reinforcement: Use galvanized-steel wire ties to fasten zinc-coated reinforcement. Repair cut and damaged zinc coatings with zinc repair material.
- 6. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M.
- 7. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2-inch (50-mm) overlap of adjacent mats.

E. Joints

- 1. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.
 - a. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

2. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints.
 - a. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
 - b. Provide tie bars at sides of paving strips where indicated.
 - c. Butt Joints: Use bonding agent **OR** epoxy bonding adhesive, **as directed**, at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
 - d. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least 1-1/2 inches (38 mm) into concrete.
 - e. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
 3. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.
 - a. Locate expansion joints at intervals of 50 feet (15.25 m) unless otherwise indicated.
 - b. Extend joint fillers full width and depth of joint.
 - c. Terminate joint filler not less than 1/2 inch (13 mm) or more than 1 inch (25 mm) below finished surface if joint sealant is indicated.
 - d. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.
 - e. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
 - f. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.
 4. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows, to match jointing of existing adjacent concrete paving:
 - a. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a 1/4-inch (6-mm) **OR** 3/8-inch (10-mm), **as directed**, radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces, **as directed**.
 - 1) Tolerance: Ensure that grooved joints are within 3 inches (75 mm) either way from centers of dowels.
 - b. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- (3-mm-) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.
 - 1) Tolerance: Ensure that sawed joints are within 3 inches (75 mm) either way from centers of dowels.
 - c. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.
 - d. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a 1/4-inch (6-mm) **OR** 3/8-inch (10-mm), **as directed**, radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces, **as directed**.
- F. Concrete Placement
1. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.
 2. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

3. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.
4. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.
5. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.
6. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.
7. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.
 - a. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement, dowels, and joint devices.
8. Screed paving surface with a straightedge and strike off.
9. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.
10. Curbs and Gutters: Use design mixture for automatic machine placement. Produce curbs and gutters to required cross section, lines, grades, finish, and jointing.
11. Slip-Form Paving: Use design mixture for automatic machine placement. Produce paving to required thickness, lines, grades, finish, and jointing.
 - a. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.
12. Cold-Weather Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:
 - a. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
 - b. Do not use frozen materials or materials containing ice or snow.
 - c. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.
13. Hot-Weather Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:
 - a. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
 - b. Cover steel reinforcement with water-soaked burlap so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
 - c. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

G. Float Finishing

1. General: Do not add water to concrete surfaces during finishing operations.
2. Float Finish: Begin the second floating operation when bleed-water sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.
 - a. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.

- b. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface perpendicular to line of traffic to provide a uniform, fine-line texture.
- c. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch (1.6 to 3 mm) deep with a stiff-bristled broom, perpendicular to line of traffic.

H. Special Finishes

1. Monolithic Exposed-Aggregate Finish: Expose coarse aggregate in paving surface as follows:
 - a. Immediately after float finishing, spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
 - b. Cover paving surface with plastic sheeting, sealing laps with tape, and remove when ready to continue finishing operations.
 - c. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
 - d. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.
2. Seeded Exposed-Aggregate Finish: Immediately after initial floating, spread a single layer of aggregate uniformly on paving surface. Tamp aggregate into plastic concrete and float finish to entirely embed aggregate with mortar cover of 1/16 inch (1.6 mm).
 - a. Spray-apply chemical surface retarder to paving according to manufacturer's written instructions.
 - b. Cover paving surface with plastic sheeting, sealing laps with tape, and remove sheeting when ready to continue finishing operations.
 - c. Without dislodging aggregate, remove mortar concealing the aggregate by lightly brushing surface with a stiff, nylon-bristle broom. Do not expose more than one-third of the average diameter of the aggregate and not more than one-half of the diameter of the smallest aggregate.
 - d. Fine-spray surface with water and brush. Repeat cycle of water flushing and brushing until cement film is removed from aggregate surfaces to depth required.
3. Slip-Resistive Aggregate Finish: Before final floating, spread slip-resistive aggregate finish on paving surface according to manufacturer's written instructions and as follows:
 - a. Uniformly spread 25 lb/100 sq. ft. (12 kg/10 sq. m) **OR** 40 lb/100 sq. ft. (19.5 kg/10 sq. m) **OR** 60 lb/100 sq. ft. (29 kg/10 sq. m), **as directed**, of dampened, slip-resistive aggregate over paving surface in two applications. Tamp aggregate flush with surface using a steel trowel, but do not force below surface.
 - b. Uniformly distribute approximately two-thirds of slip-resistive aggregate over paving surface with mechanical spreader, allow to absorb moisture, and embed by power floating. Follow power floating with a second slip-resistive aggregate application, uniformly distributing remainder of material at right angles to first application to ensure uniform coverage, and embed by power floating.
 - c. Cure concrete with curing compound recommended by slip-resistive aggregate manufacturer. Apply curing compound immediately after final finishing.
 - d. After curing, lightly work surface with a steel wire brush or abrasive stone and water to expose nonslip aggregate.
4. Rock-Salt Finish: After initial floating **OR** troweling **OR** brooming, **as directed**, uniformly spread rock salt over paving surface at the rate of 5 lb/100 sq. ft. (0.2 kg/10 sq. m).
 - a. Embed rock salt into plastic concrete with roller or magnesium float.
 - b. Cover paving surface with 1-mil- (0.025-mm-) thick polyethylene sheet and remove sheet when concrete has hardened and seven-day curing period has elapsed.
 - c. After seven-day curing period, saturate concrete with water and broom-sweep surface to dissolve remaining rock salt, thereby leaving pits and holes.
5. Pigmented Mineral Dry-Shake Hardener Finish: After initial floating, apply dry-shake materials to paving surface according to manufacturer's written instructions and as follows:

- a. Uniformly spread dry-shake hardener at a rate of 100 lb/100 sq. ft. (49 kg/10 sq. m), unless greater amount is recommended by manufacturer to match paving color required.
- b. Uniformly distribute approximately two-thirds of dry-shake hardener over the concrete surface with mechanical spreader; allow hardener to absorb moisture and embed it by power floating. Follow power floating with a second application of pigmented mineral dry-shake hardener, uniformly distributing remainder of material at right angles to first application to ensure uniform color, and embed hardener by final power floating.
- c. After final power floating, apply a hand-trowel finish followed by a broom finish.
- d. Cure concrete with curing compound recommended by dry-shake hardener manufacturer. Apply curing compound immediately after final finishing.

I. Detectable Warnings

1. Blockouts: Form blockouts in concrete for installation of detectable paving units specified in Division 32 Section "Unit Paving".
 - a. Tolerance for Opening Size: Plus 1/4 inch (6 mm), no minus.
2. Stamped Detectable Warnings: Install stamped detectable warnings as part of a continuous concrete paving placement and according to stamp-mat manufacturer's written instructions.
 - a. Before using stamp mats, verify that the vent holes are unobstructed.
 - b. Apply liquid release agent to the concrete surface and the stamp mat.
 - c. Stamping: While initially finished concrete is plastic **OR** After application and final floating of pigmented mineral dry-shake hardener, **as directed**, accurately align and place stamp mats in sequence. Uniformly load, gently vibrate, and press mats into concrete to produce imprint pattern on concrete surface. Load and tamp mats directly perpendicular to the stamp-mat surface to prevent distortion in shape of domes. Press and tamp until mortar begins to come through all of the vent holes. Gently remove stamp mats.
 - d. Trimming: After 24 hours, cut off the tips of mortar formed by the vent holes.
 - e. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

J. Concrete Protection And Curing

1. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
2. Comply with ACI 306.1 for cold-weather protection.
3. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.
4. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.
5. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover curing, curing compound, or a combination of these as follows:
 - a. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
 - 1) Water.
 - 2) Continuous water-fog spray.
 - 3) Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12-inch (300-mm) lap over adjacent absorptive covers.
 - b. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches (300 mm) and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period using cover material and waterproof tape.
 - c. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas that have been subjected to

heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

K. Paving Tolerances

1. Comply with tolerances in ACI 117 and as follows:
 - a. Elevation: 3/4 inch (19 mm).
 - b. Thickness: Plus 3/8 inch (10 mm), minus 1/4 inch (6 mm).
 - c. Surface: Gap below 10-foot- (3-m-) long, unleveled straightedge not to exceed 1/2 inch (13 mm).
 - d. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches (13 mm per 300 mm) of tie bar.
 - e. Lateral Alignment and Spacing of Dowels: 1 inch (25 mm).
 - f. Vertical Alignment of Dowels: 1/4 inch (6 mm).
 - g. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6 mm per 300 mm) of dowel.
 - h. Joint Spacing: 3 inches (75 mm).
 - i. Contraction Joint Depth: Plus 1/4 inch (6 mm), no minus.
 - j. Joint Width: Plus 1/8 inch (3 mm), no minus.

L. Pavement Marking

1. Do not apply pavement-marking paint until layout, colors, and placement have been verified with the Owner.
2. Allow concrete paving to cure for a minimum of 28 days and be dry before starting pavement marking.
3. Sweep and clean surface to eliminate loose material and dust.
4. Apply paint with mechanical equipment to produce markings of dimensions indicated with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils (0.4 mm).
 - a. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
 - b. Broadcast glass beads uniformly into wet markings at a rate of 6 lb/gal. (0.72 kg/L).

M. Wheel Stops

1. Install wheel stops in bed of adhesive applied as recommended by manufacturer.
2. Securely attach wheel stops to paving with not less than two steel **OR** galvanized-steel, **as directed**, dowels located at one-quarter to one-third points. Install dowels in drilled holes in the paving and bond dowels to wheel stop. Recess head of dowel beneath top of wheel stop.

N. Preformed Traffic-Calming Devices

1. Install preformed speed bumps **OR** humps **OR** cushions, **as directed**, in bed of adhesive applied as recommended by manufacturer for heavy traffic.
2. Securely attach preformed speed bumps **OR** humps **OR** cushions, **as directed**, to paving with hardware spaced as recommended by manufacturer for heavy traffic. Recess head of hardware beneath top surface.

O. Field Quality Control

1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
2. Testing Services: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:
 - a. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. (76 cu. m) **OR** 5000 sq. ft. (465 sq. m), **as directed**, or fraction thereof of each concrete mixture placed each day.

- 1) When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
 - b. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
 - c. Air Content: ASTM C 231, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
 - d. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (27 deg C) and above, and one test for each composite sample.
 - e. Compression Test Specimens: ASTM C 31/C 31M; cast and laboratory cure one set of three standard cylinder specimens for each composite sample.
 - f. Compressive-Strength Tests: ASTM C 39/C 39M; test one specimen at seven days and two specimens at 28 days.
 - 1) A compressive-strength test shall be the average compressive strength from two specimens obtained from same composite sample and tested at 28 days.
 3. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi (3.4 MPa).
 4. Test results shall be reported in writing to the Owner, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
 5. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by the Owner but will not be used as sole basis for approval or rejection of concrete.
 6. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by the Owner.
 7. Concrete paving will be considered defective if it does not pass tests and inspections.
 8. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
 9. Prepare test and inspection reports.
- P. Repairs And Protection
1. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by the Owner.
 2. Drill test cores, where directed by the Owner, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with portland cement concrete bonded to paving with epoxy adhesive.
 3. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.
 4. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Final Completion inspections.

END OF SECTION 32 01 11 53

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 01 16 71 - GRINDING/GROOVING PAVEMENT

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of grinding/grooving pavement. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.

1.2 PRODUCTS - Not Used

1.3 EXECUTION

A. Grinding: This covers grinding asphalt concrete or portland cement concrete pavement and roadway surfaces of structures as shown on the plans and as specified in these specifications and the special provisions

1. Grinding shall be performed with abrasive grinding equipment utilizing diamond cutting blades.
2. Existing portland cement concrete pavement not constructed as part of the project shall be ground as follows:
 - a. Grinding shall be performed so that the pavement surface on both sides of all transverse joints and cracks has essentially the same depth of texture and does not vary from a true plane enough to permit a 1.9 mm thick shim 75 mm wide to pass under a one-meter straightedge adjacent to either side of the joint or crack when the straightedge is laid on the pavement parallel to centerline with its midpoint at the joint or crack. After grinding has been completed, the pavement shall conform to the straightedge and profile requirements specified in paving specification, paragraph "Final Finishing," except that pavement on tangent alignment and on horizontal curves of any radius shall have a profile index of 19 mm or less per 0.1-km.
 - b. Abnormally depressed areas due to subsidence or other localized causes will be excluded from testing with the profilograph and 3.6-m \pm 0.06-m straightedge. The accumulated total of the excluded areas shall not exceed 5 percent of the total area to be ground. Profilograph testing shall end 8 m prior to excluded areas and shall resume 8 m following the excluded areas.
3. Existing asphalt concrete pavement not constructed as part of the project shall be ground so that the finished surface shall not vary from a true plane enough to permit a 3-mm thick shim 75 mm wide to pass under a straightedge 3.6 m \pm 0.06-m long when the straightedge is laid on the finished surface parallel with the centerline. The transverse slope of the finished surface shall be uniform to a degree such that a 6 mm thick shim 75 mm wide will not pass under a straightedge 3.6 m \pm 0.06-m long when the straightedge is laid on the finished surface in a direction transverse to the centerline and extending from edge to edge of a 3.6-m traffic lane.
4. Ground areas on structures, approach slabs and the adjacent 15 m of approach pavement shall conform to the provisions for smoothness and concrete cover over reinforcing steel.
5. Ground surfaces shall not be smooth or polished and, except as otherwise specified, shall have a coefficient of friction of not less than 0.30.
6. Residue from grinding operations shall be picked up by means of a vacuum attachment to the grinding machine and shall not be allowed to flow across the pavement nor be left on the surface of the pavement. Residue from grinding portland cement concrete pavement shall be disposed of

as directed. Residue from grinding asphalt concrete shall be disposed of outside the highway right of way.

7. At the option of the Contractor, the residue from grinding portland cement concrete pavement may be disposed of as directed by the authorities having jurisdiction over the site. A copy of the approval shall be delivered to the Engineer before disposing of residue at the site.
8. The noise level created by the combined grinding operation shall not exceed 86 dBA at a distance of 15 m at right angles to the direction of travel.

B. Grooving: This work shall consist of grooving the surface of asphalt concrete or Portland cement concrete pavement and bridge decks as shown on the plans and as specified in these specifications and the special provisions

1. Grooved areas shall begin and end at lines normal to the pavement center line and shall be centered within the lane width. If new concrete pavement is grooved, the grooving in any lane shall cover the full lane width.
2. Grooving blades shall be 2.41 mm \pm 0.13-mm wide and shall be spaced 19 mm on centers. The grooves shall be cut not less than 3 mm nor more than 7 mm deep. The grooves on bridge decks shall be cut not less than 3 mm nor more than 5 mm deep. Grooves over inductive loop detectors shall be cut not less than 2 mm nor more than 3 mm deep.
3. At the beginning of each work shift, all grooving machines shall be equipped with a full complement of grooving blades that are capable of cutting grooves of the specified width, depth and spacing.
4. If during the course of work a single grooving blade on any individual grooving machine becomes incapable of cutting a groove, work will be permitted to continue for the remainder of the work shift, and the Contractor will not be required to otherwise cut the groove omitted because of the failed blade. Should 2 or more grooving blades on any individual grooving machine become incapable of cutting grooves the Contractor shall either:
 - a. Discontinue work with the affected grooving machine within 15 m of the location where more than one blade became incapable, in which event the Contractor will not be required to otherwise cut the grooves omitted because of the failed blades; **OR**
Continue work with the affected grooving machine for the remainder of the work shift and by other means cut all grooves omitted, including grooves omitted because a single blade was incapable, by the affected grooving machine within that work shift. The omitted grooves shall be cut before any of the grooving work performed during the time the grooves were omitted will be accepted.
5. The actual grooved area of any selected 0.6-m by 30 m longitudinal area of pavement specified to be grooved shall be not less than 95 percent of the selected area. Grooves which are omitted as permitted for blades which become incapable will be measured as being actually grooved. No area will be measured until omitted grooves, which are required to be cut before the area is accepted, have been cut. Except as provided for omitted grooves due to an incapable blade, any area within the selected area not grooved shall be due only to irregularities in the pavement surface and for no other reason.
6. Residue from grooving operations shall be picked up by means of a vacuum attachment to the grooving machine and shall not be allowed to flow across the pavement nor be left on the surface of the pavement. Residue from grooving portland cement concrete pavement shall be disposed of as directed. Residue from grooving asphalt concrete shall be disposed of outside the highway right of way.
7. At the option of the Contractor, the residue from grooving portland cement concrete pavement may be disposed as directed by the authorities having jurisdiction over the site. A copy of the approval shall be delivered to the Engineer before disposing of residue at the site.
8. The noise level created by the combined grooving operation shall not exceed 86 dBA at a distance of 15 m at right angles to the direction of travel.

C. Highway or Street Grooving: AASHTO recommends the following groove specifications: 2.4 mm wide; depth of 3.2 to 4.8 mm, and a center-to-center spacing of 19.1 mm (0.75 inches) (7). The center 10-foot portion of a 12-foot lane is typically grooved, leaving a 1-foot strip ungrooved at the edge of each lane.

- D. Boat Ramp Grooving: Grooves shall be non-skid V-grooves spaced 2 inches on center, 1/2-inch radius, 1/2-inch deep.
- E. Runway Grooving
1. General
 - a. The grooving dimensions shall be as follows:
 - 1) Depth - One-quarter (1/4) inch \pm one sixteenth (1/16) inch
 - 2) Width - One-quarter (1/4) inch \pm one sixteenth (1/16) inch
 - 3) Center to center - One and one-half (1 1/2) inch \pm one eighth (1/8) inch
 - b. Grooving shall not begin until new pavement has properly cooled/cured and permission is given.
 - c. In no case shall final painted pavement markings be applied prior to grooving.
 2. The pavement must be grooved by approved diamond bladed saw-cutting equipment. Variations in the grooving contour will not be permitted without approval. All reasonable precautions shall be taken to avoid breaking or chipping the pavement surfaces between grooves. Excessive spalling of the grooved edges will not be permitted.
 3. The Contractor shall groove bituminous concrete and portland cement concrete pavements according to the following specifications (from FAA Advisory Circular 150/5320-12B, Section IV):
 - a. The depth of 90 percent or more of the groove shall not be less than 1/4 inch.
 - b. The grooves shall be continuous for the entire runway length and transverse (perpendicular) to the direction of aircraft landing and takeoff operations.
 - c. The grooves shall be continued to the end of the runway where the concrete meets the asphalt.
 - d. The grooves shall not vary more than 3 inches in alignment for 75 feet, allowing for realignment every 500 feet.
 - e. Grooves shall not be closer than 3 inches or more than 9 inches from transverse joints in concrete pavements.
 - f. Grooving through longitudinal or diagonal saw kerfs where lighting cables are installed shall be avoided. Grooves may be continued through longitudinal construction joints.
 - g. Grooves shall be sawed no closer than 6 inches and no more than 18 inches from in-pavement light fixtures.
 4. Cleanup is extremely important and should be continuous throughout the grooving operations. Accumulation of debris resulting from the grooving operations shall be cleaned from the grooves and removed from the pavement by air jets, high pressure water streams, or other approved methods, after each grooving operation at hourly intervals. The Contractor shall provide water for cleanup operations. The waste material shall not be flushed into the storm or sanitary sewer system. The waste material shall not be allowed to drain onto the shoulders or left on the runway surface in order to prevent foreign object damage.

SECTION 32 01 90 00 - CSF OPERATION AND MAINTENANCE OF PLANTING**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

The use of this section requires approval of the Contracting Officer. Use this section for Medium Standard Buildings and Small Standard Buildings where planting and irrigation system maintenance is part of the Work and as approved by USPS Contracting Officer.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Contractor maintenance of exterior plants, lawns, and grasses.
 - 2. Contractor maintenance of irrigation system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 017704 - Closeout Procedures and Training: Maintenance data and Maintenance Manuals.
 - 2. Section 329200 - Turf and Grasses: Grass, sod, and sprigs.
 - 3. Section 329300 - Plants: Planting materials.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Operation and Maintenance Data:
 - a. Instructions indicating procedures to be used by United States Postal Service personnel for maintenance of plants and groundcover during one typical year including variations of maintenance for climatic conditions throughout the year. Include instructions and procedures including but not limited to the following:
 - 1) Watering.
 - 2) Promotion of growth.
 - 3) Fertilizing.
 - 4) Mowing.

- 5) Pruning.
 - 6) Pesticides.
 - 7) Maintenance of irrigation system components.
- b. Submit in conformance with requirements for maintenance data specified in Section 017704.
- c. Include approved Maintenance Instructions into Operation and Maintenance Manual prepared as part of requirements specified in Section 017704.
- 2. Application Records: Maintain record of chemical applications, indicating the following. Include records as part of maintenance data specified in Section 017704.
 - a. Dates of application.
 - b. Type of chemical applied.
 - c. Location and planting area applied.
 - d. Application rate.
- 3. Assurance/Control Submittals:
 - a. Qualification Documentation: Submit planting and irrigation maintenance provider documentation of experience indicating compliance with specified requirements.

1.3 QUALITY ASSURANCE

- A. Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting one week prior to commencing start of plant maintenance period.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of operations, procedures and coordination with related Work.
 - 4. Agenda:
 - a. Tour, inspect, and discuss conditions of exterior plants, lawns, grasses, and irrigation system.
 - b. Review plant maintenance, irrigation system maintenance, and their requirements.
 - c. Review required inspections.
 - d. Review environmental procedures.

1.4 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.
 - 2. Recycled Content:
 - a. Wood fiber mulch: Provide products manufactured from 100 percent post-consumer paper content and yard trimming composts.
 - b. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.
 - c. Soil amendment from recycled scrap gypsum: Coordinate with Section 092900 - Gypsum Board to prepare scrap gypsum board for use as soil amendment.

1.5 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Warrant to remove defective plants, including those that have died, have unsatisfactory growth, and have lost their original form, and replace with new healthy plants of same genus, species, variety, and size, within 10 days of discovery.
 - 2. Warranty does not include plants damaged by vandalism or severe weather.
 - 3. Warranty Period: 1 year maintenance period.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Specified in Section 329200 and Section 329300.
- B. Indicated on Drawings.

PART 3 - EXECUTION

3.1 ESTABLISHMENT PERIOD

- A. Specified in Section 329200 and Section 329300.

3.2 MAINTENANCE PERIOD

- A. One year from date of initial acceptance. Maintenance Period end date established by Contracting Officer.

NOTE TO SPECIFIER

Delete below if no irrigation.

3.3 IRRIGATION SYSTEM

- A. Remove sand and debris from irrigation piping causing restrictions within emitter discharge orifices.
- B. Program automatic electric controllers for optimum watering of plant materials while maintaining water conservation practices. Adjust irrigation program to compensate for seasonal water requirements.
- C. Operate flush valves on emitter lateral lines.
- D. Repair damage caused by maintenance work. Replace damaged irrigation components which cannot be repaired with new functioning components.

3.4 WATERING

- A. Water landscaping at programmed intervals to maintain good color and sturdy growth of plant materials.

3.5 CHEMICAL CONTROLS

- A. Fertilize to promote healthy plant growth without encouraging excessive top foliar growth. Do not apply high nitrogen fertilizer in late fall. Application at that time may promote frost tender foliar growth.
- B. No chemical fertilizers; use organic/natural matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.

3.6 WEED CONTROL

- A. Control weeds with use of herbicides, filter fabric weed barrier and, preferably, by manual removal of weeds.
- B. Remove noxious weeds common to the area from planting areas by mechanical means.
- C. Apply herbicide in accordance with manufacturer's published instructions.
- D. Do not apply pre-emergent herbicides in areas to be seeded for lawns or native seed areas.

3.7 PEST AND DISEASE CONTROL

- A. Apply pest and disease control chemicals in accordance with manufacturer's published instructions.
- B. Spray or dust using appropriate insecticide, miticide and fungicide and as necessary to maintain plants in healthy and vigorous growing condition.
- C. No chemical pesticides; use organic/natural matter for pest and disease control.

3.8 TREE STAKING AND GUYING

- A. Stake or guy trees as specified in Section 329300 and as indicated on Drawings.
- B. Inspect staking and guying at least two times per year and make necessary adjustments to prevent girdling or chafing of bark.

3.9 PRUNING

- A. Prune or head back plants in keeping with nature and character of plants.
- B. Seal 1 inch or greater cuts with tree seal.
- C. Establish radial branch orientation and eliminate narrow V-shaped forks, cross-over branching, and branches that rub against each other.

3.10 TOPSOIL EROSION

- A. Replace topsoil in areas experiencing noticeable soil erosion and make minor repairs necessary to avoid further erosion.
- B. Notify Contracting Officer of unusual causes of erosion immediately.

3.11 CLEANING

- A. Remove litter and dead vegetation from job site within 24 hours of discovery.
- B. Broom clean paved surfaces at minimum 21 day intervals.

3.12 END OF MAINTENANCE

- A. Within 2 weeks prior to end of maintenance period, apply an approved commercial fertilizer at rate recommended by manufacturer uniformly over planted areas.
- B. At end of maintenance period and when ground covers have established and landscaping and irrigation work is complete, request End of Maintenance Period Inspection by Contracting Officer.
- C. When landscaping work is found to be satisfactory, maintenance period will end on Date of Final Acceptance established by Contracting Officer.
- D. When work is found to be unsatisfactory, maintenance period will be extended at no additional cost to United States Postal Service until work has been completed, inspected and accepted by Contracting Officer.
- E. Contractor is to maintain plants for one year from completion.

END OF SECTION 32 01 90 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 01 90 00 - MPF OPERATION AND MAINTENANCE OF PLANTING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

The use of this section requires approval of the Contracting Officer. Use this section for Medium Standard Buildings and Small Standard Buildings where planting and irrigation system maintenance is part of the Work and as approved by USPS Contracting Officer.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Contractor maintenance of exterior plants, lawns, and grasses.
 - 2. Contractor maintenance of irrigation system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 017704 - Closeout Procedures and Taining: Maintenance data and Maintenance Manuals.
 - 2. Section 329200 - Turf and Grasses: Grass, sod, and sprigs.
 - 3. Section 329300 - Plants: Planting materials.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Operation and Maintenance Data:
 - a. Instructions indicating procedures to be used by United States Postal Service personnel for maintenance of plants and groundcover during one typical year including variations of maintenance for climatic conditions throughout the year. Include instructions and procedures including but not limited to the following:
 - 1) Watering.
 - 2) Promotion of growth.
 - 3) Fertilizing.
 - 4) Mowing.

- 5) Pruning.
 - 6) Pesticides.
 - 7) Maintenance of irrigation system components.
- b. Submit in conformance with requirements for maintenance data specified in Section 017704.
- c. Include approved Maintenance Instructions into Operation and Maintenance Manual prepared as part of requirements specified in Section 017704.
- 2. Application Records: Maintain record of chemical applications, indicating the following. Include records as part of maintenance data specified in Section 017704.
 - a. Dates of application.
 - b. Type of chemical applied.
 - c. Location and planting area applied.
 - d. Application rate.
- 3. Assurance/Control Submittals:
 - a. Qualification Documentation: Submit planting and irrigation maintenance provider documentation of experience indicating compliance with specified requirements.

1.3 QUALITY ASSURANCE

- A. Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting one week prior to commencing start of plant maintenance period.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of operations, procedures and coordination with related Work.
 - 4. Agenda:
 - a. Tour, inspect, and discuss conditions of exterior plants, lawns, grasses, and irrigation system.
 - b. Review plant maintenance, irrigation system maintenance, and their requirements.
 - c. Review required inspections.
 - d. Review environmental procedures.

1.4 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.
 - 2. Recycled Content:
 - a. Wood fiber mulch: Provide products manufactured from 100 percent post-consumer paper content and yard trimming composts.
 - b. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.
 - c. Soil amendment from recycled scrap gypsum: Coordinate with Section 092900 - Gypsum Board to prepare scrap gypsum board for use as soil amendment.

1.5 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Warrant to remove defective plants, including those that have died, have unsatisfactory growth, and have lost their original form, and replace with new healthy plants of same genus, species, variety, and size, within 10 days of discovery.
 - 2. Warranty does not include plants damaged by vandalism or severe weather.
 - 3. Warranty Period: 1 year maintenance period.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Specified in Section 329200 and Section 329300.
- B. Indicated on Drawings.

PART 3 - EXECUTION

3.1 ESTABLISHMENT PERIOD

- A. Specified in Section 329200 and Section 329300.

3.2 MAINTENANCE PERIOD

- A. One year from date of initial acceptance. Maintenance Period end date established by Contracting Officer.

NOTE TO SPECIFIER

Delete below if no irrigation.

3.3 IRRIGATION SYSTEM

- A. Remove sand and debris from irrigation piping causing restrictions within emitter discharge orifices.
- B. Program automatic electric controllers for optimum watering of plant materials while maintaining water conservation practices. Adjust irrigation program to compensate for seasonal water requirements.
- C. Operate flush valves on emitter lateral lines.
- D. Repair damage caused by maintenance work. Replace damaged irrigation components which cannot be repaired with new functioning components.

3.4 WATERING

- A. Water landscaping at programmed intervals to maintain good color and sturdy growth of plant materials.

3.5 CHEMICAL CONTROLS

- A. Fertilize to promote healthy plant growth without encouraging excessive top foliar growth. Do not apply high nitrogen fertilizer in late fall. Application at that time may promote frost tender foliar growth.
- B. No chemical fertilizers; use organic/natural matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.

3.6 WEED CONTROL

- A. Control weeds with use of herbicides, filter fabric weed barrier and, preferably, by manual removal of weeds.
- B. Remove noxious weeds common to the area from planting areas by mechanical means.
- C. Apply herbicide in accordance with manufacturer's published instructions.
- D. Do not apply pre-emergent herbicides in areas to be seeded for lawns or native seed areas.

3.7 PEST AND DISEASE CONTROL

- A. Apply pest and disease control chemicals in accordance with manufacturer's published instructions.
- B. Spray or dust using appropriate insecticide, miticide and fungicide and as necessary to maintain plants in healthy and vigorous growing condition.
- C. No chemical pesticides; use organic/natural matter for pest and disease control.

3.8 TREE STAKING AND GUYING

- A. Stake or guy trees as specified in Section 329300 and as indicated on Drawings.
- B. Inspect staking and guying at least two times per year and make necessary adjustments to prevent girdling or chafing of bark.

3.9 PRUNING

- A. Prune or head back plants in keeping with nature and character of plants.
- B. Seal 1 inch or greater cuts with tree seal.
- C. Establish radial branch orientation and eliminate narrow V-shaped forks, cross-over branching, and branches that rub against each other.

3.10 TOPSOIL EROSION

- A. Replace topsoil in areas experiencing noticeable soil erosion and make minor repairs necessary to avoid further erosion.
- B. Notify Contracting Officer of unusual causes of erosion immediately.

3.11 CLEANING

- A. Remove litter and dead vegetation from job site within 24 hours of discovery.
- B. Broom clean paved surfaces at minimum 21 day intervals.

3.12 END OF MAINTENANCE

- A. Within 2 weeks prior to end of maintenance period, apply an approved commercial fertilizer at rate recommended by manufacturer uniformly over planted areas.
- B. At end of maintenance period and when ground covers have established and landscaping and irrigation work is complete, request End of Maintenance Period Inspection by Contracting Officer.
- C. When landscaping work is found to be satisfactory, maintenance period will end on Date of Final Acceptance established by Contracting Officer.
- D. When work is found to be unsatisfactory, maintenance period will be extended at no additional cost to United States Postal Service until work has been completed, inspected and accepted by Contracting Officer.
- E. Contractor is to maintain plants for one year from completion.

SECTION 32 12 16 00 - MPF ASPHALT PAVING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Bituminous Concrete Pavement into this section.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

NOTE TO SPECIFIER

The decision to use bituminous concrete pavement (this section) or plain cement concrete pavement (section 321313) for the paving of vehicular areas should be made by the Site A/E in consultation with the USPS Contracting Officer. This decision should be based on local climate and construction practices, and must consider not only initial costs but also life cycle costs.

- A. Section Includes:
 - 1. Bituminous concrete paving.
 - 2. Surface course.
 - 3. Binder course.
 - 4. Paving base course.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Earthwork for Pavement.
 - 2. Section 321313 - Concrete Paving: Concrete paving, curbs and sidewalks.
 - 3. Section 321723 - Pavement Markings: Painted pavement markings.

C. American Association of State Highway and Transportation Officials (AASHTO):

1. AASHTO T 88 - Particle Size Analysis of Soils.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Provide asphalt-aggregate mixture as recommended by local or state paving authorities to suit project conditions. Use locally available materials and gradations which meet standard state highway specifications and exhibit satisfactory records of previous installations.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Assurance/Control Submittals:
 - a. Design Data:
 - 1) Submit design mix following format indicated Asphalt Institute Manual MS-2, Marshall Stability Method; including type/name of mix, gradation analysis, grade of asphalt cement used, Marshall Stability (pounds), flow, effective asphalt content (percent), and direct references to applicable state highway department specification sections for each material.
 - 2) Provide design mixture listed in current edition of applicable state highway department specifications.
 - 3) Use mix designs prepared within 3 years maximum.
 - 4) Provide documentation of state highway limitations, if any, on use of recycled content materials.
 - b. Certificates: Submit materials certificate to Testing Laboratory signed by material supplier and Contractor, certifying that materials comply with, or exceed, the requirements specified herein.
 - c. Qualification Documentation: Paving installer documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Perform Work in accordance with AI MS-8
- B. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- C. Regulatory Requirements:
 - 1. Conform to applicable requirements for paving work on public property.
 - 2. Maintain access for vehicular and pedestrian traffic as required for other construction activities. Use temporary striping, flagmen, barricades, warning signs, and warning lights as required.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Jobsite Requirements:
 - 1. Apply prime and tack coats when ambient temperature is above 40 degrees F, and when temperature has been above 35 degrees F for 12 hours immediately prior to application. Do not apply when base is wet, contains excess moisture, or during rain.
 - 2. Construct bituminous concrete paving when atmospheric temperature is above 40 degrees F.

NOTE TO SPECIFIER

***REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.*

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Recycled Content: Provide aggregate fabricated from a minimum of 30% recycled rubble or concrete. Provide asphalt cement fabricated from recycled content asphalt.

PART 2 - PRODUCTS

2.1 MATERIALS

NOTE TO SPECIFIER

***REQUIRED Articles (Base Course and Asphalt Cement) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.*

- A. Base Course: As indicated on Drawings, complying with applicable state highway specifications regarding source, quality, gradation, liquid limit, plasticity index and mix proportioning.
 - 1. Unless otherwise specified in applicable state highway specifications, provide base course aggregate fabricated from minimum 30 percent recycled rubble or concrete.
- B. Asphalt Cement: Fabricated from minimum 15 percent recycled asphalt and complying with ASTM D 3381; Table 2 AC-10, AC-20, or AC-30, viscosity grade, depending on local mean annual air temperature as indicated below:

TEMPERATURE CONDITION

ASPHALT GRADES

Cold, mean annual air temperature at 45 degrees F or lower	AC-10 85/100 pen.
Warm, mean annual air temperature between 45 degrees F and 75 degrees F	AC-20 60/70 pen.
Hot, mean annual air temperature at 75 degrees F or higher	AC-30

NOTE TO SPECIFIER

Delete paragraph below when prime coat is not to be included.

- C. Prime Coat: A medium curing cut-back asphalt or an asphalt penetrating prime coat consisting of either ASTM D 2397 or ASTM D 2399, MC- 30 or SS-1h.
- D. Tack Coat: Emulsified asphalt; ASTM D 2397 or ASTM D 2399, SS-1h, CSS-1, or CSS-1h, diluted with one part water to one part emulsified asphalt.
- E. Mineral Filler: Rock or slag dust, hydraulic cement, or other inert material complying with AASHTO M-17/ASTM D 242, if recommended by applicable state highway department standards.
- F. Asphalt-Aggregate Mixture: Unless otherwise indicated on Drawings, the Design Mix shall have a minimum stability based on a 50-blow Marshall complying with ASTM D 1559 of 1000 pounds with a flow between 8 and 16. The Design Mix shall be within sieve analysis and bitumen ranges below:

NOTE TO SPECIFIER

Use paragraph below and delete paragraph above where CALTRANS standard is used in place of Marshall test.

- G. Asphalt-Aggregate Mixture: Unless otherwise indicated on Drawings, the Design Mix shall have a minimum stability based on CALTRANS AR4000. The Design Mix shall be within sieve analysis and bitumen ranges below:

SIEVE ANALYSIS OF MIX

Square Sieve	Total Percent Passing	Percent Tolerance
1/2 inch	80 - 100	5
3/8 inch	65 - 93	4
No. 8	0 - 55	4
No. 50	2 - 27	2
No. 200	0 - 10	2

Percent Bitumen by Weight of Total Mix: 5.0 - 8.5.

Percent Air Voids: 3-6.

Percent Aggregate Voids Filled with Asphalt Cement: 70 - 82.

Allowable Variance of Percent Bitumen by Weight of Total Mix: 0.4.

2.2 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify gradients and elevations of base are correct, and base is dry.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 BASE COURSE PLACEMENT

NOTE TO SPECIFIER

Minimum thickness as per project site requirements. Coordinate with geotechnical engineer.

- A. Perform base course construction in a manner that will drain surface properly at all times and at the same time prevent runoff from adjacent areas from draining onto base course construction.
- B. Compact base material to not less than 98 percent of optimum density as determined by ASTM D 698 or 95 percent of optimum density, as determined by ASTM D 1557, unless otherwise indicated on the Drawings.
- C. Granular Base: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 8 inches, measured loose.
- D. Sand/Shell Base: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 4 inches, measured loose.
- E. Asphalt Institute Type IV Mix for Full Depth Asphalt Base: Construct to thickness indicated on Drawings in lifts or layers not exceeding 3 inches, measured loose.
- F. Asphalt Institute Type VI, VII, or VIII Mixes for Hot-Mix Sand Asphalt Bases: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 3 inches, measured loose.
- G. Soil Cement Stabilized Base: Construct to thickness and strength as indicated on Drawings and in accordance with applicable state highway specifications. If not indicated on the Drawings, the minimum compressive strength shall be 500 pounds per square inch, tested at 28 days.

3.3 APPLICATIONS

- A. Prime Coat:
 - 1. Apply bituminous prime coat to all base material surfaces where bituminous concrete paving will be constructed.
 - 2. Apply bituminous prime coat in accordance with applicable state highway specifications.

3. Apply at minimum rate of 0.25 gallon per square yard over compacted base material. Apply to penetrate and seal, but not flood surface.
4. Make necessary precautions to protect adjacent areas from overspray.
5. Cure and dry as long as necessary to attain penetration of compacted base and evaporation of volatile substances.

B. Tack Coat:

1. Apply to contact surfaces of previously constructed bituminous concrete base courses or portland cement concrete and surfaces abutting or projecting into bituminous concrete or into bituminous concrete pavement.
2. Apply tack coat to bituminous concrete base course or sand asphalt base course. Apply emulsified asphalt tack coat between each lift or layer of full depth bituminous concrete and sand asphalt bases and on surface of all such bases where bituminous concrete paving will be constructed.
3. Apply emulsified asphalt tack coat in accordance with applicable state highway specifications.
4. Apply at minimum rate of 0.05 gallon per square yard of surface.
5. Allow to dry until at proper condition to receive paving.

3.4 BITUMINOUS CONCRETE PLACEMENT

- A. Place bituminous concrete mixture on completed compacted subgrade surface, spread, and strike off. Spread mixture at following minimum temperatures:
1. When ambient temperature is between 40 degrees F and 50 degrees F, mixture temperature equal to 285 degrees F.
 2. When ambient temperature is between 50 degrees F and 60 degrees F, mixture temperature equal to 280 degrees F.
 3. When ambient temperature is higher than 60 degrees F, mixture temperature equal to 275 degrees F.
- B. Whenever possible, all pavement shall be spread by a finishing machine; however, inaccessible or irregular areas may be placed by hand methods. The hot mixture shall be spread uniformly to the required depth with hot shovels and rakes. After spreading, the hot mixture shall be carefully smoothed to remove all segregated course aggregate and rake marks. Rakes and lutes used for hand spreading shall be of the type designed for use on asphalt mixtures. Loads shall not be dumped faster than they can be properly spread. Workers shall not stand on the loose mixture while spreading.
- C. Paving Machine Placement: Apply successive lifts of bituminous concrete in transverse directions with the surface course placed in the direction of surface-water flow. Place in typical strips not less than 10 feet wide.
- D. Joints: Make joints between old and new pavements, or between successive days and work in a manner that will provide a continuous bond between adjoining work. Construction joints shall have same texture, density, and smoothness as other sections of bituminous concrete course. Clean contact surfaces of all joints and apply tack coat.

3.5 ROLLING AND COMPACTION

- A. The mixture, after being spread, shall be thoroughly compacted by rolling as soon as it will bear the weight of the rollers without undue displacement. The number, weight, and types of rollers and sequences of rolling operations shall be such that the required density and surface are consistently attained while the mixture is in a workable condition.
- B. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.

- C. Breakdown Rolling: Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling, and repair displaced areas by loosening and filling with hot material.
- D. Second Rolling: Follow breakdown rolling as soon as possible, while mixture is hot. Continue second rolling until mixture has been thoroughly compacted.
- E. Finish Rolling: Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated and course has attained maximum density.
- F. Patching: Remove and replace paving areas mixed with foreign materials and defective areas. Cut out such areas and fill with fresh, hot bituminous concrete. Compact by rolling to maximum surface density and smoothness.
- G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.6 CONSTRUCTION

- A. Site Tolerances:
 - 1. Paving Surface Smoothness: Maximum allowable 10 foot straightedge tolerance for smoothness.
 - a. Base Course Surface: 1/4 inch.
 - b. Wearing Surface Course: 3/16 inch.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing procedures
- B. Site Tests:
 - 1. Paving Base Course: Perform testing of in-place base courses for compliance with requirements for thickness, compaction, density, and tolerance.
 - a. Moisture/Density Test: ASTM D 698 or ASTM D 1557.
 - b. Mechanical Analysis Test: AASHTO T-88.
 - c. Plasticity Index Test: ASTM D 4318.
 - d. Base Material Thickness Test: Minimum one test for every 20,000 square feet.
 - e. Base Material Compaction Test: Minimum one test for every 20,000 square feet.
 - f. Field Density Tests: Perform testing of in-place base courses for compliance with requirements for density using one of the following methods:
 - 1) Sand-cone Method: ASTM D 1556.
 - 2) Balloon Method: ASTM D 2167.
 - 3) Nuclear Method: ASTM D 2922, Method B (Direct Transmission).
 - g. Test each source of base material for compliance with applicable state highway specifications.
 - 2. Asphalt Concrete Paving: Perform testing of in-place asphalt concrete paving courses for compliance with requirements for thickness, compaction, and surface smoothness.
 - a. Thickness: ASTM D 3549; Thickness shall not be less than thickness specified on Drawings.
 - b. Surface Smoothness: Testing shall be performed on the finished surface of each asphalt paving course using 10 foot straightedge applied parallel with, and at right angles to centerline of paved areas. Smoothness shall not be less than tolerances specified herein.
 - 3. Compaction: Field density test for in place materials shall be performed by examination of field cores in accordance with one of the following standards:
 - a. Bulk Specific Gravity of Paraffin-Coated Specimens: ASTM D 1188, minimum one core per 20,000 square feet.

- 1) Standard Duty Areas: Minimum 3 cores.
 - 2) Heavy Duty Areas: Minimum 3 cores.
- b. Bulk Specific Gravity Using Saturated Surface-Dry Specimens: ASTM D 2726, minimum one core per 20,000 square feet.
 - 1) Standard Duty Areas: Minimum 3 cores.
 - 2) Heavy Duty Areas: Minimum 3 cores.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 32 12 16 00

SECTION 32 12 16 00 - CSF ASPHALT PAVING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Bituminous Concrete Pavement into this section.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

NOTE TO SPECIFIER

For Small Standard Buildings: The decision to use bituminous concrete pavement (this section) or plain cement concrete pavement (section 321313) for the paving of vehicular areas should be made by the Site A/E in consultation with the USPS Contracting Officer. This decision should be based on local climate and construction practices, and must consider not only initial costs but also life cycle costs.

- A. Section Includes:
 - 1. Bituminous concrete paving.
 - 2. Surface course.
 - 3. Binder course.
 - 4. Paving base course.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Earthwork for Pavement.
 - 2. Section 321313 - Concrete Paving: Concrete paving, curbs and sidewalks.
 - 3. Section 321723 - Pavement Markings: Painted pavement markings.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Provide asphalt-aggregate mixture as recommended by local or state paving authorities to suit project conditions. Use locally available materials and gradations which meet standard state highway specifications and exhibit satisfactory records of previous installations.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Assurance/Control Submittals:
 - a. Design Data:
 - 1) Submit design mix following format indicated Asphalt Institute Manual MS-2, Marshall Stability Method; including type/name of mix, gradation analysis, grade of asphalt cement used, Marshall Stability (pounds), flow, effective asphalt content (percent), and direct references to applicable state highway department specification sections for each material.
 - 2) Provide design mixture listed in current edition of applicable state highway department specifications.
 - 3) Use mix designs prepared within 3 years maximum.
 - 4) Provide documentation of state highway limitations, if any, on use of recycled content materials.
 - b. Certificates: Submit materials certificate to Testing Laboratory signed by material supplier and Contractor, certifying that materials comply with, or exceed, the requirements specified herein.
 - c. Qualification Documentation: Paving installer documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Perform Work in accordance with AI MS-8
- B. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- C. Regulatory Requirements:
 - 1. Conform to applicable requirements for paving work on public property.
 - 2. Maintain access for vehicular and pedestrian traffic as required for other construction activities. Use temporary striping, flagmen, barricades, warning signs, and warning lights as required.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Jobsite Requirements:
 - 1. Apply prime and tack coats when ambient temperature is above 40 degrees F, and when temperature has been above 35 degrees F for 12 hours immediately prior to application. Do not apply when base is wet, contains excess moisture, or during rain.
 - 2. Construct bituminous concrete paving when atmospheric temperature is above 40 degrees F.

NOTE TO SPECIFIER

***REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.*

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Recycled Content: Provide aggregate fabricated from a minimum of 30% recycled rubble or concrete. Provide asphalt cement fabricated from recycled content asphalt.

PART 2 - PRODUCTS

2.1 MATERIALS

NOTE TO SPECIFIER

***REQUIRED Articles (Base Course and Asphalt Cement) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.*

- A. Base Course: As indicated on Drawings, complying with applicable state highway specifications regarding source, quality, gradation, liquid limit, plasticity index and mix proportioning.
 - 1. Unless otherwise specified in applicable state highway specifications, provide base course aggregate fabricated from minimum 30 percent recycled rubble or concrete.
- B. Asphalt Cement: Fabricated from minimum 15 percent recycled asphalt and complying with ASTM D 3381; Table 2 AC-10, AC-20, or AC-30, viscosity grade, depending on local mean annual air temperature as indicated below:

TEMPERATURE CONDITION

ASPHALT GRADES

Cold, mean annual air temperature at 45 degrees F or lower	AC-10 85/100 pen.
Warm, mean annual air temperature between 45 degrees F and 75 degrees F	AC-20 60/70 pen.
Hot, mean annual air temperature at 75 degrees F or higher	AC-30

NOTE TO SPECIFIER

Delete paragraph below when prime coat is not to be included.

- C. Prime Coat: A medium curing cut-back asphalt or an asphalt penetrating prime coat consisting of either ASTM D 2397 or ASTM D 2399, MC- 30 or SS-1h.
- D. Tack Coat: Emulsified asphalt; ASTM D 2397 or ASTM D 2399, SS-1h, CSS-1, or CSS-1h, diluted with one part water to one part emulsified asphalt.
- E. Mineral Filler: Rock or slag dust, hydraulic cement, or other inert material complying with AASHTO M-17/ASTM D 242, if recommended by applicable state highway department standards.
- F. Asphalt-Aggregate Mixture: Unless otherwise indicated on Drawings, the Design Mix shall have a minimum stability based on a 50-blow Marshall complying with ASTM D 1559 of 1000 pounds with a flow between 8 and 16. The Design Mix shall be within sieve analysis and bitumen ranges below:

NOTE TO SPECIFIER

Use paragraph below and delete paragraph above where CALTRANS standard is used in place of Marshall test.

- G. Asphalt-Aggregate Mixture: Unless otherwise indicated on Drawings, the Design Mix shall have a minimum stability based on CALTRANS AR4000. The Design Mix shall be within sieve analysis and bitumen ranges below:

SIEVE ANALYSIS OF MIX

Square Sieve	Total Percent Passing	Percent Tolerance
1/2 inch	80 - 100	5
3/8 inch	65 - 93	4
No. 8	0 - 55	4
No. 50	2 - 27	2
No. 200	0 - 10	2

Percent Bitumen by Weight of Total Mix: 5.0 - 8.5.

Percent Air Voids: 3-6.

Percent Aggregate Voids Filled with Asphalt Cement: 70 - 82.

Allowable Variance of Percent Bitumen by Weight of Total Mix: 0.4.

2.2 EQUIPMENT

- A. Maintain equipment in satisfactory operating condition and correct breakdowns in a manner that will not delay or be detrimental to progress of paving operations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify gradients and elevations of base are correct, and base is dry.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 BASE COURSE PLACEMENT

NOTE TO SPECIFIER

Minimum thickness as per CSF Small or [] as per project site requirements. Coordinate with geotechnical engineer.

- A. Perform base course construction in a manner that will drain surface properly at all times and at the same time prevent runoff from adjacent areas from draining onto base course construction.
- B. Compact base material to not less than 98 percent of optimum density as determined by ASTM D 698 or 95 percent of optimum density, as determined by ASTM D 1557, unless otherwise indicated on the Drawings.
- C. Granular Base: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 8 inches, measured loose.
- D. Sand/Shell Base: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 4 inches, measured loose.
- E. Asphalt Institute Type IV Mix for Full Depth Asphalt Base: Construct to thickness indicated on Drawings in lifts or layers not exceeding 3 inches, measured loose.
- F. Asphalt Institute Type VI, VII, or VIII Mixes for Hot-Mix Sand Asphalt Bases: Construct to thickness indicated on Drawings. Apply in lifts or layers not exceeding 3 inches, measured loose.
- G. Soil Cement Stabilized Base: Construct to thickness and strength as indicated on Drawings and in accordance with applicable state highway specifications. If not indicated on the Drawings, the minimum compressive strength shall be 500 pounds per square inch, tested at 28 days.

3.3 APPLICATIONS

- A. Prime Coat:
 - 1. Apply bituminous prime coat to all base material surfaces where bituminous concrete paving will be constructed.

2. Apply bituminous prime coat in accordance with applicable state highway specifications.
3. Apply at minimum rate of 0.25 gallon per square yard over compacted base material. Apply to penetrate and seal, but not flood surface.
4. Make necessary precautions to protect adjacent areas from overspray.
5. Cure and dry as long as necessary to attain penetration of compacted base and evaporation of volatile substances.

B. Tack Coat:

1. Apply to contact surfaces of previously constructed bituminous concrete base courses or portland cement concrete and surfaces abutting or projecting into bituminous concrete or into bituminous concrete pavement.
2. Apply tack coat to bituminous concrete base course or sand asphalt base course. Apply emulsified asphalt tack coat between each lift or layer of full depth bituminous concrete and sand asphalt bases and on surface of all such bases where bituminous concrete paving will be constructed.
3. Apply emulsified asphalt tack coat in accordance with applicable state highway specifications.
4. Apply at minimum rate of 0.05 gallon per square yard of surface.
5. Allow to dry until at proper condition to receive paving.

3.4 BITUMINOUS CONCRETE PLACEMENT

- A. Place bituminous concrete mixture on completed compacted subgrade surface, spread, and strike off. Spread mixture at following minimum temperatures:
1. When ambient temperature is between 40 degrees F and 50 degrees F, mixture temperature equal to 285 degrees F.
 2. When ambient temperature is between 50 degrees F and 60 degrees F, mixture temperature equal to 280 degrees F.
 3. When ambient temperature is higher than 60 degrees F, mixture temperature equal to 275 degrees F.
- B. Whenever possible, all pavement shall be spread by a finishing machine; however, inaccessible or irregular areas may be placed by hand methods. The hot mixture shall be spread uniformly to the required depth with hot shovels and rakes. After spreading, the hot mixture shall be carefully smoothed to remove all segregated course aggregate and rake marks. Rakes and lutes used for hand spreading shall be of the type designed for use on asphalt mixtures. Loads shall not be dumped faster than they can be properly spread. Workers shall not stand on the loose mixture while spreading.
- C. Paving Machine Placement: Apply successive lifts of bituminous concrete in transverse directions with the surface course placed in the direction of surface-water flow. Place in typical strips not less than 10 feet wide.
- D. Joints: Make joints between old and new pavements, or between successive days and work in a manner that will provide a continuous bond between adjoining work. Construction joints shall have same texture, density, and smoothness as other sections of bituminous concrete course. Clean contact surfaces of all joints and apply tack coat.

3.5 ROLLING AND COMPACTION

- A. The mixture, after being spread, shall be thoroughly compacted by rolling as soon as it will bear the weight of the rollers without undue displacement. The number, weight, and types of rollers and sequences of rolling operations shall be such that the required density and surface are consistently attained while the mixture is in a workable condition.
- B. Compact mixture with hot hand tampers or vibrating plate compactors in areas inaccessible to rollers.

- C. Breakdown Rolling: Accomplish breakdown or initial rolling immediately following rolling of joints and outside edge. Check surface after breakdown rolling, and repair displaced areas by loosening and filling with hot material.
- D. Second Rolling: Follow breakdown rolling as soon as possible, while mixture is hot. Continue second rolling until mixture has been thoroughly compacted.
- E. Finish Rolling: Perform finish rolling while mixture is still warm enough for removal of roller marks. Continue rolling until roller marks are eliminated and course has attained maximum density.
- F. Patching: Remove and replace paving areas mixed with foreign materials and defective areas. Cut out such areas and fill with fresh, hot bituminous concrete. Compact by rolling to maximum surface density and smoothness.
- G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.6 CONSTRUCTION

- A. Site Tolerances:
 - 1. Paving Surface Smoothness: Maximum allowable 10 foot straightedge tolerance for smoothness.
 - a. Base Course Surface: 1/4 inch.
 - b. Wearing Surface Course: 3/16 inch.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing procedures
- B. Site Tests:
 - 1. Paving Base Course: Perform testing of in-place base courses for compliance with requirements for thickness, compaction, density, and tolerance.
 - a. Moisture/Density Test: ASTM D 698 or ASTM D 1557.
 - b. Mechanical Analysis Test: AASHTO T-88.
 - c. Plasticity Index Test: ASTM D 4318.
 - d. Base Material Thickness Test: Minimum one test for every 20,000 square feet.
 - e. Base Material Compaction Test: Minimum one test for every 20,000 square feet.
 - f. Field Density Tests: Perform testing of in-place base courses for compliance with requirements for density using one of the following methods:
 - 1) Sand-cone Method: ASTM D 1556.
 - 2) Balloon Method: ASTM D 2167.
 - 3) Nuclear Method: ASTM D 2922, Method B (Direct Transmission).
 - g. Test each source of base material for compliance with applicable state highway specifications.
 - 2. Asphalt Concrete Paving: Perform testing of in-place asphalt concrete paving courses for compliance with requirements for thickness, compaction, and surface smoothness.
 - a. Thickness: ASTM D 3549; Thickness shall not be less than thickness specified on Drawings.
 - b. Surface Smoothness: Testing shall be performed on the finished surface of each asphalt paving course using 10 foot straightedge applied parallel with, and at right angles to centerline of paved areas. Smoothness shall not be less than tolerances specified herein.
 - 3. Compaction: Field density test for in place materials shall be performed by examination of field cores in accordance with one of the following standards:

- a. Bulk Specific Gravity of Paraffin-Coated Specimens: ASTM D 1188, minimum one core per 20,000 square feet.
 - 1) Standard Duty Areas: Minimum 3 cores.
 - 2) Heavy Duty Areas: Minimum 3 cores.
- b. Bulk Specific Gravity Using Saturated Surface-Dry Specimens: ASTM D 2726, minimum one core per 20,000 square feet.
 - 1) Standard Duty Areas: Minimum 3 cores.
 - 2) Heavy Duty Areas: Minimum 3 cores.

SECTION 32 13 13 00 - CSF CONCRETE PAVING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Plain Cement Concrete Pavement into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.32 13 13 00

PART 1 - GENERAL

1.1 SUMMARY

NOTE TO SPECIFIER

For Small Standard Buildings: The decision to use bituminous concrete pavement (section 321216) or plain cement concrete pavement (this section) for the paving of vehicular areas should be made by the Site A/E in consultation with the USPS Contracting Officer. This decision should be based on local climate and construction practices, and must consider not only initial costs but also life cycle costs.

- A. Section Includes:
 - 1. Concrete Pavement
 - 2. Concrete walks and terraces.
 - 3. Concrete curbs, and curb and gutters.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Earthwork for pavement.
 - 2. Section 321216 - Asphalt Paving.
 - 3. Section 033000 - Cast-In-Place Concrete: Concrete requirements for pavement.

 - 1. ACI 301 - Specifications for Structural Concrete.
 - 2. ACI 308 - Standard Practice for Curing Concrete.

- B. American society for Testing and Materials (ASTM):
1. ASTM A 185 - Specification for Steel Welded Wire, Fabric, Plain, for Concrete Reinforcement.
 2. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 3. ASTM C 494 - Standard Specification for Chemical Admixtures for Concrete.
 4. ASTM C 618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
 5. ASTM D 1751 - Specification for Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Product Data: Submit product data for the following:
 - a. Joint filler.
 - b. Joint sealant.
 - c. Concrete admixtures.
 - d. Concrete curing compounds.
 2. Assurance/Control Submittals:
 - a. Concrete Mix Design: Submit three copies of each proposed mix design for each class of concrete in accordance with ACI 301, Sections 3.9 "Proportioning on the basis of previous field experience or trial mixture", or 3.10 "Proportioning based on empirical data". Submit separate mix design for concrete to be placed by pumping, in addition to the mix design for concrete to be placed directly from the truck chute.
 - b. Include the following information in concrete mix design:
 - 1) Proportions of cement, fine and coarse aggregate, and water.
 - 2) Water-cement ratio, 28-day compressive design strength, slump, and air content.
 - 3) Type of cement and aggregate.
 - 4) Aggregate gradation.
 - 5) Type and dosage of admixtures.
 - 6) Special requirements for pumping.
 - 7) Range of ambient temperature and humidity for which design is valid.
 - 8) Special characteristics of mix which require precautions in mixing, placing, or finishing techniques to achieve finished product specified.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with ACI 301.
- B. Conform to ACI 305R when mixing and placing concrete during hot weather.
- C. Conform to ACI 306R when mixing and placing concrete during cold weather.
- D. Regulatory Requirements:
1. Conform to applicable requirements for paving work on public property.
 2. Contractor shall maintain access for vehicular and pedestrian traffic as required for other construction activities. Utilize temporary striping, flagmen, barricades, warning signs, and warning lights as required.

PART 2 - PRODUCTS**2.1 FORM AND REINFORCING MATERIAL**

- A. Forms: Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Use flexible spring steel forms or laminated boards to form radius bends as required.
1. APA Exterior Plyform BB with a medium density, smooth, hard, fused resin fiber overlay, or metal forms.
 2. Form Oil: Coat forms with nonstaining type coating that will not discolor or deface surface of concrete. Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Eucoslip" - Euclid Chemical Co., Cleveland, OH (800) 321-7628.
 - b. "Form Coating" - Nox-Crete Chemicals, Omaha, NE (800) 669-2738.
 - c. Substitutions: Under provisions of Section 016000.
- B. Curb, Curb and Gutter Forms: Use flexible spring-steel forms or laminated boards to form radius bends. Tolerance: Not to deviate more than 1/4 inch in 10 feet in grade and alignment.
- C. Reinforcing:
1. Welded Wire Mesh: Welded plain cold-drawn steel wire fabric, ASTM A 185. Furnish in flat sheets, not rolls, unless otherwise acceptable to Owner.
 2. Reinforcing Bars: Deformed steel bars, ASTM A 615, Grade 60.
 3. Fiber reinforced concrete mixtures having the same strength or exceeding as specified for concrete mixes, as verified by Manufacturer's testing laboratory procedures, shall be considered as an alternate for welded wire mesh in exterior flat work, curbs and sidewalks.
- D. Reinforcing Accessories:
1. Reinforcing Accessories: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. Dayton Superior Corp., Miamisburg, OH (800) 745-3700.
 - b. Heckmann Building Products, Inc., Chicago, IL (800) 621-4140.
 - c. Hohmann & Barnard, Inc., Hauppauge, NY (800) 645-0616.
 - d. Richmond Screw Anchor Co., Inc., Ft. Worth, TX (817) 284-4981.
 2. Conform to Concrete Reinforcing Steel Institute Manual of Standard Practice. Include spacers and chairs with plastic tipped legs, ties and other devices necessary for properly assembling, placing, spacing and supporting forms and reinforcement in place.
 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 CONCRETE MATERIALS

- A. Comply with requirements of applicable Section 033000 for concrete materials, admixtures, bonding materials, curing materials, surface sealers and others as required.
- B. Cement:
1. Portland Cement: ASTM C150 Type 1.
 2. High-early Strength Portland Cement: ASTM C150, Type III.
- C. Aggregates: ASTM C33.
1. Fine aggregate shall be natural sand, or sand prepared from stone or gravel. Grains shall; be clean, hard, durable, uncoated and free from silt, loam and clay.
 2. Coarse Aggregates: Crushed stone, gravel, or other approved inert materials of similar characteristics, or combinations thereof, having hard, strong, durable pieces free from adherent

coatings. Maximum size of pieces shall be 3/4" to #4 except for footings, which may be 1-1/2". The maximum size of aggregate may also be not larger than one fifth of the narrowest dimension between forms, nor larger than three fourths of the minimum clear spacing between reinforcing bars.

- D. Water: Clean and free from injurious amounts of oil, acids, salts, organic or other deleterious matter.
- E. Air Entrainment: ASTM C260.
 - 1. Use air-entrained concrete for exterior exposed concrete including walls, walks, paving, etc. where minimum daily temperatures are expected below 38 degrees F during pouring or subsequent 38 day curing period.
 - 2. Proportion air-entraining concrete to attain minimum 28-day compressive strength specified.
 - 3. Total Air Entrainment in Concrete: Not less than four percent nor more than six percent volume of concrete.
- F. Admixtures:
 - 1. May be used at contractors option to provide workability at low slumps, increased compressive strength, retardation or acceleration of the concrete.
 - 2. Chemical Admixtures: ASTM C494. Mineral Admixtures: ASTM C618.
 - 3. The cement factor shall not be reduced and changes shall be made in the other mix proportions to ensure the minimum strength requirements.
 - 4. Use of admixtures approved in writing by Architect. No additional expense to the Owner will be allowed.
 - 5. No calcium chloride shall be used.
 - 6. Before any admixture is accepted for use, the Contractor shall submit certified laboratory reports on each additive material to the architectural consultant. The report shall show the following:
 - a. Confirmation of compliance with the applicable ASTM Standard.
 - b. Evaluation of the effects of the admixture on the properties of the concrete to be made on the job, including consideration of the anticipated ambient conditions on the job, and proposed construction procedures.
 - c. Determination of within-lot uniformity of product proposed for use.

2.3 CONCRETE MIXES

- A. Concrete Proportions:
 - 1. Concrete shall be homogenous, and when hardened, shall have the required strength, resistance to deterioration, durability, water tightness and the properties as specified.
 - 2. Minimum concrete strength at 28 days shall be;
 - a. 3,000 psi for walks, terraces, curbs and gutters.
 - b. 4,000 psi for concrete pavement and pads.
 - 3. Slump of concrete:
 - a. Pavement: 2-1/2 inch minimum to 4 inch maximum.
 - b. Ramps and sloping surfaces: Not more than 3 inches.
- B. Ready-Mix Concrete:
 - 1. Ready-mix concrete shall conform to ASTM C94. The mixing agitation shall begin within 30 minutes, and the concrete shall be discharged from the truck within one hour after the water has been added to the concrete mix.
 - 2. Delivery tickets are to accompany each concrete truck and shall be kept in the job superintendent's file. Delivery tickets must indicate the following information or be subject to rejection:
 - a. Name of project.
 - b. Supplier of concrete.
 - c. Truck identity and ticket serial number.
 - d. Date of delivery.

- e. Brand of cement.
 - f. Cement content.
 - g. Strength classification.
 - h. Batching time.
 - i. Point of deposit.
 - j. Total amount of water.
 - k. Weight of aggregate.
 - l. Daily temperature.
 - m. Number of cubic yards in load.
 - n. Admixture content.
 - o. Name of Contractor.
 - p. Name of driver.
 - q. Time loaded and first mixing of concrete.
 - r. Reading of revolution counter.
3. Quantity of water used for each batch shall be accurately measured.

2.4 JOINT MATERIALS

- A. Sealed expansion and contraction joints: Filler of nonbituminous rubber or cork conforming to ASTM D1752.
- B. Non-sealed joints:
 - 1. Non-sealed Joints: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Flexcell" - Celotex Corp., Tampa, FL (813) 873-1700.
 - b. "Seal Tight Fiber Expansion Joint" - W.R. Meadows, Inc., Hampshire, IL (800) 342-5976.
 - 2. Filler premolded bituminous type conforming to ASTM D1751.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Noncompressive Filler:
 - 1. Noncompressive Filler: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Styrofoam SM" - Dow Chemical Co., Midland, MI (517) 636-0754.
 - b. "Foamular" - Owens Corning, Toledo, OH (800) 828-7155.
 - 2. 2 inch or 1 inch thick sheets.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- D. Compressive Filler:
 - 1. Compressive Filler: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Ethafoam" - Dow Chemical Co., Midland, MI (800) 322-8723.
 - b. "Rodofast" - Sternson Group, Brampton, ON (800) 265-8417.
 - 2. 2 inch or 1 inch thick sheets, compression modulus within the range of 15 to 25 pounds per square inch per inch.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- E. Filler Adhesive for Noncompressive Filler and Compressive Filler:
 - 1. Filler Adhesive: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "General Purpose Mastic No. 11" - Dow Chemical Co., Midland, MI (800) 322-8723.
 - b. "Rodofast" - Sternson Group, Brampton, ON (800) 265-8417.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

- F. Slab-on-grade Construction Joints: Provide a full slab depth 24 gauge metal preshaped key, approximate depth of key to be 1/4 slab thickness and a key width of about 1/10 slab thickness.
- G. Joint Sealants: ASTM C920. Non-priming, pourable, self-leveling polyurethane. Subject to compliance with project requirements manufacturers offering joint sealants which may be incorporated in the Work include, but are not limited to the following:
 - 1. Sonolastic Paving Joint Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 2. Sonomeric CT 1 Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 3. Sonomeric CT 2 Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 4. Vulkem 45, by Mameco, Cleveland, OH (800) 321-6412.
 - 5. Chem-Caulk, by Bostik, Middleton, MA (800) 726-7845.
 - 6. "THC-900" - Tremco, Beachwood, OH (800) 562-2728.
 - 7. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.5 CURING MATERIALS

- A. Sealers:
 - 1. Sealers: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Polyseal" - W.R. Meadows, Inc., Hampshire, IL (800) 342-5976.
 - b. "Kure-N-Seal" - Sonneborn, Shakopee, MN (800) 433-9517.
 - c. "Cure-Hard" - W.R. Meadows, Inc., Elgin, IL (312) 683-4500.
 - 2. ASTM C156 and ASTM C309, Type I. Material shall become integral part of concrete and leave slab free of residue or film.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Membrane: Opaque-white polyethylene sheet, 0.006 inch thick, meeting requirements of ASTM C171.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution Requirements: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify gradients and elevations of base are correct, and base is dry.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 SUBGRADE PREPARATION

- A. Conform with the requirements specified in Section 312000 .

- B. Thoroughly wet subgrade and then compact with two passes of a 500 pound roller.
- C. Pumping: Where concrete paving or sidewalks, and curbs are to be placed, yielding material deflecting more than 1/2 inch under a 500 lb. roller shall be removed to a depth of not less than 4 inches below subgrade elevation and replaced with an approved granular material which shall then be compacted as described above.
- D. The subgrade shall be in a moist condition when the concrete is placed. In cold weather the subgrade shall be prepared and protected so as to provide a subgrade free from frost when the concrete is deposited.

3.3 FORM CONSTRUCTION

- A. Comply with the requirements of Section 033000. Install sufficient quantity of forms to allow continuous progress of the work and so that forms can remain in place at least 24 hours after concrete placement.
- B. Check complete formwork for grade and alignment to the following tolerances:
 - 1. Top of form: Not more than 1/8 inch in 10 feet.
 - 2. Vertical face: Longitudinal axis not more than 1/4 inch in 10 feet.

3.4 PLACING REINFORCEMENT

- A. Support reinforcing and wire securely together to prevent displacement by construction loads and traffic, or the placing of concrete. For slabs on grade, supporting pieces of concrete blocks or bricks may be used.
- B. Place wire mesh reinforcing two inches above bottom of slab unless otherwise indicated.
- C. Reinforcement shall be kept clean from oil, dirt and loose mill scale or other coatings which might destroy the concrete bond. Remove tags and markings prior to concrete placement.
- D. Do not place concrete until reinforcement has been inspected and approved by local authorities, if required.

3.5 CONCRETE PLACEMENT AND FINISHING

- A. Tamp and consolidate concrete with a suitable wood or metal tamping bar and the surface shall be finished to grade with a wood float.
- B. Finished surfaces shall not vary more than 3/16 inch from the testing edge of a 10 foot straightedge.
- C. Curb Expansion Joints: Fill joints with 1/2 inch thick joint filler strips conforming to ASTM D1751 or ASTM D1752.
- D. Contraction Joints: Divide the surface of paving, walks and terraces into rectangular areas not to exceed 5 feet 0 inches each way.
 - 1. Cut a groove in the top portion of the slab to a depth of at least one-fourth of the slab thickness using a jointer or by sawing a groove in the hardened concrete with a power-driven saw.
 - 2. Membrane-cured surface damaged during the sawing operations shall be resprayed as soon as the surface becomes dry.
- E. Slab Finishes: ACI 301, paragraph 11.7 and as follows:

1. Broom Finish: On stair treads with abrasive nosings and on walks, unless other finishes have been indicated or specified.
2. Broom or Belt Finish: On level walks. Broom in direction perpendicular to travel and approved sample panel. Submit joint pattern layout prior to starting work.

3.6 TOLERANCES

- A. Horizontal slabs: Finished surfaces true with no deviation in excess of 1/8 inch when tested with a 10 foot straightedge, non-accumulative. No coarse aggregate showing.
- B. Steps:
 1. Variation in steps within a flight of stairs:
 - a. Rise: 1/8 inch.
 - b. Tread: 1/4 inch.
 2. Variation in consecutive steps:
 - a. Rise: 1/16 inch.
 - b. Tread: 1/8 inch.

3.7 EXPANSION JOINTS

- A. Install transverse expansion joints at returns and 15 feet on center.
- B. Install longitudinal expansion joints where curbs and paved areas abut each other, buildings, other concrete slabs and pads or vertical restraints.
- C. Place joint filler with top edge 1/4 inch below the surface and shall be held in place with steel pins or other devices to prevent warping of the filler during floating and finishing.
- D. Immediately after finishing operations are completed, round joint edges with edging tool having a radius of 1/8 inch. Remove concrete over the joint filler.
- E. At the end of the curing period, clean and fill expansion joints with joint sealer. Fill joints flush with concrete surface. Dummy groove joints shall not be sealed.

3.8 CURING

- A. Immediately after the finishing operations, the exposed concrete surface shall be cured for 7 days by the mat, impervious sheet, or membrane-curing method.

3.9 BACKFILLING

- A. After curing, remove debris and backfill the adjoining areas, grade and compact to conform to the surrounding area in accordance with the lines and grades indicated.

3.10 PROTECTION

- A. Protect the completed work from damage. Repair damaged concrete and clean concrete discolored during construction. Remove work that is damaged and reconstruct to entire length between regularly scheduled joints. Refinishing damaged portion is not acceptable.

-
- B. Prevent cars and trucks from driving on new pavement for a minimum of 14 days.

USPS CSF Specifications issued: 10/1/2013

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 13 13 00 - MPF CONCRETE PAVING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Plain Cement Concrete Pavement into this section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.32 13 13 00

PART 1 - GENERAL

1.1 SUMMARY

NOTE TO SPECIFIER

The decision to use bituminous concrete pavement (section 321216) or plain cement concrete pavement (this section) for the paving of vehicular areas should be made by the Site A/E in consultation with the USPS Contracting Officer. This decision should be based on local climate and construction practices, and must consider not only initial costs but also life cycle costs.

- A. Section Includes:
 - 1. Concrete Pavement
 - 2. Concrete walks and terraces.
 - 3. Concrete curbs, and curb and gutters.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Earthwork for pavement.
 - 2. Section 321216 - Asphalt Paving.
 - 3. Section 033000 - Cast-In-Place Concrete: Concrete requirements for pavement.

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 - 1. ACI 301 - Specifications for Structural Concrete.
 - 2. ACI 308 - Standard Practice for Curing Concrete.

- B. American society for Testing and Materials (ASTM):
 - 1. ASTM A 185 - Specification for Steel Welded Wire, Fabric, Plain, for Concrete Reinforcement.
 - 2. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 - 3. ASTM C 494 - Standard Specification for Chemical Admixtures for Concrete.
 - 4. ASTM C 618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
 - 5. ASTM D 1751 - Specification for Preformed Expansion Joint Fillers for Concrete Paving and Structural Construction (Nonextruding and Resilient Bituminous Types).

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Submit product data for the following:
 - a. Joint filler.
 - b. Joint sealant.
 - c. Concrete admixtures.
 - d. Concrete curing compounds.
 - 2. Assurance/Control Submittals:
 - a. Concrete Mix Design: Submit three copies of each proposed mix design for each class of concrete in accordance with ACI 301, Sections 3.9 "Proportioning on the basis of previous field experience or trial mixture", or 3.10 "Proportioning based on empirical data". Submit separate mix design for concrete to be placed by pumping, in addition to the mix design for concrete to be placed directly from the truck chute.
 - b. Include the following information in concrete mix design:
 - 1) Proportions of cement, fine and coarse aggregate, and water.
 - 2) Water-cement ratio, 28-day compressive design strength, slump, and air content.
 - 3) Type of cement and aggregate.
 - 4) Aggregate gradation.
 - 5) Type and dosage of admixtures.
 - 6) Special requirements for pumping.
 - 7) Range of ambient temperature and humidity for which design is valid.
 - 8) Special characteristics of mix which require precautions in mixing, placing, or finishing techniques to achieve finished product specified.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with ACI 301.
- B. Conform to ACI 305R when mixing and placing concrete during hot weather.
- C. Conform to ACI 306R when mixing and placing concrete during cold weather.
- D. Regulatory Requirements:
 - 1. Conform to applicable requirements for paving work on public property.
 - 2. Contractor shall maintain access for vehicular and pedestrian traffic as required for other construction activities. Utilize temporary striping, flagmen, barricades, warning signs, and warning lights as required.

PART 2 - PRODUCTS**2.1 FORM AND REINFORCING MATERIAL**

- A. Forms: Steel, wood, or other suitable material of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use straight forms, free of distortion and defects. Use flexible spring steel forms or laminated boards to form radius bends as required.
 - 1. APA Exterior Plyform BB with a medium density, smooth, hard, fused resin fiber overlay, or metal forms.
 - 2. Form Oil: Coat forms with nonstaining type coating that will not discolor or deface surface of concrete. Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Eucoslip" - Euclid Chemical Co., Cleveland, OH (800) 321-7628.
 - b. "Form Coating" - Nox-Crete Chemicals, Omaha, NE (800) 669-2738.
 - c. Substitutions: Under provisions of Section 016000.
- B. Curb, Curb and Gutter Forms: Use flexible spring-steel forms or laminated boards to form radius bends. Tolerance: Not to deviate more than 1/4 inch in 10 feet in grade and alignment.
- C. Reinforcing:
 - 1. Welded Wire Mesh: Welded plain cold-drawn steel wire fabric, ASTM A 185. Furnish in flat sheets, not rolls, unless otherwise acceptable to Owner.
 - 2. Reinforcing Bars: Deformed steel bars, ASTM A 615, Grade 60.
 - 3. Fiber reinforced concrete mixtures having the same strength or exceeding as specified for concrete mixes, as verified by Manufacturer's testing laboratory procedures, shall be considered as an alternate for welded wire mesh in exterior flat work, curbs and sidewalks.
- D. Reinforcing Accessories:
 - 1. Reinforcing Accessories: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. Dayton Superior Corp., Miamisburg, OH (800) 745-3700.
 - b. Heckmann Building Products, Inc., Chicago, IL (800) 621-4140.
 - c. Hohmann & Barnard, Inc., Hauppauge, NY (800) 645-0616.
 - d. Richmond Screw Anchor Co., Inc., Ft. Worth, TX (817) 284-4981.
 - 2. Conform to Concrete Reinforcing Steel Institute Manual of Standard Practice. Include spacers and chairs with plastic tipped legs, ties and other devices necessary for properly assembling, placing, spacing and supporting forms and reinforcement in place.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 CONCRETE MATERIALS

- A. Comply with requirements of applicable Section 033000 for concrete materials, admixtures, bonding materials, curing materials, surface sealers and others as required.
- B. Cement:
 - 1. Portland Cement: ASTM C150 Type 1.
 - 2. High-early Strength Portland Cement: ASTM C150, Type III.
- C. Aggregates: ASTM C33.
 - 1. Fine aggregate shall be natural sand, or sand prepared from stone or gravel. Grains shall; be clean, hard, durable, uncoated and free from silt, loam and clay.
 - 2. Coarse Aggregates: Crushed stone, gravel, or other approved inert materials of similar characteristics, or combinations thereof, having hard, strong, durable pieces free from adherent

coatings. Maximum size of pieces shall be 3/4" to #4 except for footings, which may be 1-1/2". The maximum size of aggregate may also be not larger than one fifth of the narrowest dimension between forms, nor larger than three fourths of the minimum clear spacing between reinforcing bars.

- D. Water: Clean and free from injurious amounts of oil, acids, salts, organic or other deleterious matter.
- E. Air Entrainment: ASTM C260.
 - 1. Use air-entrained concrete for exterior exposed concrete including walls, walks, paving, etc. where minimum daily temperatures are expected below 38 degrees F during pouring or subsequent 38 day curing period.
 - 2. Proportion air-entraining concrete to attain minimum 28-day compressive strength specified.
 - 3. Total Air Entrainment in Concrete: Not less than four percent nor more than six percent volume of concrete.
- F. Admixtures:
 - 1. May be used at contractors option to provide workability at low slumps, increased compressive strength, retardation or acceleration of the concrete.
 - 2. Chemical Admixtures: ASTM C494. Mineral Admixtures: ASTM C618.
 - 3. The cement factor shall not be reduced and changes shall be made in the other mix proportions to ensure the minimum strength requirements.
 - 4. Use of admixtures approved in writing by Architect. No additional expense to the Owner will be allowed.
 - 5. No calcium chloride shall be used.
 - 6. Before any admixture is accepted for use, the Contractor shall submit certified laboratory reports on each additive material to the architectural consultant. The report shall show the following:
 - a. Confirmation of compliance with the applicable ASTM Standard.
 - b. Evaluation of the effects of the admixture on the properties of the concrete to be made on the job, including consideration of the anticipated ambient conditions on the job, and proposed construction procedures.
 - c. Determination of within-lot uniformity of product proposed for use.

2.3 CONCRETE MIXES

- A. Concrete Proportions:
 - 1. Concrete shall be homogenous, and when hardened, shall have the required strength, resistance to deterioration, durability, water tightness and the properties as specified.
 - 2. Minimum concrete strength at 28 days shall be;
 - a. 3,000 psi for walks, terraces, curbs and gutters.
 - b. 4,000 psi for concrete pavement and pads.
 - 3. Slump of concrete:
 - a. Pavement: 2-1/2 inch minimum to 4 inch maximum.
 - b. Ramps and sloping surfaces: Not more than 3 inches.
- B. Ready-Mix Concrete:
 - 1. Ready-mix concrete shall conform to ASTM C94. The mixing agitation shall begin within 30 minutes, and the concrete shall be discharged from the truck within one hour after the water has been added to the concrete mix.
 - 2. Delivery tickets are to accompany each concrete truck and shall be kept in the job superintendent's file. Delivery tickets must indicate the following information or be subject to rejection:
 - a. Name of project.
 - b. Supplier of concrete.
 - c. Truck identity and ticket serial number.
 - d. Date of delivery.

- e. Brand of cement.
 - f. Cement content.
 - g. Strength classification.
 - h. Batching time.
 - i. Point of deposit.
 - j. Total amount of water.
 - k. Weight of aggregate.
 - l. Daily temperature.
 - m. Number of cubic yards in load.
 - n. Admixture content.
 - o. Name of Contractor.
 - p. Name of driver.
 - q. Time loaded and first mixing of concrete.
 - r. Reading of revolution counter.
3. Quantity of water used for each batch shall be accurately measured.

2.4 JOINT MATERIALS

- A. Sealed expansion and contraction joints: Filler of nonbituminous rubber or cork conforming to ASTM D1752.
- B. Non-sealed joints:
 - 1. Non-sealed Joints: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Flexcell" - Celotex Corp., Tampa, FL (813) 873-1700.
 - b. "Seal Tight Fiber Expansion Joint" - W.R. Meadows, Inc., Hampshire, IL (800) 342-5976.
 - 2. Filler premolded bituminous type conforming to ASTM D1751.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Noncompressive Filler:
 - 1. Noncompressive Filler: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Styrofoam SM" - Dow Chemical Co., Midland, MI (517) 636-0754.
 - b. "Foamular" - Owens Corning, Toledo, OH (800) 828-7155.
 - 2. 2 inch or 1 inch thick sheets.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- D. Compressive Filler:
 - 1. Compressive Filler: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Ethafoam" - Dow Chemical Co., Midland, MI (800) 322-8723.
 - b. "Rodofast" - Sternson Group, Brampton, ON (800) 265-8417.
 - 2. 2 inch or 1 inch thick sheets, compression modulus within the range of 15 to 25 pounds per square inch per inch.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- E. Filler Adhesive for Noncompressive Filler and Compressive Filler:
 - 1. Filler Adhesive: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "General Purpose Mastic No. 11" - Dow Chemical Co., Midland, MI (800) 322-8723.
 - b. "Rodofast" - Sternson Group, Brampton, ON (800) 265-8417.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

- F. Slab-on-grade Construction Joints: Provide a full slab depth 24 gauge metal preshaped key, approximate depth of key to be 1/4 slab thickness and a key width of about 1/10 slab thickness.
- G. Joint Sealants: ASTM C920. Non-priming, pourable, self-leveling polyurethane. Subject to compliance with project requirements manufacturers offering joint sealants which may be incorporated in the Work include, but are not limited to the following:
 - 1. Sonolastic Paving Joint Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 2. Sonomeric CT 1 Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 3. Sonomeric CT 2 Sealant, by Sonneborn, Shakopee, MN (800) 433-9517.
 - 4. Vulkem 45, by Mameco, Cleveland, OH (800) 321-6412.
 - 5. Chem-Caulk, by Bostik, Middleton, MA (800) 726-7845.
 - 6. "THC-900" - Tremco, Beachwood, OH (800) 562-2728.
 - 7. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.5 CURING MATERIALS

- A. Sealers:
 - 1. Sealers: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 - a. "Polyseal" - W.R. Meadows, Inc., Hampshire, IL (800) 342-5976.
 - b. "Kure-N-Seal" - Sonneborn, Shakopee, MN (800) 433-9517.
 - c. "Cure-Hard" - W.R. Meadows, Inc., Elgin, IL (312) 683-4500.
 - 2. ASTM C156 and ASTM C309, Type I. Material shall become integral part of concrete and leave slab free of residue or film.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Membrane: Opaque-white polyethylene sheet, 0.006 inch thick, meeting requirements of ASTM C171.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution Requirements: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to for earthwork operations to begin.
 - 1. Verify gradients and elevations of base are correct, and base is dry.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 SUBGRADE PREPARATION

- A. Conform with the requirements specified in Section 312000 .

- B. Thoroughly wet subgrade and then compact with two passes of a 500 pound roller.
- C. Pumping: Where concrete paving or sidewalks, and curbs are to be placed, yielding material deflecting more than 1/2 inch under a 500 lb. roller shall be removed to a depth of not less than 4 inches below subgrade elevation and replaced with an approved granular material which shall then be compacted as described above.
- D. The subgrade shall be in a moist condition when the concrete is placed. In cold weather the subgrade shall be prepared and protected so as to provide a subgrade free from frost when the concrete is deposited.

3.3 FORM CONSTRUCTION

- A. Comply with the requirements of Section 033000. Install sufficient quantity of forms to allow continuous progress of the work and so that forms can remain in place at least 24 hours after concrete placement.
- B. Check complete formwork for grade and alignment to the following tolerances:
 - 1. Top of form: Not more than 1/8 inch in 10 feet.
 - 2. Vertical face: Longitudinal axis not more than 1/4 inch in 10 feet.

3.4 PLACING REINFORCEMENT

- A. Support reinforcing and wire securely together to prevent displacement by construction loads and traffic, or the placing of concrete. For slabs on grade, supporting pieces of concrete blocks or bricks may be used.
- B. Place wire mesh reinforcing two inches above bottom of slab unless otherwise indicated.
- C. Reinforcement shall be kept clean from oil, dirt and loose mill scale or other coatings which might destroy the concrete bond. Remove tags and markings prior to concrete placement.
- D. Do not place concrete until reinforcement has been inspected and approved by local authorities, if required.

3.5 CONCRETE PLACEMENT AND FINISHING

- A. Tamp and consolidate concrete with a suitable wood or metal tamping bar and the surface shall be finished to grade with a wood float.
- B. Finished surfaces shall not vary more than 3/16 inch from the testing edge of a 10 foot straightedge.
- C. Curb Expansion Joints: Fill joints with 1/2 inch thick joint filler strips conforming to ASTM D1751 or ASTM D1752.
- D. Contraction Joints: Divide the surface of paving, walks and terraces into rectangular areas not to exceed 5 feet 0 inches each way.
 - 1. Cut a groove in the top portion of the slab to a depth of at least one-fourth of the slab thickness using a jointer or by sawing a groove in the hardened concrete with a power-driven saw.
 - 2. Membrane-cured surface damaged during the sawing operations shall be resprayed as soon as the surface becomes dry.
- E. Slab Finishes: ACI 301, paragraph 11.7 and as follows:

1. Broom Finish: On stair treads with abrasive nosings and on walks, unless other finishes have been indicated or specified.
2. Broom or Belt Finish: On level walks. Broom in direction perpendicular to travel and approved sample panel. Submit joint pattern layout prior to starting work.

3.6 TOLERANCES

- A. Horizontal slabs: Finished surfaces true with no deviation in excess of 1/8 inch when tested with a 10 foot straightedge, non-accumulative. No coarse aggregate showing.
- B. Steps:
 1. Variation in steps within a flight of stairs:
 - a. Rise: 1/8 inch.
 - b. Tread: 1/4 inch.
 2. Variation in consecutive steps:
 - a. Rise: 1/16 inch.
 - b. Tread: 1/8 inch.

3.7 EXPANSION JOINTS

- A. Install transverse expansion joints at returns and 15 feet on center.
- B. Install longitudinal expansion joints where curbs and paved areas abut each other, buildings, other concrete slabs and pads or vertical restraints.
- C. Place joint filler with top edge 1/4 inch below the surface and shall be held in place with steel pins or other devices to prevent warping of the filler during floating and finishing.
- D. Immediately after finishing operations are completed, round joint edges with edging tool having a radius of 1/8 inch. Remove concrete over the joint filler.
- E. At the end of the curing period, clean and fill expansion joints with joint sealer. Fill joints flush with concrete surface. Dummy groove joints shall not be sealed.

3.8 CURING

- A. Immediately after the finishing operations, the exposed concrete surface shall be cured for 7 days by the mat, impervious sheet, or membrane-curing method.

3.9 BACKFILLING

- A. After curing, remove debris and backfill the adjoining areas, grade and compact to conform to the surrounding area in accordance with the lines and grades indicated.

3.10 PROTECTION

- A. Protect the completed work from damage. Repair damaged concrete and clean concrete discolored during construction. Remove work that is damaged and reconstruct to entire length between regularly scheduled joints. Refinishing damaged portion is not acceptable.

-
- B. Prevent cars and trucks from driving on new pavement for a minimum of 14 days.

SECTION 32 13 13 17 - ROLLER COMPACTED CONCRETE PAVEMENT

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of roller compacted concrete pavement. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Cementitious Materials:

1. Portland cement shall conform to ASTM C 150, Type I. Low alkali is to be used with aggregates when directed. In lieu of low-alkali cement, the Contractor may use a combination of Portland cement that does not meet the low-alkali requirement with a suitable pozzolan or ground granulated blast-furnace slag (GGBFS) provided the following requirement is met. The expansion of the proposed combination shall be equal to or less than the expansion of a low-alkali cement meeting the requirements of ASTM C 150 when tested in conformance with ASTM C 441. These two tests shall be performed concurrently at an independent certified laboratory at the Contractor's expense. the Owner reserves the right to confirm the test results and to adjust the percentage of pozzolan or GGBFS in the combination to suit other requirements at no additional cost to the Owner. Portland cement shall be furnished in bulk.
2. Pozzolan shall conform to ASTM C 618, and, in addition, limits in Table 2A, Uniformity Requirements (for air content) shall apply to all fly ash. Table 1A, Supplementary Optional Chemical Requirement for Maximum Alkalies, shall apply when it is to be used with aggregates listed to require low-alkali cement. Pozzolan shall be furnished in bulk.
3. The temperature of the cementitious materials as delivered to the site shall not exceed 150 degrees F.

B. Admixtures: All chemical admixtures furnished as liquids shall be in a solution of suitable viscosity and dilution for field use as determined by the Owner.

1. Water-Reducing Admixture (WRA) shall meet the requirements of ASTM C 494, Type D.
2. Air-entraining admixture shall conform to ASTM C 260.

C. Water for washing aggregates and for mixing and curing concrete shall be free from injurious amounts of oil, acid, salt, alkali, organic matter, or other deleterious substances and shall comply with COE CRD-C 400.

D. Aggregates

1. Composition: Fine aggregate shall consist of natural sand, manufactured sand, or a combination of natural and manufactured sands. Coarse aggregate shall consist of gravel, crushed gravel, crushed stone, air-cooled blast-furnace slag, or a combination thereof.

OR

All concrete mixtures will be proportioned by the Owner except that proportions for the slipformed facing concrete mixture will be selected by the Contractor. RCC shall be composed of cementitious materials, water, fine and coarse aggregates, and possibly admixtures. The cementitious material shall be portland cement, or portland cement in combination with pozzolan. An admixture when approved or directed will be a water-reducing/retarding admixture. Air-entraining admixture will be used in the bedding concrete and other conventional concrete.

1.3 EXECUTION

- A. **Concrete Mixing Plant:** A continuous mixing plant(s) shall be capable of producing RCC of the same quality and uniformity as would be produced in a conventional redi-mix batch plant and shall be capable of producing a uniform continuous product (at both maximum and minimum production rates) that is mixed so that complete intermingling of all ingredients occurs without balling, segregation, and wet or dry portions.
- B. **Trucks:** Truck mixers or agitators used for transporting central-mixed conventional concrete shall conform to the applicable requirements of ASTM C 94. Truck mixers shall not be used to transport concrete with larger than 37.5 mm (1-1/2-inch) nominal maximum size aggregate (NMSA) or 2 inch slump, or less. Nonagitator trucks may be used for transporting conventional central-mixed concrete over a smooth road when the hauling time is less than 15 minutes and the slump is less than 3 inches. Bodies of nonagitator trucks shall be smooth, water-tight, metal containers specifically designed to transport concrete, shaped with rounded corners to minimize segregation.
- C. **Belt Conveyors:** Belt conveyors shall be designed and operated to assure a uniform flow of concrete from mixer or delivery truck to final place of deposit without segregation of ingredients or loss of mortar and shall be provided with positive means for preventing segregation of the concrete or loss of mortar at transfer points and the point of placing. The NMSA required in mixture proportions furnished by the Owner will not be changed to accommodate the belt width.
- D. **Spreading and Remixing Equipment:** The primary spreading procedure shall be accomplished by dozer. Graders or other equipment not specified may be used to facilitate the RCC spreading process only when approved. For open, unrestricted areas, the dozer shall be a minimum size and weight equivalent to a Caterpillar D-6. For restricted placement areas, such as placement of RCC near the dam crest or next to abutments, the dozer shall have as a minimum a size and weight equivalent to a Caterpillar D-4. There shall be a minimum of one operating dozer for each 200 cubic yards of RCC placed each hour. The dozers shall be equipped with well-maintained grousers. A front-end loader with operator shall be available to assist with deposition and spreading of RCC as needed in confined areas. The equipment shall be maintained in good operating condition. The equipment shall not leak or drip oil, grease, or other visible contaminants onto the RCC surface. All equipment used for spreading and remixing that leaves the surface of the structure for maintenance or repairs or, for any other reason, must be cleaned of all contaminants by an approved method before returning to the structure surface. Under no conditions shall a dozer or other tracked vehicle be operated on other than fresh uncompacted RCC except to facilitate startup operations for each lift and by approved procedures.
- E. **Compaction Equipment:**
 - 1. Self-propelled vibratory rollers shall be used for primary rolling and shall be double-drum. They shall transmit a dynamic impact to the surface through a smooth steel drum by means of revolving weights, eccentric shafts, or other equivalent methods. The compactor shall have a minimum gross mass of 20,000 pounds and shall produce a minimum dynamic force of 350 pounds per linear inch of drum width. The operating frequency shall be variable in the approximate range of 1,700 to 3,000 cycles per minute. The amplitude shall be adjustable between 0.015 and 0.04 inches. The roller shall be capable of full compaction in both forward and reverse directions. The roller shall be operated at speeds not exceeding 2.2 ft/s. Within the range of the operating capability of the equipment, the Owner may direct or approve variations to the frequency, amplitude, and speed of operation which result in the specified density at the fastest production rate.
 - 2. Small vibratory rollers shall be used to compact the RCC where the larger vibratory rollers specified above cannot maneuver. The rollers shall compact the RCC to the required density and shall be so demonstrated during construction of the test section. Small vibratory rollers cannot compact the RCC to the same density and thickness as the primary rollers. When small rollers are used, total lift thickness of the RCC layer or lift shall be reduced to not over 6 inches

- uncompacted thickness to permit adequate compaction. Rollers shall have independent speed and vibration controls and shall be capable of a wide range of speed adjustments.
3. The tampers shall compact the RCC to the required density and shall be so demonstrated during construction of the test section. Tampers cannot compact the RCC to the same density and thickness as the primary rollers. When tampers are used, thickness of each RCC layer that is to be compacted shall be reduced to not more than 6 inches uncompacted thickness to assure adequate compaction.
- F. Placing During Rain: RCC shall not be placed during rainfall of 0.1 inch/hr or more. During periods of lesser rainfall, placement of RCC may continue if, in the opinion of the Owner, no damage to the RCC is occurring. Work shall commence only after excess free surface water and contaminated paste or RCC have been removed. The surface shall have gained sufficient strength (no less than 4 hours after the RCC placement was suspended) to prevent rutting, pumping, intermixing of rainwater with the RCC, or other damage to the RCC. When the RCC surface has been contaminated or damaged in any manner, the RCC surface shall be washed to break up and remove laitance and/or mud-like coatings from the surface. Any undercut coarse aggregate shall be removed. All waste shall be removed and disposed of in an approved manner.
- G. Hot-Weather Placement: In hot-weather placement the temperature of the RCC shall be controlled so that it does not exceed 75.0 degrees F when placed. Placement shall be suspended as soon as the RCC temperature exceeds 75 degrees F. Measures that can be taken to prevent temperatures exceeding 75 degrees F include, but are not limited to; 1.) chilling mixing water, 2.) sprinkling aggregate stockpiles, 3.) use of a canopy to shade the RCC placement areas, 4.) placing during nighttime and early morning hours, or 5.) restricting placements to cloudy days. Use of any of these systems shall not be reason for extension of completion dates specified in these specifications. In addition, to prevent potential damage to the RCC due to hot-weather related placement conditions, all RCC operation shall be suspended between June 15 and October 31, unless directed otherwise.

SECTION 32 14 43 00 - POROUS UNIT PAVING**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for porous unit paving. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Porous paving consisting of concrete pavers set in aggregate setting beds.
 - b. Edge restraints.
 - c. Cast-in-place concrete edge restraints.
 - d. Precast concrete curbs.
 - e. Granite curbs.

C. Submittals

1. Product Data: For materials other than aggregates.
2. Sieve Analyses: For aggregate materials, according to ASTM C 136.
3. Samples:
 - a. Full-size units of each type of unit paver indicated.
 - b. Exposed edge restraints.
 - c. Precast concrete curbs.
 - d. Granite curbs.
 - e. Aggregate fill.
4. Material Certificates: For unit pavers. Include statements of material properties indicating compliance with requirements, including compliance with standards. Provide for each type and size of unit.

D. Quality Assurance

1. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling

1. Store pavers on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied.
2. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

1.2 PRODUCTS**A. Concrete Unit Pavers**

1. Concrete Grid Pavers: Grid paving units complying with ASTM C 1319, made from normal-weight aggregates.
2. Solid Concrete Pavers for Porous Paving: Solid interlocking paving units of shapes that provide openings between units, complying with ASTM C 936, resistant to freezing and thawing when tested according to ASTM C 67, **as directed**, and made from normal-weight aggregates.
 - a. Thickness: 2-3/8 inches (60 mm) **OR** 3-1/8 inches (80 mm) **OR** 3-1/2 inches (90 mm) **OR** 4 inches (100 mm), **as directed**.
 - b. Face Size and Shape: As indicated.
 - c. Color: As indicated by manufacturer's designations **OR** Match the Owner's sample **OR** As selected by the Owner from manufacturer's full range, **as directed**.

B. Accessories

1. Plastic Edge Restraints: Triangular PVC extrusions, 1-3/4 inches (45 mm) high by 3-1/2 inches (90mm) wide **OR** 3-1/8 inches (80 mm) high by 9-1/2 inches (240 mm) wide, **as directed**, designed to serve as edge restraints for unit pavers; rigid type for straight edges and flexible type for curved edges, with pipe connectors and 3/8-inch- (9.5-mm-) diameter by 12-inch- (300-mm-) long steel spikes.
2. Steel Edge Restraints: Painted steel edging, 3/16 inch (4.8 mm) thick by 4 inches (100 mm) high **OR** 1/4 inch (6.4 mm) thick by 5 inches (125 mm) high, **as directed**, with loops pressed from or welded to face to receive stakes at 36 inches (900 mm) o.c., and with steel stakes 15 inches (380 mm) long for each loop.
 - a. Color: As indicated by manufacturer's designations **OR** Match the Owner's sample **OR** As selected by the Owner from manufacturer's full range, **as directed**.
3. Aluminum Edge Restraints: Straight, 1/8-inch- (3.2-mm-) thick by 4-inch- (100-mm-) high **OR** Straight, 3/16-inch- (4.8-mm-) thick by 4-inch- (100-mm-) high **OR** L-shaped, 1/8-inch- (3.2-mm-) thick by 1-3/8-inch- (35-mm-) high **OR** L-shaped, 3/16-inch- (4.8-mm-) thick by 2-1/4-inch- (57-mm-) high, **as directed**, extruded-aluminum edging, with loops pressed from face to receive stakes at 12 inches (300 mm) o.c., and with aluminum stakes 12 inches (300 mm) long for each loop.
4. Precast Concrete Curbs: Made from normal-weight concrete with a compressive strength not less than 5000 psi (35 MPa) **OR** 6000 psi (41 MPa), **as directed**, and water absorption not more than 5 percent, in shapes and sizes indicated.
 - a. Color and Texture: As indicated by manufacturer's designations **OR** Match the Owner's sample **OR** As selected by the Owner from manufacturer's full range, **as directed**.
5. Granite Curbs: Granite curbing, with face battered 1 inch per foot (1:12), produced in random lengths not less than 36 inches (900 mm) from granite complying with ASTM C 615.
 - a. Granite Color and Grain: Light gray **OR** Dark gray **OR** Buff **OR** White **OR** Black **OR** Pink, **as directed**, with fine **OR** medium **OR** coarse, **as directed**, grain.
 - b. Top Width: 4 inches (100 mm) **OR** 5 inches (125 mm) **OR** 6 inches (150 mm), **as directed**.
 - c. Face Height: 4 inches (100 mm) **OR** 6 inches (150 mm) **OR** 8 inches (200 mm), **as directed**.
 - d. Total Height: 12 inches (300 mm) **OR** 16 inches (400 mm) **OR** 18 inches (450 mm), **as directed**.
 - e. Top Finish: Sawed **OR** Thermal **OR** Bushhammered, **as directed**.
 - f. Face Finish: Split **OR** Sawed **OR** Thermal **OR** Bushhammered, **as directed**.

C. Aggregate Setting-Bed Materials

1. Graded Aggregate for Subbase: Sound crushed stone or gravel complying with ASTM D 448 for Size No. 57 **OR** ASTM D 448 for Size No. 5 **OR** ASTM D 2940, subbase material **OR** requirements in Division 31 Section "Earth Moving" for subbase material, **as directed**.
2. Graded Aggregate for Base Course: Sound crushed stone or gravel complying with ASTM D 448 for Size No. 8 **OR** ASTM D 448 for Size No. 57 **OR** ASTM D 2940, base-course material **OR** requirements in Division 31 Section "Earth Moving" for base-course material, **as directed**.
3. Sand for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate.
4. Soil Mix for Leveling Course: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate blended with planting soil mix complying with requirements in Division 32 Section(s) "Turf And Grasses" **OR** "Plants", **as directed**. Use blend consisting of 1/2 sand and 1/2 soil mix **OR** 2/3 sand and 1/3 soil mix, **as directed**.
5. Graded Aggregate for Leveling Course: Sound crushed stone or gravel complying with ASTM D 448 for Size No. 8 **OR** 9, **as directed**.
6. Soil for Porous Paver Fill: Planting soil mix complying with requirements in Division 32 Section(s) "Turf And Grasses" **OR** "Plants", **as directed**.

7. Graded Aggregate for Porous Paver Fill: Sound crushed stone or gravel complying with ASTM D 448 for Size No. 8 **OR** 9, **as directed**.
 - a. Provide stone of color indicated **OR** to match the Owner's sample, **as directed**.
8. Grass Seed: Comply with requirements in Division 32 Section "Turf And Grasses".
9. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications; made from polyolefins or polyesters, with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 - a. Survivability: Class 2; AASHTO M 288.
 - b. Apparent Opening Size: No. 60 (0.250-mm) sieve, maximum; ASTM D 4751.
 - c. Permittivity: 0.02 per second, minimum; ASTM D 4491.
 - d. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.
10. Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:
 - a. Survivability: Class 2; AASHTO M 288.
 - b. Apparent Opening Size: No. 40 (0.425-mm) sieve, maximum; ASTM D 4751.
 - c. Permittivity: 0.5 per second, minimum; ASTM D 4491.
 - d. UV Stability: 50 percent after 500 hours' exposure; ASTM D 4355.

1.3 EXECUTION

A. Preparation

1. Proof-roll prepared subgrade according to requirements in Division 31 Section "Earth Moving" to identify soft pockets and areas of excess yielding. Proceed with porous paver installation only after deficient subgrades have been corrected and are ready to receive subbase and base **OR** base, **as directed**, course for porous paving.

B. Installation, General

1. Do not use unit pavers with chips, cracks, voids, discolorations, and other defects that might be structurally unsound or visible in finished work.
2. Cut unit pavers with motor-driven masonry saw equipment or a block splitter, **as directed**, to provide clean, sharp, unchipped edges. Cut units to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible. Hammer cutting is not acceptable.
3. Tolerances:
 - a. Variation in Plane between Adjacent Units (Lipping): Do not exceed 1/16-inch (1.5-mm) unit-to-unit offset from flush.
 - b. Variation from Level or Indicated Slope: Do not exceed 1/8 inch in 24 inches (3 mm in 600 mm) and 1/4 inch in 10 feet (6 mm in 3 m) or a maximum of 1/2 inch (13 mm).
4. Provide edge restraints as indicated. Install edge restraints before placing unit pavers.
 - a. Install edge restraints to comply with manufacturer's written instructions. Install stakes at intervals required to hold edge restraints in place during and after porous paver installation.
 - b. For metal edge restraints with top edge exposed, drive stakes at least 1 inch (25 mm) below top edge.
 - c. Install job-built concrete edge restraints to comply with requirements in Division 32 Section "Concrete Paving".
5. Provide curbs as indicated. Install curbs before placing unit pavers.
 - a. Install precast concrete **OR** granite, **as directed**, curbs on a bedding of compacted base-course material over compacted subgrade. Install curbs before placing base course for pavers. Set curbs at elevations indicated, accurately aligned, and place and compact base-course material behind curbs as indicated.
 - b. Install precast concrete curbs on aggregate base course after placing and compacting base course for pavers. Set curbs with top edge 1 inch (25 mm) below top of pavers. Anchor curbs with metal stakes driven through holes in curbs into base-course material.

- c. Install precast concrete curbs on aggregate-base course after placing and compacting base course for pavers. Set curbs with top surface 1/2 inch (13 mm) **OR** 2 inches (50 mm) **OR** 4 inches (100 mm), **as directed**, above top of pavers. Anchor curbs with metal stakes driven behind curbs into base-course material.

C. Setting-Bed Installation

1. Compact soil subgrade uniformly to at least 95 percent of ASTM D 698 **OR** ASTM D 1557, **as directed**, laboratory density.
2. Proof-roll prepared subgrade to identify soft pockets and areas of excess yielding. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by the Owner, and replace with compacted backfill or fill as directed.
3. Place separation **OR** drainage, **as directed**, geotextile over prepared subgrade, overlapping ends and edges at least 12 inches (300 mm).
4. For light-traffic uses, place aggregate subbase **OR** subbase and base, **as directed**, compact by tamping with plate vibrator, and screed to depth indicated.
5. For heavy-duty applications, place aggregate subbase **OR** subbase and base, **as directed**, compact to 100 percent of ASTM D 1557 maximum laboratory density, and screed to depth indicated.
6. Place drainage geotextile over compacted subbase, overlapping ends and edges at least 12 inches (300 mm).
7. Place drainage geotextile over compacted base course, overlapping ends and edges at least 12 inches (300 mm).
8. Place leveling course and screed to a thickness of 1 to 1-1/2 inches (25 to 38 mm) **OR** 2 to 2-1/2 inches (50 to 64 mm) **OR** 3 inches (76 mm), **as directed**, taking care that moisture content remains constant and density is loose and constant until pavers are set and compacted.

D. Paver Installation

1. Set unit pavers on leveling course, being careful not to disturb leveling base. If pavers have lugs or spacer bars to control spacing, place pavers hand tight against lugs or spacer bars. If pavers do not have lugs or spacer bars, place pavers with a 1/16-inch- (1.6-mm-) minimum and 1/8-inch- (3.2-mm-) maximum joint width. Use string lines to keep straight lines. Fill gaps between units that exceed 3/8 inch (10 mm) with pieces cut to fit from full-size pavers.
 - a. When installation is performed with mechanical equipment, use only unit pavers with lugs or spacer bars on sides of each unit.
2. Compact pavers into leveling course with a low-amplitude plate vibrator capable of a 3500- to 5000-lbf (16- to 22-kN) compaction force at 80 to 90 Hz. Use vibrator with neoprene mat on face of plate or other means as needed to prevent cracking and chipping of pavers. Perform at least three passes across paving with vibrator.
 - a. Compact pavers when there is sufficient surface to accommodate operation of vibrator, leaving at least 36 inches (900 mm) of uncompacted pavers adjacent to temporary edges.
 - b. Before ending each day's work, compact installed concrete pavers except for 36-inch (900 mm) width of uncompacted pavers adjacent to temporary edges (laying faces).
 - c. As work progresses to perimeter of installation, compact installed pavers that are adjacent to permanent edges unless they are within 36 inches (90 mm) of laying face.
 - d. Before ending each day's work and when rain interrupts work, cover pavers that have not been compacted and leveling course on which pavers have not been placed with nonstaining plastic sheets to protect them from rain.
3. Place soil fill as follows, immediately after vibrating pavers into leveling course. Spread and screed soil fill level with tops of pavers. Vibrate pavers and add soil fill until porous paving is filled to about 3/4 inch (19 mm) from top surface; remove excess soil fill if any.
 - a. Before ending each day's work, place soil fill in installed porous paving except for 42-inch (1067-mm) width of unfilled paving adjacent to temporary edges (laying faces).
 - b. As work progresses to perimeter of installation, place soil fill in installed paving that is adjacent to permanent edges unless it is within 42 inches (1067 mm) of laying face.

- c. Before ending each day's work and when rain interrupts work, cover paving that has not been filled with nonstaining plastic sheets to protect it from rain.
 4. After filling pavers with soil, sow seed to comply with requirements in Division 32 Section "Turf And Grasses". except sow seed at half the rate specified for seeding lawns. Sweep seed from surfaces of pavers into voids and water with fine spray.
 - a. Within 24 hours after sowing seed, spread an additional 3/16 inch (4.8 mm) of soil fill over seed and soak with water.
 5. Place graded aggregate fill immediately after vibrating pavers into leveling course. Spread and screed aggregate fill level with tops of pavers.
 - a. Before ending each day's work, place aggregate fill in installed porous paving except for 42-inch (1067-mm) width of unfilled paving adjacent to temporary edges (laying faces).
 - b. As work progresses to perimeter of installation, place aggregate fill in installed paving that is adjacent to permanent edges unless it is within 42 inches (1067 mm) of laying face.
 - c. Before ending each day's work and when rain interrupts work, cover paving that has not been filled with nonstaining plastic sheets to protect it from rain.
 6. Remove and replace pavers that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Provide new units to match adjoining units and install in same manner as original units, with same joint treatment and with no evidence of replacement.
- E. Maintenance And Protection
 1. Water newly planted grass and keep moist until grass is established. Maintain grass that is planted in paving to comply with requirements in Division 32 Section "Turf And Grasses".
 2. Erect barricades and warning signs as required to protect newly planted areas from traffic. Maintain barricades for 60 days after planting.

END OF SECTION 32 14 43 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 14 43 00a - VITRIFIED BRICK PAVEMENT REPLACEMENT**1.1 GENERAL****A. General**

1. Limits of Brick Pavement Replacement shall be as per the detail entitled "Payment Limits for Surface Restoration" shown in the plans, plus one foot on each side. Alternate individual bricks may have to be removed in order to maintain staggered joint pattern along the edge of the undisturbed brick pavement.

1.2 PRODUCT**A. Preparation**

1. Base shall be provided and shaped to match level, kind and thickness (4" min.) of adjoining base. The base material shall be compacted to meet the density standards. 4" 2500 PSI concrete base may be used for irregular patches and where compaction is otherwise impractical. Concrete shall be properly placed, consolidated and cured. One inch of sand, or good grade dirt, free from clay, loam or other foreign matter shall be used for cushion to hold the bricks in place. The sand shall be shaped to a true surface parallel to required finished pavement surface.

B. Materials

1. Existing bricks shall be cleaned, stored, and secured by the Contractor.

1.3 EXECUTION**A. Reinstallation of Bricks**

1. The bricks shall be installed in rows, better face upward, sorted by size with joints staggered, then rolled daily with a static tandem wheel roller. Additional bricks, if required, will be supplied by the Owner. City Personnel shall inspect work daily. After inspection, the bricks shall be sprayed with a solution of lime and water, using 26 lbs. of lime to 55 gallons of water. Asphalt steep 7330 or equal shall be used for joint filler. The steep shall be heated until fluid and poured over bricks and removed when cool with square pointed shovels dipped in lime water. Removed asphalt may be reused. If adjoining bricks are grouted, new filler shall be grout (8:1, builders sand: cement).

B. Acceptance

1. Upon completion of the work, and before acceptance and final payment, the Contractor shall remove all false work, equipment, rubbish, surplus, and discarded materials. The Contractor shall restore in an acceptable manner all property, both public and private, damaged during the prosecution of the work. The Contractor shall leave the roadway in a neat and presentable condition each day.

SECTION 32 17 23 00 - CSF PAVEMENT MARKINGS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Pavement Marking is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Painted pavement markings.
 - 2. Painted curbs, guard posts, and light pole bases.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 321216 - Asphalt Paving: Asphalt paving substrate for marking application.
 - 2. Section 321313 - Concrete Paving: Concrete paving substrate for marking application.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Technical data sheets indicating manufacturer's catalog number, paint type description, and VOC content for each paint type specified.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer certificate that Products meet or exceed specified requirements.
 - b. Test Reports: Manufacturer Material Safety Data Sheets (MSDS) for each paint type specified.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Provide paint materials that conform to Federal, State, and local restrictions for Volatile Organic Compounds (VOC) and lead free content.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and/or reducing.
- C. Store paint materials at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's published instructions.

1.5 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Maintain access for vehicular and pedestrian traffic as required for other construction activities. Utilize flagmen, barricades, warning signs and warning lights as required.

1.6 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Requirements for Closeout Submittals.
 - 1. Extra Materials:
 - a. Provide 1 gallon of each color to Contracting Officer.
 - b. Label each container with color and type, in addition to manufacturer's label.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified Products which may be incorporated into the Work include the following:
 - 1. ICI Dulux Paints, Cleveland, OH (800) 984-5444.
 - 2. Sherwin-Williams Company, Cleveland, OH (800) 321-8194.
 - 3. McCormick Paint Works, Rockville, MD (877) PAINT-55
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Ready-mixed; pigments fully ground maintaining a soft paste consistency, capable of readily and uniformly dispersing to a complete homogeneous mixture providing good flowing and brushing properties capable of drying or curing free of streaks or sags. Dry to traffic and touch in 2 hours.
- B. Traffic Paint: Flat, Water Base, Acrylic, complying with Federal Specifications TT-P 1952D
 - 1. 1st Coat:
 - a. Devoe: Traffic-Line Interior-Exterior Water Borne Traffic Marking Paint, 850XX; MDF 7 mils.
 - b. Sherwin-Williams: Setfast Acrylic Waterborne Traffic Marking Paint, MDF 7 mils.
 - c. McCormick: Acrylic Latex Traffic Marking Paint #01705.
 - 2. 2nd Coat:
 - a. Devoe: Traffic-Line Interior-Exterior Water Borne Traffic Marking Paint, 850XX; MDF 7 mils.

- b. Sherwin-Williams: Setfast Acrylic Waterborne Traffic Marking Paint, MDF 7 mils.
- c. McCormick: Acrylic Latex Traffic Marking Paint #01705.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Sweep pavement and surfaces to receive paint markings clean of dust and dirt. Allow pavement to cure a minimum of 60 days prior to application of paint markings.
- B. Clean surfaces free of glaze and grease, road film, and other foreign materials.

NOTE TO SPECIFIER

Use Paragraph below where removal of existing markings is a part of the Work.

- C. Where existing pavement markings are indicated on Drawings to be removed or would interfere with the adhesion of new paint, use a motorized abrasive device to remove existing markings.
 - 1. Use equipment that will not damage existing paving or create surface hazardous to vehicle or pedestrian traffic.
 - 2. Use marking removal methods approved by governing authority having jurisdiction in areas within public rights-of-way.

3.3 APPLICATION

- A. Apply paint products in accordance with manufacturer's published instructions using application procedures approved for the particular application and substrate to the specified Minimum Dry Film Thickness (MDF). Apply each coat to uniform finish.
- B. Do not apply paint markings on surfaces that are not dry and if rain is expected within 24 hours.
- C. Do not apply paint markings when surface or air temperature is below 50 degrees F.
- D. Apply 2 coats at manufacturer recommended rate without addition of thinner. Apply with mechanical equipment to produce uniform straight edges. At sidewalk curbs and crosswalks, use straightedge to provide uniform, clean, and straight stripe.

NOTE TO SPECIFIER

Edit marking colors to coordinate with colors indicated on Drawings and per local code requirements.

3.4 PAINT MARKING SCHEDULE

A. Paint the following items with colors indicated below:

1. Pedestrian Crosswalks: [White] [Yellow].

NOTE TO SPECIFIER

Delete painting of bollards if plastic covers are used.

2. Bollards: Yellow.
3. Fire Lanes: Red or per local code.
4. Lane Striping Where Separating Traffic in Opposite Directions: Yellow.
5. Lane Striping Where Separating Traffic in Same Direction: White.
6. Handicap Symbols: Per local code.
7. Parking Stall Striping: [White] [Yellow]

Last revised: 4/12/2011

END OF SECTION 32 17 23 00

SECTION 32 17 23 00 - MPF PAVEMENT MARKINGS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Pavement Marking is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

SECTION 32 17 26 00 - TACTILE/DETECTABLE WARNING TILE

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for tactile/detectable warning tile. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product data for each specified product.
2. Shop drawings, showing detailed plans of tile profile, fastener locations, and installation methods
3. Two (2) tile samples, minimum size 6" x 8" of the kind proposed for use.
4. Material Test Reports: Submit test reports from qualified independent testing laboratory indicating that materials proposed for use are in compliance with requirements and meet the properties indicated. All test reports shall be conducted on a cast-in-place tactile panel system as certified by a qualified independent testing laboratory.
5. Maintenance Instructions: Submit copies of manufacturer's specified maintenance practices for each type of tactile tile and accessory as required.

C. Quality Control

1. Americans with Disabilities Act (ADA): Provide tactile warning surfaces, which comply with the detectable warnings on walking surfaces, section of the Americans with Disabilities Act (Title 49 CFR TRANSPORTATION, PART 37.9 STANDARDS FOR ACCESSIBLE TRANSPORTATION FACILITIES, Appendix A, Section 4.29.2 DETECTABLE WARNINGS ON WALKING SURFACES.
2. California Code of Regulations (CCR): Provide only approved DSAAC detectable warning products as provided in the California Code of Regulations (CCR). Title 24, Part 1, Articles 2, 3 and 4 and Part 2, Section 205 definition of "Detectable Warning". Section 1127B.5 for "Curb Ramps" and Section 1133B.8.5 for "Detectable Warnings at Hazardous Vehicle Area's".
3. Performance: Tiles shall meet or exceed the following criteria:
 - a. Water Absorption: 0.35% maximum, when tested in accordance with ASTM D570.
 - b. Slip Resistance: 0.90 minimum combined wet/ dry static coefficient of friction on top of domes and field area, when tested in accordance with ASTM C1028.
 - c. Compressive Strength: 18,000 psi minimum, when tested in accordance with ASTM D695.
 - d. Tensile Strength: 10,000 psi minimum, when tested in accordance with ASTM D638.
 - e. Flexural Strength: 24,000 psi minimum, when tested in accordance with ASTM C293.
 - f. Gardner Impact: 450 inch-pounds per inch minimum, when tested in accordance with Geometry "GE" of ASTM D5420.
 - g. Chemical Stain Resistance: No reaction to 1% hydrochloric acid, urine, calcium chloride, stamp pad ink, gum and red aerosol paint, when tested in accordance with ASTM D543.
 - h. Wear Depth: 0.03" maximum, after 1000 abrasion cycles of 40 grit Norton Metallite sandpaper, when tested in accordance with ASTM D2486-Modified.
 - i. Flame Spread: 25 maximum, when tested in accordance with ASTM E84.
 - j. Accelerated Weathering: No deterioration, fading or chalking for 2000 hours, when tested in accordance with ASTM D2565.
4. Tactile warning tiles embedded in or adhered to concrete shall meet or exceed the following performance criteria:
 - a. Accelerated Aging and Freeze Thaw of Adhesive System: No cracking, delamination, warping, checking, blistering, color change, loosening, etc. when tested in accordance with ASTM D1037.
 - b. Salt and Spray Performance: No deterioration after 100 hours of exposure, when tested in accordance with ASTM B117.

- D. Delivery, Storage And Handling
 - 1. Tiles shall be suitably packaged or crated to prevent damage in shipment or handling. Finished surfaces shall be protected by sturdy wrappings, and tile type shall be identified by part number.
 - 2. Tiles shall be delivered to location at building site for storage prior to installation.
- E. Warranty
 - 1. Installed tiles shall be warranted for a minimum of five (5) years against failure of adhesives, fasteners and sealants.

1.2 PRODUCT

- A. Materials
 - 1. Vitrified Polymer Composite (VPC) tiles shall be an epoxy polymer composition with an ultra violet stabilized coating employing aluminum oxide particles in the truncated domes. The tile shall incorporate an in-line dome pattern of truncated domes. For wheelchair safety the field area shall consist of a non-slip surface with a minimum of 40 - 90° raised points 0.045" high, per square inch.
 - 2. Color: Safety Yellow, (Federal Color # 33538) colorfast, UV stabilized coating. Color shall be homogeneous throughout the tile.
- B. Cast-In-Place Tactile Tile
 - 1. Tile shall be minimum 1-3/8" thick, with minimum 3/8" thick face and ribs designed for after-pour embedment in concrete.
- C. Surface Applied Detectable Warning Surface Tile
 - 1. The tile shall have with countersunk fastening holes and perimeter beveled edges.
 - 2. Accessories:
 - a. Fasteners: Color matched, corrosion resistant, flat head drive anchor, 1/4" diameter x 1-3/4" long.
 - b. Adhesive: Urethane elastomeric adhesive.
 - c. Sealants: Epoxy two component sealant.
- D. Modular Paver Tactile Tile
 - 1. Pre-cast with a 1-3/8" thick reinforced epoxy polymer concrete core.
 - a. Polymer Concrete and/or epoxy resin properties shall meet or exceed the following criteria:

Tensile Strength of Resin:	greater than 7,000psi; ASTM D638
Modulus of Elasticity of Resin:	greater than 4,000psi; ASTM D638
Bond Strength of Polymeric Concrete:	greater than 8,000psi; ASTM C551
 - 2. Accessories:
 - a. Adhesive: Urethane elastomeric adhesive.
 - b. Backer Rod: ASTM C 1330, Type C (closed-cell material with a surface skin) **OR** Type O (open-cell material) **OR** Type B (bicellular material with a surface skin), **as directed**, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance
- E. Surface Applied Detectable Guidance Tiles
 - 1. Accessories:
 - a. Adhesive: Heavy-duty polyurethane elastomeric adhesive.
 - b. Sealants: Heavy-duty polyurethane elastomeric sealant.
- F. Surface Applied Detectable Directional Bar Tiles
 - 1. Accessories:
 - a. Fasteners: Stainless steel low profile expansion anchors, 3/16" diameter by 2" long.

- b. Adhesive: Heavy-duty polyurethane elastomeric adhesive.
- c. Sealants: Heavy-duty polyurethane elastomeric sealant.

1.3 EXECUTION

A. Installation

1. Installation shall be in strict compliance with manufacturer's printed instructions.

END OF SECTION 32 17 26 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 18 26 00 - LAWNS AND GRASSES**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for lawns and grasses. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Seeding.
 - b. Hydroseeding.
 - c. Sodding.
 - d. Plugging.
 - e. Sprigging.
 - f. Meadow grasses and wildflowers.
 - g. Turf renovation.
 - h. Erosion-control material(s).
 - i. Grass paving.

C. Definitions

1. Duff Layer: The surface layer of native topsoil that is composed of mostly decayed leaves, twigs, and detritus.
2. Finish Grade: Elevation of finished surface of planting soil.
3. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.
4. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.
5. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. These include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.
6. Planting Soil: Standardized topsoil; existing, native surface topsoil; existing, in-place surface soil; imported topsoil; or manufactured topsoil that is modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.
7. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or top surface of a fill or backfill before planting soil is placed.
8. Subsoil: All soil beneath the topsoil layer of the soil profile, and typified by the lack of organic matter and soil organisms.
9. Surface Soil: Soil that is present at the top layer of the existing soil profile at the Project site. In undisturbed areas, the surface soil is typically topsoil, but in disturbed areas such as urban environments, the surface soil can be subsoil.

D. Submittals

1. Product Data: For each type of product indicated.
2. Certification of Grass Seed.
 - a. Certification of each seed mixture for turfgrass sod **OR** plugs, **as directed**.
3. Product Certificates: For soil amendments and fertilizers, from manufacturer.
4. Maintenance Instructions: Recommended procedures to be established by Owner for maintenance of turf and meadows during a calendar year. Submit before expiration of required initial maintenance periods.

E. Quality Assurance

1. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
 - a. Pesticide Applicator: State licensed, commercial.
2. Soil Analysis: For each unamended soil type, furnish soil analysis and a written report by a qualified soil-testing laboratory.
 - a. The soil-testing laboratory shall oversee soil sampling.
 - b. Report suitability of tested soil for turf growth.
 - 1) State recommendations for nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce satisfactory planting soil suitable for healthy, viable plants.
 - 2) Report presence of problem salts, minerals, or heavy metals; if present, provide additional recommendations for corrective action.

F. Delivery, Storage, And Handling

1. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of conformance with state and federal laws, as applicable.
2. Sod: Harvest, deliver, store, and handle sod according to requirements in "Specifications for Turfgrass Sod Materials" and "Specifications for Turfgrass Sod Transplanting and Installation" in TPI's "Guideline Specifications to Turfgrass Sodding." Deliver sod in time for planting within 24 hours of harvesting. Protect sod from breakage and drying.
3. Bulk Materials:
 - a. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
 - b. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
 - c. Accompany each delivery of bulk fertilizers, lime, and soil amendments with appropriate certificates.

G. Maintenance Service

1. Initial Turf Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 1.3. Begin maintenance immediately after each area is planted and continue until acceptable turf is established but for not less than the following periods:
 - a. Seeded Turf: 60 days from date of planting completion **OR** Final Completion, **as directed**.
 - 1) When initial maintenance period has not elapsed before end of planting season, or if turf is not fully established, continue maintenance during next planting season.
 - b. Sodded Turf: 30 days from date of planting completion **OR** Final Completion, **as directed**.
 - c. Plugged Turf: 30 days from date of planting completion **OR** Final Completion, **as directed**.
 - d. Sprigged Turf: 30 days from date of planting completion **OR** Final Completion, **as directed**.
2. Initial Meadow Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in Part 1.3. Begin maintenance immediately after each area is planted and continue until acceptable meadow is established, but for not less than 40 days from date of planting completion **OR** Final Completion, **as directed**.
3. Continuing Maintenance Proposal: From Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1.2 PRODUCTS

A. Seed

1. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA's "Journal of Seed Technology; Rules for Testing Seeds" for purity and germination tolerances.
2. Seed Species: If grass seed is required to be certified by the State Department of Agriculture, State-certified seed of grass species as follows:
OR
 Seed Species: If grass seed is not required to be certified by the State Department of Agriculture, seed of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:
 - a. Warm-season grass
 - 1) Full Sun: Bermudagrass (*Cynodon dactylon*).
 - b. Cool-season grass
 - 1) Full Sun: Kentucky bluegrass (*Poa pratensis*), a minimum of three cultivars.
 - 2) Sun and Partial Shade: Proportioned by weight as follows:
 - a) 50 percent Kentucky bluegrass (*Poa pratensis*).
 - b) 30 percent chewings red fescue (*Festuca rubra* variety).
 - c) 10 percent perennial ryegrass (*Lolium perenne*).
 - d) 10 percent redtop (*Agrostis alba*).
 - 3) Shade: Proportioned by weight as follows:
 - a) 50 percent chewings red fescue (*Festuca rubra* variety).
 - b) 35 percent rough bluegrass (*Poa trivialis*).
 - c) 15 percent redtop (*Agrostis alba*).
3. Grass Seed Mix: Proprietary seed mix as directed by the Owner.

B. Turfgrass Sod

1. Turfgrass Sod: Certified **OR** Approved **OR** Number 1 Quality/Premium, including limitations on thatch, weeds, diseases, nematodes, and insects, **as directed**, complying with "Specifications for Turfgrass Sod Materials" in TPI's "Guideline Specifications to Turfgrass Sodding." Furnish viable sod of uniform density, color, and texture, strongly rooted, and capable of vigorous growth and development when planted.
2. Turfgrass Species (warm-season grass): Bermudagrass (*Cynodon dactylon*) **OR** Carpetgrass (*Axonopus affinis*) **OR** Centipedegrass (*Eremochloa ophiuroides*) **OR** St. Augustinegrass (*Stenotaphrum secundatum*) **OR** Zoysiagrass (*Zoysia japonica*) **OR** Zoysiagrass (*Zoysia matrella*), **as directed**.
3. Turfgrass Species (cool-season grass): Sod of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:
 - a. Full Sun: Kentucky bluegrass (*Poa pratensis*), a minimum of three cultivars.
 - b. Sun and Partial Shade: Proportioned by weight as follows:
 - 1) 50 percent Kentucky bluegrass (*Poa pratensis*).
 - 2) 30 percent chewings red fescue (*Festuca rubra* variety).
 - 3) 10 percent perennial ryegrass (*Lolium perenne*).
 - 4) 10 percent redtop (*Agrostis alba*).
 - c. Shade: Proportioned by weight as follows:
 - 1) 50 percent chewings red fescue (*Festuca rubra* variety).
 - 2) 35 percent rough bluegrass (*Poa trivialis*).
 - 3) 15 percent redtop (*Agrostis alba*).

C. Plugs

1. Plugs: Turfgrass sod, certified **OR** approved **OR** Number 1 Quality/Premium, including limitations on thatch, weeds, diseases, nematodes, and insects, **as directed**, complying with "Specifications for Turfgrass Sod Materials" in TPI's "Guideline Specifications to Turfgrass Sodding." Furnish viable sod of uniform density, color, and texture, cut into square or round plugs, strongly rooted,

and capable of vigorous growth and development when planted; of the following turfgrass species and plug size:

- a. Turfgrass Species (warm-season grass): Bermudagrass (*Cynodon dactylon*) **OR** Carpetgrass (*Axonopus affinis*) **OR** Centipedegrass (*Eremochloa ophiuroides*) **OR** St. Augustinegrass (*Stenotaphrum secundatum*) **OR** Zoysiagrass (*Zoysia japonica*) **OR** Zoysiagrass (*Zoysia matrella*), **as directed**.
- b. Plug Size: 2 inches (50 mm) **OR** 3 inches (75 mm) **OR** 4 inches (100 mm), **as directed**.

D. Sprigs

1. Sod Sprigs: Healthy living stems, rhizomes, or stolons with a minimum of two nodes and attached roots free of soil, of the following turfgrass species:
 - a. Turfgrass Species (warm-season grass): Bermudagrass (*Cynodon dactylon*) **OR** Carpetgrass (*Axonopus affinis*) **OR** Centipedegrass (*Eremochloa ophiuroides*) **OR** St. Augustinegrass (*Stenotaphrum secundatum*) **OR** Zoysiagrass (*Zoysia japonica*) **OR** Zoysiagrass (*Zoysia matrella*), **as directed**.
 - b. Turfgrass Species (cool-season grass): Creeping bentgrass (*Agrostis palustris*).

E. Meadow Grasses And Wildflowers

1. Wildflower Seed: Fresh, clean, and dry new seed, of mixed species as directed.
2. Native Grass Seed: Fresh, clean, and dry new seed, of mixed species as directed.
3. Wildflower and Native Grass Seed: Fresh, clean, and dry new seed, of mixed species as directed.
4. Seed Carrier: Inert material, sharp clean sand or perlite, mixed with seed at a ratio of not less than two parts seed carrier to one part seed.

F. Inorganic Soil Amendments

1. Lime: ASTM C 602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
 - a. Class T, with a minimum of 99 percent passing through No. 8 (2.36-mm) sieve and a minimum of 75 percent passing through No. 60 (0.25-mm) sieve.
OR
Class O, with a minimum of 95 percent passing through No. 8 (2.36-mm) sieve and a minimum of 55 percent passing through No. 60 (0.25-mm) sieve.
 - b. Provide lime in form of ground dolomitic limestone **OR** calcitic limestone **OR** mollusk shells, **as directed**.
2. Sulfur: Granular, biodegradable, containing a minimum of 90 percent sulfur, and with a minimum of 99 percent passing through No. 6 (3.35-mm) sieve and a maximum of 10 percent passing through No. 40 (0.425-mm) sieve.
3. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
4. Aluminum Sulfate: Commercial grade, unadulterated.
5. Perlite: Horticultural perlite, soil amendment grade.
6. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through No. 50 (0.30-mm) sieve.
7. Sand: Clean, washed, natural or manufactured, and free of toxic materials.
8. Diatomaceous Earth: Calcined, 90 percent silica, with approximately 140 percent water absorption capacity by weight.
OR
Zeolites: Mineral clinoptilolite with at least 60 percent water absorption by weight.

G. Organic Soil Amendments

1. Compost: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch (25-mm) **OR** 3/4-inch (19-mm) **OR** 1/2-inch (12.5-mm), **as directed**, sieve; soluble salt content of 5 to 10

- decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:
- a. Organic Matter Content: 50 to 60 percent of dry weight.
 - b. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.
 2. Sphagnum Peat: Partially decomposed sphagnum peat moss, finely divided or of granular texture, with a pH range of 3.4 to 4.8.
 3. Muck Peat: Partially decomposed moss peat, native peat, or reed-sedge peat, finely divided or of granular texture, with a pH range of 6 to 7.5, and having a water-absorbing capacity of 1100 to 2000 percent.
 4. Wood Derivatives: Decomposed, nitrogen-treated sawdust, ground bark, or wood waste; of uniform texture and free of chips, stones, sticks, soil, or toxic materials.
 - a. In lieu of decomposed wood derivatives, mix partially decomposed wood derivatives with ammonium nitrate at a minimum rate of 0.15 lb/cu. ft. (2.4 kg/cu. m) of loose sawdust or ground bark, or with ammonium sulfate at a minimum rate of 0.25 lb/cu. ft. (4 kg/cu. m) of loose sawdust or ground bark.
 5. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, and material harmful to plant growth.

H. Fertilizers

1. Bonemeal: Commercial, raw or steamed, finely ground; a minimum of 1 **OR** 4, **as directed**, percent nitrogen and 10 **OR** 20, **as directed**, percent phosphoric acid.
2. Superphosphate: Commercial, phosphate mixture, soluble; a minimum of 20 percent available phosphoric acid.
3. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:
 - a. Composition: 1 lb/1000 sq. ft. (0.45 kg/92.9 sq. m) of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
 - b. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.
4. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:
 - a. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
OR
Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

I. Planting Soils

1. Planting Soil: ASTM D 5268 topsoil, with pH range of 5.5 to 7, a minimum of 2 percent organic material content **OR** Existing, native surface topsoil formed under natural conditions with the duff layer retained during excavation process **OR** Existing, in-place surface soil **OR** Imported topsoil or manufactured topsoil from off-site sources; do not obtain from agricultural land, bogs or marshes, **as directed**. Verify suitability of soil to produce viable planting soil. Clean soil of roots, plants, sod, stones, clods, clay lumps, pockets of coarse sand, concrete slurry, concrete layers or chunks, cement, plaster, building debris, and other extraneous materials harmful to plant growth. Mix soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:
 - a. Ratio of Loose Compost to Topsoil by Volume: 1:4 **OR** 1:3 **OR** 1:2, **as directed**.
 - b. Ratio of Loose Sphagnum **OR** Muck, **as directed**, Peat to Topsoil by Volume: as directed by the Owner .
 - c. Ratio of Loose Wood Derivatives to Topsoil by Volume: as directed by the Owner.
 - d. Weight of Lime per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.

- e. Weight of Sulfur **OR** Iron Sulfate **OR** Aluminum Sulfate, **as directed**, per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- f. Weight of Agricultural Gypsum per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- g. Volume of Sand Plus 10 Percent Diatomaceous Earth **OR** Zeolites, **as directed**, per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- h. Weight of Bonemeal per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- i. Weight of Superphosphate per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- j. Weight of Commercial Fertilizer per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.
- k. Weight of Slow-Release Fertilizer per 1000 Sq. Ft. (92.9 Sq. m): as directed by the Owner.

J. Mulches

- 1. Straw Mulch: Provide air-dry, clean, mildew- and seed-free, salt hay or threshed straw of wheat, rye, oats, or barley.
- 2. Sphagnum Peat Mulch: Partially decomposed sphagnum peat moss, finely divided or of granular texture, and with a pH range of 3.4 to 4.8.
- 3. Muck Peat Mulch: Partially decomposed moss peat, native peat, or reed-sedge peat, finely divided or of granular texture, with a pH range of 6 to 7.5, and having a water-absorbing capacity of 1100 to 2000 percent.
- 4. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch (25-mm) sieve; soluble salt content of 2 to 5 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:
 - a. Organic Matter Content: 50 to 60 percent of dry weight.
 - b. Feedstock: Agricultural, food, or industrial residuals; biosolids; yard trimmings; or source-separated or compostable mixed solid waste.
- 5. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic and free of plant-growth or germination inhibitors; with a maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.
- 6. Nonasphaltic Tackifier: Colloidal tackifier recommended by fiber-mulch manufacturer for slurry application; nontoxic and free of plant-growth or germination inhibitors.
- 7. Asphalt Emulsion: ASTM D 977, Grade SS-1; nontoxic and free of plant-growth or germination inhibitors.

K. Pesticides

- 1. General: Pesticide, registered and approved by EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.
- 2. Pre-Emergent Herbicide (Selective and Non-Selective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.
- 3. Post-Emergent Herbicide (Selective and Non-Selective): Effective for controlling weed growth that has already germinated.

L. Erosion-Control Materials

- 1. Erosion-Control Blankets: Biodegradable wood excelsior, straw, or coconut-fiber mat enclosed in a photodegradable plastic mesh. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.
- 2. Erosion-Control Fiber Mesh: Biodegradable burlap or spun-coir mesh, a minimum of 0.92 lb/sq. yd. (0.5 kg/sq. m), with 50 to 65 percent open area. Include manufacturer's recommended steel wire staples, 6 inches (150 mm) long.
- 3. Erosion-Control Mats: Cellular, non-biodegradable slope-stabilization mats designed to isolate and contain small areas of soil over steeply sloped surface, of 3-inch (75-mm) **OR** 4-inch (100-mm) **OR** 6-inch (150-mm), **as directed**, nominal mat thickness. Include manufacturer's recommended anchorage system for slope conditions.

M. Grass-Paving Materials

1. Grass Paving: Cellular, non-biodegradable plastic mats, designed to contain small areas of soil and enhance the ability of turf to support vehicular and pedestrian traffic, of 1-inch (25-mm) **OR** 1-3/4-inch (45-mm) **OR** 2-inch (50-mm) **OR** manufacturer's standard, **as directed**, nominal mat thickness. Include manufacturer's recommended anchorage system for slope conditions.
2. Base Course: Sound crushed stone or gravel complying with ASTM D 448 for Size No. 8 **OR** Division 31 Section "Earth Moving" for base-course material, **as directed**.
3. Sand: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate.
4. Proprietary Growing Mix: As submitted and acceptable to the Owner.
5. Sandy Loam Soil Mix: Sound, sharp, washed, natural sand or crushed stone complying with gradation requirements in ASTM C 33 for fine aggregate blended with planting soil as specified. Use blend consisting of 1/2 sand and 1/2 planting soil **OR** 2/3 sand and 1/3 planting soil, **as directed**.
6. Soil for Paving Fill: Planting soil as specified.

1.3 EXECUTION

A. Preparation

1. Protect structures, utilities, sidewalks, pavements, and other facilities, trees, shrubs, and plantings from damage caused by planting operations.
 - a. Protect adjacent and adjoining areas from hydroseeding and hydromulching overspray.
 - b. Protect grade stakes set by others until directed to remove them.
2. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

B. Turf Area Preparation

1. Limit turf subgrade preparation to areas to be planted.
2. Newly Graded Subgrades: Loosen subgrade to a minimum depth of 4 inches (100 mm) **OR** 6 inches (150 mm) **OR** 8 inches (200 mm), **as directed**. Remove stones larger than 1 inch (25 mm) **OR** 1-1/2 inches (38 mm) **OR** 2 inches (50 mm), **as directed**, in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.
 - a. Apply superphosphate fertilizer directly to subgrade before loosening.
 - b. Thoroughly blend planting soil off-site before spreading or spread topsoil, apply soil amendments and fertilizer on surface, and thoroughly blend planting soil.
 - 1) Delay mixing fertilizer with planting soil if planting will not proceed within a few days.
 - 2) Mix lime with dry soil before mixing fertilizer.
 - c. Spread planting soil to a depth of 4 inches (100 mm) **OR** 6 inches (150 mm) **OR** 8 inches (200 mm), **as directed**, but not less than required to meet finish grades after light rolling and natural settlement. Do not spread if planting soil or subgrade is frozen, muddy, or excessively wet.
 - 1) Spread approximately 1/2 the thickness of planting soil over loosened subgrade. Mix thoroughly into top 2 inches (50 mm) **OR** 4 inches (100 mm), **as directed**, of subgrade. Spread remainder of planting soil.
 - 2) Reduce elevation of planting soil to allow for soil thickness of sod.
3. Unchanged Subgrades: If turf is to be planted in areas unaltered or undisturbed by excavating, grading, or surface-soil stripping operations, prepare surface soil as follows:
 - a. Remove existing grass, vegetation, and turf. Do not mix into surface soil.
 - b. Loosen surface soil to a depth of at least 6 inches (150 mm) **OR** 8 inches (200 mm), **as directed**. Apply soil amendments and fertilizers according to planting soil mix proportions and mix thoroughly into top 4 inches (100 mm) **OR** 6 inches (150 mm), **as directed**, of soil. Till soil to a homogeneous mixture of fine texture.
 - 1) Apply superphosphate fertilizer directly to surface soil before loosening.
 - c. Remove stones larger than 1 inch (25 mm) **OR** 1-1/2 inches (38 mm) **OR** 2 inches (50 mm), **as directed**, in any dimension and sticks, roots, trash, and other extraneous matter.

- d. Legally dispose of waste material, including grass, vegetation, and turf, off Owner's property.
 4. Finish Grading: Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Grade to within plus or minus 1/2 inch (13 mm) of finish elevation. Roll and rake, remove ridges, and fill depressions to meet finish grades. Limit finish grading to areas that can be planted in the immediate future.
 5. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.
 6. Before planting, obtain the Owner's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.
- C. Preparation For Erosion-Control Materials
1. Prepare area as specified in "Turf Area Preparation" Article.
 2. For erosion-control mats, install planting soil in two lifts, with second lift equal to thickness of erosion-control mats. Install erosion-control mat and fasten as recommended by material manufacturer.
 3. Fill cells of erosion-control mat with planting soil and compact before planting.
 4. For erosion-control blanket or mesh, install from top of slope, working downward, and as recommended by material manufacturer for site conditions. Fasten as recommended by material manufacturer.
 5. Moisten prepared area before planting if surface is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.
- D. Preparation For Grass-Paving Materials
1. Reduce subgrade elevation soil to allow for thickness of grass-paving system. Grade planting areas to a smooth, uniform surface plane with loose, uniformly fine texture. Grade so that installed paving is within plus or minus 1/2 inch (13 mm) of finish elevation. Roll and rake, remove ridges, and fill depressions.
 2. Install base course **OR** sand course **OR** base course and sand course, **as directed**, and sandy loam soil mix **OR** proprietary growing mix **OR** soil for paving fill, **as directed**, as recommended by paving-material manufacturer for site conditions; comply with details shown on Drawings. Compact according to paving-material manufacturer's written instructions.
 3. Install paving mat and fasten according to paving-material manufacturer's written instructions.
 4. Before planting, fill cells of paving mat with planting soil **OR** sandy loam soil mix **OR** proprietary growing mix **OR** sand half full, **as directed**, and compact according to manufacturer's written instructions.
 5. Moisten prepared area before planting if surface is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.
- E. Seeding
1. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph (8 km/h). Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
 - a. Do not use wet seed or seed that is moldy or otherwise damaged.
 - b. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.
 2. Sow seed at a total rate of 2 lb/1000 sq. ft. (0.9 kg/92.9 sq. m) **OR** 3 to 4 lb/1000 sq. ft. (1.4 to 1.8 kg/92.9 sq. m) **OR** 5 to 8 lb/1000 sq. ft. (2.3 to 3.6 kg/92.9 sq. m), **as directed**.
 3. Rake seed lightly into top 1/8 inch (3 mm) of soil, roll lightly, and water with fine spray.
 4. Protect seeded areas with slopes exceeding 1:4 with erosion-control blankets and 1:6 with erosion-control fiber mesh installed and stapled according to manufacturer's written instructions.
 5. Protect seeded areas with erosion-control mats where shown on Drawings; install and anchor according to manufacturer's written instructions.
 6. Protect seeded areas with slopes not exceeding 1:6 by spreading straw mulch. Spread uniformly at a minimum rate of 2 tons/acre (42 kg/92.9 sq. m) to form a continuous blanket 1-1/2 inches (38 mm) in loose thickness over seeded areas. Spread by hand, blower, or other suitable equipment.

- a. Anchor straw mulch by crimping into soil with suitable mechanical equipment.
 - b. Bond straw mulch by spraying with asphalt emulsion at a rate of 10 to 13 gal./1000 sq. ft. (38 to 49 L/92.9 sq. m). Take precautions to prevent damage or staining of structures or other plantings adjacent to mulched areas. Immediately clean damaged or stained areas.
 7. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch **OR** peat mulch **OR** planting soil, **as directed**, within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch (4.8 mm), and roll surface smooth.
- F. Hydroseeding
 1. Hydroseeding: Mix specified seed, fertilizer, and fiber mulch in water, using equipment specifically designed for hydroseed application. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.
 - a. Mix slurry with nonasphaltic **OR** asphalt-emulsion **OR** fiber-mulch manufacturer's recommended, **as directed**, tackifier.
 - b. Apply slurry uniformly to all areas to be seeded in a one-step process. Apply slurry at a rate so that mulch component is deposited at not less than 1500-lb/acre (15.6-kg/92.9 sq. m) dry weight, and seed component is deposited at not less than the specified seed-sowing rate.
OR
Apply slurry uniformly to all areas to be seeded in a two-step process. Apply first slurry coat at a rate so that mulch component is deposited at not less than 500-lb/acre (5.2-kg/92.9 sq. m) dry weight, and seed component is deposited at not less than the specified seed-sowing rate. Apply slurry cover coat of fiber mulch (hydromulching) at a rate of 1000 lb/acre (10.4 kg/92.9 sq. m).
- G. Sodding
 1. Lay sod within 24 hours of harvesting. Do not lay sod if dormant or if ground is frozen or muddy.
 2. Lay sod to form a solid mass with tightly fitted joints. Butt ends and sides of sod; do not stretch or overlap. Stagger sod strips or pads to offset joints in adjacent courses. Avoid damage to subgrade or sod during installation. Tamp and roll lightly to ensure contact with subgrade, eliminate air pockets, and form a smooth surface. Work sifted soil or fine sand into minor cracks between pieces of sod; remove excess to avoid smothering sod and adjacent grass.
 - a. Lay sod across angle of slopes exceeding 1:3.
 - b. Anchor sod on slopes exceeding 1:6 with wood pegs or steel staples spaced as recommended by sod manufacturer but not less than 2 anchors per sod strip to prevent slippage.
 3. Saturate sod with fine water spray within two hours of planting. During first week after planting, water daily or more frequently as necessary to maintain moist soil to a minimum depth of 1-1/2 inches (38 mm) below sod.
- H. Plugging
 1. Plant plugs in holes or furrows, spaced 12 inches (300 mm) **OR** 18 inches (450 mm), **as directed**, apart in both directions. On slopes, contour furrows to near level.
- I. Sprigging
 1. Plant freshly shredded sod sprigs in furrows 1 to 1-1/2 inches (25 to 38 mm) **OR** 1-1/2 to 2 inches (38 to 50 mm) **OR** 2-1/2 to 3 inches (64 to 75 mm), **as directed**, deep. Place individual sprigs with roots and portions of stem in moistened soil, 6 inches (150 mm) **OR** 12 inches (300 mm), **as directed**, apart in rows 10 inches (250 mm) **OR** 18 inches (450 mm), **as directed**, apart, and fill furrows without covering growing tips. Lightly roll and firm soil around sprigs after planting.
 2. Broadcast sprigs uniformly over prepared surface at a rate of 10 cu. ft./1000 sq. ft. (0.28 cu. m/92.9 sq. m) and mechanically force sprigs into lightly moistened soil.
 - a. Spread a 1/4-inch- (6-mm-) thick layer of compost mulch **OR** peat mulch **OR** planting soil, **as directed**, on sprigs.
 - b. Lightly roll and firm soil around sprigs after planting.

- c. Water sprigs immediately after planting and keep moist by frequent watering until well rooted.

J. Turf Renovation

1. Renovate existing turf.
2. Renovate existing turf damaged by Contractor's operations, such as storage of materials or equipment and movement of vehicles.
 - a. Reestablish turf where settlement or washouts occur or where minor regrading is required.
 - b. Install new planting soil as required.
3. Remove sod and vegetation from diseased or unsatisfactory turf areas; do not bury in soil.
4. Remove topsoil containing foreign materials such as oil drippings, fuel spills, stones, gravel, and other construction materials resulting from Contractor's operations, and replace with new planting soil.
5. Mow, dethatch, core aerate, and rake existing turf.
6. Remove weeds before seeding. Where weeds are extensive, apply selective herbicides as required. Do not use pre-emergence herbicides.
7. Remove waste and foreign materials, including weeds, soil cores, grass, vegetation, and turf, and legally dispose of them off Owner's property.
8. Till stripped, bare, and compacted areas thoroughly to a soil depth of 6 inches (150 mm).
9. Apply soil amendments and initial fertilizers required for establishing new turf and mix thoroughly into top 4 inches (100 mm) of existing soil. Install new planting soil to fill low spots and meet finish grades.
10. Apply seed and protect with straw mulch **OR** sod, **as directed**, as required for new turf.
11. Water newly planted areas and keep moist until new turf is established.

K. Turf Maintenance

1. Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and remulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation.
 - a. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and turf damaged or lost in areas of subsidence.
 - b. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
 - c. Apply treatments as required to keep turf and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.
2. Watering: Install and maintain temporary piping, hoses, and turf-watering equipment to convey water from sources and to keep turf uniformly moist to a depth of 4 inches (100 mm).
 - a. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
 - b. Water turf with fine spray at a minimum rate of 1 inch (25 mm) per week unless rainfall precipitation is adequate.
3. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than 1/3 of grass height. Remove no more than 1/3 of grass-leaf growth in initial or subsequent mowings. Do not delay mowing until grass blades bend over and become matted. Do not mow when grass is wet. Schedule initial and subsequent mowings to maintain the following grass height:
 - a. Mow bentgrass to a height of 1/2 inch (13 mm) or less.
 - b. Mow bermudagrass to a height of 1/2 to 1 inch (13 to 25 mm).
 - c. Mow carpetgrass, centipedegrass, perennial ryegrass, and zoysiagrass to a height of 1 to 2 inches (25 to 50 mm).
 - d. Mow Kentucky bluegrass, buffalograss, annual ryegrass, and chewings red fescue to a height of 1-1/2 to 2 inches (38 to 50 mm).

- e. Mow bahiagrass, turf-type tall fescue, and St. Augustinegrass to a height of 2 to 3 inches (50 to 75 mm).
 - 4. Turf Postfertilization: Apply fertilizer after initial mowing and when grass is dry.
 - a. Use fertilizer that will provide actual nitrogen of at least 1 lb/1000 sq. ft. (0.45 kg/92.9 sq. m) to turf area.
- L. Satisfactory Turf
 - 1. Turf installations shall meet the following criteria as determined by Architect:
 - a. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. (0.92 sq. m) and bare spots not exceeding 5 by 5 inches (125 by 125 mm).
 - b. Satisfactory Sodded Turf: At end of maintenance period, a healthy, well-rooted, even-colored, viable turf has been established, free of weeds, open joints, bare areas, and surface irregularities.
 - c. Satisfactory Plugged Turf: At end of maintenance period, the required number of plugs has been established as well-rooted, viable patches of grass, and areas between plugs are free of weeds and other undesirable vegetation.
 - d. Satisfactory Sprigged Turf: At end of maintenance period, the required number of sprigs has been established as well-rooted, viable plants, and areas between sprigs are free of weeds and other undesirable vegetation.
 - 2. Use specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf is satisfactory.
- M. Meadow
 - 1. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph (8 km/h). Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
 - a. Do not use wet seed or seed that is moldy or otherwise damaged.
 - 2. Sow seed at a total rate of 4 oz./1000 sq. ft. (113 g/92.9 sq. m) **OR** 5 oz./1000 sq. ft. (142 g/92.9 sq. m) **OR** 6 oz./1000 sq. ft. (170 g/92.9 sq. m), **as directed**.
 - 3. Brush seed into top 1/16 inch (1.6 mm) of soil, roll lightly, and water with fine spray.
 - 4. Protect seeded areas from hot, dry weather or drying winds by applying peat or compost mulch within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch (4.8 mm), and roll surface smooth.
 - 5. Water newly planted areas and keep moist until meadow is established.
- N. Meadow Maintenance
 - 1. Maintain and establish meadow by watering, weeding, mowing, trimming, replanting, and performing other operations as required to establish a healthy, viable meadow. Roll, regrade, and replant bare or eroded areas and remulch. Provide materials and installation the same as those used in the original installation.
 - a. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and meadow damaged or lost in areas of subsidence.
 - b. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
 - c. Apply treatments as required to keep meadow and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.
 - 2. Watering: Install and maintain temporary piping, hoses, and meadow-watering equipment to convey water from sources and to keep meadow uniformly moist.
 - a. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
 - b. Water meadow with fine spray at a minimum rate of 1/2 inch (13 mm) per week for four **OR** six **OR** eight, **as directed**, weeks after planting unless rainfall precipitation is adequate.

- O. Pesticide Application
 - 1. Apply pesticides and other chemical products and biological control agents in accordance with requirements of authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.
 - 2. Post-Emergent Herbicides (Selective and Non-Selective): Apply only as necessary to treat already-germinated weeds and in accordance with manufacturer's written recommendations.
- P. Cleanup And Protection
 - 1. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.
 - 2. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout initial maintenance period and remove after plantings are established.
 - 3. Remove nondegradable erosion-control measures after grass establishment period.

END OF SECTION 32 18 26 00

SECTION 32 31 13 00 - CSF CHAIN LINK FENCES AND GATES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Chain Link Fences and Gates is part of the Work.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location. Drawing Coordination Items at end of Section.32 31 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Chain link fence framework, fabric, and accessories.
 - 2. Excavation for post bases, concrete footings for posts, and center drop for gates.
 - 3. Chain link manual gates and related hardware.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 033000 - Cast-In-Place Concrete: Post footings.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 90 - Tests for Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles.
 - 2. ASTM A 116 - Specification for Zinc-Coated (Galvanized) Steel Woven Wire Fence Fabric.
 - 3. ASTM F 1184 - Specification for Industrial and Commercial Horizontal Slide Gates, Type II, Class
 - 4. ASTM A 123 - Specification for Zinc (Hot- Dip Galvanized) Coatings on Iron and Steel Products.

NOTE TO SPECIFIER

Use ASTM A 392 below if galvanized finish fabric is selected for Project.

- 5. ASTM A 392 - Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
- 6. ASTM F 567 - Standard Practice for Installation of Chain Link Fence.
- 7. ASTM A 824 - Specification for Metallic-Coated Steel Marcellled Tension Wire Use with Chain Link Fence.

8. ASTM F 1043 - Specification for Strength and Protective Coatings on Metal Industrial Chain Link Fence Framework.

NOTE TO SPECIFIER

Use ASTM 668 below if PVC COATED galvanized fabric is selected for Project.

9. ASTM F 668 - Specification for Poly (Vinyl Chloride) (PVC) Coated Steel Chain Link Fence Fabric.
 10. ASTM F 900 - Specification for Industrial and Commercial Swing Gates.
 11. ASTM F 1083 - Specification for Pipe, Steel, Hot-Dipped Zinc Coated (Galvanized) Welded, For Fence Structures.

B. Underwriter's Laboratories (UL):

1. UL325, Door, Drapery, Gate, Louver, Window Operators, and Systems.

C. Chain Link Fence Manufacturer's Institute (CLFMI):

1. CLF-PM0610 (July 2011) - Product Manual.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Submit product data for fabric, posts, accessories, fittings, and hardware.
 2. Shop Drawings: Include plan layout, grid, spacing of components, accessories, fittings, hardware, anchorage's, and schedule of components.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with CLFMI PM.

- B. Installer Qualifications:** Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to site, store, and protect products under provisions of Section 016000.**

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Use MANUFACTURERS below where specific companies are selected to meet specific Project requirements. Verify manufacturer information at time of Project Manual preparation for Project. Consult with USPS Contracting Officer for modification to manufacturer list for regional manufacturers.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Allied Tube & Conduit, Harvey, IL (800) 882-5543.
 2. Anchor Fence Division, Master-Halco, Incorporated, Baltimore, MD (800) 229-5615.
 3. Merchant's Metals, Houston, TX (800) 254-0080.
 4. The Tymetal Corporation, Fort Miller, NY (518) 695-9000.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Conform to CLFMI Product Manual.
- B. Steel Framing:

NOTE TO SPECIFIER

OPTION 1: Select one of the following for galvanized framing. Coordinate fabric to match.

1. Type I: ASTM F 1083 Schedule 40, standard weight galvanized steel pipe, welded construction, minimum yield strength of 25 ksi; coating conforming to ASTM F 1043 Group IA on pipe exterior and interior.
2. Type II: ASTM F 1043, cold-formed and welded galvanized steel pipe with minimum yield strength of 50 ksi ; coating conforming to ASTM F 1043 Group IC on pipe exterior and Group ID on pipe interior.
3. Type III (Roll-formed "C" sections): ASTM F 1043, cold-formed galvanized steel post cold-formed and welded galvanized steel pipe with minimum yield strength of 45 ksi ; coating conforming to ASTM F 1043 on post exterior and interior.

NOTE TO SPECIFIER

OPTION 2: Select the following for polymer coated framing. Coordinate fabric to match.

4. External, Type B, zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. (0.27 kg/sq. m) of zinc after welding, a chromate conversion coating, and a clear, verifiable polymer film. Internal, Type D, consisting of 81 percent, not less than 0.3-mil- (0.0076-mm-) thick, zinc pigmented coating.

NOTE TO SPECIFIER

OPTION 1: Use ASTM A 392 below for galvanized finish fabric.

- C. Fabric: ASTM A 392; [Class 1: 1.2 ounce zinc][Class 2: 2 ounce zinc] 9 gage (0.148 inch diameter) galvanized steel wire, 2 inch diamond mesh interwoven wire, top and bottom selvages knuckled or knuckled and twist.

NOTE TO SPECIFIER

OPTION 2: Use ASTM 668 below for PVC COATED galvanized fabric. If PVC fabric finish is selected, coordinate steel framing and accessory finish to match.

- D. Fabric: ASTM F 668; 9 gage (0.148 inch diameter) polyolefin ASTM F668-2b coated galvanized steel wire, 2 inch diamond mesh interwoven wire, top and bottom selvages knuckled or knuckled and twist.

2.3 MIXES

- A. Footing Concrete: 3,000 psi Portland cement concrete.
- B. Grout: Premixed, factory packaged, non staining, non corrosive grout. Provide type formulated for exterior application.

2.4 COMPONENTS

- A. End, Corner, and Pull Posts: Minimum sizes and weights as follows:
1. Up to 6 Foot Fabric Height:
 - a. Type I Posts: 2.375 inch outside diameter pipe, 3.65 pounds per lineal foot.
 - b. Type II Posts: 2.375 inch outside diameter pipe, 3.12 pounds per lineal foot.
 2. Over 6 Foot to 13 Foot Fabric Height:
 - a. Type I Posts: 2.875 inch outside diameter pipe, 5.79 pounds per lineal foot.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 pounds per lineal foot.
 3. 13 Foot and Over Fabric Height (If required):
 - a. Type I Posts: Round; 4.0 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.0 inch outside diameter pipe, 6.56 pounds per lineal foot.
- B. Line (Intermediate) Posts: Minimum sizes and weights as follows:
1. Up to 6 Foot Fabric Height:
 - a. Type I Posts: Round; 1.90 inch outside diameter pipe, 2.72 pounds per lineal foot.
 - b. Type II Posts: 1.90 inch outside diameter pipe, 2.28 pounds per lineal foot.
 - c. Type III Posts: 1.875 inch x 1.625 inch, 2.26 pounds per lineal foot.

NOTE TO SPECIFIER

Fences over 6 feet in height allowed only with an approved deviation supported by a risk analysis.

2. Over 6 Foot to 8 Foot Fabric Height:
 - a. Type I Posts: Round; 2.375 inch outside diameter pipe, 3.65 pounds per lineal foot.
 - b. Type II Posts: 2.375 inch outside diameter pipe, 3.12 pounds per lineal foot.
 - c. Type III Posts: 1.875 inch x 1.625 inch, 2.26 pounds per lineal foot.
 3. Over 8 Foot Fabric Height:
 - a. Type I Posts: 2.875 inch outside diameter pipe, 5.79 pounds per lineal foot.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 pounds per lineal foot.
 - c. Type III Posts: 2.25 inch x 1.7 inch, 2.64 pounds per lineal foot.
- C. Swinging Gate Posts: For leaf widths, as follows:
1. Up to 4 Feet Width:
 - a. Type I Posts: 2.875 inch outside diameter pipe, 5.79 pounds per lineal foot.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 pounds per lineal foot.
 2. Between 4 Feet and 10 Feet Width:
 - a. Type I Posts: Round; 4.00 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.00 inch outside diameter pipe, 6.56 pounds per lineal foot.
 3. Between 10 Feet and 15 Feet Width:

- a. Type I Posts: 6.625 inch outside diameter pipe, 8.97 pounds per lineal foot.
- D. Sliding Gate Posts:
1. All leaf widths:
 - a. Type I Posts: Round; 4.00 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.00 inch outside diameter pipe, 6.56 pounds per lineal foot.
- E. Bottom Rail and Intermediate Rails: Manufacturer's longest lengths.
1. Typical:
 - a. Type I: Round; 1.66 inch outside diameter pipe, 2.27 pounds per lineal foot.
 - b. Type II: 1.66 inch outside diameter pipe 1.83 pounds per lineal foot.
 - c. Type III Posts: 1.625 inch x 1.25 inch, 1.37 pounds per lineal foot.
 2. Couplings: Expansion type, approximately 6 inches long.
 3. Attaching Devices: Means of attaching bottom rail securely to each gate, corner, pull, and end post.
- F. Swinging Gate Hardware:
1. Hinges: Size and material to suit gate size; offset to permit 180 degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6 foot 0 inch nominal height.
 2. Latch: Forked type or plunger-bar type to permit operation from both sides of gate, with padlock eye.
 3. Double Gate Hardware: In addition to the above, provide gate stops for double gates, consisting of mushroom type flush plate with anchors set in concrete to engage center drop rod or plunger bar. Configure for use of one padlock to lock both gate leaves.
 4. Sliding Gate Hardware: Provide manufacturer's standard heavy duty track, ball-bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories required.
- G. Sliding Gate Hardware:
1. Provide manufacturer's standard heavy duty track, ball-bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories required.
 2. For 10 feet to 30 feet opening:
 - a. Frame shall be fabricated from 6063-T6 aluminum alloy extrusion. The top member shall be 3 inch x 5 inch aluminum structural channel/tube extrusion weighing not less than 3.9 lbs/lf. The top member shall be "keyed" to interlock with the "keyed" track member. The bottom member shall be a single horizontal aluminum structural tube weighing not less than 2.0 lbs/lf or a spliced 2 inch x 5 inch aluminum structural channel weighing not less than 2.65 lbs/lf. The two horizontal sections may be spliced in the field.
 - b. SPLICING: A 1/4 inch x 5 inch x 24 inch galvanized steel splice plate shall be used to secure the two 5 inch channel bottom members together utilizing eight 3/8 inch x 1 1/2 inch plated carriage bolts with lock nuts. The top members shall be spliced together on the side opposite the track member using a 1/4 inch x 2 inch x 24 inch aluminum splice plate secured with six 1/4 inch x 1/2 inch drive rivets on one side and welded to the top member on the other side. On the track side, the track is to be overlapped 24 inch onto the opposing section, interlocked with the top member and vertically secured in place using six 1/4 inch x 1/2 inch drive rivets and horizontally secured in place using six 5/16 inch x 1 inch plated hex head cap screws. The respective splice end vertical member shall be 1 inch x 2 inch, weighing not less than 0.82 lbs/lf. The 1 inch x 2 inch members will be joined utilizing 5/16 inch x 2 3/4 inch plated hex head cap screws, quantity varying by height of gate.
 - c. The vertical members shall alternate between 2 inch x 2 inch and 1 inch x 2 inch in cross section weighing not less 1.1 lbs/lf and 0.82 lbs/lf respectively. The spacing for the vertical intermediates shall be no greater than half the height of the gate.
 - d. The gate frame shall have a separate semi-enclosed "keyed" track, extruded from 6105-T5 aluminum alloy, weighing not less than 2.9 lbs/lf. Track member to be located on only one side of the top member. When interlocked with the "keyed" top member and welded to it, it forms a composite structure with the top of the gate frame. Welds to be placed alternately along the top and side of the track at 9 inch centers and a minimum of 2 inches long.

- e. The gate frame is to be supported from the track by two swivel type, self aligning, 4-wheeled, sealed lubricant, ball-bearing truck assemblies. The bottom of the support posts shall be equipped with two pairs of 3 inch rubber guide wheels.
 - f. Diagonal "X" bracing of 3/16 inch minimum diameter stainless steel aircraft cable shall be installed to brace the gate panels and to provide a ready means of vertical alignment.
3. For 31 feet to 40 feet opening:
 - a. Frame shall be fabricated from 6063-T6 aluminum alloy extrusion. The top member shall be 3 inch x 5 inch aluminum structural channel/tube extrusion weighing not less than 3.0 lbs/lf. The top member shall be "keyed" to interlock with the "keyed" track member. The bottom member shall be a single horizontal aluminum structural tube weighing not less than 2.0 lbs/lf or a spliced 2 inch x 5 inch aluminum structural channel weighing not less than 2.65 lbs/lf. The two horizontal sections may be spliced in the field.
 - b. SPLICING: A 1/4 inch x 5 inch x 24 inch galvanized steel splice plate shall be used to secure the two 5 inch channel bottom members together utilizing eight 3/8 inch x 1 1/2 inch plated carriage bolts with lock nuts. The top members shall be spliced together on the side opposite the track member using a 1/4 inch x 2 inch x 24 inch aluminum splice plate secured with six 1/4 inch x 1/2 inch drive rivets on one side and welded to the top member on the other side. On the track side, the track is to be overlapped 24 inch onto the opposing section, interlocked with the top member and vertically secured in place using six 1/4 inch x 1/2 inch drive rivets and horizontally secured in place using six 5/16 inch x 1 inch plated hex head cap screws. The respective splice end vertical member shall be 1 inch x 2 inch, weighing not less than 0.82 lbs/lf. The 1 inch x 2 inch members will be joined utilizing 5/16 inch x 2 3/4 inch plated hex head cap screws, quantity varying by height of gate.
 - c. The vertical members at the ends of the opening portion of the frame shall be "P" shaped in cross section with a nominal base dimension of no less than 2 inch x 2 inch and weighing not less than 1.6 lbs/lf. The intermediate vertical members shall alternate between 2 inch x 2 inch and 1 inch x 2 inch in cross section weighing not less 1.1 lbs/lf and 0.82 lbs/lf respectively. The spacing for the vertical intermediates shall be no greater than half the height of the gate.
 - d. The gate frame shall have two separate semi-enclosed "keyed" track, extruded from 6105-T5 aluminum alloy, weighing not less than 2.9 lbs/lf. Track member to be located on only one side of the top member. When interlocked with the "keyed" top member and welded to it, it forms a composite structure with the top of the gate frame. Welds to be placed alternately along the top and side of the track at 9 inch centers and a minimum of 2 inches long.
 - e. The gate frame is to be supported from the track by two swivel type, self aligning, 8-wheeled, sealed lubricant, ball-bearing truck assemblies. These are to be attached to double 4 inch O.D. support posts. The bottom of the support posts shall be equipped with two pairs of 3 inch rubber guide wheels. Openings of 28 feet or less shall use 4-wheeled truck assemblies.
 - f. Diagonal "X" bracing of 3/16 inch minimum diameter stainless steel aircraft cable shall be installed to brace the gate panels and to provide a ready means of vertical alignment.
 4. For 41 feet to 65 feet opening:
 - a. Frame shall be fabricated from 6063-T6 aluminum alloy extrusion. The top and bottom members shall be "P" shaped in cross section with no less than 2 inches on a side and weighing not less than 1.6 lbs/lf. The top member shall be "keyed" to interlock with the "keyed" track member. The bottom member shall be a single horizontal aluminum structural tube weighing not less than 2.0 lbs/lf or a spliced 2 inch x 5 inch aluminum structural channel weighing not less than 2.65 lbs/lf. The two horizontal sections may be spliced in the field.
 - b. SPLICING: A 1/4 inch x 5 inch x 24 inch galvanized steel splice plate shall be used to secure the two 5 inch channel bottom members together utilizing eight 3/8 inch x 1 1/2 inch plated carriage bolts with lock nuts. The top members shall be spliced together on the side opposite the track member using a 1/4 inch x 2 inch x 24 inch aluminum splice plate

secured with six 1/4 inch x 1/2 inch drive rivets on one side and welded to the top member on the other side. On the track side, the track is to be overlapped 24 inch onto the opposing section, interlocked with the top member and vertically secured in place using six 1/4 inch x 1/2 inch drive rivets and horizontally secured in place using six 5/16 inch x 1 inch plated hex head cap screws. The respective splice end vertical member shall be 1 inch x 2 inch, weighing not less than 0.82 lbs/lf. The 1 inch x 2 inch members will be joined utilizing 5/16 inch x 2 3/4 inch plated hex head cap screws, quantity varying by height of gate.

- c. The vertical members shall alternate between 2 inch x 2 inch and 1 inch x 2 inch in cross section weighing not less 1.1 lbs/lf and 0.82 lbs/lf respectively. The spacing for the vertical members shall be no greater than the height of the gate. Intermediate vertical members shall be 1 inch x 1 inch in cross section weighing not less than 0.52 lbs/lf. And spaced at a maximum 3 feet on center. The gate shall be constructed in "box" form with the width between the frames measuring 2'-0" from outside to outside. Between these frames there shall be a continuous series of 1 inch x 1 inch diagonal and horizontal bracing with the diagonals welded at 45 degrees to the frame.
- d. The gate frame shall have a semi-enclosed "keyed" track, extruded from 6105-T5 aluminum alloy, weighing not less than 2.9 lbs/lf. Track member to be located on each side of the frame. When interlocked with the "keyed" top member and welded to it, it forms a composite structure with the top of the gate frame. Welds to be placed alternately along the top and side of the track at 9 inch centers and a minimum of 2 inches long.
- e. The gate frame is to be supported from the track by four swivel type, self aligning, 8-wheeled, sealed lubricant, ball-bearing truck assemblies. The bottom of the support posts shall be equipped with a single 3 inch rubber guide wheel.
- f. Diagonal "X" bracing of 3/16 inch minimum diameter stainless steel aircraft cable shall be installed to brace the gate panels and to provide a ready means of vertical alignment. A ground roller assembly shall be included to support the back end of the gate in the open position, as required.

2.5 ACCESSORIES

- A. Sleeves: Galvanized steel pipe with inside diameter not less than 1/2 inch greater than outside diameter of fence posts. Provide steel plate closure welded to bottom of sleeves of width and length not less than 1 inch greater than outside diameter of sleeve.
 - 1. Up to 6 Foot Fabric Height: Provide sleeve not less than 12 inches long.
 - 2. Over 6 Foot Fabric Height: Provide sleeve not less than 24 inches long.
 - 3. Fabric Installed Tight to Roof Deck (Posts Braced to Roof Structure): Provide sleeve not less than 12 inches long.
- B. Tension Wire: 7 gage steel, metallic-coated coil spring wire, in accordance with ASTM A 824, located at the top of fence fabric.
- C. Wire Ties: 11 gage galvanized steel.
- D. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same materials as top rail for brace, and truss to line posts with 0.375 inch diameter rod and adjustable tightener.
- E. Post Tops: Galvanized steel, weather tight closure cap for tubular posts, one cap for each post. Furnish cap with openings to permit passage of top rail.
- F. Stretcher Bars: Galvanized steel, one piece lengths equal to full height of fabric; with minimum cross section of 3/16 inch x 3/4 inch. Provide one stretcher bar for each gate and end post, one for each bottom rail, and two for each corner and pull post.
- G. Stretcher Bar Bands: Manufacturer's standard.

- H. Gate Cross-Bracing: 3/8 inch diameter galvanized steel adjustable length truss rods.

2.6 FABRICATION

- A. Fabricate swing gate perimeter frames of 1.90 inch outside diameter galvanized steel pipe. Provide horizontal and vertical members to ensure proper gate operation and for attachment of fabric, hardware, and accessories. Space frame members maximum 8 feet apart.
- B. Assemble gate frames rigidly by welding or with special fittings and rivets. Use same fabric as for fence. Install fabric with stretcher bars at vertical edges. Bars may also be used at top and bottom edges. Attach stretchers to frame at not more than 15 inches on center. Install diagonal cross-bracing on gates as required to ensure frame rigidity without sag or twist.
- C. Attach hardware to provide security against removal or breakage.

2.7 FINISHES

- A. All fence posts, fabric, components, and accessories shall be galvanized.

NOTE TO SPECIFIER

Retain paragraph above or below depending on the desired finish.

- B. All fence posts, fabric, components, and accessories shall be galvanized with black-colored Polyvinyl Chloride (PVC) Coating.

NOTE TO SPECIFIER

Use GATE OPERATORS below if selected for Project and for facilities equipped with Physical Access Control System (PACS) provide requirement for coordination of conduit runs and electrical connections with PACS and Structured Wiring.

2.8 GATE OPERATORS

- A. Gate operators must conform to UL325, Standards for Safety. The operator must be tested by an independent testing laboratory such as UL or ETL and found to conform to these standards. The completed installation shall conform to applicable ASTM and UL requirements.
- B. Basis of Design: H4 Security 50VF2.
- C. All electrical work is to be done by qualified electricians and is to conform to all applicable local, state, and federal codes.
- D. General Operation
1. The operator must be designed for high-cycle applications and low maintenance. The operator shall be capable of actuating gates up to 50 feet in overall length. The gate operator must be able to operate gates up to 5,000 pounds (2300 kg) at 2.2 (66cm) feet per second.
 2. All fasteners, except structural bolts, are to be stainless steel, or other non-corrosive material.
 3. The operator is to provide wear compensating, spring-loaded, friction-feed type drive mechanism. The drive mechanism is to consist of two drive wheels that can be manually disconnected by a toggle style disconnect. This disconnect is to instantly disengage the drive wheels for manual

operation. The operator, upon returning to automatic operation by engaging the drive mechanism, shall function properly without regard to the gate's actual position.

E. Housing Construction

1. The housing cover must swing open to allow access to the internal components.
2. The housing cover must be lockable.
3. All operator cover locks are to be keyed alike.
4. The housing, chassis and cover to be galvanized for corrosion resistance per ASTM 123 M.

F. Electric Motor

1. The electric motor used in the gate operators must have a continuous-duty rating of two horsepower with a service factor of 1.15 or greater and shall be available in all voltages and phases to suit the installation requirements of the site.
2. The electric motors must have built-in overload protection and resettable with a sealed pushbutton reset.

G. Hydraulic System

1. The hydraulic system must be self-contained and contain pump, reservoir, two position control valve, hydraulic hoses, fittings and hydraulic motors.
2. All hydraulic hoses are shall have a minimum burst pressure of 12,000 pounds per square inches.
3. The hydraulic motors must be automatically locked when the control valve is in the de-energized to prevent slippage of the drive wheels.
4. The hydraulic system must be soft-start and soft-stop to minimize shock loads transmitted to the gate system including a reverse delay to maximize gate hardware life.

H. Electrical

1. Built in "warn before operate" system.
2. Anti-tailgate mode.
3. 26 programmable user relay output options.
4. Built-in power surge/lightning strike protection.
5. Control circuit: 24VDC.
6. Electrical enclosure: Oversized, metal, with hinged lid gasketed for protection from intrusion of foreign objects, and providing ample space for the addition of accessories.
7. Menu configuration, event logging and system diagnostics easily accessible with integral touchpad or a PC and free START software.
8. Limit switch shall feature a built in LED "tripped" indicator light. The limit switch must be readily accessible, adjustable, and replaceable with normal hand tools.
9. The limit switches are to provide the ability to remote monitor the gate position when in the fully closed and fully open positions.

I. Accessories

1. Through beam type photo eyes.
2. Heater with thermostat for cold damp climates.
3. Snow brushes and blades for cold snowy climates
4. Strobe or other similar visual beacon to operate simultaneously with standard gate operator "warn before operate" audible beacon.

J. Inductive vehicle loop detectors

1. Inside and outside obstruction loops are to be installed to prevent the gate from closing when vehicle traffic is present. Anti-Tailgating logic is to be applied to entrance lane gates.
2. Free exit loops are to be installed for exit lane gates.
3. Loops for gates with heavy truck traffic will have no side of the loop less than 6'.
4. Loop wire to be stranded Thhn or XLPE, crosslink poly-ethylene jacketed type acceptable for direct burial.
5. Refer to detail drawings for specific loop placement or refer to manufacturers recommendations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install fence in accordance with ASTM F 567 and manufacturer's published instructions.
- B. Install gates in accordance with ASTM F 900, ASTM F2200 or ASTM 1184 as applicable and to manufacturer's published instructions.
- C. Space line posts 10 feet 0 inches on center maximum, unless otherwise indicated on Drawings.
- D. Grade-set Posts:
 - 1. Drill or hand excavate.
 - 2. Excavate each post hole to 12 inch diameter, or not less than four times diameter of post.
 - 3. Excavate approximately 3 inches lower than post bottom; set post bottom not less than 36 inches below finish grade.
 - 4. Hold post in position while placing, consolidating, and finishing concrete.
- E. Sleeve-set Posts: Anchor posts in concrete by means of pipe sleeves preset and anchored into concrete. After posts have been inserted into sleeves, fill annular space between post and sleeve solid with grout, mixed and placed to manufacturer's recommendations.
- F. Rails: Run rail between post, bending smoothly for curved runs located at the bottom of the fence fabric. Provide expansion couplings as recommended by fencing manufacturer.
- G. Center Rails: Provide center rails where indicated. Install in one piece between posts and flush with post on fabric side, using offset fittings where necessary.
- H. Brace Assemblies: Install braces so posts are plumb with rod in tension.
- I. Tension Wire: Install tension wires through post cap loops before stretching fabric and tie to each post cap with not less than 6 gage galvanized wire. Fasten fabric to tension wire using 11 gage galvanized steel hog rings spaces 24 inches on center.
- J. Fabric: The fence fabric must be installed within 2 inches between finish grade and bottom selvage. Pull fabric taut and tie to posts, rails, and tension wires. Install fabric on the exterior side of the fence, and anchor to framework so fabric remains in tension after pulling force is released.
- K. Stretcher Bars: To secure end, corner, pull, and gate posts, thread through or clamp to fabric 4 inches on center and secure to posts with metal bands spaced 15 inches on center.

- L. Tie Wires:
 - 1. Use U-shaped wire conforming with diameter of pipe to which attached, clasp pipe and fabric firmly with ends twisted two full turns. Bend wire ends to minimize hazards to persons or clothing.
 - 2. Tie fabric to line posts with wire ties spaced 12 inches on center. Tie fabric to rails and braces with wire ties spaced 24 inches on center. Manufacturer's standard procedure will be accepted if of equal strength and durability.
- M. Fasteners: Install nuts for tension bands and hardware bolts on side of fence opposite fabric side. Peen ends of bolts or score threads to prevent removal of nuts.
- N. Gates: Install gates plumb, level, and secure for full opening without interference. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation.

3.3 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maximum Variation from Plumb: 1/4 inch.
 - 2. Maximum Offset from True Position: 1 inch.
 - 3. Locate fencing components completely within site boundaries. Do not infringe adjacent property lines.
 - 4. Maximum Fence Distance from Ground: 1 1/2 inches.
 - 5. Maximum Gate Distance from Ground: 4 inches.

3.4 FIELD QUALITY CONTROL

- A. Test gate operator through ten full cycles and adjust for operation without binding, scraping or uneven motion. Test limit switches for proper "at rest" gate position.
- B. All anchor bolts shall be fully concealed in the finished installation.
- C. Owner, or owner's representative, shall complete "punch list" with installing contractor prior to final acceptance of the installation and submit completed warranty documentation to manufacturers where applicable.

3.5 CONTINUED SERVICE AND DOCUMENTATION

- A. Train owner's personnel on how to safely shut off electrical power, release and manually operate the gates. Additionally, demonstrate the general maintenance of the gate operator and accessories and provide one copy of "Installation and Reference" manual for the Owner's use (a second manual is available upon request). Manuals will identify parts of the equipment for future procurement. Direct maintenance personnel to HySecurity's website, specifically the technical support sections.

USPS CSF Specifications issued: 10/1/2013

Last revised: 5/17/2012

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 31 13 00 - MPF CHAIN LINK FENCES AND GATES**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Chain link fence framework, fabric, and accessories.
 - 2. Excavation for post bases, concrete footings for posts, and center drop for gates.
 - 3. Chain link manual and motorized gates and related hardware.
- B. Related Sections:
 - 1. Section 033000 - Cast-In-Place Concrete: Post footings.
 - 2. Section 281304 - Physical Access Control System
 - 3. Section 270500 - Common Work Results for Communications.
 - 4. Section 271500 - Communications Horizontal Cabling.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 90 - Tests for Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles.
 - 2. ASTM A 116 - Specification for Zinc-Coated (Galvanized) Steel Woven Wire Fence Fabric.
 - 3. ASTM F 1184 - Specification for Industrial and Commercial Horizontal Slide Gates, Type II, Class 2.
 - 4. ASTM A 123 - Specification for Zinc (Hot- Dip Galvanized) Coatings on Iron and Steel Products.

NOTE TO SPECIFIER

Use ASTM A 392 below if galvanized finish fabric is selected for Project.

- 5. ASTM A 392 - Specification for Zinc-Coated Steel Chain-Link Fence Fabric.
- 6. ASTM F 567 - Standard Practice for Installation of Chain Link Fence.
- 7. ASTM A 824 - Specification for Metallic-Coated Steel Marcellled Tension Wire Use with Chain Link Fence.
- 8. ASTM F 1043 - Specification for Strength and Protective Coatings on Metal Industrial Chain Link Fence Framework.

NOTE TO SPECIFIER

Use ASTM 668 below if PVC COATED galvanized fabric is selected for Project.

9. ASTM F 668 - Specification for Poly (Vinyl Chloride) (PVC) Coated Steel Chain Link Fence Fabric.
10. ASTM F 900 - Specification for Industrial and Commercial Swing Gates.
11. ASTM F 1083 - Specification for Pipe, Steel, Hot-Dipped Zinc Coated (Galvanized) Welded, For Fence Structures.
12. ASTM F 2200 – Specification for gates to be automated.

B. Underwriter's Laboratories (UL):

1. UL325, Door, Drapery, Gate, Louver, Window Operators, and Systems.

C. Chain Link Fence Manufacturer's Institute (CLFMI):

1. CLF-PM0610 (July 2011) - Product Manual.

1.3 SUBMITTALS

A. Procedures for submittals.

1. Product Data: Submit product data for fabric, posts, accessories, fittings, and hardware.
2. Shop Drawings: Include plan layout, grid, spacing of components, accessories, fittings, hardware, anchorage's, and schedule of components.
3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate certifying that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with CLFMI PM.

B. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site, store, and protect products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Use MANUFACTURERS below where specific companies are selected to meet specific Project requirements. Verify manufacturer information at time of Project Manual preparation for Project. Consult with USPS Contracting Officer for modification to manufacturer list for regional manufacturers.

2.1 MANUFACTURERS

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. Allied Tube & Conduit, Harvey, IL (800) 882-5543.
2. Anchor Fence Division, Master-Halco, Incorporated, Baltimore, MD (800) 229-5615.
3. Merchant's Metals, Houston, TX (800) 254-0080.
4. The Tymetal Corporation, Fort Miller, NY (518) 695-9000.
5. HySecurity, Kent, Washington, (800) 321-9947.

B. Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Conform to CLFMI Product Manual.
- B. Steel Framing:
 - 1. Type I: ASTM F 1083 Schedule 40, standard weight galvanized steel pipe, welded construction, minimum yield strength of 25 ksi; coating conforming to ASTM F 1043 Group IA on pipe exterior and interior.
 - 2. Type II: ASTM F 1043, cold-formed and welded galvanized steel pipe with minimum yield strength of 50 ksi ; coating conforming to ASTM F 1043 Group IC on pipe exterior and Group ID on pipe interior.
 - 3. Type III (Roll-formed "C" sections): ASTM F 1043, cold-formed galvanized steel post cold-formed and welded galvanized steel pipe with minimum yield strength of 45 ksi ; coating conforming to ASTM F 1043 on post exterior and interior.

NOTE TO SPECIFIER

OPTION 1: Use ASTM A 392 below for galvanized finish fabric.

- C. Fabric: ASTM A 392; [Class 1: 1.2 ounce zinc][Class 2: 2 ounce zinc] 9 gage (0.148 inch diameter) galvanized steel wire, 2 inch diamond mesh interwoven wire, top and bottom selvages knuckled or knuckled and twist.

NOTE TO SPECIFIER

OPTION 2: Use ASTM 668 below for PVC COATED galvanized fabric.

- C. Fabric: ASTM A 668-2b; 9 gage (0.148 inch diameter) polyolefin ASTM F668-2b coated galvanized steel wire, 2 inch diamond mesh interwoven wire, top and bottom selvages knuckled or knuckled and twist.

2.3 MIXES

- A. Footing Concrete: 3,000 psi Portland cement concrete.
- B. Grout: Premixed, factory-packaged, non-staining, non-corrosive grout. Provide type formulated for exterior application.

2.4 COMPONENTS

- A. End, Corner, and Pull Posts: Minimum sizes and weights as follows:
 - 1. Up to 6 Foot Fabric Height:
 - a. Type I Posts: 2.375 inch outside diameter pipe, 3.65 pounds per lineal foot.
 - b. Type II Posts: 2.375 inch outside diameter pipe, 3.12 pounds per lineal foot.
 - 2. Over 6 Foot to 13 Foot Fabric Height:
 - a. Type I Posts: 2.875 inch outside diameter pipe, 5.79 pounds per lineal foot.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 pounds per lineal foot.
 - 3. 13 Foot and Over Fabric Height (If required):
 - a. Type I Posts: Round; 4.0 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.0 inch outside diameter pipe, 6.56 pounds per lineal foot.
- B. Line (Intermediate) Posts: Minimum sizes and weights as follows:
 - 1. Up to 6 Foot Fabric Height:
 - a. Type I Posts: Round; 1.90 inch outside diameter pipe, 2.72 pounds per lineal foot.
 - b. Type II Posts: 1.90 inch outside diameter pipe, 2.28 pounds per lineal foot.
 - c. Type III Posts: 1.875 inch x 1.625 inch, 2.28 pounds per lineal foot.

NOTE TO SPECIFIER

Fences over 6 feet in height allowed only with an approved deviation supported by a risk analysis.

C. Swinging Gate Posts: For leaf widths, as follows:

1. Up to 4 Feet Width:
 - a. Type I Posts: 2.875 inch outside diameter pipe, 5.79 pounds per lineal foot.
 - b. Type II Posts: 2.875 inch outside diameter pipe, 4.64 pounds per lineal foot.
2. Between 4 Feet and 10 Feet Width:
 - a. Type I Posts: Round; 4.00 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.00 inch outside diameter pipe, 6.56 pounds per lineal foot.
3. Between 10 Feet and 15 Feet Width:
 - a. Type I Posts: 6.625 inch outside diameter pipe, 8.97 pounds per lineal foot.

D. Sliding Gate Posts:

1. All leaf widths:
 - a. Type I Posts: Round; 4.00 inch outside diameter pipe, 9.10 pounds per lineal foot.
 - b. Type II Posts: 4.00 inch outside diameter pipe, 6.56 pounds per lineal foot.

E. Bottom Rail and Intermediate Rails: Manufacturer's longest lengths.

1. Typical:
 - a. Type I: Round; 1.66 inch outside diameter pipe, 2.27 pounds per lineal foot.
 - b. Type II: 1.66 inch outside diameter pipe 1.83 pounds per lineal foot.
 - c. Type III Posts: 1.625 inch x 1.25 inch, 1.37 pounds per lineal foot.
2. Couplings: Expansion type, approximately 6 inches long.
3. Attaching Devices: Means of attaching bottom rail securely to each gate, corner, pull, and end post.

F. Swinging Gate Hardware:

1. Hinges: Size and material to suit gate size; offset to permit 180 degree gate opening. Provide 1-1/2 pair of hinges for each leaf over 6 foot 0 inch nominal height.
2. Latch: Forked type or plunger-bar type to permit operation from both sides of gate, with padlock eye.
3. Double Gate Hardware: In addition to the above, provide gate stops for double gates, consisting of mushroom type flush plate with anchors set in concrete to engage center drop rod or plunger bar. Configure for use of one padlock to lock both gate leaves.
4. Sliding Gate Hardware: Provide manufacturer's standard heavy duty track, ball-bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories required.

G. Sliding Gate Hardware:

1. Provide manufacturer's standard heavy duty track, ball-bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories required. Tymetal, Fortress type gate is basis of design. Gates may not exceed 30 feet in width.
2. For 10 feet to 30 feet opening:
 - a. Frame shall be fabricated from 6063-T6 aluminum alloy extrusion. The top member shall be 3 inch x 5 inch aluminum structural channel/tube extrusion weighing not less than 3.9 lbs/lf. The top member shall be "keyed" to interlock with the "keyed" track member. The bottom member shall be a single horizontal aluminum structural tube weighing not less than 2.0 lbs/lf or a spliced 2 inch x 5 inch aluminum structural channel weighing not less than 2.65 lbs/lf. The two horizontal sections may be spliced in the field.
 - b. SPLICING: A 1/4 inch x 5 inch x 24 inch galvanized steel splice plate shall be used to secure the two 5 inch channel bottom members together utilizing eight 3/8 inch x 1 1/2 inch plated carriage bolts with lock nuts. The top members shall be spliced together on the side opposite the track member using a 1/4 inch x 2 inch x 24 inch aluminum splice plate secured with six

- 1/4 inch x 1/2 inch drive rivets on one side and welded to the top member on the other side. On the track side, the track is to be overlapped 24 inch onto the opposing section, interlocked with the top member and vertically secured in place using six 1/4 inch x 1/2 inch drive rivets and horizontally secured in place using six 5/16 inch x 1 inch plated hex head cap screws. The respective splice end vertical member shall be 1 inch x 2 inch, weighing not less than 0.82 lbs/lf. The 1 inch x 2 inch members will be joined utilizing 5/16 inch x 2 3/4 inch plated hex head cap screws, quantity varying by height of gate.
- c. The vertical members shall alternate between 2 inch x 2 inch and 1 inch x 2 inch in cross section weighing not less 1.1 lbs/lf and 0.82 lbs/lf respectively. The spacing for the vertical intermediates shall be no greater than half the height of the gate.
 - d. The gate frame shall have a separate semi-enclosed "keyed" track, extruded from 6105-T5 aluminum alloy, weighing not less than 2.9 lbs/lf. Track member to be located on only one side of the top member. When interlocked with the "keyed" top member and welded to it, it forms a composite structure with the top of the gate frame. Welds to be placed alternately along the top and side of the track at 9 inch centers and a minimum of 2 inches long.
 - e. The gate frame is to be supported from the track by two swivel type, self aligning, 4-wheeled, sealed lubricant, ball-bearing truck assemblies. The bottom of the support posts shall be equipped with two pairs of 3 inch rubber guide wheels.
 - f. Diagonal "X" bracing of 3/16 inch minimum diameter stainless steel aircraft cable shall be installed to brace the gate panels and to provide a ready means of vertical alignment.

2.5 ACCESSORIES

- A. Sleeves: Galvanized steel pipe with inside diameter not less than 1/2 inch greater than outside diameter of fence posts. Provide steel plate closure welded to bottom of sleeves of width and length not less than 1 inch greater than outside diameter of sleeve.
 - 1. Up to 6 Foot Fabric Height: Provide sleeve not less than 12 inches long.
- B. Tension Wire: 7 gage steel, metallic-coated coil spring wire, in accordance with ASTM A 824, located at the top of fence fabric.
- C. Wire Ties: 11 gage galvanized steel.
- D. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same materials as top rail for brace, and truss to line posts with 0.375 inch diameter rod and adjustable tightener.
- E. Post Tops: Galvanized steel, weather tight closure cap for tubular posts, one cap for each post. Furnish cap with openings to permit passage of top rail.
- F. Stretcher Bars: Galvanized steel, one piece lengths equal to full height of fabric; with minimum cross section of 3/16 inch x 3/4 inch. Provide one stretcher bar for each gate and end post, one for each bottom rail, and two for each corner and pull post.
- G. Stretcher Bar Bands: Manufacturer's standard.
- H. Gate Cross-Bracing: 3/8 inch diameter galvanized steel adjustable length truss rods.

2.6 FABRICATION

- A. Fabricate swing gate perimeter frames of 1.90 inch outside diameter galvanized steel pipe. Provide horizontal and vertical members to ensure proper gate operation and for attachment of fabric, hardware, and accessories. Space frame members maximum 8 feet apart.
- B. Assemble gate frames rigidly by welding or with special fittings and rivets. Use same fabric as for fence. Install fabric with stretcher bars at vertical edges. Bars may also be used at top and bottom edges.

Attach stretchers to frame at not more than 15 inches on center. Install diagonal cross-bracing on gates as required to ensure frame rigidity without sag or twist.

- C. Attach hardware to provide security against removal or breakage.

2.7 FINISHES

- A. All fence posts, fabric, and accessories shall be galvanized.

NOTE TO SPECIFIER

Retain paragraph above or below depending on the desired finish.

- B. All fence posts, fabric, components, and accessories shall be galvanized with black-colored Polyvinyl Chloride (PVC) Coating.

2.8 GATE OPERATORS

- A. Gate operators must conform to UL325, Standards for Safety. The operator must be tested by an independent testing laboratory such as UL or ETL and found to conform to these standards. The completed installation shall conform to applicable ASTM and UL requirements.

- B. Basis of Design: HySecurity Slide Driver Unit.

- C. All electrical work is to be done by qualified electricians and is to conform to all applicable local, state, and federal codes.

- D. General Operation

1. The operator must be designed for high-cycle applications and low maintenance. The operator shall be capable of actuating gates up to 30 feet in overall length. The gate operator must be able to operate gates up to 150 per cent of weight of actual gate at 2.2feet (66 cm) per second.
2. All fasteners, except structural bolts, are to be stainless steel, or other non-corrosive material.
3. The operator is to provide wear compensating, spring-loaded, friction-feed type drive mechanism. The drive mechanism is to consist of two drive wheels that can be manually disconnected by a toggle style disconnect. This disconnect is to instantly disengage the drive wheels for manual operation. The operator, upon returning to automatic operation by engaging the drive mechanism, shall function properly without regard to the gate's actual position.

- E. Housing Construction

1. The housing cover must swing open to allow access to the internal components.
2. The housing cover must be lockable.
3. All operator cover locks are to be keyed alike.
4. The housing, chassis and cover to be galvanized for corrosion resistance per ASTM 123 M.

- F. Electric Motor

1. The electric motor used in the gate operators must have a continuous-duty rating of two horsepower with a service factor of 1.15 or greater and shall be available in all voltages and phases to suit the installation requirements of the site.
2. The electric motors must have built-in overload protection and resettable with a sealed pushbutton reset.

- G. Hydraulic System

1. The hydraulic system must be self-contained and contain pump, reservoir, two position control valve, hydraulic hoses, fittings and hydraulic motors.

2. All hydraulic hoses shall have a minimum burst pressure of 12,000 pounds per square inches.
 3. The hydraulic motors must be automatically locked when the control valve is in the de-energized to prevent slippage of the drive wheels.
 4. The hydraulic system must be soft-start and soft-stop to minimize shock loads transmitted to the gate system including a reverse delay to maximize gate hardware life.
- H. Electrical
1. Built in "warn before operate" system.
 2. Anti-tailgate mode.
 3. 26 programmable user relay output options.
 4. Built-in power surge/lightning strike protection.
 5. Control circuit: 24VDC.
 6. Electrical enclosure: Oversized, metal, with hinged lid gasketed for protection from intrusion of foreign objects, and providing ample space for the addition of accessories.
 7. Menu configuration, event logging and system diagnostics easily accessible with integral touchpad or a PC and free START software.
 8. Limit switch shall feature a built in LED "tripped" indicator light. The limit switch must readily accessible, adjustable and replaceable with normal hand tools.
 9. The limit switches are to provide the ability to remote monitor the gate position when in the fully closed and fully open positions.
- I. Accessories
1. Through beam type photo eyes.
 2. Heater with thermostat for cold damp climates.
 3. Snow brushes and blades for cold snowy climates
 4. Strobe or other similar visual beacon to operate simultaneously with standard gate operator "warn before operate" audible beacon.
- J. Inductive vehicle loop detectors
1. Inside and outside obstruction loops are to be installed to prevent the gate from closing when vehicle traffic is present. Anti-Tailgating logic is to be applied to entrance lane gates.
 2. Free exit loops are to be installed for exit lane gates.
 3. Loops for gates with heavy truck traffic will have no side of the loop less than 6'.
 4. Loop wire to be stranded Thhn or XLPE, crosslink poly-ethylene jacketed type acceptable for direct burial.
 5. Refer to detail drawings for specific loop placement or refer to manufacturers recommendations.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Execution Requirements: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install fence in accordance with ASTM F 567 and manufacturer's published instructions.

- B. Install gates in accordance with ASTM F 900, ASTM F2200 or ASTM 1184 as applicable and to manufacturer's published instructions.
 - C. Space line posts 10 feet 0 inches on center maximum, unless otherwise indicated on Drawings.
 - D. Grade-set Posts:
 - 1. Drill or hand excavate.
 - 2. Excavate each post hole to 12 inch diameter, or not less than four times diameter of post.
 - 3. Excavate approximately 3 inches lower than post bottom; set post bottom not less than 36 inches below finish grade.
 - 4. Hold post in position while placing, consolidating, and finishing concrete.
 - E. Sleeve-set Posts: Anchor posts in concrete by means of pipe sleeves preset and anchored into concrete. After posts have been inserted into sleeves, fill annular space between post and sleeve solid with grout, mixed and placed to manufacturer's recommendations.
 - F. Rails: Run rail between post, bending smoothly for curved runs located at the bottom of the fence fabric. Provide expansion couplings as recommended by fencing manufacturer.
 - G. Center Rails: Provide center rails where indicated. Install in one piece between posts and flush with post on fabric side, using offset fittings where necessary.
 - H. Brace Assemblies: Install braces so posts are plumb with rod in tension.
 - I. Tension Wire: Install tension wires through post cap loops before stretching fabric and tie to each post cap with not less than 6 gage galvanized wire. Fasten fabric to tension wire using 11 gage galvanized steel hog rings spaces 24 inches on center.
 - J. Fabric: The fence fabric must be installed within 2 inches between finish grade and bottom selvage. Pull fabric taut and tie to posts, rails, and tension wires. Install fabric on the exterior side of the fence, and anchor to framework so fabric remains in tension after pulling force is released.
 - K. Stretcher Bars: To secure end, corner, pull, and gate posts, thread through or clamp to fabric 4 inches on center and secure to posts with metal bands spaced 15 inches on center.
 - L. Tie Wires:
 - 1. Use U-shaped wire conforming with diameter of pipe to which attached, clasping pipe and fabric firmly with ends twisted two full turns. Bend wire ends to minimize hazards to persons or clothing.
 - 2. Tie fabric to line posts with wire ties spaced 12 inches on center. Tie fabric to rails and braces with wire ties spaced 24 inches on center. Manufacturer's standard procedure will be accepted if of equal strength and durability.
 - M. Fasteners: Install nuts for tension bands and hardware bolts on side of fence opposite fabric side. Peen ends of bolts or score threads to prevent removal of nuts.
 - N. Gates: Install gates plumb, level, and secure for full opening without interference. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation.
- 3.3 CONSTRUCTION
- A. Site Tolerances:
 - 1. Maximum Variation from Plumb: 1/4 inch.
 - 2. Maximum Offset from True Position: 1 inch.
 - 3. Locate fencing components completely within site boundaries. Do not infringe adjacent property lines.

4. Maximum Fence Distance from Ground: 1 1/2 inches.
 5. Maximum Gate Distance from Ground: 4 inches.
- B. Gate Operator:
1. Coordinate conduit runs and electrical connections with Access Control Section 281304, Common Work Results for Communications Section 270500, and Communications Horizontal Cabling Section 271500.
- 3.4 FIELD QUALITY CONTROL
- A. Test gate operator through ten full cycles and adjust for operation without binding, scraping or uneven motion. Test limit switches for proper "at rest" gate position.
 - B. All anchor bolts shall be fully concealed in the finished installation.
Owner, or owner's representative, shall complete "punch list" with installing contractor prior to final acceptance of the installation and submit completed warranty documentation to manufacturers where applicable.
- 3.5 CONTINUED SERVICE AND DOCUMENTATION
- A. Train owner's personnel on how to safely shut off electrical power, release and manually operate the gates. Additionally, demonstrate the general maintenance of the gate operator and accessories and provide one copy of "Installation and Reference" manual for the Owner's use (a second manual is available upon request). Manuals will identify parts of the equipment for future procurement. Direct maintenance personnel to HySecurity's website, specifically the technical support sections.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 31 19 00 - ORNAMENTAL METAL FENCES AND GATES**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of ornamental metal fences and gates. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Decorative metallic-coated steel tubular picket fences.
 - b. Decorative metallic-coated steel wire fences.
 - c. Decorative metallic-coated steel security fences.
 - d. Decorative steel fences.
 - e. Decorative aluminum fences.
 - f. Swing gates.
 - g. Horizontal-slide gates.
 - h. Gate operators, including controls.

C. Performance Requirements

1. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

D. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: For gates. Include plans, elevations, sections, details, and attachments to other work.
 - a. Wiring Diagrams: For power, signal, and control wiring.
3. Samples: For each fence material and for each color specified.
 - a. Provide Samples 12 inches (300 mm) in length for linear materials.
 - b. Provide Samples 12 inches (300 mm) square for wire mesh, bar grating, and sheet or plate materials.
4. Welding certificates.
5. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for decorative metallic-coated steel tubular picket fences, including finish, indicating compliance with referenced standard and other specified requirements.
6. Maintenance Data: For gate operators to include in maintenance manuals.

E. Quality Assurance

1. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel **OR** AWS D1.2/D1.2M, "Structural Welding Code - Aluminum", **as directed**.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
3. UL Standard: Provide gate operators that comply with UL 325.
4. Emergency Access Requirements: Comply with requirements of authorities having jurisdiction for automatic gate operators on gates that must provide emergency access.
5. Preinstallation Conference: Conduct conference at Project site.

1.2 PRODUCTS

A. Aluminum

1. Aluminum, General: Provide alloys and tempers with not less than the strength and durability properties of alloy and temper designated in paragraphs below for each aluminum form required.
2. Extrusions: ASTM B 221 (ASTM B 221M), Alloy 6063-T5.
3. Tubing: ASTM B 429, Alloy 6063-T6.
4. Plate and Sheet: ASTM B 209 (ASTM B 209M), Alloy 6061-T6.
5. Die and Hand Forgings: ASTM B 247 (ASTM B 247M), Alloy 6061-T6.
6. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.

B. Steel And Iron

1. Plates, Shapes, and Bars: ASTM A 36/A 36M.
2. Bars (Pickets): Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.
3. Tubing: ASTM A 500, cold formed steel tubing.
4. Bar Grating: NAAMM MBG 531.
 - a. Bars: Hot-rolled steel strip, ASTM A 1011/A 1011M, Commercial Steel, Type B.
 - b. Wire Rods: ASTM A 510 (ASTM A 510M).
5. Uncoated Steel Sheet: Hot-rolled steel sheet, ASTM A 1011/A 1011M, Structural Steel, Grade 45 (Grade 310) or cold-rolled steel sheet, ASTM A 1008/A 1008M, Structural Steel, Grade 50 (Grade 340).
6. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 50 (Grade 340), with G90 (Z275) **OR** G60 (Z180), **as directed**, coating.
7. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, structural quality, Grade 50 (Grade 340), with AZ60 (AZM180) coating.
8. Castings: Either gray or malleable iron unless otherwise indicated.
 - a. Gray Iron: ASTM A 48/A 48M, Class 30.
 - b. Malleable Iron: ASTM A 47/A 47M.

C. Coating Materials

1. Shop Primers for Steel: Provide primers that comply with Division 09 Section(s) "Exterior Painting" **OR** "High-performance Coatings", **as directed**.
2. Epoxy Zinc-Rich Primer for Steel: Complying with MPI #20 and compatible with coating specified to be applied over it.
 - a. Use primer with a VOC content of 420 g/L **OR** 400 g/L **OR** 340 g/L, **as directed**, or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
3. Epoxy Primer for Galvanized Steel: Complying with MPI #101 and compatible with coating specified to be applied over it.
 - a. Use primer with a VOC content of 420 g/L **OR** 400 g/L **OR** 300 g/L, **as directed**, or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Epoxy Intermediate Coat: Complying with MPI #77 and compatible with primer and topcoat.
 - a. Use product with a VOC content of 420 g/L **OR** 400 g/L **OR** 250 g/L, **as directed**, or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
5. Polyurethane Topcoat: Complying with MPI #72 and compatible with undercoat.
 - a. Use product with a VOC content of 420 g/L **OR** 400 g/L **OR** 250 g/L, **as directed**, or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Miscellaneous Materials

1. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.
 - a. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.
2. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Division 03 Section "Miscellaneous Cast-in-place Applications) Concrete" with a minimum 28-day compressive strength of 3000 psi (20 MPa), 3-inch (75-mm) slump, and 1-inch (25-mm)

maximum aggregate size or dry, packaged, normal-weight concrete mix complying with ASTM C 387 mixed with potable water according to manufacturer's written instructions.

3. Nonshrink Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107 and specifically recommended by manufacturer for exterior applications.

E. Grounding Materials

1. Grounding Conductors: Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.
 - a. Material above Finished Grade: Copper **OR** Aluminum, **as directed**.
 - b. Material on or below Finished Grade: Copper.
 - c. Bonding Jumpers: Braided copper tape, 1 inch (25 mm) wide, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.
2. Grounding Connectors and Grounding Rods: Comply with UL 467.
 - a. Connectors for Below-Grade Use: Exothermic-welded type.
 - b. Grounding Rods: Copper-clad steel.
 - 1) Size: 5/8 by 96 inches (16 by 2440 mm).

F. Decorative Metallic-Coated Steel Tubular Picket Fences

1. Decorative Metallic-Coated Steel Tubular Picket Fences: Comply with ASTM F 2408, for residential **OR** light industrial (commercial) **OR** industrial, **as directed**, application (class) unless otherwise indicated.
2. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc alloy-coated steel sheet.
3. Interior surface of tubes formed from uncoated steel sheet shall be hot-dip zinc coated same as exterior or coated with zinc-rich thermosetting coating to comply with ASTM F 2408.
4. Posts:
 - a. End and Corner Posts: Square tubes 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - b. Swing Gate Posts:
 - 1) Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
OR
Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.
 - c. Horizontal-Slide Gate Post, Openings up to 12 Feet (3.7 m): Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.
 - d. Horizontal-Slide Gate Post, Openings Wider Than 12 Feet (3.7 m): Square steel tubing 4 by 4 inches (102 by 102 mm) with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.
 - e. Guide Posts for Class 1 Horizontal-Slide Gates:
 - 1) Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication; installed adjacent to gate post to permit gate to slide in space between.
OR
Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized; installed adjacent to gate post to permit gate to slide in space between.
5. Post Caps: Formed from steel sheet and hot-dip galvanized after forming **OR** UV-resistant plastic **OR** Aluminum castings **OR** Aluminum castings with round ball finials, **as directed**.
6. Rails: Square tubes **OR** Double-wall channels, **as directed**.
 - a. Size: 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 1-3/4 by 1-3/4 inches (45 by 45 mm), **as directed**.

- b. Metal and Thickness: 0.079-inch (2.01-mm) nominal-thickness, metallic-coated steel sheet or 0.075-inch (1.90-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
- 7. Pickets: Square tubes.
 - a. Terminate tops of pickets at top rail for flush top appearance **OR** Extend pickets beyond top rail as indicated and terminate with UV-resistant plastic caps **OR** Extend pickets beyond top rail as indicated and terminate with galvanized-steel caps **OR** Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape, **as directed**.
 - b. Picket Spacing: 6 inches (152.4 mm) **OR** 4 inches (101.6 mm) **OR** 1-3/4 inches (44 mm), **as directed**, clear, maximum.
- 8. Fasteners: Manufacturer's standard concealed fastening system.
- 9. Fasteners: Manufacturer's standard tamperproof, **as directed**, corrosion-resistant, color-coated fasteners matching fence components, with resilient polymer washers, **as directed**.
- 10. Galvanizing: For components indicated to be galvanized and for which galvanized coating is not specified in ASTM F 2408, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
- 11. Finish: Organic coating complying with requirements in ASTM F 2408 **OR** Powder coating, **as directed**.

G. Decorative Metallic-Coated Steel Wire Fences

- 1. Metallic-Coated Steel Wire: Welded-wire fence fabric, hot-dip galvanized after fabrication. Weight of zinc coating shall be not less than 1.0 oz./sq. ft. (305 g/sq. m).
 - a. Spacing of Vertical Wires: 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 3-1/2 inches (89 mm) **OR** 4 inches (102 mm) **OR** As indicated, **as directed**.
 - b. Vertical Wire Size: 0.187 inch (4.76 mm) **OR** 0.192 inch (4.88 mm) **OR** 0.225 inch (5.72 mm) **OR** 0.25 inch (6.35 mm) **OR** 0.262 inch (6.67 mm), **as directed**.
 - c. Spacing of Horizontal Wires: 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 4 inches (102 mm) **OR** 8 inches (203 mm) **OR** As indicated, **as directed**.
 - d. Horizontal Wire Size: 0.187 inch (4.76 mm) **OR** 0.192 inch (4.88 mm) **OR** 0.225 inch (5.72 mm) **OR** 0.25 inch (6.35 mm) **OR** 0.312 inch (7.94 mm), **as directed**.
- 2. Metallic-Coated Steel Sheet: Galvanized-steel sheet or aluminum-zinc alloy-coated steel sheet.
- 3. Interior surface of tubes formed from uncoated steel sheet shall be hot-dip zinc coated same as exterior or coated with zinc-rich thermosetting coating to comply with ASTM F 2408.
- 4. Posts:
 - a. Line Posts: Square tubes 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, formed from 0.064-inch (1.63-mm) **OR** 0.079-inch (2.01-mm) **OR** 0.108-inch (2.74-mm), **as directed**, nominal-thickness, metallic-coated steel sheet or formed from 0.060-inch (1.52-mm) **OR** 0.075-inch (1.90-mm) **OR** 0.105-inch (2.66-mm), **as directed**, nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - b. End and Corner Posts: Square tubes 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - c. Swing Gate Posts:
 - 1) Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
OR
Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.
 - d. Horizontal-Slide Gate Post, Openings up to 12 Feet (3.7 m): Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.

- e. Horizontal-Slide Gate Post, Openings Wider Than 12 Feet (3.7 m): Square steel tubing 4 by 4 inches (102 by 102 mm) with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized.
 - f. Guide Posts for Class 1 Horizontal-Slide Gates:
 - 1) Square tubes 3 by 3 inches (76 by 76 mm) formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication; installed adjacent to gate post to permit gate to slide in space between.
OR
Square steel tubing 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness, hot-dip galvanized; installed adjacent to gate post to permit gate to slide in space between.
 - 5. Post Caps: Formed from steel sheet and hot-dip galvanized after forming **OR** UV-resistant plastic **OR** Aluminum castings **OR** Aluminum castings with round ball finials, **as directed**.
 - 6. Rails: Square tubes.
 - a. Size: 1-3/16 by 1-1/2 inches (30 by 38 mm) **OR** 1-3/8 by 1-1/2 inches (35 by 38 mm) **OR** 1-1/2 by 1-1/2 inches (38 by 38 mm), **as directed**.
 - b. Metal and Thickness: 0.064-inch (1.63-mm) **OR** 0.079-inch (2.01-mm), **as directed**, nominal-thickness, metallic-coated steel sheet or 0.060-inch (1.52-mm) **OR** 0.075-inch (1.90-mm), **as directed**, nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
 - 7. Fasteners: Manufacturer's standard tamperproof, **as directed**, corrosion-resistant, color-coated fasteners matching fence components with resilient polymer washers or clips, **as directed**.
 - 8. Galvanizing: For components indicated to be galvanized and for which galvanized coating is not specified, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
 - 9. Finish: Organic coating complying with requirements in ASTM F 2408 **OR** Powder coating, **as directed**.
- H. Decorative Metallic-Coated Steel Security Fences
- 1. Posts: 1-3/4-by-4-inch (45-by-102-mm) double-thickness, I-shaped sections.
 - a. Metal and Thickness: 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or 0.105-inch (2.66-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
 - 2. Post Caps: Aluminum castings.
 - 3. Rails: 2-by-2-1/2-inch (50-by-64-mm) pentagon-shaped box channel designed to shed water and to enclose wire rope reinforcement.
 - a. Metal and Thickness: 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or 0.105-inch (2.66-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
 - b. Wire Rope Reinforcement: 3/4-inch (19-mm) zinc-coated steel wire rope.
 - 4. Pickets: 3/4-by-2-3/4-inch (19-by-70-mm) M-shaped pales.
 - a. Metal and Thickness: 0.079-inch (2.01-mm) nominal-thickness, metallic-coated steel sheet or 0.075-inch (1.90-mm) nominal-thickness, uncoated steel sheet, hot-dip galvanized after fabrication.
 - b. Extend pickets beyond top rail as indicated and terminate with rounded edge **OR** cut and split to form three points, **as directed**.
 - c. Picket Spacing: 6 inches (152.4 mm) o.c.
 - 5. Fasteners: Stainless-steel carriage bolts with tamperproof nuts.
 - 6. Galvanizing: For components indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M unless otherwise indicated. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
 - 7. Finish: Powder coating.
- I. Decorative Steel Fences
- 1. Decorative Steel Fences: Fences made from steel tubing bars, **as directed**, and shapes, hot-dip galvanized, **as directed**.

2. Posts: Square steel tubing.
 - a. Line Posts: 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, with 1/8-inch (3.2-mm) **OR** 3/16-inch (4.76-mm), **as directed**, wall thickness.
 - b. End and Corner Posts: 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 1/8-inch (3.2-mm) **OR** 3/16-inch (4.76-mm), **as directed**, wall thickness.
 - c. Swing Gate Posts: 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness.
 - d. Horizontal-Slide Gate Post, Openings up to 12 Feet (3.7 m): 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness.
 - e. Horizontal-Slide Gate Post, Openings Wider Than 12 Feet (3.7 m): 4 by 4 inches (102 by 102 mm) with 3/16-inch (4.76-mm) wall thickness.
 - f. Guide Posts for Class 1 Horizontal-Slide Gates: 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 3/16-inch (4.76-mm) wall thickness; installed adjacent to gate post to permit gate to slide in space between.
3. Post Caps: Formed from steel sheet **OR** Formed from steel sheet and hot-dip galvanized after forming **OR** Aluminum castings **OR** Aluminum castings with round ball finials, **as directed**.
4. Rails:
 - a. Steel Tube Rails: Square steel tubing 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 1/8-inch (3.2-mm) wall thickness.
 - b. Steel Channel Rails: Steel channels 2 by 1 inch (50 by 25 mm) **OR** 1-1/2 by 3/4 inch (38 by 19 mm) **OR** 1-1/2 by 1/2 inch (38 by 13 mm), **as directed**.
5. Pickets: 1/2-inch- (13-mm-) square steel bars **OR** 3/4-inch- (19-mm-) square steel bars **OR** Decorative steel bars of pattern and size indicated **OR** 5/8 inch (16 mm) square by 0.065-inch (1.65-mm) steel tubes **OR** 5/8 inch (16 mm) square by 0.083-inch (2.11-mm) steel tubes **OR** 3/4 inch (19 mm) square by 0.065-inch (1.65-mm) steel tubes **OR** 3/4 inch (19 mm) square by 0.083-inch (2.11-mm) steel tubes **OR** 1 inch (25 mm) square by 0.065-inch (1.65-mm) steel tubes **OR** 1 inch (25 mm) square by 0.083-inch (2.11-mm) steel tubes, **as directed**.
 - a. Terminate tops of pickets at top rail for flush top appearance **OR** Extend pickets beyond top rail as indicated and mill ends to pyramid shaped points **OR** Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape **OR** Extend pickets beyond top rail as indicated and cap with metal spear point finial **OR** Extend pickets beyond top rail as indicated and cap with metal tripoint finial, **as directed**.
 - b. Picket Spacing: 6 inches (152.4 mm) **OR** 4 inches (101.6 mm) **OR** 1-3/4 inches (44 mm), **as directed**, clear, maximum.
 - c. Treillage: Provide iron castings of pattern indicated between each pair of pickets.
6. Infill: Forge-welded steel bar grating.
 - a. Perimeter Bars: Steel flat bars 1 by 1/8 inch (25 by 3.2 mm).
 - b. Vertical Main Bars: Steel flat bars 1 by 1/8 inch (25 by 3.2 mm) **OR** 1-3/16 by 5/32 inch (30 by 4 mm), **as directed**.
 - c. Vertical Main Bar Spacing: 1-21/32 inches (42 mm) **OR** 1-7/8 inches (48 mm) **OR** 2-7/16 inches (62 mm), **as directed**, o.c.
 - d. Horizontal Cross Rods: 3/16-inch- (4.8-mm-) **OR** 1/4-inch- (6.4-mm-), **as directed**, diameter, steel rods.
 - e. Horizontal Cross Rod Spacing: 1-3/4 inches (45 mm) **OR** 2-19/32 inches (66 mm) **OR** 5-3/16 inches (132 mm), **as directed**, o.c.
7. Infill: Custom design as indicated on Drawings.
 - a. Bars: 1/2-inch- (12.7 -mm-) square steel bars **OR** 3/4-inch- (19-mm-) square steel bars **OR** 1/2-inch- (12.7 -mm-) diameter, round steel bars **OR** 3/4-inch- (19-mm-) diameter, round steel bars **OR** 1-by-1/8-inch (25-by-3.2-mm) steel flat bars **OR** 1-by-1/4-inch (25-by-6.4-mm) steel flat bars **OR** 1-by-1/2-inch (25-by-12.7 -mm) steel flat bars, **as directed**, unless otherwise indicated.

- b. Square Tubes: Square steel tubing 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 1/8-inch (3.2-mm) wall thickness unless otherwise indicated.
 - c. Round Tubes: 1-inch- (25-mm-) **OR** 1-1/2-inch- (38-mm-) **OR** 2-inch- (50-mm-) **OR** 2-1/2-inch- (64-mm-), **as directed**, diameter, round steel tubing with 1/8-inch (3.2-mm) wall thickness unless otherwise indicated.
 - d. Steel Plate: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** 1/4 inch (6.4 mm), **as directed**, thick unless otherwise indicated.
 - e. Perforated Metal Sheet: Uncoated steel sheet, perforated as indicated, 0.060-inch (1.52-mm) **OR** 0.075-inch (1.90-mm) **OR** 0.105-inch (2.66-mm), **as directed**, nominal thickness.
 - 8. Fasteners: Stainless-steel carriage bolts and tamperproof, **as directed**, nuts.
 - 9. Fabrication:
 - a. Assemble fences into sections by welding pickets to rails.
 - 1) Fabricate sections with clips welded to rails for fastening to posts in field.
 - 2) Drill posts and clips for fasteners before finishing to maximum extent possible.
 - b. Fabricate bar grating infill into sections of size indicated.
 - 1) Fabricate rails with clips welded to rails for fastening to posts in field.
 - 2) Drill posts, clips, **as directed**, and bar grating for fasteners before finishing to maximum extent possible.
 - 10. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay **OR** Finish #3 - partially dressed weld with splatter removed **OR** Finish #4 - good-quality, uniform undressed weld with minimal splatter, **as directed**.
 - 11. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
 - a. Hot-dip galvanize posts and rails, **as directed**.
 - b. Hot-dip galvanize rail and picket assemblies after fabrication.
 - c. Hot-dip galvanize bar grating infill after fabrication.
 - d. Hot-dip galvanize custom-design rail and infill assemblies after fabrication.
 - 12. Finish for Bar Grating Infill: Powder coating.
 - 13. Finish for Steel Items Other than Bar Grating Infill: Primed **OR** Shop painted **OR** High-performance coating, **as directed**.
 - 14. Finish for Metallic-Coated Steel Items Other than Bar Grating Infill: High-performance coating **OR** Galvanized finish, **as directed**.
- J. Decorative Aluminum Fences
- 1. Decorative Aluminum Fences: Fences made from aluminum extrusions.
 - 2. Posts: Square extruded tubes.
 - a. Line Posts: 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, with 0.062-inch (1.57-mm) **OR** 0.080-inch (2.03-mm) **OR** 0.093-inch (2.36-mm) **OR** 0.100-inch (2.54-mm) **OR** 0.125-inch (3.18-mm), **as directed**, wall thickness.
 - b. End and Corner Posts: 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, with 0.062-inch (1.57-mm) **OR** 0.080-inch (2.03-mm) **OR** 0.093-inch (2.36-mm) **OR** 0.100-inch (2.54-mm) **OR** 0.125-inch (3.18-mm), **as directed**, wall thickness.
 - c. Swing Gate Posts: 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 0.125-inch (3.18-mm) **OR** 0.250-inch (6.35-mm), **as directed**, wall thickness.
 - d. Horizontal-Slide Gate Post, Openings up to 12 Feet (3.7 m): 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm), **as directed**, with 0.125-inch (3.18-mm) **OR** 0.250-inch (6.35-mm), **as directed**, wall thickness.
 - e. Horizontal-Slide Gate Post, Openings Wider Than 12 Feet (3.7 m): 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm) **OR** 6 by 6 inches (152 by 152 mm), **as directed**, with 0.125-inch (3.18-mm) **OR** 0.250-inch (6.35-mm), **as directed**, wall thickness.

- f. Guide Posts for Class 1 Horizontal-Slide Gates: 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm) **OR** 3 by 3 inches (76 by 76 mm), **as directed**, with 0.062-inch (1.57-mm) **OR** 0.093-inch (2.36-mm) **OR** 0.125-inch (3.18-mm), **as directed**, wall thickness; installed adjacent to gate post to permit gate to slide in space between.
 3. Post Caps: Aluminum castings that cover entire top of posts **OR** project at least 1/4 inch (6 mm) beyond posts, **as directed**, with round ball finial, **as directed**.
 4. Rails: Extruded-aluminum channels, 1-1/2 by 1-1/2 inches (38 by 38 mm), with 0.100-inch- (2.54-mm-) thick sidewalls and 0.070-inch- (1.78-mm-) thick top **OR** 1 by 1-1/2 inches (25 by 38 mm), with 0.082-inch- (2.08-mm-) thick sidewalls and 0.055-inch- (1.40-mm-) thick top **OR** 1-1/4 by 1-1/4 inches (32 by 32 mm), with 0.078-inch- (1.98-mm-) thick sidewalls and 0.062-inch- (1.57-mm-) thick top **OR** 1 by 1 inch (25 by 25 mm), with 0.080-inch- (2.03-mm-) thick sidewalls and 0.055-inch- (1.40-mm-) thick top **OR** 1 by 1 inch (25 by 25 mm), with 0.078-inch- (1.98-mm-) thick sidewalls and 0.062-inch- (1.57-mm-) thick top, **as directed**.
 5. Pickets: Extruded-aluminum tubes, 1 inch (25 mm) square, with 0.062-inch (1.57-mm) wall thickness **OR** 1 inch (25 mm) square, with 0.060-inch (1.52-mm) wall thickness **OR** 3/4 inch (19 mm) square, with 0.050-inch (1.27-mm) wall thickness **OR** 1 by 5/8 inch (25 by 16 mm), with 0.050-inch (1.27-mm) wall thickness **OR** 5/8 inch (16 mm) square, with 0.050-inch (1.27-mm) wall thickness, **as directed**.
 - a. Terminate tops of pickets at top rail for flush top appearance **OR** Extend pickets beyond top rail as indicated and terminate with UV-resistant plastic caps **OR** Extend pickets beyond top rail as indicated and terminate with cast-aluminum caps **OR** Extend pickets beyond top rail as indicated and press flat and trim to produce spear point shape **OR** Extend pickets beyond top rail as indicated and terminate with cast-aluminum spear point finial **OR** Extend pickets beyond top rail as indicated and terminate with cast-aluminum tripoint finial, **as directed**.
 - b. Picket Spacing: 6 inches (152.4 mm) **OR** 4 inches (101.6 mm) **OR** 1-3/4 inches (44 mm), **as directed**, clear, maximum.
 6. Fasteners:
 - a. Manufacturer's standard concealed fastening system.
OR
Manufacturer's standard tamperproof, **as directed**, corrosion-resistant, color-coated fasteners matching fence components with resilient polymer washers, **as directed**.
 7. Fabrication: Assemble fences into sections by welding **OR** fastening, **as directed**, pickets to rails.
 - a. Fabricate sections with clips welded to rails for fastening to posts in field.
 - b. Drill clips for fasteners before finishing.
 8. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay **OR** Finish #3 - partially dressed weld with splatter removed **OR** Finish #4 - good-quality, uniform undressed weld with minimal splatter, **as directed**.
 9. Finish: Baked enamel or powder coating.
- K. Swing Gates
1. Gate Configuration: Single leaf **OR** Double leaf, **unless directed otherwise**.
 2. Gate Frame Height: 72 inches (1830 mm), **unless directed otherwise**.
 3. Gate Opening Width: 36 inches (914 mm), **unless directed otherwise**.
 4. Galvanized-Steel Frames and Bracing: Fabricate members from square tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 1-3/4 by 1-3/4 inches (45 by 45 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 5. Steel Frames and Bracing: Fabricate members from square steel tubing 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 1/8-inch (3.2-mm) wall thickness. Hot-dip galvanize frames after fabrication, **as directed**.

6. Aluminum Frames and Bracing: Fabricate members from square extruded-aluminum tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 0.100-inch (2.54-mm) **OR** 0.125-inch (3.18-mm) **OR** 0.140-inch (3.56-mm) **OR** 0.154-inch (3.91-mm), **as directed**, wall thickness.
7. Frame Corner Construction: Welded or assembled with corner fittings and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider.
8. Additional Rails: Provide as indicated, complying with requirements for fence rails.
9. Infill: Comply with requirements for adjacent fence.
10. Picket Size, Configuration, and Spacing: Comply with requirements for adjacent fence.
 - a. Treillage: Provide iron castings of pattern indicated between each pair of pickets. Finish as specified for adjacent fence **OR** gates, **as directed**.
11. Hardware: Latches permitting operation from both sides of gate, hinges, and keepers for each gate leaf more than 5 feet (1.52 m) wide. Provide center gate stops and cane bolts for pairs of gates. Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate, **as directed**.
12. Spring Hinges: BHMA A156.17, Grade 1, suitable for exterior use.
 - a. Function: 320 - Gate spring pivot hinge. Adjustable tension **OR** 321 - Gate spring pivot hinge. Fixed tension, **as directed**.
 - b. Material: Malleable iron.
13. Hinges: BHMA A156.1, Grade 1, suitable for exterior use.
 - a. Function: 39 - Full surface, triple weight, antifriction bearing.
 - b. Material: Wrought steel, forged steel, cast steel, or malleable iron.
14. Rim Locks: BHMA A156.5, Grade 1, suitable for exterior use.
 - a. Function: 621 - Latchbolt by key from outside and by turn from inside. Latchbolt is held retracted by device from inside **OR** 622 - Deadbolt by key from outside and by turn from inside **OR** 629 - Deadlocking latchbolt by key from outside and by turn from inside **OR** 626 - Interlocking deadbolt operated by key from either side **OR** 627 - Interlocking deadbolt operated by key from outside and by turn from inside, **as directed**.
 - b. Material: Cast, forged, or extruded brass or bronze.
 - c. Mounting Plate: Configuration necessary for mounting locks. Fabricate from 1/8-inch- (3.2-mm-) thick, steel **OR** aluminum, **as directed**, plate.
15. Mortise Locks: BHMA A156.13, Grade 1, suitable for exterior use.
 - a. Function: F06 - Holdback lock **OR** F07 - Storeroom or closet lock **OR** F09 - Apartment, exit, or public toilet lock **OR** F16 - Double-cylinder dead lock **OR** F17 - Dead lock, **as directed**.
 - b. Material: Brass or bronze.
 - c. Levers: Cast, forged, or extruded brass or bronze.
 - d. Mounting Box: Configuration necessary to enclose locks. Fabricate from 1/8-inch- (3.2-mm-) thick, steel **OR** aluminum, **as directed**, plate.
16. Electric Strikes: BHMA A156.31, Grade 1, of configuration required for use with lock specified, fail safe **OR** fail secure, **as directed**, and suitable for exterior use.
 - a. Mounting Plate: Configuration necessary for mounting electric strikes. Fabricate from 1/8-inch- (3.2-mm-) thick, steel **OR** aluminum, **as directed**, plate.
 - b. Mounting: Mortise into post.
17. Exit Hardware: BHMA A156.3, Grade 1, Type 1 (rim exit device), with push pad actuating bar, suitable for exterior use.
 - a. Function: 01 - Exit only, no trim or blank escutcheon **OR** 04 - Entrance by trim when latch bolt is released by key or set in a retracted position by key **OR** 08 - Entrance by lever. Key locks or unlocks lever **OR** 09 - Entrance by lever only when released by key. Key removable only when locked, **as directed**.
 - b. Mounting Channel: Bent-plate channel formed from 1/8-inch- (3.2-mm-) thick, steel **OR** aluminum, **as directed**, plate. Channel spans gate frame. Exit device is mounted on channel web, recessed between flanges, with flanges extending 1/8 inch (3.2 mm) beyond push pad surface.
18. Cane Bolts: Provide for inactive leaf of pairs of gates. Fabricated from 1/2-inch- (12.7 -mm-) **OR** 3/4-inch- (19-mm-), **as directed**, diameter, round steel bars, hot-dip galvanized after fabrication.

Finish to match gates. Provide galvanized-steel pipe strikes to receive cane bolts in closed position **OR** both open and closed positions, **as directed**.

19. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay **OR** Finish #3 - partially dressed weld with splatter removed **OR** Finish #4 - good-quality, uniform undressed weld with minimal splatter, **as directed**.
20. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M unless otherwise indicated. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
21. Metallic-Coated Steel Finish: High-performance coating **OR** Galvanized finish, **as directed**.
22. Steel Finish: Primed **OR** Shop painted **OR** High-performance coating, **as directed**.
23. Aluminum Finish: Baked enamel or powder coating.

L. Horizontal-Slide Gates

1. Gate Configuration: Single leaf **OR** Double leaf **OR** As indicated, **as directed**.
 - a. Type:
 - 1) Overhead slide.
OR
Cantilever slide, with external **OR** internal, **as directed**, roller assemblies.
2. Gate Frame Height: 72 inches (1830 mm), **unless directed otherwise**.
3. Gate Opening Width: 36 inches (914 mm), **unless directed otherwise**.
4. Galvanized-Steel Frames and Bracing: Fabricate members from square tubing.
 - a. Frame Members: Square tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 1-3/4 by 1-3/4 inches (45 by 45 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
 - b. Bracing Members: Square tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 1-3/4 by 1-3/4 inches (45 by 45 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, formed from 0.108-inch (2.74-mm) nominal-thickness, metallic-coated steel sheet or formed from 0.105-inch (2.66-mm) nominal-thickness steel sheet and hot-dip galvanized after fabrication.
5. Steel Frames and Bracing: Fabricate members from square tubing. Hot-dip galvanize frames after fabrication, **as directed**.
 - a. Frame Members: Steel tubing 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 1/8-inch (3.2-mm) wall thickness.
 - b. Bracing Members: Steel tubing 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 1/8-inch (3.2-mm) wall thickness.
6. Aluminum Frames and Bracing: Fabricate members from square tubing.
 - a. Frame Members: Extruded-aluminum tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 0.100-inch (2.54-mm) **OR** 0.125-inch (3.18-mm) **OR** 0.140-inch (3.56-mm) **OR** 0.154-inch (3.91-mm), **as directed**, wall thickness.
 - b. Bracing Members: Extruded-aluminum tubes 1-1/2 by 1-1/2 inches (38 by 38 mm) **OR** 2 by 2 inches (50 by 50 mm) **OR** 2-1/2 by 2-1/2 inches (64 by 64 mm), **as directed**, with 0.100-inch (2.54-mm) **OR** 0.125-inch (3.18-mm) **OR** 0.140-inch (3.56-mm) **OR** 0.154-inch (3.91-mm), **as directed**, wall thickness.
7. Frame Corner Construction:
 - a. Welded frame with panels assembled with bolted or riveted corner fittings and 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider.
 - b. Overhead Slide Gates: Welded or assembled with corner fittings including 5/16-inch- (7.9-mm-) diameter, adjustable truss rods for panels 5 feet (1.52 m) wide or wider.
8. Additional Rails: Provide as indicated, complying with requirements for fence rails.
9. Infill: Comply with requirements for adjacent fence.

10. Picket Size, Configuration, and Spacing: Comply with requirements for adjacent fence.
 - a. Treillage: Provide iron castings of pattern indicated between each pair of pickets. Finish as specified for adjacent fence **OR** gates, **as directed**.
11. Overhead Track Assembly: Manufacturer's standard track, with overhead framing supports, bracing, and accessories, engineered to support size, weight, width, operation, and design of gate and roller assemblies.
12. Hardware: Latches permitting operation from both sides of gate, locking devices, hangers, roller assemblies, and stops fabricated from galvanized steel **OR** galvanized malleable iron **OR** mill-finished, Grade 319 aluminum-alloy casting with stainless-steel fasteners, **as directed**. Fabricate latches with integral eye openings for padlocking; padlock accessible from both sides of gate, **as directed**.
13. Finish exposed welds to comply with NOMMA Guideline 1, Finish #2 - completely sanded joint, some undercutting and pinholes okay **OR** Finish #3 - partially dressed weld with splatter removed **OR** Finish #4 - good-quality, uniform undressed weld with minimal splatter, **as directed**.
14. Galvanizing: For items other than hardware that are indicated to be galvanized, hot-dip galvanize to comply with ASTM A 123/A 123M unless otherwise indicated. For hardware items, hot-dip galvanize to comply with ASTM A 153/A 153M.
15. Metallic-Coated Steel Finish: High-performance coating **OR** Galvanized finish, **as directed**.
16. Steel Finish: Primed **OR** Shop painted **OR** High-performance coating, **as directed**.
17. Aluminum Finish: Baked enamel or powder coating.

M. Gate Operators

1. General: Provide factory-assembled automatic operating system designed for gate size, type, weight, and operation frequency. Provide operation control system with characteristics suitable for Project conditions, with remote-control stations, safety devices, and weatherproof enclosures; coordinate electrical requirements with building electrical system.
 - a. Provide operator designed so motor may be removed without disturbing limit-switch adjustment and without affecting auxiliary emergency operator.
 - b. Provide operator with UL approval **OR** UL-approved components, **as directed**.
 - c. Provide electronic components with built-in troubleshooting diagnostic feature.
 - d. Provide unit designed and wired for both right-hand/left-hand opening, permitting universal installation.
 - e. Provide controllers, electrical devices, and wiring that comply with requirements specified in Division 22.
2. Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Division 11 Section "Common Motor Requirements For Equipment".
 - a. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
 - b. Horsepower: Not less than 1/4 **OR** 1/3 **OR** 1/2 **OR** 3/4, **as directed**.
 - c. Enclosure: Open dripproof **OR** Totally enclosed **OR** Manufacturer's standard, **as directed**.
 - d. Duty: Continuous duty at ambient temperature of 105 deg F (40 deg C) and at altitude of 3300 feet (1005 m) above sea level.
 - e. Service Factor: 1.15 for open dripproof motors; 1.0 for totally enclosed motors.
 - f. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 22.
3. Gate Operators: Gate **OR** Concrete base **OR** Post **OR** In-ground, **as directed**, mounted and as follows:
 - a. Hydraulic Swing **OR** Slide, **as directed**, Gate Operators:
 - 1) Duty: Light **OR** Medium **OR** Heavy, **as directed**, duty, residential **OR** commercial/industrial, **as directed**.
 - 2) Gate Speed: Minimum 45 feet (13.7 m) **OR** 60 feet (18.2 m), **as directed**, per minute.
 - 3) Maximum Gate Weight: Not to exceed operator manufacturer's recommendations.
 - 4) Frequency of Use: 10 cycles per hour **OR** 25 cycles per hour **OR** Continuous duty, **as directed**.

- 5) Locking: Hydraulic in both directions.
- 6) Heater: Manufacturer's standard track and roller heater with thermostatic control, as directed.
- 7) Operating Type: Crank arm **OR** Wheel and rail drive **OR** Roller chain, **as directed**, with manual release, **as directed**.
- b. Mechanical Swing **OR** Slide, **as directed**, Gate Operators:
 - 1) Duty: Light **OR** Medium **OR** Heavy, **as directed**, duty, residential **OR** commercial/industrial, **as directed**.
 - 2) Gate Speed: Minimum 45 feet (13.7 m) per minute **OR** 60 feet (18.2 m) per minute **OR** variable speed, **as directed**.
 - 3) Maximum Gate Weight: 600 lb (272 kg) **OR** 800 lb (363 kg), **as directed**.
 - 4) Frequency of Use: 10 cycles per hour **OR** 25 cycles per hour **OR** 60 cycles per hour **OR** Continuous duty, **as directed**.
 - 5) Operating Type: Crank arm **OR** Wheel and rail drive **OR** Roller chain, **as directed**, with manual release, **as directed**.
 - 6) Drive Type:
 - a) Enclosed worm gear and chain-and-sprocket, **as directed**, reducers, roller-chain drive.
OR
V-belt and worm gear **OR** chain-and-sprocket, **as directed**, reducers, roller-chain drive.
4. Remote Controls: Electric controls separated from gate and motor and drive mechanism, with NEMA ICS 6, Type 1 **OR** NEMA ICS 6, Type 4, **as directed**, enclosure for surface **OR** recessed or flush, **as directed**, concrete base **OR** pedestal, **as directed**, mounting, and with space for additional optional equipment. Provide the following remote-control device(s):
 - a. Control Station:
 - 1) Keyed, two-position **OR** three-position, **as directed**, switch with open, stop, **as directed**, and close function; located remotely from gate. Provide two keys per station.
OR
Momentary-contact, single-button-operated **OR** three-button-operated, **as directed**, with open, stop, **as directed**, and close function; located remotely from gate. Key switch to lock out open and close buttons, **as directed**.
 - b. Card Reader: Functions only when authorized card is presented. Programmable, multiple-code **OR** single-code, **as directed**, system, permitting four different access time periods, **as directed**, face-lighted unit fully visible at night, **as directed**.
 - 1) Reader Type: Touch plate **OR** Swipe **OR** Insertion **OR** Proximity, **as directed**.
 - 2) Features: Timed antipassback **OR** Limited-time usage **OR** Capable of monitoring and auditing gate activity, **as directed**.
 - c. Digital Keypad Entry Unit: Multiple-programmable **OR** Multiple-code, **as directed**, capability of not less than 5 **OR** 500 **OR** 2500, **as directed**, possible individual codes, consisting of 1- to 7 **OR** 4 **OR** 5, **as directed**, -digit codes, and permitting 4 different access time periods, **as directed**.
 - 1) Features: Timed antipassback **OR** Limited-time usage **OR** Capable of monitoring and auditing gate activity, **as directed**.
 - 2) Face-lighted unit with metal-keyed **OR** keyless-membrane, **as directed**, keypad fully visible at night.
 - d. Radio Control: Digital system consisting of code-compatible universal receiver for each gate, located where indicated, with remote antenna with coaxial cable and mounting brackets designed to operate gates. Provide 1 **OR** 2, **as directed**, programmable transmitter(s) with multiple-code capability permitting validating or voiding of not less than 1000 **OR** 10,000, **as directed**, codes per channel configured for the following functions:
 - 1) Transmitters: Single **OR** Three, **as directed**, -button operated, with open and close, **as directed**, function.

- 2) Channel Settings: Two **OR** Three **OR** Four, **as directed**, independent channel settings controlling separate receivers for operating more than one gate from each transmitter.
- e. Telephone Entry System: Hands-free, voice-communication system for connection to building telephone system with digital-entry code activation of gate operator and auxiliary keypad entry, **as directed**.
 - 1) Residential System: Designed to be wired to same line with telephone.
 - 2) Multiunit System: Designed to be wired to a dedicated telephone line, with capacity to access 20 **OR** 100, **as directed**, telephones, and with electronic directory, **as directed**.
- f. Vehicle Loop Detector: System including automatic closing timer with adjustable time delay before closing, timer cutoff switch, **as directed**, and loop detector designed to open and close gate **OR** hold gate open until traffic clears **OR** reverse gate, **as directed**. Provide electronic detector with adjustable detection patterns, adjustable sensitivity and frequency settings, and panel indicator light designed to detect presence or transit of a vehicle over an embedded loop of wire and to emit a signal activating the gate operator. Provide number of loops consisting of multiple strands of wire, number of turns, loop size, and method of placement at location shown on Drawings, as recommended in writing by detection system manufacturer for function indicated.
 - 1) Loop:
 - a) Wire, in size indicated for field assembly, for pave-over **OR** saw cut with epoxy-grouted, **as directed**, installation.
OR
Loop: Factory preformed in size indicated; style for pave-over **OR** saw cut with epoxy-grouted, **as directed**, installation.
- g. Vehicle Presence Detector: System including automatic closing timer with adjustable time delay before closing, timer cutoff switch, **as directed**, and presence detector designed to open and close gate **OR** hold gate open until traffic clears **OR** reverse gate, **as directed**. Provide retroreflective **OR** emitter/receiver, **as directed**, detector with adjustable detection zone pattern and sensitivity, designed to detect the presence or transit of a vehicle in gate pathway when infrared beam in zone pattern is interrupted, and to emit a signal activating the gate operator.
5. Obstruction Detection Devices: Provide each motorized gate with automatic safety sensor(s). Activation of sensor(s) causes operator to immediately function as follows:
 - a. Action:
 - 1) Reverse gate in both opening and closing cycles and hold until clear of obstruction.
OR
Stop gate in opening cycle and reverse gate in closing cycle and hold until clear of obstruction.
 - b. Internal Sensor: Built-in torque or current monitor senses gate is obstructed.
 - c. Sensor Edge: Contact-pressure-sensitive safety edge, profile, and sensitivity designed for type of gate and component indicated, in locations as follows. Connect to control circuit using take-up cable reel **OR** self-coiling cable **OR** gate edge transmitter and operator receiver system, **as directed**.
 - 1) Along entire gate leaf leading edge **OR** Along entire gate leaf trailing edge **OR** Across entire gate leaf bottom edge **OR** Along entire length of gate posts **OR** Along entire length of gate guide posts **OR** Where indicated on Drawings, **as directed**.
 - d. Photoelectric/Infrared Sensor System: Designed to detect an obstruction in gate's path when infrared beam in the zone pattern is interrupted.
6. Limit Switches: Adjustable switches, interlocked with motor controls and set to automatically stop gate at fully retracted and fully extended positions.
7. Emergency Release Mechanism: Quick-disconnect release of operator drive system of the following type of mechanism, permitting manual operation if operator fails. Design system so control-circuit power is disconnected during manual operation.
 - a. Type:

- 1) Integral fail-safe release, allowing gate to be pushed open without mechanical devices, keys, cranks, or special knowledge.
OR
Mechanical device, key, or crank-activated release.
8. Operating Features:
 - a. Digital Microprocessor Control: Electronic programmable means for setting, changing, and adjusting control features with capability for monitoring and auditing gate activity, **as directed**. Provide unit that is isolated from voltage spikes and surges.
 - b. System Integration: With controlling circuit board capable of accepting any type of input from external devices.
 - c. Master/Slave Capability: Control stations designed and wired for gate pair operation.
 - d. Automatic Closing Timer: With adjustable time delay before closing and timer cutoff switch, **as directed**.
 - e. Open Override Circuit: Designed to override closing commands.
 - f. Reversal Time Delay: Designed to protect gate system from shock load on reversal in both directions.
 - g. Maximum Run Timer: Designed to prevent damage to gate system by shutting down system if normal time to open gate is exceeded.
 - h. Clock Timer: 24-hour **OR** Seven-day, **as directed**, programmable for regular events.
9. Accessories:
 - a. Warning Module: Audio **OR** Visual, **as directed**, ADA/ABA-compliant, constant-light **OR** strobe-light, **as directed**, alarm sounding three to five seconds in advance of gate operation and continuing until gate stops moving.
 - b. Battery Backup System: Battery-powered drive and access-control system, independent of primary drive system:
 - 1) Fail Safe: Gate opens and remains open until power is restored.
 - 2) Fail Secure: Gate cycles on battery power, then fail safe when battery is discharged.
 - c. External electric-powered solenoid **OR** magnetic, **as directed**, lock with delay timer allowing time for lock to release before gate operates.
 - d. Fire **OR** Postal, **as directed**, box.
 - e. Fire strobe **OR** siren, **as directed**, alarm.
 - f. Intercom System: as directed by the Owner.
 - g. Instructional, Safety, and Warning Labels and Signs: According to UL 325 **OR** Manufacturer's standard for components and features specified **OR** As indicated on Drawings, **as directed**.
- N. Aluminum Finishes
 1. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 2 mils (0.05 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Color and Gloss: As selected from manufacturer's full range.
- O. Steel Finishes
 1. Surface Preparation: Clean surfaces according to SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning" **OR** SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning", **as directed**.
 - a. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
 2. Powder Coating: Immediately after cleaning, apply 2-coat finish consisting of epoxy primer and TGIC polyester topcoat, with a minimum total dry film thickness of not less than 8 mils (0.20 mm). Comply with coating manufacturer's written instructions.
 - a. Color and Gloss: As selected from manufacturer's full range.
 3. Primer Application: Apply zinc-rich epoxy primer immediately after cleaning, to provide a minimum dry film thickness of 2 mils (0.05 mm) per applied coat, to surfaces that will be exposed after assembly and installation, and to concealed surfaces.

4. Shop-Painted Finish: Comply with Division 09 Section(s) "Exterior Painting" OR "High-performance Coatings", **as directed**.
5. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
 - a. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

P. Metallic-Coated Steel Finishes

1. Galvanized Finish: Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
2. Surface Preparation: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a zinc-phosphate, **as directed**, conversion coating suited to the organic coating to be applied over it. Clean welds, mechanical connections, and abraded areas and repair galvanizing to comply with ASTM A 780.
3. Powder Coating: Immediately after cleaning and pretreating, apply TGIC polyester powder-coat finish, with a minimum dry film thickness of 2 mils (0.05 mm).
 - a. Color and Gloss: As selected from manufacturer's full range.
4. Powder Coating: Immediately after cleaning and pretreating, apply 2-coat finish consisting of zinc-rich, **as directed**, epoxy prime coat and TGIC polyester topcoat, with a minimum dry film thickness of 2 mils (0.05 mm) for topcoat. Comply with coating manufacturer's written instructions to achieve a minimum total dry film thickness of 4 mils (0.10 mm).
 - a. Color and Gloss: As selected from manufacturer's full range.
 - b. Comply with surface finish testing requirements in ASTM F 2408 except change corrosion-resistance requirement to 3000 hours without failure, **as directed**.
5. High-Performance Coating: Apply epoxy primer, epoxy intermediate coat, and polyurethane topcoat to prepared surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.
 - a. Match approved Samples for color, texture, and coverage. Remove and refinish, or recoat work that does not comply with specified requirements.

1.3 EXECUTION

A. Examination

1. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.
2. Do not begin installation before final grading is completed unless otherwise permitted by the Owner.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

1. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet (152.5 m) or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

C. Decorative Fence Installation

1. Install fences according to manufacturer's written instructions.
OR
Install fences by setting posts as indicated and fastening rails and infill panels to posts. Peen threads of bolts after assembly to prevent removal, **as directed**.

2. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches (600 mm) plus 3 inches (75 mm) for each foot (300 mm) or fraction of a foot (300 mm) that fence height exceeds 4 feet (1200 mm).
3. Post Setting: Set posts in concrete **OR** with mechanical anchors **OR** by mechanically driving into soil, **as directed**, at indicated spacing into firm, undisturbed soil.
 - a. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
 - b. Concrete Fill: Place concrete around posts and sleeves, **as directed**, and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.
 - 1) Exposed Concrete: Extend 2 inches (50 mm) above grade. Finish and slope top surface to drain water away from post.
 - 2) Concealed Concrete: Top 2 inches (50 mm) below grade as indicated on Drawings to allow covering with surface material. Slope top surface of concrete to drain water away from post.
 - c. Posts Set in Concrete: Extend post to within 6 inches (150 mm) of specified excavation depth, but not closer than 3 inches (75 mm) to bottom of concrete.
 - d. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least 3/4 inch (20 mm) larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.
 - 1) Extend posts at least 5 inches (125 mm) into sleeve.
 - 2) After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.
 - e. Posts Set into Voids in Concrete: Form or core drill holes not less than 3/4 inch (20 mm) larger than outside diagonal dimension of post.
 - 1) Extend posts at least 5 inches (125 mm) into concrete.
 - 2) Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink grout, mixed and placed to comply with grout manufacturer's written instructions. Finish and slope top surface of grout to drain water away from post.
 - f. Mechanically Driven Posts: Drive into soil to depth of 30 inches (762 mm) **OR** 36 inches (914 mm), **as directed**. Protect post top to prevent distortion.
 - g. Space posts uniformly at 6 feet (1.83 m) **OR** 8 feet (2.44 m), **as directed**, o.c.

D. Gate Installation

1. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

E. Gate Operator Installation

1. General: Install gate operators according to manufacturer's written instructions, aligned and true to fence line and grade.
2. Excavation for Support Posts **OR** Pedestals **OR** Concrete Bases, **as directed**: Hand-excavate holes for bases, in firm, undisturbed soil to dimensions and depths and at locations as required by gate operator component manufacturer's written instructions and as indicated.
3. Concrete Bases: Cast-in-place or precast concrete, depth not less than 12 inches (300 mm) **OR** 6 to 12 inches (150 to 300 mm) below frost line, **as directed**, dimensioned and reinforced according to gate operator component manufacturer's written instructions and as indicated on Drawings.
4. Vehicle Loop Detector System: Cut grooves in pavement, **as directed**, and bury and seal wire loop according to manufacturer's written instructions. Connect to equipment operated by detector.

5. Comply with NFPA 70 and manufacturer's written instructions for grounding of electric-powered motors, controls, and other devices.
- F. Grounding And Bonding
1. Fence Grounding: Install at maximum intervals of 1500 feet (450 m) except as follows:
 - a. Fences within 100 Feet (30 m) of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet (225 m).
 - 1) Gates and Other Fence Openings: Ground fence on each side of opening.
 - a) Bond metal gates to gate posts.
 - b) Bond across openings, with and without gates, except openings indicated as intentional fence discontinuities. Use No. 2 AWG wire and bury it at least 18 inches (460 mm) below finished grade.
 2. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet (45 m) on each side of crossing.
 3. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.
 4. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches (150 mm) below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at the grounding location.
 5. Bonding Method for Gates: Connect bonding jumper between gate post and gate frame.
 6. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.
 - a. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
 - b. Make connections with clean, bare metal at points of contact.
 - c. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
 - d. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
 - e. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.
 7. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.
- G. Field Quality Control
1. Grounding-Resistance Testing: Engage a qualified testing agency to perform tests and inspections.
 - a. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.
 - b. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify the Owner promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
 - c. Report: Prepare test reports certified by a testing agency of grounding resistance at each test location. Include observations of weather and other phenomena that may affect test results.
- H. Adjusting
1. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire

operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

2. Automatic Gate Operators: Energize circuits to electrical equipment and devices. Adjust operators, controls, safety devices, alarms, **as directed**, and limit switches.
 - a. Hydraulic Operators: Purge Operating System, Adjust Pressure And Fluid Levels, And Check For Leaks.
 - b. Operational Test: After Electrical Circuitry Has Been Energized, Start Units To Confirm Proper Motor Rotation And Unit Operation.
 - c. Test And Adjust Controls, Alarms, **as directed**, And Safeties. Replace Damaged And Malfunctioning Controls And Equipment.
 3. Lubricate hardware, gate operators, **as directed**, and other moving parts.
- I. Demonstration
1. Train Owner's personnel to adjust, operate, and maintain gates.

SECTION 32 33 00 00 - CSF SITE FURNISHINGS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Site Furnishings are part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.32 33 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Bicycle racks.
 - 2. Parking blocks.
- B. Related Documents: The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Indicate materials, construction, configuration, dimensions, and finishes.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Bicycle Rack and Parking Blocks are included below. If other Site Furnishings are required, specify them in this Section. Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 BICYCLE RACK

- A. Manufacturer: Subject to compliance with project requirements, manufacturers offering products which may be incorporated in the Work include the following:
 - 1. Brandir International, New York, NY (212) 505-6500.
 - 2. Huntco Supply, LLC, Portland, OR (800) 547-5909.
 - 3. Trilary, Incorporated, Middleton, WI (800) 448-7931.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Model:
 - 1. Brandair: #RB-051G.
 - 2. Huntco: #BR 5 SF-G.
 - 3. Trilary: #H36-5-SF-G.
- D. Ribbon Rack; 5 bicycle capacity, ground anchored.
 - 1. ASTM A 53, Schedule 40 galvanized pipe with 2.375 inch O.D. x 0.154 inch thick wall, hot-dipped galvanized after fabrication.

2.2 PARKING BLOCKS

- A. Parking Blocks:
 - 1. Manufacturers: Subject to compliance with project requirements, manufacturers offering products which may be incorporated in the Work include the following:
 - a. Amazing Recycled Products, Denver, CO (800) 241-2174.
 - b. American Recreational Products, Ronkonkoma, NY (800) 663-4096.
 - c. The Parking Block Store, Sherwood, MD (800) 683-9963.
 - d. Phoenix Recycled Plastics Corporation, Ambler, PA (215) 653-0300.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Model:
 - 1. Amazing: #ARP8150.
 - 2. American: #PB4-6
 - 3. Parking Block Store: Saver Block.
 - 4. Phoenix: Paving Maintenance Products (stops).
- D. Design: Solid block, 6 feet long by 4 inches high. Manufactured from 100% recycled plastic. Anchoring as recommended by manufacturer.
- E. Color: Homogenous. Gray.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's published instructions at locations indicated on Drawings.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 84 13 00 - IRRIGATION SYSTEMS**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for irrigation systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Piping.
 - b. Encasement for piping.
 - c. Manual valves.
 - d. Pressure-reducing valves.
 - e. Automatic control valves.
 - f. Automatic drain valves.
 - g. Transition fittings.
 - h. Dielectric fittings.
 - i. Miscellaneous piping specialties.
 - j. Sprinklers.
 - k. Quick couplers.
 - l. Drip irrigation specialties.
 - m. Controllers.
 - n. Boxes for automatic control valves.

C. Definitions

1. Circuit Piping: Downstream from control valves to sprinklers, specialties, and drain valves. Piping is under pressure during flow.
2. Drain Piping: Downstream from circuit-piping drain valves. Piping is not under pressure.
3. Main Piping: Downstream from point of connection to water distribution piping to, and including, control valves. Piping is under water-distribution-system pressure.
4. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50 V or for remote-control, signaling power-limited circuits.

D. Performance Requirements

1. Irrigation zone control shall be automatic operation with controller and automatic control **OR** manual operation with manual, **as directed**, valves.
2. Location of Sprinklers and Specialties: Design location is approximate. Make minor adjustments necessary to avoid plantings and obstructions such as signs and light standards. Maintain 100 percent irrigation coverage of areas indicated.
3. Delegated Design: Design 100 percent coverage irrigation system, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
 - a. Available land records indicate the following soil conditions:
 - 1) Type: Coarse **OR** Medium **OR** Fine, **as directed**.
 - 2) Texture:
 - a) Sand: as directed by the Owner.
 - b) Silt: as directed by the Owner .
 - c) Clay: as directed by the Owner.
 - 3) Particle Size:
 - a) Sand: as directed by the Owner.
 - b) Silt: as directed by the Owner.

- c) Clay: as directed by the Owner.
 - 4) Structure: Single grained **OR** Granular **OR** Platy **OR** Blocky, **as directed**.
 - 5) Density: as directed by the Owner.
 - 6) Moisture Content: as directed by the Owner.
 - 7) Infiltration Rate: as directed by the Owner.
- 4. Minimum Working Pressures: The following are minimum pressure requirements for piping, valves, and specialties unless otherwise indicated:
 - a. Irrigation Main Piping: 200 psig (1380 kPa).
 - b. Circuit Piping: 150 psig (1035 kPa).

E. Submittals

- 1. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- 2. Wiring Diagrams: For power, signal, and control wiring.
- 3. Delegated-Design Submittal: For irrigation systems indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 4. Zoning Chart: Show each irrigation zone and its control valve.
- 5. Controller Timing Schedule: Indicate timing settings for each automatic controller zone.
- 6. Field quality-control reports.
- 7. Operation and maintenance data.

F. Quality Assurance

- 1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

G. Delivery, Storage, And Handling

- 1. Deliver piping with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.
- 2. Store plastic piping protected from direct sunlight. Support to prevent sagging and bending.

H. Project Conditions

- 1. Interruption of Existing Water Service: Do not interrupt water service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary water service according to requirements indicated:
 - a. Notify the Owner no fewer than two days in advance of proposed interruption of water service.
 - b. Do not proceed with interruption of water service without the Owner's written permission.

1.2 PRODUCTS

A. Pipes, Tubes, And Fittings

- 1. Comply with requirements in the piping schedule for applications of pipe, tube, and fitting materials, and for joining methods for specific services, service locations, and pipe sizes.
- 2. Galvanized-Steel Pipe: ASTM A 53/A 53M, Standard Weight, Type E, Grade B.
 - a. Galvanized-Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106/A 106M, Standard Weight, seamless-steel pipe with threaded ends.
 - b. Galvanized, Gray-Iron Threaded Fittings: ASME B16.4, Class 125, standard pattern.
 - c. Malleable-Iron Unions: ASME B16.39, Class 150, hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface, and female threaded ends.
 - d. Cast-Iron Flanges: ASME B16.1, Class 125.
- 3. Ductile-Iron Pipe with Mechanical Joints: AWWA C151, with mechanical-joint bell and spigot ends.

- a. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 1) Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
 4. Ductile-Iron Pipe with Push-on Joint: AWWA C151, with push-on-joint bell and spigot ends.
 - a. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 - 1) Gaskets: AWWA C111, rubber.
 5. Soft Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B), water tube, annealed temper.
 - a. Copper Pressure Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper solder-joint fittings. Furnish wrought-copper fittings if indicated.
 - b. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end.
 - c. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends.
 6. Hard Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B), and ASTM B 88, Type M (ASTM B 88M, Type C), water tube, drawn temper.
 - a. Copper Pressure Fittings: ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper solder-joint fittings. Furnish wrought-copper fittings if indicated.
 - b. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end.
 - c. Copper Unions: MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces and solder-joint or threaded ends.
 7. PE Pipe with Controlled ID: ASTM F 771, PE 3408 compound; SDR 11.5 and SDR 15.
 - a. Insert Fittings for PE Pipe: ASTM D 2609, nylon or propylene plastic with barbed ends. Include bands or other fasteners.
 8. PE Pipe with Controlled OD: ASTM F 771, PE 3408 compound, SDR 11.
 - a. PE Butt, Heat-Fusion Fittings: ASTM D 3261.
 - b. PE Socket-Type Fittings: ASTM D 2683.
 9. PE Pressure Pipe: AWWA C906, with DR of 7.3, 9, or 9.3 and PE compound number required to give pressure rating not less than 160 psig (1100 kPa) **OR** 200 psig (1380 kPa), **as directed**.
 - a. PE Butt, Heat-Fusion Fittings: ASTM D 3261.
 - b. PE Socket-Type Fittings: ASTM D 2683.
 10. PVC Pipe: ASTM D 1785, PVC 1120 compound, Schedule 40 **OR** Schedule 80, **as directed**.
 - a. PVC Socket Fittings: ASTM D 2466, Schedule 40 **OR** Schedule 80, **as directed**.
 - b. PVC Threaded Fittings: ASTM D 2464, Schedule 80.
 - c. PVC Socket Unions: Construction similar to MSS SP-107, except both headpiece and tailpiece shall be PVC with socket ends.
 11. PVC Pipe, Pressure Rated: ASTM D 2241, PVC 1120 compound, SDR 21 and SDR 26.
 - a. PVC Socket Fittings: ASTM D 2467, Schedule 80.
 - b. PVC Socket Unions: Construction similar to MSS SP-107, except both headpiece and tailpiece shall be PVC with socket or threaded ends.
- B. Piping Joining Materials
 1. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick unless otherwise indicated; full-face or ring type unless otherwise indicated.
 2. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1, carbon steel unless otherwise indicated.
 3. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing unless otherwise indicated.
 4. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
 5. Solvent Cements for Joining PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
 6. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.
- C. Encasement For Piping
 1. Standard: ASTM A 674 or AWWA C105.

2. Form: Sheet **OR** Tube, **as directed**.
3. Material: LLDPE film of 0.008-inch (0.20-mm) **OR** LLDPE film of 0.008-inch (0.20-mm) minimum thickness or high-density, cross-laminated PE film of 0.004-inch (0.10-mm) **OR** High-density, cross-laminated PE film of 0.004-inch (0.10-mm), **as directed**, minimum thickness.
4. Color: Black **OR** Natural, **as directed**.

D. Manual Valves

1. Curb Valves:
 - a. Description:
 - 1) Standard: AWWA C800.
 - 2) NPS 1 (DN 25) and Smaller Pressure Rating: 100 psig (690 kPa) minimum **OR** 150 psig (1035 kPa), **as directed**.
 - 3) NPS 1-1/4 to NPS 2 (DN 32 to DN 50) Pressure Rating: 80 psig (550 kPa) minimum **OR** 150 psig (1035 kPa), **as directed**.
 - 4) Body Material: Brass or bronze with ball or ground-key plug.
 - 5) End Connections: Matching piping.
 - 6) Stem: With wide-tee head.
2. Curb-Valve Casing:
 - a. Standard: Similar to AWWA M44 for cast-iron valve casings.
 - b. Top Section: Telescoping, of length required for depth of burial of curb valve.
 - c. Barrel: Approximately 3-inch (75-mm) diameter.
 - d. Plug: With lettering "WATER."
 - e. Bottom Section: With base of size to fit over valve.
 - f. Base Support: Concrete collar **OR** wood frame, **as directed**.
3. Shutoff Rods for Curb-Valve Casings: Furnish one **OR** two, **as directed**, steel, tee-handle shutoff rod(s) with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve for Project.
4. Brass Ball Valves:
 - a. Description:
 - 1) Standard: MSS SP-110.
 - 2) SWP Rating: 150 psig (1035 kPa).
 - 3) CWP Rating: 600 psig (4140 kPa).
 - 4) Body Design: Two piece.
 - 5) Body Material: Forged brass.
 - 6) Ends: Threaded or solder joint if indicated.
 - 7) Seats: PTFE or TFE.
 - 8) Stem: Brass.
 - 9) Ball: Chrome-plated brass.
 - 10) Port: Full **OR** regular, but not reduced, **as directed**.
5. Bronze Ball Valves:
 - a. Description:
 - 1) Standard: MSS SP-110.
 - 2) SWP Rating: 150 psig (1035 kPa).
 - 3) CWP Rating: 600 psig (4140 kPa).
 - 4) Body Design: Two piece.
 - 5) Body Material: Bronze.
 - 6) Ends: Threaded or solder joint if indicated.
 - 7) Seats: PTFE or TFE.
 - 8) Stem: Bronze.
 - 9) Ball: Chrome-plated brass.
 - 10) Port: Full **OR** regular, but not reduced, **as directed**.
6. Iron Ball Valves:
 - a. Description:
 - 1) Standard: MSS SP-72.
 - 2) CWP Rating: 200 psig (1380 kPa).

- 3) Body Design: Split body.
- 4) Body Material: ASTM A 126, gray iron.
- 5) Ends: Flanged.
- 6) Seats: PTFE or TFE.
- 7) Stem: Stainless steel.
- 8) Ball: Stainless steel.
- 9) Port: Full.
7. Plastic Ball Valves:
 - a. Description:
 - 1) Standard: MSS SP-122.
 - 2) Pressure Rating: 125 psig (860 kPa) minimum **OR** 150 psig (1035 kPa), **as directed**.
 - 3) Body Material: PVC.
 - 4) Type: Union.
 - 5) End Connections: Socket or threaded.
 - 6) Port: Full.
8. Bronze Gate Valves:
 - a. Description:
 - 1) Standard: MSS SP-80, Type 2.
 - 2) Class: 125.
 - 3) CWP Rating: 200 psig (1380 kPa).
 - 4) Body Material: ASTM B 62 bronze with integral seat and screw-in bonnet.
 - 5) Ends: Threaded or solder joint.
 - 6) Stem: Bronze, nonrising.
 - 7) Disc: Solid wedge; bronze.
 - 8) Packing: Asbestos free.
 - 9) Handwheel: Malleable iron, bronze, or aluminum.
9. Iron Gate Valves, Resilient Seated:
 - a. Description:
 - 1) Standard: AWWA C509.
 - 2) Pressure Rating: 200 psig (1380 kPa) **OR** 250 psig (1725 kPa), **as directed**, minimum.
 - 3) Body Material: Ductile or gray iron with bronze trim.
 - 4) End Connections: Mechanical joint or push-on joint.
 - 5) Interior Coating: Comply with AWWA C550.
 - 6) Body Design: Nonrising stem.
 - 7) Operator: Stem nut.
 - 8) Disc: Solid wedge with resilient coating.
10. Iron Gate Valve Casings:
 - a. Standard: AWWA M44 for cast-iron valve casings.
 - b. Top Section: Adjustable extension of length required for depth of burial of valve.
 - c. Barrel: Approximately 5-inch (125-mm) diameter.
 - d. Plug: With lettering "WATER."
 - e. Bottom Section: With base of size to fit over valve.
 - f. Base Support: Concrete collar **OR** wood frame, **as directed**.
11. Operating Wrenches for Iron Gate Valve Casings: Furnish one **OR** two, **as directed**, steel, tee-handle operating wrench(es) with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut for Project.
12. Iron Gate Valves, NRS:
 - a. Description:
 - 1) Standard: MSS SP-70, Type I.
 - 2) CWP Rating: 200 psig (1380 kPa).
 - 3) Body Material: ASTM A 126, gray iron with bolted bonnet.
 - 4) Ends: Flanged.
 - 5) Trim: All bronze.
 - 6) Disc: Solid wedge.

- 7) Packing and Gasket: Asbestos free.
13. Iron Gate Valves, OS&Y:
 - a. Description:
 - 1) Standard: MSS SP-70, Type I.
 - 2) CWP Rating: 200 psig (1380 kPa).
 - 3) Body Material: ASTM A 126, gray iron with bolted bonnet.
 - 4) Ends: Flanged.
 - 5) Trim: All bronze.
 - 6) Disc: Solid wedge.
 - 7) Packing and Gasket: Asbestos free.
- E. Pressure-Reducing Valves
 1. Water Regulators:
 - a. Description:
 - 1) Standard: ASSE 1003.
 - 2) Body Material: Bronze for NPS 2 (DN 50) and smaller; cast iron with interior lining complying with AWWA C550 or that is FDA approved for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
 - 3) Pressure Rating: Initial pressure of 150 psig (1035 kPa).
 - 4) End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 and NPS 3 (DN 65 and DN 80).
 2. Water Control Valves:
 - a. Description: Pilot-operation, diaphragm-type, single-seated main water control valve. Include small pilot control valve, restrictor device, specialty fittings, and sensor piping.
 - 1) Main Valve Body: Cast- or ductile-iron body with AWWA C550 or FDA-approved, interior epoxy coating; or stainless-steel body.
 - 2) Pattern: Angle-valve **OR** Globe-valve, **as directed**, design.
 - 3) Trim: Stainless steel.
 - 4) Pressure Rating: Initial pressure of 150 psig (1035 kPa) minimum.
 - 5) End Connections: Threaded for NPS 2 (DN 50) and smaller; flanged for NPS 2-1/2 (DN 65) and larger.
- F. Automatic Control Valves
 1. Bronze, Automatic Control Valves:
 - a. Description: Cast-bronze body, normally closed, diaphragm type with manual-flow adjustment, and operated by 24-V ac solenoid.
 2. Plastic, Automatic Control Valves:
 - a. Description: Molded-plastic body, normally closed, diaphragm type with manual-flow adjustment, and operated by 24-V ac solenoid.
- G. Automatic Drain Valves
 1. Description: Spring-loaded-ball type of corrosion-resistant construction and designed to open for drainage if line pressure drops below 2-1/2 to 3 psig (17 to 20 kPa).
- H. Transition Fittings
 1. General Requirements: Same size as, and with pressure rating at least equal to and with ends compatible with, piping to be joined.
 2. Transition Couplings:
 - a. Description: AWWA C219, metal sleeve-type coupling for underground pressure piping.
 3. Plastic-to-Metal Transition Fittings:
 - a. Description: PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions; one end with threaded brass insert, and one solvent-cement-socket or threaded end.
 4. Plastic-to-Metal Transition Unions:

- a. Description: MSS SP-107, PVC four-part union. Include one brass or stainless-steel threaded end, one solvent-cement-joint or threaded plastic end, rubber O-ring, and union nut.
- I. Dielectric Fittings
1. General Requirements: Assembly of copper alloy and ferrous materials or ferrous material body with separating nonconductive insulating material suitable for system fluid, pressure, and temperature.
 2. Dielectric Unions:
 - a. Description: Factory-fabricated union, NPS 2 (DN 50) and smaller.
 - 1) Pressure Rating: 150 psig (1035 kPa) minimum **OR** 250 psig (1725 kPa), **as directed**, at 180 deg F (82 deg C).
 - 2) End Connections: Solder-joint copper alloy and threaded ferrous; threaded ferrous.
 3. Dielectric Flanges:
 - a. Description: Factory-fabricated, bolted, companion-flange assembly, NPS 2-1/2 to NPS 4 (DN 65 to DN 100) and larger.
 - 1) Pressure Rating: 150 psig (1035 kPa) minimum **OR** 175 psig (1200 kPa) minimum **OR** 300 psig (2070 kPa), **as directed**.
 - 2) End Connections: Solder-joint copper alloy and threaded ferrous; threaded solder-joint copper alloy and threaded ferrous.
 4. Dielectric-Flange Kits:
 - a. Description: Nonconducting materials for field assembly of companion flanges, NPS 2-1/2 (DN 65) and larger.
 - 1) Pressure Rating: 150 psig (1035 kPa) minimum.
 - 2) Gasket: Neoprene or phenolic.
 - 3) Bolt Sleeves: Phenolic or polyethylene.
 - 4) Washers: Phenolic with steel backing washers.
 5. Dielectric Couplings:
 - a. Description: Galvanized-steel coupling.
 - 1) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
 - 2) End Connections: Female threaded.
 - 3) Lining: Inert and noncorrosive, thermoplastic lining.
 6. Dielectric Nipples:
 - a. Description: Electroplated steel nipple complying with ASTM F 1545.
 - 1) Pressure Rating: 300 psig (2070 kPa) at 225 deg F (107 deg C).
 - 2) End Connections: Male threaded or grooved.
 - 3) Lining: Inert and noncorrosive, propylene.
- J. Miscellaneous Piping Specialties
1. Water Hammer Arresters: ASSE 1010 or PDI WH 201, with bellows or piston-type pressurized cushioning chamber and in sizes complying with PDI WH 201, Sizes A to F.
 2. Pressure Gages: ASME B40.1. Include 4-1/2-inch- (115-mm-) diameter dial, dial range of two times system operating pressure, and bottom outlet.
- K. Sprinklers
1. General Requirements: Designed for uniform coverage over entire spray area indicated at available water pressure.
 2. Metal, Exposed, Impact-Drive Rotary Sprinklers:
 - a. Description:
 - 1) Construction: Brass and other corrosion-resistant metals.
 - 2) Mounting: Aboveground, exposed on riser.
 3. Plastic, Exposed, Impact-Drive Rotary Sprinklers:
 - a. Description:
 - 1) Construction: ABS and corrosion-resistant metals.
 - 2) Mounting: Aboveground, exposed on riser.
 4. Plastic, Pop-up, Gear-Drive Rotary Sprinklers:

- a. Description:
 - 1) Body Material: ABS.
 - 2) Nozzle: ABS **OR** Brass, **as directed**.
 - 3) Retraction Spring: Stainless steel.
 - 4) Internal Parts: Corrosion resistant.
- 5. Metal, Pop-up, Impact-Drive Rotary Sprinklers:
 - a. Description:
 - 1) Case: Brass.
 - 2) Body Material: Brass.
 - 3) Pop-up Height: Approximately 3 inches (75 mm).
 - 4) Sprinkler Construction: Brass and other corrosion-resistant metals.
- 6. Plastic, Pop-up, Impact-Drive Rotary Sprinklers:
 - a. Description:
 - 1) Case: ABS.
 - 2) Pop-up Height: Approximately 3 inches (75 mm).
 - 3) Sprinkler Construction: ABS and other corrosion-resistant metals.
- 7. Metal, Surface Spray Sprinklers:
 - a. Description:
 - 1) Body Material and Flange: Brass.
 - 2) Nozzle: Brass.
 - 3) Pattern: Fixed, with flow adjustment.
- 8. Plastic, Surface Spray Sprinklers:
 - a. Description:
 - 1) Body Material and Flange: ABS.
 - 2) Pattern: Fixed, with flow adjustment.
- 9. Metal, Surface, Pop-up Spray Sprinklers:
 - a. Description:
 - 1) Body Material and Flange: Brass.
 - 2) Nozzle: Brass.
 - 3) Pattern: Fixed, with flow adjustment.
- 10. Plastic, Surface, Pop-up Spray Sprinklers:
 - a. Description:
 - 1) Body Material and Flange: ABS.
 - 2) Pattern: Fixed, with flow adjustment.
- 11. Plastic, Pop-up Spray Sprinklers:
 - a. Description:
 - 1) Body Material: ABS.
 - 2) Nozzle: ABS **OR** Brass, **as directed**.
 - 3) Retraction Spring: Stainless steel.
 - 4) Internal Parts: Corrosion resistant.
 - 5) Pattern: Fixed, with flow adjustment.
- 12. Metal Shrub Sprinklers:
 - a. Description:
 - 1) Body Material: Brass.
 - 2) Nozzle: Brass.
 - 3) Pattern: Fixed, with flow adjustment.
- 13. Plastic Shrub Sprinklers:
 - a. Description:
 - 1) Body Material: ABS or other plastic.
 - 2) Pattern: Fixed, with flow adjustment.

L. Quick Couplers

- 1. Description: Factory-fabricated, bronze or brass, two-piece assembly. Include coupler water-seal valve; removable upper body with spring-loaded or weighted, rubber-covered cap; hose swivel with ASME B1.20.7, 3/4-11.5NH threads for garden hose on outlet; and operating key.

- a. Locking-Top Option: Vandal-resistant locking feature. Include one **OR** two, **as directed**, matching key(s).

M. Drip Irrigation Specialties

1. Freestanding Emitters: Device to deliver water at approximately 20 psig (138 kPa).
 - a. Body Material: PE or vinyl, with flow control.
 - b. Riser to Emitter: PE or PVC flexible tubing.
2. Manifold Emitter Systems: Manifold with tubing and emitters.
 - a. Manifold: With multiple outlets to deliver water to emitters.
 - 1) Body Material: Plastic.
 - 2) Outlet Caps: Plastic, for outlets without installed tubing.
 - 3) Operation: Automatic pressure compensating.
 - b. Tubing: PE or PVC; 1/8-inch (3-mm) minimum ID.
 - c. Emitter: Device to deliver water at approximately 20 psig (138 kPa).
 - 1) Body Material: PE or vinyl, with flow control.
3. Multiple-Outlet Emitter Systems: Emitter with tubing and button-type outlets.
 - a. Emitter: With multiple outlets to deliver water to remote outlets.
 - 1) Body Material: Plastic, with flow control.
 - 2) Outlet Caps: Plastic, for outlets without installed tubing.
 - 3) Operation: Automatic pressure compensating.
 - 4) Emitters: Devices to deliver water at approximately 20 psig (138 kPa).
 - b. Tubing: PE or PVC; 1/8-inch (3-mm) minimum ID.
4. Drip Tubes with Direct-Attached Emitters:
 - a. Tubing: Flexible PE or PVC with plugged end.
 - b. Emitters: Devices to deliver water at approximately 20 psig (138 kPa).
 - 1) Body Material: PE or vinyl, with flow control.
 - 2) Mounting: Inserted into tubing at set intervals.
5. Drip Tubes with Remote Discharge:
 - a. Tubing: Flexible PE or PVC with plugged end.
 - b. Emitters: Devices to deliver water at approximately 20 psig (138 kPa).
 - 1) Body Material: PE or vinyl, with flow control.
 - 2) Mounting: Inserted into tubing at set intervals.
6. Off-Ground Supports: Plastic stakes.
7. Application Pressure Regulators: Brass or plastic housing, NPS 3/4 (DN 20), with corrosion-resistant internal parts; capable of controlling outlet pressure to approximately 20 psig (138 kPa).
8. Filter Units: Brass or plastic housing, with corrosion-resistant internal parts; of size and capacity required for devices downstream from unit.
9. Air Relief Valves: Brass or plastic housing, with corrosion-resistant internal parts.
10. Vacuum Relief Valves: Brass or plastic housing, with corrosion-resistant internal parts.

N. Controllers

1. Description:
 - a. Controller Stations for Automatic Control Valves: Each station is variable from approximately 5 to 60 minutes. Include switch for manual or automatic operation of each station.
 - b. Exterior Control Enclosures: NEMA 250, Type 4, weatherproof, with locking cover and two matching keys; include provision for grounding.
 - 1) Body Material: Enameled-steel sheet metal **OR** Stainless-steel sheet metal **OR** Molded plastic, **as directed**.
 - 2) Mounting: Freestanding type for concrete base **OR** Surface type for wall, **as directed**.
 - c. Interior Control Enclosures: NEMA 250, Type 12, dripproof, with locking cover and two matching keys.
 - 1) Body Material: Enameled-steel sheet metal **OR** Stainless-steel sheet metal **OR** Molded plastic, **as directed**.

- 2) Mounting: Freestanding type for concrete base **OR** Surface type for wall, **as directed**.
- d. Control Transformer: 24-V secondary, with primary fuse.
- e. Timing Device: Adjustable, 24-hour, 14-day clock, with automatic operations to skip operation any day in timer period, to operate every other day, or to operate two or more times daily.
 - 1) Manual or Semiautomatic Operation: Allows this mode without disturbing preset automatic operation.
 - 2) Nickel-Cadmium Battery and Trickle Charger: Automatically powers timing device during power outages.
 - 3) Surge Protection: Metal-oxide-varistor type on each station and primary power.
- f. Moisture Sensor: Adjustable from one to seven days, to shut off water flow during rain.
- g. Wiring: UL 493, Type UF multiconductor, with solid-copper conductors; insulated cable; suitable for direct burial.
 - 1) Feeder-Circuit Cables: No. 12 AWG minimum, between building and controllers.
 - 2) Low-Voltage, Branch-Circuit Cables: No. 14 AWG minimum, between controllers and automatic control valves; color-coded different from feeder-circuit-cable jacket color; with jackets of different colors for multiple-cable installation in same trench.
 - 3) Splicing Materials: Manufacturer's packaged kit consisting of insulating, spring-type connector or crimped joint and epoxy resin moisture seal; suitable for direct burial.
- h. Concrete Base: Reinforced precast concrete not less than 36 by 24 by 4 inches (900 by 600 by 100 mm) thick, and 6 inches (150 mm) greater in each direction than overall dimensions of controller. Include opening for wiring.

O. Boxes For Automatic Control Valves

- 1. Plastic Boxes:
 - a. Description: Box and cover, with open bottom and openings for piping; designed for installing flush with grade.
 - 1) Size: As required for valves and service.
 - 2) Shape: Round **OR** Square **OR** Rectangular, **as directed**.
 - 3) Sidewall Material: PE **OR** PE, ABS, or FRP, **as directed**.
 - 4) Cover Material: PE **OR** PE, ABS, or FRP, **as directed**.
 - a) Lettering: "VALVE BOX" **OR** "IRRIGATION," **as directed**.
- 2. Polymer-Concrete Boxes:
 - a. Description: Box and cover, with open bottom and openings for piping; designed for installing flush with grade.
 - 1) Size: As required for valves and service.
 - 2) Shape: Round **OR** Square **OR** Rectangular, **as directed**.
 - 3) Sidewall Material: Polymer concrete with lateral and vertical sidewall design loading of 5000 lb (2268 kg) **OR** 10,000 lb (4536 kg) **OR** 15,000 lb (6800 kg), **as directed**, minimum over 10 by 10 inches (254 by 254 mm) square.
 - 4) Cover Material: Polymer concrete **OR** Reinforced polymer concrete, **as directed**, with cover design loading of 5000 lb (2268 kg) **OR** 10,000 lb (4536 kg) **OR** 15,000 lb (6800 kg), **as directed**, minimum over 10 by 10 inches (254 by 254 mm) square.
 - a) Lettering: "VALVE BOX" **OR** "IRRIGATION," **as directed**.
- 3. Drainage Backfill: Cleaned gravel or crushed stone, graded from 3/4 inch (19 mm) minimum to 3 inches (75 mm) maximum.

1.3 EXECUTION

A. Earthwork

- 1. Excavating, trenching, and backfilling are specified in Division 31 Section "Earth Moving".
- 2. Install warning tape directly above pressure piping, 12 inches (300 mm) below finished grades, except 6 inches (150 mm) below subgrade under pavement and slabs.

3. Drain Pockets: Excavate to sizes indicated. Backfill with cleaned gravel or crushed stone, graded from 3/4 to 3 inches (19 to 75 mm), to 12 inches (300 mm) below grade. Cover gravel or crushed stone with sheet of asphalt-saturated felt and backfill remainder with excavated material.
 4. Provide minimum cover over top of underground piping according to the following:
 - a. Irrigation Main Piping: Minimum depth of 36 inches (900 mm) below finished grade, or not less than 18 inches (450 mm) below average local frost depth, whichever is deeper.
 - b. Circuit Piping: 12 inches (300 mm).
 - c. Drain Piping: 12 inches (300 mm)
 - d. Sleeves: 24 inches (600 mm).
- B. Piping Installation
1. Location and Arrangement: Drawings indicate location and arrangement of piping systems. Install piping as indicated unless deviations are approved on Coordination Drawings.
 2. Install piping at minimum uniform slope of 0.5 percent down toward drain valves.
 3. Install piping free of sags and bends.
 4. Install groups of pipes parallel to each other, spaced to permit valve servicing.
 5. Install fittings for changes in direction and branch connections.
 6. Install unions adjacent to valves and to final connections to other components with NPS 2 (DN 50) or smaller pipe connection.
 7. Install flanges adjacent to valves and to final connections to other components with NPS 2-1/2 (DN 65) or larger pipe connection.
 8. Install underground thermoplastic piping according to ASTM D 2774 and ASTM F 690.
 9. Install expansion loops in control-valve boxes for plastic piping.
 10. Lay piping on solid subbase, uniformly sloped without humps or depressions.
 11. Install ductile-iron piping according to AWWA C600.
 12. Install PVC piping in dry weather when temperature is above 40 deg F (5 deg C). Allow joints to cure at least 24 hours at temperatures above 40 deg F (5 deg C) before testing.
 13. Install water regulators with shutoff valve and strainer on inlet and pressure gage on outlet. Install shutoff valve on outlet. Install aboveground or in control-valve boxes.
 14. Water Hammer Arresters: Install between connection to building main and circuit valves aboveground or in control-valve boxes.
 15. Install piping in sleeves under parking lots, roadways, and sidewalks.
 16. Install sleeves made of Schedule 40 **OR** Schedule 80, **as directed**, PVC pipe and socket fittings, and solvent-cemented joints.
 17. Install transition fittings for plastic-to-metal pipe connections according to the following:
 - a. Underground Piping:
 - 1) NPS 1-1/2 (DN 40) and Smaller: Plastic-to-metal transition fittings.
 - 2) NPS 2 (DN 50) and Larger: AWWA transition couplings.
 - b. Aboveground Piping:
 - 1) NPS 2 (DN 50) and Smaller: Plastic-to-metal transition fittings **OR** unions, **as directed**.
 - 2) NPS 2 (DN 50) and Larger: Use dielectric flange kits with one plastic flange.
 18. Install dielectric fittings for dissimilar-metal pipe connections according to the following:
 - a. Underground Piping:
 - 1) NPS 2 (DN 50) and Smaller: Dielectric coupling or dielectric nipple.
 - 2) NPS 2-1/2 (DN 65) and Larger: Prohibited except in control-valve box.
 - b. Aboveground Piping:
 - 1) NPS 2 (DN 50) and Smaller: Dielectric union.
 - 2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Dielectric flange.
 - 3) NPS 5 (DN 125) and Larger: Dielectric flange kit.
 - c. Piping in Control-Valve Boxes:
 - 1) NPS 2 (DN 50) and Smaller: Dielectric union.
 - 2) NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Dielectric flange.
 - 3) NPS 5 (DN 125) and Larger: Dielectric flange kit.

C. Joint Construction

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
3. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - a. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - b. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
4. Flanged Joints: Select rubber gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
5. Ductile-Iron Piping Gasketed Joints: Comply with AWWA C600 and AWWA M41.
6. Copper-Tubing Brazed Joints: Construct joints according to CDA's "Copper Tube Handbook," using copper-phosphorus brazing filler metal.
7. Copper-Tubing Soldered Joints: Apply ASTM B 813 water-flushable flux to tube end unless otherwise indicated. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy (0.20 percent maximum lead content) complying with ASTM B 32.
8. PE Piping Fastener Joints: Join with insert fittings and bands or fasteners according to piping manufacturer's written instructions.
9. PE Piping Heat-Fusion Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join according to ASTM D 2657.
 - a. Plain-End PE Pipe and Fittings: Use butt fusion.
 - b. Plain-End PE Pipe and Socket Fittings: Use socket fusion.
10. PVC Piping Solvent-Cemented Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 - a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and solvent cements.
 - b. PVC Pressure Piping: Join schedule number, ASTM D 1785, PVC pipe and PVC socket fittings according to ASTM D 2672. Join other-than-schedule-number PVC pipe and socket fittings according to ASTM D 2855.
 - c. PVC Nonpressure Piping: Join according to ASTM D 2855.

D. Valve Installation

1. Underground Curb Valves: Install in curb-valve casings with tops flush with grade.
2. Underground Iron Gate Valves, Resilient Seat: Comply with AWWA C600 and AWWA M44. Install in valve casing with top flush with grade.
 - a. Install valves and PVC pipe with restrained, gasketed joints.
3. Aboveground Valves: Install as components of connected piping system.
4. Pressure-Reducing Valves: Install in boxes for automatic control valves or aboveground between shutoff valves. Install full-size valved bypass, **as directed**.
5. Throttling Valves: Install in underground piping in boxes for automatic control valves.
6. Drain Valves: Install in underground piping in boxes for automatic control valves.

E. Sprinkler Installation

1. Install sprinklers after hydrostatic test is completed.
2. Install sprinklers at manufacturer's recommended heights.
3. Locate part-circle sprinklers to maintain a minimum distance of 4 inches (100 mm) from walls and 2 inches (50 mm) from other boundaries unless otherwise indicated.

F. Drip Irrigation Specialty Installation

1. Install freestanding emitters on pipe riser to mounting height indicated.
2. Install manifold emitter systems with tubing to emitters. Plug unused manifold outlets. Install emitters on off-ground supports at height indicated.

3. Install multiple-outlet emitter systems with tubing to outlets. Plug unused emitter outlets. Install outlets on off-ground supports at height indicated.
 4. Install drip tubes with direct-attached emitters on ground.
 5. Install drip tubes with remote-discharge on ground with outlets on off-ground supports at height indicated.
 6. Install off-ground supports of length required for indicated mounted height of device.
 7. Install application pressure regulators and filter units in piping near device being protected, and aboveground **OR** in control-valve boxes, **as directed**.
 8. Install air relief valves and vacuum relief valves in piping, and aboveground **OR** in control-valve boxes, **as directed**.
- G. Automatic Irrigation-Control System Installation
1. Equipment Mounting: Install interior controllers on floor **OR** concrete bases **OR** wall, **as directed**.
 - a. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - b. Install anchor bolts to elevations required for proper attachment to supported equipment.
 2. Equipment Mounting: Install exterior freestanding controllers on precast concrete bases.
 - a. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - b. Install anchor bolts to elevations required for proper attachment to supported equipment.
 3. Install control cable in same trench as irrigation piping and at least 2 inches (51 mm) below or beside piping. Provide conductors of size not smaller than recommended by controller manufacturer. Install cable in separate sleeve under paved areas.
- H. Connections
1. Comply with requirements for piping specified in Division 22 Section "Facility Water Distribution Piping" for water supply from exterior water service piping, water meters, protective enclosures, and backflow preventers. Drawings indicate general arrangement of piping, fittings, and specialties.
 2. Install piping adjacent to equipment, valves, and devices to allow service and maintenance.
 3. Connect wiring between controllers and automatic control valves.
- I. Identification
1. Identify system components. Comply with requirements for identification specified in Division 22 Section "Identification For Plumbing Piping And Equipment".
 2. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplates and signs on each automatic controller.
 - a. Text: In addition to identifying unit, distinguish between multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations.
 3. Warning Tapes: Arrange for installation of continuous, underground, detectable warning tapes over underground piping during backfilling of trenches. See Division 31 Section "Earth Moving" for warning tapes.
- J. Field Quality Control
1. Perform tests and inspections.
 2. Tests and Inspections:
 - a. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
 - b. Operational Test: After electrical circuitry has been energized, operate controllers and automatic control valves to confirm proper system operation.
 - c. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 3. Any irrigation product will be considered defective if it does not pass tests and inspections.
 4. Prepare test and inspection reports.

- K. Adjusting
1. Adjust settings of controllers.
 2. Adjust automatic control valves to provide flow rate at rated operating pressure required for each sprinkler circuit.
 3. Adjust sprinklers and devices, except those intended to be mounted aboveground, so they will be flush with, or not more than 1/2 inch (13 mm) above, finish grade.
- L. Cleaning
1. Flush dirt and debris from piping before installing sprinklers and other devices.
- M. Piping Schedule
1. Install components having pressure rating equal to or greater than system operating pressure.
 2. Piping in control-valve boxes and aboveground may be joined with flanges or unions instead of joints indicated.
 3. Aboveground irrigation main piping, NPS 4 (DN 100) and smaller, shall be one of the following:
 - a. Galvanized-steel pipe and galvanized-steel pipe nipples; galvanized, gray-iron threaded fittings; and threaded joints.
 - b. Type L (Type B) **OR** Type M (Type C), **as directed**, hard copper tube, wrought- or cast-copper fittings, and brazed **OR** soldered, **as directed**, joints.
 - c. Schedule 40 **OR** Schedule 80, **as directed**, PVC pipe; socket-type PVC fittings; and solvent-cemented joints.
 - d. Schedule 80, PVC pipe; Schedule 80, threaded PVC fittings; and threaded joints.
 4. Aboveground irrigation main piping, NPS 5 (DN 125) and larger, shall be one of the following:
 - a. Galvanized-steel pipe and galvanized-steel pipe nipples; galvanized, gray-iron threaded fittings; and threaded joints.
 - b. Schedule 40 **OR** Schedule 80, **as directed**, PVC pipe and socket fittings; and solvent-cemented joints.
 - c. Schedule 80, PVC pipe; Schedule 80, threaded PVC fittings; and threaded joints.
 5. Underground irrigation main piping, NPS 4 (DN 100) and smaller, shall be one of the following:
 - a. NPS 3 and NPS 4 (DN 80 and DN 100) ductile-iron, mechanical-joint pipe; ductile-iron, mechanical-joint fittings, glands, bolts, and nuts; and gasketed joints.
 - b. NPS 3 and NPS 4 (DN 80 and DN 100) ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings and gaskets; and gasketed joints.
 - c. Type L (Type B) soft copper tube, wrought-copper fittings, and brazed joints.
 - d. NPS 4 (DN 100) PE pressure pipe; PE butt, heat-fusion or socket-type fittings; and heat-fusion joints.
 - e. Schedule 40 **OR** Schedule 80, **as directed**, PVC pipe and socket fittings, and solvent-cemented joints.
 - f. Schedule 80, PVC pipe; Schedule 80, threaded PVC fittings; and threaded joints.
 - g. SDR 21, PVC, pressure-rated pipe; Schedule 80, PVC socket fittings; and solvent-cemented joints.
 6. Underground irrigation main piping, NPS 5 (DN 125) and larger, shall be one of the following:
 - a. NPS 6 (DN 150) and larger ductile-iron, mechanical-joint pipe; ductile-iron, mechanical-joint fittings, glands, bolts, and nuts; and gasketed joints.
 - b. NPS 6 (DN 150) and larger ductile-iron, push-on-joint pipe; ductile-iron, push-on-joint fittings and gaskets; and gasketed joints.
 - c. PE pressure pipe; PE butt, heat-fusion fittings; and heat-fusion joints.
 - d. Schedule 40 **OR** Schedule 80, **as directed**, PVC pipe and socket fittings; and solvent-cemented joints.
 - e. SDR 21, PVC, pressure-rated pipe; Schedule 80, PVC socket fittings; and solvent-cemented joints.
 7. Circuit piping, NPS 2 (DN 50) and smaller, shall be one of the following:
 - a. SDR 7 **OR** SDR 9, **as directed**, PE, controlled ID pipe; insert fittings for PE pipe; and fastener joints.

- b. DR 9 **OR** DR 11, **as directed**, PE, controlled OD pipe; PE butt, heat-fusion, or PE socket-type fittings; and heat-fusion joints.
 - c. Schedule 40, PVC pipe and socket fittings; and solvent-cemented joints.
 - d. SDR 26, PVC, pressure-rated pipe; Schedule 40, PVC socket fittings; and solvent-cemented joints.
 - 8. Circuit piping, NPS 2-1/2 to NPS 4 (DN 65 to DN 100), shall be one of the following:
 - a. SDR 7 **OR** SDR 9, **as directed**, PE, controlled ID pipe; insert fittings for PE pipe; and banded or fastener joints.
 - b. DR 9 **OR** DR 11, **as directed**, PE, controlled OD pipe; PE socket or butt-fusion fittings; and heat-fusion joints. NPS 3 (DN 80) pipe and fittings if NPS 2-1/2 (DN 65) pipe and fittings are not available.
 - c. Schedule 40, PVC pipe and socket fittings; and solvent-cemented joints.
 - d. SDR 26, PVC, pressure-rated pipe; Schedule 40, PVC socket fittings; and solvent-cemented joints.
 - 9. Underground Branches and Offsets at Sprinklers and Devices: Schedule 80, PVC pipe; threaded PVC fittings; and threaded joints.
 - a. Option: Plastic swing-joint assemblies, with offsets for flexible joints, manufactured for this application.
 - 10. Risers to Aboveground Sprinklers and Specialties: Type L (Type B) **OR** Type M (Type C), **as directed**, hard copper tube, wrought-copper fittings, and brazed **OR** soldered, **as directed**, joints.
 - 11. Risers to Aboveground Sprinklers and Specialties: Schedule 80, PVC pipe and socket fittings; and solvent-cemented joints.
 - 12. Drain piping shall be one of the following:
 - a. SDR 9, 11.5, or 15, PE, controlled ID pipe; insert fittings for PE pipe; and banded or fastener joints.
 - b. Schedule 40, PVC pipe and socket fittings; and solvent-cemented joints.
 - c. SDR 21, 26, or 32.5, PVC, pressure-rated pipe; Schedule 40, PVC socket fittings; and solvent-cemented joints.
- N. Valve Schedule
- 1. Underground, Shutoff-Duty Valves: Use the following:
 - a. NPS 2 (DN 50) and Smaller: Curb valve, curb-valve casing, and shutoff rod.
 - b. NPS 3 (DN 80) and Larger: Iron gate valve, resilient seated; iron gate valve casing; and operating wrench(es).
 - 2. Aboveground, Shutoff-Duty Valves:
 - a. NPS 2 (DN 50) and Smaller: Brass **OR** Bronze **OR** Plastic, **as directed**, ball valve.
 - b. NPS 2 (DN 50) and Smaller: Bronze gate valve.
 - c. NPS 2-1/2 (DN 65) and Larger: Iron ball valve.
 - d. NPS 2-1/2 (DN 65) and Larger: Iron gate valve, NRS **OR** OS&Y, **as directed**.
 - 3. Throttling-Duty Valves:
 - a. NPS 2 (DN 50) and Smaller: Bronze **OR** Plastic, **as directed**, automatic control valve.
 - b. NPS 2 (DN 50) and Smaller: Brass **OR** Bronze **OR** Plastic, **as directed**, ball valve.
 - c. NPS 2-1/2 and NPS 3 (DN 65 and DN 80): Bronze **OR** Plastic, **as directed**, automatic control valve.
 - d. NPS 2-1/2 and NPS 3 (DN 65 and DN 80): Iron ball valve.
 - 4. Drain Valves:
 - a. NPS 1/2 and NPS 3/4 (DN 15 and DN 20): Automatic drain valve.
 - b. NPS 1/2 and NPS 3/4 (DN 15 and DN 20): Brass **OR** Bronze **OR** Plastic, **as directed**, ball valve.
 - c. NPS 1/2 and NPS 3/4 (DN 15 and DN 20): Bronze gate valve.
 - d. NPS 1 to NPS 2 (DN 25 to DN 50): Brass **OR** Bronze **OR** Plastic, **as directed**, ball valve.
 - e. NPS 1 to NPS 2 (DN 25 to DN 50): Bronze gate valve.

SECTION 32 91 13 00 - CSF SOIL PREPARATION

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Soil Preparation is a part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. pH Adjusters.
 - 2. Soil Conditioners.
 - 3. Fertilizer.
 - 4. Pesticides.
 - 5. Application of topsoil.
 - 6. Landscape grading.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 312000 - Earth Moving: Topsoil.
 - 2. Section 329200 - Turf and Grasses: Groundcover materials.
 - 3. Section 329300 - Plants: Plants, trees, and shrubs.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Requirements: Procedures for submittals.
 - 1. Product Data: Manufacturer's data including installation and storage instructions for each product specified.
 - 2. Assurance/Control Submittals:
 - a. Pesticide Control Plan: Proposed sequence of pesticide work. Include common name, chemical composition, formulation, concentration, rate and method of application, for all products furnished; and names of state certified applicator(s), in the appropriate category.
 - b. Test Reports: Topsoil composition, in duplicate.
 - c. Certifications: In duplicate. Certify that topsoil, peat, lime, aluminum sulfate perlite and vermiculite conforms with requirements specified.

- d. Field Reports: Pesticide application, in duplicate.
- e. Qualification Documentation: Pesticide applicator documentation of experience indicating compliance with specified qualification requirements.

1.3 QUALITY ASSURANCE

- A. Applicator Qualification: Applicator specializing in performing Work of this Section with minimum 5 years documented experience.
 - 1. Pesticide applicator; state certified, using procedures, materials and equipment of type required for Work.
- B. Regulatory Requirements: Conform to applicable requirements of the Local and State Department of Agriculture Extension Service of the state in which the project is located.

1.4 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver materials to job site in unopened containers bearing manufacturer's name and content identification, Environmental Protection Agency (EPA) registration number and manufacturer's registered uses.
- C. Store materials as recommended by manufacturer.

1.5 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Protection of Personnel Property: Apply pesticides so damage will not result to personnel or property from wither direct spray of drifting of chemicals both on and off site.
 - 2. Disposal of Excess Chemicals and Containers: In accordance with Federal, State laws and local rules and regulations.

PART 2 - PRODUCTS

2.1 TOPSOIL

- A. Specified in Section 312000.

NOTE TO SPECIFIER

Edit t pH ADJUSTERS for type selected for specific Project.

2.2 pH ADJUSTERS

- A. Lime:
 - 1. Commercial grade [ground] [hydrated] [or] [burnt] limestone containing not less than 50 percent of total oxides, [____] percent calcium and [____] percent magnesium oxide.
 - 2. Gradation: Minimum 75 percent passing 100-mesh sieve and 100 percent passing 20-mesh sieve.

- B. Ferrous Sulfate: Commercial grade.

2.3 SOIL CONDITIONERS

- A. Use singly or in combinations required to meet requirements for topsoil.
- B. Soil Conditioners: Nontoxic to plants.

NOTE TO SPECIFIER

Edit PEAT for type selected for specific Project.

- C. Peat:
1. [Sphagnum moss peat] [Peat moss] [Hypnum moss peat] [Reedsedge peat] [Peat humus] derived from a freshwater site and conforming to ASTM D 2607 as modified herein.
 2. Shred and granulate peat to pass 1/2 inch mesh screen and condition in storage pile for minimum six months after excavation.
- D. Sand: Clean and free of materials harmful to plants.
- E. Perlite: Horticultural grade for planters.
- F. Vermiculite: Horticultural grade for planters.
- G. Rotted Manure:
1. Well rotted horse or cattle manure containing maximum 25 percent by volume of straw, sawdust, or other bedding materials; free of stones, sticks and soil.
- H. Composted Wood Derivatives:
1. Ground bark, sawdust, or other wood waste material free of stones, sticks, and soil stabilized with nitrogen having the following properties:
 - a. Particle Size: Minimum percent by weight passing:

1) No. 4 mesh screen	95 percent
2) No. 8 mesh screen	80 percent
 - b. Nitrogen Content: Minimum percent based on dry weight:

1) Redwood Sawdust	0.5 percent
2) Fir Sawdust	0.7 percent
3) Fir or Pine Bark	1.0 percent
- I. Calcined Clay:
1. Granular particles produced from montmorillonite clay calcined to minimum temperature of 1200 degrees F to the following gradation:
 - a. Minimum 90 percent passing 8-mesh screen.
 - b. 99 percent retained on 60-mesh screen.
 - c. Maximum 2 percent passing 100-mesh screen.
 2. Bulk Density: 40 pounds maximum per cubic foot.

2.4 FERTILIZER

- A. Specified in Section 329200 and 329300.

**NOTE TO SPECIFIER**

Edit PESTICIDES for type selected for specific Project.

2.5 PESTICIDES

- A. [Soil Fumigant] [Herbicide] [Insecticide] [and] [Fungicide]: EPA registered and approved, for [pre-emergence] [and] [broadleaf weed control].

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Subgrade:
1. After areas required to be landscaped have been brought to required subgrade, thoroughly till to minimum depth of 6 inches by scarifying, disking, harrowing, or other approved methods.
 2. Remove debris and stones larger than one inch in any dimension remaining on surface after tillage.

3.3 TOPSOIL APPLICATION

- A. Immediately prior to placing topsoil, scarify subgrade to a 2 inch depth for bonding of topsoil with subsoil.
- B. Lawns: Spread topsoil evenly to [indicated depth] [a minimum depth of 4 inches]. Do not spread topsoil when frozen or excessively wet or dry.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below for TILLING of Topsoil. Edit for type of soil conditioner and minimum depth selected for specific Project.

- C. Plant Beds: Till to minimum depth of 6 inches. Spread [peat] [manure] uniformly over bed to minimum depth of [____] inches and thoroughly incorporate into existing soil to a minimum depth of 6 inches to obtain a uniform and well pulverized soil mix. During tillage operations remove all sticks, stones, roots,

and other objectionable materials, Bring plant beds to a smooth and even surface conforming to established grades.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below for EXCAVATION OF EXISTING AND REPLACEMENT. Edit for type of soil selected for specific Project.

- D. Plant Beds: Excavate existing soil in plant beds to minimum depth of 4 inches and replace with [planting soil mixture] [topsoil]. Bring plant beds to smooth and even surface conforming to established grades.
- E. Correct irregularities in finished surfaces to eliminate depressions.
- F. Protect finished topsoil areas from damage by vehicular or pedestrian traffic.

3.4 FERTILIZER, pH ADJUSTERS, AND SOIL CONDITIONERS

- A. Application:
 - 1. Apply [fertilizer] [pH adjuster] [and] [soil conditioner] at rates and analysis determined by laboratory soil tests of [soils at job site] [topsoil supplied].
 - 2. [Apply at rates of [_____] pounds per acre.] [_____] pounds per 1000 square feet.]
- B. Tillage: Incorporate [fertilizer,] [pH adjusters,] [and] [soil conditioners] into soil to minimum depth of 6 inches. This may be done as part of the subgrade tillage operation specified above.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

SECTION 32 91 19 13 - SEPTIC TANK SYSTEMS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for septic tank systems. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Septic tanks.
 - b. Distribution boxes.
 - c. Pipe and fittings.
 - d. Absorption systems

C. Submittals

1. Product Data: For each type of product indicated.
 - a. Include construction details, material descriptions, dimensions of individual components, and profiles.
 - b. Include manhole openings, covers, and pipe connections.
2. Shop Drawings: For [trench absorption systems] [bed absorption systems].
 - a. Include manhole openings, covers, pipe connections, and accessories.
 - b. Include piping with sizes and invert elevations.
 - c. Include underground structures.
 - d. Include other utilities.

1.2 PRODUCTS

A. Septic Tanks

1. Precast Concrete Septic Tanks: ASTM C 1227, single-chamber **OR** two-chamber, **as directed**, precast, reinforced-concrete tank with internal baffle, **as directed**, and covers.
 - a. Design: For A-8 (H10-44) **OR** A-12 (HS15-44) **OR** A-16 (HS20-44), **as directed**, traffic loading according to ASTM C 890.
 - b. Manholes: 20-inch- (508-mm-) **OR** 22-inch- (559-mm-) **OR** 24-inch- (610-mm-), **as directed**, minimum diameter opening with reinforced-concrete risers to grade and access lid with steel lift rings. Include manhole in center of each septic tank compartment top.
 - c. Filter Access: Reinforced-concrete access hole, large enough to remove filter, over filter position.
 - d. Inlet and Outlet Access: 12-inch- (300-mm-) minimum diameter, reinforced-concrete access lids with steel lift rings. Include access centered over inlet and outlet.
 - e. Resilient Connectors: ASTM C 923 (ASTM C 923M), of size required for piping, fitted into inlet and outlet openings.
2. Fiberglass Septic Tanks: UL 1316, single-chamber, FRP construction; fabricated for septic tank application with at least one access riser and manhole.
 - a. Manholes: 22-inch- (559-mm-) **OR** 24-inch- (610-mm-), **as directed**, minimum diameter opening with FRP access risers to grade and cover.
 - b. Filter Access: Include access hole, large enough to remove filter, over filter position.
 - c. Resilient Connectors: ASTM C 923 (ASTM C 923M) or other watertight seal, of size required for piping, fitted into inlet and outlet openings.
3. Polyethylene Septic Tanks: Single-chamber, molded, HDPE or PE construction; fabricated for septic tank application, with baffle, **as directed**, and at least one access riser and manhole.

4. Polyethylene Septic Tanks: Two-chamber, molded, HDPE or PE construction; fabricated for septic tank application, with access risers and manholes.
 - a. Manholes: 18-inch- (457-mm-) **OR** 20-inch- (508-mm-) **OR** 22-inch- (559-mm-), **as directed**, minimum diameter opening with HDPE or PE access risers to grade and cover.
 - b. Filter Access: Include access hole, large enough to remove filter, over filter position.
 - c. Resilient Connectors: ASTM C 923 (ASTM C 923M) or other watertight seal, of size required for piping, fitted into inlet and outlet openings.
- B. Filters
1. Description: Removable, septic-tank-outlet filter that restricts discharge solids to 1/8 inch (3.2 mm).
 - a. Housing: HDPE or PVC.
 - b. Outlet Size: NPS 4 (DN 100) **OR** NPS 6 (DN 150), **as directed**.
- C. Dosing Tanks
1. Dosing Tanks: Comply with ASTM C 913 for precast, reinforced-concrete tank and cover; designed for structural loading according to ASTM C 890.
 - a. Design: For effluent pump, **OR** automatic siphon, **as directed**, installation and A-8 (H10-44) **OR** A-12 (HS15-44) **OR** A-16 (HS20-44), **as directed**, traffic loading according to ASTM C 890.
 - b. Manholes: 20-inch- (508-mm-) **OR** 22-inch- (559-mm-) **OR** 24-inch- (610-mm-), **as directed**, minimum diameter opening with reinforced-concrete risers to grade and access lid with steel lift rings. Include manhole in center of each septic tank compartment top.
 - c. Resilient Connectors: ASTM C 923 (ASTM C 923M), of size required for piping, fitted into inlet and outlet openings.
- D. Automatic Siphons
1. Description: Manufactured siphon assembly of molded-HDPE trap, pipe, and bell, with PVC vent piping and stainless-steel bolts.
- E. Distribution Boxes
1. Description: Precast concrete, single-chamber box and cover.
 - a. Design: Made according to ASTM C 913, and for A-8 (H10-44) **OR** A-12 (HS15-44) **OR** A-16 (HS20-44), **as directed**, traffic loading according to ASTM C 890. Include baffle opposite inlet.
 - b. Manholes: 20-inch- (508-mm-) **OR** 22-inch- (559-mm-) **OR** 24-inch- (610-mm-), **as directed**, minimum diameter opening with reinforced-concrete risers to grade and cover with steel lift rings in center of distribution box cover.
 - c. Pipe Connections: ASTM C 923 (ASTM C 923M) resilient connectors, of size required for piping, fitted into inlet and outlet openings. Include watertight plugs in outlets not required.
 2. Description: Molded-HDPE or -PE, single-chamber box and cover.
 - a. Manholes: 18-inch- (457-mm-) **OR** 20-inch- (508-mm-) **OR** 22-inch- (559-mm-), **as directed**, minimum diameter opening with HDPE or PE access risers to grade and cover. Access for PE distribution boxes may be a removable plastic cover and is usually small.
OR
Manufacturer's standard cover or other access opening of size that permits access to distribution-box inlet and outlets.
 - b. Pipe Connections: With seal that prevents leakage. Include watertight plugs in outlets not required.
- F. Leaching Pipes And Fittings
1. Pipe: PE, complying with ASTM F 810, perforated.
 - a. Fittings: ASTM D 2729 PVC for loose joints; ASTM D 3034, PVC for gasketed joints; or ASTM D 2751, ABS for gasketed joints.

2. Tube and Fittings: PE, complying with ASTM F 405, perforated corrugated tube with solid-wall fittings.
 - a. Couplings: PE band, matching tube and fitting dimensions.
 3. Pipe and Fittings: PVC, complying with ASTM D 2729, perforated, for solvent-cement joints.
 - a. Solvent Cement: ASTM D 2564. Include primer according to ASTM F 656
 4. Drainage Tile: Clay drain tile, complying with ASTM C 4, Standard class, drain tile with regular and smooth ends, for open joints.
- G. Nonpressure-Type Pipe Couplings
1. Description: Comply with ASTM C 1173, elastomeric, sleeve-type, reducing or transition coupling, for joining underground nonpressure piping. Include ends of same sizes as piping to be joined and corrosion-resistant-metal tension band and tightening mechanism on each end.
 - a. Sleeve Materials:
 - 1) For Concrete Pipes: ASTM C 443 (ASTM C 443M), rubber.
 - 2) For Plastic Pipes: ASTM F 477, elastomeric seal or ASTM D 5926, PVC.
 - 3) For Vitrified-Clay Pipes: ASTM C 425, rubber.
 - 4) For Dissimilar Pipes: ASTM D 5926, PVC or other material compatible with pipe materials being joined.
- H. Leaching Chambers
1. Description: Arched, molded-PE structures with solid top, perforated sides, open ends, and open bottom.
 - a. End Pieces: Solid and solid with pipe opening types.
 - b. Effluent Distribution Piping: PE or PVC pipe, with holes or slots along pipe, attached to underside of top of chambers.
- I. Trench **OR** Bed, **as directed**, Absorption-System Materials
1. Filtering Material: ASTM D 448, Size No. 24, 3/4 to 2-1/2 inches (19 to 63 mm), washed, crushed stone or gravel; or broken, hard-burned clay brick.
 2. Filter Mat: Geotextile woven or spun filter fabric, in 1 or more layers, for minimum total unit weight of 3 oz./sq. yd. (101 g/sq. m) **OR** Untreated building paper or similar porous material, **as directed**.
 3. Cover for Distribution Pipe: Geotextile woven filter fabric, in 1 or more layers, for minimum total unit weight of 3 oz./sq. yd. (101 g/sq. m).
 4. Fill Material: Soil removed from trench.
- J. Mound Absorption-System Materials
1. Sand Filtering Material: 25 percent or more of very coarse, coarse, or medium sand or combination; maximum of 50 percent fine or very fine sand or combination; and silt and clay combination not to exceed 25 percent. If clay exceeds 60 percent in combination with silt, mixture cannot exceed 15 percent of sand filtering material.
 2. Aggregate Filtering Material: Coarse, 1/2 to 2-1/2 inches (13 to 63 mm).
 3. Cap: Clay, silt, or combination of clay and silt.
 4. Topsoil: Good quality, free of stones, metal, and glass.
 5. Vegetation Cover: Grass compatible with adjacent ground cover. No shrubs or trees.
 6. Filter Mat: Geotextile woven or spun filter fabric, in 1 or more layers, for minimum total unit weight of 3 oz./sq. yd. (101 g/sq. m) **OR** Untreated building paper or similar porous material, **as directed**.
 7. Cover for Distribution Pipe: Geotextile woven filter fabric, in 1 or more layers, for minimum total unit weight of 3 oz./sq. yd. (101 g/sq. m).
- K. Chamber Absorption-System Materials
1. Chamber: Arched, molded-PE structures with solid top, perforated sides, open ends, and open bottom.
 2. End Pieces: Blank without opening for distribution pipe at end of last chamber in row, and with opening for distribution pipe where pipe penetrates chamber.

3. Retain first paragraph below to run piping through chambers to improve distribution.
4. Effluent Distribution Piping: PE or PVC pipe, with holes or slots along pipe, attached to underside of top of chambers.

L. Seepage Pit Absorption-System Materials

1. Constructed-in-Place-Type Seepage Pit: Include the following materials.
 - a. Pit Lining: ASTM C 62, Type SW, clay bricks; ASTM C 55, concrete bricks; ASTM C 90, hollow, concrete masonry units; or precast concrete rings with notches or weep holes.
 - b. Filtering Material: ASTM D 448, Size No. 24, 3/4 to 2-1/2 inches (19 to 63 mm), washed, crushed stone or gravel; or broken, hard-burned clay brick.
 - c. Cover: Precast concrete slab; designed for A-8 (H10-44) **OR** A-12 (HS15-44) **OR** A-16 (HS20-44), **as directed**, traffic loading according to ASTM C 890 and made according to ASTM C 913. Include slab dimensions that will extend minimum of 12 inches (300 mm) beyond edge of excavation. Cast cover with opening for manhole in center.
 - d. Manholes: 20-inch- (508-mm-) **OR** 22-inch- (559-mm-) **OR** 24-inch- (610-mm-), **as directed**, minimum diameter opening with reinforced-concrete risers to grade and access lid with steel lift rings.

1.3 EXECUTION

A. Earthwork

1. Excavating, trenching, and backfilling for piping and seepage pits are specified in Division 31 Section "Earth Moving".
 - a. Stockpile topsoil for reuse in finish grading without intermixing with other excavated material. Stockpile materials away from edge of excavation and do not store within drip line of remaining trees.
 - b. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.
2. Excavating and Backfilling for Septic and Dosing Tanks:
 - a. Excavate sufficient width and length for tanks to depth determined by tank inlet elevation. Provide level bottom.
 - b. Backfill with excavated soil, mounding soil above original grade without compacting.
3. Excavating and Backfilling for Trench **OR** Bed, **as directed**, Absorption Fields:
 - a. Excavate for trench absorption fields 30 inches (760 mm) wide and 24 inches (600 mm) deep, minimum.
 - b. Backfill trench absorption fields with excavated soil, mounding soil above original grade without compacting.
 - c. Excavate for bed absorption fields of width indicated and 24 inches (600 mm) deep, minimum.
 - d. Backfill bed absorption fields with excavated soil, mounding soil above original grade without compacting.

B. Excavating and Backfilling for Chamber Absorption Systems:

1. Excavate for trench-type chamber absorption systems **30 inches (762 mm)** wide and **24 inches (610 mm)** deep, minimum.
2. Excavate for bed-type chamber absorption systems of width indicated and **24 inches (610 mm)** deep, minimum.
3. Backfill chamber absorption systems with excavated soil, mounding soil above original grade without compacting.

C. Excavating and Backfilling for Seepage-Pit Absorption Systems:

1. Excavate sufficient hole diameter for pits to depth determined by tank inlet and bottom elevations. Provide level bottom.
2. Backfill with excavated soil, mounding soil above original grade without compacting.

- D. Septic Tank Installation
1. Install precast concrete septic tanks level according to ASTM C 891.
 2. Install septic tanks level.
 3. Connect septic tank to concrete ballast pad.
 4. Install filter in septic tank outlet. Secure filter to septic tank wall. Make direct connections to distribution piping.
 5. Install insulation on exterior sides and top of septic tank.
 6. Fill septic tank with water.
- E. Dosing Tank Installation
1. Install dosing tanks level and according to ASTM C 891.
 2. Install automatic siphons embedded in precast concrete dosing tank. Make direct connections to distribution piping.
 3. Set submersible effluent pumps on dosing tank floor. Make direct connections to distribution piping.
 4. Fill dosing tanks with water.
- F. Distribution Box Installation
1. Install precast concrete distribution boxes according to ASTM C 891 and at invert elevations indicated. Set level and plumb.
 2. Install PE distribution boxes at invert elevations indicated and according to manufacturer's written instructions. Set level and plumb.
- G. Piping Installation
1. Install leaching piping according to the following:
 - a. Use perforated pipe and fittings for trench **OR** bed **OR** mound, **as directed**, absorption fields with perforations at bottom.
 - b. PE Tube and Fittings: ASTM F 481.
 - c. PVC Sewer Pipe and Fittings: ASTM F 481.
- H. Pipe Joint Construction
1. Basic piping joint construction is specified in Division 33 Section "Common Work Results For Utilities". Where specific joint construction is not indicated, follow piping manufacturer's written instructions.
 2. Join distribution piping with or according to the following:
 - a. Install leaching pipe and fittings for trench **OR** bed **OR** mound, as directed, absorption fields with closed joints, unless otherwise indicated.
 - b. PE Tube and Fittings: With PE band couplings.
 - c. PVC Sewer Pipe and Fittings: With solvent-cemented joints according to ASTM F 402 and ASTM D 2321.
 3. Join dissimilar pipe materials according to ASTM D 5926, with couplings and gaskets compatible with pipe materials being joined.
- I. Cleanout Installation
1. Install cleanouts according to the following:
 - a. Inlet and Outlet of Septic Tanks: Cast-iron cleanouts.
 - b. Inlet and Outlet of Dosing Tanks: Cast-iron cleanouts.
 - c. Inlet and Outlet of Distribution Boxes: Cast-iron **OR** PVC cleanouts.
 - d. At Each Change in Direction of Sewer Piping: Cast-iron **OR** PVC cleanouts.
 - e. At Ends of Each Row and at Each Change in Direction of Distribution Piping: Cast-iron **OR** PVC cleanouts.
 2. Cast-Iron Cleanouts: Install with PVC fitting riser from distribution and leaching piping to cast-iron cleanout housing at grade. Use NPS 4 (DN 100) PVC sewer pipe and fittings with solvent-cemented joints for risers. Attach riser to cleanout housing with rubber gasket or coupling.

3. PVC Cleanouts: Install with PVC riser from distribution and leaching piping to PVC cleanout at grade. Use NPS 4 (DN 100) PVC sewer pipe and fittings with solvent-cemented joints for risers and cleanout fitting.
 4. Cleanout Support: Set cleanouts in concrete blocks 18 by 18 by 12 inches (457 by 457 by 305 mm) deep, unless location is in concrete pavement. Formwork, reinforcement, and concrete are specified in Division 03 Section "Cast-in-place Concrete".
 5. Set top of cleanout 1 inch (25 mm) **OR** 2 inches (50 mm), **as directed**, above surrounding rough grade, or set flush with grade if installed in pavement.
- J. Trench **OR** Bed **OR** Absorption-Field, **as directed**, Installation
1. Filtering Material: Place supporting layer of filtering material over the compacted trench **OR** bed, **as directed**, base to a compacted depth not less than 6 inches (150 mm) below bottom of pipe.
 2. Refer to Part 1.3 "Piping Installation" and "Pipe Joint Construction" articles for specific piping material installation.
 3. Install distribution piping at minimum slope of 1 percent and maximum slope of 2 percent.
 4. Install leaching piping solidly bedded in filtering material, with full bearing for each pipe section throughout its length. Maintain pipe alignment with no slope.
 - a. Install perforated pipe with perforations down and joints tightly closed. Install collars and couplings as required.
 - b. Install open-joint pipe with 1/2-inch (13-mm) space, maximum, between ends, unless otherwise indicated. Cover top two-thirds of joint opening with joint cover, and tie with corrosion-resistant wire. Commercial joint-cover assemblies may be provided.
 - c. Install elbow fittings with tight joints.
 - d. Place additional filtering material around sides to a minimum compacted depth of 8 inches (200 mm) above the top of leaching piping.
 5. Install filter mat over filter material before backfilling.
 6. Install leaching chambers with no slope in bottom of trench **OR** bed, **as directed**.
 - a. Install leaching chamber distribution piping with tight joints throughout chambers.
 7. Backfill according to Part 1.3 "Earthwork" Article.
- K. Mound Absorption-Field Installation
1. Plow top 6 inches (150 mm) of surface.
 2. Place layers of sand, aggregate, **as directed**, cap, and topsoil above plowed area. Provide grass topping to match adjacent vegetation. Provide side slope not steeper than 3:1. Tie slope toe smoothly into existing grade.
 3. Refer to Part 1.3 "Piping Installation" and "Pipe Joint Construction" articles for specific piping material installation.
 4. Provide solid vent pipe with vent cap extending 12 inches (300 mm) above top of mounds.
 5. Install distribution piping with no slope for pressurized effluent system.
 6. Install distribution piping at a minimum slope of 1 percent and a maximum slope of 2 percent for gravity effluent system.
 7. Install leaching piping solidly bedded in filtering material, with full bearing for each pipe section throughout its length. Maintain pipe alignment with no slope.
 - a. Install perforated pipe with perforations down and joints tightly closed. Install collars and couplings as required.
 - b. Install open-joint pipe with 1/2-inch (13-mm) space, maximum, between ends, unless otherwise indicated. Cover top two-thirds of joint opening with joint cover, and tie with corrosion-resistant wire. Commercial joint-cover assemblies may be provided.
 - c. Install elbow fittings with tight joints.
 8. Install leaching chambers with no slope above plowed area.
 - a. Install leaching chamber distribution piping with tight joints throughout chambers.
 9. Provide adequate grading around mound absorption field to prevent storm runoff from washing away a portion of mound absorption field and to prevent exposing pipes.
- L. Seepage Pit Installation

1. Excavate hole to minimum diameter of 6 inches (150 mm) greater than outside of pit lining.
 2. Do not extend pit depth into ground-water table.
 3. Install constructed-in-place seepage pits according to the following procedure if no requirements of authorities having jurisdiction apply:
 - a. Install brick pit lining material dry and laid flat with staggered joints for seepage.
 - b. Install block pit lining material dry with staggered joints and a minimum of 20 percent of blocks on side for seepage. Install precast concrete rings with notches or weep holes for seepage.
 - c. Extend pit lining material so top of manhole will be approximately 8 inches (200 mm) below finished grade.
 - d. Backfill bottom of inside of pit with filtering material at least 12 inches (300 mm) above bottom of lining material.
 - e. Extend effluent inlet pipe 12 inches (300 mm) into seepage pit and terminate into side of tee fitting.
 - f. Backfill around outside of pit lining with filtering material to top of lining.
 - g. Install manhole risers from top of pit to grade. Support cover on undisturbed soil. Do not support cover on pit lining.
- M. Identification
1. Identification materials and their installation are specified in Division 31 Section "Earth Moving". Arrange for installation of green warning tape directly over piping (including absorption-field piping), at outside edges of underground structures, and at outside edges of absorption fields.
 2. Use detectable warning tape over piping, over edges of underground structures, and over edges of absorption fields.
- N. Field Quality Control
1. System Tests: Perform testing of completed septic tank system piping and structures according to authorities having jurisdiction.
 2. Additional Tests: Fill underground structures with water and let stand overnight. If water level recedes, locate and repair leaks and retest. Repeat tests and repairs until no leaks exist.
- O. Cleaning
1. Clear interior of piping and structures of dirt and other superfluous material as work progresses.
 2. Maintain swab or drag in piping, and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of workday or when work stops.

**SECTION 32 92 00 00 - MPF TURF AND GRASSES****

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information must be inserted at that location.

PART 1 - GENERAL**1.1 SUMMARY**

- A. Section Includes:
 - 1. Seed.
 - 2. Sod.
 - 3. Sprigs.
 - 4. Mulches.
 - 5. Asphalt Adhesive.
 - 6. Water.
 - 7. Erosion Control Material.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 311000 - Site Clearing: Mulch from recycled site debris.
 - 2. Section 312000 - Earth Moving: Topsoil material.
 - 3. Section 313200 - Soil Stabilization: Stabilization materials and procedures.
 - 4. Section 312500 - Erosion and Sedimentation Controls: Slope and erosion protection materials.
 - 5. Section 329200 - Plants: Planting materials.
 - 6. Section 092900 - Gypsum Board: Soil amendment from recycled scrap gypsum.

1.2 REFERENCES

- A. American Society For Testing and Materials (ASTM):
 - 1. ASTM C 602 - Specification for Agricultural Liming Materials.
 - 2. ASTM D 977 - Specification for Emulsified Asphalt.
- B. American Sod Producers Association (ASPA):
 - 1. ASPA STSMT - Specification for Turfgrass Sod Materials and Transplanting/Installing.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Assurance/Control Submittals:
 - a. Certificates:
 - 1) Submit certificate from seed supplier for each grass-seed mixture stating the botanical and common name and percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.
 - 2) Submit certificate from sod supplier for each seed mixture, identifying sod source, including name and telephone number of supplier.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operation and Maintenance Data: Include maintenance instructions, cutting method and maximum grass height, types of application frequency, and recommended coverage of fertilizer for one full growing cycle.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to applicable requirements of the Local and State Department of Agriculture Extension Service of the state in which the project is located.

NOTE TO SPECIFIER

****REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.**

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic/natural matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.
 - 2. Recycled Content:
 - a. Wood fiber mulch: Provide products manufactured from 100 % post-consumer paper content and yard trimming composts.
 - b. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.
 - c. Soil amendment from recycled scrap gypsum: Coordinate with Section 092900 - Gypsum Board to prepare scrap gypsum board for use as soil amendment.

PART 2 - PRODUCTS

2.1 SEED

NOTE TO SPECIFIER

Edit paragraph below for classification appropriate for location of Project Site.

A. Classification:

1. [State-Certified] [State Approved] of latest season's crop delivered in original sealed packages bearing producer's guaranteed analysis for percentages of mixtures, purity, germination, weedseed content, and inert material.
2. Label in conformance with applicable state seed laws.
3. Wet, moldy, or damaged seed will be rejected.

2.2 SOD

NOTE TO SPECIFIER

Edit paragraph below for classification appropriate for location of Project Site.

A. Classification:

1. [Nursery grown] [Field] [Certified] as classified in ASPA STSMT.
2. Machine cut sod at a uniform thickness of 3/4 inch with a tolerance of 1/4 inch, excluding top growth and thatch. Each individual sod piece capable of supporting its own weight when lifted by ends.
3. Broken pads, irregularly shaped pieces, torn or uneven ends will be rejected.
4. Wood pegs and wire staples for anchorage as recommended by sod supplier.

2.3 SPRIGS

A. Healthy living stems, stolons, or rhizomes and attached roots of locally adapted grass without adhering soil, including two to three nodes, from 4 to 6 inches long, obtained from heavy and dense sod.

1. Provide sprigs which have been grown under climatic conditions similar to those in locality of Project Site.
2. Coordinate harvesting and planting operations to prevent exposure of sprigs to sun for more than 30 minutes before covering and moistening.
3. Sprigs containing weeds or other detrimental material or that are heat damaged will be rejected.

2.4 MULCHES

A. Provide mulch free from noxious weeds, mold, and other deleterious materials.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when STRAW is selected for Project.

B. Straw: Stalks from oats, wheat, rye, barley, or rice. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when HAY is selected for Project.

C. Hay: Use only marsh hay for lawn areas. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when WOOD FIBER is selected for Project.

- D. Wood Cellulose Fiber:
1. Processed to contain no growth or germination-inhibiting factors, dyed with non toxic, biodegradable dye to an appropriate color to facilitate visual metering of materials application.
 2. Composition on air-dry weight basis: 9 to 15 percent moisture, pH range from 3.5 to 5.0
 3. Use with hydraulic application of grass seed and fertilizer.
 4. Provide organic mulch products manufactured from 100 percent post-consumer paper content and yard trimming composts.
 5. Manufacturers:
 - a. National Fiber, Belcher, MA, (800) 282-7711 or (413) 283-8747.
 - b. Wood Recycling Inc., Woburn, MA, (800) 982-8732 or (617) 937-0855.
 - c. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.5 TABILIZING MATERIALS

- A. Specified in Section 313200.
- B. Asphalt Adhesive: ASTM D 977, Grade RS-1. Use with straw or hay mulch.
- C. Cellulose Fiber: Use for anchoring straw. Fiber binding shall be applied at a net dry weight of 750 pounds per acre. Cellulose fiber may be mixed with water. Mixture shall contain maximum of 50 pounds of cellulose fiber per 100 gallons of water.
- D. Mulch Netting: Stake light weight plastic netting over the mulch according to manufacturer's recommendations. Stakes shall be driven to ground level.

2.6 WATER

- A. Suitable quality for irrigation.

2.7 EROSION CONTROL MATERIAL

- A. Specified in Section 312500.
- B. Net: Heavy, twisted jute mesh, plastic mesh, biodegradable paper fabric with knitted yarns, or standard weave burlap.

NOTE TO SPECIFIER

Edit paragraph below for BLANKET type selected for Project.

- C. Blanket: [Fiber] [Excelsior] [_____].

2.8 TOPSOIL

- A. Topsoil:

NOTE TO SPECIFIER

Edit paragraph below for percentage of organic matter appropriate to establishment of plants selected for Project.

1. Containing organic matter as needed to support establishment of plants; minimum [____] percent and maximum [____] percent organic matter as determined by soil testing service. Maximum particle size, 3/4 inch, with maximum 3 percent retained on 1/4 inch screen.
2. Component Percentages:
 - a. Silt: 25 to 50
 - b. Clay: 10 to 30
 - c. Sand: 20 to 30
 - d. pH: 5.5 to 7.0
 - e. Soluble Salts: 600 ppm maximum

NOTE TO SPECIFIER

Edit paragraph below to include additional inorganic material such as gypsum as needed to improve workability and drainage of soil and as appropriate to establishment of plants selected for Project.

- f. Gypsum: [____] to [____] .
- g. pH: 5.5 to 7.0.

2.9 pH ADJUSTERS

- A. Lime:
 1. Material: ASTM C 602, Class T, agricultural commercial grade ground limestone containing not less than 50 percent of total oxides.
 2. Gradation: Minimum 75 percent passing 100 mesh sieve and 100 percent passing 20 mesh sieve.
- B. Ferrous Sulfate: Commercial Grade.

NOTE TO SPECIFIER

Edit FERTILIZER below for type of fertilizer appropriate for specific soil conditions at Project Site.

2.10 FERTILIZER

- A. Bonemeal: Commercial, raw, finely ground; minimum 4 percent nitrogen and 20 percent phosphoric acid.
- B.
- C. Superphosphate: Commercial-Grade complete fertilizer of neutral character consisting of fast-and-slow-release nitrogen, 50 percent derived from natural organic sources of urea-form, phosphorous, and potassium in following composition:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when fertilizer COMPOSITION IS SPECIFIED. Edit for composition .

1. Composition: [1] [____] pound per [1000] [____] square feet of actual nitrogen, [4] [____] percent phosphorous, and [2] [____] percent potassium, by weight.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when fertilizer COMPOSITION IS DETERMINED BY "Report of Subsurface Investigation" prepared by the Geotechnical Engineer.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing agency.

- D. Slow-Release Fertilizer: Granular fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorous, and potassium in the following composition:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when fertilizer COMPOSITION IS SPECIFIED. Edit for composition.

1. Composition: [20] [____] percent nitrogen, [10] [____] percent phosphorous, and [10] [____] percent potassium, by weight.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when fertilizer COMPOSITION IS DETERMINED BY "Report of Subsurface Investigation" prepared by the Geotechnical Engineer.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from qualified soil-testing agency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION OF SUBSOIL

- A. Prepare subsoil to eliminate uneven areas and low spots. Maintain lines, levels, profiles, and contours. Make changes in grade gradual. Blend slopes into level areas.
- B. Remove foreign materials, weeds, and undesirable plants and their roots. Remove contaminated subsoil.
- C. Scarify subsoil to a depth of 3 inches where topsoil is to be placed. Repeat cultivation in areas where equipment, used for hauling and spreading topsoil, has compacted subsoil.
- D. Place topsoil as specified in Section 312000.

3.3 FERTILIZING

- A. Apply fertilizer in accordance with manufacturer's published instructions.

- B. Apply after smooth after smooth raking of topsoil and prior to roller compaction.
- C. Do not apply fertilizer at same time or with same machine as will be used to apply seed.
- D. Mix thoroughly into upper 2 inches of topsoil.
- E. Lightly water to aid the dissipation of fertilizer.
- F. No chemical fertilizers.

3.4 SEEDING

- A. Sow one-half of seed in one direction and remainder at right angles to first sowing.

NOTE TO SPECIFIER

Edit paragraph below for depth selected.

- B. Cover seed to average depth of [1/2] [____] inch by means of spike-tooth harrow, cultipacker, or other recommended device.

NOTE TO SPECIFIER

Edit paragraph below for selected Seeding and depth selected.

- C. Drill Seeding:
 - 1. Use [cultipacker seeders] [grass seed drills] [____].
 - 2. Drill seed uniformly to an average depth of [1/2][____] inch and at a rate of [____] pounds per 1,000 square feet.
- D. Hydroseeding:
 - 1. Mix seed, fertilizer, and wood cellulose fiber in required amount of water to product a homogeneous slurry. Add wood cellulose fiber after seed, water, and fertilizer have been thoroughly mixed and apply at the rate of 200 pounds per acre dry weight.
 - 2. Hydraulically spray material on ground to form a blotter-like cover impregnated uniformly with grass seed.

NOTE TO SPECIFIER

Edit paragraph below for depth application rate selected.

- 3. Immediately following application of slurry mix, make separate application of wood cellulose mulch at the rate of [800] [1,000] pounds, dry weight, per acre.
- 4. Apply cover so that rainfall or applied water will percolate to underlying soil.

NOTE TO SPECIFIER

Edit paragraph below for application rate selected.

- E. Mulch:
 - 1. Spread evenly at rate of [____] tons per acre.
 - 2. Anchor by crimping mulch with serrated disc, or by spraying asphalt emulsion on mulched surface.
 - 3. Take precautionary measures to prevent asphalt materials from marking of defacing structures, pavements, utilities, or plantings.

- F. Rolling:
1. Immediately after seeding, firm entire area except for slopes in excess of 3 to 1 with a roller not exceeding 90 pounds for each foot of roller width.
 2. If seeding is performed with cultipacker-type seeder or hydroseeding, rolling may be eliminated.
- G. Erosion Control Material: Install in accordance with manufacturer's instructions.

3.5 SODDING

- A. Placing:
1. Place a maximum of 20 hours after initial harvesting, in accordance with ASPA GSS as modified herein.
 2. Thoroughly moisten areas to be sodded immediately prior to placing.

NOTE TO SPECIFIER

Edit paragraph below for sod spacing and overseeding locations selected.

- B. Spot Sodding:
1. Cut sod into plugs 2 inches square or 2 inches in diameter. Place individual pieces on [____] inch centers and press firmly into soil by foot pressure or by tamping.
 2. Overseed for erosion control on [all] [3 to 1 or greater slopes and drainage ways in] spot sodded areas.
 3. Place seed, as specified above, at the rate of [____] pounds per 1,000 square feet.
- C. Slopes and Ditches:
1. For slopes 2:1 and greater, lay with long edge parallel to slope.
 2. V-ditches and flat bottomed ditches, lay with long edge perpendicular to flow of water.
 3. Anchor each piece of sod with wood pegs or wire staples maximum 2 feet on center.
 4. On slope areas, start sodding at bottom of slope.
- D. Finishing: After completing sodding, blend edges of sodded area smoothly into surrounding area.
- E. Watering: Start immediately after completing each day's sodding. Apply at a rate sufficient to ensure thorough wetting of soil to minimum depth of 4 inches.

3.6 SPRIGGING

- A. Rate:
1. Perform a maximum 36 hours after initial harvesting. Inspect sprigs for heat damage during planting operation.
 2. Plant groups of sprigs at 12 inch maximum intervals. Limit interval between dropping sprigs and covering with soil to 10 minutes.

- B. Planting:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when BROADCAST method is selected.

1. Broadcast sprigs by hand, manure spreader, or other suitable devices over prepared surface. Force sprigs into soil to a depth of approximately 4 inches with disk harrow or other recommended equipment.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when FURROW PLANTING method is selected.

2. Plant sprigs in furrows spaced a maximum 12 inches apart. Immediately after opening furrows, place sprigs. Fill furrows so that surface is flush with designated grade and a live portion of each sprig is exposed.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when FLUSH PLANTING method is selected.

3. Plant to a depth of approximately 4 inches and cover sprigs so that surface is flush with designated grade and a live portion of each sprig is exposed.

NOTE TO SPECIFIER

Edit paragraph below for OVERSEEDING rate selected.

- C. Overseeding: Broadcast additional seed as specified above, at the rate of [____] pounds per 1000 square feet.
- D. Rolling: Immediately after completion of sprigging operations and additional seeding, if required, roll planted area with cultipacker or roller not exceeding 90 pounds for each foot of roller width.
- E. Watering: Apply at time of sprigging operations at a rate sufficient to ensure thorough wetting of soil to a depth of 4 inches.

3.7 CLEANING AND PROTECTION

- F. Remove soil and debris created by lawn work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto surface of roads, walks, or other paved areas.
- G. Immediately after seeding, sodding or sprigging, protect the area against traffic or other use.
- H. Restore existing lawn and grass areas which have been damaged during execution of this work to original condition.
- I. Keep one paved pedestrian access route and one paved vehicular access route to each building clean at all time. Clean other paving when work in adjacent areas is complete.

3.7 ESTABLISHMENT PERIOD

- A. Definitions:
 1. Lawns and grasses establishment period will be in effect until lawns and grasses have been mowed 3 times.
 2. Stand of lawn and grass is 95 percent ground cover of established species.

NOTE TO SPECIFIER

Edit paragraph below for grass average height and fertilizer type selected.

- B. Maintenance During Establishment Period:
 1. Mow lawns and grassed areas to an average height of [____] inches whenever average height of grass becomes [____] inches.

2. Promotion of growth: Mow, remove excess clippings, eradicate weeds, water, fertilize, overseed, and perform other operations necessary to promote growth.
3. Post-fertilize areas with [commercial grade] [controlled release] fertilizer approximately [____] days after planting and at intervals of [____] weeks thereafter until accepted. Apply fertilizer uniformly at the rate of [____] pounds per 1,000 square feet.

3.8 FINAL INSPECTION AND ACCEPTANCE

A. Final Inspection and Acceptance:

1. Final inspection will be made upon written request from the Contractor at least 10 days prior to last day of lawn and grasses establishment period.

NOTE TO SPECIFIER

Edit paragraph below for application rate selected.

2. Final acceptance will be based upon a satisfactory stand of lawns and grasses as defined in the paragraph entitled, "Establishment Period." [Prior to final acceptance apply [[____] pounds per 1,000 square feet] [[____] pounds per acre]] of controlled release fertilizer.

B. Replanting: Replant areas which do not have a satisfactory stand of lawns and grasses.

C. Contractor is to maintain lawns and grasses for one year from completion.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 32 92 00 00

**SECTION 32 92 00 00 - CSF TURF AND GRASSES****

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL**1.1 SUMMARY**

- A. Section Includes:
 - 1. Seed.
 - 2. Sod.
 - 3. Sprigs.
 - 4. Mulches.
 - 5. Asphalt Adhesive.
 - 6. Water.
 - 7. Erosion Control Material.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 311000 - Site Clearing: Mulch from recycled site debris.
 - 2. Section 312000 - Earth Moving: Topsoil material.
 - 3. Section 313200 - Soil Stabilization: Stabilization materials and procedures.
 - 4. Section 312500 - Erosion and Sedimentation Controls: Slope and erosion protection materials.
 - 5. Section 329200 - Plants: Planting materials.
 - 6. Section 092900 - Gypsum Board: Soil amendment from recycled scrap gypsum.

1.2 REFERENCES

- A. American Society For Testing and Materials (ASTM):
 - 1. ASTM C 602 - Specification for Agricultural Liming Materials.
 - 2. ASTM D 977 - Specification for Emulsified Asphalt.
- B. American Sod Producers Association (ASPA):
 - 1. ASPA STSMT - Specification for Turfgrass Sod Materials and Transplanting/Installing.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Assurance/Control Submittals:
 - a. Certificates:
 - 1) Submit certificate from seed supplier for each grass-seed mixture stating the botanical and common name and percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.
 - 2) Submit certificate from sod supplier for each seed mixture, identifying sod source, including name and telephone number of supplier.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
1. Operation and Maintenance Data: Include maintenance instructions, cutting method and maximum grass height, types of application frequency, and recommended coverage of fertilizer for one full growing cycle.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to applicable requirements of the Local and State Department of Agriculture Extension Service of the state in which the project is located.

NOTE TO SPECIFIER

***REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.*

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic/natural matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.
 2. Recycled Content:
 - a. Wood fiber mulch: Provide products manufactured from 100 % post-consumer paper content and yard trimming composts.
 - b. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.
 - c. Soil amendment from recycled scrap gypsum: Coordinate with Section 092900 - Gypsum Board to prepare scrap gypsum board for use as soil amendment.

PART 2 - PRODUCTS

2.1 SEED

NOTE TO SPECIFIER

Edit paragraph below for classification appropriate for location of Project Site.

A. Classification:

1. [State-Certified] [State Approved] of latest season's crop delivered in original sealed packages bearing producer's guaranteed analysis for percentages of mixtures, purity, germination, weedseed content, and inert material.
2. Label in conformance with applicable state seed laws.
3. Wet, moldy, or damaged seed will be rejected.

2.2 SOD

NOTE TO SPECIFIER

Edit paragraph below for classification appropriate for location of Project Site.

A. Classification:

1. [Nursery grown] [Field] [Certified] as classified in ASPA STSMT.
2. Machine cut sod at a uniform thickness of 3/4 inch with a tolerance of 1/4 inch, excluding top growth and thatch. Each individual sod piece capable of supporting its own weight when lifted by ends.
3. Broken pads, irregularly shaped pieces, torn or uneven ends will be rejected.
4. Wood pegs and wire staples for anchorage as recommended by sod supplier.

2.3 SPRIGS

A. Healthy living stems, stolons, or rhizomes and attached roots of locally adapted grass without adhering soil, including two to three nodes, from 4 to 6 inches long, obtained from heavy and dense sod.

1. Provide sprigs which have been grown under climatic conditions similar to those in locality of Project Site.
2. Coordinate harvesting and planting operations to prevent exposure of sprigs to sun for more than 30 minutes before covering and moistening.
3. Sprigs containing weeds or other detrimental material or that are heat damaged will be rejected.

2.4 MULCHES

A. Provide mulch free from noxious weeds, mold, and other deleterious materials.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when STRAW is selected for Project.

B. Straw: Stalks from oats, wheat, rye, barley, or rice. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when HAY is selected for Project.

C. Hay: Use only marsh hay for lawn areas. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when WOOD FIBER is selected for Project.

D. Wood Cellulose Fiber:

1. Processed to contain no growth or germination-inhibiting factors, dyed with non toxic, biodegradable dye to an appropriate color to facilitate visual metering of materials application.
2. Composition on air-dry weight basis: 9 to 15 percent moisture, pH range from 3.5 to 5.0
3. Use with hydraulic application of grass seed and fertilizer.
4. Provide organic mulch products manufactured from 100 percent post-consumer paper content and yard trimming composts.
5. Manufacturers:
 - a. National Fiber, Belcher, MA, (800) 282-7711 or (413) 283-8747.
 - b. Wood Recycling Inc., Woburn, MA, (800) 982-8732 or (617) 937-0855.
 - c. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.5 TABILIZING MATERIALS

- A. Specified in Section 313200.
- B. Asphalt Adhesive: ASTM D 977, Grade RS-1. Use with straw or hay mulch.
- C. Cellulose Fiber: Use for anchoring straw. Fiber binding shall be applied at a net dry weight of 750 pounds per acre. Cellulose fiber may be mixed with water. Mixture shall contain maximum of 50 pounds of cellulose fiber per 100 gallons of water.
- D. Mulch Netting: Stake light weight plastic netting over the mulch according to manufacturer's recommendations. Stakes shall be driven to ground level.

2.6 WATER

- A. Suitable quality for irrigation.

2.7 EROSION CONTROL MATERIAL

- A. Specified in Section 312500.
- B. Net: Heavy, twisted jute mesh, plastic mesh, biodegradable paper fabric with knitted yarns, or standard weave burlap.

NOTE TO SPECIFIER

Edit paragraph below for BLANKET type selected for Project.

- C. Blanket: [Fiber] [Excelsior] [_____].

2.8 TOPSOIL

- A. Topsoil:

NOTE TO SPECIFIER

Edit paragraph below for percentage of organic matter appropriate to establishment of plants selected for Project.

1. Containing organic matter as needed to support establishment of plants; minimum [____] percent and maximum [____] percent organic matter as determined by soil testing service. Maximum particle size, 3/4 inch, with maximum 3 percent retained on 1/4 inch screen.
2. Component Percentages:
 - a. Silt: 25 to 50
 - b. Clay: 10 to 30
 - c. Sand: 20 to 30
 - d. pH: 5.5 to 7.0
 - e. Soluble Salts: 600 ppm maximum

NOTE TO SPECIFIER

Edit paragraph below to include additional inorganic material such as gypsum as needed to improve workability and drainage of soil and as appropriate to establishment of plants selected for Project.

- f. Gypsum: [____] to [____] .
- g. pH: 5.5 to 7.0.

2.9 pH ADJUSTERS

- A. Lime:
 1. Material: ASTM C 602, Class T, agricultural commercial grade ground limestone containing not less than 50 percent of total oxides.
 2. Gradation: Minimum 75 percent passing 100 mesh sieve and 100 percent passing 20 mesh sieve.
- B. Ferrous Sulfate: Commercial Grade.

NOTE TO SPECIFIER

Edit FERTILIZER below for type of fertilizer appropriate for specific soil conditions at Project Site.

2.10 FERTILIZER

- A. Bonemeal: Commercial, raw, finely ground; minimum 4 percent nitrogen and 20 percent phosphoric acid.
- B.
- C. Superphosphate: Commercial-Grade complete fertilizer of neutral character consisting of fast-and-slow-release nitrogen, 50 percent derived from natural organic sources of urea-form, phosphorous, and potassium in following composition:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when fertilizer COMPOSITION IS SPECIFIED. Edit for composition .

1. Composition: [1] [____] pound per [1000] [____] square feet of actual nitrogen, [4] [____] percent phosphorous, and [2] [____] percent potassium, by weight.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when fertilizer COMPOSITION IS DETERMINED BY "Report of Subsurface Investigation" prepared by the Geotechnical Engineer.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing agency.

- D. Slow-Release Fertilizer: Granular fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorous, and potassium in the following composition:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when fertilizer COMPOSITION IS SPECIFIED. Edit for composition.

1. Composition: [20] [____] percent nitrogen, [10] [____] percent phosphorous, and [10] [____] percent potassium, by weight.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when fertilizer COMPOSITION IS DETERMINED BY "Report of Subsurface Investigation" prepared by the Geotechnical Engineer.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from qualified soil-testing agency.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION OF SUBSOIL

- A. Prepare subsoil to eliminate uneven areas and low spots. Maintain lines, levels, profiles, and contours. Make changes in grade gradual. Blend slopes into level areas.
- B. Remove foreign materials, weeds, and undesirable plants and their roots. Remove contaminated subsoil.
- C. Scarify subsoil to a depth of 3 inches where topsoil is to be placed. Repeat cultivation in areas where equipment, used for hauling and spreading topsoil, has compacted subsoil.
- D. Place topsoil as specified in Section 312000.

3.3 FERTILIZING

- A. Apply fertilizer in accordance with manufacturer's published instructions.

- B. Apply after smooth after smooth raking of topsoil and prior to roller compaction.
- C. Do not apply fertilizer at same time or with same machine as will be used to apply seed.
- D. Mix thoroughly into upper 2 inches of topsoil.
- E. Lightly water to aid the dissipation of fertilizer.
- F. No chemical fertilizers.

3.4 SEEDING

- A. Sow one-half of seed in one direction and remainder at right angles to first sowing.

NOTE TO SPECIFIER

Edit paragraph below for depth selected.

- B. Cover seed to average depth of [1/2] [____] inch by means of spike-tooth harrow, cultipacker, or other recommended device.

NOTE TO SPECIFIER

Edit paragraph below for selected Seeding and depth selected.

- C. Drill Seeding:
 - 1. Use [cultipacker seeders] [grass seed drills] [____].
 - 2. Drill seed uniformly to an average depth of [1/2][____] inch and at a rate of [____] pounds per 1,000 square feet.
- D. Hydroseeding:
 - 1. Mix seed, fertilizer, and wood cellulose fiber in required amount of water to product a homogeneous slurry. Add wood cellulose fiber after seed, water, and fertilizer have been thoroughly mixed and apply at the rate of 200 pounds per acre dry weight.
 - 2. Hydraulically spray material on ground to form a blotter-like cover impregnated uniformly with grass seed.

NOTE TO SPECIFIER

Edit paragraph below for depth application rate selected.

- 3. Immediately following application of slurry mix, make separate application of wood cellulose mulch at the rate of [800] [1,000] pounds, dry weight, per acre.
- 4. Apply cover so that rainfall or applied water will percolate to underlying soil.

NOTE TO SPECIFIER

Edit paragraph below for application rate selected.

- E. Mulch:
 - 1. Spread evenly at rate of [____] tons per acre.
 - 2. Anchor by crimping mulch with serrated disc, or by spraying asphalt emulsion on mulched surface.
 - 3. Take precautionary measures to prevent asphalt materials from marking of defacing structures, pavements, utilities, or plantings.

- F. Rolling:
1. Immediately after seeding, firm entire area except for slopes in excess of 3 to 1 with a roller not exceeding 90 pounds for each foot of roller width.
 2. If seeding is performed with cultipacker-type seeder or hydroseeding, rolling may be eliminated.
- G. Erosion Control Material: Install in accordance with manufacturer's instructions.

3.5 SODDING

- A. Placing:
1. Place a maximum of 20 hours after initial harvesting, in accordance with ASPA GSS as modified herein.
 2. Thoroughly moisten areas to be sodded immediately prior to placing.

NOTE TO SPECIFIER

Edit paragraph below for sod spacing and overseeding locations selected.

- B. Spot Sodding:
1. Cut sod into plugs 2 inches square or 2 inches in diameter. Place individual pieces on [____] inch centers and press firmly into soil by foot pressure or by tamping.
 2. Overseed for erosion control on [all] [3 to 1 or greater slopes and drainage ways in] spot sodded areas.
 3. Place seed, as specified above, at the rate of [____] pounds per 1,000 square feet.
- C. Slopes and Ditches:
1. For slopes 2:1 and greater, lay with long edge parallel to slope.
 2. V-ditches and flat bottomed ditches, lay with long edge perpendicular to flow of water.
 3. Anchor each piece of sod with wood pegs or wire staples maximum 2 feet on center.
 4. On slope areas, start sodding at bottom of slope.
- D. Finishing: After completing sodding, blend edges of sodded area smoothly into surrounding area.
- E. Watering: Start immediately after completing each day's sodding. Apply at a rate sufficient to ensure thorough wetting of soil to minimum depth of 4 inches.

3.6 SPRIGGING

- A. Rate:
1. Perform a maximum 36 hours after initial harvesting. Inspect sprigs for heat damage during planting operation.
 2. Plant groups of sprigs at 12 inch maximum intervals. Limit interval between dropping sprigs and covering with soil to 10 minutes.

- B. Planting:

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when BROADCAST method is selected.

1. Broadcast sprigs by hand, manure spreader, or other suitable devices over prepared surface. Force sprigs into soil to a depth of approximately 4 inches with disk harrow or other recommended equipment.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when FURROW PLANTING method is selected.

2. Plant sprigs in furrows spaced a maximum 12 inches apart. Immediately after opening furrows, place sprigs. Fill furrows so that surface is flush with designated grade and a live portion of each sprig is exposed.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when FLUSH PLANTING method is selected.

3. Plant to a depth of approximately 4 inches and cover sprigs so that surface is flush with designated grade and a live portion of each sprig is exposed.

NOTE TO SPECIFIER

Edit paragraph below for OVERSEEDING rate selected.

- C. Overseeding: Broadcast additional seed as specified above, at the rate of [____] pounds per 1000 square feet.
- D. Rolling: Immediately after completion of sprigging operations and additional seeding, if required, roll planted area with cultipacker or roller not exceeding 90 pounds for each foot of roller width.
- E. Watering: Apply at time of sprigging operations at a rate sufficient to ensure thorough wetting of soil to a depth of 4 inches.

3.7 CLEANING AND PROTECTION

- F. Remove soil and debris created by lawn work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto surface of roads, walks, or other paved areas.
- G. Immediately after seeding, sodding or sprigging, protect the area against traffic or other use.
- H. Restore existing lawn and grass areas which have been damaged during execution of this work to original condition.
- I. Keep one paved pedestrian access route and one paved vehicular access route to each building clean at all time. Clean other paving when work in adjacent areas is complete.

3.7 ESTABLISHMENT PERIOD

- A. Definitions:
 1. Lawns and grasses establishment period will be in effect until lawns and grasses have been mowed 3 times.
 2. Stand of lawn and grass is 95 percent ground cover of established species.

NOTE TO SPECIFIER

Edit paragraph below for grass average height and fertilizer type selected.

- B. Maintenance During Establishment Period:
 1. Mow lawns and grassed areas to an average height of [____] inches whenever average height of grass becomes [____] inches.

2. Promotion of growth: Mow, remove excess clippings, eradicate weeds, water, fertilize, overseed, and perform other operations necessary to promote growth.
3. Post-fertilize areas with [commercial grade] [controlled release] fertilizer approximately [____] days after planting and at intervals of [____] weeks thereafter until accepted. Apply fertilizer uniformly at the rate of [____] pounds per 1,000 square feet.

3.8 FINAL INSPECTION AND ACCEPTANCE

A. Final Inspection and Acceptance:

1. Final inspection will be made upon written request from the Contractor at least 10 days prior to last day of lawn and grasses establishment period.

NOTE TO SPECIFIER

Edit paragraph below for application rate selected.

2. Final acceptance will be based upon a satisfactory stand of lawns and grasses as defined in the paragraph entitled, "Establishment Period." [Prior to final acceptance apply [[____] pounds per 1,000 square feet] [[____] pounds per acre]] of controlled release fertilizer.

- B. Replanting: Replant areas which do not have a satisfactory stand of lawns and grasses.
- C. Contractor is to maintain lawns and grasses for one year from completion.

**SECTION 32 93 00 00 - MPF PLANTS****

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL**1.1 SUMMARY**

- A. Section Includes:
 - 1. Plants, Trees and Shrubs.
 - 2. Antidesiccants.
 - 3. Pesticides.
 - 4. Fertilizer.
 - 5. Planting Soil Mixtures.
 - 6. Membrane Ground Covers.
 - 7. Drainage Pipe and Bedding.
 - 8. Mulches.
 - 9. Edging Material.
 - 10. Trunk Wrapping Material.
 - 11. Staking and Guying Material.
 - 12. Water.
 - 13. Maintenance of Existing Erosion Control.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 311000 - Site Clearing: Mulch from recycled site debris.
 - 2. Section 312000 - Earth Moving: Topsoil materials.
 - 3. Section 313200 - Soil Stabilization: Stabilization materials and procedures.
 - 4. Section 312500 - Erosion and Sedimentation Controls: Slope and erosion protection materials.
 - 5. Section 329200 - Turf and Grasses: Grass, sod, and sprigs.

1.2 REFERENCES

- A. American National Standards Institute (ANSI):

1. ANSI Z60.1 - American Standard for Nursery stock.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 4 - Specification for Clay Drain Tile.
2. ASTM C 136 - Method for Sieve Analysis of fine and Coarse Aggregates.
3. ASTM C 498 - Specification for Perforated Clay Drain Tile.
4. ASTM C 700 - Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength, and Perforated.
5. ASTM D 1621 - Test Method for Compressive Properties of Rigid Cellular Plastics.
6. ASTM D 2103 - Specification for Polyethylene Film and Sheeting.
7. ASTM D2178 - Specification for Asphalt Glass (Felt) Used in Roofing and Waterproofing.
8. ASTM D 2729 - Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
9. ASTM D 4491 - Test Methods for Water Permeability of Geotextiles by Permittivity.
10. ASTM D 4716 - Test Method for Constant Head Hydraulic Transmissivity (In-Plane Flow) of Geotextiles and Geotextile Related Products.
11. ASTM F 405 - Specification for Corrugated Polyethylene (PE) Tubing and Fittings.

C. National Arborist Association (NAA):

1. NAA PSST - Pruning Standards for Shade Trees.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

- a. Assurance/Control Submittals:
- b. Delivery Schedule: Submit schedule of delivery of trees, plants, and ground covers minimum 10 days prior to first scheduled delivery.
- c. Pesticide Control Plan:
 - 1) Submit plan for proposed sequence of pesticide application including common name, chemical composition, formulation, concentration rate, and method of application of each type of pesticide.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Operation and Maintenance Data: Include maintenance instructions recommending procedures to be established by United States Postal Service for maintenance of trees, plants, and ground covers during entire year. Include cutting and trimming method and types, application frequency, and recommended coverage of fertilizer. Submit before expiration of maintenance during plant establishment period.

1.4 QUALITY ASSURANCE

A. Horticultural Standards:

1. Names conform to "Standardized Plant Names" by American Joint Committee on horticultural Nomenclature.
2. Material selection, sizing, transportation, protection and planting in accordance with "American Standard for Nursery Stock", by American Association of Nurserymen and American National Standard Institute (ANSI) Publication Z60.1.

B. Regulatory Agencies: Conform to applicable requirements of the Local and State Department of Agriculture Extension Service of State where Project is located.

C. Plant, tree, and shrub materials will be inspected by Contracting Officer at growing site; tagged for size and quality, and approved for delivery.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Delivery:
 - 1. Branched Plants: Branches tied and exposed branches covered with material that allows air circulation. Prevent damage to root balls and desiccation of leaves.
 - 2. Fertilizer and Lime: In original, unopened containers bearing manufacturer's chemical analysis, name, trade name, or trademark, and indication of conformance to state and federal rules and regulations. May be furnished in bulk with certificate indicating above information.
 - 3. Labels: Durable waterproof labels in weather-resistant ink, legible for a minimum of 60 days after delivery to planting location, stating the correct name and size as specified in the list of required plants. Attach to plants, bundles and containers of plants. Groups of plants may be labeled by tagging one plant.
 - 4. Pesticides: In original unopened containers with legible label indicating Environmental Protection Agency (EPA) registration number and manufacturer's registered uses.
- C. Storage:
 - 1. Plants, Trees and Shrubs: Store and protect plants not planted on day of arrival at Project Site as follows:
 - a. Shade and protect plants in outside storage areas protected from wind and direct sunlight until planted.
 - b. Heel-in bare root plants.
 - c. Protect balled and burlapped plants from freezing or drying out by covering balls or roots with moist burlap, sawdust, wood chips, shredded bark, peat moss, or other approved material. Provide covering which allows air circulation.
 - d. Keep all plants in a moist condition by watering with fine mist spray until planted.
 - 2. Lime, Fertilizers, Mulch: Store in dry locations away from contaminants.
 - 3. Pesticides, Antidesiccants: Do not store with other landscape materials.
- D. Handling: Do not drop or dump materials from vehicles. Handle plants by rootballs or containers. Do not lift or carry by stems or crown.

1.6 PROJECT CONDITIONS

- A. Jobsite Requirements:
 - 1. Protection of Personnel and Property: Apply pesticides so damage will not result to personnel or property from either direct spray or drifting of chemicals both on and off site.
 - 2. Disposal of Excess Chemicals and Containers: In accordance with federal and state laws.

NOTE TO SPECIFIER

"REQUIRED Article (Environmental Requirements) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
 - 1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.

- c. Pesticides: No chemical pesticides.
- 2. Recycled Content:
 - a. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Submit written warranty signed by material supplier and installer agreeing that they will:
 - 1. Warrant plants, trees and shrubs unconditionally for 1 year or 1 full growing season, whichever is greater.
 - 2. Replace any material diseased or 25 percent dead or more at no additional cost to United States Postal Service.
 - 3. Warrant deciduous material to break dormancy if planted in dormant season.
 - 4. Warrant perennials to show signs of healthy growth by May 15 to June 1.
 - 5. Provide replacement material during next planting period.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

- A. Pre-Bid: If any plant specified is not obtainable, submit a written substitution request to Contracting Officer during bidding.
- B. Substitutions of planting materials will not be permitted unless authorized by Contracting Officer.

NOTE TO SPECIFIER

Edit PLANTS, TREES, AND SHRUBS for planting used for specific Project.

2.2 PLANTS, TREES, AND SHRUBS

- A. Varieties: Botanical names indicated are listed in "HORTUS III". Furnish nursery stock in accordance with ANSI Z60.1, except as otherwise specified or indicated. Furnish plants grown under climatic conditions similar to those in locality of Project Site. Spray plants budding into leaf of having soft growth with an antidesiccant before digging. Provide plants of same specified size in uniform size and character of growth.
- B. Shape: Well branched, well formed, sound, vigorous, healthy planting stock free from disease, sunscald, windburn, abrasion, and harmful insects or insect eggs and having healthy, normal, and unbroken root system.
- C. Deciduous Trees and Shrubs: Symmetrical tops with typical spread of branches for each particular species or variety.
- D. Evergreen Trees and Shrubs: Well developed symmetrical tops with typical spread of branches for each particular species or variety.

- E. Ground Covers and Vines: Number and length of runners and clump sizes indicated, and of proper age for grade of plants indicated, furnished in removable containers, integral containers or formed homogeneous soil section.
- F. Size: Minimum sizes measured before pruning and with branches in normal position, conform to measurements indicated, based on average width or height of plant for species specified in ANSI Z60.1. Plants of larger size than specified may be used with approval of Contracting Officer. When larger plants are used, increase ball of earth or spread of roots in accordance with ANSI Z60.1.
- G. Balled and Burlapped (B&B) and Balled and Potted (B&P) Plants: Ball size and ratios, conform to ANSI Z60.1. Ball plants with firm, natural balls of soil. Wrap B&B plants firmly with burlap or strong cloth, and tie securely.
- H. Balled and Platformed (BP) Plants: Wrap and ball in same manner as B&B plants and fasten securely to strong platforms.
- I. Bare-Root Plants: Dig with root system substantially intact but with earth carefully removed. Cover roots with a thick coating of mud by puddling after plants are dug or wrap with moist material immediately after digging.
- J. Container Grown Plants: Sufficient root growth to hold earth intact when removed from containers. Root bound plants not permitted.

NOTE TO SPECIFIER

Use paragraph below when RELOCATION OF EXISTING PLANTS is a part of the Work.

- K. Existing Plants for Relocation: Ball sizes shall conform to requirements for collected plants in ANSI Z60.1.

NOTE TO SPECIFIER

Add additional Products and manufacturers as appropriate for specific Project.

2.3 ANTIDESICCANTS

- A. Antidesiccants: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 1. "Vapor Guard" - Miller Chemicals & Fertilizer Corp.; Hanover, PA (717) 632-8921.
 2. [_____].

2.4 PESTICIDES

- A. Soil fumigant, herbicide, insecticide and fungicide, EPA registered and state approved. Furnish for preemergence and postemergence application(s).

NOTE TO SPECIFIER

Edit FERTILIZERS below for specific soil conditions at Project Site.

2.5 FERTILIZERS

- A. Commercial Grade Fertilizer: Granular, free flowing, and uniform in composition with nitrogen-phosphorus-potash ratio of [____] nitrogen, [____] available phosphorus, and [____] potash.
- B. Controlled Release Fertilizer: Magnesium ammonia phosphate and magnesium potassium phosphate with nitrogen-phosphorus-potassium ratio, [____] percent nitrogen, [____] percent phosphorus, and [____] percent potassium, granulated to pass 1/8 inch screen.

NOTE TO SPECIFIER

Edit PLANTING SOIL MIXTURES below for specific soil conditions at Project Site.

2.6 PLANTING SOIL MIXTURES

- A. [____] part topsoil, [____] parts [____], and [____] parts [____].

2.7 MEMBRANE GROUND COVERS

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when SHEET POLYETHYLENE is appropriate for Project. Select mil thickness.

- A. Sheet Polyethylene: Black, conforming to ASTM D2103, minimum thickness [4 mils] [6 mils].

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when ASPHALT GLASS FELT is appropriate for Project.

- B. Asphalt Glass Felt: ASTM D2178; Types I, III or IV.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when ROLL TYPE FIBERGLASS MATS is appropriate for Project. Select mil thickness.

- C. Roll Type Fiberglass Mats: 100 percent lime borosilicate glass fibers with an average fiber diameter of 8 to 12 microns and 2 to 4 inch strands of fiber bonded with phenol formaldehyde resin, water permeable, having a minimum of 1/4 inch and a maximum of 1/2 inch thickness with a density of not less than 3/4 pound per cubic foot.

2.8 DRAINAGE PIPE AND BEDDING

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when DRAINAGE PIPE is selected for Project. Edit for sizes and types of materials required for Project Site conditions.

- A. Drainage Pipe for Plant Pits and Beds: [Plastic polyvinyl chloride pipe, [____] inches in diameter, [unperforated] [perforated] conforming to ASTM D2729.] [Corrugated plastic drainage tubing, [____] inches in diameter, [unperforated] [perforated] conforming to ASTM F405.] [Clay drain tile, [____]

inches in diameter, [unperforated as specified in ASTM C4] [perforated conforming to ASTM C498] [extra strength] [standard strength] conforming to ASTM C700].

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when GRANULAR FILL is selected for Project.

- B. Granular Fill for Plant Pit and Bed Drainage: Uniformly graded sand, stone, gravel, or stone screening free from an excess of soft or unsound particles or other objectionable material. When testing in accordance with ASTM C136, material shall conform to the following gradation limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
3/8 inch 100	
No. 4	85 - 100
No. 16	45 - 80
No. 50	10 - 30
No. 100	0 - 10
No. 200	0 - 3

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when DRAINAGE BOARD is selected for Project.

- C. Drainage Board for Planters:
1. Drainage Board for Planters:
 - a. "Miradrain 9000" - Miradri Moisture Protection Products.; Norcross, GA (888) 863-6781.
 - b. "Hydraway WD3000" - Solutia, Inc.; St. Louis, MO (800) 325-4330.
 - c. "Deck Drain" - Greenstreak; St. Louis, MO (800) 325-9504.

2.9 MULCHES

- A. Free from noxious weeds, mold, or other deleterious materials.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when INERT MULCH is selected for Project. Edit for types and sizes.

- B. Inert Mulch Materials: [Riverbank stone] [Crushed pit-run rock] [Granite chips] [Marble chips] [Crushed bricks] [Volcanic rock] [_____] ranging in size from [_____] to [_____] inch(es).

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when ORGANIC MULCH is selected for Project. Edit for types and sizes.

- C. Organic Mulch Materials: [Ground or shredded bark] [Shredded hardwood] [Pine needles] [Cypress] ranging in size from [_____] to [_____] inch(es).

2.10 EDGING

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when WOOD EDGING is selected for Project.

- A. Wood Edging: Minimum 8 inches by 1/2 inch, treated in accordance with AWPA C2 with CCA Type C or ACA before installation, free of solvent at time of delivery.

1. Anchoring Stakes: Same material as wood edging, 1/2 inch by 2 inches, 12 inches long.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when METAL EDGING is selected for Project. Edit for types and sizes.

- B. Metal Edging: [Galvanized steel] [Aluminum with slots for stakes], [1/4] [3/16] [1/8] inch thick by [4] [5] inches deep in [16] [20] foot length. Treat steel edging with rust preventative and factory finish in color [green] [black].
 1. Anchoring Stakes: Tapered galvanized steel with same finish as metal edging, 16 to 18 inch long.

2.11 TRUNK WRAPPING

- A. Two thicknesses burlap minimum 4 inch width.
- B. Tying Material: 3 ply, lightly tarred medium or coarse sisal yarn twine.

2.12 STAKING AND GUYING

- A. Tree Support Stakes: Rough sawn hard wood free of knots, rot, cross grain, bark, long slivers, or other defects that impair strength. Minimum 2 inches square or 2 1/2 inch diameter by 8 feet long, pointed at one end. Paint or stain wood stakes dark brown.
- B. Guying Wire: 12 gauge galvanized steel.
- C. Hose Chafing Guards: New or used 2 ply, 3/4 inch diameter, reinforced rubber or plastic hose, black or dark green, all of same color.
- D. Flags: White surveyor's plastic tape, 6 inches long, fastened to guying wires or cables.
- E. Driven Anchors: May be used instead of guy stakes for trees with 3 to 6 inch caliper. malleable iron, arrow shaped, galvanized.

2.13 WATER

- A. Suitable quality for irrigation.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Edit paragraph below for Planting Date requirements for specific Project Site.

3.1 TIME RESTRICTIONS AND PLANTING CONDITIONS

- A. Planting Dates:
 1. Deciduous material from [_____] to [_____] for spring planting and from [_____] to [_____] for fall planting.
 2. Evergreen material from [_____] to [_____] for spring planting and from [_____] to [_____] for fall planting.

- B. Restriction: Do not plant when ground is frozen, snow covered, or muddy.

3.2 PREPARATION

- A. Layout: Stake out approved plant material locations and bed outlines on the project site before digging plant pits or beds. The landscape consultant reserves the right to adjust plant material locations to meet field conditions.
- B. Verify location of underground utilities prior to excavation. Protect existing adjacent turf before excavations are made. Where planting beds occur in existing turf areas, remove turf to a depth that will ensure removal of the entire root system. Measure depth of pits from finished grade. Depth of excavation shall provide proper relation between top of ball and finished grade as specified in paragraph entitled "Handling."

3.3 PLANTING

NOTE TO SPECIFIER

Edit paragraph below for selected depth requirements.

- A. Handling: Move balled, burlapped and container-grown plants only by supporting the ball or container. Set plants on hand compacted layer of planting soil 6 inches thick and hold in position until soil has been firmly placed around roots or ball. Set plants [1/8 to 1/4 depth of ball above] [_____] surrounding grade. Replace balled plant whose balls are cracked or broken either before or during the planting process.
1. Ball diameter 12 inches or less: Balled or potted items; excavate pits at least 16 inches larger in diameter and 6 inches deeper than size of ball or container.
 2. Ball diameter greater than 12 inches: Balled or potted items; excavate pits at least 24 inches larger in diameter and 6 inches deeper than size of ball or container.
 3. Mulch: Provide mulching material over entire earth saucer and berm surface around trees and shrubs [3 inches deep] [as indicated], ground cover and annuals [2 inches deep] [as indicated]. Keep mulch out of the crowns of shrubs.

NOTE TO SPECIFIER

Edit paragraph below for selected backfill material.

- B. Balled and Burlapped Stock: Backfill with [planting soil mixture] [topsoil] to approximately half the depth of ball and then tamp and water. Carefully remove or fold back excess burlap and tying materials. Tamp and complete backfill, place mulch and water.

NOTE TO SPECIFIER

Edit paragraph below for selected backfill material.

- C. Bare-Root Stock: Plant so roots are arranged in a natural position. Apply tree wound dressing to cuts larger than 1/2 inch in diameter. Carefully work [planting soil mixtures] [topsoil] among roots. Tamp remainder of backfill, place mulch and water.
- D. Container Grown Stock: Remove from container to prevent damage to plant or root system. Cut root ball vertically in 3 to 5 places with sharp knife before planting.

- E. Ground Covers and Vines: Plant after placing mulch. Do not remove from flats and containers until immediately before planting. Space at intervals indicated, sufficiently deep to cover all roots. Immediately sprinkle with water until entire area is soaked. Smooth planting areas after planting to provide even, smooth finish. Mulch as indicated.

NOTE TO SPECIFIER

Edit paragraph below for fertilizer rate. No chemical fertilizers.

- F. Fertilization: After establishment of finished grade around plants, top dress all pit and bed areas with fertilizer at the rate of [____] pounds per 100 square feet of areas. If fertilizer adheres to plants, carefully remove it by flushing.
- G. Application of Pesticides: No chemical pesticides.

3.4 FINISHING

NOTE TO SPECIFIER

Edit paragraph below for selected edging material.

- A. Edging: Uniformly edge beds of individual plants with a 3 inch to 4 inch deep "Vee" cut to provide a clear division line between planted areas and adjacent lawn. Form bed shapes as indicated. Install [metal] [wooden] edging materials as specified. Mulch to bottom edge of cut.

NOTE TO SPECIFIER

Edit paragraph below for selected mulching depth..

- B. Mulching: Provide mulching materials at other indicated locations [3 inches deep] [____]. Keep mulch off buildings, sidewalks, light standards, and other structures.
1. Placing Inert Materials: Lay membrane with edges lapped 6 inches to 12 inches to receive inert mulch material. Punch a grid of 1/4 inch holes for drainage in the membrane one foot on centers over entire area. Spread mulch [3 inches deep] [____] [as indicated].
 2. Placing Mulching Materials: Spread a uniform thickness [of 3 inches] [as indicated].
- C. Wrapping: Tie trunk wrapping material to trunks of deciduous trees with specified material within the next full working day after planting. Contracting Officer will inspect the trunks of deciduous trees for physical damage, insect infestation, or disease, and determine required treatment or rejection prior to wrapping operation. Begin wrapping at base and extend to first branches. Overlap wrapping half with width of underlying wrap and securely tie at top, bottom, and 18 inch maximum intervals with twine.
- D. Staking and Guying:
1. Deadmen: Stake, guy and place deadmen for plantings as indicated.
 2. Chafing Guards: Hold plants firmly between stakes with double-strand of 12 gauge guying wire. Use hose chafing guards, where wire will contact the plant. (Provide turnbuckles as indicated).
 3. Stakes: Drive vertically into ground 3 feet deep outside of plant balls. Do not injure ball or roots.
 4. Ground Stakes: Drive into firm ground outside of plant pit with top of stakes flush with ground.
 5. Deadmen: Place minimum 18 inches below ground surface.
 6. Iron Anchors: Drive minimum 30 inches below ground surface.
 7. Steel Anchors: Insert steel screw anchors as recommended in manufacturer's data.
 8. Flags: Securely fasten flags on each guy [wire] [cable] approximately two-thirds of the distance up from ground level.

- E. Pruning: NAA DSST; prune in accordance with safety requirements of ANSI Z133.1.
1. Trees and Shrubs: Remove dead and broken branches. Prune deciduous trees and shrubs to reduce total amount of branching structure by maximum one-third. Retain typical grown habit of individual plant with as much height and spread as is practical. Make cuts with sharp instruments flush with trunk or adjacent branch, above node.
 2. Wound Dressing: Apply tree wound dressing to cuts 1/2 inch in diameter and larger immediately after pruning.

3.5 MAINTENANCE

- A. Commencement: Begin maintenance immediately after each plant is planted.
- B. Inspection: Inspect plants at least once a week during installation period and perform needed maintenance promptly.

3.6 PLANT ESTABLISHMENT PERIOD

- A. Commencement: On the date that inspection by Contracting Officer shows that all new plants furnished under this Contract have been satisfactorily installed.

NOTE TO SPECIFIER

Edit paragraph below for Establishment Period Dates, fertilizer application rate, and time for removal of dead plants.

- B. Maintenance During Plant Establishment Period:
 1. Promote Plant Growth: Water, prune, mulch, re-guy, re-wrap and perform other operations necessary to promote plant growth.
 2. Fertilizing Plants: At least once during the plant establishment period between the dates of [_____] [_____]. Fertilize by topdressing at [_____] pounds per 100 square feet of plant pit or bed area or by tablet or packet form with controlled release fertilizer.
 3. Remove Dead Plants: Remove and replace dead plants [immediately] [immediately upon commencement of specified planting season] and replace stakes, guys, wraps, and eroded plant saucers required. No additional plant establishment period will be required for replacement plants.
 4. Tracking Unhealthy Plants: Plants not in healthy growing condition, as determined by Contracting Officer, will be noted and removed as soon as seasonal conditions permit and replaced with plants of the same species and sizes as originally specified. Make replacements in same manner as specified for original plantings.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect plant conditions, placement, and soil conditions.

3.8 FINAL INSPECTION AND ACCEPTANCE

NOTE TO SPECIFIER

Edit paragraph below for topdressing application rate.

- A. Final Inspection: Upon written request from Contractor at least 10 days prior to last day of the plant establishment period. Prior to final inspection, fertilize all plants by topdressing at [____] pounds per 100 square feet of plant pit or bed area or by tablet or packet form with controlled release fertilizer.
- B. Final Acceptance: Base on compliance with the following:
 - 1. Total Plants on Site: Plants have been accepted and required number of replacement are in place.
 - 2. Mulching and Weeding: Plant beds and saucers are properly mulches and free of weeds.
 - 3. Supports: Stakes and guys are in good condition.
 - 4. Remedial Work: Remedial measures directed by Contracting Officer have been carried out to ensure plant survival.
 - 5. Fertilizing: Plant materials have been fertilized as required.
- C. Contractor is to maintain exterior plants for one year from completion.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 32 93 00 00

SECTION 32 93 00 00 - CSF PLANTS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Plants, Trees and Shrubs.
 - 2. Antidesiccants.
 - 3. Pesticides.
 - 4. Fertilizer.
 - 5. Planting Soil Mixtures.
 - 6. Membrane Ground Covers.
 - 7. Drainage Pipe and Bedding.
 - 8. Mulches.
 - 9. Edging Material.
 - 10. Trunk Wrapping Material.
 - 11. Staking and Guying Material.
 - 12. Water.
 - 13. Maintenance of Existing Erosion Control.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 311000 - Site Clearing: Mulch from recycled site debris.
 - 2. Section 312000 - Earth Moving: Topsoil materials.
 - 3. Section 313200 - Soil Stabilization: Stabilization materials and procedures.
 - 4. Section 312500 - Erosion and Sedimentation Controls: Slope and erosion protection materials.
 - 5. Section 329200 - Turf and Grasses: Grass, sod, and sprigs.

1.2 REFERENCES

- A. American National Standards Institute (ANSI):

1. ANSI Z60.1 - American Standard for Nursery stock.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 4 - Specification for Clay Drain Tile.
2. ASTM C 136 - Method for Sieve Analysis of fine and Coarse Aggregates.
3. ASTM C 498 - Specification for Perforated Clay Drain Tile.
4. ASTM C 700 - Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength, and Perforated.
5. ASTM D 1621 - Test Method for Compressive Properties of Rigid Cellular Plastics.
6. ASTM D 2103 - Specification for Polyethylene Film and Sheeting.
7. ASTM D2178 - Specification for Asphalt Glass (Felt) Used in Roofing and Waterproofing.
8. ASTM D 2729 - Specification for Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
9. ASTM D 4491 - Test Methods for Water Permeability of Geotextiles by Permittivity.
10. ASTM D 4716 - Test Method for Constant Head Hydraulic Transmissivity (In-Plane Flow) of Geotextiles and Geotextile Related Products.
11. ASTM F 405 - Specification for Corrugated Polyethylene (PE) Tubing and Fittings.

C. National Arborist Association (NAA):

1. NAA PSST - Pruning Standards for Shade Trees.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

- a. Assurance/Control Submittals:
- b. Delivery Schedule: Submit schedule of delivery of trees, plants, and ground covers minimum 10 days prior to first scheduled delivery.
- c. Pesticide Control Plan:
 - 1) Submit plan for proposed sequence of pesticide application including common name, chemical composition, formulation, concentration rate, and method of application of each type of pesticide.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Operation and Maintenance Data: Include maintenance instructions recommending procedures to be established by United States Postal Service for maintenance of trees, plants, and ground covers during entire year. Include cutting and trimming method and types, application frequency, and recommended coverage of fertilizer. Submit before expiration of maintenance during plant establishment period.

1.4 QUALITY ASSURANCE

A. Horticultural Standards:

1. Names conform to "Standardized Plant Names" by American Joint Committee on horticultural Nomenclature.
2. Material selection, sizing, transportation, protection and planting in accordance with "American Standard for Nursery Stock", by American Association of Nurserymen and American National Standard Institute (ANSI) Publication Z60.1.

B. Regulatory Agencies: Conform to applicable requirements of the Local and State Department of Agriculture Extension Service of State where Project is located.

C. Plant, tree, and shrub materials will be inspected by Contracting Officer at growing site; tagged for size and quality, and approved for delivery.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Delivery:
1. Branched Plants: Branches tied and exposed branches covered with material that allows air circulation. Prevent damage to root balls and desiccation of leaves.
 2. Fertilizer and Lime: In original, unopened containers bearing manufacturer's chemical analysis, name, trade name, or trademark, and indication of conformance to state and federal rules and regulations. May be furnished in bulk with certificate indicating above information.
 3. Labels: Durable waterproof labels in weather-resistant ink, legible for a minimum of 60 days after delivery to planting location, stating the correct name and size as specified in the list of required plants. Attach to plants, bundles and containers of plants. Groups of plants may be labeled by tagging one plant.
 4. Pesticides: In original unopened containers with legible label indicating Environmental Protection Agency (EPA) registration number and manufacturer's registered uses.
- C. Storage:
1. Plants, Trees and Shrubs: Store and protect plants not planted on day of arrival at Project Site as follows:
 - a. Shade and protect plants in outside storage areas protected from wind and direct sunlight until planted.
 - b. Heel-in bare root plants.
 - c. Protect balled and burlapped plants from freezing or drying out by covering balls or roots with moist burlap, sawdust, wood chips, shredded bark, peat moss, or other approved material. Provide covering which allows air circulation.
 - d. Keep all plants in a moist condition by watering with fine mist spray until planted.
 2. Lime, Fertilizers, Mulch: Store in dry locations away from contaminants.
 3. Pesticides, Antidesiccants: Do not store with other landscape materials.
- D. Handling: Do not drop or dump materials from vehicles. Handle plants by rootballs or containers. Do not lift or carry by stems or crown.

1.6 PROJECT CONDITIONS

- A. Jobsite Requirements:
1. Protection of Personnel and Property: Apply pesticides so damage will not result to personnel or property from either direct spray or drifting of chemicals both on and off site.
 2. Disposal of Excess Chemicals and Containers: In accordance with federal and state laws.

NOTE TO SPECIFIER

"REQUIRED Article (Environmental Requirements) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
1. Renewable Resources: Plants specified are indigenous, low maintenance varieties, tolerant of site's existing soils and climate without supplemental irrigation or fertilization once established.
 - a. Soil amendments: No chemical fertilizers; use organic matter to support establishment of indigenous plants; use inorganic materials such as sand or gypsum to improve workability and drainage of soil as appropriate to indigenous plants.
 - b. Mulch: Provide organic mulch products.

- c. Pesticides: No chemical pesticides.
- 2. Recycled Content:
 - a. Mulch from recycled site debris: Coordinate with Section 311000 - Site Clearing to identify and prepare suitable organic debris for use as mulch on site.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Submit written warranty signed by material supplier and installer agreeing that they will:
 - 1. Warrant plants, trees and shrubs unconditionally for 1 year or 1 full growing season, whichever is greater.
 - 2. Replace any material diseased or 25 percent dead or more at no additional cost to United States Postal Service.
 - 3. Warrant deciduous material to break dormancy if planted in dormant season.
 - 4. Warrant perennials to show signs of healthy growth by May 15 to June 1.
 - 5. Provide replacement material during next planting period.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

- A. Pre-Bid: If any plant specified is not obtainable, submit a written substitution request to Contracting Officer during bidding.
- B. Substitutions of planting materials will not be permitted unless authorized by Contracting Officer.

NOTE TO SPECIFIER

Edit PLANTS, TREES, AND SHRUBS for planting used for specific Project.

2.2 PLANTS, TREES, AND SHRUBS

- A. Varieties: Botanical names indicated are listed in "HORTUS III". Furnish nursery stock in accordance with ANSI Z60.1, except as otherwise specified or indicated. Furnish plants grown under climatic conditions similar to those in locality of Project Site. Spray plants budding into leaf of having soft growth with an antidesiccant before digging. Provide plants of same specified size in uniform size and character of growth.
- B. Shape: Well branched, well formed, sound, vigorous, healthy planting stock free from disease, sunscald, windburn, abrasion, and harmful insects or insect eggs and having healthy, normal, and unbroken root system.
- C. Deciduous Trees and Shrubs: Symmetrical tops with typical spread of branches for each particular species or variety.
- D. Evergreen Trees and Shrubs: Well developed symmetrical tops with typical spread of branches for each particular species or variety.

- E. Ground Covers and Vines: Number and length of runners and clump sizes indicated, and of proper age for grade of plants indicated, furnished in removable containers, integral containers or formed homogeneous soil section.
- F. Size: Minimum sizes measured before pruning and with branches in normal position, conform to measurements indicated, based on average width or height of plant for species specified in ANSI Z60.1. Plants of larger size than specified may be used with approval of Contracting Officer. When larger plants are used, increase ball of earth or spread of roots in accordance with ANSI Z60.1.
- G. Balled and Burlapped (B&B) and Balled and Potted (B&P) Plants: Ball size and ratios, conform to ANSI Z60.1. Ball plants with firm, natural balls of soil. Wrap B&B plants firmly with burlap or strong cloth, and tie securely.
- H. Balled and Platformed (BP) Plants: Wrap and ball in same manner as B&B plants and fasten securely to strong platforms.
- I. Bare-Root Plants: Dig with root system substantially intact but with earth carefully removed. Cover roots with a thick coating of mud by puddling after plants are dug or wrap with moist material immediately after digging.
- J. Container Grown Plants: Sufficient root growth to hold earth intact when removed from containers. Root bound plants not permitted.

NOTE TO SPECIFIER

Use paragraph below when RELOCATION OF EXISTING PLANTS is a part of the Work.

- K. Existing Plants for Relocation: Ball sizes shall conform to requirements for collected plants in ANSI Z60.1.

NOTE TO SPECIFIER

Add additional Products and manufacturers as appropriate for specific Project.

2.3 ANTIDESICCANTS

- A. Antidesiccants: Subject to compliance with requirements, manufacturers offering specified items which may be incorporated in the work include the following.
 1. "Vapor Guard" - Miller Chemicals & Fertilizer Corp.; Hanover, PA (717) 632-8921.
 2. [_____].

2.4 PESTICIDES

- A. Soil fumigant, herbicide, insecticide and fungicide, EPA registered and state approved. Furnish for preemergence and postemergence application(s).

NOTE TO SPECIFIER

Edit FERTILIZERS below for specific soil conditions at Project Site.

2.5 FERTILIZERS

- A. Commercial Grade Fertilizer: Granular, free flowing, and uniform in composition with nitrogen-phosphorus-potash ratio of [____] nitrogen, [____] available phosphorus, and [____] potash.
- B. Controlled Release Fertilizer: Magnesium ammonia phosphate and magnesium potassium phosphate with nitrogen-phosphorus-potassium ratio, [____] percent nitrogen, [____] percent phosphorus, and [____] percent potassium, granulated to pass 1/8 inch screen.

NOTE TO SPECIFIER

Edit PLANTING SOIL MIXTURES below for specific soil conditions at Project Site.

2.6 PLANTING SOIL MIXTURES

- A. [____] part topsoil, [____] parts [____], and [____] parts [____].

2.7 MEMBRANE GROUND COVERS

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when SHEET POLYETHYLENE is appropriate for Project. Select mil thickness.

- A. Sheet Polyethylene: Black, conforming to ASTM D2103, minimum thickness [4 mils] [6 mils].

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when ASPHALT GLASS FELT is appropriate for Project.

- B. Asphalt Glass Felt: ASTM D2178; Types I, III or IV.

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when ROLL TYPE FIBERGLASS MATS is appropriate for Project. Select mil thickness.

- C. Roll Type Fiberglass Mats: 100 percent lime borosilicate glass fibers with an average fiber diameter of 8 to 12 microns and 2 to 4 inch strands of fiber bonded with phenol formaldehyde resin, water permeable, having a minimum of 1/4 inch and a maximum of 1/2 inch thickness with a density of not less than 3/4 pound per cubic foot.

2.8 DRAINAGE PIPE AND BEDDING

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when DRAINAGE PIPE is selected for Project. Edit for sizes and types of materials required for Project Site conditions.

- A. Drainage Pipe for Plant Pits and Beds: [Plastic polyvinyl chloride pipe, [____] inches in diameter, [unperforated] [perforated] conforming to ASTM D2729.] [Corrugated plastic drainage tubing, [____] inches in diameter, [unperforated] [perforated] conforming to ASTM F405.] [Clay drain tile, [____]

inches in diameter, [unperforated as specified in ASTM C4] [perforated conforming to ASTM C498] [extra strength] [standard strength] conforming to ASTM C700].

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when GRANULAR FILL is selected for Project.

- B. Granular Fill for Plant Pit and Bed Drainage: Uniformly graded sand, stone, gravel, or stone screening free from an excess of soft or unsound particles or other objectionable material. When testing in accordance with ASTM C136, material shall conform to the following gradation limits:

<u>Sieve Size</u>	<u>Percent Passing</u>
3/8 inch 100	
No. 4	85 - 100
No. 16	45 - 80
No. 50	10 - 30
No. 100	0 - 10
No. 200	0 - 3

NOTE TO SPECIFIER

OPTION 3: Use paragraph below when DRAINAGE BOARD is selected for Project.

- C. Drainage Board for Planters:
1. Drainage Board for Planters:
 - a. "Miradrain 9000" - Miradri Moisture Protection Products.; Norcross, GA (888) 863-6781.
 - b. "Hydraway WD3000" - Solutia, Inc.; St. Louis, MO (800) 325-4330.
 - c. "Deck Drain" - Greenstreak; St. Louis, MO (800) 325-9504.

2.9 MULCHES

- A. Free from noxious weeds, mold, or other deleterious materials.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when INERT MULCH is selected for Project. Edit for types and sizes.

- B. Inert Mulch Materials: [Riverbank stone] [Crushed pit-run rock] [Granite chips] [Marble chips] [Crushed bricks] [Volcanic rock] [_____] ranging in size from [_____] to [_____] inch(es).

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when ORGANIC MULCH is selected for Project. Edit for types and sizes.

- C. Organic Mulch Materials: [Ground or shredded bark] [Shredded hardwood] [Pine needles] [Cypress] ranging in size from [_____] to [_____] inch(es).

2.10 EDGING

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when WOOD EDGING is selected for Project.

- A. Wood Edging: Minimum 8 inches by 1/2 inch, treated in accordance with AWPA C2 with CCA Type C or ACA before installation, free of solvent at time of delivery.

1. Anchoring Stakes: Same material as wood edging, 1/2 inch by 2 inches, 12 inches long.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when METAL EDGING is selected for Project. Edit for types and sizes.

- B. Metal Edging: [Galvanized steel] [Aluminum with slots for stakes], [1/4] [3/16] [1/8] inch thick by [4] [5] inches deep in [16] [20] foot length. Treat steel edging with rust preventative and factory finish in color [green] [black].
 1. Anchoring Stakes: Tapered galvanized steel with same finish as metal edging, 16 to 18 inch long.

2.11 TRUNK WRAPPING

- A. Two thicknesses burlap minimum 4 inch width.
- B. Tying Material: 3 ply, lightly tarred medium or coarse sisal yarn twine.

2.12 STAKING AND GUYING

- A. Tree Support Stakes: Rough sawn hard wood free of knots, rot, cross grain, bark, long slivers, or other defects that impair strength. Minimum 2 inches square or 2 1/2 inch diameter by 8 feet long, pointed at one end. Paint or stain wood stakes dark brown.
- B. Guying Wire: 12 gauge galvanized steel.
- C. Hose Chafing Guards: New or used 2 ply, 3/4 inch diameter, reinforced rubber or plastic hose, black or dark green, all of same color.
- D. Flags: White surveyor's plastic tape, 6 inches long, fastened to guying wires or cables.
- E. Driven Anchors: May be used instead of guy stakes for trees with 3 to 6 inch caliper. malleable iron, arrow shaped, galvanized.

2.13 WATER

- A. Suitable quality for irrigation.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Edit paragraph below for Planting Date requirements for specific Project Site.

3.1 TIME RESTRICTIONS AND PLANTING CONDITIONS

- A. Planting Dates:
 1. Deciduous material from [] to [] for spring planting and from [] to [] for fall planting.
 2. Evergreen material from [] to [] for spring planting and from [] to [] for fall planting.

- B. Restriction: Do not plant when ground is frozen, snow covered, or muddy.

3.2 PREPARATION

- A. Layout: Stake out approved plant material locations and bed outlines on the project site before digging plant pits or beds. The landscape consultant reserves the right to adjust plant material locations to meet field conditions.
- B. Verify location of underground utilities prior to excavation. Protect existing adjacent turf before excavations are made. Where planting beds occur in existing turf areas, remove turf to a depth that will ensure removal of the entire root system. Measure depth of pits from finished grade. Depth of excavation shall provide proper relation between top of ball and finished grade as specified in paragraph entitled "Handling."

3.3 PLANTING

NOTE TO SPECIFIER

Edit paragraph below for selected depth requirements.

- A. Handling: Move balled, burlapped and container-grown plants only by supporting the ball or container. Set plants on hand compacted layer of planting soil 6 inches thick and hold in position until soil has been firmly placed around roots or ball. Set plants [1/8 to 1/4 depth of ball above] [_____] surrounding grade. Replace balled plant whose balls are cracked or broken either before or during the planting process.
1. Ball diameter 12 inches or less: Balled or potted items; excavate pits at least 16 inches larger in diameter and 6 inches deeper than size of ball or container.
 2. Ball diameter greater than 12 inches: Balled or potted items; excavate pits at least 24 inches larger in diameter and 6 inches deeper than size of ball or container.
 3. Mulch: Provide mulching material over entire earth saucer and berm surface around trees and shrubs [3 inches deep] [as indicated], ground cover and annuals [2 inches deep] [as indicated]. Keep mulch out of the crowns of shrubs.

NOTE TO SPECIFIER

Edit paragraph below for selected backfill material.

- B. Balled and Burlapped Stock: Backfill with [planting soil mixture] [topsoil] to approximately half the depth of ball and then tamp and water. Carefully remove or fold back excess burlap and tying materials. Tamp and complete backfill, place mulch and water.

NOTE TO SPECIFIER

Edit paragraph below for selected backfill material.

- C. Bare-Root Stock: Plant so roots are arranged in a natural position. Apply tree wound dressing to cuts larger than 1/2 inch in diameter. Carefully work [planting soil mixtures] [topsoil] among roots. Tamp remainder of backfill, place mulch and water.
- D. Container Grown Stock: Remove from container to prevent damage to plant or root system. Cut root ball vertically in 3 to 5 places with sharp knife before planting.

- E. Ground Covers and Vines: Plant after placing mulch. Do not remove from flats and containers until immediately before planting. Space at intervals indicated, sufficiently deep to cover all roots. Immediately sprinkle with water until entire area is soaked. Smooth planting areas after planting to provide even, smooth finish. Mulch as indicated.

NOTE TO SPECIFIER

Edit paragraph below for fertilizer rate. No chemical fertilizers.

- F. Fertilization: After establishment of finished grade around plants, top dress all pit and bed areas with fertilizer at the rate of [_____] pounds per 100 square feet of areas. If fertilizer adheres to plants, carefully remove it by flushing.
- G. Application of Pesticides: No chemical pesticides.

3.4 FINISHING

NOTE TO SPECIFIER

Edit paragraph below for selected edging material.

- A. Edging: Uniformly edge beds of individual plants with a 3 inch to 4 inch deep "Vee" cut to provide a clear division line between planted areas and adjacent lawn. Form bed shapes as indicated. Install [metal] [wooden] edging materials as specified. Mulch to bottom edge of cut.

NOTE TO SPECIFIER

Edit paragraph below for selected mulching depth..

- B. Mulching: Provide mulching materials at other indicated locations [3 inches deep] [_____]. Keep mulch off buildings, sidewalks, light standards, and other structures.
1. Placing Inert Materials: Lay membrane with edges lapped 6 inches to 12 inches to receive inert mulch material. Punch a grid of 1/4 inch holes for drainage in the membrane one foot on centers over entire area. Spread mulch [3 inches deep] [_____] [as indicated].
 2. Placing Mulching Materials: Spread a uniform thickness [of 3 inches] [as indicated].
- C. Wrapping: Tie trunk wrapping material to trunks of deciduous trees with specified material within the next full working day after planting. Contracting Officer will inspect the trunks of deciduous trees for physical damage, insect infestation, or disease, and determine required treatment or rejection prior to wrapping operation. Begin wrapping at base and extend to first branches. Overlap wrapping half with width of underlying wrap and securely tie at top, bottom, and 18 inch maximum intervals with twine.
- D. Staking and Guying:
1. Deadmen: Stake, guy and place deadmen for plantings as indicated.
 2. Chafing Guards: Hold plants firmly between stakes with double-strand of 12 gauge guying wire. Use hose chafing guards, where wire will contact the plant. (Provide turnbuckles as indicated).
 3. Stakes: Drive vertically into ground 3 feet deep outside of plant balls. Do not injure ball or roots.
 4. Ground Stakes: Drive into firm ground outside of plant pit with top of stakes flush with ground.
 5. Deadmen: Place minimum 18 inches below ground surface.
 6. Iron Anchors: Drive minimum 30 inches below ground surface.
 7. Steel Anchors: Insert steel screw anchors as recommended in manufacturer's data.
 8. Flags: Securely fasten flags on each guy [wire] [cable] approximately two-thirds of the distance up from ground level.

- E. Pruning: NAA DSST; prune in accordance with safety requirements of ANSI Z133.1.
1. Trees and Shrubs: Remove dead and broken branches. Prune deciduous trees and shrubs to reduce total amount of branching structure by maximum one-third. Retain typical grown habit of individual plant with as much height and spread as is practical. Make cuts with sharp instruments flush with trunk or adjacent branch, above node.
 2. Wound Dressing: Apply tree wound dressing to cuts 1/2 inch in diameter and larger immediately after pruning.

3.5 MAINTENANCE

- A. Commencement: Begin maintenance immediately after each plant is planted.
- B. Inspection: Inspect plants at least once a week during installation period and perform needed maintenance promptly.

3.6 PLANT ESTABLISHMENT PERIOD

- A. Commencement: On the date that inspection by Contracting Officer shows that all new plants furnished under this Contract have been satisfactorily installed.

NOTE TO SPECIFIER

Edit paragraph below for Establishment Period Dates, fertilizer application rate, and time for removal of dead plants.

- B. Maintenance During Plant Establishment Period:
 1. Promote Plant Growth: Water, prune, mulch, re-guy, re-wrap and perform other operations necessary to promote plant growth.
 2. Fertilizing Plants: At least once during the plant establishment period between the dates of [_____] [_____]. Fertilize by topdressing at [_____] pounds per 100 square feet of plant pit or bed area or by tablet or packet form with controlled release fertilizer.
 3. Remove Dead Plants: Remove and replace dead plants [immediately] [immediately upon commencement of specified planting season] and replace stakes, guys, wraps, and eroded plant saucers required. No additional plant establishment period will be required for replacement plants.
 4. Tracking Unhealthy Plants: Plants not in healthy growing condition, as determined by Contracting Officer, will be noted and removed as soon as seasonal conditions permit and replaced with plants of the same species and sizes as originally specified. Make replacements in same manner as specified for original plantings.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect plant conditions, placement, and soil conditions.

3.8 FINAL INSPECTION AND ACCEPTANCE

NOTE TO SPECIFIER

Edit paragraph below for topdressing application rate.

- A. Final Inspection: Upon written request from Contractor at least 10 days prior to last day of the plant establishment period. Prior to final inspection, fertilize all plants by topdressing at [____] pounds per 100 square feet of plant pit or bed area or by tablet or packet form with controlled release fertilizer.
- B. Final Acceptance: Base on compliance with the following:
 - 1. Total Plants on Site: Plants have been accepted and required number of replacement are in place.
 - 2. Mulching and Weeding: Plant beds and saucers are properly mulches and free of weeds.
 - 3. Supports: Stakes and guys are in good condition.
 - 4. Remedial Work: Remedial measures directed by Contracting Officer have been carried out to ensure plant survival.
 - 5. Fertilizing: Plant materials have been fertilized as required.
- C. Contractor is to maintain exterior plants for one year from completion.

SECTION 33 01 30 72 - PIPE LINING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of pipe lining. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

A. Lining Material:

1. Polyethylene Pipe: Extruded, flexible industrial grade, high density (Type 3 or 4) in 40 foot lengths, complying with ASTM D 2239 and D 2447.
 - a. Diameter: Outside diameter shall be as large as possible while allowing for ease of pulling into the existing pipes. Pipe dimensions shall comply with ASTM D 2447 and D 2837.
 - b. Liner Thickness and Class shall be suitable for the use intended. The tolerance on the pipe wall thickness shall be as noted in Table 2 of ASTM D 2447.
 - c. Gravity Sanitary, Gravity Storm, and Gravity Industrial Sewers shall be Schedule 40.
 - d. Gravity Thermal Discharge Sewers shall be Schedule 80.
 - e. Low Pressure Sewers shall be Schedule 40, complying with ASTM D 2239.
 - f. High Pressure Sewers shall be Schedule 80, complying with ASTM D 2239 and D 2837.
 - g. Chemical Resistance: Pipe liner shall be resistant to chemical attack, erosion, and corrosion.
 - h. Fittings shall be fabricated from polyethylene pipe. The polyethylene fittings shall have the same pressure rating as the pipe and shall comply with ASTM D 3261.
2. Cement-Mortar Lining:
 - a. Portland Cement shall comply with ASTM C 150, Type 1.
 - b. Pozzolan Cement shall comply with ASTM C 618 and shall not comprise more than 20 percent of total cement amount, by weight.
 - c. Sand shall be well graded, clean, free from organic and extraneous matter. One hundred percent shall pass the 16-mesh size screen.
 - d. Lining Thickness: Cement lining shall be not less than 1/8 inch for pipe sizes 4 to 14 inches, not less than 3/16 inch for pipe sized 16 inches and larger, and not less than 1/4 inch for steel pipe 16 inches and larger.
3. Reinforced Mortar Pipe Slip-Lining:
 - a. Gravity Sewers: Slip-lining shall be of glass fiber reinforced polyester mortar pipe, complying with ASTM D 3262.
 - b. Pressure Sewers (Force Mains): Slip-lining shall be of glass fiber reinforced polyester mortar pipe complying with ASTM D 2517.
 - c. Diameter: Outside diameter shall be as large as possible while allowing for ease of pulling into existing pipes, as recommended by the manufacturer.
 - d. Chemical Resistance: Pipe liner shall be resistant to chemical attack, erosion, and corrosion.
4. Fittings: Fittings shall be manufactured of the same materials as is the glass fiber reinforced polyester mortar pipe.
5. Epoxy-Mortar Lining:
 - a. Epoxy compound shall comply with ASTM D 1763.
 - b. Admixtures shall be well graded with one hundred percent passing. The 16-mesh size screen. All admixtures shall improve the workability, density, and strength of the mortar.

- c. Lining Thickness: For pipe sizes 4 to 14 inches, epoxy mortar lining thickness shall be not less than 1/8 inch. For pipe sizes 16 inches and larger, epoxy mortar lining shall be not less than 3/16 inch.

B. Joint:

1. Slip-Lining:

- a. Polyethylene Pipe Butt Joints: Pipe lengths, fittings, and flanged connections to be joined by thermal butt fusion shall be of the same time, grade, and class of polyethylene compound and supplied by pipe supplier.
- b. Flanged Joints shall consist of a polyethylene flange, thermally butt fused to the ends of the pipe. The companion flange shall be steel or cast iron and nylon-coated.
- c. Lateral Service Connections: Sidewall connections shall be made with polyethylene pipe sections of the same material, grade, and class as the liner material and shall have the same pressure ratings. Lateral connections shall be watertight.

2. Reinforced Mortar Lining:

- a. Bell and spigot joints shall be the inverted type.
- b. Manhole Joints and Connections shall be oakum ring and grout as required.

1.3 EXECUTION:

A. Slip-Lining, Polyethylene Pipe:

- 1. Insertion of Liner: Liner shall be laid at a constant line and grade as the existing pipe, without undulations or damage. Where the existing pipe is not at constant grade, the liner shall follow as true a constant grade as possible.
- 2. Grouting: At manholes, annular space shall be packed with oakum and expansion grout or nonshrink grout as required. At existing line, after liner has been inserted, grout wherever existing pipe has failed structurally.
- 3. Concrete Encasement: Crown of liner shall be encased in concrete a minimum thickness of 6 inches for the entire length of the excavated trench and out at least 6 inches each side of the bottom half of the original pipe remaining down to firm soil. Wherever existing concrete encasement has been removed, the liner shall be encased in the same manner as the original pipe.
- 4. Thrust Blocks: Concrete thrust blocks shall be provided as required.

B. Cement Mortar and Epoxy Mortar Lining:

- 1. Cement Mortar Mixing: One part cement to one and one-half parts of sand by volume.
- 2. Application of Lining: The lining shall be applied to produce a smooth, uniform thickness throughout the interior of the pipe line.
- 3. Curing of the Cement Mortar Lining: Immediately upon completion of the lining of a length of pipe between access openings or at the end of a day's run, the section of pipe shall be closed at each end, the access openings covered to prevent the circulation of air, and the atmosphere kept moist.
- 4. Reconnection of Pipes After Lining: Close and make watertight all openings in the lines.
- 5. Pressure Test and Leaks: Hydrostatic and leakage tests shall be conducted on all pipe that is cleaned and lined.

C. Reinforced Mortar Pipe Lining:

- 1. Joining of Pipe Ends: Liner sections containing bell and spigot joints shall be joined using an O-ring.
- 2. Grouting Work shall be accomplished following the same techniques as described in paragraph Slip-Lining, Polyethylene Pipe.

D. Cement Mortar Lining:

1. Epoxy Mortar Lining: Excessive mortar shall be removed from the manhole walls and bottom. Manhole bottom shall receive special care in making all transitions smooth.
2. Work at Service Connections: Plugs or caps shall be placed at the access point of the service connection to the lines and shall be removed once the mortar has set. The completed lining shall not be damaged.
3. Reinforced Mortar Pipe Lining: Joining of fiberglass reinforced polyester mortar pipe shall be carried out in the trench, with the first section of liner already inserted.
4. Lateral Connections: Service to connections shall be provided for and continued after installation of the lining.
5. Testing: Upon completion of lining operation, the sewer line shall be tested for proper operation and shall be observed for a period of 24 hours. All deficiencies shall be corrected.
6. Pavement Restoration: All disturbed pavement shall be restored to its original condition and shall match existing adjacent.
7. Inspection: Large diameter sewers shall be inspected from inside to ensure that all lateral connections and joints are in proper order. Sewers that have been cement-lined may be inspected for a smooth finish, while plugs and caps are being removed.

SECTION 33 11 00 00 - CSF WATER UTILITY DISTRIBUTION PIPING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Domestic water system pipe and fittings.
2. Connection of domestic water system to municipal water system.

NOTE TO SPECIFIER

Use paragraphs (3 and 4) below when building has a fire sprinkler system as part of the Work.

3. Fire protection water system pipe, fittings, valves, and hydrants.
4. Connection of fire protection water system to municipal water system.

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 312300 - Excavation and Fill: Earthwork for utilities.
2. Section 033000 - Cast-In-Place Concrete: Concrete for thrust blocks.

1.2 REFERENCES

A. American Society of Mechanical Engineers (ASME):

1. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
2. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.

B. American Society for Testing and Materials (ASTM):

1. ASTM B 88 - Specification for Seamless Copper water Tube.
2. ASTM D 1785 - Specification for Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120.
3. ASTM D 2241 - Specification for Polyvinyl Chloride (PVC) Pressure Rated Pipe (SDR Series).
4. ASTM D 3034 - Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.

5. ASTM D 3139 - Specification for Joints for Plastic Pressure Pipes using Flexible Elastomeric Seals.

C. American Water Works Association (AWWA):

1. AWWA C 110 - Gray-Iron Fittings, 3 inches Through 48 Inches, for Water and Other Liquids.
2. AWWA C 111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
3. AWWA C 151 - Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
4. AWWA C 504 - Rubber Seated Butterfly Valves.
5. AWWA C 509 - Resilient Seated Gate Valves 3 inch through 12 inch NPS, for Water and Sewage Systems.
6. AWWA C 600 - Installation of Ductile-Iron Water Mains and Appurtenances.
7. AWWA C 900 - Standard for Polyvinyl Chloride (PVC) Pressure Pipe, 4 inch through 12 inch, for Water.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

Product Data: Data for each type of pipe, pipe fitting, valve and accessory specified.

- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Project Record Documents: Accurately record the following:
 - a. Locations of piping mains, valves, connections, and top of pipe elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with utility company requirements and local authority having jurisdiction requirements.
- B. Valves: Manufacturer's name and pressure rating marked on valve body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver and store valves in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 PIPE

- A. Pipe sizes less than 3 inch that are installed below grade and outside building shall comply with one or combination of following:

1. Seamless Copper Tubing: Type "K" soft copper to comply with ASTM B 88 latest edition and installed with wrought copper (95-5 Tin Antimony solder joint) fittings in accordance with ASME B16.22.
 2. Polyvinyl Chloride (PVC) Water Pipe: Pipe shall conform to ASTM D 2241 with an SDR 21 rating and shall be continually marked with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 1785 classification. Pipe joints shall be integrally molded bell ends in accordance with ASTM D 3139 with factory supplied elastomeric gaskets and lubricant.
- B. Pipe sizes 3 inch and larger that are installed below grade and outside building shall comply with one of the following:
1. Ductile Iron Water Pipe: In accordance with AWWA C 151, Fittings shall be either mechanical joint or push-on joint complying with AWWA C 110 or AWWA C-111 (CLASS 50).
 2. Polyvinyl Chloride (PVC) Water Pipe: Pipe shall meet the requirements of AWWA C-900 and comply with ASTM D 2241, rated SDR 21 (Class 150). Pipe shall be continually marked as for smaller pipes. Pipe joints shall be integrally molded bell ends in accordance with ASTM D 3034, Table 2, with factory supplied elastomeric gaskets and lubricant.
- 2.2 GATE VALVES - 2 Inches and Larger
- A. Manufacturers: Mueller Resilient Seat Gate Valves.
 - B. AWWA C509, Iron body, bronze mounted double disc, parallel seat type, non-rising stem with square nut, single wedge, resilient seat, flanged or mechanical joint ends, control rod, post indicator where indicated on Drawings, extension box and valve key.
 - C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- 2.3 BALL VALVES - 2 Inches and Smaller
- A. Manufacturers: Mueller Oriseal.
 - B. Brass body, Teflon coated brass ball, rubber seats and stem seals, Tee stem pre-drilled for control rod, AWWA compression inlet end, compression outlet with electrical ground connector, with control rod, extension box and valve key.
 - C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- 2.4 BUTTERFLY VALVES - 2 inches to 24 inches
- A. AWWA C504, iron body, bronze disc, resilient replaceable seat, water or lug ends, infinite position lever handle.

NOTE TO SPECIFIER

Use CHECK VALVES, ...etc. below when building has a fire sprinkler system as part of the Work.

2.5 CHECK VALVES, POST INDICATOR VALVES, AND BACKFLOW PREVENTORS

- A. Specified in Section 210000 - Fire Suppression.

NOTE TO SPECIFIER

Use HYDRANTS below when building has a fire sprinkler system as part of the Work.

2.6 HYDRANTS

- A. Hydrant: Type as required by utility company, local authority having jurisdiction, and as indicated on Drawings.
- B. Hydrant Extensions: Provide in multiples of 6 inches with rod and coupling to increase barrel length.
- C. Hose and Stream Connection: Match sizes with utility company, two hose nozzles, one pumper nozzle. Provide connection type as required by local fire marshall and by governing agencies having jurisdiction.
- D. Finish: Primer and two coats of enamel or special coating to color as required by utility company.

2.7 ACCESSORIES

- A. Concrete for Thrust Blocks: Section 033000. Place thrust blocking consisting of 2,500 psi concrete to provide sufficient bearing area to transmit unbalanced thrust from bends, tees, caps, or plugs to undisturbed soil without loading undisturbed soil in excess of 2,500 pounds per square foot when water main pressure is 100 psi.

MINIMUM THRUST BLOCKING BEARING AREAS

Pipe Diameter	Tees Sq. Ft.	90° Bend Sq. Ft.	45° Bend Sq. Ft.	22° Bend Sq. Ft.	11° Bend Sq. Ft.
3"	1.0	1.0	1.0	1.0	1.0
4"	1.0	1.0	1.0	1.0	1.0
6"	1.5	2.0	1.0	1.0	1.0
8"	2.5	3.5	1.8	1.0	1.0
10"	4.0	5.5	2.8	1.5	1.0
12"	6.0	8.0	4.0	2.0	1.5
14"	8.0	11.0	5.5	3.0	2.0
16"	10.0	14.2	7.0	4.0	3.0
18"	21.0	21.0	12.0	6.0	4.0

- B. Locked Mechanical Joint fittings shall be installed where vertical changes in direction are required and, if approved by Contracting Officer, can be installed in lieu of the above thrust blocking requirements.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when building DOES NOT HAVE a FIRE SPRINKLER SYSTEM as part of the Work.

- C. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted with "DOMESTIC WATER SERVICE" in large letters.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when building HAS a FIRE SPRINKLER SYSTEM as part of the Work.

- D. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted in large letters.

1. Domestic Water Lines: "DOMESTIC WATER SERVICE"
2. Fire Protection Water Lines: "FIRE PROTECTION WATER SERVICE"

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify trench cut, excavations, dimensions, and elevations are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe and tube ends and remove burrs.
- D. Remove scale and dirt, on inside and outside, before assembly.
- E. Prepare pipe for connections to equipment with flanges or unions.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section. Provide trench wall shoring as required.
- B. Form and place concrete for pipe thrust restraints at any change of pipe direction and at fittings as indicated on Drawings. Place concrete to permit full access to pipe and pipe accessories. Provide thrust restraint bearing on subsoil per schedule on Drawings.
- C. Place bedding material at trench bottom, level fill materials in one continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- D. Maintain optimum moisture content of bedding material to attain required compaction density.
- E. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE AND FITTINGS

- A. Maintain separation of water main from sanitary and storm sewer piping in accordance with state or local code.
- B. Install pipe and fittings in accordance with AWWA C600.
- C. Install pipe to allow for expansion and contraction without stressing pipe or joints or as specified by pipe manufacturer.
- D. Install access fittings in accordance with local codes to permit disinfection of water system performed under this Section.
- E. Connections with Existing Pipelines: Where connections are made between new work and existing piping, make connection using suitable fittings for conditions encountered. Make each connection with existing pipe at time and under conditions which least interfere with operation of existing pipeline and in compliance with the local utility company.
- F. Form and place concrete for thrust blocks or other specified methods of retainage at each change of direction or end of pipe main.
- G. Establish elevations of buried piping in accordance with Section 312300 for work in this Section.
- H. Backfill trench in accordance with Section 312300.
- I. Install trace wire continuous buried 10 inches below finish grade, above pipe line. Trace wire shall be in accordance with local utilities standards.

NOTE TO SPECIFIER

Use VALVES AND HYDRANTS below when building has a fire sprinkler system as part of the Work.

3.5 INSTALLATION - VALVES AND HYDRANTS

- A. Install gate valves as indicated on Drawings and supported on concrete pads with valve stem vertical and plumb. Install valve boxes in a manner that will not transmit loads, stress, or shock to valve body. Center valve box over operating nut of valve vertical and plumb. Securely fit valve box together leaving cover flush with finished surface.
- B. Install fire hydrant assemblies as indicated on Drawings in vertical and plum position with stream/pumper nozzle pointed perpendicular to traffic where hydrant is adjacent to a street, roadway or parking lot drive or toward the protected building unless otherwise directed by local authorities. Support hydrant assembly on concrete pad and firmly braced on side opposite inlet pipe against undisturbed soil and concrete blocking. Place minimum of 6 cu. ft. of crushed stone or gravel around hydrant base and barrel after thrust blocking has cured at least 24 hours. Exercise care when backfilling and compacting so proper vertical position will not be altered.
- C. Provide a drainage pit 36 inches square by 24 inches deep filled with 2 inch washed gravel. Encase elbow of hydrant in gravel to 6 inches above drain opening. Do not connect drain opening to sewer.
- D. Paint hydrants in accordance with local utility company requirements.

3.6 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

- A. Disinfect distribution system with chlorine before acceptance for domestic operation. Amount of chlorine shall be such as to provide dosage of not less than 50 parts/million. Thoroughly flush lines before introduction of chlorinating materials and after contact period of not less than 24 hours, system shall be flushed with clean water until residual chlorine content is not greater than 1.0 part/million. Open and close valves in lines being disinfected several times during contact period. After disinfection, take water sample and bacteriological test in accordance with AWWA specifications. Do not place distribution system in service until approval is obtained from applicable governing authorities.

3.7 SERVICE CONNECTIONS

- A. Provide water service connection in compliance with utility company requirements including reduced pressure backflow preventer if required and water meter with by-pass valves and sand strainer.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 - 1. Compaction:
 - a. Perform inspections prior to and immediately after placing bedding.
 - b. Perform tests as specified in Section 312300.
 - 2. Piping: Water distribution system pipe installed below grade and outside building shall be tested in accordance with following procedures:
 - a. Perform the testing of pipe materials, joints, and/or other materials incorporated into the construction of water mains and force mains to determine leakage and watertightness. All pressure pipeline shall be tested in accordance with Section 4 of AWWA C600 latest edition. In the event any state or local code requires a more stringent test, the more stringent shall apply.
 - b. Pressure Test: After the pipe has been laid, all newly laid pipe or any valved section thereof shall be subjected to a hydrostatic pressure of at least 1.5 times the working pressure at the point of testing and not less than 1.25 times the working pressure at the highest point along the test section.
 - c. Leakage Test: The leakage test shall be conducted concurrently with the pressure test. Leakage is defined as the quantity of water that must be supplied into the newly laid pipeline, or any valved section thereof, to maintain pressure within 5 psi of the specified test pressure after the air in the pipeline has been expelled and the pipeline has been filled with water. Leakage shall not be measured by a drop in pressure in a test section over a period of time. No pipeline installation will be accepted if the leakage is greater than that determined by the following formula:

$$L = \frac{SDP}{133200}$$

L = allowable leakage, (gallons per hour)

S = length of pipe tested, (feet)

D = nominal diameter of pipe, (inches)

P = average test pressure during test, (psig)

- d. Visible Leakage: All visible leaks shall be repaired regardless of the amount of leakage.
- e. Acceptance of Installation: If any test of pipe laid in place discloses leakage greater than that specified, the Contractor shall, at his own expense, locate the leak and make repairs

as necessary until the leakage is within the specified allowance. Contractor shall supply all water for testing at no additional cost to United States Postal Service.

- f. Provide one copy of results of meter test and hydrostatic pressure test to Contracting Officer and utility company upon completion of water distribution backfilling operations.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 33 11 00 00

SECTION 33 11 00 00 - MPF WATER UTILITY DISTRIBUTION PIPING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Domestic water system pipe and fittings.
2. Connection of domestic water system to municipal water system.

NOTE TO SPECIFIER

Use paragraphs (3 and 4) below when building has a fire sprinkler system as part of the Work.

3. Fire protection water system pipe, fittings, valves, and hydrants.
4. Connection of fire protection water system to municipal water system.

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 312300 - Excavation and Fill: Earthwork for utilities.
2. Section 033000 - Cast-In-Place Concrete: Concrete for thrust blocks.

1.2 REFERENCES

A. American Society of Mechanical Engineers (ASME):

1. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
2. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.

B. American Society for Testing and Materials (ASTM):

1. ASTM B 88 - Specification for Seamless Copper water Tube.
2. ASTM D 1785 - Specification for Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120.
3. ASTM D 2241 - Specification for Polyvinyl Chloride (PVC) Pressure Rated Pipe (SDR Series).
4. ASTM D 3034 - Specification for Type PSM Poly(Vinyl Chloride) (PVC) Sewer Pipe and Fittings.

5. ASTM D 3139 - Specification for Joints for Plastic Pressure Pipes using Flexible Elastomeric Seals.

C. American Water Works Association (AWWA):

1. AWWA C 110 - Gray-Iron Fittings, 3 inches Through 48 Inches, for Water and Other Liquids.
2. AWWA C 111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
3. AWWA C 151 - Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water or Other Liquids.
4. AWWA C 504 - Rubber Seated Butterfly Valves.
5. AWWA C 509 - Resilient Seated Gate Valves 3 inch through 12 inch NPS, for Water and Sewage Systems.
6. AWWA C 600 - Installation of Ductile-Iron Water Mains and Appurtenances.
7. AWWA C 900 - Standard for Polyvinyl Chloride (PVC) Pressure Pipe, 4 inch through 12 inch, for Water.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

Product Data: Data for each type of pipe, pipe fitting, valve and accessory specified.

- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Project Record Documents: Accurately record the following:
 - a. Locations of piping mains, valves, connections, and top of pipe elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with utility company requirements and local authority having jurisdiction requirements.
- B. Valves: Manufacturer's name and pressure rating marked on valve body.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver and store valves in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 PIPE

- A. Pipe sizes less than 3 inch that are installed below grade and outside building shall comply with one or combination of following:

1. Seamless Copper Tubing: Type "K" soft copper to comply with ASTM B 88 latest edition and installed with wrought copper (95-5 Tin Antimony solder joint) fittings in accordance with ASME B16.22.
 2. Polyvinyl Chloride (PVC) Water Pipe: Pipe shall conform to ASTM D 2241 with an SDR 21 rating and shall be continually marked with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 1785 classification. Pipe joints shall be integrally molded bell ends in accordance with ASTM D 3139 with factory supplied elastomeric gaskets and lubricant.
- B. Pipe sizes 3 inch and larger that are installed below grade and outside building shall comply with one of the following:
1. Ductile Iron Water Pipe: In accordance with AWWA C 151, Fittings shall be either mechanical joint or push-on joint complying with AWWA C 110 or AWWA C-111 (CLASS 50).
 2. Polyvinyl Chloride (PVC) Water Pipe: Pipe shall meet the requirements of AWWA C-900 and comply with ASTM D 2241, rated SDR 21 (Class 150). Pipe shall be continually marked as for smaller pipes. Pipe joints shall be integrally molded bell ends in accordance with ASTM D 3034, Table 2, with factory supplied elastomeric gaskets and lubricant.
- 2.2 GATE VALVES - 2 Inches and Larger
- A. Manufacturers: Mueller Resilient Seat Gate Valves.
 - B. AWWA C509, Iron body, bronze mounted double disc, parallel seat type, non-rising stem with square nut, single wedge, resilient seat, flanged or mechanical joint ends, control rod, post indicator where indicated on Drawings, extension box and valve key.
 - C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- 2.3 BALL VALVES - 2 Inches and Smaller
- A. Manufacturers: Mueller Oriseal.
 - B. Brass body, Teflon coated brass ball, rubber seats and stem seals, Tee stem pre-drilled for control rod, AWWA compression inlet end, compression outlet with electrical ground connector, with control rod, extension box and valve key.
 - C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- 2.4 BUTTERFLY VALVES - 2 inches to 24 inches
- A. AWWA C504, iron body, bronze disc, resilient replaceable seat, water or lug ends, infinite position lever handle.

NOTE TO SPECIFIER

Use CHECK VALVES, ...etc. below when building has a fire sprinkler system as part of the Work.

2.5 CHECK VALVES, POST INDICATOR VALVES, AND BACKFLOW PREVENTORS

- A. Specified in Section 210000 - Fire Suppression.

NOTE TO SPECIFIER

Use HYDRANTS below when building has a fire sprinkler system as part of the Work.

2.6 HYDRANTS

- A. Hydrant: Type as required by utility company, local authority having jurisdiction, and as indicated on Drawings.
- B. Hydrant Extensions: Provide in multiples of 6 inches with rod and coupling to increase barrel length.
- C. Hose and Stream Connection: Match sizes with utility company, two hose nozzles, one pumper nozzle. Provide connection type as required by local fire marshall and by governing agencies having jurisdiction.
- D. Finish: Primer and two coats of enamel or special coating to color as required by utility company.

2.7 ACCESSORIES

- A. Concrete for Thrust Blocks: Section 033000. Place thrust blocking consisting of 2,500 psi concrete to provide sufficient bearing area to transmit unbalanced thrust from bends, tees, caps, or plugs to undisturbed soil without loading undisturbed soil in excess of 2,500 pounds per square foot when water main pressure is 100 psi.

MINIMUM THRUST BLOCKING BEARING AREAS

Pipe Diameter	Tees Sq. Ft.	90° Bend Sq. Ft.	45° Bend Sq. Ft.	22° Bend Sq. Ft.	11° Bend Sq. Ft.
3"	1.0	1.0	1.0	1.0	1.0
4"	1.0	1.0	1.0	1.0	1.0
6"	1.5	2.0	1.0	1.0	1.0
8"	2.5	3.5	1.8	1.0	1.0
10"	4.0	5.5	2.8	1.5	1.0
12"	6.0	8.0	4.0	2.0	1.5
14"	8.0	11.0	5.5	3.0	2.0
16"	10.0	14.2	7.0	4.0	3.0
18"	21.0	21.0	12.0	6.0	4.0

- B. Locked Mechanical Joint fittings shall be installed where vertical changes in direction are required and, if approved by Contracting Officer, can be installed in lieu of the above thrust blocking requirements.

NOTE TO SPECIFIER

OPTION 1: Use paragraph below when building DOES NOT HAVE a FIRE SPRINKLER SYSTEM as part of the Work.

- C. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted with "DOMESTIC WATER SERVICE" in large letters.

NOTE TO SPECIFIER

OPTION 2: Use paragraph below when building HAS a FIRE SPRINKLER SYSTEM as part of the Work.

- D. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted in large letters.

1. Domestic Water Lines: "DOMESTIC WATER SERVICE"
2. Fire Protection Water Lines: "FIRE PROTECTION WATER SERVICE"

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify trench cut, excavations, dimensions, and elevations are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe and tube ends and remove burrs.
- D. Remove scale and dirt, on inside and outside, before assembly.
- E. Prepare pipe for connections to equipment with flanges or unions.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section. Provide trench wall shoring as required.
- B. Form and place concrete for pipe thrust restraints at any change of pipe direction and at fittings as indicated on Drawings. Place concrete to permit full access to pipe and pipe accessories. Provide thrust restraint bearing on subsoil per schedule on Drawings.
- C. Place bedding material at trench bottom, level fill materials in one continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- D. Maintain optimum moisture content of bedding material to attain required compaction density.
- E. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE AND FITTINGS

- A. Maintain separation of water main from sanitary and storm sewer piping in accordance with state or local code.
- B. Install pipe and fittings in accordance with AWWA C600.
- C. Install pipe to allow for expansion and contraction without stressing pipe or joints or as specified by pipe manufacturer.
- D. Install access fittings in accordance with local codes to permit disinfection of water system performed under this Section.
- E. Connections with Existing Pipelines: Where connections are made between new work and existing piping, make connection using suitable fittings for conditions encountered. Make each connection with existing pipe at time and under conditions which least interfere with operation of existing pipeline and in compliance with the local utility company.
- F. Form and place concrete for thrust blocks or other specified methods of retainage at each change of direction or end of pipe main.
- G. Establish elevations of buried piping in accordance with Section 312300 for work in this Section.
- H. Backfill trench in accordance with Section 312300.
- I. Install trace wire continuous buried 10 inches below finish grade, above pipe line. Trace wire shall be in accordance with local utilities standards.

NOTE TO SPECIFIER

Use VALVES AND HYDRANTS below when building has a fire sprinkler system as part of the Work.

3.5 INSTALLATION - VALVES AND HYDRANTS

- A. Install gate valves as indicated on Drawings and supported on concrete pads with valve stem vertical and plumb. Install valve boxes in a manner that will not transmit loads, stress, or shock to valve body. Center valve box over operating nut of valve vertical and plumb. Securely fit valve box together leaving cover flush with finished surface.
- B. Install fire hydrant assemblies as indicated on Drawings in vertical and plum position with stream/pumper nozzle pointed perpendicular to traffic where hydrant is adjacent to a street, roadway or parking lot drive or toward the protected building unless otherwise directed by local authorities. Support hydrant assembly on concrete pad and firmly braced on side opposite inlet pipe against undisturbed soil and concrete blocking. Place minimum of 6 cu. ft. of crushed stone or gravel around hydrant base and barrel after thrust blocking has cured at least 24 hours. Exercise care when backfilling and compacting so proper vertical position will not be altered.
- C. Provide a drainage pit 36 inches square by 24 inches deep filled with 2 inch washed gravel. Encase elbow of hydrant in gravel to 6 inches above drain opening. Do not connect drain opening to sewer.
- D. Paint hydrants in accordance with local utility company requirements.

3.6 DISINFECTION OF DOMESTIC WATER PIPING SYSTEM

- A. Disinfect distribution system with chlorine before acceptance for domestic operation. Amount of chlorine shall be such as to provide dosage of not less than 50 parts/million. Thoroughly flush lines before introduction of chlorinating materials and after contact period of not less than 24 hours, system shall be flushed with clean water until residual chlorine content is not greater than 1.0 part/million. Open and close valves in lines being disinfected several times during contact period. After disinfection, take water sample and bacteriological test in accordance with AWWA specifications. Do not place distribution system in service until approval is obtained from applicable governing authorities.

3.7 SERVICE CONNECTIONS

- A. Provide water service connection in compliance with utility company requirements including reduced pressure backflow preventer if required and water meter with by-pass valves and sand strainer.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 - 1. Compaction:
 - a. Perform inspections prior to and immediately after placing bedding.
 - b. Perform tests as specified in Section 312300.
 - 2. Piping: Water distribution system pipe installed below grade and outside building shall be tested in accordance with following procedures:
 - a. Perform the testing of pipe materials, joints, and/or other materials incorporated into the construction of water mains and force mains to determine leakage and watertightness. All pressure pipeline shall be tested in accordance with Section 4 of AWWA C600 latest edition. In the event any state or local code requires a more stringent test, the more stringent shall apply.
 - b. Pressure Test: After the pipe has been laid, all newly laid pipe or any valved section thereof shall be subjected to a hydrostatic pressure of at least 1.5 times the working pressure at the point of testing and not less than 1.25 times the working pressure at the highest point along the test section.
 - c. Leakage Test: The leakage test shall be conducted concurrently with the pressure test. Leakage is defined as the quantity of water that must be supplied into the newly laid pipeline, or any valved section thereof, to maintain pressure within 5 psi of the specified test pressure after the air in the pipeline has been expelled and the pipeline has been filled with water. Leakage shall not be measured by a drop in pressure in a test section over a period of time. No pipeline installation will be accepted if the leakage is greater than that determined by the following formula:

$$L = \frac{SDP}{133200}$$

L = allowable leakage, (gallons per hour)

S = length of pipe tested, (feet)

D = nominal diameter of pipe, (inches)

P = average test pressure during test, (psig)

- d. Visible Leakage: All visible leaks shall be repaired regardless of the amount of leakage.
- e. Acceptance of Installation: If any test of pipe laid in place discloses leakage greater than that specified, the Contractor shall, at his own expense, locate the leak and make repairs

- as necessary until the leakage is within the specified allowance. Contractor shall supply all water for testing at no additional cost to United States Postal Service.
- f. Provide one copy of results of meter test and hydrostatic pressure test to Contracting Officer and utility company upon completion of water distribution backfilling operations.

SECTION 33 20 00 00 - MPF WELLS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Water Well is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Water Wells into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Drilling and casing water well.
 - 2. Pump and controller.
 - 3. Water and system testing and certification.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 012200 - Unit Prices: Procedures related to Work performed under unit price method.
 - 2. Section 331100 - Water Utility Distribution Piping: Site water distribution piping.
- D. Unit Prices:
 - 1. Base bids on vertical foot of well depth indicated on Drawings.
 - 2. Determine change in well depth from depth indicated on Drawings by vertical foot of actual well depth change from Base Bid and recorded in Project Record Documents.
 - 3. Adjustment to price due to changes in depth of well will be based on unit prices established as specified in Section 012200 – Unit Prices.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc Coated, Welded and Seamless.
- B. American Water Works Association (AWWA):

1. AWWA A100 - Water Wells.
2. AWWA C900 - Standard for Polyvinyl Chloride (PVC) Pressure Pipe, 4 inch through 12 inch, for Water.

C. American Society of Mechanical Engineers (ASME):

1. ASME SEC. VIII - Pressure Vessels.

D. National Electrical Manufacturers Association (NEMA):

1. NEMA MG 1 - Motors and Generators.

1.3 SYSTEM DESCRIPTION

NOTE TO SPECIFIER

Edit for design requirements for specific Project. Do not include if this information is indicated on Drawings.

A. Design Requirements: Water well with the following characteristics:

1. Upper Drill Hole: [____] inch diameter, [____] feet deep.
2. Lower Drill Hole: [____] inch diameter, [____] feet deep.
3. Casing Size: [____] inch outside diameter, [____] feet deep.
4. Grout Seal: [____] feet deep.
5. Total Well Depth: [____] feet deep.
6. Pump Depth: [____] feet deep.

NOTE TO SPECIFIER

Edit for required GPM and acceptable PPM for specific Project.

B. Performance Requirements:

1. Water well capable of producing minimum [____] gallons of water per minute.
2. Maximum Sand Suspended in Delivered Water: [____] parts per million.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Indicate pump rated capacity, weight, accessories, electrical nameplate data, and wiring diagrams.
2. Shop Drawings: Indicate layout of well pump system, including pumps, controls, related accessories, and piping.
3. Assurance/Control Submittals:
 - a. Test Reports: Submit the following water test reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor.
 - 1) Physical properties.
 - 2) Inorganic chemicals and water quality.
 - 3) Water quality.
 - 4) Radiological.
 - 5) Bacteriological contaminants.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Project Record Documents: Accurately record the following:
 - a. Actual location of well.
 - b. Well depth.

- c. Subsoil strata.
- d. Drilling difficulties encountered.
- e. Signed copy of driller's log book statements.
- f. Executed certification of well pump after performance testing.

1.5 QUALITY ASSURANCE

- A. Perform Work in accordance with AWWA A 100.
- B. Drilling Firm Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience, licensed in State where Project is located.
- C. Regulatory Requirements:
 - 1. Conform to State regulatory authority or regulations for water well flow capabilities and water quality.
 - 2. Provide certificate for authority having jurisdiction indicating suitability of water for human consumption.

PART 2 - PRODUCTS

2.1 MATERIALS

NOTE TO SPECIFIER

Edit for Well Casing pipe diameter required for this Project..

- A. Well Casing: ASTM A 120 [____] inch diameter seamless steel pipe and couplings and threaded joints, with pitless adapter and ventilated well cap. Casing diameter as indicated on Drawings.
- B. Grout: Portland cement type, no admixtures.

NOTE TO SPECIFIER

Edit bracketed items below for Pump type required for this Project..

2.2 PUMP

- A. Type: Vertical shaft, multiple stage, close coupled, for insertion in [____] diameter pipe.
- B. Casing: [Cast iron] [Bronze] casting with stainless steel housing and intake screen, check valve with stainless steel stem and valve seat with rubber seal built into discharge casting.
- C. Impellers and Diffusers: [Bronze.] [Glass reinforced thermoplastic with stainless steel wear rings.]
- D. Shaft: Stainless steel with stainless steel shaft sleeve.
- E. Motor: NEMA MG 1, submersible type:
 - 1. Characteristics: [____] hp; [[115] [230] volt, single phase 60 Hertz [[200] [230] [460] [575] volt, three phase 60 Hertz].
- F. Pump: Submersible type for deep well pump, [water lubricated] [oil filled]:
 - 1. Operating Performance: [____] gpm flow capacity, [____] feet total dynamic head, [____] hp motor.

2. Pump Capacity: [[____] gpm] [[____] gph]

- G. Pump Controller: NEMA 250 Type [1] [3R] enclosure with main disconnect interlocked with door, containing across-the-line electric motor starter with starting relay [and ambient compensate quick trip overloads in each phase with manual trip button and reset button]; circuit breaker, control transformer, hand-off-automatic selector switches, pilot light.
- H. Disconnect: NEMA 250 Type [1] [3R] enclosure.
- I. Pressure Sensing Switch: Low voltage relay type, [fixed] [adjustable] settings to start at [20] [30] [____] psig and shut-off at [40] [50] [____] psig [and low pressure cutoff set at [20] [____] psig .
- J. Control Voltage: [120 VAC.] [24 VDC.]
- K. Pump Lift Cable: Stainless steel, multi-stranded aircraft cable, high tensile strength; cable ends fitted with closed loop fittings; length of cable equals depth of shaft plus [20] [____] feet.
- L. Screens: Stainless steel type.

2.3 TANK

- A. Galvanized steel, tested and stamped in accordance with ASME SEC. VIII; Pressurized diaphragm type with integral floor stand; tapping for installation of piping and accessories:
 - 1. Tank Volume: Indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that site conditions will support equipment for performing drilling operations and testing.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 DRILLING

- A. Drill concentric well shaft to diameters and depths required.
- B. Place well casing immediately after drilling. Set firmly in place.
- C. Clean shaft bottom of loose material.
- D. Allow inspection of casing prior to placement of grout.

- E. Place grout tight to surrounding work.
- F. Maintain well opening and casing free of contaminating materials.
- G. Cut off shaft top 24 inches above grade. Do not permit metal cuttings to enter casing.
- H. Disinfect well.

3.3 INSTALLATION - PUMP

- A. Install pump and accessories in accordance with manufacturer's instructions.
- B. Electrical Connections: Refer to Section 260500.

3.4 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maximum Variation From Plumb: In accordance with AWWA A100.
 - 2. Maximum Offset From True Position: 1 inch.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Test flow rate and certify.
- C. Test Water Quality.
- D. Test for sand content.

3.6 CLEANING

- A. Clean piping in preparation for disinfecting and testing.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 33 20 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 20 00 00 - CSF WELLS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Water Well is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Water Wells into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

SECTION 33 30 00 00 - CSF SANITARY SEWERAGE UTILITIES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Sanitary sewer drainage piping, fittings, accessories and bedding.
 - 2. Connection of project sanitary drainage system to the municipal sanitary sewer system.
 - 3. Clean-out and access structures.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312300- Excavation and Fill: Earthwork for utilities.
 - 2. Section 033000 - Cast-In-Place Concrete: Concrete for cleanout and manhole base pads.

1.2 REFERENCES

- A. American Association of State Highway and transportation Officials (AASHTO):
 - 1. AASHTO M294 - Corrugated Polyethylene Pipe, 300-1200 mm Diameter.
 - 2. AASHTO M252 - Corrugated Polyethylene Drainage Pipe.
- B. American National Standards Institute (ANSI):
 - 1. ANSI A21.14 - Ductile Iron Fittings, 3-Inch Through 24-Inch, for Gas.
- C. American Society for Testing and Materials (ASTM):
 - 1. ASTM C 12 - Practice for Installing Vitrified Clay Pipe Lines.
 - 2. ASTM C 14 - Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
 - 3. ASTM C 76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
 - 4. ASTM C 425 - Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
 - 5. ASTM C 443 - Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
 - 6. ASTM D 3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.

7. ASTM A 746 - Specification for Ductile Iron Gravity Sewer Pipe.
8. ASTM C 700 - Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength and perforated.
9. ASTM F 477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Data for each type of pipe and pipe accessory specified.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Project Record Documents: Accurately record the following.
 - a. Actual locations of pipe runs, connections, manholes, cleanouts, and invert elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with utility company requirements and applicable health codes and authority having jurisdiction requirements.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Edit PIPE MATERIALS paragraph below for type of pipe used for this Project.

2.1 PIPE MATERIALS

- A. Polyvinyl Chloride (PVC) Pipe:
 1. ASTM D 3034, Rated SDR 35 unless otherwise required by local utility having jurisdiction. Continuously mark pipe with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 3034 classification.
 2. ASTM D 3034, Table 2; pipe joints with integrally molded bell ends and factory supplied elastomeric gaskets and lubricant.
- B. Corrugated Polyethylene (CPP) Pipe:
 1. Pipe: AASHTO designation #M294 and #M252; smooth interior, 4 inches through 18 inches as indicated on Drawings.
 2. Fittings: ASTM D 3034, rated SDR 35; with thermo-molded PVC.
 3. Gaskets: ASTM F 477; with thermo-molded PVC fittings and CPP pipe joint assembly.
- C. Vitrified Clay (VCP) Pipe:
 1. Pipe: ASTM C 700.
 2. Joints: ASTM C 425.

3. Gaskets: ASTM C 425; high grade vulcanized elastomeric compound consisting of basic natural or synthetic rubber. Provide gaskets manufactured in compliance with Rubber Manufacturer's Association tolerances for gaskets.
 4. Lubricant: Suitable for lubricating joint components; no deteriorating effects on gasket or pipe material, will not support growth of fungi or bacteria, and of type recommended by gasket manufacturer.
- D. Ductile Iron Pipe:
1. Pipe: ASTM A 746; Extra Heavy type, inside nominal diameter as indicated on Drawings with bell and spigot end.
 2. Pipe Joint: ANSI A21.14, rubber gasket joint devices.
- E. Concrete Pipe:
1. Pipe: ASTM C 14, Class 1, 2, or 3; bell and spigot pipe with inside nominal diameter as indicated on Drawings.
 2. Pipe Joint: ASTM C 443; rubber compression gasket joint devices.
- F. Reinforced Concrete Pipe:
1. Reinforced Concrete: ASTM C 76, Class I, II, III, IV, or V as indicated on Drawings, with Wall type A, B, or C; mesh reinforcement; inside nominal diameter as indicated with bell and spigot end.
 2. Reinforced Concrete: ASTM C 443; rubber compression gasket joint devices.

2.2 PIPE ACCESSORIES

- A. Pipe Joints: Mechanical clamp ring type, stainless steel expanding and contracting sleeve, neoprene ribbed gasket for positive seal.
- B. Fittings: Same material as pipe molded or formed to suit pipe size and end design, in required tee, bends, elbows, cleanouts, reducers, traps and other configurations required.
- C. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted with "SEWER SERVICE" in large letters.

2.3 CLEANOUTS AND MANHOLES

- A. Lid and Frame: Heavy duty cast iron with removable lid as indicated on Drawings.
- B. Shaft Construction: Cast Iron shaft of internal diameter as indicated on Drawings with 2500 psi concrete collar for cleanouts.
- C. Base Pad: Concrete specified in Section 033000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify trench cut, excavations, dimensions, and elevations are as indicated on Drawings.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section.
- B. Place bedding material at trench bottom, level materials in continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE

- A. Install pipe, fittings, and accessories in accordance with ASTM C 12, ASTM C 14, manufacturer's published instructions and state or local requirements. Seal joints watertight.
- B. Install pipe on minimum 4 inch bedding as specified in Section 312300.
- C. Lay pipe to slope gradients indicated on Drawings.
- D. Refer to Section 312300 for trenching requirements. Do not displace or damage pipe when compacting.
- E. Connect to building sanitary sewer outlet and municipal sewer system as indicated on Drawings.
- F. Install trace wire continuous over top of pipe buried 6 inches below finish grade, above pipe line.

3.5 INSTALLATION - CLEANOUTS

- A. Form bottom of excavation clean and smooth to elevation indicated on Drawings.
- B. Form and place cast-in-place concrete base pad, with provision for sanitary sewer pipe to be placed at required elevations.
- C. Mount lid and frame level in grout, secured to top section at elevation indicated.

3.6 SERVICE CONNECTIONS

- A. Coordinate the Work with termination of sanitary sewer connection outside building including connection to municipal sanitary sewer system.
- B. Connect to existing municipal sanitary sewer system in compliance with utility requirements for new service connections.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 - 1. Perform inspections prior to and immediately after placing bedding.
 - 2. Compaction: Specified in Section 312300.
 - a. If tests indicate Work does not meet specified requirements, remove Work, replace and retest.
 - b. Frequency of Tests: One test for each 50 lineal feet of trench.
 - 3. Perform the following tests in accordance with applicable local Public Works Department Standard Specifications and requirements.
 - a. Pressure Test.
 - b. Infiltration Test
 - c. Deflection Test

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Sanitary sewer drainage piping, fittings, accessories and bedding.
 2. Connection of project sanitary drainage system to the municipal sanitary sewer system.
 3. Clean-out and access structures.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 312300- Excavation and Fill: Earthwork for utilities.
 2. Section 033000 - Cast-In-Place Concrete: Concrete for cleanout and manhole base pads.

1.2 REFERENCES

- A. American Association of State Highway and transportation Officials (AASHTO):
 1. AASHTO M294 - Corrugated Polyethylene Pipe, 300-1200 mm Diameter.
 2. AASHTO M252 - Corrugated Polyethylene Drainage Pipe.
- B. American National Standards Institute (ANSI):
 1. ANSI A21.14 - Ductile Iron Fittings, 3-Inch Through 24-Inch, for Gas.
- C. American Society for Testing and Materials (ASTM):
 1. ASTM C 12 - Practice for Installing Vitrified Clay Pipe Lines.
 2. ASTM C 14 - Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
 3. ASTM C 76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
 4. ASTM C 425 - Specification for Compression Joints for Vitrified Clay Pipe and Fittings.
 5. ASTM C 443 - Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
 6. ASTM D 3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.

7. ASTM A 746 - Specification for Ductile Iron Gravity Sewer Pipe.
8. ASTM C 700 - Specification for Vitrified Clay Pipe, Extra Strength, Standard Strength and perforated.
9. ASTM F 477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Data for each type of pipe and pipe accessory specified.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Project Record Documents: Accurately record the following.
 - a. Actual locations of pipe runs, connections, manholes, cleanouts, and invert elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with utility company requirements and applicable health codes and authority having jurisdiction requirements.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Edit PIPE MATERIALS paragraph below for type of pipe used for this Project.

2.1 PIPE MATERIALS

- A. Polyvinyl Chloride (PVC) Pipe:
 1. ASTM D 3034, Rated SDR 35 unless otherwise required by local utility having jurisdiction. Continuously mark pipe with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 3034 classification.
 2. ASTM D 3034, Table 2; pipe joints with integrally molded bell ends and factory supplied elastomeric gaskets and lubricant.
- B. Corrugated Polyethylene (CPP) Pipe:
 1. Pipe: AASHTO designation #M294 and #M252; smooth interior, 4 inches through 18 inches as indicated on Drawings.
 2. Fittings: ASTM D 3034, rated SDR 35; with thermo-molded PVC.
 3. Gaskets: ASTM F 477; with thermo-molded PVC fittings and CPP pipe joint assembly.
- C. Vitrified Clay (VCP) Pipe:
 1. Pipe: ASTM C 700.
 2. Joints: ASTM C 425.

3. Gaskets: ASTM C 425; high grade vulcanized elastomeric compound consisting of basic natural or synthetic rubber. Provide gaskets manufactured in compliance with Rubber Manufacturer's Association tolerances for gaskets.
 4. Lubricant: Suitable for lubricating joint components; no deteriorating effects on gasket or pipe material, will not support growth of fungi or bacteria, and of type recommended by gasket manufacturer.
- D. Ductile Iron Pipe:
1. Pipe: ASTM A 746; Extra Heavy type, inside nominal diameter as indicated on Drawings with bell and spigot end.
 2. Pipe Joint: ANSI A21.14, rubber gasket joint devices.
- E. Concrete Pipe:
1. Pipe: ASTM C 14, Class 1, 2, or 3; bell and spigot pipe with inside nominal diameter as indicated on Drawings.
 2. Pipe Joint: ASTM C 443; rubber compression gasket joint devices.
- F. Reinforced Concrete Pipe:
1. Reinforced Concrete: ASTM C 76, Class I, II, III, IV, or V as indicated on Drawings, with Wall type A, B, or C; mesh reinforcement; inside nominal diameter as indicated with bell and spigot end.
 2. Reinforced Concrete: ASTM C 443; rubber compression gasket joint devices.

2.2 PIPE ACCESSORIES

- A. Pipe Joints: Mechanical clamp ring type, stainless steel expanding and contracting sleeve, neoprene ribbed gasket for positive seal.
- B. Fittings: Same material as pipe molded or formed to suit pipe size and end design, in required tee, bends, elbows, cleanouts, reducers, traps and other configurations required.
- C. Trace Wire: Magnetic detectable conductor, clear brightly colored plastic covered, imprinted with "SEWER SERVICE" in large letters.

2.3 CLEANOUTS AND MANHOLES

- A. Lid and Frame: Heavy duty cast iron with removable lid as indicated on Drawings.
- B. Shaft Construction: Cast Iron shaft of internal diameter as indicated on Drawings with 2500 psi concrete collar for cleanouts.
- C. Base Pad: Concrete specified in Section 033000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify trench cut, excavations, dimensions, and elevations are as indicated on Drawings.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section.
- B. Place bedding material at trench bottom, level materials in continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE

- A. Install pipe, fittings, and accessories in accordance with ASTM C 12, ASTM C 14, manufacturer's published instructions and state or local requirements. Seal joints watertight.
- B. Install pipe on minimum 4 inch bedding as specified in Section 312300.
- C. Lay pipe to slope gradients indicated on Drawings.
- D. Refer to Section 312300 for trenching requirements. Do not displace or damage pipe when compacting.
- E. Connect to building sanitary sewer outlet and municipal sewer system as indicated on Drawings.
- F. Install trace wire continuous over top of pipe buried 6 inches below finish grade, above pipe line.

3.5 INSTALLATION - CLEANOUTS

- A. Form bottom of excavation clean and smooth to elevation indicated on Drawings.
- B. Form and place cast-in-place concrete base pad, with provision for sanitary sewer pipe to be placed at required elevations.
- C. Mount lid and frame level in grout, secured to top section at elevation indicated.

3.6 SERVICE CONNECTIONS

- A. Coordinate the Work with termination of sanitary sewer connection outside building including connection to municipal sanitary sewer system.
- B. Connect to existing municipal sanitary sewer system in compliance with utility requirements for new service connections.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 - 1. Perform inspections prior to and immediately after placing bedding.
 - 2. Compaction: Specified in Section 312300.
 - a. If tests indicate Work does not meet specified requirements, remove Work, replace and retest.
 - b. Frequency of Tests: One test for each 50 lineal feet of trench.
 - 3. Perform the following tests in accordance with applicable local Public Works Department Standard Specifications and requirements.
 - a. Pressure Test.
 - b. Infiltration Test
 - c. Deflection Test

SECTION 33 36 00 00 - CSF UTILITY SEPTIC TANKS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where a Septic Tank System is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Septic Tank System into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Septic tank.
 - 2. Distribution box.
 - 3. Filter drainage field system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Provide data on tank accessories.
 - 2. Shop Drawings: Indicate tank size and configuration; plan, location and inverts of filter field; inverts of connecting piping.
 - 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - c. Manufacturer's Instructions: Indicate special procedures for septic tank installation.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - 2. Actual locations and inverts of buried pipe, components, and connections.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Septic Tank: Reinforced precast concrete construction, 4,000 psi 28 day minimum strength, concrete partitioned chambers, concrete lid with lift rings, vent, inlet inspection hole, inlet turned down minimum 12 inches below effluent level.
 - 1. Tank Capacity: Indicated on Drawings.
- B. Distribution Box: Reinforced concrete, single inlet, two outlets, gate, removable cover with lift ring.

2.2 CONNECTING PIPE MATERIALS

- A. Vitrified Clay Pipe: ASTM C700 Standard strength, bell and spigot joint with seal; nominal inside diameter indicated on Drawings.
- B. Fittings: Same material as pipe, tee bends, elbows, clean-outs, reducers, ends to suit pipe joint.
- C. Pipe Joint Cover: Geotextile fabric.

2.3 FILTER FIELD PIPE MATERIALS

- A. Vitrified Clay Pipe: ASTM C700, Standard strength, plain end joint; nominal inside diameter indicated on Drawings.
- B. Use perforated pipe at filter field system; unperforated through sleeves and at junction with distribution box.

2.4 BEDDING MATERIALS

- A. Aggregate Bedding Material: Fill as specified in Section 312000.

2.5 FILTER AGGREGATE

- A. Filter Aggregate Materials: Fill as specified in Section 312000.

2.6 ACCESSORIES

- A. Geotextile Fabric: Non-woven fabric, polypropylene.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream pipe ends and remove burrs.
- B. Remove scale and dirt from components before assembly.
- C. Establish invert elevations for all components in the system.
- D. Hand trim excavation to suit septic tank, distribution box and field tile arrangement. Remove stones, roots or other obstructions.

3.2 TANK AND TANK BEDDING

- A. Excavate in accordance with Section 312300 for work of this section. Hand trim excavation for accurate placement of tank to elevations indicated.
- B. Place bedding material level in one continuous layer not exceeding 8 inches compacted depth, compact to 95 percent.
- C. Backfill around sides of tank, tamp in place and compact to 95 percent.
- D. Maintain optimum moisture content of bedding material to attain required compaction density.
- E. Install septic tank and distribution box and related components on bedding in accordance with manufacturer's instructions. Position components to permit access to inspection ports.

3.3 CONNECTING PIPING

- A. Install vitrified clay pipe in accordance with ASTM C12.
- B. Connect outlet between building sanitary piping and septic tank, between septic tank and distribution box, between distribution box and filter field header [with Type [_____] pipe and fittings].
- C. Place pipe and fittings on clean excavated subsoil.
- D. Slope piping to each successive component, minimum of [1:50.] [_____.]
- E. Cover pipe with aggregate, sides and top. Place geotextile fabric over cover prior to backfilling.
- F. Coordinate the work with connections to building sanitary sewer piping outlet.

3.4 INSTALLATION - FILTER FIELD

- A. Install vitrified clay pipe in accordance with ASTM C12.
- B. Place field pipe header [at constant elevation] [sloping down from header inlet], [1:100.] [_____.]
- C. Place aggregate bed [18] [_____] inch thick, tamp compact firm. Establish slope of bed to suit established invert elevations.

- D. Place pipe sloping away from header minimum of [1:200] [] [, with perforations facing down].
- E. Wrap pipe joints with paper, cover with aggregate, sides and top. Place geotextile fabric over cover prior to backfilling.
- F. Cover entire field with aggregate [12] [] inch, lightly compact. Level prior to placement of subsoil cover as specified in Section 312000.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 33 36 00 00

SECTION 33 36 00 00 - MPF UTILITY SEPTIC TANKS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where a Septic Tank System is part of the Work. Before editing this Section, obtain the "Report of Subsurface Investigation" prepared by the Geotechnical Engineer. Read the report and incorporate the recommendations included in the report for Septic Tank System into this Section.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Septic tank.
 - 2. Distribution box.
 - 3. Filter drainage field system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Provide data on tank accessories.
 - 2. Shop Drawings: Indicate tank size and configuration; plan, location and inverts of filter field; inverts of connecting piping.
 - 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - c. Manufacturer's Instructions: Indicate special procedures for septic tank installation.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - 2. Actual locations and inverts of buried pipe, components, and connections.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Septic Tank: Reinforced precast concrete construction, 4,000 psi 28 day minimum strength, concrete partitioned chambers, concrete lid with lift rings, vent, inlet inspection hole, inlet turned down minimum 12 inches below effluent level.
 - 1. Tank Capacity: Indicated on Drawings.
- B. Distribution Box: Reinforced concrete, single inlet, two outlets, gate, removable cover with lift ring.

2.2 CONNECTING PIPE MATERIALS

- A. Vitrified Clay Pipe: ASTM C700 Standard strength, bell and spigot joint with seal; nominal inside diameter indicated on Drawings.
- B. Fittings: Same material as pipe, tee bends, elbows, clean-outs, reducers, ends to suit pipe joint.
- C. Pipe Joint Cover: Geotextile fabric.

2.3 FILTER FIELD PIPE MATERIALS

- A. Vitrified Clay Pipe: ASTM C700, Standard strength, plain end joint; nominal inside diameter indicated on Drawings.
- B. Use perforated pipe at filter field system; unperforated through sleeves and at junction with distribution box.

2.4 BEDDING MATERIALS

- A. Aggregate Bedding Material: Fill as specified in Section 312000.

2.5 FILTER AGGREGATE

- A. Filter Aggregate Materials: Fill as specified in Section 312000.

2.6 ACCESSORIES

- A. Geotextile Fabric: Non-woven fabric, polypropylene.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Ream pipe ends and remove burrs.
- B. Remove scale and dirt from components before assembly.
- C. Establish invert elevations for all components in the system.
- D. Hand trim excavation to suit septic tank, distribution box and field tile arrangement. Remove stones, roots or other obstructions.

3.2 TANK AND TANK BEDDING

- A. Excavate in accordance with Section 312300 for work of this section. Hand trim excavation for accurate placement of tank to elevations indicated.
- B. Place bedding material level in one continuous layer not exceeding 8 inches compacted depth, compact to 95 percent.
- C. Backfill around sides of tank, tamp in place and compact to 95 percent.
- D. Maintain optimum moisture content of bedding material to attain required compaction density.
- E. Install septic tank and distribution box and related components on bedding in accordance with manufacturer's instructions. Position components to permit access to inspection ports.

3.3 CONNECTING PIPING

- A. Install vitrified clay pipe in accordance with ASTM C12.
- B. Connect outlet between building sanitary piping and septic tank, between septic tank and distribution box, between distribution box and filter field header [with Type [_____] pipe and fittings].
- C. Place pipe and fittings on clean excavated subsoil.
- D. Slope piping to each successive component, minimum of [1:50.] [_____.]
- E. Cover pipe with aggregate, sides and top. Place geotextile fabric over cover prior to backfilling.
- F. Coordinate the work with connections to building sanitary sewer piping outlet.

3.4 INSTALLATION - FILTER FIELD

- A. Install vitrified clay pipe in accordance with ASTM C12.
- B. Place field pipe header [at constant elevation] [sloping down from header inlet], [1:100.] [_____.]
- C. Place aggregate bed [18] [_____] inch thick, tamp compact firm. Establish slope of bed to suit established invert elevations.

- D. Place pipe sloping away from header minimum of [1:200] [] [, with perforations facing down].
- E. Wrap pipe joints with paper, cover with aggregate, sides and top. Place geotextile fabric over cover prior to backfilling.
- F. Cover entire field with aggregate [12] [] inch, lightly compact. Level prior to placement of subsoil cover as specified in Section 312000.

SECTION 33 40 00 00 - MPF STORM DRAINAGE UTILITIES

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Storm Drainage is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Site storm sewer drainage piping, fittings and accessories, and bedding.
 - 2. Connection of storm sewer system to municipal storm sewer system.
 - 3. Catch basins, paved area drainage, site surface drainage, and storm water detention facilities.
- B. Related Documents: The Contract Documents, as defined in the General Conditions, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312300 - Excavation and Fill: Earthwork for utilities.
 - 2. Section 334913- Storm Drainage Manholes, Frames, and Covers: Manholes, manhole lids, frames, and accessories.
 - 3. Section 333000 - Sanitary Sewerage Utilities: Site sanitary sewer system.
 - 4. Section 033000 - Cast-In-Place Concrete: Concrete for catch basins, inlets, and junction boxes.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 760 - Standard Specification for Corrugated Steel Pipe, Metallic Coated for Sewers and Drains.
 - 2. ASTM C 12 - Practice for Installing Vitrified Clay Pipe Lines.
 - 3. ASTM C 76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
 - 4. ASTM C 443 - Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
 - 5. ASTM D 2321 - Recommended Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe.
 - 6. ASTM D 3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.
 - 7. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to start of backfill operations.

1.4 SUBMITTALS

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
1. Project Record Documents: Accurately record the following.
 - a. Actual locations of pipe runs, connections, manholes, catch basins, cleanouts, and invert elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to local Public Works Standard Specifications for materials and installation of the work of this Section.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Edit PIPE MATERIALS paragraph below for type of pipe used for this Project.

2.1 PIPE MATERIALS

- A. Reinforced Concrete Pipe:
1. Pipe: ASTM C 76, Class III unless indicated otherwise on Drawings.
 2. Gaskets: ASTM C 443; rubber compression gaskets installed in accordance with manufacturer's published instructions.
- B. Corrugated Steel Pipe:
1. Pipe: ASTM A 760; galvanized, aluminized or bituminous coated round pipe, arch pipe, or slotted drain pipe as indicated on Drawings., 16 gage unless otherwise indicated.
 - a. Provide slotted drain pipe with 1.75 inch wide drain guide waterway openings and 6 inch minimum height drain guide.
 2. Fittings:
 - a. Matching band connectors.
 - b. Sleeve gaskets in accordance with manufacturer's recommendations.
- C. Spiral Rib Metal Pipe:
1. Pipe: ASTM A 760, Type 1R; Galvanized, aluminized or bituminous coated as indicated on Drawings.
 2. Fittings: Provide re- corrugated pipe ends with semi-corrugated Hugger-type bands and "O" ring gaskets in accordance with manufacturers recommendations.
- D. Polyvinyl Chloride (PVC) Pipe:
1. Pipe: ASTM D 3034, SDR 35 Rated.
 - a. Continuously mark pipe with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 3034 classification.

2. Joints: ASTM D 3034, Table 2; integrally molded bell ends with factory supplied elastomeric gaskets and lubricant.

E. High-Density Polyethylene (HDPE) Pipe:

1. Pipe: AASHTO M252, M294 & MP7-97 Type "S" (Corrugated Polyethylene Pipe).
 - a. Pipe shall have a smooth interior and a corrugated annular exterior.
 - b. Continuously mark pipe with manufacturer's name, pipe size and AASHTO classification.
 - c. Pipe shall be installed per manufacturer's recommendations.
 - d. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1) Hancor, Findlay, OH (888) 367-7473: Sure-Lok F477.
 - 2) Section 016000 - Product Requirements: Product options and substitutions. Substitutions: permitted.
2. Joints: Pipe shall be joined with a bell and spigot joint incorporating ASTM F477 gasket material insuring a leak resistant performance.

2.2 INLETS, CATCH BASINS AND JUNCTION BOXES

- A. Lid and Frame: Cast iron as indicated on Drawings.
- B. Structure: As indicated on Drawings.
- C. Concrete: Specified in Section 033000.

NOTE TO SPECIFIER

The following item may be included when fuel tanks and on-site fueling is to occur at the facility.

D. Oil/Sediment Separator

1. Separator shall remove oil and sediment from storm water during frequent wet weather events. Separator shall treat a minimum of 75 to 90 percent of the annual runoff volume and be capable of removing 50 to 80 percent of the total suspended sediment load and greater than 90 percent of the floatable free oil. Separator must be capable of trapping silt and clay size particles in addition to large particles. Separator shall be installed underground as part of the storm sewer system and be structurally designed for (HS-20 min.) traffic loading at the surface. Storage in the separator shall be vertically oriented. Separator shall be maintainable from the surface via one access point.
2. Separator shall be equipped with an internal high flow bypass that regulates the flow rate into the treatment chamber and conveys high flows directly to the outlet such that scour and/or re-suspension of material previously collected in the separator does not occur. External bypasses are not acceptable. Bypass area shall be physically separated from the separation area to prevent mixing. Separator shall be circular, and constructed from either fiberglass or precast concrete risers. Concrete separator shall be designed and manufactured in accordance with ASTM C-478. Concrete joints shall be oil resistance, water tight and meet the design criteria according to ASTM C-443. In the concrete separator, a fiberglass insert, bolted and sealed watertight to the inside of the bypass chamber, shall divert low to normal stormwater flows into the treatment chamber. A minimum of 12 inches (30 cm) of oil storage shall be lined with fiberglass to provide secondary containment of any hydrocarbon materials.
3. Difference between the inlet pipe elevation to the separator and the outlet pipe elevation from the separator shall be 1 inch (2.5 cm). For a multiple inlet pipe or inlet design there shall be a 3 inch (7.5 cm) difference between horizontal inlet pipe inverts and the outlet pipe invert. Separator shall be able to be used as a bend structure in the storm sewer system. Access cover for all non-inlet type separators shall clearly indicate that it is an oil/sediment separator.

4. Separator shall be capable of containing spills of floatable substances such as free oil and not be compromised by temporary backwater conditions (i.e., trapped pollutants should not be re-suspended and scoured from the separator during backwater conditions).
5. Capabilities of the selected separator must be documented with scientific studies and reports. Preference will be given to devices that have been verified by a state or federal stormwater verification program.
6. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - a. Stormceptor manufactured by Carder Concrete Products, Littleton, CO (888) 220-9190.
 - b. Stormceptor manufactured by Rinker Stormceptor, Kansas City, MO (800) 909-7763.
 - c. Baysaver manufactured by Baysaver Technologies, Mount Airy, MD (800) 229-7283.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings.
 2. Verify that trench cut and excavation is ready to receive Work and excavations, dimensions, and elevations are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage piping or impede consistent backfilling or compaction.

3.3 BEDDING

- A. Excavate pipe trench as specified in Section 312300. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place bedding material at trench bottom, level materials in continuous layers not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE

- A. Install pipe, fittings, and accessories in accordance with ASTM C 12, ASTM D 2321 or manufacturer's published instructions, and state or local requirements. Seal joints watertight.
- B. Install pipe on minimum 4 inch bedding as specified in Section 312300.
- C. Lay pipe to slope gradients indicated on Drawings.
- D. Install aggregate at sides and over top of pipe. Provide top cover to minimum compacted thickness equal to paving subgrade indicated on Drawings.
- E. Refer to Section 312300 for trenching requirements. Do not displace or damage pipe when compacting.
- F. Refer to Section 334913 for manhole requirements.
- G. Connect to municipal storm sewer systems, manholes, and inlets as indicated on Drawings.

3.5 INSTALLATION - CATCH BASINS, INLETS, AND JUNCTION BOXES

- A. Form bottom of excavation clean and smooth to elevation indicated on Drawings.
- B. Form and place cast-in-place concrete base pad, with provision for storm sewer pipe to be placed at required elevations.
- C. Form and place cast-in-place concrete walls, sleeved at required elevation, to receive storm sewer pipe as indicated on Drawings.
- D. Form and place cast-in-place top of structure as indicated on Drawings.
- E. Mount grate and frame level, in grout, secured to top section at elevation indicated.

3.6 CONSTRUCTION

- A. Interface with Other work: Coordinate the Work with termination of storm sewer connection outside building including connection to municipal storm sewer system.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing.
- B. Site Tests:
 - 1. Perform inspections prior to and immediately after placing bedding.
 - 2. Compaction: Specified in Section 312300.
 - a. If tests indicate Work does not meet specified requirements, remove Work, replace and retest.
 - b. Frequency of Tests: One test for each 50 lineal feet of trench.
 - 3. Perform the following tests in accordance with applicable local Public Works Department Standard Specifications and requirements.
 - a. Pressure Test.
 - b. Infiltration Test.
 - c. Deflection Test.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION 33 40 00 00

SECTION 33 40 00 00 - CSF STORM DRAINAGE UTILITIES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Storm Drainage is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Site storm sewer drainage piping, fittings and accessories, and bedding.
 - 2. Connection of storm sewer system to municipal storm sewer system.
 - 3. Catch basins, paved area drainage, site surface drainage, and storm water detention facilities.
- B. Related Documents: The Contract Documents, as defined in the General Conditions, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312300 - Excavation and Fill: Earthwork for utilities.
 - 2. Section 334913- Storm Drainage Manholes, Frames, and Covers: Manholes, manhole lids, frames, and accessories.
 - 3. Section 333000 - Sanitary Sewerage Utilites: Site sanitary sewer system.
 - 4. Section 033000 - Cast-In-Place Concrete: Concrete for catch basins, inlets, and junction boxes.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 760 - Standard Specification for Corrugated Steel Pipe, Metallic Coated for Sewers and Drains.
 - 2. ASTM C 12 - Practice for Installing Vitrified Clay Pipe Lines.
 - 3. ASTM C 76 - Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
 - 4. ASTM C 443 - Specification for Joints for Circular Concrete Sewer and Culvert Pipe, Using Rubber Gaskets.
 - 5. ASTM D 2321 - Recommended Practice for Underground Installation of Flexible Thermoplastic Sewer Pipe.
 - 6. ASTM D 3034 - Specification for Type PSM Polyvinyl Chloride (PVC) Sewer Pipe and Fittings.
 - 7. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to start of backfill operations.

1.4 SUBMITTALS

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
1. Project Record Documents: Accurately record the following.
 - a. Actual locations of pipe runs, connections, manholes, catch basins, cleanouts, and invert elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to local Public Works Standard Specifications for materials and installation of the work of this Section.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Edit PIPE MATERIALS paragraph below for type of pipe used for this Project.

2.1 PIPE MATERIALS

- A. Reinforced Concrete Pipe:
1. Pipe: ASTM C 76, Class III unless indicated otherwise on Drawings.
 2. Gaskets: ASTM C 443; rubber compression gaskets installed in accordance with manufacturer's published instructions.
- B. Corrugated Steel Pipe:
1. Pipe: ASTM A 760; galvanized, aluminized or bituminous coated round pipe, arch pipe, or slotted drain pipe as indicated on Drawings., 16 gage unless otherwise indicated.
 - a. Provide slotted drain pipe with 1.75 inch wide drain guide waterway openings and 6 inch minimum height drain guide.
 2. Fittings:
 - a. Matching band connectors.
 - b. Sleeve gaskets in accordance with manufacturer's recommendations.
- C. Spiral Rib Metal Pipe:
1. Pipe: ASTM A 760, Type 1R; Galvanized, aluminized or bituminous coated as indicated on Drawings.
 2. Fittings: Provide re- corrugated pipe ends with semi-corrugated Hugger-type bands and "O" ring gaskets in accordance with manufacturers recommendations.
- D. Polyvinyl Chloride (PVC) Pipe:
1. Pipe: ASTM D 3034, SDR 35 Rated.
 - a. Continuously mark pipe with manufacturer's name, pipe size, cell classification, SDR rating, and ASTM D 3034 classification.

2. Joints: ASTM D 3034, Table 2; integrally molded bell ends with factory supplied elastomeric gaskets and lubricant.

E. High-Density Polyethylene (HDPE) Pipe:

1. Pipe: AASHTO M252, M294 & MP7-97 Type "S" (Corrugated Polyethylene Pipe).
 - a. Pipe shall have a smooth interior and a corrugated annular exterior.
 - b. Continuously mark pipe with manufacturer's name, pipe size and AASHTO classification.
 - c. Pipe shall be installed per manufacturer's recommendations.
 - d. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1) Hancor, Findlay, OH (888) 367-7473: Sure-Lok F477.
 - 2) Section 016000 - Product Requirements: Product options and substitutions. Substitutions: permitted.
2. Joints: Pipe shall be joined with a bell and spigot joint incorporating ASTM F477 gasket material insuring a leak resistant performance.

2.2 INLETS, CATCH BASINS AND JUNCTION BOXES

- A. Lid and Frame: Cast iron as indicated on Drawings.
- B. Structure: As indicated on Drawings.
- C. Concrete: Specified in Section 033000.

NOTE TO SPECIFIER

The following item may be included when fuel tanks and on-site fueling is to occur at the facility.

D. Oil/Sediment Separator

1. Separator shall remove oil and sediment from storm water during frequent wet weather events. Separator shall treat a minimum of 75 to 90 percent of the annual runoff volume and be capable of removing 50 to 80 percent of the total suspended sediment load and greater than 90 percent of the floatable free oil. Separator must be capable of trapping silt and clay size particles in addition to large particles. Separator shall be installed underground as part of the storm sewer system and be structurally designed for (HS-20 min.) traffic loading at the surface. Storage in the separator shall be vertically oriented. Separator shall be maintainable from the surface via one access point.
2. Separator shall be equipped with an internal high flow bypass that regulates the flow rate into the treatment chamber and conveys high flows directly to the outlet such that scour and/or re-suspension of material previously collected in the separator does not occur. External bypasses are not acceptable. Bypass area shall be physically separated from the separation area to prevent mixing. Separator shall be circular, and constructed from either fiberglass or precast concrete risers. Concrete separator shall be designed and manufactured in accordance with ASTM C-478. Concrete joints shall be oil resistance, water tight and meet the design criteria according to ASTM C-443. In the concrete separator, a fiberglass insert, bolted and sealed watertight to the inside of the bypass chamber, shall divert low to normal stormwater flows into the treatment chamber. A minimum of 12 inches (30 cm) of oil storage shall be lined with fiberglass to provide secondary containment of any hydrocarbon materials.
3. Difference between the inlet pipe elevation to the separator and the outlet pipe elevation from the separator shall be 1 inch (2.5 cm). For a multiple inlet pipe or inlet design there shall be a 3 inch (7.5 cm) difference between horizontal inlet pipe inverts and the outlet pipe invert. Separator shall be able to be used as a bend structure in the storm sewer system. Access cover for all non-inlet type separators shall clearly indicate that it is an oil/sediment separator.

4. Separator shall be capable of containing spills of floatable substances such as free oil and not be compromised by temporary backwater conditions (i.e., trapped pollutants should not be re-suspended and scoured from the separator during backwater conditions).
5. Capabilities of the selected separator must be documented with scientific studies and reports. Preference will be given to devices that have been verified by a state or federal stormwater verification program.
6. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - a. Stormceptor manufactured by Carder Concrete Products, Littleton, CO (888) 220-9190.
 - b. Stormceptor manufactured by Rinker Stormceptor, Kansas City, MO (800) 909-7763.
 - c. Baysaver manufactured by Baysaver Technologies, Mount Airy, MD (800) 229-7283.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that survey benchmark and intended elevations for the Work are as indicated on Drawings.
 2. Verify that trench cut and excavation is ready to receive Work and excavations, dimensions, and elevations are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage piping or impede consistent backfilling or compaction.

3.3 BEDDING

- A. Excavate pipe trench as specified in Section 312300. Hand trim excavation for accurate placement of pipe to elevations indicated.
- B. Place bedding material at trench bottom, level materials in continuous layers not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of paving subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPE

- A. Install pipe, fittings, and accessories in accordance with ASTM C 12, ASTM D 2321 or manufacturer's published instructions, and state or local requirements. Seal joints watertight.
- B. Install pipe on minimum 4 inch bedding as specified in Section 312300.
- C. Lay pipe to slope gradients indicated on Drawings.
- D. Install aggregate at sides and over top of pipe. Provide top cover to minimum compacted thickness equal to paving subgrade indicated on Drawings.
- E. Refer to Section 312300 for trenching requirements. Do not displace or damage pipe when compacting.
- F. Refer to Section 334913 for manhole requirements.
- G. Connect to municipal storm sewer systems, manholes, and inlets as indicated on Drawings.

3.5 INSTALLATION - CATCH BASINS, INLETS, AND JUNCTION BOXES

- A. Form bottom of excavation clean and smooth to elevation indicated on Drawings.
- B. Form and place cast-in-place concrete base pad, with provision for storm sewer pipe to be placed at required elevations.
- C. Form and place cast-in-place concrete walls, sleeved at required elevation, to receive storm sewer pipe as indicated on Drawings.
- D. Form and place cast-in-place top of structure as indicated on Drawings.
- E. Mount grate and frame level, in grout, secured to top section at elevation indicated.

3.6 CONSTRUCTION

- A. Interface with Other work: Coordinate the Work with termination of storm sewer connection outside building including connection to municipal storm sewer system.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing.
- B. Site Tests:
 - 1. Perform inspections prior to and immediately after placing bedding.
 - 2. Compaction: Specified in Section 312300.
 - a. If tests indicate Work does not meet specified requirements, remove Work, replace and retest.
 - b. Frequency of Tests: One test for each 50 lineal feet of trench.
 - 3. Perform the following tests in accordance with applicable local Public Works Department Standard Specifications and requirements.
 - a. Pressure Test.
 - b. Infiltration Test.
 - c. Deflection Test.

USPS CSF Specifications issued: 10/1/2013

33 41 13 00	22 05 23 00	Piped Utilities Basic Materials And Methods

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 42 16 13 - CULVERTS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for culverts. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.

C. Delivery, Storage, And Handling

1. Delivery and Storage: Materials delivered to site shall be inspected for damage, unloaded, and stored with a minimum of handling. Materials shall not be stored directly on the ground. The inside of pipes and fittings shall be kept free of dirt and debris. Before, during, and after installation, plastic pipe and fittings shall be protected from any environment that would result in damage or deterioration to the material. The Contractor shall have a copy of the manufacturer's instructions available at the construction site at all times and shall follow these instructions unless directed otherwise by the the Owner. Solvents, solvent compounds, lubricants, elastomeric gaskets, and any similar materials required to install plastic pipe shall be stored in accordance with the manufacturer's recommendations and shall be discarded if the storage period exceeds the recommended shelf life. Solvents in use shall be discarded when the recommended pot life is exceeded.
2. Handling: Materials shall be handled in a manner that ensures delivery to the trench in sound, undamaged condition. Pipe shall be carried to the trench, not dragged.

1.2 PRODUCTS

A. Pipe For Culverts

1. Pipe for culverts and storm drains shall be of the sizes indicated and shall conform to the requirements specified.
2. Concrete Pipe
 - a. ASTM C76/ASTM C76M, Class I **OR II OR III OR IV OR V, as directed**, or ASTM C655 D-Load. Note: D-load is defined as the minimum required three-edge test load on a pipe to produce a 0.01 inch crack and/or ultimate failure in pounds per linear foot per foot (no metric definition) of inside diameter.
 - b. Reinforced Arch Culvert and Storm Drainpipe: ASTM C506/ASTM C506M, Class A-II **OR A-III OR A-IV, as directed**.
 - c. Reinforced Elliptical Culvert and Storm Drainpipe: ASTM C507/ASTM C507M. Horizontal elliptical pipe shall be Class HE-A **OR HE-I OR HE-II OR HE-III OR HE-IV, as directed**. Vertical elliptical pipe shall be Class VE-II **OR VE-III OR VE-IV OR VE-V OR VE-VI, as directed**.
 - d. Nonreinforced Pipe: ASTM C14/ASTM C14M, Class 1 **OR 2 OR 3, as directed**.
 - 1) Cast-In-Place Nonreinforced Conduit: ACI 346, except that testing shall be the responsibility of and at the expense of the Contractor. In the case of other conflicts between ACI 346 and project specifications, requirements of ACI 346 shall govern.
NOTE: This type conduit should not be used beneath structures, for drain crossings, adjacent to paved areas, or under high fills.
3. Clay Pipe: Standard or extra strength, as indicated, conforming to ASTM C700.
NOTE: "Bell-and-spigot piping only" in areas where corrosion problems may be anticipated with the stainless steel parts of the couplings used for plain-end piping.

4. Corrugated Steel Pipe
 - a. ASTM A760/A760M, zinc or aluminum (Type 2) coated pipe of either:
 - 1) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - 2) Type IR **OR** IIR, **as directed**, pipe with helical 3/4 by 3/4 by 7-1/2 inch (19 by 19 by 190 mm) corrugations.
 - b. Fully Bituminous Coated
 - 1) AASHTO M190 Type A and ASTM A760/A 760M zinc or aluminum (Type 2) coated pipe of either:
 - a) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - b) Type IR **OR** IIR, **as directed**, pipe with helical 3/4 by 3/4 by 7-1/2 inch (19 by 19 by 190 mm) corrugations.
 - c. Half Bituminous Coated, Part Paved: AASHTO M190 Type B and ASTM A760/A 760M zinc or aluminum (Type 2) coated Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - d. Fully Bituminous Coated, Part Paved: AASHTO M190 Type C and ASTM A760/A 760M zinc or aluminum (Type 2) coated Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - e. Fully Bituminous Coated, Fully Paved: AASHTO M190 Type D and ASTM A760/A 760M zinc or aluminum (Type 2) coated Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - f. Concrete-Lined: ASTM A760/A760M zinc coated Type I corrugated steel pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations and a concrete lining in accordance with ASTM A849.
 - g. Polymer Precoated: ASTM A 762/A 762M corrugated steel pipe fabricated from ASTM A742/A742M Grade 250/250 10/10 polymer precoated sheet of either:
 - 1) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - 2) Type IR **OR** IIR, **as directed**, pipe with helical 3/4 by 3/4 by 7-1/2 inch (19 by 19 by 190 mm) corrugations.
 - h. Polymer Precoated, Part Paved: ASTM A762/A762M Type I **OR** II, **as directed**, corrugated steel pipe and AASHTO M190 Type B (modified) paved invert only, fabricated from ASTM A742/A742M Grade 250/250 10/10 polymer precoated sheet with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
 - i. Polymer Precoated, Fully Paved: ASTM A762/A762M Type I **OR** II, **as directed**, corrugated steel pipe and AASHTO M190 Type D (modified), fully paved only, fabricated from ASTM A 742/A 742M Grade 250/250 10/10 polymer precoated sheet with annular **OR** helical, **as directed**, 2-2/3 by 1/2 inch (68 by 13 mm) corrugations.
5. Corrugated Aluminum Alloy Pipe: ASTM B745/B745M corrugated aluminum alloy pipe of either:
 - 1) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, corrugations.
 - 2) Type IA **OR** IR **OR** IIA **OR** IIR, **as directed**, pipe with helical corrugations.
- b. Aluminum Fully Bituminous Coated: Bituminous coating shall conform to ASTM A849. Piping shall conform to AASHTO M190 Type A and ASTM B745/B745M corrugated aluminum alloy pipe of either:
 - 1) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, corrugations.
 - 2) Type IA **OR** IR **OR** IIA **OR** IIR, **as directed**, pipe with helical corrugations.
- c. Aluminum Fully Bituminous Coated, Part Paved: Bituminous coating shall conform to ASTM A849. Piping shall conform to AASHTO M190 Type C and ASTM B 745/B 745M corrugated aluminum alloy pipe of either:
 - 1) Type I **OR** II, **as directed**, pipe with annular **OR** helical, **as directed**, corrugations.
 - 2) Type IR **OR** IIR, **as directed**, pipe with helical corrugations.
6. Structural Plate, Steel Pipe, Pipe Arches and Arches

- a. Assembled with galvanized steel nuts and bolts, from galvanized corrugated steel plates conforming to AASHTO M167. Pipe coating, when required, shall conform to the requirements of AASHTO M190 Type A **OR** AASHTO M243, **as directed**.
 - b. Thickness of plates shall be as indicated.
7. Structural Plate, Aluminum Pipe, Pipe Arches and Arches
 - a. Assembled with either aluminum alloy, aluminum coated steel, stainless steel or zinc coated steel nuts and bolts. Nuts and bolts, and aluminum alloy plates shall conform to AASHTO M219. Pipe coating, when required, shall conform to the requirements of AASHTO M190, Type A **OR** AASHTO M 243, **as directed**.
 - b. Thickness of plates shall be as indicated.
8. Ductile Iron Culvert Pipe: ASTM A716.
9. Cast-Iron Soil Piping: Cast-Iron Soil Pipe shall conform to ASTM A74, service-weight; gaskets shall be compression-type rubber conforming to ASTM C564.
10. PVC Pipe
 - a. The pipe manufacturer's resin certification, indicating the cell classification of PVC used to manufacture the pipe, shall be submitted prior to installation of the pipe.
 - b. Type PSM PVC Pipe: ASTM D3034, Type PSM, maximum SDR 35, produced from PVC certified by the compounder as meeting the requirements of ASTM D1784, minimum cell class 12454-B.
 - c. Profile PVC Pipe: ASTM F794, Series 46, produced from PVC certified by the compounder as meeting the requirements of ASTM D1784, minimum cell class 12454-B.
 - d. Smooth Wall PVC Pipe: ASTM F679 produced from PVC certified by the compounder as meeting the requirements of ASTM D1784, minimum cell class 12454-B.
 - e. Corrugated PVC Pipe: ASTM F949 produced from PVC certified by the compounder as meeting the requirements of ASTM D 1784, minimum cell class 12454-B.
11. PE Pipe
 - a. The pipe manufacturer's resin certification indicating the cell classification of PE used to manufacture the pipe shall be submitted prior to installation of the pipe. The minimum cell classification for polyethylene plastic shall apply to each of the seven primary properties of the cell classification limits in accordance with ASTM D3350.
 - b. Smooth Wall PE Pipe: ASTM F714, maximum DR of 21 for pipes 3 to 24 inches (80 to 600 mm) in diameter and maximum DR of 26 for pipes 26 to 48 inches (650 to 1200 mm) in diameter. Pipe shall be produced from PE certified by the resin producer as meeting the requirements of ASTM D3350, minimum cell class 335434C.
 - c. Corrugated PE Pipe: AASHTO M294, Type S or D, for pipes 12 to 48 inches (300 to 1200 mm) and AASHTO MP 7, Type S or D, for pipes 54 to 60 inches (1350 to 1500 mm) produced from PE certified by the resin producer as meeting the requirements of ASTM D3350, minimum cell class in accordance with AASHTO M294. Pipe walls shall have the following properties:
 NOTE: Corrugated PE pipe culverts and storm drains shall not be installed beneath airfield pavements, Class A, B, or C roads, or road pavements with a design index of 6 or greater. Type S pipe has a full circular cross-section, with an outer corrugated pipe wall and a smooth inner liner. Type C pipe has a full circular cross-section, with a corrugated surface both inside and outside. Corrugations may be either annular or helical.

Nominal Size (in.)	Minimum Wall Area (square in/ft)	Minimum Moment of Inertia of Wall Section (in to the 4th/in)

B. Drainage Structures

1. Flared End Sections: Sections shall be of a standard design fabricated from zinc coated steel sheets meeting requirements of ASTM A929/A929M.
2. Precast Reinforced Concrete Box: Four-sided box section with open ends to be monolithically cast of reinforced concrete, smooth inside surfaces. Each box section shall be manufactured with chamfered inside corners. Design and manufacture shall conform to ASTM C890.
 - a. Design References: ACI 318.
 - 1) Boxes subjected to highway loadings shall conform to requirements of AASHTO M259 or M273, as applicable, and ASTM C789, C850, C1433, and PS62.
 - 2) Boxes subjected to aircraft loadings shall conform to requirements of FAA specifications.
 - 3) Boxes subjected to railway loadings shall conform to requirements of AREMA specifications.
 - b. Concrete: 5,000 psi @ 30 days, unless otherwise directed.
 - c. Entrained Air: 5 to 9 percent.
 - d. Steel Reinforcing: ASTM A185, A615, A616, Grade 60, 60 ksi.
 - e. Design Loading: AASHTO HS-20-44 or HS-25-44 with 30 percent impact and equivalent soil pressure of 130 psf. Floatation forces not accounted for.
 - f. Joints: Each section shall have a male and female end with no less than 1-1/2-inch of concrete overlap and shall include a 1-inch square neoprene gasket, cemented to male surface of section during manufacture.
 - g. End Sections: As required for the individual installation, provide:
 - 1) Doweled end for 1-inch diameter x 12-inch deep steel dowels, keyway slot.
 - 2) Keyway slot, a shear connection between the precast and field cast sections.
 - 3) Plain end, for use where wing and end walls act independently of precast box.
 - h. Lifting Pins: Each section shall be equipped with 4 OSHA approved lifting pins.
 - i. For multi-cell installations, fill 1-inch spacing between cells with granular material to assume proper load distribution.
3. Three-Sided Structures for Culverts or Short Span Bridge System
 - a. Structures shall conform to requirements of ASTM C1504 and ACI 318. For structures subjected to roadway loadings, conform to requirements of AASHTO specifications.

C. Miscellaneous Materials

1. Concrete
 - a. Unless otherwise specified, concrete and reinforced concrete shall conform to the requirements concrete under Division 03 Section "Cast-in-place Concrete". The concrete mixture shall have air content by volume of concrete, based on measurements made immediately after discharge from the mixer, of 5 to 7 percent when maximum size of coarse aggregate exceeds 1-1/2 inches (37.5 mm).
 - b. Air content shall be determined in accordance with ASTM C231. The concrete covering over steel reinforcing shall not be less than 1 inch (25 mm) thick for covers and not less than 1-1/2 inches (40 mm) thick for walls and flooring. Concrete covering deposited directly against the ground shall have a thickness of at least 3 inches (75 mm) between steel and ground.
 - c. Expansion-joint filler material shall conform to ASTM D1751, or ASTM D1752, or shall be resin-impregnated fiberboard conforming to the physical requirements of ASTM D1752.
2. Mortar: Mortar for pipe joints, connections to other drainage structures, and brick or block construction shall conform to ASTM C270, Type M, except that the maximum placement time shall be 1 hour. The quantity of water in the mixture shall be sufficient to produce a stiff workable mortar. Water shall be clean and free of harmful acids, alkalies, and organic impurities. The mortar shall be used within 30 minutes after the ingredients are mixed with water. The inside of

- the joint shall be wiped clean and finished smooth. The mortar head on the outside shall be protected from air and sun with a proper covering until satisfactorily cured.
3. Precast Concrete Segmental Blocks: Precast concrete segmental block shall conform to ASTM C139, not more than 8 inches (200 mm) thick, not less than 8 inches (200 mm) long, and of such shape that joints can be sealed effectively and bonded with cement mortar.
 4. Brick
 - a. Brick shall conform to ASTM C62, Grade SW; ASTM C55, Grade S-I or S-II; or ASTM C32, Grade MS. Mortar for jointing and plastering shall consist of one part portland cement and two parts fine sand. Lime may be added to the mortar in a quantity not more than 25 percent of the volume of cement.
 - b. The joints shall be filled completely and shall be smooth and free from surplus mortar on the inside of the structure. Brick structures shall be plastered with 1/2 inch (10 mm) of mortar over the entire outside surface of the walls. For square or rectangular structures, brick shall be laid in stretcher courses with a header course every sixth course. For round structures, brick shall be laid radially with every sixth course a stretcher course.
 5. Precast Reinforced Concrete Manholes
 - a. Precast reinforced concrete manholes shall conform to ASTM C478/ASTM C478M.
 - b. Joints between precast concrete risers and tops shall be full-bedded in cement mortar and shall be smoothed to a uniform surface on both interior and exterior of the structure **OR** made with flexible watertight, rubber-type gaskets meeting the requirements of paragraph JOINTS, **as directed**.
 6. Prefabricated Corrugated Metal Manholes
 - a. Manholes shall be of the type and design recommended by the manufacturer.
 - b. Manholes shall be complete with frames and cover, or frames and gratings.
 7. Frame and Cover for Gratings
 - a. Frame and cover for gratings shall be cast gray iron, ASTM A48/A48M,
 - b. Class 35B; cast ductile iron, ASTM A536, Grade 65-45-12; or cast aluminum, ASTM B26M/B26, Alloy 356.OT6. Weight, shape, size, and waterway openings for grates and curb inlets shall be as indicated on the plans.
 8. Joints
 - a. Flexible Watertight Joints
 - 1) Materials: Flexible watertight joints shall be made with plastic or rubber-type gaskets for concrete pipe and with factory-fabricated resilient materials for clay pipe. The design of joints and the physical requirements for plastic gaskets shall conform to AASHTO M198, and rubber-type gaskets shall conform to ASTM C443/ASTM C443M. Factory-fabricated resilient joint materials shall conform to ASTM C425. Gaskets shall have not more than one factory-fabricated splice, except that two factory-fabricated splices of the rubber-type gasket are permitted if the nominal diameter of the pipe being gasketed exceeds 54 inches (1.35 m).
 - 2) Test Requirements: Watertight joints shall be tested and shall meet test requirements of paragraph HYDROSTATIC TEST ON WATERTIGHT JOINTS. Rubber gaskets shall comply with the oil resistant gasket requirements of ASTM C443/ASTM C443M. Certified copies of test results shall be delivered to the the Owner before gaskets or jointing materials are installed. Alternate types of watertight joint may be furnished, if specifically approved.
 - b. External Sealing Bands: Requirements for external sealing bands shall conform to ASTM C877/ASTM C877M.
 - c. Flexible Watertight, Gasketed Joints
 - 1) Gaskets: When infiltration or exfiltration is a concern for pipe lines, the couplings may be required to have gaskets. The closed-cell expanded rubber gaskets shall be a continuous band approximately 7 inches (178 mm) wide and approximately 3/8 inch (10 mm) thick, meeting the requirements of ASTM D1056, Type 2 A1 **OR** B3, **as directed**, and shall have a quality retention rating of not less than 70 percent when tested for weather resistance by ozone chamber exposure, Method B of ASTM D1171. Rubber O-ring gaskets shall be 13/16 inch (21 mm) in diameter for pipe

diameters of 36 inches (914 mm) or smaller and 7/8 inch (22 mm) in diameter for larger pipe having 1/2 inch (13 mm) deep end corrugation. Rubber O-ring gaskets shall be 1-3/8 inches (35 mm) in diameter for pipe having 1 inch (25 mm) deep end corrugations. O-rings shall meet the requirements of AASHTO M198 or ASTM C443/ASTM C443M. Flexible plastic gaskets shall conform to requirements of AASHTO M198, Type B.

- 2) Connecting Bands: Connecting bands shall be of the type, size and sheet thickness of band, and the size of angles, bolts, rods and lugs as indicated or where not indicated as specified in the applicable standards or specifications for the pipe. Exterior rivet heads in the longitudinal seam under the connecting band shall be countersunk or the rivets shall be omitted and the seam welded. Watertight joints shall be tested and shall meet the test requirements of paragraph HYDROSTATIC TEST ON WATERTIGHT JOINTS.

- d. PVC Plastic Pipes: Joints shall be solvent cement or elastomeric gasket type in accordance with the specification for the pipe and as recommended by the pipe manufacturer.
- e. Smooth Wall PE Plastic Pipe: Pipe shall be joined using butt fusion method as recommended by the pipe manufacturer.
- f. Corrugated PE Plastic Pipe: Water tight joints shall be made using a PVC or PE coupling and rubber gaskets as recommended by the pipe manufacturer. Rubber gaskets shall conform to ASTM F477. Soil tight joints shall conform to the requirements in AASHTO HB-17, Division II, Section 26.4.2.4.(e) for soil tightness and shall be as recommended by the pipe manufacturer.
- g. Profile Wall PE Plastic Pipe: Joints shall be gasketed or thermal weld type with integral bell in accordance with ASTM F894.
- h. Ductile Iron Pipe: Couplings and fittings shall be as recommended by the pipe manufacturer.

D. Steel Ladder

1. Steel ladder shall be provided where the depth of the manhole exceeds 12 feet (3.66 m). These ladders shall be not less than 16 inches (406 mm) in width, with 3/4 inch (19 mm) diameter rungs spaced 12 inches (305 mm) apart. The two stringers shall be a minimum 3/8 inch (10 mm) thick and 2-1/2 inches (63 mm) wide. Ladders and inserts shall be galvanized after fabrication in conformance with ASTM A123/A123M.

E. Resilient Connectors

1. Flexible, watertight connectors used for connecting pipe to manholes and inlets shall conform to ASTM C923/ASTM C923M.

F. Hydrostatic Test On Watertight Joints

1. Concrete, Clay, PVC and PE Pipe: A hydrostatic test shall be made on the watertight joint types as proposed. Only one sample joint of each type needs testing; however, if the sample joint fails because of faulty design or workmanship, an additional sample joint may be tested. During the test period, gaskets or other jointing material shall be protected from extreme temperatures which might adversely affect the performance of such materials. Performance requirements for joints in reinforced and nonreinforced concrete pipe shall conform to AASHTO M198 or ASTM C443M ASTM C443. Test requirements for joints in clay pipe shall conform to ASTM C425. Test requirements for joints in PVC and PE plastic pipe shall conform to ASTM D3212.
2. Corrugated Steel and Aluminum Pipe: A hydrostatic test shall be made on the watertight joint system or coupling band type proposed. The moment strength required of the joint is expressed as 15 percent of the calculated moment capacity of the pipe on a transverse section remote from the joint by the AASHTO HB-17 (Division II, Section 26). The pipe shall be supported for the hydrostatic test with the joint located at the point which develops 15 percent of the moment capacity of the pipe based on the allowable span in meters feet for the pipe flowing full or 40,000 foot-pounds (54,233 Newton meters), whichever is less. Performance requirements shall be met

at an internal hydrostatic pressure of 10 psi (69 kPa) for a 10 minute period for both annular corrugated metal pipe and helical corrugated metal pipe with factory reformed ends.

G. Erosion Control Riprap

1. Provide nonerodible rock not exceeding 15 inches (375 mm) in its greatest dimension and choked with sufficient small rocks to provide a dense mass with a minimum thickness of 8 inches (200 mm) or as indicated.

1.3 EXECUTION

A. Excavation for Pipe Culverts and Drainage Structures

1. Excavation of trenches, and for appurtenances and backfilling for culverts and storm drains, shall be in accordance with the applicable portions of Division 31 Section "Earth Moving" and the requirements specified below.
2. Trenching: The width of trenches at any point below the top of the pipe shall be not greater than the outside diameter of the pipe plus 12-inches (300 mm) each side of pipe to permit satisfactory jointing and thorough tamping of the bedding material under and around the pipe. Sheet piling and bracing, where required, shall be placed within the trench width as specified. Contractor shall not overexcavate. Where trench widths are exceeded, redesign with a resultant increase in cost of stronger pipe or special installation procedures will be necessary. Cost of this redesign and increased cost of pipe or installation shall be borne by the Contractor without additional cost to the Owner.
3. Removal of Rock: Rock in either ledge or boulder formation shall be replaced with suitable materials to provide a compacted earth cushion having a thickness between unremoved rock and the pipe of at least 8 inches (200 mm) or 1/2 inch (13 mm) for each meter foot of fill over the top of the pipe, whichever is greater, but not more than three-fourths the nominal diameter of the pipe. Where bell-and-spigot pipe is used, the cushion shall be maintained under the bell as well as under the straight portion of the pipe. Rock excavation shall be as specified and defined in Division 31 Section "Earth Moving".
4. Removal of Unstable Material: Where wet or otherwise unstable soil incapable of properly supporting the pipe, as determined by the the Owner, is unexpectedly encountered in the bottom of a trench, such material shall be removed to the depth required and replaced to the proper grade with select granular material, compacted as provided in paragraph BACKFILLING. When removal of unstable material is due to the fault or neglect of the Contractor while performing shoring and sheet piling, water removal, or other specified requirements, such removal and replacement shall be performed at no additional cost to the Owner.

B. Bedding

1. The bedding surface for the pipe shall provide a firm foundation of uniform density throughout the entire length of the pipe.
2. Concrete Pipe Requirements: When no bedding class is specified or detailed on the drawings, concrete pipe shall be bedded in a soil foundation accurately shaped and rounded to conform to the lowest one-fourth of the outside portion of circular pipe or to the lower curved portion of pipe arch for the entire length of the pipe or pipe arch. When necessary, the bedding shall be tamped. Bell holes and depressions for joints shall be not more than the length, depth, and width required for properly making the particular type of joint.
3. Clay Pipe Requirements: Bedding for clay pipe shall be as specified by ASTM C12.
4. Corrugated Metal Pipe: Bedding for corrugated metal pipe and pipe arch shall be in accordance with ASTM A798/A798M. It is not required to shape the bedding to the pipe geometry. However, for pipe arches, the Contractor shall either shape the bedding to the relatively flat bottom arc or fine grade the foundation to a shallow v-shape. Bedding for corrugated structural plate pipe shall meet requirements of ASTM A807/A807M.
5. Ductile Iron and Cast-Iron Pipe: Bedding for ductile iron and cast-iron pipe shall be as shown on the drawings.

6. Plastic Pipe: Bedding for PVC and PE pipe shall meet the requirements of ASTM D2321. Bedding, haunching, and initial backfill shall be either Class IB or II material.

C. Placing Pipe

1. Each pipe shall be thoroughly examined before being laid; defective or damaged pipe shall not be used. Plastic pipe shall be protected from exposure to direct sunlight prior to laying, if necessary to maintain adequate pipe stiffness and meet installation deflection requirements. Pipelines shall be laid to the grades and alignment indicated. Proper facilities shall be provided for lowering sections of pipe into trenches. Lifting lugs in vertically elongated metal pipe shall be placed in the same vertical plane as the major axis of the pipe. Pipe shall not be laid in water, and pipe shall not be laid when trench conditions or weather are unsuitable for such work. Diversion of drainage or dewatering of trenches during construction shall be provided as necessary. Deflection of installed flexible pipe shall not exceed the following limits:

TYPE OF PIPE	MAXIMUM ALLOWABLE DEFLECTION (%)
Corrugated Steel and Aluminum Alloy	5
Concrete-Lined Corrugated Steel	3
Ductile Iron Culvert	3
Plastic	7.5

Not less than 30 days after the completion of backfilling, the Owner may perform a deflection test on the entire length of installed flexible pipe using a mandrel or other suitable device. Installed flexible pipe showing deflections greater than those indicated above shall be retested by a run from the opposite direction. If the retest also fails, the suspect pipe shall be replaced.

2. Concrete, Clay, PVC, Ribbed PVC, Ductile Iron and Cast-Iron Pipe: Laying shall proceed upgrade with spigot ends of bell-and-spigot pipe and tongue ends of tongue-and-groove pipe pointing in the direction of the flow.
3. Elliptical and Elliptical Reinforced Concrete Pipe: The manufacturer's reference lines, designating the top of the pipe, shall be within 5 degrees of a vertical plane through the longitudinal axis of the pipe, during placement. Damage to or misalignment of the pipe shall be prevented in all backfilling operations.
4. Corrugated PE Pipe: Laying shall be with the separate sections joined firmly on a bed shaped to line and grade and shall follow manufacturer's recommendations.
5. Corrugated Metal Pipe and Pipe Arch: Laying shall be with the separate sections joined firmly together, with the outside laps of circumferential joints pointing upstream, and with longitudinal laps on the sides. Part paved pipe shall be installed so that the centerline of bituminous pavement in the pipe, indicated by suitable markings on the top at each end of the pipe sections, coincides with the specified alignment of pipe. Fully paved steel pipe or pipe arch shall have a painted or otherwise applied label inside the pipe or pipe arch indicating sheet thickness of pipe or pipe arch. Any unprotected metal in the joints shall be coated with bituminous material as specified in AASHTO M190 or AASHTO M243. Interior coating shall be protected against damage from insertion or removal of struts or tie wires. Lifting lugs shall be used to facilitate moving pipe without damage to exterior or interior coatings. During transportation and installation, pipe or pipe arch and coupling bands shall be handled with care to preclude damage to the coating, paving or lining. Damaged coatings, pavings and linings shall be repaired in accordance with the manufacturer's recommendations prior to placing backfill. Pipe on which coating, paving or lining has been damaged to such an extent that satisfactory field repairs cannot be made shall be removed and replaced. Vertical elongation, where indicated, shall be accomplished by factory elongation. Suitable markings or properly placed lifting lugs shall be provided to ensure placement of factory elongated pipe in a vertical plane.
6. Structural-Plate Steel: Structural plate shall be installed in accordance with ASTM A807/A807M. Structural plate shall be assembled in accordance with instructions furnished by the manufacturer. Instructions shall show the position of each plate and the order of assembly. Bolts shall be tightened progressively and uniformly, starting at one end of the structure after all plates are in place. The operation shall be repeated to ensure that all bolts are tightened to meet the torque requirements of 200 foot-pounds (270 Newton meters) plus or minus 50 foot-pounds (68 Newton meters). Any power wrenches used shall be checked by the use of hand torque

wrenches or long-handled socket or structural wrenches for amount of torque produced. Power wrenches shall be checked and adjusted frequently as needed, according to type or condition, to ensure proper adjustment to supply the required torque.

7. **Structural-Plate Aluminum:** Structural plate shall be assembled in accordance with instructions furnished by the manufacturer. Instructions shall show the position of each plate and the order of assembly. Bolts shall be tightened progressively and uniformly, starting at one end of the structure after all plates are in place. The operation shall be repeated to ensure that all bolts are torqued to a minimum of 100 foot-pounds (136 Newton meters) on aluminum alloy bolts and a minimum of 150 foot-pounds (203 Newton meters) on galvanized steel bolts. Any power wrenches used shall be checked by the use of hand torque wrenches or long-handled socket or structural wrenches for the amount of torque produced. Power wrenches shall be checked and adjusted as frequently as needed, according to type or condition, to ensure that they are in proper adjustment to supply the required torque.
8. **Multiple Culverts:** Where multiple lines of pipe are installed, adjacent sides of pipe shall be at least half the nominal pipe diameter or 1 meter 3 feet apart, whichever is less.
9. **Jacking Pipe Through Fills:** Methods of operation and installation for jacking pipe through fills shall conform to requirements specified in Volume 1, Chapter 1, Part 4 of AREMA Manual.

D. Jointing

1. Concrete and Clay Pipe

- a. **Cement-Mortar Bell-and-Spigot Joint:** The first pipe shall be bedded to the established gradeline, with the bell end placed upstream. The interior surface of the bell shall be thoroughly cleaned with a wet brush and the lower portion of the bell filled with mortar as required to bring inner surfaces of abutting pipes flush and even. The spigot end of each subsequent pipe shall be cleaned with a wet brush and uniformly matched into a bell so that sections are closely fitted. After each section is laid, the remainder of the joint shall be filled with mortar, and a bead shall be formed around the outside of the joint with sufficient additional mortar. If mortar is not sufficiently stiff to prevent appreciable slump before setting, the outside of the joint shall be wrapped or bandaged with cheesecloth to hold mortar in place.
- b. **Cement-Mortar Oakum Joint for Bell-and-Spigot Pipe:** A closely twisted gasket shall be made of jute or oakum of the diameter required to support the spigot end of the pipe at the proper grade and to make the joint concentric. Joint packing shall be in one piece of sufficient length to pass around the pipe and lap at top. This gasket shall be thoroughly saturated with neat cement grout. The bell of the pipe shall be thoroughly cleaned with a wet brush, and the gasket shall be laid in the bell for the lower third of the circumference and covered with mortar. The spigot of the pipe shall be thoroughly cleaned with a wet brush, inserted in the bell, and carefully driven home. A small amount of mortar shall be inserted in the annular space for the upper two-thirds of the circumference. The gasket shall be lapped at the top of the pipe and driven home in the annular space with a caulking tool. The remainder of the annular space shall be filled completely with mortar and beveled at an angle of approximately 45 degrees with the outside of the bell. If mortar is not sufficiently stiff to prevent appreciable slump before setting, the outside of the joint thus made shall be wrapped with cheesecloth. Placing of this type of joint shall be kept at least five joints behind laying operations.
- c. **Cement-Mortar Diaper Joint for Bell-and-Spigot Pipe:** The pipe shall be centered so that the annular space is uniform. The annular space shall be caulked with jute or oakum. Before caulking, the inside of the bell and the outside of the spigot shall be cleaned.
 - 1) **Diaper Bands:** Diaper bands shall consist of heavy cloth fabric to hold grout in place at joints and shall be cut in lengths that extend one-eighth of the circumference of pipe above the spring line on one side of the pipe and up to the spring line on the other side of the pipe. Longitudinal edges of fabric bands shall be rolled and stitched around two pieces of wire. Width of fabric bands shall be such that after fabric has been securely stitched around both edges on wires, the wires will be uniformly spaced not less than 200 mm 8 inches apart. Wires shall be cut into

- lengths to pass around pipe with sufficient extra length for the ends to be twisted at top of pipe to hold the band securely in place; bands shall be accurately centered around lower portion of joint.
- 2) Grout: Grout shall be poured between band and pipe from the high side of band only, until grout rises to the top of band at the spring line of pipe, or as nearly so as possible, on the opposite side of pipe, to ensure a thorough sealing of joint around the portion of pipe covered by the band. Silt, slush, water, or polluted mortar grout forced up on the lower side shall be forced out by pouring, and removed.
 - 3) Remainder of Joint: The remaining unfilled upper portion of the joint shall be filled with mortar and a bead formed around the outside of this upper portion of the joint with a sufficient amount of additional mortar. The diaper shall be left in place. Placing of this type of joint shall be kept at least five joints behind actual laying of pipe. No backfilling around joints shall be done until joints have been fully inspected and approved.
- d. Cement-Mortar Tongue-and-Groove Joint: The first pipe shall be bedded carefully to the established gradeline with the groove upstream. A shallow excavation shall be made underneath the pipe at the joint and filled with mortar to provide a bed for the pipe. The grooved end of the first pipe shall be thoroughly cleaned with a wet brush, and a layer of soft mortar applied to the lower half of the groove. The tongue of the second pipe shall be cleaned with a wet brush; while in horizontal position, a layer of soft mortar shall be applied to the upper half of the tongue. The tongue end of the second pipe shall be inserted in the grooved end of the first pipe until mortar is squeezed out on interior and exterior surfaces. Sufficient mortar shall be used to fill the joint completely and to form a bead on the outside.
 - e. Cement-Mortar Diaper Joint for Tongue-and-Groove Pipe: The joint shall be of the type described for cement-mortar tongue-and-groove joint in this paragraph, except that the shallow excavation directly beneath the joint shall not be filled with mortar until after a gauze or cheesecloth band dipped in cement mortar has been wrapped around the outside of the joint. The cement-mortar bead at the joint shall be at least 1/2 inch (15 mm), thick and the width of the diaper band shall be at least 8 inches (200 mm). The diaper shall be left in place. Placing of this type of joint shall be kept at least five joints behind the actual laying of the pipe. Backfilling around the joints shall not be done until the joints have been fully inspected and approved.
 - f. Plastic Sealing Compound Joints for Tongue-and-Grooved Pipe: Sealing compounds shall follow the recommendation of the particular manufacturer in regard to special installation requirements. Surfaces to receive lubricants, primers, or adhesives shall be dry and clean. Sealing compounds shall be affixed to the pipe not more than 3 hours prior to installation of the pipe, and shall be protected from the sun, blowing dust, and other deleterious agents at all times. Sealing compounds shall be inspected before installation of the pipe, and any loose or improperly affixed sealing compound shall be removed and replaced. The pipe shall be aligned with the previously installed pipe, and the joint pulled together. If, while making the joint with mastic-type sealant, a slight protrusion of the material is not visible along the entire inner and outer circumference of the joint when the joint is pulled up, the pipe shall be removed and the joint remade. After the joint is made, all inner protrusions shall be cut off flush with the inner surface of the pipe. If nonmastic-type sealant material is used, the "Squeeze-Out" requirement above will be waived.
 - g. Flexible Watertight Joints: Gaskets and jointing materials shall be as recommended by the particular manufacturer in regard to use of lubricants, cements, adhesives, and other special installation requirements. Surfaces to receive lubricants, cements, or adhesives shall be clean and dry. Gaskets and jointing materials shall be affixed to the pipe not more than 24 hours prior to the installation of the pipe, and shall be protected from the sun, blowing dust, and other deleterious agents at all times. Gaskets and jointing materials shall be inspected before installing the pipe; any loose or improperly affixed gaskets and jointing materials shall be removed and replaced. The pipe shall be aligned with the previously installed pipe, and the joint pushed home. If, while the joint is being made the gasket becomes visibly dislocated the pipe shall be removed and the joint remade.

- h. External Sealing Band Joint for Noncircular Pipe: Surfaces to receive sealing bands shall be dry and clean. Bands shall be installed in accordance with manufacturer's recommendations.
- 2. Corrugated Metal Pipe
 - a. Field Joints: Transverse field joints shall be designed so that the successive connection of pipe sections will form a continuous line free of appreciable irregularities in the flow line. In addition, the joints shall meet the general performance requirements described in ASTM A798/A798M. Suitable transverse field joints which satisfy the requirements for one or more of the joint performance categories can be obtained with the following types of connecting bands furnished with suitable band-end fastening devices: corrugated bands, bands with projections, flat bands, and bands of special design that engage factory reformed ends of corrugated pipe. The space between the pipe and connecting bands shall be kept free from dirt and grit so that corrugations fit snugly. The connecting band, while being tightened, shall be tapped with a soft-head mallet of wood, rubber or plastic, to take up slack and ensure a tight joint. The annular space between abutting sections of part paved, and fully paved pipe and pipe arch, in sizes 30 inches (750 mm) or larger, shall be filled with a bituminous material after jointing. Field joints for each type of corrugated metal pipe shall maintain pipe alignment during construction and prevent infiltration of fill material during the life of the installations. The type, size, and sheet thickness of the band and the size of angles or lugs and bolts shall be as indicated or where not indicated, shall be as specified in the applicable standards or specifications for the pipe.
 - b. Flexible Watertight, Gasketed Joints: Installation shall be as recommended by the gasket manufacturer for use of lubricants and cements and other special installation requirements. The gasket shall be placed over one end of a section of pipe for half the width of the gasket. The other half shall be doubled over the end of the same pipe. When the adjoining section of pipe is in place, the doubled-over half of the gasket shall then be rolled over the adjoining section. Any unevenness in overlap shall be corrected so that the gasket covers the end of pipe sections equally. Connecting bands shall be centered over adjoining sections of pipe, and rods or bolts placed in position and nuts tightened. Band Tightening: The band shall be tightened evenly, even tension being kept on the rods or bolts, and the gasket; the gasket shall seat properly in the corrugations. Watertight joints shall remain uncovered for a period of time designated, and before being covered, tightness of the nuts shall be measured with a torque wrench. If the nut has tended to loosen its grip on the bolts or rods, the nut shall be retightened with a torque wrench and remain uncovered until a tight, permanent joint is assured.

E. Concrete Placement

- 1. Place cast-in-place concrete according to ACI 318/318R.

F. Drainage Structures

- 1. Manholes and Inlets: Construction shall be of reinforced concrete, plain concrete, brick, precast reinforced concrete, precast concrete segmental blocks, prefabricated corrugated metal, or bituminous coated corrugated metal; complete with frames and covers or gratings; and with fixed galvanized steel ladders where indicated. Pipe studs and junction chambers of prefabricated corrugated metal manholes shall be fully bituminous-coated and paved when the connecting branch lines are so treated. Pipe connections to concrete manholes and inlets shall be made with flexible, watertight connectors.
- 2. Walls and Headwalls: Construction shall be as indicated.

G. Steel Ladder Installation

- 1. Ladder shall be adequately anchored to the wall by means of steel inserts spaced not more than 6 feet (1.83 m) vertically, and shall be installed to provide at least 6 inches (152 mm) of space between the wall and the rungs. The wall along the line of the ladder shall be vertical for its entire length.

H. Backfilling

1. **Backfilling Pipe in Trenches:** After the pipe has been properly bedded, selected material from excavation or borrow, at a moisture content that will facilitate compaction, shall be placed along both sides of pipe in layers not exceeding 6 inches (150 mm) in compacted depth. The backfill shall be brought up evenly on both sides of pipe for the full length of pipe. The fill shall be thoroughly compacted under the haunches of the pipe. Each layer shall be thoroughly compacted with mechanical tampers or rammers. This method of filling and compacting shall continue until the fill has reached an elevation of at least 12 inches (300 mm) above the top of the pipe. The remainder of the trench shall be backfilled and compacted by spreading and rolling or compacted by mechanical rammers or tampers in layers not exceeding 8 inches (200 mm). Tests for density shall be made as necessary to ensure conformance to the compaction requirements specified below. Where it is necessary, in the opinion of the the Owner, that sheeting or portions of bracing used be left in place, the contract will be adjusted accordingly. Untreated sheeting shall not be left in place beneath structures or pavements.
2. **Backfilling Pipe in Fill Sections:** For pipe placed in fill sections, backfill material and the placement and compaction procedures shall be as specified below. The fill material shall be uniformly spread in layers longitudinally on both sides of the pipe, not exceeding 6 inches (150 mm) in compacted depth, and shall be compacted by rolling parallel with pipe or by mechanical tamping or ramming. Prior to commencing normal filling operations, the crown width of the fill at a height of 12 inches (300 mm) above the top of the pipe shall extend a distance of not less than twice the outside pipe diameter on each side of the pipe or 12 feet (4 m), whichever is less. After the backfill has reached at least 12 inches (300 mm) above the top of the pipe, the remainder of the fill shall be placed and thoroughly compacted in layers not exceeding 8 inches (200 mm).
3. **Movement of Construction Machinery:** When compacting by rolling or operating heavy equipment parallel with the pipe, displacement of or injury to the pipe shall be avoided. Movement of construction machinery over a culvert or storm drain at any stage of construction shall be at the Contractor's risk. Any damaged pipe shall be repaired or replaced.
4. **Compaction**
 - a. **General Requirements:** Cohesionless materials include gravels, gravel-sand mixtures, sands, and gravelly sands. Cohesive materials include clayey and silty gravels, gravel-silt mixtures, clayey and silty sands, sand-clay mixtures, clays, silts, and very fine sands. When results of compaction tests for moisture-density relations are recorded on graphs, cohesionless soils will show straight lines or reverse-shaped moisture-density curves, and cohesive soils will show normal moisture-density curves.
 - b. **Minimum Density:** Backfill over and around the pipe and backfill around and adjacent to drainage structures shall be compacted at the approved moisture content to the following applicable minimum density, which will be determined as specified below.
 - 1) Under airfield and heliport pavements, paved roads, streets, parking areas, and similar-use pavements including adjacent shoulder areas, the density shall be not less than 90 percent of maximum density for cohesive material and 95 percent of maximum density for cohesionless material, up to the elevation where requirements for pavement subgrade materials and compaction shall control.
 - 2) Under unpaved or turfed traffic areas, density shall not be less than 90 percent of maximum density for cohesive material and 95 percent of maximum density for cohesionless material.
 - 3) Under nontraffic areas, density shall be not less than that of the surrounding material.
5. **Determination of Density:** Testing shall be the responsibility of the Contractor and performed at no additional cost to the Owner. Testing shall be performed by an approved commercial testing laboratory or by the Contractor subject to approval. Tests shall be performed in sufficient number to ensure that specified density is being obtained. Laboratory tests for moisture-density relations shall be made in accordance with ASTM D1557 except that mechanical tampers may be used provided the results are correlated with those obtained with the specified hand tamper. Field density tests shall be determined in accordance with ASTM D2167 or ASTM D2922. When ASTM D2922 is used, the calibration curves shall be checked and adjusted, if necessary, using the sand cone method as described in paragraph Calibration of the referenced publications.

ASTM D2922 results in a wet unit weight of soil and when using this method ASTM D3017 shall be used to determine the moisture content of the soil. The calibration curves furnished with the moisture gauges shall be checked along with density calibration checks as described in ASTM D3017 or ASTM D2922. Test results shall be furnished to the Owner. The calibration checks of both the density and moisture gauges shall be made at the beginning of a job on each different type of material encountered and at intervals as directed.

I. Pipeline Testing

1. **Leakage Tests:** Lines shall be tested for leakage by low pressure air or water testing or exfiltration tests, as appropriate. Low pressure air testing for vitrified clay pipes shall conform to ASTM C828. Low pressure air testing for concrete pipes shall conform to ASTM C924/ASTM C924M. Low pressure air testing for plastic pipe shall conform to ASTM F1417. Low pressure air testing procedures for other pipe materials shall use the pressures and testing times prescribed in ASTM C828 or ASTM C924/ASTM C924M, after consultation with the pipe manufacturer. Testing of individual joints for leakage by low pressure air or water shall conform to ASTM C1103/ASTM C1103M. Prior to exfiltration tests, the trench shall be backfilled up to at least the lower half of the pipe. If required, sufficient additional backfill shall be placed to prevent pipe movement during testing, leaving the joints uncovered to permit inspection. Visible leaks encountered shall be corrected regardless of leakage test results. When the water table is 600 mm 2 feet or more above the top of the pipe at the upper end of the pipeline section to be tested, infiltration shall be measured using a suitable weir or other device acceptable to the Owner. An exfiltration test shall be made by filling the line to be tested with water so that a head of at least 2 feet (600 mm) is provided above both the water table and the top of the pipe at the upper end of the pipeline to be tested. The filled line shall be allowed to stand until the pipe has reached its maximum absorption, but not less than 4 hours. After absorption, the head shall be reestablished. The amount of water required to maintain this water level during a 2-hour test period shall be measured. Leakage as measured by the exfiltration test shall not exceed 250 gallons per inch in diameter per mile (60 liters per mm in diameter per kilometer) of pipeline per day **OR** 0.2 gallons per inch in diameter per 100 feet (9 mL per mm in diameter per 100 meters), **as directed**, of pipeline per hour. When leakage exceeds the maximum amount specified, satisfactory correction shall be made and retesting accomplished.
2. **Deflection Testing:** Perform a deflection test on entire length of installed plastic pipeline on completion of work adjacent to and over the pipeline, including leakage tests, backfilling, placement of fill, grading, paving, concreting, and any other superimposed loads. Deflection of pipe in the installed pipeline under external loads shall not exceed 4.5 percent of the average inside diameter of pipe. Determine whether the allowable deflection has been exceeded by use of a pull-through device or a deflection measuring device.
 - a. **Pull-through device:** This device shall be a spherical, spheroidal, or elliptical ball, a cylinder, or circular sections fused to a common shaft. Circular sections shall be so spaced on the shaft that distance from external faces of front and back sections will equal or exceed diameter of the circular section. Pull-through device may also be of a design promulgated by the Uni-Bell Plastic Pipe Association, provided that the device meets the applicable requirements specified in this paragraph, including those for diameter of the device. Ball, cylinder, or circular sections shall conform to the following:
 - 1) A diameter, or minor diameter as applicable, of 95 percent of the average inside diameter of the pipe; tolerance of plus 0.5 percent will be permitted.
 - 2) A homogeneous material throughout, with a density greater than 1.0 as related to water at 39.2 degrees F (4 degrees C), and a surface Brinell hardness of not less than 150.
 - 3) Center bored and through bolted with a 1/4 inch (6 mm) minimum diameter steel shaft having a yield strength of not less than 70,000 psi (483 MPa), with eyes or loops at each end for attaching pulling cables.
 - 4) Each eye or loop shall be suitably backed with a flange or heavy washer such that a pull exerted on opposite end of shaft will produce compression throughout remote end.

- b. Deflection measuring device: Sensitive to 1.0 percent of the diameter of the pipe being tested and accurate to 1.0 percent of the indicated dimension. Deflection measuring device shall be approved by the the Owner prior to use.
 - c. Pull-through device: Pass the pull-through device through each run of pipe, either by pulling it through or flushing it through with water. If the device fails to pass freely through a pipe run, replace pipe which has the excessive deflection and completely retest in same manner and under same conditions as specified.
 - d. Deflection measuring device procedure: Measure deflections through each run of installed pipe. If deflection readings in excess of 4.5 percent of average inside diameter of pipe are obtained, retest pipe by a run from the opposite direction. If retest continues to show a deflection in excess of 4.5 percent of average inside diameter of pipe, remove pipe which has excessive deflection, replace with new pipe, and completely retest in same manner and under same conditions.
 - e. Warranty period test: Pipe found to have a deflection of greater than 5 percent of average inside diameter when deflection test is performed just prior to end of one-year warranty period shall be replaced with new pipe and tested as specified for leakage and deflection.
- J. Field Painting
- 1. After installation, clean cast-iron frames, covers, gratings, and steps not buried in masonry or concrete to bare metal of mortar, rust, grease, dirt, and other deleterious materials and apply a coat of bituminous paint **OR** After installation, clean steel covers and steel or concrete frames not buried in masonry or concrete to bare metal of mortar, dirt, grease, and other deleterious materials. Apply a coat of primer and apply a top coat as specified in Division 09 Section "Exterior Painting", **as directed**. Do not paint surfaces subject to abrasion.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 44 19 19 - OIL/WATER SEPARATOR

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for oil/water separator. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Scope

1. The separator shall be designed for gravity separation of sand, grit, settleable solids, or semisolids, and free oils (hydrocarbons and other petroleum products) from wastewater. Separator shall be installed belowground with top access at or above grade level. The source of the influent to the separator shall be gravity flow from storm water runoff, hydrocarbon spills, and/or cleaning/maintenance operations.

C. Performance

1. Influent Characteristics

- a. Provide separator designed for intermittent and variable flows of water, oil, or any combination of non-emulsified oil-water mixtures. Minimum separator retention time shall be 10 minutes. Operating temperatures of the influent oil in water mixture shall range from 40 degrees F. to 80 degrees F. The specific gravity of the oils at operating temperatures shall range from 0.71 to 0.92. The specific gravity of the fresh water at operating temperatures shall range from 1.00 to 1.03.

2. Effluent Characteristics

- a. The free oil and grease concentration in the effluent from the separator shall not exceed 10 mg/l (10 PPM) to satisfy requirements of the NPDES stormwater discharge permit. To achieve this goal, it will be necessary to remove all free oil droplets equal to and greater than 20 microns.

D. Design Criteria

1. The separator shall be listed to Underwriters' Laboratories UL-SU2215. Construction and performance of the oil/water separators shall be in accordance with UL-SU2215. Provide certification documentation detailing criteria under which the system was tested. UL-SU2215 label shall be prominently displayed on manway covers.
2. Separator shall be designed in accordance with Stokes Law and the American Petroleum Institute Publication 421, "Monographs on Refinery Environmental Control - Management of Water Discharges; Design and Operation of Oil/Water Separators." Effective surface area calculations, signed and stamped by a Registered Professional Engineer shall be submitted to document specified effluent quality based on complete removal of the specified oil globule at design flow. A separator with lower effective surface area than required is not permissible.
3. Separator capacities, dimensions, construction, and thickness shall be in strict accordance with Underwriters' Laboratories, Subject UL-58 Standard for Safety, Steel Underground Tanks for Flammable and Combustible Liquids, September 30, 1997, Double Wall construction with 360 degree Steel Secondary Containment. The inner steel tank shall be completely contained within the outer steel tank, enclosing 100% of the tank volume. The tank shall have a double steel shell with a space between the layers. The space between the inner and outer steel walls shall be monitored with an approved electronic leak detection device through a pipe that extends vertically to the top of the tank from a small sump at the bottom. Tank construction using thin walled primary tank with external fiberglass jacket shall not be permissible.
4. Separator Corrosion Control System shall be in strict accordance with Underwriters' Laboratories Inc. Subject UL-1746 Standard for External Corrosion Protection Systems for Steel Underground Storage Tanks and the HighGuard® External Corrosion Protection Specifications.

5. Oil/water separator shall comply with National Fire Protection Association NFPA 30 Flammable and Combustible Liquids Code, 2003 Edition.
6. Separator vessel volume shall allow for a hydraulic retention time of ten (10) minutes to ensure laminar flow conditions which result in hydraulic uniformity and high effluent quality. Volume reduction will adversely affect separator performance by increasing horizontal velocity and turbulence, therefore a separator of smaller volume is not permissible.
7. Separator shall be the standard patented product of a steel tank manufacturer regularly engaged in the production of such equipment. Manufacturer shall have at least 20 years experience in manufacturing similar units for identical applications. No subcontracting of tank fabrication shall be permitted.
8. Separator shall be fabricated, inspected, and tested for leakage before shipment from the factory by manufacturer as a completely assembled vessel ready for installation.
9. Separator shall be cylindrical, horizontal, atmospheric-type steel vessel intended for the separation and storage of flammable and combustible liquids. The separator shall have the structural strength to withstand static and dynamic hydraulic loading while empty and during operating conditions. The Oil/Water Separator's dimensions and thickness shall be in strict compliance with Roark's Formulas for Stress and Strain as presented in UL 58, September 30, 1997. Calculations, signed and stamped by a Registered Professional Engineer shall be submitted to document structural strength under specified overbearing or external pressure. A separator with a reduced shell thickness is not permissible.
10. Separator shall have an oil storage capacity equal to about 43% of the total vessel volume and an emergency oil spill capacity equal to 80% of the total vessel volume.
11. To prevent extensive shutdown and maintenance, the separator design must allow solids to fall unhindered by turbulence, and oil droplets to rise without risk of re-emulsifying due to collisions with interfering solids. The use of plastic perforated tubes, spherical balls, or irregular shaped media will increase the facility's maintenance costs and shall not be permitted.
12. Separator shall consist of inlet and outlet connections, integral sand interceptor compartment, non-clogging flow distributor and energy dissipater device, stationary under flow baffle, presettling chamber for solids, sludge baffle, oil coalescing chamber with removable parallel flat/corrugated plate coalescer, with removable plates, and sectionalized removable polypropylene impingement coalescers to optimize separation of free oil from water, effluent downcomer positioned to prevent discharge of free oil that has been separated from the water, access ways for coalescers and each chamber, fittings for vent, oil pump-out, sampling, gauging, leak detection, and lifting lugs.

E. Submittals:

1. Shop Drawings: shop drawings for oil water separators shall show principal dimensions and location of all fittings.
2. Instructions: provide three complete sets of installation, operation, and maintenance instructions with separator.
3. Quality Control: Quality control, inspection procedures, and reports shall be considered part of the submittal package.

F. Warranty

1. The manufacturer shall warrant its products to be free from defects in material and workmanship for a period of one year from the date of shipment. The warranty shall be limited to repair or replacement of the defective part(s).
2. The manufacturer's warranty shall be standard limited warranty in effect at time of purchase.

1.2 PRODUCTS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Highland Tank, One Highland Road, Box 338, Stoystown, PA 15563, Phone 814-893-5701, FAX 893-6126, E-mail ows.info@highlandtank.com, Website <http://www.highlandtank.com>

B. Product

1. Provide and install Highland Tank Model HTC Series "G" UL-SU2215 approved Belowground Double Wall Parallel Flat/Corrugated Plate Gravity Displacement Oil/Water Separator with Integral Sand Interceptor Compartment. Separator shall be furnished with oil level alarm and leak detection systems. Oil/Water Separator shall be of capacity to comply with Spill Prevention Control and Countermeasures (SPCC) plan requirements at the facility. The sizing of this oil/water separator is consistent with industry protocols for complying with the minimum federal spill and discharge regulations therefore a separator of smaller volume is not permissible.
2. Separator shall be furnished with a Corella™ inclined parallel flat/corrugated plate coalescer to simultaneously separate free oil droplets and settleable or suspended solids particles from water without clogging of the coalescer.

C. Description

1. Separator shall be standard prefabricated inclined parallel flat/corrugated plate, gravity displacement type unit.
2. Separator shall be cylindrical with capacities, dimensions, construction, and thickness in strict accordance with Underwriters' Laboratories Subject 58, Double Wall construction using flat-flanged heads. Separator shall comply with National Fire Protection Association NFPA 30 Flammable and Combustible Liquids Code, 2003 Edition.
3. The separator shall be a pre-packaged, pre-engineered, ready to install unit consisting of:
 - a. An influent connection, flanged. An internal influent nozzle at the inlet end of the separator. Nozzle discharge to be located at the furthest diagonal point from the effluent discharge opening.
 - b. An integral sand interceptor compartment containing one (1) manhole, UL approved, complete with extension, cover, gasket, and bolts. A heavy-duty bulkhead shall retain sand, grit, settleable solids or semisolids and prevent them from entering the separation chamber. Bulkhead shall have a transfer pipe.
 - c. A velocity head diffusion baffle at the inlet to:
 - 1) reduce horizontal velocity and flow turbulence.
 - 2) distribute the flow equally over the separator's cross sectional area.
 - 3) direct the flow in a serpentine path in order to enhance hydraulic characteristics and fully utilize all separator volume.
 - 4) completely isolate all inlet turbulence from the separation chamber.
 - d. A sediment chamber to disperse flow and collect oily solids and sediments.
 - e. A sludge baffle to retain settleable solids and sediment and prevent them from entering the separation chamber.
 - f. An Oil/Water Separation Chamber containing a removable Corella™ inclined parallel flat/corrugated plate coalescer. The coalescer shall have individual removable plates, sloped towards the sediment chamber. Each coalescing plate shall be flat on the top and corrugated on the bottom. The flat top plate shall resist clogging and clotting with solids. The corrugations of each of the plate bottoms shall be shaped and positioned to enhance collisions between the rising oil droplets and coalesce between them thereby improving separator efficiency. The coalescer shall:
 - 1) effect separation of oil and solids from all strata of the wastewater stream.
 - 2) shorten the vertical distance that an oil globule or solid particle has to rise or sink, respectively, for effective removal. Minimum plate gap to be 3/4".
 - 3) enhance coalescence and agglomeration by causing the smaller globules and particles (those possessing smaller rising/settling rates) to coalesce and collect on the plates thereby forming larger globules and particles that separate rapidly in water.
 - 4) direct the flow paths of the separated oil to the surface of the separator and separated solids to the bottom of the separator.
 - 5) allow solids to fall unhindered by turbulence, and oil droplets to rise without risk of re-emulsifying due to collisions with interfering solids.
 - g. The Oil/Water Separation Chamber shall also contain a sectionalized removable "Petro-Screen"™ polypropylene impingement coalescer designed to intercept oil globules of less

than 20 microns in diameter. Heavy, one-piece impingement coalescers are not permissible.

- h. An internal effluent downcomer at the outlet end of the separator, to allow for discharge from the bottom of the separation chamber only.
- i. An effluent connection, flanged.
- j. Fittings for vent, interface/level sensor, leak detection, waste oil pump-out, sampling, and gauge.
- k. Two (2) manholes, UL approved, complete with extension, cover, gasket, and bolts. One manway shall be placed between the inlet and the parallel flat/corrugated plate coalescer to facilitate access into sediment chamber for solids removal. One manway shall be placed between the parallel flat/corrugated plate coalescer and outlet to facilitate access into the oil water separation chamber for oil removal.
- l. Lifting lugs at balancing points for handling and installation.
- m. Identification plates: Plates shall be affixed in prominent location and be durable and legible throughout equipment life.
- n. HighGuard® Corrosion Protection System consisting of:
 - 1) Isolation Spool Pieces
 - 2) Dielectric Isolation Gaskets and Bushings
 - 3) External surfaces commercial grit blast, coated 75 mils DFT Self-Reinforcing Polyurethane.
- o. Internal surfaces commercial grit blast and coated with 10 mils DFT heavy duty Polyurethane.

D. Accessories

- 1. Separator shall be supplied with an audible and visual alarm system that indicates hi oil level (visual only) and hi hi oil level (audible and visual) of oil storage in the oil/water separator and an audible and visual leak detection alarm system that indicates hydrocarbon and/or water in the interstice. A silence control shall be provided for the audible alarms. Level sensor(s) shall be intrinsically safe. Level sensor floats shall be made of stainless steel. The control panel shall contain both level sensor and detection control. The control panel shall be NEMA 4. Power to the control panel shall be as directed by the Owner.
- 2. Separator shall be supplied with Polyester Hold-down straps.
- 3. Separator shall be supplied with prefabricated Concrete Deadman Anchors.
- 4. Separator shall be supplied with cylindrical and/or rectangular steel Grade Level Manways designed to AASHTO H20 requirements.

1.3 EXECUTION

A. Installation

- 1. Installation shall be in strict compliance with manufacturer's instructions and shall comply with all applicable local, state, and federal requirements.

END OF SECTION 33 44 19 19

SECTION 33 46 13 00 - CSF FOUNDATION DRAINAGE

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Foundation Drainage is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Foundation, Subsoil Drainage Systems.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312300 - Excavation and Fill: Earthwork for utilities.
 - 2. Section 334000- Storm Drainage Utilities.
 - 3. Section 033000 - Cast-In-Place Concrete: Concrete for catch basins, inlets, and junction boxes.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM F 405 Standard Specification for Corrugated Polyethylene (PE) Tubing and Fittings
 - 2. ASTM D 448 Standard Classification for Sizes of Aggregate for Road and Bridge Construction
 - 3. ASTM D 2321 Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures.
- B. Section 017704 - Closeout Procedures and Training.

1.4 QUALITY ASSURANCE

- A. Qualifications:
1. Manufacturer Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Drainage Conduits:
 - a. Advanced Drainage Systems, Incorporated, London, OH, (800) 733-9554.
 - b. CertainTeed Corporation, Valley Forge, PA, (800) 274-8530.
 - c. Flo-Well Products, Centerville, MA, (800) 356-9935.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Pipes and Fittings:
1. Perforated, Polyethylene (PE) Pipe and Fittings: ASTM F 405, corrugated, for coupled joints.

2.3 ACCESSORIES

1. Couplings: Manufacturer's standard, band type.

2.4 SOIL MATERIALS

- A. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, ASTM D 448, coarse aggregate, Size No. 57, with 100 percent passing 1-1/2-inch (4 cm) sieve and not more than 5 percent passing No. 8 sieve.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Where foundation drainage systems are to be installed, examine surfaces and areas for suitable conditions.
 - 2. Do not proceed with Work until negative conditions have been corrected.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 FOUNDATION DRAINAGE SYSTEM APPLICATIONS

NOTE TO SPECIFIER

Products listed below must correlate with specifications in Part 2 Products and pipe size indicated on Contract Drawings.

- A. Systems with 6-Inch (15 cm) (DN 150) Piping:
 - 1. Perforated, polyethylene (PE) pipe and fittings, couplings, and coupled joints.

3.3 INSTALLATION

- A. Contract Drawings and details indicate general location and arrangement of foundation drainage system piping.
- B. Install piping beginning at low points of system, true to grades and alignment indicated, with unbroken continuity of invert. Bed piping with full bearing, solidly in filtering material. Install gaskets, seals, sleeves, and couplings according to manufacturer's instructions and specifications and other requirements indicated.

NOTE TO SPECIFIER

Edit the paragraphs below as required for different minimum slope and cover.

- 1. Install piping pitched down in direction of flow, at a minimum slope of [1 percent (1:100)] and with a minimum cover of [36 inches (100 cm)], except where otherwise indicated in the Contract Drawings.
- 2. Apply and compact impervious fill material to raise low areas or where unsatisfactory bearing soil may occur.
- 3. Use increasers, reducers, and couplings made for different sizes or materials of pipes and fittings being connected. Reduction of pipe size in direction of flow is prohibited.
- C. Extend piping and connect to storm [storm drainage system] [building storm drains], of sizes and in locations indicated. Terminate piping as indicated in the Contract Drawings.

3.4 CONSTRUCTION

- A. General Requirements:
 - 1. Join and install pipe and fittings as indicated in the Contract Drawings and according to the following requirements:

B. Polyethylene (PE) Pipe and Fittings:

1. Join pipe, tubing, and fittings with couplings for soiltight joints according to AASHTO "Standard Specifications for Highway Bridges," Division II, Section 26.4.2.4 "Joint Properties"; and manufacturer's instructions.
2. Join perforated pipe and fittings with couplings for soiltight joints according to AASHTO "Standard Specifications for Highway Bridges," Division II, Section 26.4.2.4 "Joint Properties"; or ASTM D 2321; and manufacturer's instructions.
3. Install according to ASTM D 2321 and manufacturer's instructions.
4. Install perforated pipe with perforations down.

C. System Piping Joints:

1. Make joints using system manufacturer's seals and couplings, except where otherwise specified.
2. Join piping made of different materials and dimensions with special couplings made for this application. Use couplings that are compatible with and that fit both pipe materials and dimensions.

D. Soil Material Insallation:

1. Drainage Fill: Place fill over drain piping after satisfactory testing and covering with filtering material. Cover piping to width of at least 6 inches (15 cm) on each side and above top of pipe to within 12 inches (30 cm) of finish grade. Place fill material in layers not exceeding 3 inches (7.5 cm) in loose depth, and compact each layer placed.
2. Fill to Grade: Place impervious fill material over compacted drainage fill. Place material in loose-depth layers not exceeding 6 inches (15 cm). Thoroughly compact each layer. Fill to finish elevations and slope away from building.

3.5 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field testing and inspection.

NOTE TO SPECIFIER

Add specific test requirements to comply with local and Federal regulations.

B. Testing:

1. Test drain piping with water or visually check piping to ensure free flow before backfilling. Remove obstructions, replace damaged components, and repeat test until results are satisfactory.
2. Place additional filtering material to depth of 4 inches (10 cm) around sides and top of drains after testing.

USPS CSF Specifications issued: 10/1/2013

Last revised: 4/12/2011

END OF SECTION 33 46 13 00

SECTION 33 46 13 00 - MPF FOUNDATION DRAINAGE

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Foundation Drainage is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

1. Manufacturer Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Drainage Conduits:
 - a. Advanced Drainage Systems, Incorporated, London, OH, (800) 733-9554.
 - b. CertainTeed Corporation, Valley Forge, PA, (800) 274-8530.
 - c. Flo-Well Products, Centerville, MA, (800) 356-9935.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Pipes and Fittings:
1. Perforated, Polyethylene (PE) Pipe and Fittings: ASTM F 405, corrugated, for coupled joints.

2.3 ACCESSORIES

1. Couplings: Manufacturer's standard, band type.

2.4 SOIL MATERIALS

- A. Drainage Fill: Washed, evenly graded mixture of crushed stone, or crushed or uncrushed gravel, ASTM D 448, coarse aggregate, Size No. 57, with 100 percent passing 1-1/2-inch (4 cm) sieve and not more than 5 percent passing No. 8 sieve.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Where foundation drainage systems are to be installed, examine surfaces and areas for suitable conditions.
 - 2. Do not proceed with Work until negative conditions have been corrected.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 FOUNDATION DRAINAGE SYSTEM APPLICATIONS

NOTE TO SPECIFIER

Products listed below must correlate with specifications in Part 2 Products and pipe size indicated on Contract Drawings.

- A. Systems with 6-Inch (15 cm) (DN 150) Piping:
 - 1. Perforated, polyethylene (PE) pipe and fittings, couplings, and coupled joints.

3.3 INSTALLATION

- A. Contract Drawings and details indicate general location and arrangement of foundation drainage system piping.
- B. Install piping beginning at low points of system, true to grades and alignment indicated, with unbroken continuity of invert. Bed piping with full bearing, solidly in filtering material. Install gaskets, seals, sleeves, and couplings according to manufacturer's instructions and specifications and other requirements indicated.

NOTE TO SPECIFIER

Edit the paragraphs below as required for different minimum slope and cover.

- 1. Install piping pitched down in direction of flow, at a minimum slope of [1 percent (1:100)] and with a minimum cover of [36 inches (100 cm)], except where otherwise indicated in the Contract Drawings.
- 2. Apply and compact impervious fill material to raise low areas or where unsatisfactory bearing soil may occur.
- 3. Use increasers, reducers, and couplings made for different sizes or materials of pipes and fittings being connected. Reduction of pipe size in direction of flow is prohibited.
- C. Extend piping and connect to storm [storm drainage system] [building storm drains], of sizes and in locations indicated. Terminate piping as indicated in the Contract Drawings.

3.4 CONSTRUCTION

- A. General Requirements:
 - 1. Join and install pipe and fittings as indicated in the Contract Drawings and according to the following requirements:

- B. Polyethylene (PE) Pipe and Fittings:
1. Join pipe, tubing, and fittings with couplings for soiltight joints according to AASHTO "Standard Specifications for Highway Bridges," Division II, Section 26.4.2.4 "Joint Properties"; and manufacturer's instructions.
 2. Join perforated pipe and fittings with couplings for soiltight joints according to AASHTO "Standard Specifications for Highway Bridges," Division II, Section 26.4.2.4 "Joint Properties"; or ASTM D 2321; and manufacturer's instructions.
 3. Install according to ASTM D 2321 and manufacturer's instructions.
 4. Install perforated pipe with perforations down.
- C. System Piping Joints:
1. Make joints using system manufacturer's seals and couplings, except where otherwise specified.
 2. Join piping made of different materials and dimensions with special couplings made for this application. Use couplings that are compatible with and that fit both pipe materials and dimensions.
- D. Soil Material Installation:
1. Drainage Fill: Place fill over drain piping after satisfactory testing and covering with filtering material. Cover piping to width of at least 6 inches (15 cm) on each side and above top of pipe to within 12 inches (30 cm) of finish grade. Place fill material in layers not exceeding 3 inches (7.5 cm) in loose depth, and compact each layer placed.
 2. Fill to Grade: Place impervious fill material over compacted drainage fill. Place material in loose-depth layers not exceeding 6 inches (15 cm). Thoroughly compact each layer. Fill to finish elevations and slope away from building.

3.5 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field testing and inspection.

NOTE TO SPECIFIER

Add specific test requirements to comply with local and Federal regulations.

- B. Testing:
1. Test drain piping with water or visually check piping to ensure free flow before backfilling. Remove obstructions, replace damaged components, and repeat test until results are satisfactory.
 2. Place additional filtering material to depth of 4 inches (10 cm) around sides and top of drains after testing.

SECTION 33 49 13 00 - MPF STORM DRAINAGE MANHOLES, FRAMES, AND COVERS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Storm Drainage is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Monolithic concrete manhole section with the option of monolithic concrete or masonry transition to lid frame, covers, anchorage and accessories.
 2. Modular precast concrete manhole section with tongue-and-groove joints and with the option of precast concrete or masonry transition to lid frame, covers, anchorage and accessories.
 3. Masonry manhole section with masonry transition to lid frame, covers, anchorage and accessories.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 312300 - Excavation and Fill: Earthwork for utilities.
 2. Section 334000 - Storm Drainage Utilities: Site storm drainage system.
 3. Section 033000 - Cast-In-Place Concrete: Concrete for utility structure base pads.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C55 - Specification for Concrete Building Brick.
 2. ASTM A48 - Specification for Gray Iron Castings.
 3. ASTM C478 - Specification for Precast Reinforced Concrete Manhole Sections.
 4. ASTM C923 - Specification for Resilient Connectors Between Reinforced Concrete Manhole Structures and Pipes.
- B. International Masonry Industry All-Weather Council (IMIAC): Recommended Practices and Guide Specification for Cold Weather Masonry Construction.

MPF STORM DRAINAGE MANHOLES, FRAMES, AND

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data for manhole covers, manhole steps, component construction, features, configuration, and dimensions.
 - 2. Shop Drawings: Drawings of manhole locations, elevations, piping with sizes, locations and elevations of penetrations.

1.4 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Cold Weather Requirements: IMIAC - Recommended Practices and Specifications for Cold Weather Masonry Construction.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Manhole Section: Reinforced precast concrete. in accordance with ASTM C 478 with gaskets in accordance with ASTM C 923.
 - 1. Construct manholes of precast concrete sections as required by Drawings to size, shape, and depth indicated, but never less than 4 foot 0 inch inside diameter.
- B. Manhole Section: Non-reinforced cast-in-place concrete as specified in Section 033000 -- Cast-In-Place Concrete.
 - 1. Cast-in place Manholes shall be constructed of 3500 psi concrete.
 - 2. Forms shall be made of steel sheets accurately shaped and fabricated of sufficient strength to form dense watertight walls to true dimensions.
 - 3. Concrete shall be deposited in evenly distributed layers of about 18 inches, with each layer vibrated to bond it to the preceding layer.
- C. Concrete Brick Units: ASTM C 55, Grade N Type I- Moisture Controlled, normal weight, of same Grade, Type and weight as block units, nominal modular size of 3 5/8 x 7 5/8 x 2 1/4 inches.
- D. Mortar and Grout: Mortar for finishing and sealing shall be Class "C". Honeycombing less than 2 inches deep shall be repaired using Class "D" mortar.
- E. Brick Transition Reinforcement: Formed steel 8 gage wire with galvanized finish.

2.2 COMPONENTS

- A. Lid and Frame: ASTM A 48, Class 30B Heavy Duty Cast iron construction, machined flat bearing surface, removable lid, closed or open as indicated on Drawings; sealing gasket; manufactured by Neenah Foundry Company.
- B. Manhole Steps: Neenah Foundry Company catalog No. R- 1982-F for precast or catalog No. R-1980-0 for brick/cast-in-place manholes or M.A. Industries PS-1.
- C. Base Pad: Cast-in-place concrete as specified in Section 033000 - Cast-In-Place Concrete.

- D. Section 016000 - Product Requirements: Product requirements and substitutions. Substitutions: Permitted.

2.3 CONFIGURATION

- A. Manhole Section Construction: Concentric with eccentric cone top section.
- B. Shape: Cylindrical.
- C. Clear Inside Dimensions: 48 inch diameter or as indicated on Drawings.
- D. Design Depth: As indicated on Drawings.
- E. Clear Lid Opening: 24 inches minimum.
- F. Pipe Entry: Provide openings as indicated on Drawings.
- G. Main and Lateral Pipes: Neatly cut off main and lateral pipes flush with inside of manhole or inlet where they enter structure walls, and point up irregularities and rough edges with nonshrinking grout.
- H. Inverts: Shape inverts for smooth flow across structure floor as shown on Drawings. Use concrete and mortar to obtain proper grade and contour and finish surface with fine textured wood float.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Coordinate placement of inlet and outlet pipe or duct sleeves as indicated on Drawings for drainage system piping specified in Section 334000.

3.3 PLACING PRE-CAST MANHOLE SECTIONS

- A. Place base pad to proper elevation and location and trowel top surface level for placement of manhole section.

- B. Place manhole section plumb and level to correct elevations and anchor to base pad.
 - 1. After completion of slab foundation the first joint of manhole section shall be lowered into position, grooved end first, and set level and plumb on concrete base. Align and adjust to proper grade prior to placing and forming invert which shall be poured immediately after setting of first section of manhole section.
 - 2. Prior to setting subsequent manhole sections, apply primer to tongue and groove ends and allow to set in accordance with manufacturer recommendations. Place "Ram-nek", or equivalent, plastic rope on tongue end. Lower next section into position, and remove excess material from interior of structure. Add additional material on exterior of joint, if necessary, for completely watertight joint.

3.4 MASONRY MANHOLE SECTION CONSTRUCTION

- A. Maintain masonry courses to uniform dimension. Form vertical and horizontal joints of uniform thickness.
- B. Lay masonry units in running bond. Course 3 brick units and 3 mortar joints to equal 8 inches.
- C. Form flush mortar joints.
- D. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work.
- E. Install joint reinforcement 16 inches on center
- F. Place joint reinforcement in first and second horizontal joints above base pad and below lid frame opening.
- G. As work progresses, build-in fabricated metal items.
- H. Cut and fit masonry for pipes as specified herein.
- I. Set cover frames and covers level without tipping, to correct elevations.
- J. Grout base of shaft section to achieve slope to exit piping. Trowel smooth. Contour as required.
- K. Coordinate with other sections of Work to provide correct size, shape and location.

3.5 BACKFILLING

- A. Backfill around manholes as specified in Section 312300.

USPS Mail Processing Facility Specification issued: 10/1/2013

SECTION 33 51 00 00 - MPF NATURAL-GAS DISTRIBUTION

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

Use this section where Natural or Propane Gas System is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.33 51 00 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

NOTE TO SPECIFIER

Edit below for type of gas used for this Project.

1. Pipe and fittings for site utility [natural] [propane] gas distribution.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

2. Propane storage tanks.

- B. Related Documents: The Contract Documents, as defined in the General Conditions, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 312300 - Excavation and Fill: Earthwork for utilities.

NOTE TO SPECIFIER

OPTION 1: Use NFPA 54 for Natural Gas System.

1. NFPA 54 - National Fuel Gas Code.

NOTE TO SPECIFIER

OPTION 2: Use NFPA 58 for Propane System.

2. NFPA 58 - National Fuel Propane Code.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data for each type of pipe, pipe fitting, valve, and accessory specified.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate certifying that Products meet or exceed specified requirements and standards.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - a. Locations of piping mains, valves, connections, and top of pipe elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with Utility Company requirements and authority having jurisdiction.

NOTE TO SPECIFIER

Edit below for type of gas used. Use NFPA 54 for Natural Gas. Use NFPA 58 for Propane.

- 1. Conform to [NFPA 54] [NFPA 58], ANSI B31.2 and ANSI B31.8.
- B. Gas Cock: Manufacturer's name and pressure rating marked on valve body.
- C. Welding Materials and Procedures: Conform to ASME Boiler and Pressure Vessel Code and applicable state regulations.
- D. Welders Certification: In accordance with ASME Sec 9.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver and store valves in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 PIPE

NOTE TO SPECIFIER

OPTION 1: Use STEEL PIPE Paragraphs A and B below for NATURAL GAS system.

- A. Steel Pipe Below Ground: ASTM A 53, Schedule 40 black:
 - 1. Fittings: ANSI B16.11, forged steel, or ASTM A 234 forged steel welding type.
 - 2. Joints: Welded and seamless.
 - 3. Jackets: AWWA C 105 polyethylene jacket, double layer, half lapped, 10 mil polyethylene tape.
- B. Steel Pipe Above Ground: ASTM A53 Schedule 40 black:

1. Fittings: ANSI B16.3, malleable iron, ANSI B16.11, forged steel, or ASTM A 234, forged steel welding type.
2. Joints: Threaded.

NOTE TO SPECIFIER

OPTION 2: Use COPPER TUBING Paragraphs A and B below for PROPANE system.

- C. Copper Tubing Below Ground: ASTM B 88, Type K, internally tinned:
 1. Fittings: AWWA B16.18, cast copper, or ASME B16.22, wrought copper; internally tinned.
 2. Joint: AWS A5.8 BCuP silver brazed.
- D. Copper Tubing Above Ground: ASTM B 88, Type K, L or ASTM B 75, Type GP; internally tinned:
 1. Fittings: ASME B6.18 cast copper, ASME B16.22, wrought copper, or ASME B16.26, cast copper, internally tinned.
 2. Joint: ASTM B 32, Solder, Grade 95TA or AWS A5.8, BCuP silver brazed.
- E. Polyethylene Pipe: ASTM D 2513, SDR 11.5 or ASTM F 678 Series 125:
 1. Fittings: ASTM D 2513.
 2. Joints: Mechanical or Compression fit.
 3. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Natural Gas Service" in large letters.
- F. Reinforced Epoxy Resin Piping: ASTM D 2517:
 1. Fittings: ASTM D 2517.
 2. Joints: Bell and spigot with epoxy resin.
 3. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Natural Gas Service" in large letters.

2.2 GAS COCKS

- A. 2 Inches and Smaller: 150 psig WOG, bronze body, bronze tapered plug, non-lubricated, Teflon packing, threaded ends with cast iron curb box, cover, and key.
- B. 2 Inches and Larger: 125 psig WOG, Steel or Cast iron body and tapered plug, non-lubricated, Teflon packing, threaded ends, with cast iron curb box, cover, and key.
- C. Applications With Line Pressure Greater Than 60 psig, Over 2 Inches: Cast iron body and plug, pressure lubricated, Teflon packing, flanged ends, with cast iron curb box, cover, and key.

2.3 PRESSURE REGULATING VALVES

- A. Valves: Single stage, malleable iron body, corrosion-resistant, pressure regulator with atmospheric vent, elevation compensator; with threaded ends for 2 inch and smaller, flanged ends larger than 2 inch.
- B. Capacity: For inlet and outlet gas pressures, specific gravity, and flow rate indicated.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

2.4 PROPANE STORAGE TANKS

- A. Construction: Closed, welded steel, tested and stamped in accordance with ASME Section 8D; minimum 250 psig (1 700 kPa) rating; cleaned, prime coated and painted with two coats of silver anti-rust paint, and supplied with steel support saddles, pressure gage; tapping for installation of piping and accessories.
- B. Vaporizer: 1000 watts, heating cable bedded in 1 inch of glass fiber insulation and covered by flexible stainless steel plate, with thermostat in weatherproof box set to turn on at -13 degrees F with manual off-on switch.
- C. Size and Capacity: Diameter and length indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that building service connection and utility gas main size, location, and depth are as indicated.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe ends and remove burrs. Bevel plain end ferrous pipe over 2 inches diameter thread ferrous pipe 2 inches diameter and under.
- D. Remove scale and dirt, on inside and outside, before assembly.
- E. Prepare piping connections with flanges or threading and unions.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section. Provide trench wall shoring as required.

- B. Place bedding material at trench bottom, level fill materials in one continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPING

- A. Maintain separation of gas line from sewer, water or storm water piping in accordance with state or local code.
- B. Install piping to allow for expansion and contraction without stressing pipe or joints.
- C. Connections with Existing Pipelines: Where connections are made between new Work and existing piping, make connection using suitable fittings for conditions encountered. Make each connection with existing pipe at time and under conditions which least interfere with operation of existing pipeline and in compliance with the local Utility Company.
- D. Install cocks and other fittings as required.
- E. Establish elevations of buried piping in accordance with Section 312300 for Work in this Section.
- F. Wrap couplings and fittings of steel pipe with polyethylene tape and heat shrink over pipe.
- G. Install trace wire continuous buried 10 inches below finish grade, above pipe line. Trace wire shall be in accordance with local utilities standards.
- H. Backfill trench in accordance with Section 312300.
- I. Center and plumb valve box over valve. Set box cover flush with finished ground surface. Prevent shock or stress from being transmitted through valve box to valve.
- J. Wrap valve and valve box with polyethylene tape and heat shrink or paint valves and valve boxes with red anti-rust primer and one coat of epoxy paint.

3.5 SERVICE CONNECTIONS

- A. Provide sleeve in foundation wall for gas service main. Caulk enlarged sleeve watertight.
- B. Anchor service main to interior surface of foundation wall.
- C. Install service regulator adjacent to building wall in specified location.
- D. Install service regulator and riser pipe to prevent undue stress upon service pipe. For plastic service pipe, use steel pipe riser from below ground to regulator.
- E. Provide regulator vent with rain and insect proof opening, terminating not less than five feet away from building openings.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

3.6 PROPANE STORAGE TANK INSTALLATION

- A. Place tank legs on concrete footings, level within tolerance of 2 inches as indicated on Drawings. Concrete specified in Section 033000.
- B. Prepare and grade an area outside tank perimeter, for a distance of 6 feet. Grade, place and compact gravel fill to a compacted depth of 3 inches. Compact to 95 percent.
- C. Provide tank with relief valve, shutoff valve, pressure regulator, pressure gage and removable protection cover. Install piping, shutoff valve and pressure gage to underground piping.
- D. Set tank regulator to outlet pressure as indicated on Drawings.
- E. Install vaporizer to under side of tank and secure to tank with aluminum tray and two stainless steel straps.
- F. Install weatherproof control box for vaporizer 40 inches above ground surface. Install to 4 x 4 inch cedar post, driven into ground 40 inches.
- G. Install wiring. Install control wire from vaporizer to control box 20 inches below ground surface. Install service wiring 24 inches below ground from control box to building.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 1. Compaction:
 - a. Perform inspections prior to immediately after placing bedding.
 - b. Perform tests as specified in Section 312300.
 2. Piping:
 - a. Test, and purge gas piping in conformance with NFPA 54, Part 4 and local Utility Company requirements.
 - b. Verify capacities and pressure ratings of gas meters, regulators, and valves.
 - c. Verify required pressure settings for pressure regulators.
- C. Inspections: Inspect gas piping in conformance with NFPA 54, Part 4 and local Utility Company requirements.

NOTE TO SPECIFIER

DRAWING COORDINATION

Drawings should indicate the following information related to this Section.

1. *Show location, size and material of existing natural gas distribution main. Show new gas distribution main and service piping. Indicate natural gas heating value in Btu per cubic foot specific gravity, and pressure in psig. Show locations of gas meters, gas service pressure regulators, and specialties, drawn to scale. Indicate gas demand in cubic feet per hour for each meter and pressure regulator, pressure regulator settings, and pipe sizes. Show access to service space requirements.*

2. *Detail or show schematic diagram of gas service. Show manifolds, pressure regulators, meters, specialties, piping, dielectric fittings, unions and flanges, drips, and flexible connections. Include connected gas demand in cubic feet per hour.*
3. *Indicate exact location of connection to gas utility or other source. Clarify responsibility for gas valves, gas service pressure regulators, meter bars, and gas meters.*
4. *Show limits of piping with protective coating.*
5. *Show concrete bases on sections, elevations, and details.*

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/10/2011

END OF SECTION

SECTION 33 51 00 00 - CSF NATURAL-GAS DISTRIBUTION

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Natural or Propane Gas System is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.33 51 00 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

NOTE TO SPECIFIER

Edit below for type of gas used for this Project.

1. Pipe and fittings for site utility [natural] [propane] gas distribution.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

2. Propane storage tanks.

- B. Related Documents: The Contract Documents, as defined in the General Conditions, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 312300 - Excavation and Fill: Earthwork for utilities.

1.2 REFERENCES

- A. American Association of State Highway and Transportation Officials (AASHTO):
 1. AASHTO T180 - Moisture-Density Relations of Soils Using a 10 pound Rammer and an 18 inch Drop.
- B. American Society of Mechanical Engineers (ASME):
 1. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
 2. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
 3. ASME B16.26 - Cast Copper Alloy Fittings for Flared Copper Tubes.

4. ASME Sec. 8D - Pressure Vessels.
5. ASME Sec. 9 - Welding and Brazing Qualifications.
6. ASME Boiler and Pressure Code.

C. American Society for Testing and Materials (ASTM):

1. ASTM B 32 - Specification for Solder Metal.
2. ASTM D 1557 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 10 Pound Rammer and 18 inch Drop.
3. ASTM A 53 - Specification for Pipe, Steel, Black and Hot-Dipped, Zinc Coated (Galvanized) Welded and Seamless, for Ordinary Uses.
4. ASTM A234 - Specification for Pipe Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and Elevated Temperatures.
5. ASTM B75 - Specification for Seamless Copper Tube.
6. ASTM B88 - Specification for Seamless Copper Water Tube.
7. ASTM D2513 - Specification for Thermoplastic Gas Pressure Pipe, Tubing and Fittings.
8. ASTM D2517 - Specification for Reinforced Epoxy Resin Gas Pressure Pipe and Fittings.
9. ASTM D2683 - Specification for Socket Type Polyethylene Fittings For Outside Diameter Controlled Polyethylene Pipe and Tubing.
10. ASTM D2922 - Test Methods for Density of Soil and Soil Aggregate in Place by Nuclear Methods (Shallow Depth).
11. ASTM D3017 - Test Methods for Moisture Content of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).

D. American Welding Society (ASTM):

1. AWS A5.8 - Brazing Filler Metal.

E. American Water Works Association (AWWA):

1. AWWA C105 - Polyethylene Encasement for Ductile Iron Piping for Water and Other liquids.

F. American National Standards Institute (ANSI):

1. ANSI B16.3 - Malleable Iron Threaded Fittings.
2. ANSI B16.11 - Forged Steel Fittings, Socket Welding and Threaded.
3. ANSI B31.2 - Fuel Gas Piping.
4. ANSI B31.8 - Gas Transmission and Distribution Piping Systems.

G. National Fire Protection Association (NFPA):

NOTE TO SPECIFIER

OPTION 1: Use NFPA 54 for Natural Gas System.

1. NFPA 54 - National Fuel Gas Code.

NOTE TO SPECIFIER

OPTION 2: Use NFPA 58 for Propane System.

2. NFPA 58 - National Fuel Propane Code.

1.3 DEFINITIONS

- A. Bedding: Fill placed under, beside and directly over pipe, prior to subsequent backfill operations.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data for each type of pipe, pipe fitting, valve, and accessory specified.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate certifying that Products meet or exceed specified requirements and standards.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - a. Locations of piping mains, valves, connections, and top of pipe elevations.
 - b. Identify and describe unexpected variations to subsoil conditions and location of uncharted utilities.

1.5 QUALITY ASSURANCE

- A. Regulatory Requirements: Perform work in accordance with Utility Company requirements and authority having jurisdiction.

NOTE TO SPECIFIER

Edit below for type of gas used. Use NFPA 54 for Natural Gas. Use NFPA 58 for Propane.

- 1. Conform to [NFPA 54] [NFPA 58], ANSI B31.2 and ANSI B31.8.
- B. Gas Cock: Manufacturer's name and pressure rating marked on valve body.
- C. Welding Materials and Procedures: Conform to ASME Boiler and Pressure Vessel Code and applicable state regulations.
- D. Welders Certification: In accordance with ASME Sec 9.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver and store valves in shipping containers with labeling in place.

PART 2 - PRODUCTS

2.1 PIPE

NOTE TO SPECIFIER

OPTION 1: Use STEEL PIPE Paragraphs A and B below for NATURAL GAS system.

- A. Steel Pipe Below Ground: ASTM A 53, Schedule 40 black:
 - 1. Fittings: ANSI B16.11, forged steel, or ASTM A 234 forged steel welding type.
 - 2. Joints: Welded and seamless.
 - 3. Jackets: AWWA C 105 polyethylene jacket, double layer, half lapped, 10 mil polyethylene tape.
- B. Steel Pipe Above Ground: ASTM A53 Schedule 40 black:

1. Fittings: ANSI B16.3, malleable iron, ANSI B16.11, forged steel, or ASTM A 234, forged steel welding type.
2. Joints: Threaded.

NOTE TO SPECIFIER

OPTION 2: Use COPPER TUBING Paragraphs A and B below for PROPANE system.

- C. Copper Tubing Below Ground: ASTM B 88, Type K, internally tinned:
 1. Fittings: AWWA B16.18, cast copper, or ASME B16.22, wrought copper; internally tinned.
 2. Joint: AWS A5.8 BCuP silver brazed.
- D. Copper Tubing Above Ground: ASTM B 88, Type K, L or ASTM B 75, Type GP; internally tinned:
 1. Fittings: ASME B6.18 cast copper, ASME B16.22, wrought copper, or ASME B16.26, cast copper, internally tinned.
 2. Joint: ASTM B 32, Solder, Grade 95TA or AWS A5.8, BCuP silver brazed.
- E. Polyethylene Pipe: ASTM D 2513, SDR 11.5 or ASTM F 678 Series 125:
 1. Fittings: ASTM D 2513.
 2. Joints: Mechanical or Compression fit.
 3. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Natural Gas Service" in large letters.
- F. Reinforced Epoxy Resin Piping: ASTM D 2517:
 1. Fittings: ASTM D 2517.
 2. Joints: Bell and spigot with epoxy resin.
 3. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Natural Gas Service" in large letters.

2.2 GAS COCKS

- A. 2 Inches and Smaller: 150 psig WOG, bronze body, bronze tapered plug, non-lubricated, Teflon packing, threaded ends with cast iron curb box, cover, and key.
- B. 2 Inches and Larger: 125 psig WOG, Steel or Cast iron body and tapered plug, non-lubricated, Teflon packing, threaded ends, with cast iron curb box, cover, and key.
- C. Applications With Line Pressure Greater Than 60 psig, Over 2 Inches: Cast iron body and plug, pressure lubricated, Teflon packing, flanged ends, with cast iron curb box, cover, and key.

2.3 PRESSURE REGULATING VALVES

- A. Valves: Single stage, malleable iron body, corrosion-resistant, pressure regulator with atmospheric vent, elevation compensator; with threaded ends for 2 inch and smaller, flanged ends larger than 2 inch.
- B. Capacity: For inlet and outlet gas pressures, specific gravity, and flow rate indicated.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

2.4 PROPANE STORAGE TANKS

- A. Construction: Closed, welded steel, tested and stamped in accordance with ASME Section 8D; minimum 250 psig (1 700 kPa) rating; cleaned, prime coated and painted with two coats of silver anti-rust paint, and supplied with steel support saddles, pressure gage; tapping for installation of piping and accessories.
- B. Vaporizer: 1000 watts, heating cable bedded in 1 inch of glass fiber insulation and covered by flexible stainless steel plate, with thermostat in weatherproof box set to turn on at -13 degrees F with manual off-on switch.
- C. Size and Capacity: Diameter and length indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that building service connection and utility gas main size, location, and depth are as indicated.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Hand trim excavations to required elevations. Correct over excavation with fine aggregate.
- B. Remove large stones or other hard matter which could damage pipe or impede consistent backfilling or compaction.
- C. Cut pipe ends square, ream pipe ends and remove burrs. Bevel plain end ferrous pipe over 2 inches diameter thread ferrous pipe 2 inches diameter and under.
- D. Remove scale and dirt, on inside and outside, before assembly.
- E. Prepare piping connections with flanges or threading and unions.

3.3 BEDDING

- A. Excavate pipe trench and place bedding material in accordance with Section 312300 for work of this Section. Provide trench wall shoring as required.

- B. Place bedding material at trench bottom, level fill materials in one continuous layer not exceeding 6 inches compacted depth, each layer. Place compacted bedding material to elevation of subgrade as indicated on Drawings.
- C. Maintain optimum moisture content of bedding material to attain required compaction density.
- D. Remove excess backfill and excavated material from site.

3.4 INSTALLATION - PIPING

- A. Maintain separation of gas line from sewer, water or storm water piping in accordance with state or local code.
- B. Install piping to allow for expansion and contraction without stressing pipe or joints.
- C. Connections with Existing Pipelines: Where connections are made between new Work and existing piping, make connection using suitable fittings for conditions encountered. Make each connection with existing pipe at time and under conditions which least interfere with operation of existing pipeline and in compliance with the local Utility Company.
- D. Install cocks and other fittings as required.
- E. Establish elevations of buried piping in accordance with Section 312300 for Work in this Section.
- F. Wrap couplings and fittings of steel pipe with polyethylene tape and heat shrink over pipe.
- G. Install trace wire continuous buried 10 inches below finish grade, above pipe line. Trace wire shall be in accordance with local utilities standards.
- H. Backfill trench in accordance with Section 312300.
- I. Center and plumb valve box over valve. Set box cover flush with finished ground surface. Prevent shock or stress from being transmitted through valve box to valve.
- J. Wrap valve and valve box with polyethylene tape and heat shrink or paint valves and valve boxes with red anti-rust primer and one coat of epoxy paint.

3.5 SERVICE CONNECTIONS

- A. Provide sleeve in foundation wall for gas service main. Caulk enlarged sleeve watertight.
- B. Anchor service main to interior surface of foundation wall.
- C. Install service regulator adjacent to building wall in specified location.
- D. Install service regulator and riser pipe to prevent undue stress upon service pipe. For plastic service pipe, use steel pipe riser from below ground to regulator.
- E. Provide regulator vent with rain and insect proof opening, terminating not less than five feet away from building openings.

NOTE TO SPECIFIER

Use PROPANE STORAGE TANKS for Propane System.

3.6 PROPANE STORAGE TANK INSTALLATION

- A. Place tank legs on concrete footings, level within tolerance of 2 inches as indicated on Drawings. Concrete specified in Section 033000.
- B. Prepare and grade an area outside tank perimeter, for a distance of 6 feet. Grade, place and compact gravel fill to a compacted depth of 3 inches. Compact to 95 percent.
- C. Provide tank with relief valve, shutoff valve, pressure regulator, pressure gage and removable protection cover. Install piping, shutoff valve and pressure gage to underground piping.
- D. Set tank regulator to outlet pressure as indicated on Drawings.
- E. Install vaporizer to under side of tank and secure to tank with aluminum tray and two stainless steel straps.
- F. Install weatherproof control box for vaporizer 40 inches above ground surface. Install to 4 x 4 inch cedar post, driven into ground 40 inches.
- G. Install wiring. Install control wire from vaporizer to control box 20 inches below ground surface. Install service wiring 24 inches below ground from control box to building.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Site Tests:
 1. Compaction:
 - a. Perform inspections prior to immediately after placing bedding.
 - b. Perform tests as specified in Section 312300.
 2. Piping:
 - a. Test, and purge gas piping in conformance with NFPA 54, Part 4 and local Utility Company requirements.
 - b. Verify capacities and pressure ratings of gas meters, regulators, and valves.
 - c. Verify required pressure settings for pressure regulators.
- C. Inspections: Inspect gas piping in conformance with NFPA 54, Part 4 and local Utility Company requirements.

NOTE TO SPECIFIER

DRAWING COORDINATION

Drawings should indicate the following information related to this Section.

1. *Show location, size and material of existing natural gas distribution main. Show new gas distribution main and service piping. Indicate natural gas heating value in Btu per cubic foot specific gravity, and pressure in psig. Show locations of gas meters, gas service pressure regulators, and specialties, drawn to scale. Indicate gas demand in cubic feet per hour for each meter and pressure regulator, pressure regulator settings, and pipe sizes. Show access to service space requirements.*

2. *Detail or show schematic diagram of gas service. Show manifolds, pressure regulators, meters, specialties, piping, dielectric fittings, unions and flanges, drips, and flexible connections. Include connected gas demand in cubic feet per hour.*
3. *Indicate exact location of connection to gas utility or other source. Clarify responsibility for gas valves, gas service pressure regulators, meter bars, and gas meters.*
4. *Show limits of piping with protective coating.*
5. *Show concrete bases on sections, elevations, and details.*

SECTION 33 71 73 00 - CSF ELECTRICAL UTILITY SERVICES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this Outline Specification Section for Customer Service Facilities only. This Specification defines "level of quality" for Customer Service Facility construction and is intended as a guide to the Architect/Engineer preparing the Construction Documents.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Electrical service entrance.
 2. Transformer and pad.
 3. Service entrance equipment.
 4. Service entrance section.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 015000 - Temporary Facilities and Controls.
 2. Section 312300 - Excavation and Fill.
 3. Section 251104 - Metering Devices.
 4. Section 251304 - EMS Communication to Remote Enterprise Server.
 5. Section 260500 - Common Work Results for Electrical.
 6. Section 262413 - Switchboards.

1.2 REFERENCES

- A. As specified in Section 260500 – Common Work Results for Electrical .
- B. National Electrical Manufacturer's Association (NEMA):
 1. NEMA PB 2 - Dead Front Distribution Switchboards.
 2. NEMA PB 2.1 - Instructions for Safe Handling, Installation, Operation, and Maintenance of Deadfront Switchboards Rated 600 Volts or Less.
 3. Std Pub No. AB 1: Molded-Case Circuit Breakers.

4. Std Pub No. SG 3: Low-Voltage Power Circuit Breakers.
5. Std Pub No. SG 5: Power Switchgear Assemblies.

C. Underwriter's Laboratories

1. UL 50: Electrical Cabinets and Boxes.
2. UL 489: Molded-Case Circuit Breakers and Circuit-Breakers Enclosures.
3. UL 854: Service-Entrance Cables.
4. UL 869: Electrical Service Equipment.

D. IEEE

1. Std 241; pertaining to service entrances.

1.3 SYSTEM DESCRIPTION

NOTE TO SPECIFIER

Modify if circumstances require different characteristics.

- A. System Characteristics: 480Y/277 volts, three phase, four wire, 60 hertz.

NOTE TO SPECIFIER

Modify if circumstances require different characteristics. Smallest Plan Types may be Single Phase. Verify and coordinate with USPS Contracting Officer.

- B. System Characteristics: [208Y/120 volts, three phase, four wire, 60 hertz.] [120/240 volts, single phase, 3 wire, 60 hertz].

- C. Provide service entrance equipment and accessories which are UL listed and labeled, and marked "SUITABLE FOR USE AS SERVICE EQUIPMENT".

1.4 SUBMITTALS

- A. As specified in Section 260500 – Common Work Results for Electrical.

- B. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Service entrance section electrical characteristics including voltage, frame size and trip ratings, fault current withstand ratings, and time-current curves of equipment and components.
2. Shop Drawings:
 - a. Utility company drawings, details, and data for service to Project.
 - b. Service entrance section front and side views of enclosures with overall dimensions indicated; conduit entrance locations and requirements; nameplate legends; size and number of bus bars per phase, neutral, and ground; [and distribution panel instrument details].
3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - c. Manufacturer's Instructions: Service entrance section application conditions and limitations of use stipulated by Product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.

- C. Section 017704 - Closeout Procedures and Requirements: Procedures for closeout submittals.

1. Operation and Maintenance Data: Service entrance section spare parts listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.5 QUALITY ASSURANCE

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience approved by Utility company for installation of electrical utility service.
- C. Regulatory Requirements:
 1. Conform to requirements of NFPA 70.
 2. Products: Listed and classified by Underwriters Laboratories Incorporated as suitable for the purpose specified and indicated.
- D. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of operations, procedures and coordination with related Work.
 4. Agenda:
 - a. Tour, inspect, and discuss conditions of Project Site and location of utility service point.
 - b. Review electrical service entrance design and requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Utility company drawings, details, and data.
 - e. Review and finalize construction schedule related to electrical service and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - h. Review safety precautions relating to electrical service installation operations.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Service Entrance Section:
 1. Deliver individually wrapped for protections and mounted on shipping skids.
 2. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.
 3. Handle in accordance with NEMA PB 2.1 and manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to distribution panel internal components, enclosure, and finish.

PART 2 - PRODUCTS

2.1 SERVICE ENTRANCE EQUIPMENT AND ACCESSORIES

- A. Provide service entrance equipment and accessories (of types, sizes, ratings and electrical characteristics indicated) which comply with manufacturer's standard materials, design and construction in accordance with published product information and as required for complete installation; and as herein specified.

2.2 MANUFACTURERS

- A. Approved by Utility company for use on electrical service entrance Work; included on Utility company list of approved Products.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.

2.3 ELECTRICAL SERVICE

- A. Products conforming to Utility company requirements as indicated on Utility company prepared Drawings, Details, and Data.

2.4 TRANSFORMER AND PAD

- A. Transformer: Furnished and installed by Utility company; type and rating as indicated on Drawings.
- B. Transformer Pad: [Precast] [Poured-in-place] reinforced concrete pad [by Contractor] [by Utility company] of size, type, and configuration as required by Utility company.

2.5 SERVICE ENTRANCE EQUIPMENT

- A. Meter Cabinet and Base: Cabinet and base of size, type, and configuration furnished and installed as required by Utility company.
- B. Meters: Furnished and installed by Utility company.

2.6 SERVICE ENTRANCE SECTION

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Eaton Corporation; Cutler-Hammer Products, Pittsburgh, PA (800) 525-2000.
 - 2. General Electric Company (800) 626-2000.
 - 3. Siemens Energy & Automation, Inc., Alpharetta, GA (800) 964-4114.
 - 4. Square D Company, Palatine, IL (800) 392-8781.
 - 5. Substitutions: Not permitted.
- B. Description: NEMA PB 2 and UL 891 with electrical ratings and configurations as indicated and specified.
- C. Section Devices: Panel mounted.
- D. Bus Material: Copper (tin plated).
- E. Bus Connections: Bolted, accessible from front for maintenance.

- F. Fully insulate load side bus bars.
- G. Ground Bus: Extend width of distribution panel.
- H. Line and Load Terminations: Accessible from front only of distribution panel, suitable for conductor materials and sizes indicated.
- I. Pull Section: Size as indicated on Drawings. Arrange as indicated on Drawings.
- J. Enclosure: [NEMA 1] [NEMA 3R].
 - 1. Align sections at front and rear.
 - 2. Distribution Panel Height: As indicated on Drawings, lifting members and pull boxes.
 - 3. Finish: Manufacturer's standard light gray enamel over external surfaces. Coat internal surfaces with minimum one coat corrosion-resisting paint, or plate with cadmium or zinc.

2.7 OVERCURRENT PROTECTIVE DEVICES

- A. Provide overcurrent protection devices as indicated on the drawings and specified within related electrical specifications.

NOTE TO SPECIFIER

Customer Service Facilities equal to or larger than 15,000 sq. ft. shall be provided with advanced electric metering. Include Section 2.8 below for these larger facilities.

2.8 ADVANCED METERING EQUIPMENT (ELECTRICAL UTILITY MAINS)

- A. The meter device shall be UL listed. All meters shall have the following ratings, features and functions.
 - 1. Designed for multifunction electrical measurements on 3 phase power systems. The Meter shall support 3-Element Wye, 2.5 Element Wye, 2 Element Delta, 4 wire Delta systems.
 - 2. Provide surge withstand ratings conforming to ANSI C62.41 (6KV)
 - 3. Be user programmable for voltage range to any PT ratio.
 - 4. Accept a direct voltage input range of up to 576 Volts Line to Neutral, and a range of up to 721 Volts Line to Line.
 - 5. Accept a current input of up to 11 amps continuous. Start up current for a 5 Amp input shall be no greater than .005 Amps.
 - 6. Have the following additional ratings and features:
 - a. Fault Current Withstand shall be 100 Amps for 10 seconds, 300 Amps for 3 seconds, and 500 Amps for 1 second.
 - b. Meter shall be programmable for current to any CT ratio.
 - c. All inputs and outputs shall be galvanically isolated to 2500 Volts AC.
 - 7. Accept current inputs of class 10: (0 to 11A), 5 Amp Nominal and class 2 (0 to 2A), 1A Nominal Secondary.
 - 8. Provide an accuracy of +/- 0.5% or better for volts and amps, and 0.5% for power and energy functions and meet or exceed the accuracy requirements of ANSI C12.20 (Class 0.5%).
 - 9. Provide true RMS measurements of voltage, phase to neutral and phase to phase; current, per phase and neutral.
 - 10. Provide sampling at 400+ samples per cycle on all channels measured readings simultaneously.
 - 11. The meter shall utilize 24 bit Analog to Digital conversion.
 - 12. Provide at a minimum Voltage and current per phase, kW, kVAR, PF, kVA, Frequency, kWh, %THD (% of total Harmonic Distortion).

13. Shall be a traceable revenue meter, which shall contain a utility grade test pulse allowing power providers to verify and confirm that the meter is performing to its rated accuracy.
14. The meter shall include 1 independent communications port on the back, with advanced features. The port shall provide Ethernet communication speaking Modbus MS/TCP, Modbus/IP, or BACnet MS/TCP protocols.
15. Provide user configured fixed window or sliding window demand. This shall allow the user to set up the particular utility demand profile.
 - a. Readings for kW, kVAR, kVA and PF shall be calculated using utility demand features.
 - b. All other parameters shall offer max and min capability over the user selectable averaging period.
 - c. Voltage shall provide an instantaneous max and min reading displaying the highest surge and lowest sag seen by the meter.
16. Capable of operating on a power supply of 90 to 265 Volts AC and 100 to 370 Volts DC. Universal Power AC/DC Supply shall be available. An option shall also be available to operate on a power supply from 18-60 VDC.
17. Meter shall provide update rate of 100msec for Watts, Var and VA. All other parameters shall be 1 second.
18. The meter shall be provided with I/O expandability through option card slots.

B. Meter Software features

1. Meter shall provide internally calculated values based in voltage and current inputs. The following parameters shall be provided for each measured phase and total of all 3 phases: volts, amps, kW, kVAR, PF, kVA, frequency., kWh, %THD. predicted kW based on selected demand period.
2. All meter setup parameters shall be adjustable though a software configuration tools, though the front panel keypad or though a web based browser. All meter configurations shall be password protected from alteration.
3. All meter parameters shall be accessible through the Modbus MS/TCP, Modbus/IP, or BACnet MS/TCP protocols.

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

C. Acceptable Manufactures Models

1. Schneider Electric/Square D – PM750
2. Electro Industries - Shark S100
3. Siemens – PAC3200
4. General Electric – EPM 6000
5. E-Mon/D-Mon – Class 3000.

D. Accessories:

1. Current transformers: All CT's should conform to the ANSI standard accuracy class for metering service of 0.3 or better and shall be provided with certificates of test stipulating the ratio and phase angle corrections at 10% and 100% of rating with the standard ANSI burden nearest to the actual "in-service" burden. Whenever practical, the CT's should be designed to withstand continuous operation and maintain class 0.3 or better metering accuracy at twice or more of rated current (ex. Transformer thermal rating factor greater than or equal to 2).
2. Voltage Transformers: All VT's should conform to the ANSI standard accuracy class for metering service of 0.3 or better and be provided with certificates of test stipulating the ratio and phase angle corrections at 100% rating with zero burden and with the rated maximum standard burden.
3. Test Block/Switches: These test blocks should be designed to provide a means to measure the input quantities from the current and/or voltage transformers and to allow the application of test quantities.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. As specified in Section 260500 – Common Work Results for Electrical.

3.2 PREPARATION

- A. Arrange with Utility Company to obtain permanent electric service to Project.
- B. Coordinate with Contracting Officer and Utility Company service contact person for execution of required Utility Company documents.

3.3 INSTALLATION

- A. Install service entrance equipment as indicated, in accordance with equipment manufacturer's written instructions, and with recognized industry practices, to ensure that service entrance equipment fulfills requirements. Comply with applicable installation requirements of NEC and NEMA Standards.
- B. Electrical Service Conduit:
 - 1. Furnished and installed by Contractor in conformance with Utility Company requirements in locations indicated on Drawings.
 - 2. Trenching, backfilling, and compacting for utilities specified in Section 312300.
 - 3. Install service in accordance with manufacturer's published instructions, Utility Company requirements, and as indicated on Drawings.
- C. Electrical Service Wiring:
 - 1. Primary: Furnished and installed by [Utility Company] [Contractor].
 - 2. Secondary: Furnished and installed by Contractor.
- D. Transformer and Pad:
 - 1. Transformer: Furnished and installed by [Utility Company] [Contractor].
 - 2. Transformer Pad: Furnished and installed by [Utility Company] [Contractor] at location indicated on Drawings in conformance with Utility Company requirements.
- E. Service Entrance Section:
 - 1. Install distribution panel [switchboard] in locations indicated on Drawings, in accordance with NEMA PB 2.1.
 - 2. Tighten accessible bus connections and mechanical fasteners after placing distribution panel.
 - 3. Ground as specified in Section 260500 and as indicated on Drawings.

3.4 FIELD QUALITY CONTROL

- A. As specified in Section 260500 – Common Work Results for Electrical.
- B. Section 014000 - Quality Requirements: Field testing and inspection.
- C. Obtain service entrance quality control inspection and approval of installation by Utility Company.
- D. Inspect and test distribution panel in accordance with NETA ATS, except Section 4.

33 - Utilities

- E. Test service entrance equipment and electrical circuitry upon completion of installation work and after energizing circuitry, and demonstrate its capability and compliance with requirements. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise remove and replace with new units and retest. Engineer's or Owner's presence at test is required.
- F. Perform [\[switchboard\]](#) [\[distribution panel\]](#) inspections and tests listed in NETA ATS, Section 7.1.

END OF SECTION 33 71 73 00

SECTION 33 71 73 00 - MPF ELECTRICAL UTILITY SERVICES

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Electrical service entrance.
 - 2. Transformer and pad.
 - 3. Service entrance equipment.
 - 4. Service entrance section.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 312300 - Excavation and Fill: Earthwork trenching, backfilling, and compacting.
 - 2. Section 250504 - Building Automation System (BAS) General
 - 3. Section 251104 - Metering Devices.
 - 4. Section 259004 - Sequence of Operation
 - 5. Section 260500 - Common Work Results for Electrical: Grounding.
 - 6. Section 260533 - Raceway and Boxes for Electrical Systems
 - 7. Section 260800 - Commissioning of Electrical Systems

1.2 REFERENCES

- A. National Electrical Contractors Association (NECA):

 - 1. NFPA 70 - National Electric Code.

1.3 SYSTEM DESCRIPTION

- A. System Characteristics: 480Y/277 volts, three phase, four wire, 60 hertz.
- B. Provide service entrance equipment and accessories which are UL listed and labeled, and marked "SUITABLE FOR USE AS SERVICE EQUIPMENT".

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Service entrance section electrical characteristics including voltage, frame size and trip ratings, fault current withstand ratings, and time-current curves of equipment and components.
 - 2. Shop Drawings:
 - a. Utility company drawings, details, and data for service to Project.
 - b. Service entrance section front and side views of enclosures with overall dimensions indicated; conduit entrance locations and requirements; nameplate legends; size and number of bus bars per phase, neutral, and ground.
 - c. Instrumentation and metering equipment.
 - 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - c. Manufacturer's Instructions: Service entrance section application conditions and limitations of use stipulated by Product testing agency. Include instructions for storage, handling, protection, examination, preparation, and installation of Product.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Maintenance Data: Service entrance section spare parts listing; source and current prices of replacement parts and supplies; and recommended maintenance procedures and intervals.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience approved by Utility company for installation of electrical utility service.
- B. Regulatory Requirements:
 - 1. Conform to requirements of NFPA 70.
 - 2. Products: Listed and classified by Underwriters Laboratories Incorporated as suitable for the purpose specified and indicated.
- C. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of operations, procedures and coordination with related Work.
 - 4. Agenda:

- a. Tour, inspect, and discuss conditions of Project Site and location of utility service point.
- b. Review electrical service entrance design and requirements.
- c. Review required submittals, both completed and yet to be completed.
- d. Review Utility company drawings, details, and data.
- e. Review and finalize construction schedule related to electrical service and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
- f. Review required inspections, testing, certifying, and material usage accounting procedures.
- g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
- h. Review safety precautions relating to electrical service installation operations.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Service Entrance Section:
 1. Deliver individually wrapped for protections and mounted on shipping skids.
 2. Store in clean, dry space. Maintain factory wrapping or provide additional heavy canvas or heavy plastic cover to protect units from dirt, water, construction debris, and traffic.
 3. Handle in accordance with NEMA PB 2.1 and manufacturer's written instructions. Lift only with lugs provided for the purpose. Handle carefully to avoid damage to distribution panel internal components, enclosure, and finish.

PART 2 - PRODUCTS

2.1 SERVICE ENTRANCE EQUIPMENT AND ACCESSORIES

- A. Provide service entrance equipment and accessories (of types, sizes, ratings and electrical characteristics indicated) which comply with manufacturer's standard materials, design and construction in accordance with published product information and as required for complete installation; and as herein specified.

2.2 MANUFACTURERS

- A. Approved by Utility company for use on electrical service entrance Work; included on Utility company list of approved Products.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.

2.3 ELECTRICAL SERVICE

- A. Products conforming to Utility company requirements as indicated on Utility company prepared Drawings, Details, and Data.

2.4 TRANSFORMER AND PAD

- A. Transformer: Furnished and installed by Utility company; type and rating as indicated on Drawings.

- B. Transformer Pad: [Precast] [Poured-in-place] reinforced concrete pad [by Contractor] [by Utility company] of size, type, and configuration as required by Utility company.

2.5 SERVICE ENTRANCE EQUIPMENT

- A. Meter Cabinet and Base: Cabinet and base of size, type, and configuration furnished and installed as required by Utility company.
- B. Utility Meters: Furnished and installed by Utility company.

2.6 SERVICE ENTRANCE SECTION

- A. Manufacturers: Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Eaton Corporation; Cutler-Hammer Products, Pittsburgh, PA (800) 525-2000.
 2. General Electric Company (800) 626-2000.
 3. Siemens Energy & Automation, Inc., Alpharetta, GA (800) 964-4114.
 4. Square D Company, Palatine, IL (800) 392-8781.
- B. Description: NEMA PB 2 and UL 869 with electrical ratings and configurations as indicated and specified.
- C. Section Devices: [Panel mounted] [Draw-out type].
- D. Bus Material: Copper (tin plated).
- E. Bus Connections: Bolted, accessible from front for maintenance.
- F. Fully insulate load side bus bars.
- G. Ground Bus: Extend width of switchboard.
- H. Line and Load Terminations: Accessible from front only of distribution panel, suitable for conductor materials and sizes indicated.
- I. Pull Section: Size as indicated on Drawings. Arrange as indicated on Drawings.
- J. Enclosure: NEMA 1.
 1. Align sections at front and rear.
 2. Distribution Panel Height: As indicated on Drawings, lifting members and pull boxes.
 3. Finish: Manufacturer's standard light gray enamel over external surfaces. Coat internal surfaces with minimum one coat corrosion-resisting paint, or plate with cadmium or zinc.

2.7 OVERCURRENT PROTECTIVE DEVICES

- A. Provide overcurrent protection devices as indicated on the drawings and specified within related electrical specifications.

2.8 ADVANCED METERING EQUIPMENT (ELECTRIC UTILITY MAINS)

- A. The meter device shall be UL listed. All meters shall have the following ratings, features and functions.
 1. Designed for multifunction electrical measurements on 3 phase power systems. The Meter shall support 3-Element Wye, 2.5 Element Wye, 2 Element Delta, 4 wire Delta systems.

2. Provide surge withstand ratings confirming to ANSI C62.41 (6KV)
 3. Be user programmable for voltage range to any PT ratio.
 4. Accept a direct voltage input range of up to 576 Volts Line to Neutral, and a range of up to 721 Volts Line to Line.
 5. Accept a current input of up to 11 amps continuous. Start up current for a 5 Amp input shall be no greater than .005 Amps.
 6. Have the following additional ratings and features:
 - a. Fault Current Withstand shall be 100 Amps for 10 seconds, 300 Amps for 3 seconds, and 500 Amps for 1 second.
 - b. Meter shall be programmable for current to any CT ratio.
 - c. All inputs and outputs shall be galvanically isolated to 2500 Volts AC.
 7. Accept current inputs of class 10: (0 to 11A), 5 Amp Nominal and class 2 (0 to 2A), 1A Nominal Secondary.
 8. Provide an accuracy of +/- 0.5% or better for volts and amps, and 0.5% for power and energy functions and meet or exceed the accuracy requirements of ANSI C12.20 (Class 0.5%).
 9. Provide true RMS measurements of voltage, phase to neutral and phase to phase; current, per phase and neutral.
 10. Provide sampling at 400+ samples per cycle on all channels measured readings simultaneously.
 11. The meter shall utilize 24 bit Analog to Digital conversion.
 12. Provide at a minimum Voltage and current per phase, kW, kVAR, PF, kVA, Frequency, kWh, %THD (% of total Harmonic Distortion).
 13. Shall be a traceable revenue meter, which shall contain a utility grade test pulse allowing power providers to verify and confirm that the meter is performing to its rated accuracy.
 14. The meter shall include 1 independent communications port on the back, with advanced features. The port shall provide Ethernet communication speaking Modbus MS/TCP, Modbus/IP, or BACnet MS/TCP protocols.
 15. Provide user configured fixed window or sliding window demand. This shall allow the user to set up the particular utility demand profile.
 - a. Readings for kW, kVAR, kVA and PF shall be calculated using utility demand features.
 - b. All other parameters shall offer max and min capability over the user selectable averaging period.
 - c. Voltage shall provide an instantaneous max and min reading displaying the highest surge and lowest sag seen by the meter.
 16. Capable of operating on a power supply of 90 to 265 Volts AC and 100 to 370 Volts DC. Universal Power AC/DC Supply shall be available. An option shall also be available to operate on a power supply from 18-60 VDC.
 17. Meter shall provide update rate of 100msec for Watts, Var and VA. All other parameters shall be 1 second.
 18. The meter shall be provided with I/O expandability through option card slots..
- B. Meter Software features
1. Meter shall provide internally calculated values based in voltage and current inputs. The following parameters shall be provided for each measured phase and total of all 3 phases: volts, amps, kW, kVAR, PF, kVA, frequency., kWh, %THD. predicted kW based on selected demand period.
 2. All meter setup parameters shall be adjustable though a software configuration tools, though the front panel keypad or though a web based browser. All meter configurations shall be password protected from alteration.
 3. All meter parameters shall be accessible through the Modbus MS/TCP, Modbus/IP, or BACnet MS/TCP protocols..
- C. Acceptable Manufactures Models
1. Schneider Electric/Square D – PM750
 2. Electro Industries - Shark S100
 3. Siemens – PAC3200
 4. General Electric – EPM 6000

5. E-Mon/D-Mon – Class 3000.

D. Accessories:

1. Current transformers: All CT's should conform to the ANSI standard accuracy class for metering service of 0.3 or better and shall be provided with certificates of test stipulating the ratio and phase angle corrections at 10% and 100% of rating with the standard ANSI burden nearest to the actual "in-service" burden. Whenever practical, the CT's should be designed to withstand continuous operation and maintain class 0.3 or better metering accuracy at twice or more of rated current (ex. Transformer thermal rating factor greater than or equal to 2)
2. Voltage Transformers: All VT's should conform to the ANSI standard accuracy class for metering service of 0.3 or better and be provided with certificates of test stipulating the ratio and phase angle corrections at 100% rating with zero burden and with the rated maximum standard burden.
3. Test Block/Switches: These test blocks should be designed to provide a means to measure the input quantities from the current and/or voltage transformers and to allow the application of test quantities

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that field measurements are as indicated on Utility Company Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Arrange with Utility Company to obtain permanent electric service to Project.
- B. Coordinate with Contracting Officer and Utility Company service contact person for execution of required Utility Company documents.

3.3 INSTALLATION

- A. Install service entrance equipment as indicated, in accordance with equipment manufacturer's written instructions, and with recognized industry practices, to ensure that service entrance equipment fulfills requirements. Comply with applicable installation requirements of NEC and NEMA Standards.
- B. Electrical Service Conduit:
 1. Furnished and installed by Contractor in conformance with Utility Company requirements in locations indicated on Drawings.
 2. Trenching, backfilling, and compacting for utilities specified in Section 312300.
 3. Install service in accordance with manufacturer's published instructions, Utility Company requirements, and as indicated on Drawings.

- C. Electrical Service Wiring:
 - 1. Primary: Furnished and installed by [Utility Company] [Contractor].
 - 2. Secondary: Furnished and installed by Contractor.
- D. Transformer and Pad:
 - 1. Transformer: Furnished and installed by [Utility Company] [Contractor].
 - 2. Transformer Pad: Furnished and installed by [Utility Company] [Contractor] at location indicated on Drawings in conformance with Utility Company requirements.
- E. Service Entrance Section:
 - 1. Install switchboard in locations indicated on Drawings, in accordance with NEMA PB 2.1.
 - 2. Tighten accessible bus connections and mechanical fasteners after placing distribution panel.
 - 3. Ground as specified in Section 260500 and as indicated on Drawings.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
 - B. Obtain service entrance quality control inspection and approval of installation by Utility Company.
 - C. Test service entrance equipment and electrical circuitry upon completion of installation work and after energizing circuitry, and demonstrate its capability and compliance with requirements. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise remove and replace with new units and retest. Engineer's or Owner's presence at test is required.
 - D. Inspect and test switchboard in accordance with NETA ATS, except Section 4.
 - E. Perform switchboard inspections and tests listed in NETA ATS, Section 7.1.
- USPS Mail Processing Facility Specification issued: 5/1/2014

SECTION 34 71 13 16 - ACTIVE VEHICLE BARRIERS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for active vehicle barriers. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Shop Drawings: Installation, Equipment, and Electrical Work
 - a. Detail drawings containing complete wiring and schematic diagrams, and any other details required to demonstrate that the system has been coordinated and will properly function as a unit. Drawings shall show proposed layout and anchorage of equipment and appurtenances, and equipment relationship to other parts of the work including foundation and clearances for maintenance and operation. For Federal work, detail drawings shall include a copy of the Department of State certificate of barrier performance.
2. Product Data:
 - a. Vehicle Barriers: A complete list of equipment, materials, including industrial standards used and how they apply to the applicable component and manufacturer's descriptive data and technical literature, catalog cuts, and installation instructions. Information necessary to document a minimum 1-year successful field operation performance history for each type of vehicle barrier installed.
 - b. Spare Parts: Spare parts data for each different item of material and equipment used, after approval of the detail drawings. The data shall include a complete list of parts and supplies, with current unit prices and source of supply.
3. Test Reports
 - a. Field Testing: Test reports in booklet form showing all field tests, including component adjustments and demonstration of compliance with the specified performance criteria, upon completion and testing of the installed system. Each test report shall indicate the final position of controls.
4. Operation and Maintenance Data
 - a. Vehicle Barriers: Operating and Maintenance Instructions
 - 1) Six copies of operation and maintenance manuals, a minimum of 2 weeks prior to field training. One complete set prior to performance testing and the remainder upon acceptance. Manuals shall be approved prior to acceptance. Operation manuals shall outline the step-by-step procedures required for system startup, operation, and shutdown. The manuals shall include the manufacturer's name, model number, service manual, parts list, and brief description of all equipment and their basic operating features. Maintenance manuals shall include routine maintenance procedures, possible breakdowns and repairs, and troubleshooting guide. The manuals shall include piping layout, equipment layout, and simplified wiring and control diagrams of the system as installed. The manuals shall also include synthetic biodegradable hydraulic oil types to be used for ambient temperature ranges of minus 30 degrees F (minus 34 degrees C) to 150 degrees F (plus 66 degrees C) to cover winter operation, summer operation, and ambient temperature ranges in between.

C. General Requirements

1. Performance levels shall be based on the following:
 - a. The Department of State (DOS) publication SD-SDT-02.01 Specification for Vehicle Crash Testing of Perimeter Barriers and Gates (April 1985) in which:
 - 1) Impact Conditions:

Condition Designation	Vehicle Weight	Impact Speed	Kinetic Energy
K4	15,000 lb (6,800 kg)	30 mph (48 km/h)	450,000 ft-lb (610 kJ)
K8	15,000 lb (6,800 kg)	40 mph (65 km/h)	800,000 ft-lb (1084 kJ)
K12	15,000 lb (6,800 kg)	50 mph (80 km/h)	1,250,000 ft-lb (1695 kJ)

2) Performance Levels:

- a) L 3.0 Vehicle and cargo are to be stopped although vehicle partial penetration and/or barrier deflection of up to 3 feet (1 m) permitted.
- b) L 2.0 Vehicle and cargo are to be stopped although vehicle partial penetration and/or barrier deflection of up to 20 feet (6 m) is permitted.
- c) L 1.0 Vehicle is disabled and does not travel more than 50 feet (15 m) after impact.

2. Vehicle Barriers furnished shall in all respects be identical to the unit tested and certified except for the width of the vehicle barrier, which is as indicated and except for bollards which have a diameter based on a required crash rating. Crash test shall be performed and data compiled by an approved independent testing agency. Test vehicle shall not vault or penetrate the barrier during the test. The design and structural materials of the vehicle barrier furnished shall be the same as those used in the crash tested barrier.

D. Nameplates

1. Nameplate data shall be permanently attached to each vehicle barrier. The data shall be legibly marked on corrosion-resistant metal plates and shall consist of at least the following:
 - a. Manufacturer's name.
 - b. Model number.
 - c. Serial number.
 - d. Date of manufacture.

E. Delivery And Storage

1. Components placed in storage shall be protected from the weather, humidity, and temperature variation, dirt and dust, or other contaminants. Structural materials shall be stored on sleepers or pallets and shall be protected from rust and objectionable materials such as dirt, grease, or oil.

F. Spare Parts

1. A manufacturer's standard recommended spare parts package, with current unit prices and source of supply complete with detailed manuals on parts replacement, shall be provided with each barrier to facilitate 1 year of normal operation. Particular consideration shall be given to system components which are not readily available from local or commercial sources and which are critical to the operation of the system.

G. Manufacturer's Services

1. Services of a manufacturer's representative who is experienced in the installation, adjustment, and operation of the equipment supplied shall be available. The representative shall supervise the installation, adjustment, and testing of the equipment.

1.2 PRODUCT

- A. Retractable Barriers: When in the raised position, the total retractable barrier heights shall be no less than 28 inches (711 mm) above the roadway surface and shall be 144 inches (3.66 m) wide. When in the lowered position, the retractable barrier shall extend no more than 5/8 inch (16 mm) above the roadway surface. Retractable barriers in the lowered position shall be capable of supporting a 32,000 pound (142 kN) axle load or a 16,000 (71 kN) wheel load. Design for this load shall be in accordance with AASHTO HB-17.
 1. Powered Retractable Barrier: The retractable barrier shall be capable of 300 complete up/down cycles per hour. The retractable barrier motion shall be instantly reversible and shall be capable

of raising the barrier from the lowered position to the raised position within 8 seconds during normal use, and within 2 seconds during an emergency. Also, the barrier shall be capable of being lowered from the raised position to the lowered position in not more than 3 seconds. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**.

- a. Failure Modes of Operation: The system shall be designed to remain in the last commanded position in the event of hydraulic, electrical, or mechanical failure. A manual pump, or other system, shall be included for operation of hydraulic barriers without power.
 - b. Electric Motors: Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed **OR** totally enclosed fan cooled, **as directed**, enclosures. All couplings, motor shafts, gears, and other moving parts shall be fully guarded in accordance with 29 CFR 1910 Subpart O. Guards shall be removable without disassembling the guarded unit. For multiple barriers operated from a single hydraulic unit it is highly recommended that the electric motor be 3-phase.
 - c. System: The system shall be designed to maintain the barriers in the raised position, without inspection, for periods of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure. The system shall not require continuous running of the motor to stay in the raised position, excluding the use of manual pinning to do so.
 - d. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
 - 1) Flexible hydraulic lines shall be in accordance with SAE J517.
 - 2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.
 - e. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
2. Manual Retractable Barriers: The manual barrier shall be capable of being raised and lowered by manual means such as levers or hydraulics requiring a maximum 60 pounds (267 N) of force. The manual mechanism shall contain a locking pin which accepts a padlock for securing the barrier when it is in the "UP" position. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**. Barrier should be capable of being locked in the down position.

- B. Retractable Bollards: The total bollard height when in the raised position shall be no less than 30 inches (750 mm) above the roadway surface and shall have an outside diameter of no less than 8 inches (200 mm). A bollard system shall consist of a minimum of 3 bollards spaced no more than 36 inches (915 mm) from centerline to centerline of bollards across a 10 foot (3.0 m) roadway. Bollards in the lowered position shall be capable of supporting a 16,000 pound (71 kN) wheel load each. Design for this load shall be in accordance with AASHTO HB-17. Retractable bollards shall withstand a K4 **OR** K8 **OR** K12, **as directed**, Impact Condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**.

1. **Powered Retractable Bollards:** The retractable bollard shall be capable of 300 complete up/down cycles per hour. Bollards shall be capable of being raised or lowered within a 3 to 15-second range during normal use and within 2.5 seconds for emergency operations.
 - a. **Failure Modes of Operation:** The system shall be designed to prevent lowering of the barrier in the event of hydraulic, electrical, or mechanical failure. A manual pump, or other system, shall be included for operation of hydraulic and/or mechanical barriers without power.
 - b. **Electric Motors:** Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures. For multiple barriers being operated from a hydraulic power unit it is highly recommended that the electric motor be 3-phase.
 - c. **System:** The system shall be designed to maintain the barriers in the raised position, without inspection, for period of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure.
 - d. **Hydraulic Power Unit:** The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range, if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
 - 1) Flexible hydraulic lines shall be in accordance with SAE J517.
 - 2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.
 - e. **Hydraulic Power Unit Enclosure:** A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
 2. **Manual Retractable Bollards:** Manual bollards shall be capable of being raised and lowered utilizing a recessed handle on the top surface of the bollard or a manual hydraulic pump, either requiring a maximum 60 pounds (267 N) of force. A mechanism, that is lockable, shall be provided to secure the bollard in either the full "UP" or full "DOWN" position.
- C. **Crash Gate:** The crash gate shall consist of steel buttresses anchored into the ground and an above grade assembly consisting of a heavy steel structure or a combination of heavy steel and structural aluminum capable of being opened and closed. The height of the gate shall be a minimum of 84 inches (2.1 m) from the road surface to the top of the gate frame. The length shall close and protect a minimum 120 inch (3.0 m) clear opening. The maximum clear opening between the gate frame and end posts, between the bottom of the gate and finished grade, and between any grill work shall be 3 inches (75 mm).
1. **Powered Crash Gate:** The gate movement shall be controlled by an electro-mechanical gate operator **OR** a hydraulic gate operator, **as directed**, consisting of an operator unit with required control circuits and operator station. The control and operating voltage shall be 24 vac (nominal) or, as an option 24 vdc. A remote control master station shall be capable of driving the gate at minimum 48 fpm (14.6 m per minute) for a slide gate or 6 degrees per second for a swing gate. Unless otherwise indicated, motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures. Crash gate shall withstand a 15,000 pound (6804 kg) vehicle at impact speed of 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with maximum barrier deflection or vehicle penetration of 3 feet (1 m).

- a. Failure Mode of Operation: The system shall be designed to prevent opening of the crash gate in the event of electrical or mechanical failure. A disconnect system for the gate drive shall be provided to allow manual operation of the barrier in the event of a power outage.
 - b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity within its operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe, or a combination of flexible and carbon steel. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.
 - 1) Flexible hydraulic lines shall be in accordance with SAE J517.
 - 2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.
 - c. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
2. Manual Crash Gate: The manual crash gate shall be capable of being hinged from either side. Hinge points of both buttresses shall each contain a locking pin with padlock acceptance for securing the crash gate in the closed position. The crash gate shall withstand a 10,000 pound (4535 kg) vehicle at impact speed of 50 mph (80 km/hour), with maximum gate deflection or vehicle penetration of 10 feet (3 m) 15,000 pound (6804 kg) vehicle traveling at impact speed of 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with a maximum gate deflection or vehicle penetration of up to 3 feet (1 m).
- D. Crash Beam: The crash beam shall be an above-grade assembly that, in the "DOWN" position, shall present a visible obstacle to approaching vehicles. The height of the barrier shall be a minimum of 30 inches (750 mm) as measured from the roadway surface to the centerline of the crash beam. The crash beam shall be capable of blocking a minimum road width of 120 inches (3.0 m). The crash beam end shall contain a locking pin with padlock acceptance for securing the crash beam when it is in the "DOWN" position. Crash beam shall withstand a 15,000 pound (6804 kg) vehicle traveling at 30 **OR** 40 **OR** 50, **as directed**, mph (48 **OR** 64 **OR** 80, **as directed**, km/hour), with maximum vehicle penetration of 20 feet (6 m) 10,000 pound (4535 kg) vehicle at impact speed of 15 mph (24 km/hour), with a maximum vehicle penetration of 10 feet (3 m).
1. Powered Crash Beam: The crash beam shall be operated by means of a hydraulic power system. The crash beam shall be capable of being raised or lowered within an 8 to 15 second time range.
 - a. Failure Mode of Operation: A disconnect system for the crash beam shall be provided to allow manual operation of the barrier in the event of an electrical or mechanical failure.
 - b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Buried hydraulic lines for the connection of the hydraulic power unit to the barrier shall be flexible or carbon steel pipe or a combination of flexible and carbon steel pipe. Flexible and rigid hydraulic line working pressures shall exceed the maximum system relief pressure. PVC pipe and fittings for burial of hydraulic lines shall be in accordance with ASTM D 3034 Type PS 46 with minimum pipe stiffness of 46.

- 1) Flexible hydraulic lines shall be in accordance with SAE J517.
 - 2) Rigid hydraulic lines shall be seamless carbon steel pipe in accordance with ASTM A 106.
 - c. Hydraulic Power Unit Enclosure: A NEMA Type 3R enclosure as specified in NEMA 250 shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit components and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable/lockable exterior door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
 2. Manual Crash Beam: The crash beam shall be manually raised and lowered with the aid of a counterbalanced end requiring approximately 60 pounds (267 N) of force.
- E. Portable Retractable Barrier: The portable retractable barrier shall be transportable and capable of manual and/or electro-mechanical operation. When in the raised position, the total barrier heights shall be no less than 28 inches (711 mm) above the roadway surface and shall be up to 144 inches (3.66 m wide). The barrier shall be equipped with entrance/exit ramps when the barrier extends more than 5/8 inch (16 mm) above the roadway surface. Retractable barriers in the lowered position shall be capable of supporting a 32,000 pound (142 kN) axle load or a 16,000 (71 kN) pound wheel load. Design for this load shall be in accordance with AASHTO HB-17.
1. Powered Portable Retractable Barrier: The portable retractable barrier shall be capable of 300 complete up/down cycles per hour. The retractable barrier motion shall be instantly reversible and shall be capable of raising the barrier from the lowered position to the raised position within 8 seconds during normal use, and within 2 seconds during an emergency. Also, the barrier shall be capable of being closed from the raised position to the lowered position in not more than 3 seconds. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**. Portable retractable barrier, when impacted by a 15,000 pound (6,800 kg) vehicle at impact speed of 50 mph (80 km/hour) shall disable the vehicle and allow it to travel no more than 50 feet (15.2 m) after impact. Portable power assisted retractable barriers shall be equipped with on and off ramps for smooth transition between surfaces when the barrier extends more than 5/8 inch (16 mm) above the roadway surface.
 - a. Failure Modes of Operation: The system shall be designed to prevent lowering of the barrier in the event of hydraulic, electric, or mechanical failure. A manual pump shall be included for operation of hydraulic and/or mechanical barriers without power.
 - b. Electric Motors: Unless otherwise indicated, electric motors shall have drip-proof **OR** totally enclosed, **as directed**, enclosures.
 - c. System: The system shall be designed to maintain the barriers in the raised position, without inspection, for periods of time of up to 1 week. If a hydraulic system is used, it shall be equipped with pressure relief valves to prevent overpressure.
 - d. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Flexible hydraulic lines shall be used for the connection of the hydraulic power unit to the barrier. Flexible hydraulic line working pressures shall exceed the maximum system relief pressure; flexible hydraulic lines shall be in accordance with SAE J517.
 2. Manual Retractable Portable Barriers: The manual barrier shall be capable of being raised and lowered by manual means such as levers or hydraulics requiring a maximum 60 pounds (267 N) of force. The manual mechanism shall contain a locking pin which accepts a padlock for securing the barrier when it is in the "UP" position and shall also be capable of being locked in the

"DOWN" position. Retractable barrier shall withstand a K4 **OR** K8 **OR** K12, **as directed**, impact condition with Performance Level of L1.0 **OR** L2.0 **OR** L3.0, **as directed**

- F. Portable Crash Beam: The portable crash beam shall be an above-grade assembly that, in the "DOWN" position, shall present a visible obstacle to approaching vehicles. The height of the barrier shall be a minimum of 30 inches (750 mm) as measured from the roadway surface to the centerline of the crash beam. The crash beam shall be capable of blocking a minimum road width of 120 inches (3.0 m). The crash beam end shall contain a locking pin with padlock acceptance for securing the crash beam when it is in the "DOWN" position. Crash beam shall withstand a 15,000 pound (6804 kg) vehicle traveling at 30 mph (48 km/hour), with maximum vehicle penetration and/or barrier deflection of 20 feet (6 m).
1. Powered Portable Crash Beam: The portable crash beam shall be operated by means of a hydraulic power system. The crash beam shall be capable of being raised or lowered within an 8 to 15 second time range.
 - a. Failure Mode of Operation: A disconnect system for the portable crash beam shall be provided to allow manual operation of the barrier in the event of an electrical or mechanical failure.
 - b. Hydraulic Power Unit: The hydraulic power unit shall contain synthetic biodegradable hydraulic fluid which maintains its viscosity operating range, even at constant heaviest use rate, for an ambient temperature range of 20 to 150 degrees F (minus 7 to plus 66 degrees C). A hydraulic fluid heater shall be provided so that the viscosity remains within its operating range if ambient temperatures below 20 degrees F (minus 7 degrees C) are expected. Flexible hydraulic lines shall be used for the connection of the hydraulic power unit to the barrier. Flexible hydraulic line working pressures shall exceed the maximum system relief pressure; flexible hydraulic lines shall be in accordance with SAE J517.
 - c. Hydraulic Power Unit Enclosure: A weather resistant enclosure shall be provided to enclose the hydraulic power unit. The enclosure shall be designed for easy removal of the hydraulic power unit components and other accessories without complete removal of the enclosure. An access door with hinges and an inside and outside operable lockable (exterior) door latch shall be provided. Equipment within the enclosure shall be placed and configured so that all periodic maintenance can be performed through the access door without removal of the equipment. The enclosure shall be equipped with weatherproof louver vents appropriately sized and located to dissipate internal heat generation.
 2. Manual Portable Crash Beam: The crash beam shall be manually operated by means of a counter balanced system requiring approximately 60 pounds (267 N) of force.
- G. Electrical Work: Motors, manual or automatic motor control equipment except where installed in motor control centers and protective or signal devices required for the operation specified herein shall be provided in accordance with Division 22. All field wiring for loop detectors, communication lines, and power circuits shall have surge protection. Any wiring required for the operation specified herein, but not shown on the electrical plans, shall be provided under this section in accordance with Division 22.
- H. Control Panel: A control panel and control circuit shall be provided to interface between all barrier control stations and the power unit. A control panel shall be provided for the inbound lanes and a separate one for the outbound lanes where the barriers are located. The control station is defined as the main control panel and the remote control panel as shown. The control circuit shall contain all relays, timers, and other devices or an industrial programmable controller programmed as necessary for the barrier operation. The control panel shall allow direct interface with auxiliary equipment such as card readers, remote switches, loop detectors, infrared sensors, and sliding **OR** swinging, **as directed**, gate limit switches. Loop controllers shall not cause an automatic barrier raise following power loss or restoration. The enclosure shall be as indicated on the drawings. All device interconnect lines shall be run to terminal strips.
1. Voltage: The control circuit shall operate from a 120 volt 60 **OR** 50, **as directed**, Hz supply. The control circuit voltage shall be 12 **OR** 24, **as directed**, ac **OR** dc, **as directed**, for all external control panels.

2. **Main Control Panel:** A main control panel shall be supplied to control barrier function. This panel shall have a key-lockable main switch with main power "ON" and panel "ON" lights. Buttons to raise and lower each barrier **OR** set of barriers, **as directed**, shall be provided. Barrier "UP" and "DOWN" indicator lights shall be included for each barrier **OR** set of barriers, **as directed**. An emergency fast operate circuit (EFO) shall be operated from a push button larger than the normal controls and have a flip safety cover installed over the push button or toggle switch. The EFO shall also be furnished with an EFO-active light and reset button. The main control panel shall have a key lockable switch to arm or disable the remote control panel. An indicator light shall show if the remote control panel is enabled.
3. **Remote Control Panel:** A remote control panel, one panel for the inbound lane(s) and a separate panel for the outbound lane(s), shall have a panel "ON" light that is lit when enabled by a key lockable switch on the main control panel. Buttons to raise and lower each barrier shall be provided. Barrier "UP" and "DOWN" indicator lights shall be included for each barrier. The EFO shall be operated from a push button larger than the normal controls and have a flip safety cover installed over the push button or toggle switch. Activation of either EFO will operate all barriers. The EFO shall be interconnected with an EFO-active light. When the remote control panel EFO is pushed, operation of the barrier will not be possible from this panel until reset at the main control panel.

I. **Miscellaneous Equipment**

1. **Safety Equipment**
 - a. **Barrier Systems Sensors:** The sensors shall be compatible with the barrier controller and shall function as part of a complete barrier control system. The barrier system sensors shall consist of the following:
 - 1) **Suppression Loops -** Two inductive loops whose outputs shall be used to prevent barriers raising when a vehicle is within a prescribed distance of the barrier. The output of the loops shall override all barrier rise signals until one second after a vehicle clears the suppression loop.
 - 2) **Speed Loops -** Two inductive loops whose output shall be used to signal the barrier controller of a vehicle approaching at a speed greater than the posted speed (25 mph (11.2 m/sec) or less (recommended)). The speed loops shall cause the barrier control panel to annunciate a warning sound alerting the guard to make a decision as to whether the barrier should be raised or not.
 - 3) **Wrong Way Loops -** Two inductive loops whose output shall be used to signal the barrier control panel to enunciate a warning sound if a vehicle is attempting to enter the facility through the exit lane. The warning sound will alert the guard to make a decision as to whether the barrier should be raised or not.
 - b. **Traffic Lights:** Red/yellow 8 inch (200 mm) traffic lights shall be supplied for each entrance and exit to alert motorists of the barrier position. Traffic lights are not required for manual barriers. The yellow flashing light shall indicate that the barrier is fully open. All other positions shall cause the light to show red. Brackets shall be supplied to allow the light to be mounted a minimum 4.5 feet (1.4 m) above the roadway pavement on a 3.5 inch (90 mm) outside diameter metal post or mounted directly on the crash gate.
2. **Warning Annunciator:** Provide a warning annunciator built into the barrier control panel that produces a pulsing audible sound when the speed loop detects a vehicle entering the facility with excess speed. Provide a warning annunciator built into the barrier control panel that produces a continuous sound whenever a wrong way loop detects a vehicle entering from the exit. The warning annunciator shall sound until a warning annunciator silence reset button is pressed.
3. **Heater:** A waterproof barrier heater with a thermostat control and NEMA 4 junction box connection point shall be provided for de-icing and snow melting. The heater shall provide barrier operation to an ambient temperature of minus 40 degrees F (minus 40 degrees C). For retractable bollards, a 250-watt heater shall be provided for each bollard.
4. **Signage:** Signage shall read "Axle Weight Limit 9 Tons" and shall conform to FHWA SA-89-006 sign (R12.2).

5. Vertical Arm Gates (Traffic Arms): Vertical arm gates shall have an opening and closing time of less than or equal to 5 seconds. The gates shall be capable of 500 duty cycles per hour as a minimum. Gate shall operate the arm through 90 degrees. Gate operators shall be supplied with single phase 120 volt motors. Each entry lane shall be provided with a vertical arm gate. Each gate shall be capable of being operated from a remote open-close push button station in each guard booth and the gatehouse for the respective entry lane. Gates shall have a hand-crank, or other means, which will allow manual operation during power failures. Gate arms shall be constructed out of wood, steel, fiberglass, or aluminum, as specified by the manufacturer for the given lengths as shown on the drawings. Gate arms shall be covered with 16 inch (406 mm) wide reflectorized red and white sheeting. Each gate shall be furnished with a spare gate arm. Gate operator cabinets shall be constructed of galvanized steel, or aluminum and shall be painted manufacturers standard color as approved. Each gate operator shall be provided with an obstruction detector that will automatically reverse the gate motor when an obstruction is detected. The obstruction detector shall be any of the following 3 types: An electronic loop vehicle detector buried in the road, a photocell electric eye mounted on the gate operator, or a safety strip mounted on the lower edge of the arm. The detector system shall be automatically deactivated when the arm reaches the fully lowered position. Slab size and anchorage for gate operator shall be per manufacturer requirements.
 6. Vehicle Barrier Vertical Arm Gate (Traffic Arm): A traffic arm, as a separate piece of equipment, will be included with each non-portable active vehicle barrier as part of the barrier safety operating system. This traffic arm shall automatically deploy (close) when the emergency up button is activated and open when the vehicle barrier is reset. This traffic arm will not be equipped with an automatic obstruction detector.
- J. Finish: Surfaces shall be painted in accordance with requirements of Division 09 Section(s) "Exterior Painting" OR "Interior Painting", as applicable. The roadway plate shall have a nonskid surface painted white with reflective red 4 **OR 6, as directed**, inch (100 **OR 150, as directed**, mm) wide red reflective stripes 4 inches (100 mm) apart. The barrier front shall be painted white and have 4 **OR 6, as directed**, inch (100 **OR 150, as directed**, mm) wide reflective red stripes 4 inches (100 mm) apart. The diagonal striping should point down and outward from the center of the device. Bollards shall be painted white with 2 **OR 3, as directed**, inch (50 **OR 75, as directed**, mm) wide reflective red diagonal stripes. The barrier crash gate shall be painted as specified by purchaser and the crash beam shall be painted white with 3 inch (75 mm) wide reflective red diagonal stripes.
 - K. Concrete: The concrete shall conform to Division 03 Section "Cast-in-place Concrete".
 - L. Welding: Welding shall be in accordance with AWS D1.1/D1.1M.
 - M. Pavement: After placement of the vehicle barrier, the pavement sections shall be replaced to match the section and depth of the surrounding pavement. Pavement shall be warped to match the elevations of existing pavement. Positive surface drainage, away from the vehicle barrier, shall be provided by pavement slope.
- 1.3 EXECUTION
- A. Installation: Installation shall be in accordance with manufacturer's instructions and in the presence of a representative of the manufacturer. Manufacturer's representative shall be experienced in the installation, adjustment, and operation of the equipment provided. The representative shall also be present during adjustment and testing of the equipment.
 - B. Hydraulic Lines: Buried hydraulic lines shall be placed in polyvinyl chloride (PVC) sleeves. Positive drainage shall be provided from the hydraulic power unit to the barrier for drainage of condensation within the PVC sleeve.

- C. Pit Drainage: A drain connection and oil/water separator, **as directed**, shall be provided in each barrier that requires pit/vault type construction. Hookups between the storm drains shall be made. The self-priming sump pump shall have the capacity to remove minimum 150 gallons per minute (34 cubic meters per hour).
- D. Electrical: All control power wiring requiring compression terminals shall use ring-style terminals. Terminals and compression tools shall conform to UL 486A. Roundhead screws and lockwashers shall be used to provide vibration-resistant connections. Connections between any printed circuit cards and the chassis shall be made with screw connections or other locking means to prevent shock or vibration separation of the card from its chassis. The electrical power supply breaker for the hydraulic power unit shall be capable of being locked in the power on and power off positions.
- E. Field Testing: Upon completion of construction, a field test shall be performed for each vehicle barrier. The test shall include raising and lowering the barrier, both electrically and manually, through its complete range of operation. Each vehicle barrier shall then be continuously cycled for not less than 30 minutes to test for heat build-up in the hydraulic system. the Owner shall be notified at least 7 days prior to the beginning of the field test. The Contractor shall furnish all equipment and make all necessary corrections and adjustments prior to tests witnessed by the Owner. Any conditions that interfere with the proper operation of the barrier disclosed by the test shall be corrected at no additional cost to the Owner. Adjustments and repairs shall be done by the Contractor under the direction of the Owner. After adjustments are made to assure correct functioning of components, applicable tests shall be completed.
- F. Field Training: A field training course shall be provided for designated operating staff members. Training shall be provided for a total period of not less than 8 hours (for electrical/hydraulic operated units) or 1 hour (for manually operated units) of normal working time and shall start after the system is functionally complete but prior to final acceptance tests. Field training shall cover all of the items contained in the operating and maintenance instructions.

END OF SECTION 34 71 13 16

SECTION 34 71 13 16a - BEAM-TYPE GUARDRAIL

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for beam-type guardrail. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.
2. Shop drawings shall be submitted for approval.

1.2 PRODUCTS

A. Rail Elements, End Sections, and Fasteners

1. ARTBA technical bulletin No. 268-B.
2. Provide galvanized steel W-beam in accordance with AASHTO M-180, class A, type 1.
3. Shop curve rail elements when required radius of installation on horizontal curve is 150 ft (46 m) or less. Provide W-beam rail (ARTBA RE-3) with a flared end section (ARTBA RE-5), rounded end section (ARTBA RE-6) at each end of installations.
4. Provide standard back-up plates behind rail elements at all intermediate, non-splice posts when steel posts and blocks are used.
5. Galvanize the rail sections, including end sections, in accordance with ASTM A 525, coating G-210.

B. Posts

1. Wood: Provide wood posts with blocks, size as required by State DOT. Rough sawn or S4S timber of Douglas Fir or any other locally approved species that is either No. 1 grade or Select Structural grade when graded in accordance with the requirements for Timber and Posts as set forth in WWPA-01 may be used. Give all wood posts and blocks a preservative treatment in accordance with the requirements of AASHTO M-133. Cut to length and bore posts and blocks for bolt holes before treatment.
2. Steel: Provide steel posts with blocks. Fabricate posts and blocks from W6X9 structural steel shapes complying with the requirements of ASTM A 36. Fabricate in the shop, grind smooth all corners and edges, galvanize posts and blocks after fabrication in accordance with ASTM A 123.

C. Bolts, Nuts, and Washers

1. Provide galvanized bolts, nuts, and washers that meet common ARTBA standards, designed to develop the required joint strength. Provide bolts with rounded heads to provide minimum obstruction.
2. Provide galvanized steel bolts conforming to the requirements of ASTM A 307, nuts conforming to the requirements of ASTM A 563, Grade A or better and galvanized steel washers, all galvanized in accordance with the requirements of ASTM A 153. Provide high strength bolts conforming to the requirements of ASTM A 325 where needed.

D. Reflectors: Provide guardrail reflectors as indicated. Place the galvanized steel tabs with reflective sheeting at every post except no reflectors are to be placed along the guardrail end flares.

E. Breakaway Cable Terminal (BCT) Assemblies: Provide BCT assemblies in accordance with the ARTBA details and standards referenced on the details.

- F. Concrete and Reinforcement for the Post Footings: In accordance with applicable sections of Division 03 Section "Cast-in-place Concrete".

1.3 EXECUTION

- A. Guardrail: Erect steel beam-type guardrail in locations and to lines and grades as directed and in accordance with details indicated.
- B. Erection
1. Firmly set posts spaced at 6 ft. 3 in. (1.9 m) centers to the required depth. Set posts by placing in hand or mechanically dug holes or by driving, with or without pilot holes. Backfill gaps around posts with approved material that is moistened and thoroughly compacted. Repair damaged roadway surfacing where pavement is disturbed.
 2. Position the top of W-beam rail at 27 in. (0.69 m) above the finished roadway surface. Align rail both vertically and horizontally within 1/4-in. (6 mm) from the theoretical alignments. Lap the rail sections at posts, in the direction of traffic in the adjacent lane, and lap end sections on the face of the rail.
 3. Exercise care to avoid damage to treated wood and galvanized steel parts. Repair or replace damaged parts at the Contractor's expense. Securely tighten all bolts in the finished guardrail. Toenail the wood blocks to wood posts with two 16 penny galvanized nails, one on each side of the top of the block.

SECTION 41 01 20 00 - MATERIAL HANDLING HOISTS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of material handling hoists. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.

1.2 PRODUCTS

A. Electric Chain Hoists

1. Hoist motors shall be H4 duty classification. Class F insulation shall be used in hoist motor for 30 minute operation. Load chain shall be grade 80 alloy, case hardened and zinc plated sized for the intended load. Hoists shall employ AC motor brakes employing single or multiple all-steel disks. Controls shall be hand-held, low voltage electrical, with emergency shut off and enclosed in NEMA 3R rated weatherproof enclosure. Hoist shall include fail safe limit switches in the hoist enclosure. Hoist shall meet requirements of ANSI B30.16 standard. Load hook shall be heavy-duty drop forged with safety latch. Hoist shall have swivel top and bottom hooks.

B. Manual Chain Hoists

1. Load capacity of hoist shall be as specified. Load chain shall be grade 80 alloy, case hardened and zinc plated sized for the intended load. Load hook shall be heavy-duty drop forged with safety latch. Hoist mechanism shall be double pawl ratchet system with Weston type brake using a non-asbestos friction disk. Hoist shall have swivel top and bottom hooks. Hoist shall require between 50 and 80 pounds effort to move load.

C. Electric Wire Rope Hoists

1. Hoist motors shall be H4 duty classification. Class F insulation shall be used in hoist motor for 30 minute operation. Lift range shall be between 20 and 150 feet. Lifting cable shall be pre-formed wire rope, of hoisting service construction, made of extra improved steel (XIP) with an independent wire rope center. Load hook shall be heavy-duty drop forged with safety latch. Hoist shall have swivel top and bottom hooks. Controls shall be hand held, low voltage electrical, with emergency shut off and enclosed in NEMA 3R rated weatherproof enclosure. Hoist shall include fail-safe limit switches in the hoist enclosure. Hoist shall meet requirements of ANSI B30.16 standard.

1.3 EXECUTION

A. Installation

1. The Contractor shall complete the assembly of any equipment furnished partially assembled and place the items in position as directed. The hoists shall be assembled and securely bolted in position, hoisting chain or wire rope installed, and the hoist made ready for regular operation. The Contractor shall furnish all miscellaneous hardware items required to complete the installation of all equipment and components. Equipment shall be primed and finish painted with a suitable corrosion-resistant paint on all parts and components not made of corrosion-resistant materials or otherwise protected.

END OF SECTION 41 01 20 00

SECTION 41 22 23 13 - MONORAILS WITH AIR MOTOR POWERED HOIST

1.1 GENERAL

- A. Description Of Work
 - 1. This specification covers the furnishing and installation of materials for monorails with air motor powered hoist. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
- B. Verification Of Dimensions
 - 1. The Contractor shall be responsible for the coordination of his work with the work of all trades involved and as it relates to the building structure. The Contractor shall verify all building dimensions that relate to fabrication of the monorail system, and shall notify the the Owner of any discrepancy before order to the monorail manufacturer is finalized.
- C. Submittals
 - 1. Shop Drawings
 - 2. Design Data
 - 3. Test Reports
 - 4. Certificates
 - 5. Operation and Maintenance Data
- D. Quality Assurance
 - 1. Drawings: Submit drawings showing the general arrangement of the track beam system, including curves and switches, clearances, principal dimensions, details of structural connections, air system details, and all component details. Manufacturer's catalog data will suffice for items of standard manufacturer.
 - 2. Certificates: Submit certification of minimum wire rope breaking strength for each hoist. Where applicable, submit factory certification of the load chain rated capacity.
 - 3. Design Data: Submit design calculations verifying the size of structural members, structural supports (fittings, rods, brackets, and components), and lifting beams for the track beam system. The calculations shall include stress and loading diagrams. Submit calculations with monorail drawings.
- E. Maintenance: Submit data package for the entire monorail system.

1.2 PRODUCTS

- A. Fabrication And Construction
 - 1. The hoist and trolley shall conform to ANSI/ASME HST-5M or ANSI/ASME HST-6M, **2 OR 3 OR 5, as directed**, ton (2 **OR 3 OR 5, as directed**, metric ton), for general service **OR** protected indoor **OR** all weather outdoor, **as directed**, (0 degrees to 100 degrees F (-18 to 38 degrees C)) working conditions. 2 ton (2 metric ton) design criteria shall apply to hoists of 2 ton (2 metric ton), or less, rated lifting capacity. Hoists of 2, 3, or 5 ton (2, 3, or 5 metric ton) rated capacity, shall be equipped with an automatic mechanical load lowering brake.
 - 2. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
 - 3. Hook Lift and Speed: Shall be the manufacturer's standard within the limits specified in ANSI/ASME HST-5M or ANSI/ASME HST-6M. The hook lift shall be at its highest point a minimum height as required to meet project requirements above the finished floor and at its lowest point a minimum as required to meet project requirements below the finished floor.

OR

B. Fabrication And Construction

1. The 1/4 **OR** 1/2 **OR** 1, **as directed**, ton (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) hoist and trolley shall meet the design requirements specified in ANSI/ASME HST-5M or ANSI/ASME HST-6M for the 2 ton (2 metric ton) hoist trolley.
2. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
3. Hook Lift and Speed: For 1/4 **OR** 1/2 **OR** 1, **as directed**, ton (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) hoist(s), the hook lift shall be at its highest point a minimum height as required to meet project requirements above the finished floor and at its lowest point a maximum **OR** minimum, **as directed**, as required to meet project requirements above **OR** below, **as directed**, the finished floor. The hook lift and speed limits for 1/4 **OR** 1/2, **OR** 1 ton, **as directed**, (1/4 **OR** 1/2 **OR** 1, **as directed**, metric ton) rated capacity hoists shall be within the limits shown in the following table.

Standardized hoist lift ranges and rated lifting speed
ranges for 1/4, 1/2, and 1 metric ton rated capacity

Rated load Capacity (metric tons)	Hoist lift range (meter)	Hoist lifting speed range (mm/s)	
		Low	High
1/4	3 to 15	120	350
1/2	3 to 12	80	250
1	3 to 10	40	225

Standardized hoist lift ranges and rated lifting speed
ranges for 1/4-, 1/2-, and 1-ton rated capacity

Rated load capacity (tons)	Hoist lift range (feet)	Hoist lifting speed range (feet per minute)	
		Low	High
1/4	10 to 50	24	70
1/2	10 to 40	16	50
1	10 to 30	8	45

4. Hooks: Shall be of the safety type with hook nuts keyed to hook shanks by means of a setscrew installed in a plane parallel to the longitudinal axis of the hook shank, or by any other similar easily removable securing device. All hook components shall be magnetic-particle inspected over the entire area in accordance with ASTM A 275/A 275M. The acceptance standard shall be one of no defects. A defect is defined as a linear indication revealed by magnetic-particle inspection that is greater than 1/8 inch (3 mm) long whose length is equal to or is greater than three times its width.
5. Hoist Wire Rope: Rope lengths shall be sufficient to maintain a minimum of two full wraps of rope at the dead end(s) of the drum, with the block in its lowest indicated position.
6. Hoist Chain: Chain hoists of 10 foot (3 m) lift or more shall be equipped with a load chain bucket.
7. Hoist Limit Switch: Hoists shall be equipped with upper and lower hoist limit switches/devices.
8. Control Pendant: Shall extend as required to meet project requirements below the underside of the track beam.
9. Trolley: Shall have a manual **OR** geared manual **OR** air motor powered, **as directed**, drive and shall be designed to operate from track beam section. Where two or more hoists are located on the same monorail beam, the trolleys shall be equipped with rubber bumper devices designed to prevent contact of any part or parts of the hoists.

- C. Monorail Track Beam System
 - 1. Shall conform to MMA MH27.1, for powered hoists. The maximum allowable deflection shall not exceed 1/600 of the unsupported span, with the hoist(s) at rated load(s) and at any location(s). The track beam system shall have trolley stops at all open end locations. The stops shall be designed to retain the hoist on the track. Wheel stops shall interface with the trolley wheel treads on both sides of the track web simultaneously and shall not interface with the trolley wheel flanges. The air supply valve specified shall be of the quick shutoff type, readily accessible from the floor, and located within proximity to the monorail system.
 - 2. Color of Finished Equipment: Shall be the manufacturer's standard brilliant yellow.
 - 3. Identification Plates: The manufacturer shall furnish and install identification plates of noncorrosive metal. Information and data on the plates shall include, in clearly legible permanent lettering, the manufacturer's name, model number, capacity rating, and other essential information. In addition, the monorail track beam system shall be furnished with identification plates showing the capacity of the system, which shall be legible from the floor and from either side of the monorail track beam.

1.3 EXECUTION

- A. Erection And Installation
 - 1. The Contractor shall erect and install the hoist and monorail system in accordance with of MMA MH27.1. The monorail supplier shall provide supervisory erection services.
- B. Field Inspection And Tests
 - 1. Pre-Erection Inspection: Before erection, the Contractor and the manufacturer's representative shall jointly inspect the monorail and hoist systems and components at the job site to determine compliance with specifications and manufacturer's data and detail drawings as approved. The Contractor shall notify the the Owner 3 days before the inspection.
 - 2. Load Tests: Upon completion, and before final acceptance, the hoist, trolley, and monorail shall be tested in operation as specified, carrying 125 percent of the rated capacity, and with the units spaced to obtain maximum possible loads in the monorail track beam systems. The air equipment will not necessarily operate at rated speed with a 125 percent overload. For hoists that incorporate mechanical load brakes, the mechanical load brake shall hold a static, as well as control a dynamic, 125 percent rated load. The systems shall be thoroughly tested in service to determine that each component of the system operates as specified, is properly installed and adjusted, and is free from defects in material, manufacture, installation, and workmanship. The Contractor shall furnish test loads, operating personnel, instruments, and other apparatus as necessary to conduct field tests on hoist and monorail. The test and final adjustments of the equipment shall be under the supervision of the the Owner. The Contractor shall rectify any deficiencies found and completely retest work affected by such deficiencies.

END OF SECTION 41 22 23 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 41 22 23 13a - MONORAILS WITH MANUAL HOIST

1.1 GENERAL

- A. Description Of Work
 - 1. This specification covers the furnishing and installation of materials for monorails with manual hoist. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
- B. Verification Of Dimensions:
 - 1. The Contractor shall verify all building dimensions that relate to fabrication of the monorail system, and shall notify the Owner of any discrepancy before the order to the monorail manufacturer is finalized.
- C. Submittals
 - 1. Shop Drawings: Submit drawings showing the general arrangement of the track beam system, including curves and switches, clearances, principal dimensions, details of structural connections, and all component details. Manufacturer's catalog data will suffice for items of standard manufacturer.
 - 2. Design Data: Structural design calculations.
 - 3. Test Reports
 - a. Hook and hook nut magnetic-particle tests.
 - b. Monorail system load tests
 - 4. Certificates: Manual hoist load chain
 - 5. Operation and Maintenance Data
 - a. Track beam system
 - b. Hoist and trolley
- D. Quality Assurance
 - 1. Certifications: Submit factory certification of load chain rated capacity.
 - 2. Design Data: Submit design calculations verifying the size of structural members, structural support fittings, rods, brackets, components, and lifting beams for the track beam system. The calculations shall include stress and loading diagrams. Submit calculations with monorail drawings.

1.2 PRODUCTS

- A. Fabrication And Construction: Provide manual hoist and trolley, ANSI/ASME HST-2M, ANSI/ASME HST-3M, trolley suspension. Trolley and wheels shall be suitable for operation on the steel monorail track beam provided, and shall have not less than four wheels.
 - 1. Capacity: The hoist shall have a minimum rated capacity as required to meet project requirements. The monorail system shall have a minimum rated capacity as required to meet project requirements.
 - 2. Hook Lift: Shall be the manufacturer's standard. The hoist lift shall be at its highest point a minimum of 8 feet (2400 mm) above the finished floor and at its lowest point a minimum of 2 feet (600 mm) below the finished floor.
 - 3. Hooks: Shall be of the safety type with hook nuts keyed to hook shanks by means of a setscrew installed in a plane parallel to the longitudinal axis of the hook shank, or by any other similar easily removable securing device. All hook components shall be magnetic-particle inspected over the entire area in accordance with ASTM A 275/A 275M. The acceptance standard shall be one of no defects. A defect is defined as a linear indication revealed by magnetic-particle

inspection that is greater than 1/8 inch (3 mm) long whose length is equal to or is greater than three times its width.

4. Trolley: Shall be designed to operate from track beam section. Where two or more hoists are located on the same monorail beam, the trolleys shall be equipped with rubber bumper devices designed to prevent contact of any part or parts of the hoists.
5. Load Chain: High strength steel links, flexible; minimum safety factor of 5 to 1 based on ratio of minimum chain breaking load to the calculated load on the chain when the hoist is assumed loaded to rated capacity. Certification from hoist manufacturer of provided chain's breaking strength shall be submitted to the Owner and approved prior to final acceptance of hoist. Do not paint or coat the load chain.
6. Load Hooks and Load Hook Components
 - a. Hook: Forged steel; complete with spring-loaded steel throat opening safety device. The hook shall be carried on suitably sealed or shielded anti-friction thrust bearings and shall swivel freely through 360 degrees rotation with full load without twisting chain.
 - 1) Disassembly. Hook and hook nut shall be capable of complete disassembly that enables access to all surfaces of the hook, including shank and hook nut for inspection purposes. Provision shall be made for the hook nut, or other hook-to-block fastener, to be keyed to hook shank by means of a set screw or similar, easily removable, securing device.
 - 2) Hook Non-Destructive Test. Each hook, including shank and hook nut, shall be inspected over the entire surface areas by magnetic particle inspection. If hook nut is not used, any device that functions the same as the hook nut shall be inspected by magnetic particle inspection.
 - a) Procedure: Magnetic particle inspection shall be conducted in accordance with ASTM A 275/A 275M. This inspection shall be conducted at the factory of the hook manufacturer or hoist manufacturer. Alternately, a recognized independent testing lab may conduct the inspections if equipped and competent to perform such a service, and if approved by the the Owner.
 - b) Acceptance Criteria: Defects found on the hook or hook nut shall result in rejection of defective items for use on furnished hoist. For this inspection, a defect is defined as a linear or non-linear indication for which the largest dimension is greater than 1/8 inch (3 mm). Weld repairs for defects on hook or hook nut will not be permitted.
 - c) Test Report: A test report of the magnetic particle inspection of each hook and hook nut provided shall be submitted to and approved by the the Owner prior to final acceptance of hoist installation. Test reports shall be certified by the testing organization.

B. Monorail Track Beam System: Comply with MMA MH27.1 except as modified and supplemented herein.

1. Patented Track: Provide specially designed trackage, e.g., patented track beam, curves, and switches constructed from welded steel components. The lower flange of the track section shall have flat wheel treads; minimum lower flange width of 3.25 inches (80 mm); chemical composition of 0.45 to 0.60 percent carbon content, 0.60 to 1.1 percent manganese content; and wheel treads shall be hardened to a minimum Brinell Hardness Number of 225. Upper flange and web of the track section shall be steel, continuously welded together or provided as one monolithic piece.
2. Track Suspension: Provide means of suspending the monorail track system, including curves and switches from the structural supports. The suspension system shall be the sole responsibility of the track supplier; however, design shall be subject to the requirements specified herein.
 - a. Cataloged Products: If possible, provide track manufacturer's standard cataloged devices for connection of the track to the indicated supporting structures. If track manufacturer's cataloged devices are not provided for this suspension system, complete shop drawings and calculations for the custom suspension device shall be submitted for review and approval by the the Owner. Track suspension devices which are not the track

- manufacturer's cataloged products shall meet the additional requirements specified in Division 05 Section "Metal Fabrications".
- b. Design: The suspension system shall be designed and constructed to ensure no impairment of the strength of track or the structural support. A hanger or suspension shall be located at each rack splice joint. Provide bracing to hold track sections in rigid alignment at all joints.
 - c. Suspension of Curves and Switches: Provide steel framing (structural supports), in addition to that indicated, as required by monorail curve and switch manufacturer to support curves and switches. The additional steel framing shall be the sole responsibility of the monorail supplier. Submit shop drawings and framing design calculations to the the Owner for approval.
 - d. Sway Bracing: Where the track is suspended from hanger rods, track shall be braced laterally and longitudinally to prevent sway.
 - e. Lock Nuts: Where the track is suspended from hanger rods, lock nuts or other means shall be provided to prevent the nuts from backing off the rods.
 - f. Multiple Suspension Devices: Where more than one suspension device attached to the track at a single point, the suspension devices shall be provided so that the loads shall be induced in each in proportion to the device's size.
3. Identification Plates: Provide identification plates of noncorrosive metal. Information and data on the plates shall include, in clearly legible permanent lettering, the manufacturer's name, model number, capacity rating, and other essential information. In addition, the monorail track beam system shall be furnished with identification plates showing the capacity of the system, which shall be legible from the floor and from either side of the monorail track beam.
- C. Painting Of System: Provide manufacturer's standard painting or shop painting of components specified in this section; comply with the requirements specified in Division 07. Do not paint, coat, or galvanize load chain, load, hook nut, or load chain sheave.

1.3 EXECUTION

- A. Erection And Installation: The Contractor shall erect and install the hoist trolley and monorail system in accordance with manufacturers written instructions, MMA MH27.1, and the contract drawings. The monorail supplier shall provide supervisory erection services. Welding new sections of monorail track to existing shall conform to AWS D1.1.
- B. Field Inspection And Tests
 1. Pre-Erection Inspection: Before erection, the Contractor and the manufacturer's representative shall jointly inspect the monorail and hoist systems and components at the job site to determine compliance with specifications and manufacturer's data and shop drawings as approved. The Contractor shall notify the the Owner 3 days before the inspection.
 2. Operational Inspection and Load Tests: Upon completion, and before final acceptance, the hoist, trolley, and monorail shall be given the rated load test specified in ASME/ANSI B30.11, carrying 125 percent (plus 5 percent, minus 0 percent) of the rated capacity, and with the units spaced to obtain maximum possible loads in the monorail track beam systems. Hoists shall hold a static, as well as control a dynamic, 125 percent rated load. The systems shall be thoroughly tested in service to determine that each component of the system operates as specified, is properly installed and adjusted, and is free from defects in material, manufacture, installation, and workmanship. The Contractor shall furnish test loads, operating personnel, instruments, and all other necessary apparatus at no additional cost to the Owner. The test and final adjustments of the equipment will be under the supervision of the Owner. The Contractor shall rectify any deficiencies found and completely retest work affected by such deficiencies.

33 05 23 13	01 22 16 00
33 05 23 16	01 22 16 00
33 05 26 00	01 22 16 00
33 11 00 00	33 11 00 00, 33 11 00 00
33 11 13 13	01 22 16 00, 22 05 23 00
33 11 13 23	01 22 16 00, 22 05 23 00, 22 11 23 39, 32 91 19 13
33 11 13 36	22 05 23 00, 22 11 23 39
33 11 13 39	22 05 23 00
33 11 13 53	01 22 16 00, 21 05 00 00
33 12 13 23	01 22 16 00, 22 05 23 00
33 12 16 00	01 22 16 00, 22 05 23 00, 22 05 23 00a, 22 05 23 00b
33 12 19 00	22 05 23 00
33 13 00 00	22 05 23 00
33 20 00 00	33 20 00 00, 33 20 00 00
33 21 13 00	01 22 16 00, 22 05 23 00, 22 11 23 39
33 26 00 00	22 05 23 00
33 30 00 00	33 30 00 00, 33 30 00 00
33 31 00 00	01 22 16 00, 22 05 23 00, 22 11 23 39, 32 91 19 13
33 32 16 13	01 22 16 00
33 36 00 00	33 36 00 00, 33 36 00 00
33 36 13 00	22 05 23 00, 32 91 19 13
33 36 33 00	32 91 19 13
33 39 13 00	01 22 16 00, 22 05 23 00
33 40 00 00	33 40 00 00, 33 40 00 00
33 41 13 00	22 05 23 00
33 42 16 13	33 42 16 13, 01 22 16 00, 22 05 23 00
33 44 13 13	22 05 23 00
33 44 16 00	22 05 23 00
33 44 19 19	33 44 19 19
33 46 13 00	33 46 13 00, 33 46 13 00
33 46 16 00	01 22 16 00, 22 05 23 00, 32 91 19 13
33 46 23 00	22 05 23 00
33 49 13 00	33 49 13 00, 33 49 13 00
33 51 00 00	33 51 00 00, 33 51 00 00
33 51 13 00	01 22 16 00, 22 05 23 00, 21 05 00 00, 23 11 23 00
33 51 33 00	22 05 23 00
33 71 73 00	33 71 73 00, 33 71 73 00
34 01 43 00	01 22 16 00
34 41 13 00	01 22 16 00
34 71 13 13	01 22 16 00

Task	Specification(s)
34 71 13 16	34 71 13 16, 34 71 13 16a
34 71 13 19	34 71 13 16
34 71 13 26	01 22 16 00, 34 71 13 16a
34 71 16 00	01 22 16 00, 34 71 13 16, 34 71 13 16a
34 82 23 00	01 22 16 00
34 82 26 00	01 22 16 00
40 05 13 19	22 05 23 00, 22 11 23 39, 21 05 00 00
40 05 13 83	21 05 00 00
40 05 23 43	22 05 23 00, 22 11 23 39, 21 05 00 00
40 05 41 00	21 05 00 00
41 01 20 00	41 01 20 00
41 22 23 13	41 22 23 13, 41 22 23 13a, 41 01 20 00, 26 05 19 23
43 21 16 00	22 05 23 00
43 21 33 00	01 22 16 00
43 21 36 00	22 05 23 00
43 41 31 00	01 22 16 00
