THIS PAGE INTENTIONALLY LEFT BLANK

01 General Requirements

01 10 00 00	SUMMARY OF WORK
01 11 04 00	CONTRACT DOCUMENTS
01 22 16 00	No Specification Required
01 23 00 00	ALTERNATES
01 32 00 00	CONSTRUCTION PROGRESS DOCUMENTATION
01 32 33 00	LEED Requirements
01 33 00 00	SUBMITTAL PROCEDURES
01 35 43 00	ENVIRONMENTAL PROCEDURES**
01 40 00 00	QUALITY REQUIREMENTS
01 50 00 00	TEMPORARY FACILITIES AND CONTROLS
01 60 00 00	PRODUCT REQUIREMENTS
01 71 23 16	Cutting and Patching
01 73 00 00	EXECUTION
01 74 19 00	CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL
01 77 04 00	CLOSEOUT PROCEDURES AND TRAINING
01 91 13 00	GENERAL COMMISSIONING REQUIREMENTS

02 Existing Conditions

02 26 23 00	R&A ASBESTOS LABORATORY ANALYSIS REPORT
02 41 00 00	R&A ROOF REMOVAL AND SUBSTRATE PREPARATION
02 41 13 00	CSF SELECTIVE SITE DEMOLITION**
02 41 13 13	Portland Cement Concrete Removal
02 41 19 00	CSF SELECTIVE STRUCTURE DEMOLITION**
02 82 00 00	Removal Of Friable Asbestos-Containing Materials
02 82 33 00	R&A REMOVAL AND DISPOSAL OF NON-FRIABLE ACM
02 85 00 00	Mold Remediation

03 Concrete

03 01 50 00	R&A CONCRETE ROOF DECK REPAIR
03 10 00 00	MPF CONCRETE FORMING AND ACCESSORIES**
03 10 00 00	CSF CONCRETE FORMING AND ACCESSORIES**
03 20 00 00	CSF CONCRETE REINFORCEMENT**
03 20 00 00	MPF CONCRETE REINFORCEMENT**
03 30 00 00	CSF CAST-IN-PLACE CONCRETE**
03 30 00 00	MPF CAST-IN-PLACE CONCRETE**
03 41 16 00	Precast Lightweight Roof Slabs
03 41 26 00	Unbonded Post-Tensioned Concrete
03 47 13 00	MPF TILT-UP CONCRETE**
03 47 13 00	CSF TILT-UP CONCRETE**
03 51 13 00	R&A CEMENTITIOUS WOOD FIBER ROOF DECK REPAIR AND REPLACEMENT
03 51 16 00	R&A GYPSUM CONCRETE ROOF DECK REPAIR/REPLACEMENT
03 51 16 00a	Gypsum Plank Decking
03 51 16 00b	Gypsum Concrete Decks
03 52 16 00	R&A LIGHTWEIGHT INSULATING CONCRETE REPAIR AND REPLACEMENT

04 Masonry

04 01 20 51	Clay Masonry Restoration And Cleaning
04 01 40 52	Stone Restoration And Cleaning
04 01 40 91	Stone Masonry
04 05 13 26	Unit Masonry Assemblies
04 05 14 00	CSF MASONRY MORTARING AND GROUTING
04 05 14 00	MPF MASONRY MORTARING AND GROUTING
04 05 26 00	Scaffolding Tubular Steel
04 21 00 00	CSF CLAY UNIT MASONRY
04 22 00 00	MPF CONCRETE UNIT MASONRY

04 22 00 00 CSF CONCRETE UNIT MASONRY

05 Metals

05 12 00 00 MPF STRUCTURAL STEEL FRAMING
05 12 00 00 CSF STRUCTURAL STEEL
05 21 00 00 MPF STEEL JOIST FRAMING
05 21 00 00 CSF STEEL JOIST FRAMING
05 31 00 00 MPF STEEL DECKING**
05 31 00 00 CSF STEEL DECKING
05 31 23 00 R&A STEEL ROOF DECK REPAIR AND REPLACEMENT
05 40 00 00 MPF COLD-FORMED METAL FRAMING
05 40 00 00 CSF COLD-FORMED METAL FRAMING
05 50 00 00 CSF METAL FABRICATIONS**
05 50 00 00 MPF METAL FABRICATIONS**
05 52 13 00 CSF PIPE AND TUBE RAILINGS
05 52 13 00 MPF PIPE AND TUBE RAILINGS
05 53 13 00 Gratings
05 58 16 00 Ornamental Formed Metal

06 Wood, Plastics, and Composites

06 01 20 91 Wood Restoration
06 05 73 33 Wood Decking
06 10 00 00 CSF ROUGH CARPENTRY
06 10 53 00 R&A MISCELLANEOUS ROUGH CARPENTRY FOR ROOF REPLACEMENT
06 15 16 00 R&A WOOD ROOF DECK REPAIR AND REPLACEMENT
06 16 23 00 Sheathing
06 17 53 00 CSF SHOP-FABRICATED WOOD TRUSSES**
06 20 00 00 CSF FINISH CARPENTRY**
06 25 16 00 Paneling
06 41 16 00 MPF PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS**
06 42 19 00 Plastic Paneling
06 51 13 00 Plastic Lumber
06 51 13 00a Composite Plastic Lumber
06 51 13 00b Structural Plastic Lumber
06 74 13 00 Pultruded Fiberglass Industrial Grating
06 81 13 00 Pultruded Fiberglass Structural Shapes

07 Thermal And Moisture Protection

07 01 51 00 R&A BITUMINOUS ROOFING REPAIR
07 01 52 00 R&A SINGLE-PLY ROOFING REPAIR
07 11 13 00 CSF BITUMINOUS DAMPPROOFING
07 19 00 00 CSF WATER REPELLENTS
07 21 00 00 MPF THERMAL INSULATION
07 21 00 00 CSF THERMAL INSULATION**
07 22 15 00 R&A INSULATION UNDERLAYMENT FOR ROOF REPLACEMENT
07 22 21 00 R&A ROOF INSULATION AND COVER BOARD OVER INSULATION UNDERLAYMENT
07 22 23 00 R&A ROOF INSULATION AND COVER BOARD OVER STEEL AND WOOD ROOF DECKS
07 24 13 00 Water-Drainage Exterior Insulation and Finish System (EIFS)
07 31 00 00 CSF SHINGLES AND SHAKES
07 31 13 00 R&A ASPHALT SHINGLE ROOFING
07 31 33 00 Composite Rubber Shingles
07 41 13 00 CSF METAL ROOF PANELS
07 46 00 00 CSF SIDING
07 46 16 00 Metal Wall Panels
07 46 16 00a Metal Plate Wall Panels
07 46 63 00 Insulated-Core Metal Wall Panels
07 51 13 00 CSF BUILT-UP ASPHALT ROOFING**

07 51 13 00	R&A BUILT-UP ASPHALT ROOFING

SECTION 01 10 00 00 - SUMMARY OF WORK

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

PART 1 - GENERAL

1.1 SCOPE

- A. The [Contractor – used in DDB, DB or R&A] or [Landlord – used in NCL] must provide all material, labor, tools, plant, supplies, equipment, transportation, superintendence, temporary construction of every nature, and all other services and facilities necessary to complete the construction of a postal facility for the Postal Service, including all incidental work described in the contract documents. [Insert the following in NCL projects - For purposes of this construction project, the terms "Landlord", "Lessor", "Owner", "Offeror", and "Contractor" are interchangeable and refer to the party whose proposal is accepted by the Postal Service. It is the Landlord's sole responsibility to clarify design and construction responsibilities among the Landlord's designers, contractors and other agents.]
- B. The scope of work is attached to the Contract.
- C. All work shall be in accordance with applicable codes and local regulations that may apply. In case of conflict in or between the Contract Documents and a governing code or ordinance, the more stringent standard shall apply.

NOTE TO SPECIFIER

Delete "Postal Service Furnished - Contractor Installed Equipment" paragraph if not applicable to Project.

1.2 POSTAL SERVICE FURNISHED – CONTRACTOR INSTALLED EQUIPMENT

- A. The Postal Service will furnish to the Contractor the equipment to be incorporated or installed in the work as identified in the Scope, Specifications, and/or drawings.
- B. The Contractor will complete the Postal Service Furnished – Contractor Installed Equipment form found in Attachment A, identifying quantities and desired delivery dates.
- C. Scheduling and installation must be in accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Postal Service Property*.

1.3 MISCELLANEOUS CONTRACT EXPENSES

NOTE TO SPECIFIER

Complete as required for specific project.

- A. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Permits and Responsibilities* and, *Building Codes, Fees and Charges*, the Contractor must include in its price proposal a separate line item for the cost each of the following fees or charges payable to State, local, or special community development agencies:
Water service connection and meter fee

Electrical company required fees	_____
Telephone company required fees	_____
Off-site inspection fees	_____
Sanitary sewer connection fee	_____
Environmental Permits/Registrations	_____
Other permits or fees	_____

- B. If the actual cost of any item identified above is more or less than the amount listed, the contract price will be adjusted accordingly by a contract modification. The adjustment will not include overhead and profit. The Contractor must, within 30 days after incurring the expenses, inform the Contracting Officer that the payment has been made. Evidence of the actual amount paid must be provided. The contract amount will be adjusted upward or downward as necessary to accommodate actual charges from the utilities. The Contractor must provide all coordination with the utilities in accomplishing their work and must make all payments to the utilities for their work.
- C. The Contractor must include all additional fees, as required, in the price proposal.

1.4 USPS DIRECT VENDOR EQUIPMENT OR SUPPLIES

- A. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning, *Direct Vendor / Pre-selected Sources*, the Contractor is solely responsible for contracting with the Direct Vendor and ordering, payment, receiving, accepting, storage and installation of United States Postal Service Direct Vendor equipment or supplies. Ordering instructions are included in each specification section.
- B. The Contractor will off-load, inspect the delivered equipment or supplies to make sure they are in good condition, acknowledge receipt, and accept the delivered goods.

NOTE TO SPECIFIER

Edit the list of Direct Vendor items to reflect project requirements.

- C. Direct Vendor items in this contract are limited to specific items, as shown in the drawings and listed below:
1. Section 083614 – Sectional Knockout Doors
 2. Section 083800 - Traffic Doors
 3. Section 101404 - Postal Signage
 4. Section 111304 - Dock Lift (Scissors Type)
 5. Section 123504 - Postal Casework
 6. Section 282305 - Integrated Security and Investigative Platform (ISIP) CCTV System

1.5 USPS PRE-APPROVED VENDOR EQUIPMENT OR SUPPLIES

- A. The Contractor is solely responsible for contracting with the Pre-Approved Vendor and ordering, payment, receiving, accepting, storage and installation of United States Postal Service Pre-Approved Vendor equipment or supplies. Ordering instructions are included in each specification section.
- B. The Contractor will off-load, inspect the delivered equipment or supplies to make sure they are in good condition, acknowledge receipt, and accept the delivered goods.

NOTE TO SPECIFIER

Edit the list of Pre-Approved Vendor items to reflect project requirements.

- C. Pre-Approved Vendor items in this contract are limited to specific items, as shown in the drawings and listed below:
1. Section 083500 - Folding Doors and Grilles

1.6 MISCELLANEOUS EQUIPMENT CROSS-REFERENCE LIST

- A. The following table is a cross-reference for equipment that may be shown in the drawings. The Contractor is solely responsible for ordering, payment, receiving, accepting, storage and installation of the equipment or supplies as specified in each specification section. USPS Standards for Facility Accessibility Handbook RE-4 supersedes standards in question of conflict.

Equipment Number	Description	Specification Section
E300	Parcel Lockers 1'-3"	105526
E302	Parcel Lockers 2'-0"	105526
E401	Standard Clerk Workstation (Base Unit Only). Square Post (For Non-POS & POS Locations)	123504
	Kit, 5-Drawer w/ 2-Drawer Inserts (For Non-POS Locations Only)	123504
	Kit, 2-Stamp Drawers w/ 1 insert, Closure Panel (For POS Locations Only)	123504
E402	Accessible Counter Add-On, Option "A." 32" Wide, 34" High (For Non-POS & POS Locations)	123504
E403	Clerk Workstation w/ Accessible Option "B." 84" Wide, 34" High (COMPLETE UNIT with 36" HC counter - Same for both NON-POS & POS Locations)	123504
E404	Clerk Workstation w/ Accessible Option "C." 72" Wide, 34" High (COMPLETE UNIT with 24" HC counter - Same for both NON-POS & POS Locations)	123504
E406	Pedestrian Guidance Barrier	111414
E506	Employees Lockers	105113
E511	Fire Extinguisher	104400
E512	Office ladder	124104
E530	Window Blinds	122000
E531	Bench	105113

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

USPS Specification issued: 10/1/2013

Postal Service Furnished – [Contractor] [Landlord] Installed Equipment					
Equipment Number	Postal Service Identification Number (PSIN)	Description	Quantity	Desired Delivery Dates	
				After	Before
	Facilities Items				
	0830	Vestibule Door Chain(s)			
	0831	Vestibule Padlock(s)			
	01032	Wire Basket (used as a retainer in conjunction with item 1807, Letter Drop Panel)	*		
	0912B	Cylinder for Corridor Doors opening directly into Inspector's private office within Inspection Suite; Evidence Storage; Interview Rooms.			
	0912C	Cylinder for Corridor Doors opening directly into Inspector's reception office; on all Inspector's Offices if not accessible through interconnecting doors.			
	0912D	Cylinder, Interior Lookout Gallery Doors			
	0931AHL	Left Hand Cylinder for exterior doors to Inspection Offices and/or entrance doors from public spaces to LOG and/or exterior doors to LOG.			
	0931AHR	Right Hand Cylinder for exterior doors to Inspection Offices and/or entrance doors from public spaces to LOG and/or exterior doors to LOG.			
	C1864	Glow light for Lookout Gallery			
	Retail Items				
E101	1577D	Letter Drop Unit			
E301	1809/1810	Rack Assembly and Cover (shipped as one unit)			
	1811	Post Office Box Side Trim (For 1800 and 1900 series)			
	1812A	Post Office Box Trim Strip, Lower (standard length, cut to fit)			
	1812B	Post Office Box Trim Strip, Upper (standard length, cut to fit)			
	1814	Letter Drop Plate			
	2901	No. 1 Assembly, 12 #1 Post Office Boxes Modules	*		
	2902	No. 2 Assembly, 8 #2 Post Office Boxes Modules	*		
	2903	No. 3 Assembly, 4 #3 Post Office Boxes Modules	*		
	2904	No. 4 Assembly, 2 #4 Post Office Boxes Drawer Modules	*		
	2905	No. 5 Assembly, 1 #5 Post Office Boxes Drawer Module	*		
E502		Key Case Wall Mount			
	Miscellaneous Items				
	None	Impact Cones (mechanization)	*		
	None	Extendible Conveyor (mechanization)	*		
	None	PSDS Cable (linear feet)	*		
	None	Floor Scale Cable (linear feet)	*		
	None	10 feet, 61 Conductor Cable, Female Drop	*		
	None	15 feet, 61 Conductor Cable, Female Drop	*		
	None	10 feet, 61 Conductor Cable, Male Drop	*

Equipment Number	Postal Service Identification Number (PSIN)	Description	Quantity	Desired Delivery Dates	
				After	Before
	None	15 feet, 61 Conductor Cable, Male Drop	*		
	None	PSDS Scales and Auxiliary Equipment			

The [Contractor] [Landlord] is responsible for determining equipment quantities and the desired delivery dates and providing them to the contracting officer within 45 days of Notice to Proceed. The [Contractor] [Landlord] is responsible for assembling and installing this equipment. Note that certain equipment not listed above, such as security containers, carrier cases and mail processing equipment, may be furnished and installed by USPS. Guidance may be requested from the contracting officer.

*: The [Contractor] [Landlord] shall request this information from the Contracting Officer Representative (COR) before completing and submitting this form.

** No PSIN# provided for this equipment. Contact Supplies Material Management, Topeka for order information.

SECTION 01 11 04 00 - CONTRACT DOCUMENTS

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

1.1 General

- A. The contract documents consist of the items included, or attached and incorporated by reference, in Section B, The Contract, B. 1500, *Attachments*.

NOTE TO SPECIFIER

Select Paragraph above or below for New Construction Leased (NCL) type projects.

- A. The contract documents consist of the items included, or attached and incorporated by reference, in the Lease, including General Conditions to USPS Lease and Construction Rider.

1.2 Drawing List

- A. The contract drawings consist of the items included, or attached and incorporated by reference, in Section B, The Contract, B. 1500, *Attachments*.

NOTE TO SPECIFIER

Select Paragraph above or below New Construction Leased (NCL) type projects.

- A. The contract documents are listed in the Construction Rider.

NOTE TO SPECIFIER

Select Paragraph above or below as most appropriate for project.

B.	1	Drawing number	Date	Title
		[]	[]	[]
		[]	[]	[]

SECTION 01 23 00 00 - ALTERNATES

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. No parts of this section shall be excluded or revised. The regulatory requirements and/or protection are not to be compromised or forfeited.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN & CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 – GENERAL**1.1 SUMMARY**

- A. Section includes: Alternates to be submitted to U.S. Postal Service with Proposal.
 - 1. Submission procedures.
 - 2. Documentation of changes to Contract Sum/Price and Contract Time.
- B. Related Documents: The Contract Documents, as defined in Section 011004 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 DEFINITIONS

- A. Alternate: The net amount to be added to or deducted from the Base Proposal Price for work identified in Schedule of Alternates.

1.3 SUBMISSION REQUIREMENTS

- A. Extent of Alternates:
 - 1. Determine the full extent of Work affected by proposed Alternates.
 - 2. Coordinate related work and modify surrounding work to integrate the Work of each Alternate.
 - a. Include as part of each Alternate, miscellaneous devices, accessory objects and similar items incidental to or required for a complete installation whether or not mentioned as part of the Alternate.
- B. Submission Form: Complete Schedule of Alternates below and attach to Proposal.
 - 1. Substitutions are permitted unless prohibited by a relevant specification section for that product or material. Submit a request for substitution for any manufacturer not named in accordance with Section 016000 - Product Requirements.
- C. Schedule: The Alternates consist of the items included, or attached and incorporated by reference in Section B, The Contract, B. 1500 Attachments. Specification Sections referenced in the Schedule contain requirements for materials and methods necessary to achieve the Work described under each Alternate.
 - 1. Alternates describe environmental requirements.
 - 2. Conform to Contract Documents for requirements for performance, appearance, workmanship and materials not modified under the Alternate Bids.

1.4 SELECTION AND AWARD OF ALTERNATES

- A. Acceptance or Rejection: Alternates quoted on Schedule of Alternates and attached to Proposal will be reviewed and accepted or rejected at the USPS's option. None, any, or all Alternates may be accepted or rejected by U.S. Postal Service.
- B. Accepted Alternates will be identified in the Contract.
- C. Some Alternates and respective pricing will survive the Contract and will remain valid for the period stated in the Schedule of Alternates below.

NOTE TO SPECIFIER

Edit alternates below by adding and/or deleting alternates for the specific conditions and requirements of the project site. Some items are listed as alternates rather than in the base proposal because only one product source is known at this time.

1.5 SCHEDULE OF ALTERNATES

- A. Alternate Number 1: [EXAMPLE} State the amount to be added to or deducted from the Base Proposal Price if in lieu of securing the formwork to slab on grade using screws, as required by Specification Section 034713-1.6B, the formwork is secured on the slab on grade using adhesive. This Alternate will remain valid until submittal and approval of product data, shop drawings and calculations (This example limits the time to the shop drawing approval date. Another way to state the time is "This Alternate will remain valid every 90 days or yearly, whatever is reasonable for the commodity until the period of performance ends".)

Add: _____ dollars, or Deduct: _____ dollars.

END OF SECTION 01 23 00 00

SECTION 01 32 00 00 - CONSTRUCTION PROGRESS DOCUMENTATION

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Design-Bid-Build (DBB), New Construction type projects. Modify as needed for project specific requirements.

NOTE TO SPECIFIER

Include Construction Progress Chart only if listed in Block 9 of Page 1 – Offer and Award (Select for smaller, less complex projects where a simple bar chart is sufficient). Modify as required for specific project scope.

1.1 Scheduling Work

- A. Before any of the work is started, the Contractor must confer with the COR and agree on a sequence of procedures: means of access to premises and building; delivery of materials and use of approaches; use of corridors, stairways, elevators, and similar means of communication; and the location of partitions, eating spaces for Contractor's employees, and the like.
- B. No work can be done during the holiday mailing season between [] and [] [November 15 and January 5] without written permission from the COR.
- C. No work can be scheduled between the hours of [] and [], in the [] area without written permission from the COR.

1.2 Construction Progress Chart

- A. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Construction Progress Chart*, prepare and submit a progress chart within five (5) days after receipt of the Notice to Proceed to show the principal categories of work corresponding with those used in the Schedule of Values:
 1. The order in which the Contractor proposes to carry on the work.
 2. The date on which it will start each category of work.
 3. The contemplated dates for completion.
- B. The chart must be in suitable scale to indicate graphically the total percentage of work scheduled to be in place at any time. At intervals as directed by the COR the Contractor must:
 1. Adjust the chart to reflect any changes in the contract work.
 2. Enter on the chart the total percentage of work actually in place.
 3. Submit six (6) copies of the chart to the Contracting Officer or their designated representative.

NOTE TO SPECIFIER

Include analysis requirements for Mail Processing Facilities (MPF) and other large, complex facilities only. Otherwise, omit it.

1.3 Contractor-Prepared Network Analysis System - Include Contractor-Prepared Network Analysis System only if listed in Block 9 of Page 1 – Offer and Award. Modify as required for specific project scope.

- A. Prepare a Network Analysis System in accordance with the terms and conditions of the contract provisions and clauses concerning *Network Analysis System and Update*, to include, at a minimum, the elements described below. In preparation of this system, the scheduling of construction is the responsibility of the Contractor. The requirement for the system is included to ensure adequate planning and execution of the work and to assist the COR in appraising the reasonableness of the proposed schedule and evaluating progress of the work. The system must consist of diagrams and accompanying mathematical analyses.
- B. Diagrams must show the order and interdependence of activities and the sequence in which the work is to be done as planned by the Contractor. The basic concept of a network analysis diagram must be followed to show how the start of a given activity is dependent on the completion of preceding activities and its completion restricts the start of the following activities. In all cases, the project completion date must be shown on the diagrams as the latest completion date of all activities.
- C. The detailed network activities must include, in addition to construction activities, the submittal and approval of samples of materials and shop drawings, the procurement of critical materials and equipment, and the fabrication of special materials and equipment and their installation and testing. All activities of the Postal Service that affect progress and dates required by the contract for completion of all or parts of the work must be shown. The activities that compose the following separate buildings and features must be separately identifiable by coding or use of sub-networks or both.

Building or Feature	Minimum Number of Activities
Mail Processing Building	250
Customer Service Building	100
Site Work	70
Mechanization	50
Vehicle Maintenance Building	40

- D. The selection and number of activities are subject to the COR's approval. Detailed networks must be drafted to show a continuous flow from left to right, with no arrows from right to left. The following information must be shown on the diagram for each activity, preceding the following event numbers: description of the activity, cost, activity duration, and workforce requirements in workdays.
- E. A summary bar chart must be provided on a 30-inch x 42-inch sheet, consisting of a minimum of 30 activities and based on and supported by detailed diagrams. The summary bar chart must be time-scaled, using units of approximately one-half inch to equal 1 week, or other suitable scale approved by the COR. Weekends and holidays must be indicated.
- F. Mathematical Analysis
1. The mathematical analysis of the network diagram must include a tabulation of each activity. The following information must be furnished as a minimum for each activity:
 - a. Numbers of preceding and following events.
 - b. Activity description.
 - c. Estimated duration of activities in days.
 - d. Earliest finish date.
 - e. Actual start date.
 - f. Actual finish date.
 - g. Latest start date.
 - h. Latest finish date.
 - i. Slack or float.
 - j. Monetary value of activity, with a labor and material cost breakdown.
 - k. Percentage of activity completed.
 - l. Contractor's earnings based on the portion of activity completed.
 - m. Workforce requirements in workdays.

2. The program or means used in making the mathematical computation must be capable of compiling the total value of completed and partially completed activities and subtotals from separate buildings or features.
 3. The analysis must list the activities in sorts or groups as follows:
 - a. By the preceding event number, from lowest to highest, then in the order of the following event number.
 - b. By the amount of slack, then in order of preceding event number.
 - c. By responsibility in order of earliest allowance start date.
 - d. In order of latest allowable start dates, then in order of preceding event numbers, then in order of succeeding even numbers.
- G. Submission and approval of the system must be as follows:
1. A preliminary network defining the Contractor's planned operations during the first 90 days after receipt of a Notice to Proceed must be submitted at the preconstruction conference after receipt of a Notice to Proceed.
 2. The complete network analysis, consisting of the detailed network mathematical analysis, schedule of anticipated earnings as of the last day of each month, and network diagrams, must be submitted within 30 days after receipt of Notice to Proceed.

NOTE TO SPECIFIER

Include the submission and approval requirements above and delete the paragraph below for MPF and other large, complex facilities. For all other projects, delete the submission and approval requirements above and include the paragraph below.

- H. Submission and approval of the system must be as follows:
1. A preliminary network defining the Contractor's planned operations must be submitted at the preconstruction conference after receipt of a Notice to Proceed.
 2. The complete network analysis must be submitted within 30 days after receipt of Notice to Proceed.

NOTE TO SPECIFIER

Include the paragraph below for MPF and other large, complex facilities only. Otherwise, omit it.

- I. The Contractor must participate in a review and evaluation of the proposed network diagrams and analysis by the COR. Any revisions necessary as a result of this review must be resubmitted for approval of the COR within ten calendar days after the conference. The approved schedule must then be the schedule to be used by the Contractor for planning, organizing, and directing the work, reporting progress, and requesting payment for work accomplished. Thereafter, if the Contractor desires to make changes in its method of operating and scheduling, the Contractor must notify the COR in writing stating the reasons for the change. If the COR considers these changes to be major, the COR may require the Contractor to revise and submit for approval, without additional cost to the Postal Service, all of the affected portions of the detailed diagrams and mathematical analysis to show the effect on the entire project. A change may be considered major if the time estimated to be required or actually used for an activity, or the logic of the sequence of activities varies from the original plan to a degree that there is a reasonable doubt as to its effect on contract completion dates. Changes that affect activities with adequate slack time must be considered minor, except that an accumulation of minor changes may be considered a major change when their cumulative effect might affect the contract completion date.
- J. The Contractor must submit at monthly intervals a report of actual construction progress by updating the mathematical analysis. Entering updated information into the mathematical analysis is subject to the approval of the COR.
- K. The report must show the activities or portion of activities completed during the reporting period and their total value as a basis for the Contractor's periodic request for payment. Payments made under the terms and conditions of the contract provisions and clauses, including those concerning *Payment*

(*Construction*), must be based on the total value of the activities or of partially completed activities after verification by the COR. The report must state the percentage of the work actually completed and scheduled on the report date and the progress along the critical path in terms of days ahead or behind the allowable dates. If the project is behind schedule, progress along other paths with negative slack must also be reported. The Contractor must also submit a narrative report with the updated analysis, which must include, but is not limited to, a description of the problem areas, current and anticipated delaying factors and their impact, and an explanation of corrective actions taken or proposed.

- L. The sheet size of diagrams must be 30 inches x 42 inches. Each updated copy must show the date of the latest revision.
- M. Initial submittal and complete revisions must be submitted in three copies.
- N. Periodic reports must be submitted in two copies.
- O. Network analysis system revisions occurring as a result of modifications or changes in the work must be in accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Network Analysis Systems and Update*.
- P. Float or slack is defined as the amount of time between the early start date and the late start date of any of the activities in the network analysis system schedule. Float or slack time is not time for the exclusive use or benefit of either the Postal Service or the Contractor. Extensions of time for performance required under the terms and conditions of the contract provisions and clauses, including those concerning *Changes; Differing Site Conditions; Termination for Convenience or Default; Excusable Delays; or Suspensions and Delays* may be granted only to the extent that equitable time adjustments for the activity or activities affected exceed the total float or slack along the channels involved at the time that Notice to Proceed was issued for the change.

USPS Specification issued: 10/1/2013

Last revised: 4/16/2013

END OF SECTION 01 32 00 00

SECTION 01 32 33 00 - LEED REQUIREMENTS**1.1 GENERAL****A. Summary**

1. Section includes general requirements and procedures for compliance with certain USGBC LEED prerequisites and credits needed for Project to obtain LEED –Certified **OR** Silver **OR** Gold **OR** Platinum, **as directed**, certification based on LEED-NC, Version 2.2 **OR** LEED-CI, Version 2.0, **as directed**.
 - a. Other LEED prerequisites and credits needed to obtain LEED certification depend on material selections and may not be specifically identified as LEED requirements. Compliance with requirements needed to obtain LEED prerequisites and credits may be used as one criterion to evaluate substitution requests and comparable product requests.
 - b. Additional LEED prerequisites and credits needed to obtain the indicated LEED certification depend on design and other aspects of Project that are not part of the Work of the Contract.

B. Definitions

1. Chain-of-Custody Certificates: Certificates signed by manufacturers certifying that wood used to make products was obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship." Certificates shall include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
2. LEED: Leadership in Energy & Environmental Design.
3. Rapidly Renewable Materials: Materials made from plants that are typically harvested within a 10-year or shorter cycle. Rapidly renewable materials include products made from bamboo, cotton, flax, jute, straw, sunflower seed hulls, vegetable oils, or wool.
4. Regional Materials (for LEED-NC): Materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site. If only a fraction of a product or material is extracted/harvested/recovered and manufactured locally, then only that percentage (by weight) shall contribute to the regional value.
5. Regionally Manufactured Materials (for LEED-CI): Materials that are manufactured within a radius of 500 miles (800 km) from Project site. Manufacturing refers to the final assembly of components into the building product that is installed at Project site.
6. Regionally Extracted and Manufactured Materials (for LEED-CI): Regionally manufactured materials made from raw materials that are extracted, harvested, or recovered within a radius of 500 miles (800 km) from Project site.
7. Recycled Content (for LEED-NC): The recycled content value of a material assembly shall be determined by weight. The recycled fraction of the assembly is then multiplied by the cost of assembly to determine the recycled content value.
 - a. "Post-consumer" material is defined as waste material generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product, which can no longer be used for its intended purpose.
 - b. "Pre-consumer" material is defined as material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.
8. Recycled Content (for LEED-CI): The percentage by weight of constituents that have been recovered or otherwise diverted from the solid waste stream, either during the manufacturing process (pre-consumer), or after consumer use (post-consumer).
 - a. Spills and scraps from the original manufacturing process that are combined with other constituents after a minimal amount of reprocessing for use in further production of the same product are not recycled materials.

- b. Discarded materials from one manufacturing process that are used as constituents in another manufacturing process are pre-consumer recycled materials.

C. Submittals

1. General: Submit additional LEED submittals required by other Specification Sections.
2. LEED submittals are in addition to other submittals. If submitted item is identical to that submitted to comply with other requirements, submit duplicate copies as a separate submittal to verify compliance with indicated LEED requirements.
3. Project Materials Cost Data: Provide statement indicating total cost for building materials used for Project, excluding mechanical, electrical, and plumbing components, and specialty items such as elevators and equipment. Include statement indicating total cost for wood-based materials used for Project, **as directed**.
4. LEED Action Plans: Provide preliminary submittals within seven **OR 14 OR 30 OR 60, as directed**, days of date established for commencement of the Work **OR** the Notice to Proceed **OR** the Notice of Award, **as directed**, indicating how the following requirements will be met:
 - a. Credit MR 2.1 and Credit MR 2.2, **as directed**: Waste management plan complying with Division 01 Section "Construction Waste Management And Disposal".
 - b. Credit MR 3.1 and Credit MR 3.2, **as directed**: List of proposed salvaged and refurbished materials. Identify each material that will be salvaged or refurbished, including its source and cost.
 - c. Credit MR 4.1 and Credit MR 4.2, **as directed**: List of proposed materials with recycled content. Indicate cost, post-consumer recycled content, and pre-consumer recycled content for each product having recycled content.
 - d. Credit MR 5.1 and Credit MR 5.2 (for LEED-NC), **as directed**: List of proposed regional materials. Identify each regional material, including its source, cost, and the fraction by weight that is considered regional.
 - e. Credit MR 5.1 and Credit MR 5.2 (for LEED-CI), **as directed**: List of proposed regionally manufactured materials and regionally extracted and manufactured materials, **as directed**.
 - 1) Identify each regionally manufactured material, including its source and cost.
 - 2) For LEED-CI Credit MR 5.2, identify each regionally extracted and manufactured material, including its source and cost.
 - f. Credit MR 7: List of proposed certified wood products. Indicate each product containing certified wood, including its source and cost of certified wood products.
 - g. Credit EQ 3.1: Construction indoor-air-quality management plan.
5. LEED Progress Reports: Concurrent with each Application for Payment, submit reports comparing actual construction and purchasing activities with LEED action plans for the following:
 - a. Credit MR 2.1 and Credit MR 2.2, **as directed**: Waste reduction progress reports complying with Division 01 Section "Construction Waste Management And Disposal".
 - b. Credit MR 3.1 and Credit MR 3.2, **as directed**: Salvaged and refurbished materials.
 - c. Credit MR 4.1 and Credit MR 4.2, **as directed**: Recycled content.
 - d. Credit MR 5.1 and Credit MR 5.2 (for LEED-NC), **as directed**: Regional materials.
 - e. Credit MR 5.1 and Credit MR 5.2 (for LEED-CI), **as directed**: Regionally manufactured materials and regionally extracted and manufactured materials, **as directed**.
 - f. Credit MR 7: Certified wood products.
6. LEED Documentation Submittals:
 - a. Credit EA 5: Product data and wiring diagrams for sensors and data collection system used to provide continuous metering of building energy-consumption performance over time **OR** a period of time of not less than one year of postconstruction occupancy, **as directed**.
 - b. Credit MR 2.1 **OR** and Credit MR 2.2, **as directed**: Comply with Division 01 Section "Construction Waste Management And Disposal".
 - c. Credit MR 3.1 and Credit MR 3.2, **as directed**: Receipts for salvaged and refurbished materials used for Project, indicating sources and costs for salvaged and refurbished materials.

- d. Credit MR 4.1 and Credit MR 4.2, **as directed**: Product data and certification letter indicating percentages by weight of post-consumer and pre-consumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
- e. Credit MR 5.1 and Credit MR 5.2 (for LEED-NC), **as directed**: Product data for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
- f. Credit MR 5.1 and Credit MR 5.2 (for LEED-CI), **as directed**: Product data indicating location of material manufacturer for regionally manufactured materials. Include statement indicating cost for each regionally manufactured material and for each regionally extracted and manufactured material, **as directed**.
 - 1) Include statement indicating distance from manufacturer to Project for each regionally manufactured material.
 - 2) For LEED-CI Credit MR 5.2, include statement indicating location of and distance from Project to point of extraction, harvest, or recovery for each raw material used in regionally extracted and manufactured materials.
- g. Credit MR 7: Product data and chain-of-custody certificates for products containing certified wood. Include statement indicating cost for each certified wood product.
- h. Credit EQ 3.1:
 - 1) Construction indoor-air-quality management plan.
 - 2) Product data for temporary filtration media.
 - 3) Product data for filtration media used during occupancy.
 - 4) Construction Documentation: Six photographs at three different times during the construction period, along with a brief description of the SMACNA approach employed, documenting implementation of the indoor-air-quality management measures, such as protection of ducts and on-site stored or installed absorptive materials.
- i. Credit EQ 3.2:
 - 1) Signed statement describing the building air flush-out procedures including the dates when flush-out was begun and completed and statement that filtration media was replaced after flush-out.
 - 2) Product data for filtration media used during flush-out and during occupancy.
 - 3) Report from testing and inspecting agency indicating results of indoor-air-quality testing and documentation showing compliance with indoor-air-quality testing procedures and requirements.
- j. Credit EQ 4.1: Product data for adhesives and sealants used inside the weatherproofing system indicating VOC content of each product used. Indicate VOC content in g/L calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- k. Credit EQ 4.2: Product data for paints and coatings used inside the weatherproofing system indicating VOC content **OR** chemical composition and VOC content (for LEED-CI), **as directed**, of each product used. Indicate VOC content in g/L calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- l. Credit EQ 4.4: Product data for products containing composite wood or agrifiber products or wood glues indicating that they do not contain urea-formaldehyde resin.

D. Quality Assurance

- 1. LEED Coordinator: Engage an experienced LEED-Accredited Professional to coordinate LEED requirements. LEED coordinator may also serve as waste management coordinator.

1.2 PRODUCTS

A. Salvaged And Refurbished Materials

- 1. Credit MR 3.1: Provide salvaged or refurbished materials for 5 percent of building materials (by cost).

**OR**

Credit MR 3.1 and Credit MR 3.2: Provide salvaged or refurbished materials for 10 percent of building materials (by cost). Recycled Content Of Materials

2. Credit MR 4.1: Provide building materials with recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 10 percent of cost of materials used for Project.

OR

Credit MR 4.1 and Credit MR 4.2: Provide building materials with recycled content such that post-consumer recycled content plus one-half of pre-consumer recycled content constitutes a minimum of 20 percent of cost of materials used for Project.

- a. Cost of post-consumer recycled content of an item shall be determined by dividing weight of post-consumer recycled content in the item by total weight of the item and multiplying by cost of the item.
- b. Cost of post-consumer recycled content plus one-half of pre-consumer recycled content of an item shall be determined by dividing weight of post-consumer recycled content plus one-half of pre-consumer recycled content in the item by total weight of the item and multiplying by cost of the item.
- c. Do not include mechanical and electrical components in the calculation.

B. Regional Materials

1. Credit MR 5.1 (for LEED-NC): Provide 10 percent of building materials (by cost) that are regional materials.

OR

Credit MR 5.1 and Credit MR 5.2 (for LEED-NC): Provide 20 percent of building materials (by cost) that are regional materials.

2. Credit MR 5.1 (for LEED-CI): Provide 20 percent of building materials (by cost) that are regionally manufactured materials.
3. Credit MR 5.2 (for LEED-CI): Provide 10 percent of building materials (by cost) that are regionally extracted and manufactured materials.

C. Certified Wood

1. Credit MR 7: Provide a minimum of 50 percent (by cost) of wood-based materials that are produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
 - a. Wood-based materials include, but are not limited to, the following materials when made from wood, engineered wood products, or wood-based panel products:
 - 1) Rough carpentry.
 - 2) Miscellaneous carpentry.
 - 3) Heavy timber construction.
 - 4) Wood decking.
 - 5) Metal-plate-connected wood trusses.
 - 6) Structural glued-laminated timber.
 - 7) Finish carpentry.
 - 8) Architectural woodwork.
 - 9) Wood paneling.
 - 10) Wood veneer wall covering.
 - 11) Wood flooring.
 - 12) Wood lockers.
 - 13) Wood cabinets.
 - 14) Furniture (for LEED-CI).

D. Low-Emitting Materials

1. Credit EQ 4.1: For field applications that are inside the weatherproofing system, use adhesives and sealants that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

- a. Wood Glues: 30 g/L.
 - b. Metal to Metal Adhesives: 30 g/L.
 - c. Adhesives for Porous Materials (Except Wood): 50 g/L.
 - d. Subfloor Adhesives: 50 g/L.
 - e. Plastic Foam Adhesives: 50 g/L.
 - f. Carpet Adhesives: 50 g/L.
 - g. Carpet Pad Adhesives: 50 g/L.
 - h. VCT and Asphalt Tile Adhesives: 50 g/L.
 - i. Cove Base Adhesives: 50 g/L.
 - j. Gypsum Board and Panel Adhesives: 50 g/L.
 - k. Rubber Floor Adhesives: 60 g/L.
 - l. Ceramic Tile Adhesives: 65 g/L.
 - m. Multipurpose Construction Adhesives: 70 g/L.
 - n. Fiberglass Adhesives: 80 g/L.
 - o. Contact Adhesive: 80 g/L.
 - p. Structural Glazing Adhesives: 100 g/L.
 - q. Wood Flooring Adhesive: 100 g/L.
 - r. Structural Wood Member Adhesive: 140 g/L.
 - s. Special Purpose Contact Adhesive (contact adhesive that is used to bond melamine covered board, metal, unsupported vinyl, Teflon, ultra-high molecular weight polyethylene, rubber or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
 - t. Top and Trim Adhesive: 250 g/L.
 - u. Plastic Cement Welding Compounds: 350 g/L.
 - v. ABS Welding Compounds: 400 g/L.
 - w. CPVC Welding Compounds: 490 g/L.
 - x. PVC Welding Compounds: 510 g/L.
 - y. Adhesive Primer for Plastic: 650 g/L.
 - z. Sheet Applied Rubber Lining Adhesive: 850 g/L.
 - aa. Aerosol Adhesive, General Purpose Mist Spray: 65 percent by weight.
 - bb. Aerosol Adhesive, General Purpose Web Spray: 55 percent by weight.
 - cc. Special Purpose Aerosol Adhesive (All Types): 70 percent by weight.
 - dd. Other Adhesives: 250 g/L.
 - ee. Architectural Sealants: 250 g/L.
 - ff. Nonmembrane Roof Sealants: 300 g/L.
 - gg. Single-Ply Roof Membrane Sealants: 450 g/L.
 - hh. Other Sealants: 420 g/L.
 - ii. Sealant Primers for Nonporous Substrates: 250 g/L.
 - jj. Sealant Primers for Porous Substrates: 775 g/L.
 - kk. Modified Bituminous Sealant Primers: 500 g/L.
 - ll. Other Sealant Primers: 750 g/L.
2. Credit EQ 4.2: For field applications that are inside the weatherproofing system, use paints and coatings that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24) and the following chemical restrictions (for LEED-CI):
- a. For LEED-NC
 - 1) Flat Paints, Coatings, and Primers: VOC not more than 50 g/L.
 - 2) Nonflat Paints, Coatings, and Primers: VOC not more than 150 g/L.
 - 3) Anticorrosive and Antirust Paints Applied to Ferrous Metals: VOC not more than 250 g/L.
 - 4) Clear Wood Finishes, Varnishes: VOC not more than 350 g/L.
 - 5) Clear Wood Finishes, Lacquers: VOC not more than 550 g/L.
 - 6) Floor Coatings: VOC not more than 100 g/L.
 - 7) Shellacs, Clear: VOC not more than 730 g/L.
 - 8) Shellacs, Pigmented: VOC not more than 550 g/L.
 - 9) Stains: VOC not more than 250 g/L.
 - b. For LEED-CI
 - 1) Flat Interior Topcoat Paints: VOC not more than 50 g/L.

- 2) Nonflat Interior Topcoat Paints: VOC not more than 150 g/L.
- 3) Anticorrosive and Antirust Paints Applied to Ferrous Metals: VOC not more than 250 g/L.
- 4) Clear Wood Finishes, Varnishes and Sanding Sealers: VOC not more than 350 g/L.
- 5) Clear Wood Finishes, Lacquers: VOC not more than 550 g/L.
- 6) Floor Coatings: VOC not more than 100 g/L.
- 7) Shellacs, Clear: VOC not more than 730 g/L.
- 8) Shellacs, Pigmented: VOC not more than 550 g/L.
- 9) Stains: VOC not more than 250 g/L.
- 10) Primers, Sealers, and Undercoaters: VOC not more than 200 g/L.
- 11) Dry-Fog Coatings: VOC not more than 400 g/L.
- 12) Zinc-Rich Industrial Maintenance Primers: VOC not more than 340 g/L.
- 13) Pretreatment Wash Primers: VOC not more than 420 g/L.
- 14) Aromatic Compounds: Paints and coatings shall not contain more than 1.0 percent by weight total aromatic compounds (hydrocarbon compounds containing one or more benzene rings).
- 15) Restricted Components: Paints and coatings shall not contain any of the following:
 - a) Acrolein.
 - b) Acrylonitrile.
 - c) Antimony.
 - d) Benzene.
 - e) Butyl benzyl phthalate.
 - f) Cadmium.
 - g) Di (2-ethylhexyl) phthalate.
 - h) Di-n-butyl phthalate.
 - i) Di-n-octyl phthalate.
 - j) 1,2-dichlorobenzene.
 - k) Diethyl phthalate.
 - l) Dimethyl phthalate.
 - m) Ethylbenzene.
 - n) Formaldehyde.
 - o) Hexavalent chromium.
 - p) Isophorone.
 - q) Lead.
 - r) Mercury.
 - s) Methyl ethyl ketone.
 - t) Methyl isobutyl ketone.
 - u) Methylene chloride.
 - v) Naphthalene.
 - w) Toluene (methylbenzene).
 - x) 1,1,1-trichloroethane.
 - y) Vinyl chloride.
3. Credit EQ 4.4: Do not use composite wood or agrifiber products or adhesives that contain urea-formaldehyde resin.

1.3 EXECUTION

- A. Refrigerant And Clean-Agent Fire-Extinguishing-Agent Removal
 1. Prerequisite EA 3: Remove CFC-based refrigerants from existing HVAC&R equipment indicated to remain and replace with refrigerants that are not CFC based. Replace or adjust existing equipment to accommodate new refrigerant as described in Division 23.
 2. Credit EA 4: Remove clean-agent fire-extinguishing agents that contain HCFCs or halons and replace with agent that does not contain HCFCs or halons. See Division 21 Section "Clean-agent Fire Extinguishing Systems" for additional requirements.

B. Measurement And Verification

1. Credit EA 5: Implement measurement and verification plan consistent with Option B: Energy Conservation Measure Isolation **OR** Option D: Calibrated Simulation, Savings Estimation Method 2, **as directed**, in the EVO's "International Performance Measurement and Verification Protocol (IPMVP) Volume III: Concepts and Options for Determining Energy Savings in New Construction," the Owner.
2. If not already in place, install metering equipment to measure energy usage. Monitor, record, and trend log measurements.
3. Evaluate energy performance and efficiency by comparing actual to predicted performance.
4. Measurement and verification period shall cover at least one year of postconstruction occupancy.

C. Construction Waste Management

1. Credit MR 2.1 and Credit MR 2.2, **as directed**: Comply with Division 01 Section "Construction Waste Management And Disposal".

D. Construction Indoor-Air-Quality Management

1. Credit EQ 3.1: Comply with SMACNA's "SMACNA IAQ Guideline for Occupied Buildings under Construction."
 - a. If the Owner authorizes use of permanent heating, cooling, and ventilating systems during construction period as specified in Division 01 Section "Temporary Facilities And Controls", install filter media having a MERV 8 according to ASHRAE 52.2 at each return-air inlet for the air-handling system used during construction.
 - b. Replace all air filters immediately prior to occupancy.
2. Credit EQ 3.2: Comply with one of the following requirements:
 - a. After construction ends, prior to occupancy and with all interior finishes installed, perform a building flush-out by supplying a total volume of 14000 cu. ft. (4 300 000 L) of outdoor air per sq. ft. (sq. m) of floor area while maintaining an internal temperature of at least 60 deg F (16 deg C) and a relative humidity no higher than 60 percent.
 - b. If occupancy is desired prior to flush-out completion, the space may be occupied following delivery of a minimum of 3500 cu. ft. (1 070 000 L) of outdoor air per sq. ft. (sq. m) of floor area to the space. Once a space is occupied, it shall be ventilated at a minimum rate of 0.30 cfm per sq. ft. (1.52 L/s per sq. m) of outside air or the design minimum outside air rate determined in EQ Prerequisite 1, whichever is greater. During each day of the flush-out period, ventilation shall begin a minimum of three hours prior to occupancy and continue during occupancy. These conditions shall be maintained until a total of 14000 cu. ft./sq. ft. (4 300 000 L/sq. m) of outside air has been delivered to the space.
 - c. Air-Quality Testing:
 - 1) Conduct baseline indoor-air-quality testing, after construction ends and prior to occupancy, using testing protocols consistent with the EPA's "Compendium of Methods for the Determination of Air Pollutants in Indoor Air," and as additionally detailed in the USGBC's "LEED-NC" **OR** "LEED-CI", **as directed**: Reference Guide."
 - 2) Demonstrate that the contaminant maximum concentrations listed below are not exceeded:
 - a) Formaldehyde: 50 ppb.
 - b) Particulates (PM10): 50 micrograms/cu. m.
 - c) Total Volatile Organic Compounds (TVOC): 500 micrograms/cu. m.
 - d) 4-Phenylcyclohexene (4-PH): 6.5 micrograms/cu. m.
 - e) Carbon Monoxide: 9 ppm and no greater than 2 ppm above outdoor levels.
 - 3) For each sampling point where the maximum concentration limits are exceeded, conduct additional flush-out with outside air and retest the specific parameter(s) exceeded to indicate the requirements are achieved. Repeat procedure until all requirements have been met. When retesting noncomplying building areas, take samples from same locations as in the first test.
 - 4) Air-sample testing shall be conducted as follows:

- a) All measurements shall be conducted prior to occupancy but during normal occupied hours, and with building ventilation system starting at the normal daily start time and operated at the minimum outside air flow rate for the occupied mode throughout the duration of the air testing.
- b) Building shall have all interior finishes installed including, but not limited to, millwork, doors, paint, carpet, and acoustic tiles. Nonfixed furnishings such as workstations and partitions are encouraged, but not required, to be in place for the testing.
- c) Number of sampling locations will vary depending on the size of building and number of ventilation systems. For each portion of building served by a separate ventilation system, the number of sampling points shall not be less than one per 25,000 sq. ft. (2300 sq. m) or for each contiguous floor area, whichever is larger, and shall include areas with the least ventilation and greatest presumed source strength.
- d) Air samples shall be collected between 3 and 6 feet (0.9 and 1.8 m) from the floor to represent the breathing zone of occupants, and over a minimum four-hour period.

END OF SECTION 01 32 33 00

SECTION 01 33 00 00 - SUBMITTAL PROCEDURES

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

1.1 Schedule of Submittals

- A. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning Shop Drawings, Coordination Drawings, *Record "As Built" Drawings, and Schedules*; within 30 days after receiving a Notice to Proceed, the Contractor must complete the Schedule of Submittals, in the format indicated below, in duplicate, listing all items that must be furnished for review and approval by the Postal Service. The schedule must indicate the type of items (such as sample, shop drawings, catalog cut, and so forth) and include the scheduled dates of submittal. In preparing the schedule, adequate time (10 business days or more, exclusive of time in the mails) must be allowed for review and approval and possible resubmittal. Also, the schedule must be coordinated with the approved construction progress chart. The Contractor must revise and/or update the schedule as directed. Such revised schedules must be made available to the COR for monitoring.
- B. Within 30 days after receiving a Notice to Proceed, the Contractor must complete and submit to the COR a listing of all subcontractors, including subcontractor name, address, telephone number, fax number and email address. Include an updated list with each progress payment request.
- C. Schedule of Submittals Format

Contract No. _____

Project Description _____

Spec. Section	Spec. Description	Paragraph Number	*Submittal Type	Date		Action Taken	Assigned Number
				Submittal	Returned		

*Submittal Type:

C – Certificate

S – Sample

SD – Shop Drawing

CD – Catalog Data

PL – Spare Parts List

MM – Maintenance Manual

1.2 Shop Drawings and Related Data

- A. Submittal of shop drawings, samples and related data must conform to the requirements of the terms and conditions of the contract provisions and clauses, including those concerning, *Record "As Built" Drawings, and Samples*. Prior to submittal, the Contractor must stamp the submittal to indicate that it

has been reviewed and approved. The Contractor must make any corrections required by the COR. If the Contractor considers any correction indicated on the drawings to constitute a change to the contract drawings or specifications, notice, as required under the terms and conditions of the contract provisions and clauses, including those concerning Changes must be given to the COR. [Four] [] prints of all approved shop drawings must be given to the COR. The approval of the drawings by the COR must not be construed as a complete check but indicates only that the general method of construction and detailing is satisfactory. Approval of the shop drawings does not relieve the Contractor of responsibility for any error that may exist because the Contractor is responsible for the dimensions and design of adequate connections and details and for satisfactory construction of all work. The submission by the Contractor must be accompanied by a transmittal letter of a type approved by the COR.

1. Each shop drawing must have a blank area of 5 by 5 inches, located adjacent to the title block. The title block must display:
 - a. Number and title of drawing;
 - b. Date of drawing or revision;
 - c. Name of project building or facility;
 - d. Name of Contractor and (if appropriate) of subcontractor submitting drawing;
 - e. Clear identity of contents and location on the work; and
 - f. Project title and contract number.
2. All drawings to be provided shall be clear and fully representative of the facility and fixed mechanization work.
3. Drawing files to be in .dwg and .pdf formats. .dwg files to be generated from Autocad revision 12 or other revision level concurred by USPS.
4. Documents other than drawings shall be provided in MicroSoft Word format.
5. Interim project documentation may be provide to USPS electronically
6. All final project documentation shall be provided to the USPS on a single CD or DVD media

1.3 Equipment Room Layout Drawings

- A. The Contractor must prepare and submit equipment room layout drawings as required by the technical provisions as well as for areas where equipment proposed for use could present interface or space difficulties. Room layout drawings must be submitted within 40 days after receiving a Notice to Proceed and must conform to the specified requirements for shop drawings. Submittals describing the various mechanical and electrical equipment items that are to be installed in the areas represented by the layout drawings must be assembled and submitted concurrently and must be accompanied by the room layout drawings. Room layout drawings must be consolidated for all trades, to scale, and must show all pertinent structural and fenestration features and other items, such as cabinets, that are required for installation and that affect the available space. All mechanical and electrical equipment and accessories must be shown to scale in the plan and also in elevation or section in their installation positions. Ductwork and piping must be shown.

1.4 Material, Equipment, and Fixture Lists

- A. When required by the technical provisions, lists of materials, equipment, and fixtures must be submitted by the Contractor in accordance with the requirements specified for shop drawings. The lists must be supported by sufficient descriptive material, such as catalogs, cuts, diagrams, and other data published by the manufacturer, as well as by evidence of compliance with safety and performance standards, to demonstrate conformance to the specification requirements. Catalog numbers alone are not acceptable. The data must include the name and address of the nearest service and maintenance organization that regularly stocks repair parts. No consideration will be given to partial lists submitted from time to time. Approval of materials and equipment is tentative, subject to submission of complete shop drawings indicating compliance with the contract documents.

1.5 Certificates of Compliance

- A. Any certificates required for demonstrating proof of compliance of materials with specification requirements, including mail certificates, statements of application, and extended guarantees, must be signed and submitted 4 copies to the COR at least 10 days before delivery. The Contractor must review all certificates before submissions are made to the COR, to ensure compliance with the contract specification requirements and to ensure that the affidavit is properly signed. Each certificate must be signed by an official authorized to certify on behalf of the manufacturing company and must contain the name and address of the Contractor, the project name and location, and the quantity and date or dates of shipment or delivery to which the certificates apply. Copies of laboratory test reports submitted with certificates must contain the name and address of the testing laboratory and the dates of tests to which the report applies. Certification must not be construed as relieving the Contractor from furnishing satisfactory material if, after tests are performed on selected samples, the material is found not to meet the specific requirements.

1.6 A-E's Review of Submittals

- A. When submittals are reviewed by the A-E on behalf of the COR, each submittal must be returned to the Contractor stamped or marked by the A-E in one of the following ways:
 - 1. A Action: The Contractor is advised that "A Action" means that fabrication, manufacture, or construction may proceed, provided the work complies with the contract documents.
 - 2. B Action: The Contractor is advised that "B Action" means that fabrication, manufacture, or construction may proceed, provided the work complies with the A-E's notations and the contract documents.
 - 3. C Action: The Contractor is advised that "C Action" means that no work may be fabricated, manufactured, or constructed and that the Contractor must make a new submittal to the A-E. Any submission marked "C Action" is not permitted on the site.
- B. The A-E must return reproducibles stamped "A Action" or "B Action" to the Contractor, who is responsible for obtaining prints of them and for distributing them to the field and to subcontractors.
- C. In the case of shop drawings in the form of manufacturers' descriptive literature, catalog cuts, and brochures stamped "A Action" or "B Action," the A-E must return the stamped copies to the Contractor, who is responsible for distributing them to the field and to the subcontractors. If the shop drawings are stamped "C Action," the A-E will return stamped copies to the Contractor, who must submit new shop drawings to the A-E.
- D. In the case of samples stamped "A Action" or "B Action," the A-E must return one of the samples to the Contractor. In the case of samples stamped "C Action," the A-E must return all of the submitted samples.

1.7 Spare Parts Data

- A. Spare parts data must be submitted in quadruplicate in accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Spare Parts Data*.

1.8 Schedule of Values

- A. In accordance with the terms and conditions of the contract provisions and clauses concerning, *Construction Cost Breakdown*, the Contractor must submit a construction cost breakdown using the attached Schedule of Values. When applicable, a separate cost breakdown form must be submitted for each separate building. However, the total cost of site work for the facility must be included in the cost estimate breakdown for the main postal building. The number of items provided on the Systems

Fixed Mechanization Construction Cost Estimate Breakdown Summary

Project
01 - General Requirements
General
Contractor

Location

Construction Cost Estimate Breakdown form are the minimum required. Additional subdivision of these items may be used by the Contractor.

- B. Submit the construction cost breakdown after contract award to the COR. A Sample Schedule of Values and Definitions is attached to this Section, as Attachment A.
- C. Do not delete items from the Schedule of Values form. However, expand the schedule "Description of Work" as necessary to allow evaluation of work or to make partial payments.
- D. If the contract price changes, the Schedule of Values must be revised to reflect the change(s) and forwarded to the COR.
- E. A current Schedule of Values must accompany all Contractor Requests for Payment.

NOTE TO SPECIFIER

Schedule of Values form can be found on the Building Design Standards CD-ROM. Print out exhibit with definitions, and include at the end of this section.

NOTE TO SPECIFIER

Delete Paragraph and Summary Form below for projects without fixed mechanization.

1.9 Fixed Mechanization Construction Cost Estimate Breakdown Summary

- A. In accordance with the terms and conditions of the contract provisions and clauses concerning, *Construction Cost Breakdown*, the Contractor must submit a construction cost estimate using the Fixed Mechanization Construction Cost Estimate Breakdown Summary indicated below. When applicable, a separate cost estimate breakdown form must be submitted for each separate building. The number of items provided on the form are the minimum required. Additional subdivision of these items may be used by the Contractor.
- B. Submit the Fixed Mechanization Construction Cost Estimate Breakdown Summary after contract award to the COR.

SECTION 01 35 43 00 - ENVIRONMENTAL PROCEDURES**

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. No parts of this section shall be excluded or revised. The regulatory requirements and/or protection are not to be compromised or forfeited.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN & CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 – GENERAL

1.1 SCOPE

- A. This section is required in accordance with the terms and conditions of the contract provisions and clauses, including those concerning Safety & Health Standards, Accident Prevention, Protection of the Environment, Existing Vegetation, Structures, Utilities and Improvements, and Handling Asbestos and other Hazardous Materials. The work covered by this section consists of furnishing all labor, material, and equipment and performing all work required for compliance with environmental regulations and preventing pollution during, and as a result of, construction operations under this contract, in addition to those measures set forth in other technical provisions of these specifications.
- B. The Contractor and subcontractors must comply with all applicable federal, state and local laws and regulations related to the environment, health and safety.

1.2 NOTIFICATION

- A. The Contractor must, after receiving a notice of noncompliance with the foregoing provisions, immediately take corrective action. The notice, when delivered to its Contractor or its authorized representative at the site of the work, is deemed sufficient for this purpose. If the Contractor fails or refuses to comply promptly, the Contracting Officer may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost because of any such stop orders may be made the subject of a claim for extension of time or for excess costs or damages by the Contractor unless it is subsequently determined that the Contractor was in compliance and the Contractor demonstrates that it is otherwise entitled to an extension of time, excess costs or damages, under the applicable terms and conditions of the contract provisions and clauses.

1.3 ENVIRONMENTAL REGULATORY COMPLIANCE

- A. Within 30 days after receiving the notice to proceed or not less than 15 days prior to commencing on-site work, the Contractor must submit any environmental documents that are required by federal, state or local environmental regulations. Plans must be approved by the COR prior to commencing on-site work and must describe and include, but is not limited to, the following
 - 1. Erosion Control and Stormwater Management Plan that describes erosion control methods, surface drainage, storm water permitting requirements, and if applicable, protection of site wetlands and/or compliance with wetland permits. This must ensure any federal, state or local permitting requirements for site preparation, erosion control or surface drainage are met.

2. Landscape Management and Protection Plan that ensures any site-specific beneficial landscaping requirements are met. The plan shall describe the prevention and restoration of landscape damage, temporary roads and embankments, and post construction cleanup as prescribed in the terms and conditions of the contract provisions and clauses, including those concerning *Protection of the Environment, Existing Vegetation, Structures, Utilities and Improvements*.
3. Waste Minimization and Management Plan must describe how natural resources potentially impacted by construction will be protected or managed; construction wastes will be stored and disposed of or recycled; and pollutants associated with building materials will be controlled. The waste minimization and management section of the plan must also list materials and construction debris to be recycled, and address the disposal of solid and hazardous wastes and materials, including asbestos and lead-based paint. It must also include tables applicable to the reclamation of chlorofluorocarbons (CFCs) and hydrochlorofluorocarbons (HCFCs) in accordance with 1.4 (B) below.

NOTE TO SPECIFIER

Part 1.3, A., 4 & 5. below must be included if an environmental assessment (EA) was prepared for this project. The EA and the Finding of No Significant Impact (FONSI) statement must be included in construction contracts, as well as any other environmental document which identifies site conditions of which the Contractor should be aware.

4. Environmental Compliance Plan must document NEPA compliance by describing mitigation measures to address environmental concerns/sensitive receptors identified in the National Environmental Policy Act (NEPA) document(s) in Section B. 1500, *Attachments*, of the contract.
5. The construction specifications in this contract must include mitigation measures to avoid or minimize potential environmental impacts identified in the NEPA document(s).

1.4 ENVIRONMENTAL SITE CONTROLS

- A. Location of Hazardous Materials: The location of the Contractor's temporary storage of any hazardous materials and/or wastes must be appropriately marked and included in the health and Safety Plan (see Section 1.5 below).
- B. Refrigerant Recovery, Recycling, and Disposal: Any work involving the replacement or repair of equipment containing refrigerant shall meet the following requirements:
 1. Recover and recycle or dispose of refrigerant from equipment according to 40 CFR 82 and local regulations.
 2. The work shall be completed by a certified refrigerant recovery technician, per 40 CFR 82 and local regulations.
 3. Provide a statement signed by the certified refrigerant recovery technician that the work was completed per 40 CFR 82 and local regulations. Include the name and address of technician and date refrigerant was recovered.
- C. Post-construction Cleanup or Obliteration: The Contractor must remove and properly dispose of all signs of temporary construction facilities such as haul roads, work area, structures, foundations of temporary structures, excess or waste materials, or any other vestiges of construction as directed by the COR. No separate or direct payment may be made for post-construction cleanup and all associated costs must be considered included in the contract price.
- D. Historical and Archeological: Monuments, markers, and works of art must be protected. Items discovered that have potential historical or archeological interest must be preserved. The Contractor must leave the archeological find undisturbed and must immediately report the find to the COR so that the proper authority may be notified.

- E. Dust Control: The Contractor must keep the site free from dust in accordance with applicable federal, state and/or local regulations.
- F. Noise Minimization: The Contractor must perform demolition and construction operations to minimize noise including conducting work during less sensitive hours of the day in accordance with applicable noise control regulations.

1.5 HEALTH AND SAFETY

- A. Prior to commencing on-site work, the Contractor must submit an Occupational Safety and Health Administration (OSHA) Emergency Action Plan (EAP) to the Contracting Officer to demonstrate compliance by the Contractor and subcontractors with applicable OSHA regulations. If the Contractor is not required by OSHA to develop a written EAP, i.e. if 10 or fewer are employed for the construction project or any other specific regulations identified by OSHA, then the Contractor shall submit to the Contracting Officer a signed letter stating the Contractor shall meet OSHA's EAP requirements in a verbal communication to all employees.
- B. The Postal Service has provided a *Safety and Health Guide for Contractors*, as Attachment A to this section. Prior to commencing on-site work, Contractor must read the *Safety and Health Guide for Contractors* and must sign the attached Certificate of Understanding acknowledging and accepting the requirements stated therein.

NOTE TO SPECIFIER

Delete paragraph below if the project construction cost is expected to be less than \$100,000, unless directed otherwise by the Contracting Officer.

- C. Prior to commencing on-site work, the Contractor must submit a project-specific Project Safety Plan to the Contracting Officer. The plan must include, but is not limited to, hazard communication, labeling, emergency response and preparedness and training.
- D. Copies of Material Safety Data Sheets (MSDSs) for any hazardous material(s), as defined by OSHA's Hazard Communications Standard, must be included whenever such materials arrive on-site. MSDSs must be kept together and maintained centrally on-site through to project completion. Provide a copy of each MSDS in the Operating and Maintenance Manual. The use of asbestos containing materials, in excess of one percent as defined by US Environmental Protection Agency regulations, is prohibited in the construction of this project. Provide an executed copy of the "Certificate of Asbestos and Lead-Based Paint (New Work)" in the Operating and Maintenance Manual and include a copy with the final payment request.
- E. The use of lead-based paint is prohibited in the construction of this project.
- F. The use of lead-containing solder for plumbing and plumbing fixtures is prohibited in the construction of this project.
- G. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Asbestos Free and Lead-Based Paint Free Certification*, the Contractor must sign and submit to the Contracting Officer the attached "Certification of Asbestos and Lead-Based Paint" for this project. The signed certificate is required to be included in the final payment request.
- H. Do not use any of the USPS targeted chemicals (see regulated and prohibited materials identified under Safety and Health and related environmental requirements).

Safety and Health Guide for Contractors**Certificate of Understanding**

This *Safety and Health Guide for Contractors* was developed by the Postal Service to provide guidance for contractors hired to perform repair, alteration, renovation, demolition, equipment installation, and other work requiring access to postal-owned or -leased property.

Distribution

A copy of this Certificate of Understanding should be signed by the Contractor's representative at the post award orientation conference or before the commencement of work. A copy of this guide should be readily accessible where the work is being performed. The contracting officer's representative (COR) should thoroughly brief the Contractor's representative on the Contract Safety and Health Requirements contained herein.

Contractor's Verification Statement

As a representative of _____ (Contractor's name), I have received the *Safety and Health Guide for Contractors* prepared by the Postal Service. As the Contractor's representative, I understand and accept the requirements contained herein, and I have reviewed each of the required sections of the guide with the COR and/or the designated Postal Service representative. I agree to review the contents of this guide with all subcontractors hired to perform work on postal property.

Maintain a copy of this signed form in the Postal Service and Contractor's project files.

Safety and Health and Related Environmental Requirements

The Contractor is required to meet all applicable OSHA, federal, state, and local safety, health, and related environmental requirements in addition to the US Postal Service requirement listed in this table.	
Issue	Postal Requirements
Asbestos	<p><i>Review of Facility Asbestos Survey:</i> Before any building maintenance, equipment installation, renovation, alteration, demolition, or other project begins, determine whether ACBM will be disturbed.</p> <p><i>Proper Work Practices:</i> If ACBM is present, follow proper control procedures and work practices.</p> <p><i>Consultation With Facility Asbestos Coordinator:</i> Consult with the facility manager or his or her designee before the start of any work likely to disturb ACBM. Disturbance means activities that crumble or pulverize ACBM or presumed asbestos-containing material (PACM) or generate visible debris. Operations may include drilling, abrading, cutting a hole, pulling cable, and crawling through tunnels or attics and spaces above the ceiling where asbestos is actively disturbed or asbestos-containing debris is actively disturbed.</p> <p><i>Asbestos Work Authorization:</i> You must have an approved Form 8210, <i>Work Authorization-Asbestos</i>, before work begins within any building containing asbestos.</p>
Barricades, Barriers, and Warnings	Your barricades must meet the OSHA requirements. In addition, you assume control of your work area during your activities unless otherwise specified in writing by the contracting officer (CO) or contracting officer's representative (COR).
Confined Spaces	<p>Confined space work must meet the OSHA requirements. You must have a comprehensive confined space program that includes a written program, employee training, entry and testing equipment, and rescue capabilities.</p> <p>If you require access to confined space requiring a permit, then the trained, designated Postal Service representative must review and approve the project and permit. Entry into other confined spaces must be in accordance with OSHA regulations.</p>
Electrical Work	Lock or rope off work areas involving exposed energized equipment or have an attendant present to prevent accidental contact by unqualified people. Refer to the Barricade section of this guideline for additional information.
Elevated Work and Fall Protection	Follow strictly the applicable OSHA fall protection requirements.
Excavation	<p>All excavations 4 feet or more in depth must be properly shored or sloped and meet all OSHA requirements.</p> <p>Before any digging or drilling commences, inform the Postal Service COR and call Dig Safe or its local equivalent to determine whether any underground utilities are located in the work area. Submit documentation that these notifications have been performed. You must not begin digging or drilling until you have verified that underground utilities have been identified and are properly marked so that work may be accomplished in a safe manner.</p>
Fire Protection	<p>Do not block, remove, or otherwise prevent Postal Service fire extinguishers from being immediately accessible and usable.</p> <p>If a system must be impaired by a scheduled shutdown, notify the appropriate Postal Service representative and do not proceed without Postal Service authorization.</p>
Hazard Communication	<p>Inform the Postal Service before any chemicals are used. Before materials are brought on site, provide material safety data sheets (MSDSs) and an inventory of materials. For projects that are anticipated to use substantial quantities of hazardous materials, you may be required to provide a routing, storage, and waste disposal plan.</p> <p>Upon request, the Postal Service will make available to you MSDSs for hazardous materials the Postal Service uses in the Contractor work area.</p>
Hazardous Materials	<p>Follow all OSHA requirements regarding hazardous materials. Hazardous materials include, but are not limited to, flammable and combustible liquids, gasoline, diesel fuel, motor oil, lubricating oil, hydraulic oil, corrosive cleaners, and battery acid.</p> <p>Provide secondary containment for all containers of liquids that are over 5 gallons in capacity. Immediately report all hazardous material releases ("spills"), regardless of how small or where they occur, to the designated Postal Service representative. Releases include solids, liquids, and gases.</p>

Scaffolding	Follow strictly the applicable OSHA scaffolding requirements. Provide adequate barrier protection around the scaffolding to prevent hazards to postal workers.
Walking and Working Surfaces	If the project requires temporary modifications to the means of egress, inform the designated Postal Service representative before performing such actions, provide appropriate alternative means of egress, and communicated these to all employees.

Emergency Procedures

Preparations for Emergency	<p>Be prepared for emergency situations.</p> <p>Ensure that emergency telephone numbers are site specific, readily available, easily read, and communicated to all employees.</p> <p>Train and authorize employees to implement emergency procedures.</p>
Medical Emergencies	<p>Have procedures and medical supplies to provide emergency medical services for your own personnel.</p> <p>Determine how to contact emergency medical services before work begins, and have on-site capabilities to contact such services immediately.</p>
Fires	<p>See Fire Protection above.</p> <p>In the event of a fire, you must:</p> <ul style="list-style-type: none"> - Immediately remove personnel from the area or building following Postal Service evacuation procedures. - Immediately contact the nearest postal employee and inform him or her of the fire. You may also activate an emergency alarm in the area. If no postal employees are on-site, immediately contact the local fire department. <p>Personnel trained in the use and limitations of fire extinguishers may attempt to extinguish the fire if it is safe to do so.</p>
Chemical Releases	<p>See Hazardous Materials above.</p> <p>If the event of a hazardous material release, you must:</p> <ul style="list-style-type: none"> - Immediately remove personnel from the area or building following Postal Service evacuation procedures. - Immediately contact the designated Postal Service representative and inform him or her of the release. You may also activate an emergency alarm in the area. If no postal employees are on-site, immediately contact the local fire department. <p>Contractor personnel should not respond to the release unless specifically trained and protected to perform hazardous material response.</p>
Power Outages	<p>In the event of a power outage, you must:</p> <ul style="list-style-type: none"> - Immediately stop work and assemble for a head count and possible facility egress. - Inform all contract employees that equipment may automatically restart when power resumes. - Immediately contact the designated Postal Service representative and inform him or her of the status of contract work and personnel head count. Relay at this time all hazards created due to the power outage. <p>When power resumes evaluate the status of operations that were being performed relative to hazard potential. For example, the interruption of ventilation in confined spaces may generate atmospheric hazards.</p>
Accident Investigation and Reporting	<p>As soon as is practical after an accident, investigate and document an accident investigation. The documentation must describe the incident and identify the causes and the corrective actions that will prevent future incidents.</p> <p>Report all accidents, whether or not they result in injury. Give the written report to the Postal Service COR within 24 hours of the accident or incident.</p>

Certificate of Asbestos and Lead-Based Paint
(New Work)

To: Contracting Officer, United States Postal Service

Subject: Certification for new construction

Postal facility name: _____

Postal facility address: _____

Certification for new construction:

This Contractor/Owner hereby certifies that no asbestos-containing material in excess of 1 percent as defined by applicable US Environmental Protection Agency regulations, and no lead-based paint has been furnished or installed at the referenced project.

Contractor/Owner name: _____

Signature: _____

Address: _____

Telephone: _____ Date executed: _____

The penalty for making a false statement is prescribed by 18 USC 1001.

END OF SECTION 01 35 43 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 40 00 00 - QUALITY REQUIREMENTS

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Design-Bid-Build (DBB), Modify as needed for project specific requirements. [Insert the following in NCL projects - For purposes of this construction project, the terms "Landlord", "Lessor", "Owner", "Offeror", and "Contractor" are interchangeable and refer to the party whose proposal is accepted by the Postal Service. It is the Landlord's sole responsibility to clarify design and construction responsibilities among the Landlord's designers, contractors and other agents.]

1.1 Contractor Quality Control

- A. Contractor Quality Control: The Contractor is responsible for the overall quality of all its own work and the work performed by their subcontractors working under this contract. The quality of any part of the work installed must not be less than that required by the technical divisions of this specification. If the COR determines that the quality of work does not conform to the applicable specifications and drawings, the Contractor will be advised in writing of the areas of nonconformance, and within 7 days the Contractor must correct the deficiencies and advise the COR in writing of the corrective action taken.
- B. Noncompliance with Quality Control Requirements: Failure of the Contractor to comply with the above requirements may be cause for termination for default as defined in the terms and conditions of the contract provisions and clauses, including those concerning, *Termination for Convenience or Default*, of the general contract clauses.

1.2 Submittals

- A. Prior to the start of on-site work, the Contractor must submit to the Contracting Officer a Contractor Quality Control Plan that includes the following information:
 - 1. Quality Control Organization: In chart form, showing relationship of Quality Control organization to other elements of Contractor's organization.
 - 2. Names and qualifications of personnel in Quality Control organization, including Contractor Quality Control Representative, inspectors, Independent Testing and Inspection Laboratory, and Independent HVAC Test and Balance Agency.
 - 3. Procedures for reviewing coordination drawings, shop drawings, certificates, certifications, or other submittals.
 - 4. Testing and inspection schedule, keyed to Construction Schedule, indicating tests and inspections to be performed, names of persons responsible for inspection and testing for each segment of work including preparatory, initial, and follow-up.
 - 5. Proposed forms to be used including Contractor's Daily Report, Contractor Test and Inspection Report and Non-Compliance Check-Off List.
- B. Independent Testing and Inspection Laboratory: Submit the following.
 - 1. Name.
 - 2. Address.
 - 3. Telephone number.
 - 4. Names of full time registered engineer.
 - 5. Responsible officer.
 - 6. Copy of report of laboratory facilities inspection made by Materials Reference Laboratory of National Bureau of Standards during most recent inspection, with memorandum of remedies of any deficiencies reported by inspection.

1.3 Quality Control Procedures

- A. Monitor quality control over Contractor staff, subcontractors, suppliers, manufacturers, products, services, site conditions, and workmanship.
- B. Comply fully with manufacturer's published instructions, including each step in sequence of installation.
- C. Should manufacturer's published instructions conflict with Contract Documents, request clarification from COR before proceeding.
- D. Comply with specified standards as a minimum quality for work, except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.
- E. Perform work by persons who are thoroughly qualified and trained in their respective trade, to produce workmanship of specified quality.
- F. Perform tests required by governing authorities having jurisdiction and utilities having jurisdiction.

1.4 Testing and Inspection Laboratory Services

- A. Selection and Payment:
 - 1. The Contractor shall pay for services of an Independent Testing and Inspection Laboratory to perform specified testing and inspection.
 - 2. Employment of Independent Testing and Inspection Laboratory in no way relieves Contractor of obligation to perform work in accordance with requirements of Contract Documents.
- B. Quality Assurance:
 - 1. Comply with requirements of all applicable ASTM standards.
 - 2. Laboratory: Authorized to operate in State in which Project is located.
 - 3. Laboratory Staff: Maintain a full time registered engineer on staff to review services.
 - 4. Testing Equipment: Calibrated at reasonable intervals with devices of and accuracy traceable to either National Bureau of Standards or accepted values of natural physical constraints.
- C. Laboratory Responsibilities. Contractor shall ensure the Laboratory has the following responsibilities and limits on authority:
 - 1. Test samples of mixes submitted by Contractor.
 - 2. Provide qualified personnel at Project site. Cooperate with COR and Contractor in performance of services.
 - 3. Perform specified sampling, testing, and inspection of Products in accordance with specified standards.
 - 4. Determine compliance of materials and mixes with requirements of Contract Documents.
 - 5. Promptly notify Contractor Quality Control Representative and COR of observed irregularities or non-conformance of work or Products.
 - 6. Submit one copy of all test results directly to the COR.
 - 7. Perform additional tests as required by COR.
 - 8. Attend appropriate preconstruction meetings and progress meetings.
- D. Limits on Authority. Contractor shall ensure the Laboratory has the following limits on authority:
 - 1. Laboratory may not release, revoke, alter, or expand on requirements of Contract Documents.
 - 2. Laboratory may not approve or accept any portion of work.
 - 3. Laboratory may not assume any duties of Contractors.
 - 4. Laboratory has no authority to stop work.

1.5 Contractor Field Inspection and Testing

- A. Contractor: Test and Inspect work provided under this Contract to ensure work is in compliance with Contract requirements. Required tests and inspections are indicated in each individual Specification Section.
- B. Preparatory Inspection: Performed prior to beginning work and prior to beginning each segment of work and includes:
 - 1. Review of Contract requirements.
 - 2. Review of shop drawings and other submittal data after return and approval.
 - 3. Examination to assure materials and equipment conform to Contract requirements.
 - 4. Examination to assure required preliminary or preparatory work is complete.
- C. Initial Inspection: Performed when representative portion of each segment of work is completed and includes:
 - 1. Performance of required tests.
 - 2. Quality of workmanship.
 - 3. Review for omissions or dimensional errors.
 - 4. Examination of products used, connections and supports.
 - 5. Approval or rejection of inspected segment of work.
- D. Follow-Up Inspections: Performed daily, and more frequently as necessary, to assure non-complying work has been corrected.
- E. Testing and Inspection: Perform testing and inspection in accordance with requirements in individual Specification Sections.

1.6 Contractor's Daily Report

- A. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Performance and Superintendence of Work by Contractor*, the Contractor shall submit daily report to COR, for days that work was performed. Include the following information:
 - 1. Date, weather, minimum and maximum temperatures, rainfall, and other pertinent weather occurrences.
 - 2. Daily workforce of Contractor and subcontractors, by trades.
 - 3. Description of work started, ongoing work, and work completed by each subcontractor.
 - 4. Coordination implemented between various trades.
 - 5. Approval of substrates received from various trades.
 - 6. Nonconforming and unsatisfactory items to be corrected.
 - 7. Remarks, to include at a minimum, any potential delays, schedule changes, workplace incidents or other items of note. However, nothing reported herein shall relieve the Contractor of the separate responsibility under other terms and conditions of the Contract provisions and clauses to provide specific notice to the Contracting Officer,

1.7 Contractor's Test and Inspection Reports

- A. Prepare and submit, to COR, a written report of each test or inspection signed by Contractor Quality Control Representative performing inspection within 2 days following day inspection was made.
- B. Include the following on written reports of inspection:
 - 1. Cover sheet prominently identifying that inspection "CONFORMS" or "DOES NOT CONFORM" to Contract Documents.
 - 2. Date of inspection and date of report.
 - 3. Project name, location, solicitation number, and Contractor.
 - 4. Names and titles of individuals making inspection, if not Contractor's Project Field Superintendent.
 - 5. Description of Contract requirements for inspection by referencing Specification Section.

6. Description of inspection made, interpretation of inspection results, and notification of significant conditions at time of inspection.
7. Requirements for follow-up inspections.

1.8 Non-Compliance Check-Off List

- A. Maintain check-off list of work that does not comply with Contract Documents, stating specifically what is non-complying, date faulty work was originally discovered, and date work was corrected. No requirement to report deficiencies corrected same day it was discovered. Submit copy of Non-Compliance Check-Off List of non-complying work items to COR on a weekly basis.

1.9 Completion and Inspection of Work

- A. Prior to final acceptance by Contracting Officer, submit a certification signed by Contractor to Contracting Officer stating that all work has been inspected and all work, except as specifically noted, is complete and in compliance with Contract Documents.

USPS Specification issued: 10/1/2013

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 50 00 00 - TEMPORARY FACILITIES AND CONTROLS

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

1.1 General

- A. The Contractor must provide all temporary facilities and services required to complete the work and to comply with OSHA and other applicable regulations.
- B. The Contractor must maintain temporary facilities in a proper, safe, operating and sanitary condition for the duration of this Contract. Upon completion of this Contract, all such temporary work and facilities shall be removed in their entirety and the premises will be restored to its prior condition.

1.2 Project Sign

- A. The Contractor must provide and maintain a construction project sign at the location directed by the COR. The sign must conform to the Construction Sign as detailed in the Contract drawings. The information needed to complete the wording on the sign is provided by the COR and will be essentially as shown on the cover of the specification. The sign must be erected within 15 days after receiving a Notice to Proceed. The sign will remain the property of the Contractor and must be removed upon completion of the work and the premises will be restored to its prior condition.
- B. Construction Site Sign:
 - 1. Silk-screened, painted or pressure-sensitive vinyl letters applied to Medium Density Overlay plywood sign.
 - 2. Red: Match Benjamin Moore OP-67.
 - 3. Blue: Match PPG 7062 Federal Blue.
 - 4. White background.
- C. The Contractor must construct and erect a minimum of two hard hat signs at locations designated by the COR. The signs must be erected prior to the commencement of on-site work.

1.3 Bulletin Board

- A. A weatherproof bulletin board, not less than 36 inches wide and 30 inches high, with hinged glass door must be provided adjacent to, or mounted on, the Contractor's project office. If adjacent to the office, the bulletin board must be securely mounted on not less than two posts. The bulletin board and posts must be painted or have approved factory finish. The bulletin board must be easily accessible at all times and must contain wage rates, equal opportunity notice, and other items required to be posted.
- B. The Contractor must maintain the bulletin board in good condition throughout the life of the project. The bulletin board will remain the property of the Contractor and upon completion of the project must be removed from the site and the premises will be restored to its prior condition.

1.4 Construction-Use Utilities

- A. The Contractor must arrange with the local utility companies for gas, water, and electricity required for construction under this project and must pay all costs in connection with them. The Contractor must, at

its own expense, make all temporary connections and install distribution lines. All temporary lines must be maintained by the Contractor in a manner satisfactory to the COR and must be removed by the Contractor in like manner before final acceptance of the construction.

1.5 Temporary Electricity

- A. **Costs:** The Contractor must make arrangements with the serving utility for power, pay deposits, and install equipment, poles, wiring, switches, and outlets necessary to provide adequate supply for lighting and power for construction purposes. The Contractor must pay for power used during construction and for removal of all temporary equipment.
- B. **Service Required:** The Contractor must provide temporary electric power throughout the construction period so that power can be secured at any desired point with no more than a 100-foot extension cord; power centers for miscellaneous tools and equipment used in the construction work (not less than one per 2,000 square feet of floor space, consisting of a weatherproof distribution box with a minimum of four 20-amp, 120-volt grounded outlets with a circuit breaker protection for each outlet); lighting for safe and adequate working conditions throughout buildings and stairways (at least 1/4 watts of incandescent lighting per square foot, with a socket voltage of at least 110 volts and using 100 watt lamps minimum); power for construction site offices and other temporary storage and construction building; and power for testing and checking equipment welding units, and terrazzo grinders.
- C. **Safety:** The Contractor must provide and maintain lights and signs to prevent damage or injury and must illuminate all hazardous areas. Safety lights must be kept burning from dusk to dawn.
- D. **Requirements of Regulatory Agencies:** The Contractor must obtain permits as required by local government authorities; obtain easements as required across private property other than that of the Owner for temporary power service; and comply with the National Electrical Code, applicable local codes, and utility regulations.
- E. **Use of Permanent System:** The Contractor must regulate any part of the permanent electrical system that is used for construction purposes in order to prevent interference with safety and with the orderly progress of the work. The Contractor must leave permanent electrical services in a condition as good as new.
- F. **Materials:** The materials may be new or used but must be adequate in capacity for the purposes intended and must not create unsafe conditions or violate the requirements of applicable codes. At the Contractor's option, patented specialty materials may be used if UL-approved.
- G. **Conductors:** The Contractor must use wire, cable, or busses of appropriate type, sized in accordance with the National Electrical Code for the applied loads. Use only UL-approved wire.
- H. **Equipment:** In compliance with NEMA standards, the Contractor must provide an appropriate enclosure for the environment in which the equipment is used.
- I. **Installation:** The Contractor must provide all required facilities, including transformers, conductors, poles, conduits, raceways, fuses, switches, fixtures, and lamps, located so as to avoid interference with cranes and materials-handling equipment, storage areas, traffic areas, and work under other contracts. The Contractor must install all work to have a neat and orderly appearance and to make it structurally sound throughout. The Contractor must maintain it to give continuous service and to provide safe working conditions. The Contractor must modify the service as required by the progress of the job.
- J. **Removal:** The Contractor must remove all temporary equipment and materials upon completion of construction, repair all damage caused by the installation, and the premises will be restored to its prior condition.

1.6 Temporary Heating and Ventilation

- A. The Contractor must provide cold weather protection and temporary heat and fuel as required to carry on the work expeditiously during inclement weather, protect all work and materials against damage from dampness and cold, dry out the building, and provide suitable working conditions for the installation and curing of materials until final acceptance by the Contracting Officer. The Contractor must refer to requirements in detailed specifications for temperatures to be provided and maintained for installation and curing of work under the various trades.
- B. The Contractor must provide temporary heat consisting of smokeless heating appliances satisfactory to the COR. The Contractor must furnish and pay for all necessary fuel and attendants in any trade and must maintain temporary heat at temperatures adequate for the intended purpose.
- C. When the permanent heating system is operable and the Contractor elects to use it, the Contractor must provide all fuel, labor, materials, services, equipment, and attendants necessary to operate the permanent heating system for temporary heat and to maintain a minimum temperature as specified in the terms and conditions of the contract provisions and clauses, including those concerning *Heat*. If the permanent system is used to provide temporary heating and ventilation, the Contractor must replace all filters and restore the system to a condition satisfactory to the COR.

1.7 Temporary Water

- A. The Contractor must provide and maintain a temporary water supply system for building purposes, extending branches to convenient points and terminating them with a proper stop and hose connection. Before any paving is laid, the temporary supply must be removed and the tap in the main supply properly capped.

1.8 Sanitary Provisions

- A. The Contractor must provide and keep in neat and sanitary condition conveniences and accommodations for the use of the construction personnel necessary to comply with the requirements and regulations of the local department of health and of other bodies having jurisdiction.

1.9 Approaches and Exits

- A. The Contractor must provide all necessary approaches and exits required to properly execute the work.
- B. In connection with these, the Contractor must provide for temporary drainage to keep the site free from standing water at all times.

1.10 Postal Service Field Office

- A. Within 30 days after receiving a Notice to Proceed, the Contractor must furnish a building or trailer having a minimum of [____] square feet of floor space to serve as a USPS temporary field office. It must be located where directed and must be reserved for Postal Service use only. Drinking water facilities, adequate lighting, ventilation, heating, air-conditioning equipment, a copy machine, and a partition-enclosed chemical toilet must be furnished and maintained by the Contractor. The Contractor must provide hook-up to utility services and telephone services and must pay the cost of all services except long-distance phone calls. Used field office buildings and used furniture and equipment in good condition are acceptable. Entrance doors must be equipped with a substantial lock. Janitorial service must be furnished by the Contractor. If a building is provided, it must be constructed to be easily moved, and the Contractor must relocate the building twice during the contract, if directed to do so. All-weather

vehicle and pedestrian access and all-weather parking areas for six cars must be provided at the field office location. The temporary field office, including furniture, with the exception of any office equipment including computers, printers, FAX machines, etc., will remain the property of the Contractor and must be removed from the site after the work is completed and the premises will be restored to its prior condition.

NOTE TO SPECIFIER

Consult with the COR for direction on field office requirements and attach the approved list at the end of this section.

- B. Detailed List of Furnishings and Equipment. See Attachment at the end of this section for a list of equipment to be included in the USPS field office.
- 1.11 Project Photos - Required on construction contracts that exceed \$10,000.00. The number of photographs, and their content, shall be appropriate to the Contract Scope of Work, with their intended purpose being to illustrate, generally, the work in place for which this payment application applies.

**SECTION 01 60 00 00 - PRODUCT REQUIREMENTS**

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

1.1 Product Options and Substitutions

- A. Refer to the terms and conditions of the contract provisions and clauses, including those concerning *Optional Materials or Methods (Construction), Materials and Workmanship, Information On "Equal" Products and Brand Name or Equal.*
- B. Provide Products that comply with Contract Documents, which are undamaged and new at time of installation.
- C. Provide Products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
- D. Substitutions may be considered when the Contractor:
 - 1. Becomes aware of a product or procedure that is more environmentally sensitive or is otherwise advantageous to the Postal Service;
 - 2. Represents that he has personally investigated the proposed substitute product and determined that it is equal or superior in all respects to that specified;
 - 3. Will provide the same guarantee for the substitution that he would for that specified; and
 - 4. Will coordinate the installation of the accepted substitute, making such changes as may be required for the Work to be complete in all respects, at no additional cost to the Postal Service and at no extension of the Contract completion date.

1.2 Product Delivery Requirements

- A. Transport and handle Products in accordance with manufacturer's instructions, using means and methods that will prevent damage, deterioration and loss, including theft.
- B. Schedule Product delivery to minimize long-term storage at Project site and prevent overcrowding of construction spaces.
- C. Coordinate Product delivery with installation schedule to assure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
- D. Deliver Products to Project site in undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
- E. Promptly inspect shipments to ensure that Products comply with project requirements, quantities are correct, Products are undamaged, and properly protected.
- F. Provide equipment and personnel to handle Products by methods to prevent soiling, disfigurement, or damage.

1.3 Product Storage and Handling Requirements

- A. Store and protect Products in accordance with manufacturers' published instructions, with seals and labels intact and legible.
- B. Store Products subject to damage by elements above ground, under cover in weathertight enclosure, with ventilation adequate to prevent condensation. Maintain temperature and humidity within range required by manufacturer's published instructions.
- C. For exterior storage of fabricated Products, place on sloped supports, above ground.
- D. Provide off-site storage and protection when Project site does not permit on-site storage or protection.
- E. Cover Products subject to deterioration with impervious sheet covering. Provide ventilation to avoid condensation or potential degradation of Products.
- F. Store loose granular materials on solid flat surfaces in a well-drained area. Prevent mixing with foreign matter.
- G. Provide equipment and personnel to store Products by methods to prevent soiling, disfigurement, or damage.
- H. Arrange storage of Products to permit access for inspection. Periodically inspect to verify Products are undamaged and are maintained in acceptable condition.

SECTION 01 71 23 16 - CUTTING AND PATCHING**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for cutting and patching. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes procedural requirements for cutting and patching.

C. Definitions

1. Cutting: Removal of in-place construction necessary to permit installation or performance of other Work.
2. Patching: Fitting and repair work required to restore surfaces to original conditions after installation of other Work.

D. Submittals

1. Cutting and Patching Proposal: Submit a proposal describing procedures at least 10 days before the time cutting and patching will be performed, requesting approval to proceed. Include the following information:
 - a. Extent: Describe cutting and patching, show how they will be performed, and indicate why they cannot be avoided.
 - b. Changes to In-Place Construction: Describe anticipated results. Include changes to structural elements and operating components as well as changes in building's appearance and other significant visual elements.
 - c. Products: List products to be used and firms or entities that will perform the Work.
 - d. Dates: Indicate when cutting and patching will be performed.
 - e. Utility Services and Mechanical/Electrical Systems: List services/systems that cutting and patching procedures will disturb or affect. List services/systems that will be relocated and those that will be temporarily out of service. Indicate how long services/systems will be disrupted.
 - f. Structural Elements: Where cutting and patching involve adding reinforcement to structural elements, submit details and engineering calculations showing integration of reinforcement with original structure.
 - g. the Owner's Approval: Obtain approval of cutting and patching proposal before cutting and patching. Approval does not waive right to later require removal and replacement of unsatisfactory work.

E. Quality Assurance

1. LEED Requirements for Building Reuse:
 - a. Credit MR 1.1 and 1.2, **as directed**: Maintain existing building structure (including structural floor and roof decking) and envelope (exterior skin and framing, excluding window assemblies and nonstructural roofing material) not indicated to be removed; do not cut such existing construction beyond indicated limits.
 - b. Credit MR 1.3: Maintain existing interior nonstructural elements (interior walls, doors, floor coverings, and ceiling systems) not indicated to be removed; do not cut such existing construction beyond indicated limits.
 - c. Credit MR 1.2 and 1.3, **as directed**: Maintain existing nonshell, nonstructural components (walls, flooring, and ceilings) not indicated to be removed; do not cut such existing construction beyond indicated limits.

2. Structural Elements: Do not cut and patch structural elements in a manner that could change their load-carrying capacity or load-deflection ratio.
 - a. **Refer to the Owner for list of elements that might otherwise be overlooked as structural elements and that require Architect's or Construction Manager's approval of a cutting and patching proposal.**
3. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operating elements include the following:
 - a. Primary operational systems and equipment.
 - b. Air or smoke barriers.
 - c. Fire-suppression systems.
 - d. Mechanical systems piping and ducts.
 - e. Control systems.
 - f. Communication systems.
 - g. Conveying systems.
 - h. Electrical wiring systems.
 - i. Operating systems of special construction in Division 13.
4. Miscellaneous Elements: Do not cut and patch miscellaneous elements or related components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Miscellaneous elements include the following:
 - a. Water, moisture, or vapor barriers.
 - b. Membranes and flashings.
 - c. Exterior curtain-wall construction.
 - d. Equipment supports.
 - e. Piping, ductwork, vessels, and equipment.
 - f. Noise- and vibration-control elements and systems.
5. Visual Requirements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch construction exposed on the exterior or in occupied spaces in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.
6. Cutting and Patching Conference: Before proceeding, meet at Project site with parties involved in cutting and patching, including mechanical and electrical trades. Review areas of potential interference and conflict. Coordinate procedures and resolve potential conflicts before proceeding.

F. Warranty

1. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during cutting and patching operations, by methods and with materials so as not to void existing warranties.

1.2 PRODUCTS

A. Materials

1. General: Comply with requirements specified in other Sections.
2. In-Place Materials: Use materials identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
 - a. If identical materials are unavailable or cannot be used, use materials that, when installed, will match the visual and functional performance of in-place materials.

1.3 EXECUTION

A. Preparation

1. Temporary Support: Provide temporary support of Work to be cut.
2. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.
3. Adjoining Areas: Avoid interference with use of adjoining areas or interruption of free passage to adjoining areas.
4. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to minimize **OR** prevent, **as directed**, interruption to occupied areas.

B. Performance

1. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
 - a. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.
2. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.
 - a. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots as small as possible, neatly to size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
 - b. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
 - c. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
 - d. Excavating and Backfilling: Comply with requirements in applicable Division 31 where required by cutting and patching operations.
 - e. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
 - f. Proceed with patching after construction operations requiring cutting are complete.
3. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as possible. Provide materials and comply with installation requirements specified in other Sections.
 - a. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate integrity of installation.
 - b. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
 - 1) Clean piping, conduit, and similar features before applying paint or other finishing materials.
 - 2) Restore damaged pipe covering to its original condition.
 - c. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
 - 1) Where patching occurs in a painted surface, apply primer and intermediate paint coats over the patch and apply final paint coat over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

- d. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
- e. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.
- 4. Cleaning: Clean areas and spaces where cutting and patching are performed. Completely remove paint, mortar, oils, putty, and similar materials.

END OF SECTION 01 71 23 16

SECTION 01 73 00 00 - EXECUTION

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB, Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements.

1.1 Layout of Work

- A. The Contractor must lay out its work from Postal Service-established base lines and benchmarks indicated on the drawings and is responsible for all measurements based on them. The Contractor must furnish, at its own expense, all stakes, templates, platforms, equipment, tools, materials, and labor as may be required in laying out any part of the work from the base lines and benchmarks established by the Postal Service. The Contractor is responsible for the execution of the work to those lines and grades established or indicated by the COR.

1.2 Contractor's Temporary Use of Facilities and Equipment

- A. No new facilities or equipment intended for the permanent installation, including materials-handling vehicles, may be used for temporary purposes unless specified in the Contract or unless the Contractor has the written permission of the COR.

1.3 Cleaning

- A. Refer to the terms and conditions of the contract provisions and clauses, including those clauses *Debris and Clean Up*.
- B. Cleaning During Construction:
 - 1. Maintain areas free of waste materials, debris, and rubbish. Maintain site in a clean and orderly condition.
 - 2. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces, and other closed or remote spaces, prior to enclosing the space.
 - 3. Broom and vacuum clean interior areas prior to start of surface finishing, and continue cleaning to eliminate dust.
 - 4. Collect and remove waste materials, debris, and rubbish from site as specified in the Environmental Compliance and Management Plan as required in Section 013543 - Environmental Procedures.
- C. Final Cleaning:
 - 1. Use cleaning materials and agents recommended by manufacturer or fabricator of surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property, or that might damage finished surfaces.
 - 2. Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit of Work to condition expected from a commercial building cleaning and maintenance program. Comply with manufacturer's published instructions.
 - 3. Complete following cleaning operations before requesting COR inspection for Substantial Completion.
 - a. Clean Project Site, yard and grounds, in areas disturbed by construction activities, including landscape development areas, of rubbish, waste materials, litter and foreign substances. Sweep paved areas broom clean. Remove petro-chemical spills, stains and other foreign

- deposits. Rake grounds that are neither planted nor paved, to a smooth even-textured surface.
- b. Remove tools, construction equipment, machinery and surplus material from Project Site.
 - c. Remove snow and ice to provide safe access to building.
 - d. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - e. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics and similar spaces.
 - f. Broom clean concrete floors in unoccupied spaces.
 - g. Provide final cleaning, waxing, and buffing of resilient tile, in accordance with manufacturer's requirements.
 - h. Vacuum clean carpet and similar soft surfaces, removing debris and excess nap. Shampoo if required.
 - i. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other substances that are noticeable vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - j. Remove labels that are not permanent labels.
 - k. Touch-up and otherwise repair and restore marred exposed finishes and surfaces. Replace finishes and surfaces that can not be satisfactorily repaired or restored, or that show evidence of repair or restoration. Do not paint over "UL" and similar labels, including mechanical and electrical name plates.
 - l. Wipe surfaces of mechanical and electrical equipment, and other similar equipment. Remove excess lubrication, paint and mortar droppings and other foreign substances.
 - m. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - n. Replace air disposable filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills. Clean ducts, blowers, and coils if units were operated without filters during construction.
 - o. Clean light fixtures, lamps, globes and reflectors to function with full efficiency. Replace burned out bulbs, and defective and noisy starters in fluorescent and mercury vapor fixtures.
 - p. Leave Project clean and ready for occupancy.
4. Engage an experienced licensed exterminator to make a final inspection, and rid Project of rodents, insects, and other pests. Comply with regulations of local authorities having jurisdiction.
 5. Remove temporary protection and facilities installed during construction to protect previously completed installations during remainder of construction.
 6. Comply with governing regulations and safety standards for cleaning operations. Remove waste materials from Project Site and dispose of in accordance with requirements of local authorities having jurisdiction.
 7. Where extra materials of value remain after completion of construction, they become Postal Service property and these materials should be stored as directed by COR.

USPS Specification issued: 10/1/2013
Last revised: 4/16/2013

SECTION 01 74 19 00 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

NOTE TO SPECIFIER

This Section includes requirements for waste management and the protection of natural resources. This section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Modify as needed for project specific requirements. This section emphasizes a team approach – including U.S. Postal Service, design professional, the contractor – to address environmental issues. Use this section for green projects and as directed by the COR. Do not revise this section without prior approval or direction from the USPS COR.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes: Procedures for achieving the most environmentally conscious Work feasible within the limits of the Construction Schedule, Contract Sum, and available materials, equipment, and products.
 - 1. Participate in promoting efforts of Postal Service to create an energy-efficient and environmentally-sensitive structure.
 - 2. Use recycled-content, toxic-free, and environmentally-sensitive materials and equipment.
 - 3. Use environmentally-sensitive procedures.
 - a. Protect the environment, both on-site and off-site, during demolition and construction operations.
 - b. Prevent environmental pollution and damage.
 - c. Effect optimum control of solid wastes.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 013200 - Construction Progress Documentation.
 - 2. Section 014000 - Quality Requirements: Contractor's Daily Report.
 - 3. Section 015000 - Temporary Facilities And Controls: Temporary ventilation, progress cleaning and waste removal.
 - 4. Section 016000 - Product Requirements: Substitutions.
 - 5. Section 017704 – Closeout Procedures and Training: Record submittals.
 - 6. Section 024113 – Selective Site Demolition.

1.2 DEFINITIONS

- A. Adequate ventilation: Ventilation, including air circulation and air changes, required to cure materials, dissipate humidity, and prevent accumulation of dust fumes, vapors, or gases.
- B. Construction and demolition waste: Includes solid wastes, such as building materials, packaging, rubbish, debris, and rubble resulting from construction, remodeling, repair, and demolition operations.
 - 1. Rubbish: Includes both combustible and noncombustible wastes but excludes recyclable materials such as paper, boxes, glass, metal, lumber scrap and metal cans.
 - 2. Debris: Includes both combustible and noncombustible wastes, such as leaves and tree trimmings, stumps and rubble that result from construction or maintenance and repair work.
- C. Chemical waste: Includes petroleum products, bituminous materials, salts, acids, alkalis, herbicides, pesticides, organic chemicals, and inorganic wastes.

- D. Diversion: Redirection of waste ordinarily deposited in a municipal landfill to a recycling facility or to another destination for reuse.
- E. Environmental pollution and damage: The presence of chemical, physical, or biological elements or agents, which adversely affect human health or welfare; unfavorably alter ecological balances; or degrade the utility of the environment for aesthetic, cultural, or historical purposes.
- F. Hazardous materials: Includes pesticides, biocides, and carcinogens as listed by recognized authorities, such as the Environmental Protection Agency (EPA) and the International Agency for Research on Cancer (IARC).
- G. Interior final finishes: Materials and products that will be exposed at interior, occupied spaces; including flooring, wallcovering, finish carpentry, and ceilings.
- H. Municipal Solid Waste Landfill: A permitted facility that accepts solid, non-hazardous waste such as household, commercial, and industrial waste, including construction and demolition waste.
- I. Packaged dry products: Materials and products that are installed in dry form and are delivered to the site in manufacturer's packaging; including carpets, resilient flooring, ceiling tiles, and insulation.
- J. Sediment: Soil and other debris that has been eroded and transported by storm or well production runoff water.
- K. Sanitary wastes:
 - 1. Garbage: Refuse and scraps resulting from preparation, cooking, distribution, or consumption of food.
 - 2. Sewage: Domestic sanitary sewage.
- L. Wet products: Materials and products installed in wet form, including paints, sealants, adhesives, and special coatings.

1.3 SUBMITTALS

- A. Solid Waste Management and Environmental Protection Plan: Prepare and **submit at the Preconstruction Meeting** a Solid Waste Management and Environmental Protection Plan including, but not limited to, the following:
 - 1. Procedures for Recycling/Re-Use Program.
 - 2. Schedule for application of interior finishes.
 - 3. Revise and resubmit Solid Waste Management and Environmental Protection Plan as required by Postal Service.
 - a. Approval of the Contractor's Solid Waste Management and Environmental Protection Plan, will not relieve the Contractor of responsibility for adequate and continuing control of pollutants and other environmental protection measures.
 - 4. Any permits required by local, state or federal agencies.
- B. With each Contractor's Report as specified in Section 014000 – Quality Requirements, submit an updated Summary Of Solid Waste Disposal And Diversion. Submit on form in Appendix A of this Section. Include manifests, weight tickets, receipts, and invoices specifically identifying the Project and waste material for:
 - 1. Municipal Solid Waste Landfills.
 - 2. Recycling/Reuse Facilities.
- C. With Record Submittals as specified in Section 017704 - Closeout Procedures and Training, submit the following:

1. Final Summary Of Solid Waste Disposal And Diversion. Submit on form in Appendix A of this Section.
2. Resource Conservation and Recovery Act Project Summary. Submit on form in Appendix B of this Section.

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

3.1 RECYCLING AND REUSE

- A. Collection: Implement a recycling/reuse program that includes separate collection of waste materials of the following types as appropriate to authorized local and regional recycling/reuse facilities:
 1. Asphalt.
 2. Concrete.
 3. Metal.
 - a. Ferrous.
 - b. Non-ferrous.
 4. Wood.
 5. Debris.
 6. Glass.
 7. Clay brick.
 8. Paper/Cardboard.
 9. Plastic.
 10. Gypsum.
 11. Paint.
 12. Carpet.
 13. Others as appropriate.
- B. Recycling/reuse centers: Contact state and/or local governmental solid waste offices, Environmental Protection Agency (EPA) regional offices, and authorized applicable non-profit organizations.
 1. Asphalt
 2. Concrete.
 3. Metal.
 4. Wood.
 5. Debris.
 6. Glass.
 7. Clay brick.
 8. Paper/Cardboard.
 9. Plastic.
 10. Gypsum.
 11. Paint.
 12. Carpet.
 13. Others as appropriate.
- C. Handling:
 1. Clean materials which are contaminated prior to placing in collection containers. Deliver materials free of dirt, adhesives, solvents, petroleum contamination, and other substances deleterious to recycling process.
 2. Arrange for collection by or delivery to the appropriate recycling or reuse facility.

- D. Participate in re-use programs: identify local and regional re-use programs, including but not limited to non-profit organizations such as schools, local housing agencies, and public arts programs, that accept used materials. The following are examples for Contractor's information only.
 - 1. National materials exchange network, such as CAL-MAX, a free service provided by various state and regional offices, designed to help businesses find markets for materials that traditionally would be discarded. The premise of the program is that material discarded by one business may be a resource for another business.
 - a. Items and regions covered by materials exchange programs may vary. Contact the applicable regional materials exchange program. In California, contact CAL-MAX at (916) 255-2369.
 - 2. Habitat For Humanity, a non-profit housing organization that rehabilitates and builds housing for low income families.
 - a. Sites requiring donated materials vary. Contact the national hotline (800) HABITAT.
- E. Rebates, tax credits, and other savings obtained for recycled or re-used materials accrue to Contractor.

3.2 ENVIRONMENTAL CONTROLS

- A. Protection of natural resources: Preserve the natural resources within the Project boundaries and outside the limits of permanent Work performed under this Contract in their existing condition or restore to an equivalent or improved condition as approved by Postal Service, upon completion of the Work.
 - 1. Confine demolition and construction activities to work area limits indicated on the Drawings and as directed by COR.
 - a. Temporary construction: As specified in Section 015000 - Temporary Facilities And Controls.
 - b. Demolition and salvage operations: As specified in Section 024119 - Selective Structure Demolition.
 - c. Disposal operations for demolished and waste materials that are not identified to be salvaged, recycled or reused:
 - 1) Remove debris, rubbish, and other waste materials resulting from demolition and construction operations, from site.
 - 2) No burning permitted.
 - 3) Transport materials with appropriate vehicles and dispose off-site to areas which are approved for disposal by governing authorities having jurisdiction.
 - 4) Avoid spillage by covering and securing loads when hauling on or adjacent to public streets or highways. Remove spillage and sweep, wash, or otherwise clean project site, streets, or highways.
 - 5) Comply with applicable federal, state and/or local regulations.
 - 2. Water resources as follows:
 - a. Comply with requirements of the National Pollutant Discharge Elimination System (NPDES) and the State Pollutant Discharge Elimination System (SPDES).
 - b. Oily substances: Prevent oily or other hazardous substances from entering the ground, drainage areas, or local bodies of water.
 - 1) Store and service construction equipment at areas designated for collection of oil wastes.
 - c. Mosquito abatement: Prevent ponding of stagnant water conducive to mosquito breeding habitat.
 - d. Prevent run-off from site during demolition and construction operations.

3. Land resources: Prior to construction, identify land resources to be preserved within the Work area. Do not remove, cut, deface, injure, or destroy land resources including trees, shrubs, vines, grasses, top soil, and land forms without permission from Postal Service.
4. Air Resources: Prevent creation of dust, air pollution, and odors.
 - a. Use water sprinkling, temporary enclosures, and other appropriate methods to limit dust and dirt rising and scattering in air to lowest practical level.
 - 1) Do not use water when it may create hazardous or other adverse conditions such as flooding and pollution.
 - b. Do not use any hazardous chemicals on USPS property when it is a shared work space with USPS employees. If chemicals are authorized for use, store volatile liquids, including fuels and solvents, in closed containers.
 - c. Properly maintain equipment to reduce gaseous pollutant emissions.
 - d. Interior final finishes: Schedule construction operations involving wet products prior to packaged dry products to the greatest extent possible in accordance with Postal Service approved Solid Waste Management and Environmental Protection Plan.
 - e. Temporary Ventilation: As specified in Section 015000 - Temporary Facilities And Controls, and as follows:
 - 1) Provide adequate ventilation during and after installation of interior wet products and interior final finishes.
 - 2) Provide adequate ventilation of packaged dry products prior to installation. Remove from packaging and ventilate in a secure, dry, well-ventilated space free from strong contaminant sources and residues. Provide a temperature range of 60 degrees F minimum to 90 degree F maximum continuously during the ventilation period. Do not ventilate within limits of Work unless otherwise approved by the COR.
 - f. Pre-occupancy ventilation: After final completion and prior to initial occupancy, provide adequate ventilation for minimum 5 days. Pre-occupancy ventilation procedures:
 - 1) Use supply air fans and ducts only.
 - 2) Temporarily seal exhaust ducts.
 - 3) Temporarily disable exhaust fans.
 - 4) Provide exhaust through operable windows or temporary openings.
 - 5) Provide temporary exhaust fans as required to pull exhaust air from deep interior locations. Stair towers may be used for exhausting air from the building during the temporary ventilation.
 - 6) After pre-occupancy ventilation and prior to final testing and balancing of HVAC system, replace air filters and make HVAC system fully operational.
5. Fish and Wildlife Resources: Manage and control construction activities to minimize interference with, disturbance of, and damage to fish and wildlife.
6. Noise Control: Perform demolition and construction operations to minimize noise. Perform noise producing work in less sensitive hours of the day or week as directed by Postal Service .
 - a. Repetitive, high level impact noise will be permitted only between the hours of 8:00 a.m. and 6:00 p.m. Do not exceed the following dB limitations:

Sound Level in dB

70
80

Time Duration of Impact Noise

More than 12 minutes in any hour
More than 3 minutes in any hour

- b. Provide equipment, sound-deadening devices, and take noise abatement measures that are necessary for compliance.

SECTION 01 77 04 00 - CLOSEOUT PROCEDURES AND TRAINING

NOTE TO SPECIFIER

This Section is intended for use with ALL project types: Design-Bid-Build (DBB), Design-Build (DB), Repair & Alteration (R&A) and New Construction Leased (NCL) type projects that use the Building Standard Design Specifications. Design-Bid-Build (DBB), New Construction type projects that use a Design and Construction contract. Modify as needed for project specific requirements. EDIT BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT. The degree of detail required for this section is related to the number and complexity of systems and equipment required for a particular project. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 – GENERAL**1.1 MANUALS**

- A. Purpose: Operation and maintenance manuals are for the training of, and use by, Postal Service employees in the operation and maintenance of the systems and related equipment as specified below. The manuals must consist of instruction on systems and equipment. A separate manual or chapter must be prepared for each of the following classes of equipment or system:
 - 1. Landscaping.
 - 2. Roof system.
 - 3. Doors.
 - 4. Security system.
 - 5. Fire protection.
 - 6. Plumbing systems.
 - 7. Mechanical systems.
 - 8. Electrical systems.
 - 9. Miscellaneous building equipment and systems.
 - 10. Mechanization (for requirements for mechanization maintenance manuals, see Mechanization Specification M-5000).
- B. Content: Unless otherwise indicated, each chapter must contain the following, as applicable:
 - Introduction.
 - Table of contents.
 - Description of system (including design intent and considerations).
- C. Preparation: The outline below is intended as a general guide for preparing the manuals. The manuals must be prepared to provide for the optimum operation and maintenance of the various systems. The description of systems and general operating instructions for plumbing and electrical manuals may cover only complicated or unusual parts of these systems, such as sewage ejectors, transformers, high tension switchgear, and signal and alarm systems. Manufacturer's literature and data must be those of the actual equipment installed under contract for the particular facility. Further guidance is available in the ASHRAE Handbook, 1984, Systems Volume, Chapter 39, Mechanical Maintenance.
- D. Suggested Outline for Operation and Maintenance (O&M) Manuals: This is a suggested outline, with general requirements of O&M manuals. The outline is presented to indicate the extent of material to be covered and the individual items required in manuals for Mail Processing Facilities. The outline may be modified to suit specific installations; however, the purpose of the manual must be fulfilled. The manual is not intended to duplicate manufacturers' data, but proper references must be made in the text of the O&M manual to indicate that that information is applicable and where it is located.
 - 1. Part I. Description and Design Intent
 - a. Introduction

- 1) Provide a brief description of project and purpose of the maintenance manual. The following statements must be included: "Operation and maintenance of this equipment must be performed in accordance with this manual and posted instructions, subject to compliance with applicable technical guides and standards issued by USPS. It is recognized that minor changes in control points and settings will be required, based on actual operating experience, to correct varying conditions and improve operation. When such changes appear necessary, they must be submitted to the maintenance manager for consideration. Upon approval of any changes, the applicable portions of all copies of the manual and proposed instructions must be revised and reissued, and any change in operating procedure brought to the attention of all operating personnel."
 - 2) "This manual is specifically developed to assist the Postal official in charge at the facility to operate and maintain the building systems and equipment. Manufacturers' recommendations set forth for certain components must be followed during the complete warranty period for that equipment."
 - 3) Contents of Manual. This portion of the introduction must explain that the manual is to contain complete operating, maintenance, and safety instructions for all equipment listed. It must also contain any other appropriate references as required to outline an explanation of the manuals and major categories of reference material required with the manuals.
- b. Table of Contents
- 1) The table of contents must list numbers and titles of chapters, sections, and main paragraphs, with their page numbers. Each volume in a set of manuals must contain its own table of contents. Publications containing 10 or more illustrations or tables must include a list of illustrations or tables, as applicable. These lists must show number, title, and page number of each illustration and table. Following is a typical table of contents:
 - a. Landscaping
 - 1.) Irrigation system
 - 2.) Lawns and grasses
 - 3.) Exterior plants
 - 4.) Plant maintenance
 - b. Roof System
 - 1.) Roof and flashing type
 - 2.) Local inspection (frequency and what is included)
 - 3.) Maintenance (when manufacturer performs, if USPS performs what methods compatible materials, etc.)
 - c. Doors
 - 1.) Overhead coiling doors
 - 2.) Folding closures
 - 3.) Sectional overhead doors
 - 4.) Impact traffic doors
 - 5.) Automatic entrance doors
 - 6.) Specialized hardware
 - d. Security Systems
 - 1.) CCTV system
 - 2.) Intrusion detection
 - 3.) Electronic article surveillance
 - 4.) Access control
 - e. Fire Protection System
 - 1.) Water supply and distribution

- 2.) Exterior fire hydrants
 - 3.) Sprinklers
 - 4.) Fire Department connections
 - 5.) Fire extinguishers
 - 6.) Exit signs
 - f. Plumbing Systems
 - 1.) Potable water
 - 2.) Domestic hot water
 - 3.) Roof and sanitary drains
 - g. Mechanical Systems
 - 1.) Space conditioning
 - 2.) Heating
 - 3.) Central chilled water and distribution
 - 4.) HVAC instrumentation and controls
 - h. Electrical Systems
 - 1.) Incoming Service
 - 2.) Electrical power distribution
 - 3.) Lighting and lighting controls
 - 4.) Fire alarm
 - 5.) Emergency lighting unit
 - i. Miscellaneous Building Equipment
 - 1.) Postal Parcel Lockers
 - 2.) Floor mats
 - 3.) Dock equipment
 - 4.) Window Treatments
 - 5.) Elevators
 - 6.) Scales
 - 7.) Dust collectors
 - 8.) Vehicle maintenance equipment
- 2. Part II. Operating Sequence and Procedures
 - a. Contents: Each chapter must describe the procedures necessary for Postal Service personnel to operate the system and equipment covered in that chapter.
 - b. Operating Procedures: The operating procedures must be divided into four subsections: Startup, Operation, Emergency Operation, and Shutdown.
 - 1) Startup: Give complete instructions for energizing the equipment and making initial settings and adjustments whenever applicable. If equipment is fully automatic, a statement to that effect is all that is required. If a specific sequence of steps must be performed, give step-by-step instructions in the proper sequence. If timing- (such as warm-up between power-on and adjustment) is important, clearly state the specific minimum time required at the proper point in the procedure. Refer to controls and indicators by panel; make references consistent with the nomenclature used in illustrations and tables of controls and indicators. If preliminary settings differ for different modes of operations, give procedures for each mode.
 - 2) Operation: Give detailed instructions in proper sequence for each mode of operation. When, for a given action on the part of the operator, alternate equipment responses are possible, give the appropriate operation reaction to each.
 - 3) Emergency Operation: If some functions of the equipment can be operated while other functions are disabled, give instructions for operations under these conditions. Include here only those alternate methods of operation (from normal) that the operator can follow when there is a partial failure or malfunctioning of components, or other unusual condition.

- 4) Shutdown: Include instructions for stopping and securing the equipment after operation. If a particular sequence is required, give step-by-step instructions in that order.
3. Part III. Maintenance Instructions and Requirements
 - a. Contents: Each chapter must describe the procedures necessary for Postal Service personnel to perform the maintenance on the systems and equipment covered in that chapter. Emphasis must be placed on the method of mechanical control of systems and equipment from a maintenance standpoint. References must be made, as appropriate, to drawings, schematics, and sequences of operation included as part of the construction Contract drawings and specifications that show piping and equipment arrangements and items of control. Prints of these drawings must be reduced to 11 inches x 17 inches for insertion in the manuals. Drawings must represent the "as-built" condition.
 - b. Maintenance Procedures: The maintenance procedures must be divided into two categories: Preventive Maintenance and Corrective Maintenance.
 1. Preventive Maintenance
 - a. Provide a schedule for preventive maintenance. State, preferably in tabular form, the recommended frequency of performance for each preventive maintenance task (cleaning, inspection, and scheduled overhauls).
 - b. Provide instruction and schedules for all routine maintenance cleaning and inspection, with recommended lubricants.
 - c. If periodic inspection of equipment is required for operation, cleaning, or other reasons, indicate the items to be inspected and give the inspection criteria for, but not limited to, the following:
 - 1.) Motors
 - 2.) Controls
 - 3.) Filters
 - 4.) Heat exchangers
 2. Provide instruction for minor repairs or adjustments required for preventive maintenance routines. Minor repair and adjustment must be limited to repairs and adjustments that may be performed without special tools or test equipment and that require no special training or skills. Identify test points and give values for each.
 - c. Corrective Maintenance
 1. Corrective Maintenance: Corrective maintenance instructions must be predicated upon a logical effect-to-cause troubleshooting philosophy and a rapid replacement procedure to minimize equipment downtime. Instructions and data must appear in the normal sequence of corrective maintenance, for example, troubleshooting first, repair and replacement of parts second, and then the parts list.
 2. Troubleshooting: This information must describe the general procedure for locating malfunctions and must give, in detail, any specific remedial procedures or techniques. The data shown are intended to isolate only the most common equipment deficiencies. Troubleshooting tables, charts, or diagrams may be used to present specific procedures. A guide to this type must be a three-column chart. The columns must be entitled Malfunction, Probable Cause, and Recommended Action. The information must be alphabetically arranged by component, and each component must, in turn, list deficiencies that may be expected. Each deficiency must contain one or more problems with a recommended correction.
 3. Repair and Replacement: Indicate the repair and replacement procedures most likely to be required in the maintenance of the equipment. Information included here must consist of step-by-step instructions for repair and replacement of defective items. Include all

- information required to accomplish repair or replacement, including information such as torque values. Identify all tools, special equipment, and materials that may be required. Identify uses for maintenance equipment. The paragraphs must contain headings to identify the topics covered.
4. Safety Precautions: This subsection must comprise a listing of safety precautions and instructions to be followed before, during, and after repairs or adjustments are made or routine maintenance is performed.
 - d. Manufacturers' Brochures: Include manufacturers' descriptive literature covering devices used in the system, together with illustrations, exploded views, and renewal parts lists. This section must also include special devices manufactured by the Contractor.
 - e. Special Maintenance: Provide information of a maintenance nature covering warranty items that have not been discussed elsewhere.
 - f. Shop Drawings: Provide a copy of all approved shop drawings covering approval of equipment for the project with the manufacturers' brochures.
 - g. Spare Parts Lists: Include a recommended spare parts list for all equipment furnished for the project. The parts list must include a tabulation of descriptive data for all the electrical-electronic spare parts and all the mechanical spare parts proposed for each type of equipment or system. Each part must be properly identified by part number and manufacturer.
 - h. Warranty: Include a copy of the "special" or extended warranty in the operation and maintenance manual.

NOTE TO SPECIFIER

The number of manuals and timeframes for submittal must be reviewed and edited for the specific project requirements. Consult with the COR for direction.

- E. Submittal, In both "hard" and electronic DVD or CD-ROM format:
 1. Preliminary Submittal: Two draft copies of the completed manuscript for items in this outline must be submitted to the COR for review within [60] [30] [__] days after approval of equipment to be provided. One copy will be returned to the Contractor within [30] [15] [__] days after submittal and, if required, must be revised and resubmitted within [30] [15] [__] days.
 2. Final Submittal: four complete sets of manuals must be furnished to the COR not later than [90] [30] [__] days before completion of the project.
 3. Final Submittal must be accepted by the COR before training can begin.

1.2 POSTED OPERATING INSTRUCTIONS

- A. General. Operating instructions and diagrams must be prepared for posting near the equipment. Posted operating instructions must be photographic or equal non-fading reproductions framed under glass or encased in non-discoloring plastic and must be mounted in locations as directed. Copies of the posted operating instructions must also be used with the O&M manuals as a basis for training Postal Service personnel in the operation and maintenance of systems and related equipment installed under contract at the facility.
- B. Posted operating instructions must consist of simplified, consolidated equipment, control, and power diagrams graphically representing the entire system and actual equipment installed, including concise written instructions on how to start and stop systems, what settings and conditions are to be observed, and what control adjustments are to be made or maintained by the operation. Posted operating instructions must include, but are not limited to the following:
 1. Boiler and burner controls.
 2. Refrigeration controls.
 3. Heating, ventilating, and air-conditioning controls for each system.

4. Controls for dust collection systems.
5. One-line schematic diagrams of water supply (plumbing).
6. One-line diagrams of steam distribution and hot water and chilled water systems, including risers, main shutoff valves, balancing cocks, and the like.
7. One-line isometric diagrams of sanitary drainage.

1.3 TRAINING

- A. The Contractor must train Postal Service personnel in the operation and maintenance of mechanical and electrical equipment. Coordination must be maintained with systems designers for developing the hours of instruction and scope of material to be covered. Training of Postal Service personnel must not begin until the COR has approved the final submittal copy of each O&M manual.
- B. Schedule Submittal: The proposed scope of training and materials and instruction schedule must be submitted for review and approval approximately 30 days before the scheduled completion of the buildings. Mutually agreeable dates for training must be arranged with the COR, but the training must be completed before final acceptance of the facility.
- C. Scope of Training: Training must include classroom and on-the-job instructions by qualified installation and maintenance personnel having the necessary knowledge, experience, and teaching skills. The use of recording on digital media (DVD or CD discs) during the instruction period is required. Discs must be turned over to the COR after training has been completed.

NOTE TO SPECIFIER

The timeframes for providing training must be reviewed and edited for the specific project requirements. Consult with the COR for direction.

- D. Time Period of Training: The minimum specific hours of training time required for each category of major equipment and systems is indicated below. Past experience indicates a workable ratio in the vicinity of approximately 25 percent classroom to 75 percent application, except that the ratio may be reversed for control systems. The COR must have the option of redistributing the training times, subject to the total time specified. Training must be presented on an 8-hour per day, 5-day per week schedule, with all reading assignments and review to be within this period.

1.4 TRAINING PERIOD

Item	Time (Hours)
1. Roofing	[8] [4] [___]
2. Special Doors	[16] [8] [___]
3. Dock Equipment	[16] [8] [___]
4. Security Equipment	[16] [8] [___]
5. Heating Plant Covers heat-generating equipment, such as heat exchangers, boilers, and burners; electric resistance heating; and related equipment, where applicable (including combustion testing), together with associated operation and safety controls.	[24] [12] [___]
6. Cooling Plant Covers the refrigeration plant, cooling tower (including water treatment), and related equipment, together with associated operating and safety controls.	[28] [14] [___]
7. Ventilation	

- | | | |
|-----|--|-------------------|
| | Covers air-handling units with heating and cooling coils, fans, and all other air-handling equipment, together with associated operating and limit controls. | [16] [8] [___] |
| 8. | Overall Control System
Covers central control center, coordinating respective controls of heating, cooling, and ventilation systems, and shows how these controls work together to provide an integrated overall control of the complete air-conditioning system, both heating and cooling, as well as all other utility control systems. | [32] [16] [___] |
| 9. | Electrical System
Covers all building services, lighting, lighting controls, and intercommunications, and security system. | [64] [32] [___] |
| 10. | Elevators
Covers operation of the different types installed, demonstrations in the machine room on the various operating and control equipment installed, and explanation of the use of the electric circuit diagrams (of sufficient size) to ensure proper operation and assistance in troubleshooting. | [24] [12] [___] |
| 11. | Piping and Plumbing
Includes, but is not limited to, domestic water supply, storm and sanitary drainage systems, cold-water supply systems, sprinkler systems, and the like. | [40] [20] [___] |
| 12. | Miscellaneous
Includes, but is not limited to, vehicle maintenance equipment, fire protection and alarm equipment, dust collection systems, compressed air systems, automatic door operators, dock levelers, truck scales, data collection center, and all other equipment not specifically covered above. | [40] [20] [___] |
| 13. | Mechanization
See Mechanization Specification M-5000. | |

1.5 TRAINING PARTICIPATION SHEETS

- A. Submit to the COR sign-in sheets with the dates and names of all training participants. Training sheets must be reviewed and certified by an authorized facility manager.

NOTE TO SPECIFIER

Many specification sections contain particular submittal requirements that go beyond the requirements for Systems Manuals, Operating Instructions and Training listed above. Reference any sections and submittals that may be overlooked.

1.6 OTHER CLOSEOUT SUBMITTALS

- A. Additional requirements for Systems Manuals, Operating Instructions, Training and other deliverables are contained in individual Specification Sections. All closeout requirements must be provided to and accepted by the COR prior to requesting final payment. Examples of additional closeout requirements include, but are not limited to, the following
1. Final Punch-List with all items certified as complete.
 2. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Record "As Built" Drawings*, the Contractor shall submit certified As-Built Record Drawings and Specifications in the quantities and media specified.
 3. In accordance with the terms and conditions of the contract provisions and clauses, including those concerning *Warranty*, the Contractor shall submit all transferable guarantees and warranties for equipment, materials and installations furnished by any manufacturer, supplier, or installer.
 4. Signed Asbestos and Lead-Based Paint Certificate.
 5. RE-4 Certification of Accessibility (CoA) and Facility Accessibility Survey Report.
 6. Material Safety Data Sheets.

7. Signed and sealed Contractor Release of Claims.
8. []

PART 3 – EXECUTION

NOT USED

USPS Master Specifications, issued: 10/1/2013
Last revised: 9/17/2013

END OF SECTION 01 77 04 00

**SECTION 01 91 13 00 - GENERAL COMMISSIONING REQUIREMENTS**

NOTE TO SPECIFIER

Use this Specification Section for Mail Processing Facilities only. This Specification is intended as a guide to the Architect/Engineer preparing the Construction Documents. The degree of commissioning that will be required for the project shall be specified by the COR.

NOTE TO SPECIFIER

REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.01 91 13 00**

PART 1 - GENERAL**1.1 WORK INCLUDED**

- A. Commissioning requirements common to all Sections.
- B. Systems and equipment start-up and functional performance testing.
- C. Validation of proper and thorough installation of systems and equipment.
- D. Equipment performance verification.
- E. Documentation of tests, procedures, and installations.
- F. Training.

1.2 SCOPE

NOTE TO SPECIFIER

This Section includes requirements common across all Divisions of the work. Requirements specific to individual Sections shall be specified in the technical specification for each of Divisions 22, 23, and 26. Edit to suit project requirements.

- A. The Commissioning ("Cx") Plan outlines the commissioning process outside of the Construction Contract. The specification sections dictate all requirements of the commissioning process relative to the Construction Contract. The Cx Plan is available for reference at the request of the Contractor; however it is not part of the Construction Contract.
- B. This Section and other Sections of the specification detail the Contractor's responsibilities relative to the Cx process and it expands on the Cx Plan, which covers the roles and responsibilities of Parties outside of the Construction Contract. The degree of commissioning that will be required for this project shall include the specific requirements listed in the Division 22, 23 and/or 26 specifications.

1.3 GENERAL DESCRIPTION

- A. Commissioning ("Cx") is the process of ensuring that all building systems are installed and perform interactively according to the design intent; that systems are efficient and cost effective and meet the Postal Service's operational needs; that the installation is adequately documented; and that the Operators are adequately trained. It serves as a tool to minimize post-occupancy operational problems. It establishes testing and communication protocols in an effort to advance the building systems from installation to full dynamic operation and optimization.
- B. The Postal Service shall retain an independent Commissioning Authority (CxA) to provide Commissioning Services through preapproved vendors.
- C. CxA shall work with the Contractor, the AE, and the Postal Service Project Manager to direct and oversee the Cx process and perform functional performance testing.
- D. The Cx process shall begin at the 95% review of the design documentation for Design/Build (DB), R&A and Design/Bid/Build (DBB) projects. However, the work shall commence at the 30% design stage for special projects, such as Geothermal, Compressed Natural Gas or Electrical Generation Projects.

1.4 RELATED WORK AND DOCUMENTS

- A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section
- B. Commissioning Plan: The Cx Plan shall be available for reference as it outlines responsibilities outside of the Construction Contract. It gives the Contractor a perspective as to the overall process. It encompasses the entire Cx process including design phase and post construction tasks.
- C. Section 013300 - Submittal Procedures: Stipulates additional copies of submittals to be submitted and refers to other sections for additional submittal requirements related to Cx.
- D. Section 017704 - Closeout Procedures and Training: Defines the milestones in completion incorporating the Cx process.
- E. Individual Specification Sections: Individual sections stipulate installation, start-up, warranty, O&M documentation, and training requirements for the system or device specified in the Section.

1.5 REFERENCE STANDARDS

- A. ASHRAE Guideline, "Guideline for Commissioning HVAC Systems"
- B. ASHRAE Guideline, "Preparation of Operating and Maintenance Documentation for Building Systems"
- C. AABC Commissioning Group (ACG)
- D. NEBB – Procedural Standards for Building Systems Commissioning
- E. National Electric Code (NEC)
- F. American Society for Testing and Materials (ASTM)
- G. Electronics Industry Association/Telecommunications Industry Association (EIA/TIA)

- H. Illuminating Engineering Society (IES)
- I. Institute of Electrical and Electronics Engineers (IEEE)
- J. International Electrical Testing Association (NETA)
- K. National Electrical Manufacturers Associates (NEMA)
- L. National Fire Protection Association (NFPA)
- M. Underwriters Laboratory, Inc. (UL)

1.6 DOCUMENTATION

- A. Contractor shall provide to the CxA the following per the procedures specified herein and in other Sections of the specification:
 - 1. Drawings and Data. One hard copy and one electronic copy of Drawings and product data related to systems or equipment to be commissioned. CxA shall review and incorporate comments for Contractor's consideration.
 - 2. Draft Start-Up Procedures. Contractor shall develop Start-up Procedures for all applicable equipment and systems along with the manufacturer's application, installation and start-up procedures. CxA will initially provide to the Contractor generic Start-up Checklists, the content of which must be reviewed by the Contractor and supplemented with manufacturer-specific requirements and the Contractor's own internal quality assurance procedures and checks. CxA will review draft and recommend approval or provide comments.
 - 3. Schedule Updates. Issue periodic updates to the construction schedule.
 - 4. Action Item Response. Respond to Action Items by Cx team members.
 - 5. Field Testing Agency Reports (other than TAB). Provide all documentation of work of independent testing agencies required by the specification. These shall be provided prior to Acceptance Phase. Field Testing Agency Reports should be provided in PDF electronic format.
 - 6. Completed Start-Up Procedures. Completed Start-Up Procedure documentation for all applicable equipment and systems.
 - 7. Equipment Warranties. Provide prior to the start of the Acceptance Phase.
- B. Record Drawings: Contractor shall maintain at the site an updated set of record or 'As-Built' documents reflecting actual installed conditions and all approved changes and modifications to the contract documents. Contractor shall provide access to the CxA to review the As-Built and Record Drawings. Provide Record Drawings in accordance with Division 1.
- C. Reports. The Cx agent shall provide a final report with executive summary of overall results, description of items commissioned, test data, conclusions, recommendations, etc. to the COR within 14 days after the completion of the commissioning process. If, due to circumstances beyond the control of the Cx agent, the Cx process cannot be completed in accordance with the schedule, then, at the discretion of the COR, a preliminary report shall be submitted detailing the results of the Cx activities completed thus far, with a final report to be submitted at a later agreed upon date.

1.7 COMMISSIONING SCHEDULING

- A. The Cx will be categorized into Phases as indicated below. Note that per schedule, different systems and/or areas may be in different phases at any given time given that the Cx and testing process will be integrated into the construction process:
1. Construction Phase: This is the period of time where the systems are installed, much of the Cx documentation is developed, the systems are started, and the majority of the Contractor required training is performed. On any given system or area, the Construction Phase will end when the CxA approves proceeding with the Functional Performance testing.
 2. Acceptance Phase: This is the period of time where the systems will be functionally tested and the systems will operate through an endurance period.
 3. Warranty Phase: This is the period of time that coincides with the start and end of the Contractor's base warranty.

1.8 CONTRACTOR RESPONSIBILITIES

- A. Construction Phase: The Postal Service shall provide independent Cx Services through preapproved vendors. The AE shall be responsible for coordinating with the CxA as necessary to assist them in completing the Cx Report. In particular, the Contractor shall be responsible for providing assistance from their test and balance contractor, BAS controls contractor, mechanical contractor, electrical contractor, etc. to confirm that the functionality of the new equipment meets the original design intent, operates efficiently, and demonstrates that all of the required features of the new system are functioning as specified in the design documents.
- B. Acceptance Phase: The following delineates the Cx-related responsibilities of the Contractor (and their subcontractors) during the Acceptance Phase.
1. Assist CxA in functional performance testing. Assistance will generally include the following:
 - a. Manipulate systems and equipment to facilitate testing.
 - b. Provide any specialized instrumentation necessary for functional performance testing.
 - c. Manipulate systems to facilitate functional performance testing.
 2. Correct any work not in accordance with Contract Documents.
 3. Maintain record documentation, and update and resubmit it after completion.
- C. Warranty Phase: The following delineates the Cx-related responsibilities of the Contractor (and their subcontractors) during the Warranty Phase.
1. Provide warranty service;
 2. Participate as required in opposite season testing;
 3. Correct any deficiencies identified throughout the Warranty Phase;
 4. Update record documentation to reflect any changes made throughout the Warranty Phase.

1.9 CX KICK OFF/COORDINATION MEETING

- A. CxA shall schedule and conduct a Cx coordination meeting at the appropriate time after the award of the Construction Contract.

1.10 START-UP PROCEDURES AND DOCUMENTATION

- A. Purpose: The Cx process requires that the normal quality control processes involved with preparing systems and equipment for operation are performed to a high standard of care and are thoroughly documented. The Start-up procedures shall be performed to all systems and

equipment specified in the Contract documents. The Cx process requires all Parties to collaborate to establish the optimal standard of care for starting systems and equipment. The Contractor performs the Start-up procedures, documents the results, and provides them to the CxA.

- B. Sampling and Final Submission: All systems shall be started and documented per the approved procedures and NO sampling strategy is used. Completed Start-up and prefunctional checklists for all pieces of equipment shall be submitted to CxA prior to any associated functional performance testing.
- C. Postal Service Access: Contractor shall allow access by Postal Service representatives to inspect the equipment and ensure its proper operation.

1.11 FUNCTIONAL PERFORMANCE TESTING

- A. The objective of Functional Performance Testing is to demonstrate that each system is operating according to the documented design intent of the Contract Documents. Functional Performance Testing facilitates bringing the systems from a state of functional completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected, improving the operation and functioning of the systems.
- B. The logistics and procedures involved in Functional Performance Testing are outlined below.

1.12 TRAINING

- A. Adequate and thorough training of the Operators and the facilities staff is vital to effective transition and early occupancy of the building. A key goal of the Cx Team is to ensure that this is accomplished. Contractors, Subcontractors, and Manufacturers/Vendors as specified shall prepare and conduct training sessions on the installed systems and equipment for which they are responsible. The Contractor shall be responsible for insuring all other training is performed in accordance with the Contract Documents.

PART 2 – PRODUCTS

2.1 INSTRUMENTATION

- A. All testing equipment used in the Cx process shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified. All equipment shall be calibrated according to the manufacturer's recommended intervals. Calibration tags shall be affixed or certificates readily available.
- B. Testing Instrumentation: Contractor shall provide all instrumentation necessary for tests for which they are responsible. CxA will provide standard instrumentation for measuring medium and low voltage electrical voltage, current, power factor, power, and THD. CxA will provide receptacle testers for normal and GFI receptacle tests. Contractor shall provide all other instrumentation required to accomplish the specified testing.
- C. Test kits for meters and gages shall be provided to the Postal Service new. Previously used test kits will be unacceptable. Kits shall be submitted prior to the Acceptance Phase.

PART 3 – EXECUTION

3.1 START-UP STANDARD OF CARE

- A. Procedures that establish a minimum Standard-of-Care for the start-up, check out and testing of applicable equipment are specified in the individual technical specifications. Contractor shall apply this Standard-of-Care and document per the Cx requirements.

3.2 START-UP/FUNCTIONAL TEST PROCEDURES - GENERAL

- A. This Section outlines 'generic' or minimally acceptable Start-Up and Functional Test Procedures for systems and equipment. These items shall provide a minimum guideline for the Contractor to determine the level of care required for start-up of the systems.

3.3 PROCEDURES COMMON TO ALL SYSTEMS

The following start-up verifications/procedures are common to all systems.

- A. Checkout shall proceed from devices to the components to the systems.
- B. Verify labeling is affixed per spec and visible.
- C. Verify prerequisite procedures are done.
- D. Inspect for damage.
- E. Verify system is applied per the manufacturer's recommendations.
- F. Verify system has been started up per the manufacturer's recommendations.
- G. Verify that access is provided for inspection, operation and repair.
- H. Verify that access is provided for replacement of the equipment.
- I. Verify the record drawings, submittal data and O&M documentation accurately reflect the installed systems.
- J. Verify all gages and test ports are provided as required by Contract Documents and manufacturer's recommendations.
- K. Verify all recorded nameplate data is accurate.
- L. Verify that the installation is done in a manner that ensures safe operation and maintenance.
- M. Verify specified replacement material/spare parts have been provided as required by the Construction Documents.
- N. Verify all rotating parts are properly lubricated.
- O. Verify all monitoring and ensure all alarms are active and set per Postal Service's requirements.

SECTION 02 26 23 00 - R&A ASBESTOS LABORATORY ANALYSIS REPORT

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes results obtained from laboratory analysis of samples taken for asbestos testing.
- B. Review the lab reports contained within this Section, and any additional, applicable, environmental surveys completed at the project site that may affect project work. Take caution during roof removal to avoid disturbance of identified ACM.

NOTE TO SPECIFIER

Review laboratory analysis reports of collected samples:

- 1. *For projects that indicate no ACM present in sampled materials, DELETE paragraph 1.2B below.*
- 2. *For projects that indicate the presence of asbestos in sampled materials, do not edit Article 1.2 – RELATED SECTIONS.*

1.2 RELATED SECTIONS

- A. Section 013543 – Environmental Procedures
- B. Section 028233 – Removal and Disposal of Non-Friable ACM

1.3 LABORATORY TESTING FOR ASBESTOS

- A. **NOTE:** The information contained within this Section regarding asbestos sampling reflects the condition at the test core and sampling location. This data is based on random, limited test cores made into the roofing system. Conditions at the test core locations may not be representative of the entire roof area. The Contractor is cautioned that the use of the following data is done solely at their own risk.

NOTE TO SPECIFIER

Review laboratory analysis reports of collected samples:

- 1. *For projects that indicate no ACM present in sampled materials, DELETE paragraph 1.3C from the list below.*
- 2. *For projects that indicate the presence of asbestos in sampled materials, EDIT paragraph 1.3C to reflect the roof area location of ACM, and the type of ACM containing material.*

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

NOTE TO SPECIFIER

EDIT laboratory name providing analysis reports in paragraphs 1.3B and 1.3C.

- B. Refer to the attached laboratory report provided by (Insert name of NVLAP-Accredited laboratory). The report indicates that no asbestos-containing building materials (ACMs) were found in the sampled roofing components.

- C. Refer to the attached laboratory report provided by (Insert Name of NVLAP Accredited laboratory). The report indicates that asbestos-containing building materials (ACMs) were found in the following roof system components:
1. Roof Areas (List Applicable Roof Areas) – Bituminous roof membrane.
 2. Roof Areas (List Applicable Roof Areas) – Bituminous flashings and strip-ins.
 3. Roof Areas (List Applicable Roof Areas) – Bituminous underlayment.

NOTE TO SPECIFIER

Review laboratory analysis reports of collected samples:

1. *For projects that indicate no ACM present in sampled materials, DELETE references to Section 028233 from paragraph 1.3D below.*
2. *For projects that indicate the presence of asbestos in sampled materials, do not edit paragraph 1.3D.*

- D. Refer to Sections 013543 and 028233 for removal, handling, and disposal requirements of non-friable ACMs.

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Attach laboratory analysis reports and any additional supporting documentation.

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 02 26 23 00

Task	Specification	Specification Description
02 32 19 00	01 22 16 00	No Specification Required

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 41 00 00 - R&A ROOF REMOVAL AND SUBSTRATE PREPARATION

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Removal of existing roofing components and substrate preparation related to roof replacement work.

NOTE TO SPECIFIER

If the project consists of an existing mechanically-attached single-ply roof membrane, ballasted roof membrane, and/or rigid board foam insulation, recycling of existing components MAY be chosen as an alternate. Review recycling options with the USPS Project Manager. If recycling is chosen as an alternate, do not edit paragraph 1.1B. If recycling is not required, DELETE paragraph 1.1B.

- B. Recycling of ballasted single ply roof membranes, mechanically-attached single-ply roof membranes, pavers, and foam insulation.

NOTE TO SPECIFIER

Review available field data and EDIT list below. DELETE Section references to structural deck types not applicable this project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 030150 – Concrete Roof Deck Repair
- D. Section 035113 – Cementitious Wood Fiber Roof Deck Repair and Replacement
- E. Section 035116 – Gypsum Concrete Roof Deck Repair and Replacement
- F. Section 035216 – Lightweight Insulating Concrete Repair and Replacement
- G. Section 053123 – Steel Roof Deck Repair and Replacement
- H. Section 061516 – Wood Roof Deck Repair and Replacement

NOTE TO SPECIFIER

Review available field data. DELETE Article 1.3 if roof drains are not present on the project. Re-number articles after editing, if necessary.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in Item 3.6.

NOTE TO SPECIFIER

Review available field data, and discuss recycling alternates with the USPS Project Manager. If recycling of existing roofing components is specified, INCLUDE Article 1.4 – ALTERNATES in the Section. If recycling is not specified, DELETE Article 1.4 – ALTERNATES. Re-number Articles after editing, if necessary.

1.4 ALTERNATES

NOTE TO SPECIFIER

Review available field data. EDIT paragraph 1.4A to reflect existing components that may be recycled. Re-number/letter paragraphs/sub-paragraphs after editing, if necessary.

- A. Provide alternate pricing for recycling of the following existing roof system components:
 - 1. Stone ballast and/or concrete pavers.
 - 2. Ballasted single-ply roof membrane.
 - 3. Mechanically-attached single-ply roof membrane.
 - 4. Rigid foam insulation board.
- B. Refer to Article 3.8 for preparation requirements related to recycling of existing components.
- C. Contact Nationwide Foam Recycling, Framingham, MA, (888) 820-2760, or similar recycling company, for recycling of existing roofing components.
- D. The recycler shall provide a certificate/letter to the Owner identifying the following:
 - 1. Project name and location.
 - 2. Contractor name.
 - 3. Components recycled as part of the project.
 - 4. Total weight and/or volume of materials recycled.

1.5 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM F 1667 – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples
 - 2. Factory Mutual Global (FM)
 - 3. National Roofing Contractors Association (NRCA)

1.6 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.7 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.9 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform roof removal work during inclement weather.
- B. Cold weather precautions:
 - 1. Refer to product manufacturer and NRCA requirements and recommendations for cold weather application requirements and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 FASTENERS

- A. For re-securement of steel deck to structural steel, per Article 3.4: Teks 5 self-drilling fastener with hex washer head, manufactured by ITW Buildex or other FM-approved fastener.
- B. For re-securement of wood deck to underlying structural components, per Article 3.4:
 - 1. For untreated wood: Minimum 8d common nails with ring shanks, complying with the requirements of ASTM F 1667. Length as necessary to penetrate minimum 1-1/4-inch depth into underlying wood structural framing.

- C. For re-securement of existing perimeter wood nailers to underlying substrates, per Article 3.5:
1. For securement to untreated wood: No. 14 fluorocarbon-coated screws, length as necessary to penetrate minimum 1-1/4-inch depth into underlying wood substrate.
 2. For securement to treated wood: Stainless steel screws; length as necessary to penetrate minimum 1-1/4-inch depth into underlying wood substrate.
 3. For securement to existing masonry walls: 1/4-inch minimum diameter "Tapcon" screws or other fastener type suitable to adequately secure the wood to the existing masonry wall.

NOTE TO SPECIFIER

Review available field data. DELETE Article 2.2 if roof drains are not present on the project. Re-number articles after editing, if necessary.

2.2 REPLACEMENT DRAIN COMPONENTS

- A. Roof drain assembly: Clamping ring type; cast iron drain bowl, clamping ring, strainer, and related fittings; such as Type 21500 (Size as necessary to match existing drain pipe size) by Josam Company.
1. Piping:
 - a. To match existing, by size and type; as necessary to comply with applicable insurance requirements, and local codes.
 2. Drain connectors, hangers, and clamps:
 - a. Drain connections as required; as necessary to comply with applicable insurance requirements, and local codes.
- B. Roof drain clamping ring (for use where existing is missing or damaged): Cast iron; type and size to fit existing drain bowl.
- C. Roof drain strainer (for use where existing is missing or damaged): Cast iron; type and size to fit existing drain assembly.

NOTE TO SPECIFIER

Review available field data. DELETE Article 2.3 if roof drain inserts will not be required on the project. Re-number articles after editing, if necessary.

2.3 RETROFIT ROOF DRAIN INSERTS

- A. Retrofit roof drain insert: Retrofit drain assembly, clamping ring and strainer: Product such as "Hercules RetroDrain", manufactured by OMG Roofing Products, Agawam, MA, or approved equal. Size and configuration as necessary to accommodate existing roof drain and pipe.

PART 3 - EXECUTION

3.1 GENERAL

- A. Exercise caution to avoid damage to components indicated as "existing" or remaining in place. Do not disturb these components.
- B. Prior to any cutting, drilling, or removals, view both sides of the surface affected. If damage occurs to existing components, repair or replace components defaced or damaged during removals to the satisfaction of the Owner.

NOTE TO SPECIFIER

Review available field data. DELETE paragraph 3.1.C if roof drains are not present on the project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

- C. Prior to work start, the contractor shall obtain the services of a licensed plumber to verify that all roof drains and plumbing vents located within the project area are free of debris and properly functioning. Notify the Owner immediately if roof drains or plumbing vents are found to be blocked, clogged, or otherwise not properly functioning. The licensed plumber shall provide a letter indicating all roof drains and plumbing vents in the project area are free of debris and properly functioning. Refer to Section 013300.

3.2 ROOF REMOVAL

- A. Removal of existing roofing and related components: Remove and discard all existing roofing materials down to the structural deck, ~~except components designated for recycling per Article 1.4.~~ This includes spray-applied polyurethane foam roof systems (where existing), roofing membranes, base flashings, penetration flashings, insulation, underlying roof membranes, underlayments, and sheet metal flashings and accessories, as indicated in the specifications and drawings. Remove all roofing and related components in a manner that will not cause damage to the underlying structural deck.

NOTE TO SPECIFIER

Review available field data. DELETE sub-paragraph 3.2.B.1 if existing mechanically-attached thermoplastic roofing membranes over existing cementitious wood fiber, gypsum concrete, or lightweight insulating concrete are not present on the project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

NOTE TO SPECIFIER

Review available field data. DELETE sub-paragraph 3.2.B.2 if existing bituminous roofing membranes over existing cementitious wood fiber, gypsum concrete, or lightweight insulating concrete are not present on the project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

NOTE TO SPECIFIER

Review available field data. DELETE paragraph 3.2B if neither of the above-referenced conditions apply to this project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

- B. Specific removal instructions:
1. Removal of existing mechanically-attached thermoplastic roof systems and insulation over existing cementitious wood fiber and gypsum concrete roof decks:
 - a. Cut membrane into manageable sections, leaving membrane and insulation mechanically attached to the deck in place; remove and discard.
 - b. At remaining locations where the membrane and insulation is mechanically attached, "back-out" fasteners in a manner that will not damage the existing roof deck; Do not pull fasteners from deck.
 - c. If fasteners cannot be "backed out", mechanically cut fasteners flush with the roof deck. Cut fasteners in a manner that will not create sparks.
 - d. Remove and discard of fasteners and previously secured membrane and insulation.
 2. Removal of underlying bituminous roofing membranes and underlayments directly over

concrete, cementitious wood fiber, gypsum concrete and lightweight insulating concrete roof decks:

- a. If present, remove overlying roof systems and insulation. Mechanically cut the bituminous roofing membrane into manageable sections, taking care not to damage the underlying roof deck.
 - b. Scrape the membrane off of the existing roof deck in a manner that does not damage the existing roof deck.
 - c. If bituminous roof membrane or underlayment cannot be removed without damage to the underlying roof deck, immediately notify the Owner for further instruction.
- C. Remove obsolete/abandoned roof penetrations and equipment as noted on the project drawings. Prior to removals, confirm and coordinate removal of obsolete penetrations and equipment with the Owner. Repair openings created by the removal of penetrations and equipment as specified.
 - D. Do not begin work until the substrates have been prepared as specified, and are ready and acceptable to have materials installed. By beginning work, the Contractor acknowledges that the substrates are satisfactory.
 - E. To the extent possible, inspect the underside of the structural deck for conduit. If conduit is found to be present directly on the underside of structural decks, take necessary precautions to protect these conduits from puncture.
 - F. Contractor shall take all precautions during roof demolition to protect the building and adjacent surfaces from being soiled and damaged.
 - G. Coordinate the roof demolition work with new roofing work in such a manner as to keep the new roofing materials, building and building interior dry and watertight.
 - H. Do not stockpile or store debris on the roof or on the ground. Place all debris in a dumpster. Cover dumpsters left on site overnight with a tarp.
 - I. Existing roof system protection:
 1. Do not use adjacent roof areas as storage areas for roofing materials.
 2. Where excessive traffic over new or existing roofing is unavoidable, provide and use 3/4-inch plywood, set over a minimum of 1-1/2 inch thick rigid board insulation to protect roofing components in place (expanded polystyrene insulation is not acceptable).
 3. When materials are stored on the roof, provide roof protection as indicated above.

3.3 TEMPORARY DISPLACEMENT OF ROOFTOP EQUIPMENT

- A. Temporary displacement of mechanical units:
 1. If mechanical units are to be temporarily displaced, shut off all affected electrical, plumbing and gas lines and disconnect all electrical, plumbing, gas lines and ventilation ducts where required to allow for lifting mechanical units prior to roof removal work. All disconnection of plumbing, gas lines, electrical conduit and ventilation ducts is to be performed by a licensed mechanical/electrical contractor. Coordinate all disconnections with the Owner.
 2. Lift units in a manner that will not cause damage to the mechanical unit, mechanical unit components or structural deck.
 3. Prior to leaving the site, return units to their original position, resulting in a watertight condition.
 4. Ensure mechanical units are returned to their previous operational condition prior to leaving the site.
 5. Within high wind and hurricane zones, and if required by local codes: provide additional

securement and strapping (hurricane straps) as required to mechanical units displaced during roof replacement work.

- B. Temporary displacement of gas lines, conduit, junction boxes and condensate lines:
 - 1. Temporarily displace gas lines, conduit, junction boxes, condensate lines or other items that may interfere with roof replacement work. Any necessary disconnection of gas lines, conduit and junction boxes is to be performed by a licensed mechanical/electrical contractor as applicable to the work being performed. Coordinate all disconnections with the Owner.
- C. After completion of work, reinstall any mechanical units that have been temporarily displaced. Reconnect all electrical, plumbing, gas lines and ventilation ducts where required. All reconnection of plumbing, gas lines, electrical conduit and ventilation ducts is to be performed by a licensed mechanical/electrical contractor. Coordinate all reconnections with the Owner.
- D. After completion of work, reconnect any gas lines, conduit and/or junction boxes have been disconnected. Reconnection of gas lines, conduit and/or junction boxes is to be performed by a licensed mechanical/electrical contractor as applicable to the work being performed. Coordinate all reconnections with the Owner.

3.4 DECK INSPECTION AND RE-SECUREMENT

NOTE TO SPECIFIER

Review available field data and EDIT the list of Sections included in paragraph 3.4A. DELETE Section references to structural deck types not applicable to this project.

- A. After completion of roof removal work, inspect the existing roof deck. If damaged or deteriorated roof deck is encountered, notify the Owner immediately. Refer to Sections 030150, 035113, 035116, 035216, 053123 and 061516 for roof deck repair/replacement procedures.

NOTE TO SPECIFIER

Review available field data. DELETE paragraph 3.4B if steel decks are not present on this project. DELETE paragraph 3.4C if wood decks are not present on this project. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

- B. Re-securement of steel decks:
 - 1. For locations requiring a wind uplift rating of FM 1-90 or less:
 - a. In the field of the roof, re-secure the existing steel deck at a maximum spacing of 12-inches on center (every other rib for 1-1/2 in. deck) at underlying supports in the field of the roof. At the roof perimeters and corners, re-secure the deck at a maximum spacing of 6 inches on center (every rib for 1-1/2 in deck) at all underlying supports.
 - b. At each deck side lap, secure the deck to the supporting members. For interlocking-type side laps, secure both sides of the lap (upper and lower). For overlap-type side laps, ensure securement penetrates all deck panels at the laps.
 - c. Ensure spacing between each side lap fastener or side lap fasteners and supports is no more than 36-inches in the field of the roof and no more than 30-inches on center in the perimeter and corner areas. Fasten overlap-type side laps with FM-Approved side lap fasteners.
 - 2. For locations requiring a wind uplift rating of FM 1-105 through 1-120:
 - a. In the field of the roof, re-secure the existing steel deck at a maximum spacing of 6-inches on center (at every rib for 1-1/2 in. deck) at underlying supports in the

- field of the roof. At the roof perimeters and corners, re-secure the deck with two fasteners every 6-inches on center (two fasteners at each rib location for 1-1/2 in deck) at all underlying supports.
 - b. At each deck side lap, secure the deck to the supporting members. For interlocking-type side laps, secure both sides of the lap (upper and lower). For overlap-type side laps, ensure securement penetrates all deck panels at the laps.
 - c. Ensure spacing between each side lap fastener or side lap fasteners and supports is no more than 30-inches in the field of the roof and no more than 15-inches on center in the perimeter and corner areas. Fasten overlap-type side laps with FM-Approved side lap fasteners.
 - 3. For locations requiring a wind uplift rating of FM 1-135 or greater:
 - a. In the field of the roof, re-secure the existing steel deck at a maximum spacing of 6-inches on center (at every rib for 1-1/2 in. deck) at underlying supports in the field of the roof. At the roof perimeters and corners, re-secure the deck with two fasteners every 6-inches on center (two fasteners at each rib location for 1-1/2 in deck) at all underlying supports.
 - b. At each deck side lap, secure the deck to the supporting members. For interlocking-type side laps, secure both sides of the lap (upper and lower). For overlap-type side laps, ensure securement penetrates all deck panels at the laps.
 - c. Ensure spacing between each side lap fastener or side lap fasteners and supports is no more than 24-inches in the field of the roof and no more than 15-inches on center in the perimeter and corner areas. Fasten overlap-type side laps with FM-Approved side lap fasteners.
- C. Re-securement of wood decks:
 - 1. For projects located within wind speed design regions up to 90 mph:
 - a. In the field of the roof and perimeters, re-secure the existing wood deck at supported panel edges 6-inches o.c. max., and 12-inches o.c. max. at intermediate panel supports.
 - b. At corners, re-secure the existing wood deck at supported panel edges and intermediate panel supports 6-inches o.c. max.
 - 2. For projects located within wind speed design regions over 90 mph and up to 120 miles per hour:
 - a. In the field of the roof, re-secure the existing wood deck at supported panel edges 6-inches o.c. max., and 12-inches o.c. max. at intermediate panel supports.
 - b. At perimeters, re-secure the existing wood deck at supported panel edges and intermediate panel supports 6-inches o.c. max.
 - c. At corners, re-secure the existing wood deck at supported panel edges and intermediate panel supports 4-inches o.c. max.
 - 3. For projects located within wind speed design regions over 120 mph and up to 150 miles per hour:
 - a. In the field of the roof, re-secure the existing wood deck at supported panel edges 6-inches o.c. max., and 12-inches o.c. max. at intermediate panel supports.
 - b. At perimeters, re-secure the existing wood deck at supported panel edges and intermediate panel supports 4-inches o.c. max.
 - c. At corners, re-secure the existing wood deck at supported panel edges and intermediate panel supports 3-inches o.c. max.

3.5 RE-SECUREMENT OF PERIMETER WOOD BLOCKING

- A. Re-secure wood blocking (nailers) to the underlying substrate at perimeters in a manner to resist a minimum force of 300 lbs. per linear foot, at a minimum spacing of 12-inches on center.

NOTE TO SPECIFIER

Review available field data. *DELETE Article 3.6 if roof drains are not present on the project.*

3.6 ROOF DRAIN INSPECTION AND REPAIR

- A. If drain assemblies are found to be damaged, contact the Owner. Replace drain assemblies found to be damaged (*Unit Price Work*):
 - 1. Remove and discard the entire roof drain assembly.
 - 2. Install replacement roof drain bowl, clamping ring, strainer and related fittings at locations of original drain assembly. Connect the bowls to the existing piping in accordance with manufacturer requirements and recommendations, and all local and state plumbing codes.
- B. If the clamping ring is missing, damaged, or does not fit the drain strainer, install a new clamping ring (*Unit Price Work*).
- C. If the roof drain strainer is missing, damaged, or plastic, install a new roof drain strainer (*Unit Price Work*).

3.7 ROOF INSERT INSTALLATION

- A. Install retrofit roof drain inserts following the requirements and recommendations of the retrofit roof drain insert manufacturer.

3.8 RECYCLING OF EXISTING ROOFING COMPONENTS (ALTERNATE WORK)

- A. Concrete pavers:
 - 1. Inspect existing concrete pavers for damage. Discard pavers found to be damaged.
 - 2. Remove stone ballast and concrete pavers from the roof surface.
 - 3. Contact the recycler for instructions regarding storage of concrete pavers awaiting pick-up.
- B. Stone ballast:
 - 1. Remove stone ballast from the roof surface.
 - 2. Contact the recycler for instructions regarding storage of ballast awaiting pick-up.
- C. Rigid board foam insulation:
 - 1. Confirm securement type of rigid board insulation. Note that rigid board foam insulation adhered using asphalt or low-rise foam adhesive cannot be recycled.
 - 2. Inspect condition of existing rigid board foam insulation. Discard insulation boards found to be wet and/or damaged.
 - 3. Remove insulation boards from the roof surface.
 - 4. Contact the recycling company for instructions regarding storage of rigid board foam insulation awaiting pick-up.
- D. Mechanically-attached single-ply roofing membrane:
 - 1. Confirm securement type of single-ply roofing membrane. Note that fully-adhered roofing membranes cannot be recycled.
 - 2. Cut membrane into manageable pieces, following the instructions of the recycler. Remove and discard existing membrane seams, fastening strips, and associated fasteners.

3. Remove roofing membrane from the roof surface.
 4. Contact the recycler for instructions regarding storage of roofing membrane awaiting pick-up.
- E. Mechanically-attached single-ply roofing membrane:
1. Confirm securement type of single-ply roofing membrane. Note that fully-adhered roofing membranes cannot be recycled.
 2. After ballast removal, cut membrane into manageable pieces, following the instructions of the recycler. Remove and discard existing membrane seams, fastening strips, and associated fasteners.
 3. Remove roofing membrane from the roof surface.
 4. Contact the recycler for instructions regarding storage of roofing membrane awaiting pick-up.

NOTE TO SPECIFIER

Review available field data. DELETE Article 3.9 if an existing lightning protection system is not present on the project.

3.9 EXISTING LIGHTNING PROTECTION SYSTEMS

- A. Prior to the start of work, review current building lightning protection and building grounding methods with the Owner. Verify the existing lightning protection system is properly functioning.
 1. If existing lighting protection system is found to be damaged or inoperable, notify the Owner immediately.
- B. Do not alter or modify the existing lighting protection system.
- C. After completion of work, verify the existing lighting protection system is properly functioning.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 02 41 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 02 41 13 00 - CSF SELECTIVE SITE DEMOLITION****

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where demolition of existing site items and structures is necessary.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL**1.1 SUMMARY****A. Section Includes:**

1. Demolition of designated site structures, retaining walls, fences, and foundations.
2. Demolition and removal of pavements, curbs and gutters, drainage structures, drainage pipe, utilities, site signs, and landscaping.
3. Disconnecting and capping or removal of identified utilities.
4. Removal of underground tanks and piping.
5. Filling voids in subgrade created as a result of removals or demolition.
6. Disposal of demolished materials.

- B. Related Documents:** The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 013543 - Environmental Procedures: Recycling and reuse of waste materials.
2. Section 015000 - Temporary Facilities and Controls: Temporary protection and barriers. Removal and disposal of demolished materials. Coordination of temporary utilities.
3. Section 311000- Site Clearing: Clearing outside periphery of structures.
4. Section 312000 - Earth Moving: Fill material.

1.2 QUALITY ASSURANCE**A. Regulatory Requirements:**

1. Conform to applicable local code for demolition of structures, safety of adjacent buildings and structures, dust control and runoff control.
2. Obtain required permits and licenses from authorities having jurisdiction. Pay associated fees including disposal charges.

3. Notify affected utility companies before starting work and comply with utility company requirements.
4. Do not close or obstruct roadways, sidewalks or fire hydrants without permits.
5. Barricade and mark hazards as necessary.
6. Conform to applicable regulatory procedures when discovering hazardous or contaminated materials. Notify Contracting Officer immediately upon discovery of hazardous or contaminated materials. Do not commence removals, remediation, or abatement without authorization from Contracting Officer.

1.3 PROJECT CONDITIONS

A. Existing Conditions:

1. Structures indicated for demolition will be discontinued in use and vacated prior to start of Work.
2. United States Postal Service assumes no responsibility for condition of structures to be demolished.
3. Unless otherwise indicated in the Contract Documents or specified by the Contracting Officer, remove items of salvageable value to Contractor from project site and structure. Storage or sale of removed items on project site not permitted.
4. Burning or fires of any nature not permitted.

NOTE TO SPECIFIER

Blasting is specified in Section 312317 - Rock Excavation. If explosives are to be used in demolition work, include submittal requirements, and quality assurance requirements similar to those used in Section 312317. NFPA 495 is the national Code for Explosive Materials.

5. Do not bring explosives on site without written approval of authorities having jurisdiction. Such written approval will not relieve Contractor of total responsibility for injury to persons or for damage to property due to blasting operations. Comply with governing regulations for use of explosives. Notify company of procedures and schedule in advance of explosive use.

PART 2 - PRODUCTS

2.1 FILL MATERIALS

- A. Refer to in Section 312000.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Insert specific existing site items that need field verification before starting work.

- B. Site Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive Work.
 1. Locate existing utilities as specified in Section.312000
 2. [_____].

3. Verify:
 - a. [_____].
 - b. [_____].
 - c. [_____].

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Provide, erect, and maintain erosion control devices, dust control measures, temporary barriers, and security devices at locations indicated on Drawings and as specified in Section. 015000
- B. Protect appurtenances and structures which are not indicated to be demolished. Repair damage caused by demolition operations at no additional cost to United States Postal Service.
- C. Prevent movement or settlement of adjacent structures. Provide bracing and shoring as required.
- D. Mark location of utilities. Protect and maintain, in safe and operable condition, utilities to remain. Provide temporary services during interruptions to existing utilities acceptable to governing authorities and United States Postal Service.
- E. Clear areas around items and structures indicated to be demolished as specified in Section 311000.

3.3 CONSTRUCTION

- A. Demolition Requirements:
 1. Conduct demolition to minimize interference with adjacent structures or pavements.
 2. Stop operations immediately if adjacent structures appear to be in danger. Notify Contracting Officer immediately. Do not resume operations until directed by Contracting Officer.
 3. Conduct operations with minimum interference to public or private access. Maintain access and egress at all times.
 4. Obtain written permission from adjacent property owners when demolition equipment will traverse, infringe upon, or limit access to their property.
 5. Sprinkle soil and demolition work area with water to minimize dust. Provide hoses and water connections for this purpose.
 6. Comply with governing regulations pertaining to environmental protection.
 7. Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing prior to start of work.
- B. Demolition:
 1. Disconnect and remove designated utilities within demolition areas.
 2. Notify inhabitants of on-site structures of intent to demolish two weeks prior to demolition and verify property is vacated prior to starting demolition.
 3. Verify structures are unoccupied; then demolish structures completely and remove from site using methods as required to complete work within limitations of governing regulations. Small structures may be removed intact when acceptable to Contracting Officer and authorities having jurisdiction.
 4. Proceed with demolition in systematic manner, from top of structure to ground.
 5. Locate demolition equipment and remove materials using procedures to prevent excessive loading to supporting walls, floors, or framing.

6. Demolish concrete and masonry in small sections. Break up concrete slabs-on-grade that are 2 or more feet below proposed subgrade.
7. Demolish and remove below grade construction and concrete slabs on grade to a minimum depth of two feet below proposed subgrade.

C. Filling Voids:

1. Completely fill below grade areas and voids existing or resulting from demolition or removal of structures (pits, wells, cisterns, etc.) using approved select fill materials consisting of stone, gravel, and sand free from debris, trash, frozen materials, roots, and other organic matter.
2. Remove standing water, frost, frozen, or unsuitable material, trash, and debris from areas to be filled before fill placement.
3. Place fill materials in horizontal layers and compact each layer at optimum moisture content of fill material to proposed density as specified in Section. 312000
4. Grade surface to match adjacent grades and to provide flow of surface drainage after fill placement and compaction.

NOTE TO SPECIFIER

"REQUIRED Article (Disposal of Demolished Materials) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.

D. Disposal of Demolished Materials:

1. Collect, recycle, reuse and dispose of demolished materials as specified in Section 013543-Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 02 41 13 00

SECTION 02 41 13 13 - PORTLAND CEMENT CONCRETE REMOVAL**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for portland cement concrete removal. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Section Includes:

1. Provide all labor, materials and equipment required for the removal work and disposal of existing Portland Cement Concrete indicated on the drawings and specified, including but not limited to the following:
 - a. Saw cutting existing concrete pavements, sidewalks, driveways, curbs and gutters noted on drawings to be removed.
 - b. Saw cutting existing concrete sidewalks for new tree pit openings (refer to drawings for locations).
 - c. Saw cutting existing bituminous paving noted on drawings to be removed.
 - d. Removal and disposal of demolished concrete sidewalks, driveways, curbs and gutters, including concrete removed for new tree pit openings.
 - e. Removal and disposal of demolished bituminous paving.
 - f. All excavating, rough grading and compacting as required to establish subgrade for new sidewalks, and Subgrade and Sub-Base for driveways.
 - g. Providing, placing and grading sand fill under new sidewalks. Top of compacted subgrades shall allow for the placement of sidewalks plus thickness of sand fill.
 - h. Removal and disposal of excavated material.

C. Special Requirements:

1. Protection: Provide protection barricades, maintain all lights and signals and other measures as required by federal, state, and municipal laws, for the full period of demolition operations and remove same when directed. In removing work, perform all work required to protect and maintain adjacent property, streets, alleys, sidewalks, curbs, and other structures remaining in place.

1.2 PRODUCTS**A. Backfilling Material:**

1. Sand: Natural sand, with the following gradation: 100% passing the 1 sieve-, 65-100% passing the No. 4 sieve; 40-90% passing the No. 10 sieve- 30-80% passing the No. 16 sieve- 10-50% passing the No. 50 sieve; 0-30% passing the No. 100 sieve, and 0-10% passing the No. 200 sieve.
2. Crushed Stone: Crushed stone having a #57 crusher run gradation.

1.3 EXECUTION**A. Demolition:**

1. The contractor shall accept the site as it finds it and shall inform itself as to the character and types of work to be removed. The Owner assumes no responsibility for the condition of the existing construction to be removed or demolished.
2. No demolition shall be commenced until a program of operations has been coordinated with the Owner, except that preparatory work may be started if specifically approved by the Owner.

3. Operations shall be done in such manner as to avoid hazards to persons and property and interference with use of adjacent areas or interruption of free passage to and from such areas. Maintain Pedestrian access to all private entrances where construction of new sidewalks is in progress. Provide temporary walk ways or other means as required to maintain entry into the private properties, complying with all laws and ordinances and as approved by the Owner. Care shall be taken to prevent the spread of dust and flying particles.
4. Demolition and removal work shall be executed in a careful and orderly manner. Accumulation of rubbish will not be permitted.
5. After work is started, it shall be continued to completion at a rate that will allow the balance of the work to be completed within the time specified. If extra shifts are necessary beyond regular working hours, the work shall proceed with a minimum of nuisance to surrounding properties.
6. Contractor shall determine the nature and extent of demolition that will be necessary by comparing the drawings with the existing field conditions. It is expressly understood that this contract includes all work of a demolition nature that may be required or necessary for a full and complete execution of the work, whether particularly referred to herein or not.

B. Removal And Excavation:

1. When removing existing sidewalks, driveways, curbs and gutters provisions shall be made for satisfactory transition between replacements and the portion remaining in place. The contractor shall saw cut to a minimum depth of 1-1/2 inches with a concrete sawing machine to prevent the surface from spalling when the concrete is broken out. This work shall be done in such a manner that a straight joint will be secured.
2. It shall be the responsibility of the contractor to determine the thickness of the existing sidewalk to be removed. No additional compensation will be allowed because of variations from the assumed thickness or from the thickness shown on the plans.
3. After existing concrete sidewalks and driveways have been removed, excavate to depth required for sand fill.
4. The bottoms of all excavations shall be properly leveled off and all loose materials shall be removed from excavations. All wood, timber and organic materials, that are exposed at the bottom of all excavations, shall be removed and the area backfilled with sand and compacted.
5. Any excess or unauthorized excavation shall be backfilled with sand and compacted, at no additional cost to the Owner.
6. No backfill shall be placed in standing water, on frozen ground or on surfaces which have not been approved by the Commissioner.
7. Backfilling for all areas shall be approved material. Backfill shall be compacted to 95% maximum density in accordance with ASTM D 1557.
8. Contractor shall determine the nature and extent of excavation work that will be necessary by comparing the drawings with the existing areas to be excavated. It is expressly understood that this contract includes all work of an excavation nature that may be required or necessary for a complete execution of all excavation work, whether particularly referred to herein or not.

C. Disposal Of Materials:

1. All demolished and unsuitable materials, including excavated earth removed to establish required grade elevations shall be disposed of legally in such a manner that public or private property will not be damaged or endangered.

D. Clean-Up:

1. On completion of the demolition work, excavation work and before acceptance by the Owner, clean the areas affected, including areas outside the limits of the contractor's work area where permission to work has been granted. Remove surplus construction material or debris resulting from the demolition work and excavation work, and dispose of legally off the site.
2. Access routes to and from the site shall be kept clean of debris resulting from the work.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 41 19 00 - CSF SELECTIVE STRUCTURE DEMOLITION**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where selective demolition of existing building items and structure is part of the Work for remodeling or building expansions. Use for RSD interior tenant improvements for demolition of existing building lease space areas. Section 024113 "Selective Site Demolition" should be used for sitework demolition of existing site improvements and structures.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Procedures for demolition and removal of existing building elements.
 - 2. Removal of designated building equipment and fixtures.
 - 3. Salvaged items.
 - 4. Salvaged material.
 - 5. Salvaged items for re-use.
- B. Related Documents: The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 013543- Environmental Procedures: Recycling and reuse of waste materials.

1.2 SYSTEM DESCRIPTION

- A. The extent of Selective Demolition Work is that Work necessary, and required to facilitate the new construction indicated.
- B. Demolition shall be such that all construction, new and existing, can be performed, and completed in accordance with the construction documents.
- C. The contractor shall visit the project site and familiarize himself with the existing conditions and project requirements.

- D. Verify the scope of the Work under this Section including salvage material. The United States Postal Service will be responsible for removing all materials and equipment which the United States Postal Service wishes to salvage prior to the beginning of this Work.
- E. The existing fire protection sprinkler system shall remain in place.

1.3 QUALITY ASSURANCE

- A. Engage only personnel who can demonstrate not less than five years successful experience in Work of similar character.
- B. Performance Criteria:
 1. Requirements of Structural Work: Do not cut structural work in a manner resulting in a reduction of load-carrying capacity of load/deflection ratio.
 2. Operational and Safety Limitations: Do not cut operational elements and safety-related components in a manner resulting in a reduction of capacities to perform in a manner intended or resulting in a decreased operational life, increased maintenance or decreased safety.
 3. Visual Requirements: Do not cut work which is exposed on the exterior or exposed in occupied spaces of the building in a manner resulting in a reduction of visual qualities or resulting in substantial evidence of the demolition work judged by the Architect to be cut and patched in a visually unsatisfactory manner.
 4. Loading: Do not superimpose loads at any point upon existing structure beyond design capacity including loads attributable to materials, construction equipment, demolition operations and shoring and bracing.
 5. Vibration: Do not use means, methods, techniques or procedures which would induce vibration into any element of the structure.
 6. Fire: Do not use means, methods, techniques or procedures which would produce any fire hazard unless otherwise approved by Contracting Officer.
 7. Water: Do not use means, methods, techniques or procedures which would produce excessive water run-off, and water pollution.
 8. Air Pollution: Do not use means, methods, techniques or procedures which would produce uncontrolled dust, fumes or other damaging air pollution.

1.4 PROJECT SITE

- A. Indicated "Existing Construction" was obtained from existing drawings or other information which may not reflect actual conditions. The Contractor shall verify all existing conditions and notify the Contracting Officer of discrepancies before proceeding with the Work.
- B. Perform the removal, cutting, drilling, etc., of existing work with extreme care, and using small tools in order not to jeopardize the structural integrity of the building.

NOTE TO SPECIFIER

Verify with the USPS Contracting Officer the occupancy of the Project Site.

- C. Occupancy: Contractor [shall] [shall not] have full use of the facility during construction.
- D. Condition of Structure: The United States Postal Service assumes no responsibility for the actual condition of portions of the structure to be demolished.

NOTE TO SPECIFIER

Edit below as required for occupancy restrictions..

- E. Partial removal: Items of salvageable value to the Contractor may be removed from the structure as the work progresses if not claimed by the United States Postal Service. Salvaged items must be transported from the site as they are removed.
- F. Protection: Make sure that the safe passage of persons around the area of demolition is maintained during the demolition operation. Conduct operations to prevent injury to adjacent buildings, structures, other facilities, and persons.

1.5 PROTECTION OF EXISTING CONSTRUCTION

- A. Provide temporary protection of existing construction (floors, roof, and walls) when adjoining new work and in traffic areas.
- B. Provide temporary construction, constructed of framing and plywood, to protect existing construction and surrounding surfaces from damage by movement of materials and personnel.
- C. The contractor is responsible for all damage to existing structure and shall replace or repair all areas of damage.
- D. Repair, replace, or rebuild existing construction as required or as directed which has been removed, altered or disrupted to allow for new construction. Existing construction shall be corrected to match adjacent construction, new or existing.
- E. Perform cutting of existing concrete and masonry construction with saws and core drills. Do not use jack-hammers or explosives.

1.6 SHORING AND BRACING

- A. Provide temporary shoring of existing construction to allow removal of existing structural elements. Maintain shoring until new structural elements are in place and accepted.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Use NOT USED if Salvaged Items or Materials are not part of the Work.

NOTE TO SPECIFIER

Use SALVAGED ITEMS below if specific Project will have items salvaged. Consult with USPS Contracting Officer.

2.1 SALVAGED ITEMS

- A. The Contract Documents indicate the existing materials that are to be reinstalled in the new construction. The Contractor shall remove, protect and reinstall these items as indicated.
 - 1. Items for "Reinstallation" will be indicated as such within the Contract Documents.
- B. Materials scheduled for reinstallation which are damaged by the Contractor to the extent that they cannot be reinstalled shall be replaced by the Contractor with equal quality material at no additional cost to the United States Postal Service.

- C. Coordinate with the Contracting Officer on disposition of salvage items note scheduled for reinstallation, demolished materials, and equipment. Salvaged materials, not reinstalled, shall be delivered, as directed, to the United States Postal Service.

NOTE TO SPECIFIER

Use SALVAGED MATERIALS below if specific Project will have materials salvaged. Consult with USPS Contracting Officer.

2.2 SALVAGED MATERIALS

- A. Removed and salvaged materials of value not designated for reinstallation, unless claimed as salvage by the United States Postal Service, shall become the property of the Contractor and shall be removed from the premises by the Contractor and recycled, reused or disposed of as specified in Section 013543- Environmental Procedures.
- B. The United States Postal Service will remove or, under separate contract, have all materials and equipment which the United States Postal Service requires removed prior to Work under this Section begins.

NOTE TO SPECIFIER

Use SALVAGED ITEMS FOR RE-USE below if specific Project will have items salvaged. Consult with USPS Contracting Officer.

2.3 SALVAGED ITEMS FOR RE-USE

- A. Materials and items scheduled for re-use which are damaged by the contractor to the extent which they cannot be re-used shall be replaced by the Contractor at no additional cost to the United States Postal Service.
- B. Contractor shall remove and salvage the existing roof hatch and access ladder for re-use. Store on site in protected area for reinstallation as indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Temporary Support: Provide adequate temporary support for work to be cut to prevent failure. Do not endanger other work.
- B. Provide adequate protection of other work during selective demolition to prevent damage and provide protection of the work from adverse weather exposure.

3.3 PROCEDURE

- A. Employ only skilled tradesmen to perform selective demolition.
- B. Cut work by methods least likely to damage work to be retained and work adjoining.
- C. In general, where physical cutting action is required, cut work with sawing and grinding tools, not with hammering and chopping tools. Core drill openings through concrete and masonry work.
- D. Patch with seams which are durable and as invisible as possible. Comply with specified tolerances for the work.
- E. Where selective demolition terminates at a surface or finish to remain, completely remove all traces of material selectively demolished, including mortar beds. Provide smooth, even, substrate transition.

3.4 POLLUTION CONTROLS

- A. Use temporary enclosures and other suitable methods to limit the amount of dust and dirt rising and scattering in the air to the lowest practical level.
- B. Comply with governing authorities pertaining to environmental protection.
 - 1. Protect natural resources as specified in Section 013543 - Environmental Procedures.
- C. Clean adjacent portion of the structure and improvement of dust, dirt and debris caused by demolition operations, as directed by Contracting Officer and governing authorities. Return adjacent areas to conditions existing prior to the start of the work.

3.5 DISPOSAL OF DEMOLISHED MATERIALS

- A. Collect, recycle, reuse, and dispose of demolished materials as specified in Section 013543 - Environmental Procedures and as approved by the U.S. Postal Service in the Solid Waste Management and Environmental Protection Plan.

NOTE TO SPECIFIER

The following is some sample text that may be used. Provide text below that describes the selective demolition Work for specific Project. Coordinate with Drawings. Do not repeat information that will be indicated on Drawings.

3.6 SCHEDULE OF SELECTIVE DEMOLITION

- A. Slab on Grade:
 - 1. Where indicated, saw cut perimeter of existing slab minimum of 50 percent of slab thickness to provide a breaking point to remove existing concrete.
 - 2. Break concrete slab to be removed into portions easily removed, maximum 3 foot dimensions in any side.
 - 3. Remove all concrete pieces within removed area down to the existing subgrade.
- B. Exterior Masonry:
 - 1. Locate portion of existing masonry wall to be removed.
 - 2. Using small power tools, remove only that portion of the exterior wall which is required for the indicated new construction.
- C. Interior Floor Finishes:
 - 1. Remove all interior floor tile finish material.
- D. Interior Walls and Partitions:
 - 1. All interior wall and partitions shall be removed unless otherwise indicated on drawings.
 - 2. Remove all top and bottom framing tracks and over head braces.
- E. Mechanical System:
 - 1. Remove all mechanical equipment and related ductwork.
 - 2. Provide temporary weathertight protection of all openings in roof and exterior walls.
 - 3. Remove all accessories to the mechanical system including hanger straps.
- F. Plumbing:
 - 1. Remove all plumbing fixtures and accessories including all exposed supply, waste, and vent piping.
 - 2. Concealed piping within and below slab construction shall be identified, and capped a minimum of 3 inches (8 cm) below finish floor.
- G. Electrical Service:
 - 1. All electrical circuits within the existing structure shall be abandoned from the existing service entrance section, beyond.
 - 2. Remove all abandoned electrical conduit, boxes, and wiring back to the existing electrical service which is to remain.
- H. Provide additional selective demolition as indicated and required by the Contract Documents and as required for indicated new construction.

SECTION 02 82 00 00 - REMOVAL OF FRIABLE ASBESTOS-CONTAINING MATERIALS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for removal of friable asbestos-containing materials. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Description

1. Furnish all labor, materials, facilities, equipment, services, employee training and testing, permits and agreements necessary to perform the work required for asbestos removal, encapsulation, repair, clean-up, decontamination, re-insulation and all other work in accordance with these specifications, in accordance with the latest regulations from the U.S. Environmental Protection Agency (EPA), the Occupational Safety and Health Administration (OSHA), the recommendations of National Institute of Occupational Safety and Health (NIOSH), and any other applicable federal, state and local government regulations. Whenever there is a conflict or overlap of the above references, the most stringent provision is applicable.
2. The work specified herein shall be performed by competent persons trained, knowledgeable and qualified in the state-of-the-art techniques of asbestos abatement, handling and subsequent cleaning of contaminated areas.

C. Scope

1. The quantities of materials and limits of abatement work area(s) shall be verified by the asbestos contractor.

D. Asbestos Hazard

1. Asbestos-containing material when damaged or disturbed is subject to fiber releases. Wet methods are a primary means of controlling fiber release.
2. Strict compliance with each of the provisions outlined in these specifications for the encapsulation, repair and handling of asbestos-containing material is of great importance, because:
 - a. The inhalation of airborne asbestos fibers can cause a very serious and often fatal disease.
 - b. Workers may not be aware they are inhaling asbestos fibers.
 - c. Symptoms of the disease do not appear for many years.
 - d. Only the Contractor and its employees can prevent the inhalation of asbestos fibers, which can lead to the development of asbestos-related disease.
 - e. No insurance is available to provide for asbestos-related disease.

E. Other Hazardous Material

1. Contractor shall comply with OSHA 29 CFR 1926.62 - Lead in Construction when demolishing any equipment or architectural component identified as lead-containing or lead-based paint. The work of this project is considered a demolition activity.
2. the Owner anticipates that a substantial amount of the Project will involve lead paint.

F. Qualifications

1. the Owner and the Owner's Representative will verify and approve the experience of the Asbestos Abatement Contractor based upon submission at the time of bidding by Contractor evidence of the following:
 - a. Experience: Provide the names and locations of at least three asbestos abatement projects of comparable size and complexity comparable with this work. Provide the names and telephone numbers of contact person at previous projects. Provide the final air monitoring decontamination fiber levels achieved.

- b. Personnel: Provide the name(s) of "Competent Person" as defined by OSHA 29 CFR 1926.32(f) - Asbestos. Demonstrate the education and specialized training with successful completion of examination of an EPA approved course. Provide evidence of participation in five projects of complexity comparable with this project.
- c. Licensing and Certification: The Contractor must hold a current, valid asbestos license issued by the State in which the work is to be performed.

G. Notices And Record Keeping

1. Contractor shall maintain for at least 30 years, a record for each asbestos project in which the Contractor engages. Each record shall include the following information: name, address, and social security number of all personnel involved with the project, the name address and social security number of the OSHA "Competent Person" who will supervise the work, the amount of asbestos material that was removed, repaired, encapsulated or disturbed, the commencement and completion date of the work, copies of Hazardous Waste Manifest(s), personal air monitoring results and any other appropriate information.
2. The Contractor shall send written notification as required by USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40 CFR 61, Subpart M) to the Owner, at least 10 working days prior to beginning any work on asbestos-containing materials.
3. Include the following information:
 - a. Name and address of the Owner or operator.
 - b. Description of the facility being demolished or renovated, including the size, age, and prior use of the facility.
 - c. Estimate of the approximate amount of asbestos material present in the facility in terms of linear feet of pipe, and surface area on other facility components. For facilities in which the amount of asbestos materials is less than 80 linear meters (260 linear feet) on pipes and less than 15 square meters (160 square feet) on other facility components, explain techniques of estimation.
 - d. Location of the facility being demolished or renovated.
 - e. Scheduled starting and completion dates of demolition or renovation.
 - f. Nature of planned demolition or renovation and method(s) to be used.
 - g. Procedures to be used to comply with the requirements of USEPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) Asbestos Regulations (40 CFR 61 Subpart M).
 - h. Name and location of the waste disposal site where the asbestos waste material will be deposited.
4. Prior to commencement of work, the Contractor shall submit the following documents to the Owner's Representative. No work will be allowed to start until these documents have been approved:
 - a. The schedule of the work, including manpower, length and number of work shifts. Schedule shall be coordinated with the Owner's full occupancy of all areas of the building.
 - b. Satisfactory proof that written notification has been provided to the EPA regional office and the Owner.
 - c. Proof that all required permits, disposal site locations, and arrangements for transportation and disposal of asbestos-contaminated materials, supplies and the like have been obtained.
 - d. Complete a worker certificate indicating that all employees have had instruction and training on the hazards of asbestos exposure, the use and fitting of respirators, protective dress, wet and dry decontamination procedures, entry and exit from work areas, and all aspects of work procedures and protective measures.
 - e. Documentation indicating that all employees have received appropriate medical examinations and have successfully passed fit testing for the respirator to be worn. As a minimum, medical exams must be consistent with OSHA 29 CFR 1926.1101(K)(9)(viii)(G)-Asbestos Regulation.

- f. Samples of signs to be used in and around the work area to comply with OSHA 29 CFR 1926.1101(K)(9)(viii)(I)- Asbestos regulations and as required by federal, state and municipal regulations.
- g. Material Safety Data Sheets (OSHA form 174 or equivalent) for all chemicals used during work performed under this section.
- h. Encapsulation data and encapsulation procedures.
- i. Design of pressure differential system including calculation used to arrive at the number of machines necessary to achieve one air change per every 10 minutes.
- j. Location of personnel and material decontamination units for each work area.
5. Contractor shall provide written notification to the Owner's Representative of its intent to start work at least five days in advance. In no case will the Contractor start work until authorization to proceed is given.
6. During the work, Contractor shall maintain a daily log which will be kept at the job site. Items to be included in the daily log shall include but are not limited to the following:
 - a. Meetings, purpose, attendees, discussions, items of resolution.
 - b. Visitations, authorized and unauthorized.
 - c. Sign-in sheets of all personnel entering and leaving the work area.
 - d. Special or unusual events (i.e., barrier breeching equipment failures).
 - e. Personal air monitoring results.
 - f. Two copies of the daily log are required for Project Closeout.
- H. Terminology (Definitions)
 1. Abatement - Procedures to control fiber release from asbestos-containing materials. Includes removal, enclosure or encapsulation.
 2. Air Lock - A system for permitting ingress or egress without permitting air movement between any two adjacent areas consisting of two curtained doorways. The air lock must be maintained in an uncontaminated condition at all times.
 3. Air Monitoring; - The process of measuring the asbestos fiber content of a specific volume of air in a stated period of time using methods approved or recommended by OSHA, EPA, NIOSH or other method approved by the Owner or the Owner's Representative.
 4. Amended water - Water to which a surfactant has been added.
 5. Asbestos - A generic name given to a number of naturally occurring hydrated mineral silicates that possess a unique crystalline structure, are incombustible in air, and are separable into fibers. Asbestos includes the asbestiform varieties of Chrysotile (serpentine), Crocidolite (Riebeckite), Amosite (Cummingtonite-Grünite), Anthophyllite, Actinolite, and Tremolite.
 6. Asbestos-containing material (ACM) - Any material that contains more than 1 percent asbestos by weight as determined by Polarized Light Microscopy (PLM).
 7. Authorized Visitor - the Owner or its designated representative, or a representative of any regulatory or other agency having jurisdiction over the project.
 8. Class I - Asbestos work means activities involving the removal of thermal systems insulation (TSI) and surfacing ACM and PACM.
 9. Class II - Asbestos work means activities involving the removal of ACM which is not TSI or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.
 10. Class III - Asbestos work means repair and maintenance operations where "ACM" including TSI and surfacing ACM and PACM is likely to be disturbed.
 11. Class IV - Asbestos work means maintenance and custodial activities during which employees contact but do not disturb ACM or PACM and activities to clean-up dust, waste and debris resulting from Class I, II and III activities.
 12. Critical Barrier - A unit of temporary construction which provides the only separation between an asbestos work area and an adjacent, potentially occupied, space. The critical barrier is composed of at least one intact sheet of polyethylene sheeting.
 13. Decontamination Enclosure System - A series of connected rooms with curtained doorways between any two adjacent rooms, for the decontamination of workers or of materials and equipment. A decontamination system contains at least two air locks.

14. Disposal - All procedures necessary to transport and deposit the asbestos-contaminated material stripped and removed from the building in a waste disposal site in compliance with applicable federal, state, and local regulations.
15. Disposal Site - A site approved by the EPA for the disposal of asbestos-containing wastes.
16. Encapsulant - A liquid which can be applied to asbestos-containing materials and which controls the possible release of fibers from the materials.
17. Encapsulation - The use of an agent to seal the surface (bridging encapsulant) or penetrate the bulk (penetrating encapsulant) of the asbestos-containing material.
18. HEPA -High Efficiency Particulate Air - A type of filter which is 99.97% efficient at filtering particles of 0.3 micrometers in diameter.
19. HEPA Vacuum Equipment - Vacuuming equipment equipped with a HEPA filter in the exhaust outlet, and so designed and maintained that 99.97% of all particles of 0.3 micrometer in diameter in the inlet air are collected and retained.
20. Negative Pressure Respirators - Respirators which function by the wearer breathing in air through a filter.
21. NIOSH - National Institute of Occupational Safety and Health.
22. the Owner's Representative - Authorized Consultants
23. Permissible Exposure Level (PEL) - A level of airborne fibers specified by OSHA as an occupational exposure standard for asbestos. It is 0.1 f/cc of air, eight-hour TWA, as measured by Phase Contrast Microscopy.
24. Repair - The restoration of damaged or deteriorated asbestos-containing material to intact condition.
25. Respirator Protection Program - A set of procedures and equipment required by OSHA if employees wear negative pressure respirators or if fiber levels are above the PEL.
26. Surfactant - Chemical wetting agent added to water to improve penetration, thus reducing the amount of water required for a given operation or area, and enhancing the effect of the water in reducing fiber release.
27. Thermal Systems Insulation - Material applied to pipes, fittings, boilers, breeching, tanks, ducts or other interior structural components to prevent heat loss or gain, or water condensation, or for other purposes.
28. Wet Cleaning - The process of eliminating asbestos contamination from building surfaces and objects by using cloths and mops or other cleaning tools that have been dampened with clean water and afterwards disposing of these cleaning tools as asbestos-contaminated waste.

I. Permits And Licenses:

1. The Contractor must maintain current licenses as required by applicable state or local jurisdictions for the removal, transporting, disposal or other regulated activity relative to the work of this contract.

J. Regulations

1. This section sets forth governmental regulations and industry standards which are included and incorporated herein by reference and made a part of the specifications. This section also sets forth those notices and permits which are known to the Owner and which either must be applied for and received, or which must be given to governmental agencies before start of work.
2. Except to the extent that more explicit or more stringent requirements are written directly into the contract documents, all applicable codes, regulations, and standards have the same force and effect (and are made a part of the contract documents by reference) as if copied directly into the contract documents, or as if published copies are bound herewith.
3. The Contractor shall assume full responsibility and liability for the compliance with all applicable federal, state, and local regulations pertaining to work practices, hauling, disposal, and protection of workers, visitors to the site, and persons occupying areas adjacent to the site. The Contractor is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable federal, state, and local regulations. The Contractor shall hold the Owner and the Owner's Representative harmless for failure to comply with any applicable work,

- hauling, disposal, safety, health or other regulation on the part of itself, its employees, or its Sub-Contractors.
4. Federal requirements which govern asbestos abatement work or hauling and disposal of asbestos waste materials include but are not limited to the following regulations:
 - a. U.S. Department of Labor, Occupational Safety and Health Administration, (OSHA), including but not limited to:
 - 1) U.S. Department of Labor, OSHA, including, but not limited to:
 - a) Occupational Exposure to Asbestos, Tremolite, Anthophyllite and Actinolite; Final Rules
Title 29, Part 1910, Section 1001
Part 1926, Section 1101 of the Code of Federal Regulations
 - b) Respiratory Protection
Title 29, Part 1910, Section 134 of the Code of Federal Regulations
 - c) Construction Industry
Title 29, Part 1926.1011, of the Code of Federal Regulation
 - d) Access to Employee Exposure and Medical Records
Title 29, Part 1910, Section 2 of the Code of Federal Regulations
 - e) Hazard Communication
Title 29, Part 1910, Section 1200 of the Code of Federal Regulations
 - f) Specifications for Accident Prevention Signs and Tags
Title 29, Part 1910, Section 145 of the Code of Federal Regulations
 - 2) U.S. Environmental Protection Agency (EPA) including, but not limited to:
 - a) Asbestos Abatement Projects Rule
40 CFR Part 762
CPTS 62044, FRL 2843-9
Federal Register, Vol. 50 No. 134, July 12, 1985
P28530-28540
 - b) Regulation for Asbestos
Title 40, Part 61, Subpart A of the Code of Federal Regulations
 - c) National Emission Standard for Asbestos
Title 40, Part 61, Subpart M (Revised Subpart B) of the Code of Federal Regulations
 - 3) State requirements which govern asbestos abatement work and/or hauling and disposal of asbestos waste materials.
 - 4) Contractor shall abide by all local requirements which govern asbestos abatement work or hauling and disposal of asbestos waste materials including the following:
 - a) American National Standards Institute (ANSI)
1430 Broadway
New York, NY 10018
(212) 354-3300
 - b) Fundamentals Governing the Design and Operation of Local Exhaust Systems
Publication Z9.2-79
 - c) Practices for Respiratory Protection Publication Z288.2-80
 - d) American Society for Testing and Materials (ASTM)
1916 Race Street
Philadelphia, PA 19103
(215) 299-5400
 - e) Specification for Encapsulants for Friable Asbestos-Containing Building Materials
 - f) Safety and Health Requirements Relating to Occupational Exposure to Asbestos

K. the Owner's Representative

1. the Owner's Representative is authorized by the Owner to perform the following:
 - a. Have free access to all asbestos work areas.

- b. To assist in interpretation of procedures.
- c. To advise on all provisions of the contract documents pertaining to the control of asbestos.
- d. To stop work if, in the course of performing their monitoring duties, an instance of substantial nonconformance with the contract documents is observed.
- e. To stop work if a situation presenting a health hazard to workers or the Owner's employees or occupants of the building is observed.
- f. To act as the Owner's liaison in technical matters involving the asbestos-related work.
- g. To perform air sampling inside and outside the asbestos work area during the project. The Contractor shall cooperate fully with the Owner's Representative, its agents and employees, and ensure cooperation of its workers during collection of air samples and work area inspections.
- h. the Owner's Representative role in advising the Owner on environmental health matters does not relieve the Contractor's obligation to comply with all applicable health and safety regulations. Air monitoring results generated by the Owner's Representative shall not be used by the Contractor to represent compliance with regulatory agency requirements for monitoring of worker's exposure to airborne asbestos, nor shall any other activity on the part of the Owner's Representative represent the Contractor's compliance with applicable health and safety regulations.

L. Pre-Construction Conference

- 1. An initial progress meeting recognized as "Pre-Construction Conference" shall be held prior to start of any work. Contractor shall meet at project site, with General Superintendent, the Owner, the Owner's Representative, and other entities concerned with asbestos abatement work. Record discussions and agreements and furnish copy to each participant. Provide at least 72 hours advance notice to all participants prior to convening Pre-Construction Conference.
- 2. This is an organizational meeting, to review responsibilities and personnel assignments, to locate the containment and decontamination areas; and temporary facilities including power, light, water, etc.
- 3. Submit waivers on forms, and executed in a manner acceptable to the Owner. Administrative requirements that must proceed or coincide with Contractor's submittal for final payment shall consist of the following:
 - a. Completion of project closeout requirements.
 - b. Completion of items specified for completion beyond time of Final Completion (regardless of whether special payment application was previously made).
 - c. Assurance, satisfactory to the Owner, that unsettled claims will be settled and that work not actually completed and accepted will be completed without undue delay.
 - d. Transmittal of required project construction records to the Owner.
 - e. Landfill receipts for all asbestos-containing material.
 - f. Proof, satisfactory to the Owner, that taxes, fees and similar obligations of Contractor have been paid.
 - g. Removal of temporary facilities, services, surplus materials, rubbish and similar elements.
 - h. Consent of surety for final payment.

M. Project Closeout

- 1. Project closeout is the term used to describe certain collective project requirements that indicate completion of the work to be fulfilled near the end of the contract time. Also, in preparation for final acceptance of the work by the Owner, as well as, final payment to the Contractor and the normal termination of the Contract.
- 2. Include supporting documentation for completion as indicated in these contract documents.
- 3. Submit a statement on accounting of changes to the Contract Sum.
- 4. Advise the Owner of pending insurance change-over requirements.
- 5. Submit specific warranties, workmanship and maintenance bonds, maintenance agreements, final certifications and similar documents.

6. Obtain and submit releases enabling the Owner's full, unrestricted use of the work area and access to services and utilities. Where required, include occupancy permits, operating certificates and similar releases.
7. Results of the completed inspection will form the initial "punch-list" for final acceptance.
8. A complete record, certified by the testing laboratory, of all personal air monitoring results.
9. Complete the following cleaning operations as outlined in Paragraph "Decontamination Procedures" before requesting the Owner's Representative inspection for certification of Final Completion.
 - a. Remove exposed labels in finished spaces which are not required as permanent labels on materials supplied as part of the work, except for "Asbestos", "Asbestos Free", or Thermal Insulation Labels specified elsewhere.
 - b. Clean transparent materials, affected by the work including mirrors and window/door glass, to a polished condition, removing substances which are noticeably vision-obscuring materials. Replace broken glass and damaged transparent materials.
 - c. Clean exposed hard-surfaced finishes affected by the work, to a dirt-free condition, free of dust, stains, films and similar distracting substances. Except as otherwise indicated, avoid disturbance of natural weathering of exterior surfaces. Restore reflective surfaces to original reflective condition.
 - d. Clean plumbing fixtures affected by the work to a sanitary condition, free of stains including those resulting from water exposure.
 - e. Replace all HVAC filters using materials supplied by the Owner or clean non-replaceable filters after minimum of two days of operation of HVAC equipment.
 - f. Clean light fixtures and lamps, which have been affected by the work so as to function with full efficiency. Replace lamps where inoperable.
 - g. Repair any damage to wall, ceiling and floor surfaces caused by installation and removal of the polyethylene sheeting.

N. Personnel Protection

1. Prior to commencement of work, the workers shall be instructed and be knowledgeable in the areas described in Paragraph "Submittals and Notices" having to do with employees.
2. Worker Protection - shall comply with 29 CFR 1910.134 (Respiratory Protection).
 - a. Because there is no known safe level of exposure to asbestos, it is prudent to reduce worker's exposures to as low a level as possible. Proper respiratory protection is critical in minimizing exposure.
 - b. Workers shall be provided, as a minimum, with personally issued and marked respirators equipped with high efficiency particulate filters approved by NIOSH to be worn in the designated work area and/or whenever a potential exposure to asbestos exists. Sufficient filters shall be provided for replacement as required by the workers or applicable regulations. Disposable respirators shall not be used.
 - c. No worker shall be exposed to levels greater than 0.01 f/cc as determined by the protection factor of the respirator worn and the work area fiber levels.
 - d. Whenever powered purifying respirator protection is used, a sufficient supply of replacement batteries and HEPA filter cartridges shall be provided to the workers.
 - e. Air monitoring required by OSHA is work of the Contractor and not covered in this specification. Contractor shall post, on a daily basis, results of the air monitoring results from the previous shift. A complete record, certified by the testing laboratory, of all personal air monitoring tests and results will be furnished to the Owner and the Owner's Representative prior to Contractor's Request for Final Payment.
 - f. During encapsulation operations or usage of other organic base aerosols (e.g., spray glue, expanding foam), workers shall be provided with combination cartridges consisting of organic vapor and HEPA sections.
 - g. Workers shall be provided with sufficient sets of protective full-body clothing to be worn in the designated work area and/or whenever potential exposure to asbestos exists. Such clothing shall include, but not be limited to, full-body coveralls, headgear and gloves. Workers shall assure that hoods covering their hair are worn in the designated work areas

- at all times. Eye protection and hard hats shall be provided as required by applicable safety regulations. Eye protection shall be worn during encapsulation operations. Non-disposable type protective clothing and footwear shall be left in the work area until the end of the asbestos abatement work, at which time such items will be disposed of as asbestos waste.
- h. Non-skid footwear shall be provided to all abatement workers. Disposable clothing shall be adequately sealed to the footwear to prevent body contamination.
 - i. Protective clothing shall not be worn in lieu of street clothing outside the work area.
 - j. Visitor Clothing: The Contractor shall provide authorized visitors with suitable respirator, protective clothing, headgear, eye protection, and footwear as described herein, whenever they enter the work area.
3. Decontamination and Work Procedures: The decontamination and work procedures to be followed by workers shall be posted as described in these specifications.
 4. Worker and Authorized Visitor Protection Procedures:
 - a. Each worker and authorized visitor shall, upon entering the job site, remove street clothes in a designated clean change area and put on a respirator with new filters and clean protective clothing before entering the work area.
 - b. The Contractor's employees shall perform a positive/negative respirator fit test each time it enters the work area. If leakage occurs, the respirator must be re-adjusted or replaced.
 - c. Workers shall maintain their respirators in a safe operating condition. The condition of respirators shall be checked daily.
 - d. Workers and visitors shall complete the decontamination procedures as outlined in the specification upon exiting the work area.
 - e. Workers shall not eat, drink, smoke, or chew gum or tobacco in or near the asbestos work areas.
 - f. Workers shall be fully protected with respirators and protective clothing immediately prior to the first disturbance of asbestos-containing or contaminated materials and until final cleanup is completed.

O. Air Monitoring

1. The airborne fiber counts outside the work area will be monitored to detect faults in the work area isolation such as contamination of the building outside of the work areas with airborne asbestos fibers, failure of filtration or rupture in the negative pressure system.
Should any of the above occur, the Contractor shall immediately cease asbestos abatement activities until the fault is corrected. Work shall not recommence until authorized by the Owner's Representative. In the case of mini-enclosures the Owner's Representative will monitor air in a remote location of the residence to determine the baseline of asbestos.
2. The airborne fiber counts in the work area will be monitored. The purpose of this air monitoring will be to detect airborne fiber counts which may significantly challenge the ability of the work area isolation procedures to protect the balance of the building or outside of the building from contamination by airborne fibers. In the case of mini-enclosures the Owner's representative may monitor air outside of several enclosures if they are in close proximity.
3. Contractor shall maintain an average airborne count inside the work area of less than 0.5 f/cc. If the fiber counts rise above this figure for any sample taken, revise work procedures to lower fiber counts. If the TWA fiber count for any work shift or eight-hour period exceeds 0.5 f/cc, stop all work, leave pressure differential system in operation and notify the Owner's Representative. Do not recommence work until authorized in writing by the Owner's Representative.
4. If airborne fiber counts exceed 1.0 f/cc for any period of time cease all work until fiber counts fall below 0.5 f/cc and notify the Owner's Representative. Do not recommence work until authorized in writing by the Owner's Representative.
5. If any air sample taken outside of the work area exceeds the 0.01 f/cc of air, Contractor shall immediately and automatically stop all work. If this air sample was taken inside the building and outside of critical barriers around the work area, immediately erect new critical barriers to isolate the affected area from the balance of the building. Erect Critical Barriers at the next existing structural isolation of the involved space (e.g., wall, ceiling, and floor). Leave Critical Barriers in

- place until completion of work and insure that the operation of the negative pressure system in the work area results in a flow of air from the balance of the building into the affected area.
6. If the exit from the clean room of the personnel decontamination unit enters the affected area, establish a temporary decontamination facility consisting of a shower room and changing room. After cleaning and decontamination of the affected area remove the shower room and leave the changing room in place as an air lock.
 7. After certification of visual inspection in the work area, remove critical barriers separating the work area from the affected area. Final air samples will be taken within the entire area.
 8. The following procedure will be used to resolve any disputes regarding fiber types when a project has been stopped due to excessive airborne fiber counts. "Airborne Fibers" referred to above include all fibers regardless of composition as counted in the Phase Contrast Microscopy (PCM) NIOSH 7400 Method procedures. If work has stopped due to high airborne fiber counts, air samples will be secured in the same area by the Owner's Representative for analysis by electron microscopy. "Airborne fibers" counted in samples analyzed by Scanning or Transmission Electron Microscopy (TEM) shall be only asbestos fibers, but of any diameter and length. Subsequent to analysis by Electron Microscopy the number of airborne fibers shall be determined by multiplying the number of fibers, regardless of composition, counted by the PCM NIOSH 7400 Method procedure by a number equal to asbestos fibers counted divided by all fibers counted in the electron microscopy analysis.
 9. If electron microscopy is used to arrive at the basis for determining airborne fiber counts in accordance with the above paragraph, and if the average of airborne asbestos fibers in all samples taken exceeds 0.1 f/cc, or if any one sample exceeds 0.2 f/cc, then the cost of such analysis will be born by the Contractor, at no additional cost to the Owner.
 10. the Owner's Representative will secure at least the following air samples to establish a base line before start of work involving large enclosures:

Location Sampled	Number of Samples	Analysis Method	Detection Limit f/cc	Minimum Volume Liters	Rate LPM
Each Work Area	1	PCM	0.01	1,900	2-16
Outside Each Work Area	1-3	PCM	0.01	1,900	2-16

11. Base Line is an action level expressed in f/cc, which is ten percent greater than the largest of the following:
 - a. Average of the samples collected on cellulose ester filters outside each work area.
 - b. Average of the samples collected on cellulose ester filters outside the building.
 - c. 0.01 fibers per cubic centimeter.
12. Daily: From start of work of Paragraph "Temporary Enclosure" through the work of Paragraph "Project Decontamination," the Owner may be taking the following samples on a daily basis. The location of each air sample will be determined by the Owner's Representative.
 - a. Baseline
 - b. Work Area
13. For larger enclosures samples will be collected on 25 mm cassettes with the following filter media:

PCM: 0.8 micrometer mixed cellulose ester.

Location Sampled	Number of Samples	Analysis Method	Detection Limit f/cc	Minimum Volume Liters	Rate LPM
Each Work Area	2	PCM	0.01	1,900 as required by conditions	2-16
Outside Each Work Area Critical Barrier	1	PCM	0.01	1,900	2-16
Clean Room	1	PCM	0.01	1,900	2-16
Equip Decon	1	PCM	0.01	1,900	2-16

14. Additional samples may be taken at the Owner or the Owner's Representative discretion. If airborne fiber counts exceed allowed limits, additional samples will be taken as necessary to monitor fiber levels.
15. The services of a testing laboratory will be employed by the Owner to perform laboratory analysis of the air samples. Samples will be sent daily so that verbal reports on air samples can be obtained in a timely manner. A complete record, certified by the testing laboratory, of all air monitoring tests and results will be furnished to the Owner's Representative, the Owner and the Contractor.
16. Air samples may be analyzed on site by the Owner's Representative, if they are to be analyzed by the NIOSH 7400 Method.
17. Cellulose ester filters will be analyzed using the PCM NIOSH 7400 Method. Thus analysis will be carried out at a laboratory located off the job site.
18. At the completion of the work in occupied areas and prior to the dismantling of the isolation system, final air clearance will be conducted by the Owner's Representative.
19. Decontamination of the work area will be considered complete when all samples indicate fiber levels are less than 0.01 f/cc of air as analyzed by PCM NIOSH 7400 Method or an average of less than 70 structures per square millimeter of filter area as analyzed by TEM; Level II AHERA Method.
20. The Contractor may conduct its own air monitoring and laboratory testing. If it elects to do this the cost of such air monitoring and laboratory testing shall be included in the Contract Sum.

P. Equipment Removal Procedures

1. Clean all external surfaces of contaminated waste containers and equipment thoroughly by wet sponging or HEPA vacuuming before moving such items into the equipment decontamination enclosure system washroom for final cleaning and removal to uncontaminated areas. Ensure that personnel do not leave the work areas through the equipment decontamination enclosure system.

Q. Disposal Activities

1. It is the responsibility of the Contractor to comply with current federal, state and local regulations concerning the waste handling, transportation, and disposal of asbestos-containing material (ACM) and accompanying solvents or residues.
2. The Contractor will document actual disposal of the waste at the designated landfill by completing Disposal Certificate or submitting proof of landfill receipt.

1.2 PRODUCTS

A. Materials

1. All Contractor's equipment delivered to the site shall be free of asbestos contamination.
2. Store all materials subject to damage off the ground, away from wet or damp surfaces, and under cover sufficient to prevent damage or contamination.
3. Damaged or deteriorating materials shall not be used and shall be removed from the premises. Materials that become contaminated shall be disposed of in accordance with applicable regulations.
4. Polyethylene flame retardant sheet of 6-mil thickness shall be used unless otherwise specified. Polyethylene sheeting shall be sized to minimize the frequency of joints. Polyethylene sheeting must satisfy the National Fire Prevention Association Standard 701, "Small Scale Fire Test for Flame Resistant Textile and Film."
5. Adhesive tape shall be capable of sealing joints of adjacent sheets of polyethylene and for use in attachment of polyethylene sheet to finished or unfinished surfaces of similar materials and shall be capable of adhering under dry and wet conditions, including use of amended water. Contractor shall use adhesive tape compatible with finished surfaces.

6. Protective devices such as, but not limited to, disposable clothing, respirators, gloves, hard hats, etc. shall be used.
7. Wetting agent shall be a mixture of 50/50 polyoxyethylene ether and polyglycol ester or equivalent commercial product.
8. Encapsulant materials shall be the bridging and penetrating type and conform with the following characteristics:
 - a. Encapsulants shall not be solvent-based or utilize a hydrocarbon in the liquid in which the solid parts of the encapsulant are suspended.
 - b. Encapsulant shall not be flammable.
9. A non-hardening lagging sealer for enclosing and sealing raw exposed edges and surfaces of asbestos-containing materials.
10. Pre-mixed or job mixed insulating plaster manufactured for use on plumbing equipment shall be used when repairing damaged thermal insulation material.
11. Non-woven fibrous glass mat and open weave glass fiber mat cloth for repair of thermal systems insulation.
12. Fire retardant sealant shall prevent fire, smoke, water and toxic fumes from penetrating through sealants. Sealant shall have a flame spread, smoke and fuel contribution of zero, and shall be ASTM and Underwriter's Laboratory (UL) rated for three hours for standard method of fire test for fire stop systems.

B. Tools And Equipment

1. Provide suitable tools for repair and encapsulation of asbestos-containing materials and for removal of asbestos-containing materials that are beyond repair. Wire brushes shall not be used as a means of removing or cleaning asbestos-containing materials from surfaces, if they are used as the surface is being sprayed with water or amended water.
2. Provide sufficient number of HEPA-filtered vacuum cleaners equipped with pick-up adapters, steel floor wands, crevice tools, and carpet tools.
3. Airless sprayers capable of spraying amended water shall be provided in sufficient number to allow continuous uninterrupted work.
4. Asbestos filtration devices shall utilize high efficiency particulate air (HEPA) filtration systems.
5. Transportation equipment, as required, shall be suitable for loading, temporary storage, and unloading of contaminated waste without exposure to persons or property, and shall be quiet in motion if used within the building.

1.3 EXECUTION

A. Safety Procedures For Power And Lighting

1. The use of wet methods for removal, repair, encapsulation or cleaning procedures increases the potential for electrical shock when working around electrical panels, conduit, light fixtures, alarm systems, junction boxes, transformers, etc. In coordination with the Owner, de-energize as much electrical equipment as possible to prevent electrical shock to employees performing the work. The Contractor shall use the following precautions:
 - a. Use non-conductive tools and vacuum attachments.
 - b. Utilize "hot line" covers over energized cables and power lines when possible.
 - c. Ensure all electrical equipment in use is properly grounded before the job starts. Check outlets, wiring, extension cords and power pickups.
 - d. Avoid stringing wiring across floors. Elevate wiring if possible.
 - e. Ensure electrical outlets are tightly sealed and taped to avoid water spray.
 - f. Determine operating voltages of equipment and lines before working on or near energized parts.
 - g. Energized parts must be insulated or guarded from employee contact and other conductive objects. Extension cords must be three-wire type and connected to a Ground Fault Interrupter (GFI) circuit.
 - h. Lock or secure de-energized circuits at panel and post warning signs.

- i. Seal heating vents with two layers of polyethylene sheeting prior to the start of work. The Contractor shall repair any damage caused by Contractor's operations to duct work, grilles, dampers, louvers or HVAC equipment at the completion of the work at Contractor's expense. Coordinate all lock out and or de-energizing with the Owner.

B. Temporary Facilities

1. Use qualified tradesmen for installation of temporary services and facilities. Locate temporary services and facilities where they will serve the entire project adequately and result in minimum interference with the performance of the work and operations of the building. Coordinate all installations and shut downs with building owner.
2. Relocate, modify and extend services and facilities as required during the course of work so as to accommodate the entire work of the project.
3. Provide new or used materials and equipment that are undamaged and in serviceable condition. Provide only materials and equipment that are recognized as being suitable for the intended use, by compliance with appropriate standards.
4. During the erection and/or moving of scaffolding, care must be exercised so that the polyethylene floor covering is not damaged.
5. Clean, as necessary, debris from non-slip surfaces.
6. At the completion of abatement work, clean all construction aids within the work area, wrap in one layer of 6-mil polyethylene sheet and seal before removal from the work area.
7. Temporary water service connections to the Owner's water system shall include back flow protection. Valves shall be temperature and pressure rated for operation of the temperatures and pressures encountered.
8. Employ heavy-duty abrasion-resistant hoses with a pressure rating 50 percent greater than the maximum pressure of the water distribution system to provide water into each work area and to each Decontamination Unit. Provide fittings as required to allow for connection to existing wall hydrants or spouts, as well as temporary water heating equipment, branch piping, showers, shut-off nozzles and equipment.
9. Electrical Services shall comply with applicable NEMA, NECA and UL standards and governing regulations for materials and layout of temporary electric service.
10. Provide a weatherproof, grounded temporary electric power service and distribution system of sufficient size, capacity, and power characteristics to accommodate performance of work during the construction period. Install temporary lighting adequate to provide sufficient illumination for safe work and traffic conditions in every area of work.
11. Provide receptacle outlets equipped with ground fault interrupters, reset button and pilot light, for plug-in connection of power tools and equipment.
12. Use only grounded extension cords; use "hard-service" cords where exposed to abrasion and traffic. Use single lengths or use waterproof connectors to connect separate lengths of electric cords, if single lengths will not reach areas of work. All cords shall be elevated off the floor inside the containment area.
13. Temporary wiring in the work area shall be type UL non-metallic sheathed cable located overhead and exposed for surveillance. Do not wire temporary lighting with plain, exposed (insulated) electrical conductors. Provide liquid tight enclosures or boxes for wiring devices.
14. Provide Type "A" fire extinguishers for temporary offices and similar spaces where there is minimal danger of electrical or grease-oil-flammable liquid fires. In other locations provide type "ABC" dry chemical extinguishers, or a combination of several extinguishers of NFPA recommended types for the exposures in each case.
15. Use of the Owner's existing toilet facilities, as indicated, will be permitted, so long as these facilities are properly cleaned and maintained in a condition acceptable to the Owner. At Final Completion, restore these facilities to the condition prevalent at the time of initial use. All provisions of these specifications regarding leaving the work area must be met.
16. When mini-enclosures area being used all of the requirements above will be enforced by the Owner's Representative. The construction and set-up of the mini-enclosures may be done by the Abatement Contractor.

C. Pressure Differential System

1. Before start of work Contractor shall submit design of pressure differential system to the Owner's Representative for review. Do not begin work until system has been approved by the Owner's Representative. Include in the submittal the following:
 - a. Number of pressure differential machines required and the calculations necessary to determine the number of machines.
 - b. Description of projected air-flow within work area and methods required to provide adequate air flow in all portions of the work area.
2. If the enclosure is not a mini-enclosure, the Contractor must supply the required number of asbestos air filtration units to the site in accordance with these specifications. Each unit shall include the following:
 - a. Cabinet constructed of steel or other durable materials able to withstand damage from rough handling and transportation. The width of the cabinet should be less than 30 inches to fit through standard-size doorways. Cabinet shall be factory sealed to prevent asbestos-containing dust from being released during use, transport, or maintenance. Access to and replacement of all air filters shall be from intake end. Unit shall be mounted on casters or wheels.
 - b. Rate capacity of fan according to useable air-moving capacity under actual operating conditions. Use centrifugal-type fan.
 - c. The final filter shall be the HEPA type. The filter media (folded into closely pleated panels) must be completely sealed on all edges with a structurally rigid frame.
 - d. A continuous rubber gasket shall be located between the filter and the filter housing to form a tight seal.
 - e. Provide HEPA Units that are individually tested and certified on site by an independent testing agency to have an efficiency of not less than 99.97 percent when challenged with 0.3 μ m dioctylphthalate (DOP) particles when tested in accordance with Military Standard Number 2182 and Army Instruction Manual 136-300-175A. Provide filters that bear a UL586 label to indicate ability to perform under specified conditions.
 - f. Pre-filters, which protect the final filter by removing the larger particles, are required to prolong the operating life of the HEPA filter. Two stages of pre-filtration are required. The first-stage pre-filter shall be a low-efficiency type (e.g., for particles 10 microns and larger). The second-stage (or intermediate) filter shall have a medium efficiency (e.g., effective for particles down to 5 microns). Pre-filters and intermediate filters shall be installed either on or in the intake grid of the unit and held in place with special housings or clamps.
 - g. Each unit shall be equipped with a Magnahelic gauge or manometer to measure the pressure drop across filters and indicate when filters have become loaded and need to be changed. A table indicating the useable air-handling capacity for various static pressure readings on the Magnahelic gauge shall be affixed near the gauge for reference, or the Magnahelic reading indicating at what point the filters should be changed, noting Cubic Feet per Minute (CFM) air delivery at that point. Provide units equipped with an elapsed time meter to show the total accumulated hours of operation.
 - h. The unit shall have an electrical (or mechanical) lockout to prevent fan from operating without a HEPA filter. Units shall be equipped with automatic shutdown system to stop fan in the event of a major rupture in the HEPA filter or blocked air discharge. Warning lights are required to indicate normal operation, too high a pressure drop across the filters (i.e., filter overloading), and too low of a pressure drop (i.e., major rupture in HEPA filter or obstructed discharge).
 - i. Electrical components shall be approved by the National Electrical Manufacturers Association (NEMA) and Underwriters' Laboratories (UL). Each unit shall be equipped with overload protection sized for the equipment. The motor, fan, fan housing, and cabinet shall be grounded.
 - j. If a mini-enclosure is used the air filtration unit may be a HEPA filtered vacuum with a flow rate of at least 100 cubic feet per minute (CFM).
3. Provide a fully operational pressure differential system within the work area maintaining continuously a pressure differential across work area enclosures of 0.02 inches of water for glove

- bag operations and mini-containments. Demonstrate to the Owner's Representative the pressure differential by use of pressure differential meter or a manometer, before disturbance of any asbestos-containing materials. In the case of a mini-enclosure visual evidence of pressure differential through the use of a smoke generation tube shall be sufficient as in paragraph C.13 of this section.
4. Continuously monitor and record the pressure differential between the work area and the building outside of the work area.
 5. Provide fully operational negative pressure systems supplying a minimum of one air change every ten minutes (six changes per hour), less in the instance of a mini-enclosure. Determine the volume in cubic feet of the work area by multiplying floor area by ceiling height. Determine total ventilation requirement in cubic feet per minute (cfm) for the work area by dividing this volume by the air change rate.
 6. Ventilation Required (CFM) = Volume of work area (cu. ft.)/10 min.
 7. Determine number of units needed to achieve ten-minute change rate by dividing the ventilation requirement (CFM) above capacity of exhaust unit(s) used. Capacity of a unit for purposes of this section is the capacity in cubic feet per minute with fully loaded filters (pressure differential which causes loaded filter warning light to come on) in the machines labeled operating characteristics.
 8. Add one additional unit as a backup in case of equipment failure or machine shutdown for filter changing.
 9. Locate exhaust unit(s) so that makeup air enters work area primarily through decontamination facilities and traverses work area as much as possible. This may be accomplished by positioning the unit(s) at a maximum distance from the worker access opening or other makeup air sources.
 10. Vent to outside of building, unless authorized in writing by the Owner's Representative.
 11. Each unit shall be serviced by a dedicated minimum 115v-20A circuit with overload device tied into an existing building electrical panel which has sufficient spare capacity to accommodate the load of all pressure differential units connected. Dedication of an existing circuit may be accomplished by shutting down existing loads on the circuit.
 12. Test pressure differential system before any asbestos-containing material is wetted or removed. After the work area has been prepared, the decontamination facility set up, and the exhaust unit(s) installed, start the unit(s) (one at a time). Demonstrate operation and testing of pressure differential system to the Owner's Representative.
 13. Demonstrate of operations of the pressure differential system to the Owner's Representative will include, but not be limited to, the following:
 - a. Plastic barriers and sheeting move lightly in toward work area.
 - b. Curtain of decontamination units move lightly in toward work area.
 - c. There is a noticeable movement of air through the decontamination unit. Use stroke tube to demonstrate air movement from clean room, and from equipment room to work area.
 - d. Use smoke tubes to demonstrate a positive motion of air across all area in which work is to be performed.
 - e. Use a differential pressure meter or manometer to demonstrate a pressure difference of at least 0.02 inches (as allowed) of water across every barrier separating the work area from the balance of the building or outside. This is not required in the case of a mini enclosure.
 14. Start exhaust units before beginning work (before any asbestos-containing material is disturbed). After abatement work has begun, run units continuously to maintain a constant negative pressure until decontamination of the work area is complete. Do not turn off units at the end of the work shift or when abatement operations temporarily stop.
 15. Do not shut down pressure differential system during encapsulating procedures, unless authorized by the Owner's Representative in writing. Start abatement work at a location farthest from the exhaust units and proceed toward them. If an electric power failure occurs, immediately stop all abatement work and do not resume until power is restored and exhaust units are operating again.
 16. At completion of abatement work, allow exhaust units to run as specified to remove airborne fibers that may have been generated during abatement work and cleanup and to purge the work area with clean makeup air. The units may be required to run for a longer time after decontamination, if

dry or only partially wetted asbestos material was encountered during any abatement work. In the case of a mini-enclosure the vacuum may be removed and the entrance sealed following encapsulation until the clearance sample is collected.

17. Prior to final air test, remove pre-filter and wipe out inside lip of negative air machine.
18. When a final inspection and the results of final air tests indicate that the area has been decontaminated, exhaust units may be removed from the work area. Before removal from the work area, remove and properly dispose of pre-filter, and seal Intake to the machine with 6-mil polyethylene to prevent environmental contamination from the filters.

D. Work Area Preparation

1. The work area is the location where asbestos-abatement work occurs. It is a variable of the extent of work of the contract. It may be a portion of a room, a single room, or a complex of rooms. A "work area" is considered contaminated during the work, and must be isolated from the balance of the building, and decontaminated at the completion of the asbestos-control work.
2. Pre-clean fixed objects, walls and floor surfaces within the proposed work areas using HEPA filtered vacuum equipment and wet cleaning methods as appropriate.
3. Seal all openings, supply and exhaust vents, and convectors within ten feet of the work area with 6-mil polyethylene sheeting secured and completely sealed with plastic adhesion tape.
4. Contact fire control agencies to review procedures prior to start of work.
5. Provide flame resistant polyethylene sheeting that conforms to requirements set forth by the National Fire Protection Association Standard 701, Small Scale Fire Test for Flame-resistant Textiles and Films. Provide largest size possible to minimize seams, four- or six- mils thick, frosted or black.
6. Provide spray adhesive in aerosol cans which is specifically formulated to stick tenaciously to sheet polyethylene and supporting surface.
7. Completely isolate the work area from other parts of the building so as to prevent asbestos-containing dust or debris from passing beyond the isolated area. Should the area beyond the work area(s) become contaminated with asbestos-containing dust or debris as a consequence of the work, clean those areas in accordance with the procedures indicated in Paragraph "Decontamination Procedures." All such required cleaning or decontamination shall be performed at no additional cost to the Owner.
8. Place all tools (i.e., scaffolding, staging) necessary for the work in the area to be isolated prior to erection of plastic sheeting temporary enclosure.
9. Disable ventilation systems or any other system bringing air into or out of the work area. Disable system by disconnecting wires, removing circuit breakers, by lockable switch or other positive means that will prevent accidental premature restarting of equipment.
10. Remove and dispose of all electrical and mechanical items, such as lighting fixtures, clocks, diffusers, registers, escutcheon plates, etc., which cover any part of the surface on which work is to be performed.
11. All general construction items such as cabinets, casework, doors and window trim, moldings, ceilings, trim, etc., which cover the surface of the work as required to prevent interference with the work. To be performed by the Owner: clean, decontaminate and reinstall all such materials, upon completion of all removal work with materials, finishes, and workmanship to match existing installations before start of work.
12. Permit Access to the work area only through the Decontamination Unit. All other means of access shall be closed off and sealed and warning signs displayed on the clean side of the sealed access.
13. Provide Warning Signs at each visual and physical barriers reading as follows in both English and Spanish:

<u>Legend</u>	<u>Notation</u>
KEEP OUT	3" Sans Serif Gothic or Block
BEYOND THIS POINT	1" Sans Serif Gothic or Block
ASBESTOS ABATEMENT WORK	1" Sans Serif Gothic or Block

IN PROGRESS
BREATHING ASBESTOS DUST MAY BE
HAZARDOUS TO YOUR HEALTH

1" Sans Serif Gothic or Block
14 Point Gothic

14. Alternate methods of containing the work area may be submitted to the Owner's Representative for approval. Do not proceed with any such method(s) without prior written approval of the Owner's Representative.
15. Individually seal all ventilation openings (supply and exhaust), lighting fixtures, clocks, doorways, windows, convectors and speakers, and other openings into the work area with plastic adhesion tape alone or with polyethylene sheeting at least 4-mil in thickness, taped securely in place with plastic adhesion tape. Maintain seal until all work including Project Decontamination is completed. Take care in sealing off lighting fixtures to avoid melting or burning of sheeting.
16. Provide sheet plastic barriers at least 6-mil in thickness as required to completely seal openings from the work area into adjacent areas. Seal the perimeter of all sheet plastic barriers with plastic adhesion tape or spray cement.
17. Where applicable, construct framing of the containment out of fire treated wood or aluminum studs. Mini-enclosure frames may be constructed of Polyvinyl Chloride (PVC) tubing.
18. Cover all walls in work area extending to the underside of the ceiling grid system with one layer of polyethylene sheeting, at least 6-mil in thickness, mechanically supported and sealed with plastic adhesion tape or spray-glue in the same manner as "Critical Barrier" sheet plastic barriers. Tape all joints with plastic adhesion tape. Contractor shall be responsible for repair of damaged wall finishes.
19. Cover floor with two layers of 6-mil polyethylene sheeting (exclude for floor tile and adhesive).
20. Provide Pressure Differential System per Paragraph "Pressure Differential System."
21. If the enclosure barrier is breached in any manner that could allow the passage of asbestos debris or airborne fibers, then add the affected area to the work area, enclose it as required by this section of the specification and decontaminate it as described in Paragraph "Decontamination Procedures."
22. Establishing a Mini-Containment area:
 - a. Establish work area so that unauthorized entry is prevented; Construct a two-compartment fire treated wood frame around work area; install one layer 6-mil polyethylene sheeting to structural members and two layers 6 mil polyethylene sheeting to the floor. Exception: no floor required if mini-containment is being constructed to perform a floor tile activity. Seal all edges to wall, ceiling, and floor surfaces with duct tape. Install viewing inspection windows, where feasible.
 - b. Seal all penetrations with duct tape such as pipes, electrical conduit, or ducts contained within the mini-containment.
 - c. Install triple 6-mil polyethylene flaps at both doorways. Place portable sprayer with clean water, disposable towels, and pre-labeled disposal bag in air lock.
 - d. Install appropriate signs on outside of mini-containment area.
 - e. Install HEPA vacuum; extend hose into mini-containment area for general vacuuming, negative air, and cleaning of disposal suit.
 - f. Accumulate all loose materials for disposal. Place in approved container. Apply appropriate labels. Adequately wet clean all wall, floor, tool and equipment surfaces.
 - g. Abatement worker must wear two disposable suits. Remove outer suit in work area and place in a plastic bag. Enter air lock.
 - h. In air lock, wet wipe respirator and wash hands with clean water. Remove respirator and place in a clean plastic bag. Proceed to remote shower unit where inner suit may be removed.

E. Worker Protection

1. This section describes the equipment and procedures required for protecting workers against asbestos contamination and other work place hazards except for respiratory protection.
2. Respiratory Protection is specified in Paragraph "Respiratory Protection."

3. Train in accordance with EPA's Model Accreditation Plan, 40 CFR 763 - Asbestos, all workers in the dangers inherent in handling asbestos and breathing asbestos dust and in proper work procedures and personal and area protective measures. Include but do not limit the topics covered in the course to the following:
 - a. Methods of recognizing asbestos.
 - b. Health effects associated with asbestos.
 - c. Relationship between smoking and asbestos in producing lung cancer.
 - d. Nature of operations that could result in exposure to asbestos.
4. Importance of and instruction in the use of necessary protective controls, practices and procedures to minimize exposure including:

Engineering controls
 Work practices
 Respirators
 Housekeeping procedures
 Hygiene facilities
 Protective clothing
 Decontamination procedures
 Emergency procedures
 Waste disposal procedures
 Appropriate work practices for the work
 Requirements of medical surveillance program
 Review of OSHA 29 CFR 1926.1101(k)(9)(viii)(G) - Asbestos
 Pressure differential systems
 Work practices including hands on or on job training
 Personal decontamination procedures
 Air monitoring, personal and area

5. Provide medical examinations for all workers who may encounter an airborne fiber level of 0.1 f/cc or greater for an 8 hour time weighted average. In the absence of specific airborne fiber data, provide medical examination for all workers who will enter the work area for any reason. Examination shall, at minimum, meet OSHA requirements as set forth in 29 CFR 1926.1101(k)(9)(viii)(G) - Asbestos. In addition, provide an evaluation of the individual's ability to work in environments capable of producing heat stress in the worker.
6. Before start of work Contractor shall submit the following to the Owner's Representative for review. Do not start work until receipt of the Owner's Representative.
 - a. An original signed copy of the Certificate of Worker's Acknowledgement found at the end of this specification, for each worker who is to be at the job site or enter the work area.
 - b. Courses outline or name of institution providing the worker training course.
 - c. Report from medical examination conducted within last 12 months as part of compliance with OSHA medical surveillance requirements for each worker who is to enter the work area.
7. Provide disposable full-body coveralls and disposable head covers, and require that they be worn by all workers in the work area. Provide a sufficient number for all required changes, for all workers in the work area.
8. Provide work boots with non-skid soles, and where required by OSHA, foot protectives, for all workers. Provide boots at no cost to workers. Paint uppers of all boots red with water proof enamel. Do not allow boots to be removed from the work area for any reason, after being contaminated with asbestos-containing material. Dispose of boots as asbestos contaminated waste at the end of the work.
9. Provide head protectives (hard hats) as required by OSHA for all workers, and provide four spares for use by the Owner's Representative, and the Owner. Label hats with same warning labels as used on disposal bags. Require hard hats to be worn at all times that work is in progress that may potentially cause head injury. Provide hard hats with plastic strap type suspension. Require hats

to remain in the work area throughout the work. Thoroughly clean, decontaminate and bag hats before removing them from work area at the end of the work.

10. Provide eye protectives (goggles) as required by OSHA for all workers involved in scraping, spraying, or any other activity which may potentially cause eye injury.
11. Provide work gloves to all workers and require that they be worn at all times in the work area. Do not remove gloves from work area. Dispose of gloves as asbestos contaminated waste at the end of the work.
12. Respirators, disposable coveralls, head covers, and footwear covers shall be provided by the contractor for the Owner, the Owner's Representative, and other authorized representatives who may inspect the job site.
13. Provide worker protection as required by the most stringent OSHA and/or EPA standards applicable to the work. The following procedures are minimums to be adhered to regardless of fiber count in the work area.
14. Each time work is entered, remove all street clothes in the changing room of the Personnel Decontamination Unit and put on new disposable coverall, new head cover, and a clean respirator. Proceed through shower room to equipment room and put on work boots.
15. In the event a mini-enclosure is used refer to Paragraph "Work Area Preparation" for personal decontamination procedures.

F. Respiratory Protection

1. Instruct and train each worker involved in asbestos abatement or maintenance and repair of friable asbestos-containing materials in proper respiratory use and require that each worker always wear a respirator, properly fitted on the face in the work area from the start of any operation which may cause airborne asbestos fibers until the work area is completely decontaminated. Use respiratory protection appropriate for the fiber level encountered in the work place or as required for other toxic or oxygen-deficient situations encountered.
2. Except to the extent that more stringent requirements are written directly into the Contract Documents, the following regulations and standards have the same force and effect (and are made a part of the Contract Documents by reference) as if copied directly into the Contract Documents, or as if published copies were bound herewith. Where there is a conflict in requirements set forth in these regulations and standards meet the more stringent requirement.
 - a. OSHA - U.S. Department of Labor Occupational Safety and Health Administration, Safety and Health Standards 29 CFR 1910, Section 1001 and Section 1910.134.29 CFR 1926.
 - b. ANSI - American National Standard Practices for Respiratory Protection. ANSI Z88.2-1980.
 - c. NIOSH - National Institute for Occupational Safety and Health.
 - d. MSHA - Mine Safety and Health Administration.

G. Type Of Respiratory Protection Required

1. Provide Respiratory Protection as indicated in paragraph below. Where paragraph below does not apply, determine the proper level of protection by dividing the expected or actual airborne fiber count in the work area by the "protection factors" given below. The level of respiratory protection which supplies an airborne fiber level inside the respirator, at the breathing zone of the wearer, at or below 0.01 fibers/cubic centimeter is the minimum level of protection allowed.
2. Eight-hour Time Weighted Average (TWA) of asbestos fibers to which any worker may be exposed shall not exceed 0.1 fibers/cubic centimeter.
3. For purposes of this section fibers are defined as all fibers regardless of composition as counted in the OSHA Reference Method (ORM), NIOSH P&CAM 239 or 7400 procedure, or asbestos fibers of any size as counted using either a scanning or transmission electron microscope.
4. Require that respiratory protection be used at all times that there is any possibility of disturbance of asbestos-containing materials whether intentional or accidental.
5. Require that a respirator be worn by anyone in a work area at all times, regardless of activity, during a period that starts with any operation which could cause airborne fibers until the area has been cleared for re-occupancy.

H. Respiratory Protection Factor

<u>Respirator Type</u>	<u>Protection Factor</u>
Air purifying: Negative pressure respirator High efficiency filter Half facepiece	10
Air purifying: Negative pressure respirator High efficiency filter Full facepiece	50
Powered-air purifying (PAPR): Positive pressure respirator High efficiency filter Half or Full facepiece	100
Type C supplied air: Positive pressure respirator continuous-flow Half or full facepiece	100
Type C supplied air: Positive pressure respirator pressure demand Full facepiece	1000
Type C supplied air: Positive pressure respirator pressure demand Full facepiece Equipped with an auxiliary positive pressure Self-contained breathing apparatus (SCBA)	over 1000
Self-contained breathing apparatus (SCBA): Positive Pressure respirator Pressure demand Full facepiece	over 1000

I. Air Purifying Respirator

1. Provide half face or full face type respirators. Equip full-face respirators with a nose cup or other anti-fogging device as would be appropriate for use in air temperatures less than 32 degrees Fahrenheit.
2. Provide, at a minimum, HEPA type filters labeled with NIOSH and MSHA certification for "Radionuclides, Radon Daughters, Dust, Fumes, Mists including Asbestos-Containing Dusts and Mists" and color coded in accordance with ANSI Z228.2 (1980). In addition, a chemical cartridge section may be added, if required, for solvents, etc., in use. In this case, provide cartridges that have each section of the combination canister labeled with the appropriate color code and NIOSH/MSHA Certification.
3. Supply with a sufficient quantity of respirator filters approved for asbestos, so that workers can change filters during the work day. Require that respirators be wet-rinsed, and filters discarded, each time a worker leaves the work area. Require that new filters be installed each time a worker re-enters the work area. Store respirators and filters at the job site in the changing room and protect totally from exposure to asbestos prior to their use. Do not use single use, disposable or quarterface respirators.

- J. Powered Air Purifying Respirator (PAPR)
1. Provide full-facepiece type respirators. Provide nose-cups for full-facepiece respirators. Provide, at a minimum, HEPA type cartridges approved by NIOSH/MSHA and certified for use in atmospheres containing asbestos dusts.
 2. Provide, at a minimum, one extra battery pack for each respirator so that one can be charging while one is in use.
 3. Provide non-cloth belts capable of being decontaminated in shower.
 4. Supply with a sufficient quantity of high efficiency respirator filters approved for asbestos so that workers can change filters at any time that flow through the face piece decreases to the level at which the manufacturer recommends filter replacement. Require that regardless of flow, filter cartridges be replaced after 40 hours of use. Require that HEPA elements in filter cartridges be protected from wetting during showering. Require entire exterior housing of respirator including blower unit, filter cartridges, hoses, battery pack, face mask, belt, and cords to be washed each time a worker leaves the work area. Caution should be used to avoid shorting battery pack during washing.
- K. Required Respiratory Protection
1. Regardless of airborne fiber levels, require the following minimum level of respiratory protection:
 - a. Half-face air purifying respirators may be used during set-up of the containment and removal of the material so long as fiber counts inside the respirator do not exceed .01 f/cc fibers per cubic centimeter.
- L. Decontamination Units -Three-Stage
1. Provide a Personnel Decontamination Unit consisting of a serial arrangement of rooms or spaces, Changing Room, Shower Room, Equipment Room adjacent to each full containment area.
 2. Require all persons without exception to pass through this decontamination unit for entry into and exiting from the work area for any purpose. Do not remove equipment or materials through Personnel Decontamination Unit.
 3. Changing (Clean) Room:
 - a. Provide a room that is physically and visually separated from the rest of the building for the purpose of changing into protective clothing.
 - b. Locate so that access to work area from changing room is through shower room.
 - c. Separate changing room from the building by a double-sheeted polyethylene flapped doorway.
 - d. Provide sub-panel at changing room to accommodate all removal equipment. Power sub-panel directly from a building electrical panel. Connect all electrical branch circuits in decontamination unit and particularly any pumps in shower room to a ground-fault circuit protection device.
 4. Shower Room:
 - a. Provide a completely water tight operational shower to be used for transit by cleanly dressed workers heading for the work area from the changing room, or for showering by workers headed out of the work area after undressing in the equipment room.
 - b. Construct room by providing a shower pan and two shower walls in a configuration that will cause water running down walls to drip into pan. Install a freely draining wood floor in shower pan at elevation of top of pan.
 - c. Separate this room from rest of building, drying room and airlock with airtight walls fabricated of 6-mil polyethylene.
 - d. Provide splash proof entrances to Drying Room and Airlock.
 5. Equipment Room (contaminated area):
 - a. Require work equipment, footwear and additional contaminated work clothing to be left here. This is a change and transit area for workers. Separate this room from the work area by a 6-mil polyethylene flap doorway.
 - b. Separate this room from the rest of the building, the shower room and work area with air tight walls fabricated of 6-mil polyethylene.

6. Clean Room: Provide Clean Room to isolate the holding room from the building exterior.
7. Load-out Area:
 - a. The load-out area is the transfer area from the building to a truck or dumpster.
 - b. Wet wipe bags before they are passed through the equipment decon-chamber.
 - c. When cleaning is complete pass items into holding room. Close all doorways except the doorway between the holding room and the Clean Room.
 - d. Workers from the area outside the containment area enter holding area and remove decontaminated equipment and/or containers for disposal.
 - e. Require these workers to wear full protective clothing and appropriate respiratory protection.
 - f. At no time is a worker from an uncontaminated area to enter the enclosure when a removal worker is inside.
 - g. Post an approximately 20 inch x 14 inch manufactured caution sign at each entrance to the work area displaying the following legend with letter sizes and styles of a visibility required by OSHA 29 CFR 1926.1101(k)(9)(viii)(J) - Asbestos.

LEGEND

DANGER

ASBESTOS

CANCER AND LUNG DISEASE HAZARD

RESPIRATORS AND PROTECTIVE CLOTHING ARE REQUIRED
IN THIS AREA

- h. Provide spacing between respective lines at least equal to the height of the respective upper line.
- i. Additional Signage: Shall also be posted in accordance with OSHA 29 CFR 1926.1101(k)(9)(viii)(J) - Asbestos

DANGER

ASBESTOS

CANCER AND LUNG DISEASE HAZARD

AUTHORIZED PERSONNEL ONLY

RESPIRATORS AND PROTECTIVE CLOTHING

3/4 inch Block

3/4 inch Block

M. Decontamination Procedures

1. Contractor shall require all workers and visitors to adhere to the following personal decontamination procedures whenever they leave the work area:
 - a. Require that all workers use the following decontamination procedure as a minimum requirement whenever leaving the work area.
 - b. When exiting area, remove disposable coveralls, disposable head covers, and disposable footwear covers or boots in the Equipment Room.
 - c. Still wearing respirators, proceed to showers. Showering is mandatory. Care must be taken to follow reasonable procedures in removing the respirator to avoid asbestos fibers while showering. The following procedure is required as a minimum:
 - 1) Thoroughly wet body including hair and face. If using a PAPR, hold blower unit above head to keep canisters dry.
 - 2) With respirator still in place thoroughly wash body, hair, respirator face piece, and all parts of the respirator except the blower unit and battery pack on a PAPR. Pay particular attention to seal between face and respirator and under straps.
 - 3) Take a deep breath, hold it and/or exhale slowly, completely wet hair, face, and respirator. While still holding breath, remove respirator and hold it away from face before starting to breathe.
 - 4) Carefully wash face-piece of respirator inside and out.
 - d. If using PAPR, shut down in the following sequence, first cap inlets to filter cartridges, then turn off blower unit (this sequence will help keep debris which has collected on the inlet side of filter from dislodging and contaminating the outside of the unit). Thoroughly wash blower unit and hoses. Carefully wash battery pack with wet rag. Be extremely cautious of getting water in battery pack as this will short out and destroy battery.
 - 1) Shower completely with soap and water.
 - 2) Rinse thoroughly.
 - 3) Rinse shower room walls and floor prior to exit.
 - 4) Proceed from shower to changing room and change into street clothes or into new disposable work items.
 - e. Require that all workers use the following decontamination procedure as a minimum requirement whenever leaving the work area with a half or full face cartridge type respirator:
 - 1) When exiting area, remove disposable coveralls, disposable headcovers, and disposable footwear covers or boots in the equipment room.
 - 2) Still wearing respirators, proceed to showers. Showering is mandatory. Care must be taken to follow reasonable procedures in removing the respirator and filters to avoid asbestos fibers while showering. The following procedure is required as a minimum:
 - 3) Thoroughly wet body from neck down.
 - 4) Wet hair as thoroughly as possible without wetting the respirator filter if using an air purifying type respirator.
 - 5) Take a deep breath, hold it and/or exhale slowly, complete wetting of hair, thoroughly wetting face, respirator and filter (air purifying respirator). While still holding breath, remove respirator and hold it away from face before starting to breathe.
 - 6) Dispose of wet filters from air purifying respirator.
 - 7) Carefully wash facepiece of respirator inside and out.
 - 8) Shower completely with soap and water.
 - 9) Rinse thoroughly.
 - 10) Rinse shower room walls and floor prior to exit.
 - 11) Proceed from shower to changing room and change into street clothes or into new disposable work items.

N. Project Decontamination

1. If the asbestos abatement work is on damaged or friable materials, then the building space is deemed contaminated before start of the work and in need of decontamination. In this case, the

- procedure includes two cleanings of the primary barrier plastic prior to its removal and two cleanings of the room surfaces to remove any new or existing contamination.
2. Work of this section includes the decontamination of air in the work area which has been, or may have been contaminated by the elevated airborne asbestos fiber levels generated during abatement activities, or which may previously have had elevated fiber levels due to friable materials in the space.
 3. Work of this section also includes the cleaning, decontamination, and removal of temporary facilities installed prior to abatement work and decontamination of all surfaces (ceiling, walls, floor) of the work area, and all furniture or equipment in the work area.
 4. First Cleaning
 - a. Carry out a first cleaning of all surfaces of the work area including items of remaining sheeting, tools, scaffolding and/or staging by use of damp-cleaning and mopping, and/or a HEPA filtered vacuum. (Note: A HEPA vacuum will fail if used with wet material). Do not perform dry dusting or dry sweeping. Use each surface of a cleaning cloth one time only and then dispose as contaminated waste. Continue this cleaning until there is no visible debris from removed materials on plastic sheeting or other surfaces. Upon authorization of the Owner's Representative proceed with encapsulation of substrate.
 - b. Perform encapsulation of substrate where required at this time. Maintain pressure differential system in operation during encapsulation work. Allow encapsulant to dry before proceeding with removal of Secondary layer of plastic.
 5. Second Cleaning
 - a. Upon authorization of the Owner's Representative, remove all Primary Barrier sheeting and Material Decontamination Unit, if there is one, leaving only the following:
 - 1) Critical Barrier which forms the sole barrier between the work area and other portions of the building or outside.
 - 2) Critical Barrier Sheeting over lighting fixtures and clocks, ventilation openings, doorways, convectors, speakers and other openings.
 - 3) Personnel Decontamination Unit.
 - 4) Pressure Differential System in continuous operation.
 - b. Remove all filters in Air Handling System(s) and dispose of as asbestos-containing waste.
 6. Final Cleaning: Carry out a final cleaning of all surfaces in the work in the same manner as the first cleaning immediately after removal of primary plastic. This cleaning is now being applied to existing room surfaces. Take care to avoid water marks or other damage to surfaces.
 7. Visual Inspection: Perform a complete visual inspection with the Owner's Representative of the entire work area including decontamination unit, all plastic sheeting, seals over ventilation openings, doorways, windows, and other openings; look for debris from any sources, residue on surfaces, dust or other matter. If any such debris, residue, dust or other matter is found repeat cleaning and continue decontamination procedure from that point. When the area is visually clean, complete the certification at the end of this section.
 8. Final Air Sampling
 - a. After the work area is found to be visually clean, air samples will be taken and analyzed in accordance with the procedures set forth in Paragraph "Powered Air Purifying Respirator (PAPR).
 - b. If Release Criteria are not met, repeat cleaning and continue decontamination procedure from that point.
 - c. If Release Criteria is met, remove the interior of the decontamination unit leaving in place only the Critical Barriers separating the work area from the rest of the building and the operating negative pressure system.
 - d. Any small quantities of residual material found upon removal of the plastic sheeting shall be removed with a HEPA filtered vacuum cleaner and local area protection. If significant quantities, as determined by the Owner's Representative, are found then the entire area affected shall be decontaminated as specified herein for the cleaning.

O. Work Area Clearance

1. Air Monitoring

- a. Visual Inspection is required as a prerequisite of air testing.
- b. To determine if the elevated airborne asbestos structure concentration during abatement operations have been reduced to the specified level, the Owner's Representative will secure samples and analyze them according to the following procedures.
2. Aggressive Sampling
 - a. All air samples will be taken using aggressive sampling techniques as follows. (There are no standards available for flow rate of leaf blowers or large fans. However, this information is not critical to the success of the procedure).
 - b. Before sampling pumps are started, the exhaust from forced-air equipment (leaf blower with at least 1 horsepower electric motor) will be swept against all walls, ceilings, floors, ledges and other surfaces in the room. This procedure will be continued for five minutes per 10,000 cubic feet of room volume.
 - c. Air samples will be collected in areas subject to normal air circulation away from room corners, obstructed locations, and sites near windows, doors or vents.
3. Schedule of Air Samples
 - a. General: The number and volume of air samples taken and analytical methods used by the Owner's Representative will be in accordance with the following schedule. Sample volumes given may vary depending upon the analytical instruments used. In each homogeneous work area after completion of all cleaning work, samples will be taken and analyzed by either PCM or TEM analysis.
 - b. Transmission Electron Microscopy (TEM) Samples:
 - 1) In each homogeneous work area after completion of all cleaning work, samples will be taken and analyzed by either PCM or TEM analysis as follows:
 - 2) Samples will be collected on 25 mm cassettes with filter media: TEM - 0.45 micrometer mixed cellulose ester or 0.40 micrometer polycarbonate, with 5.0 micron mixed cellulose ester backing filter.

Location Sampled	Number of Samples	Detection Limit (f/cc)	Minimum Volume (Liters)	Rate LPM
Each Work Area	5	0.005	1,300	2-10

- 3) TEM Analysis will be performed using the analysis method set forth in the AHERA Regulation 40 CFR Part 763 Appendix A.
- 4) Asbestos Structures referred to in this Section include asbestos fibers, bundles, clusters, or matrices, as defined by method of analysis.
- 5) Decontamination of the work site is complete when all the sample results are below 0.01 fibers per cubic centimeters (f/cc) of air or 70 structures per square millimeter.
- c. Phase Contrast Microscopy (PCM) Samples:
 - 1) In each homogeneous work area after completion of all cleaning work, samples may be taken and analyzed as follows:
 - 2) Samples will be analyzed by PCM for clearance in areas where ceiling tile and/or pipe insulation are removed
 - 3) Samples will be collected on 25 mm cassettes with filter media: PCM - 0.8 micrometer mixed cellulose ester.

Location Sampled	Number of Samples	Detection Limit (s/cc)	Minimum Volume (Liters)	Rate LPM
Each Work Area	1-5	0.01	2,400	2-10

- 4) PCM Analysis: Fibers on each filter will be measured using the NIOSH 7400 Method entitled "Fibers" published in the NIOSH Manual of Analytical Methods, 3rd Edition, Second Supplement, August 1987.

- 5) Fibers: Referred to in this section include fibers regardless of composition as counted by the phase contrast microscopy method used
 - 6) Decontamination of the work site is complete when all the sample results are below 0.01 fibers per cubic centimeters (f/cc) of air or 70 structures per square millimeter.
4. Failure of Clearance Sampling: Should results from analysis of final clearance air samples not meet the specified criteria, Contractor will be responsible for the payment of all costs, including Consultant's time for subsequent clearance air sampling. The costs associated with subsequent re-sampling for final clearance shall be deducted from the Contractor's final payment of the contract amount.
- P. Removal Of Pipe Insulation
1. The work of this section applied to the removal of asbestos-containing Pipe Insulation.
 - a. Place one layer of 6-mil fire retardant polyethylene sheeting directly below the work. The sheet shall be of sufficient size to completely wrap the pipe once it has been removed.
 - b. Thoroughly wet the ends of the pipe with amended water and scrape off a minimum of 6 inches of asbestos wrap from both ends of the pipe. Immediately place the wetted material into pre-labeled asbestos disposal bag(s).
 - c. Detach the pipe at each scraped end and place the pipe onto one sheet of 6-mil fire retardant polyethylene sheeting. Wrap the pipe with the 6-mil fire retardant polyethylene sheeting. Contractor shall wrap the pipe with a second sheet of 6-mil, fire retardant polyethylene sheeting and label as asbestos-containing material. Dispose of the bag(s) and duct in accordance with the Paragraph "Handling and Disposal of Asbestos Contaminated Waste" of this specification.
 - d. Upon clearance from the Owner's Representative, Contractor shall remove the 6-mil, fire retardant polyethylene sheeting from the openings.
- Q. Glove Bag Removal
1. The work of this section applies to full containment or glovebag removal.
 2. Isolate the area in accordance with Paragraph "Temporary Facilities."
 3. Construct a decontamination unit as described in Paragraph "Decontamination Units" and attach to the work area.
 4. Set up pressure differential isolation and ventilation of the work area in accordance to Paragraph "Pressure Differential System."
 - a. Upon approval of the enclosure by the Owner's Representative, Contractor may proceed to remove the material using the following method.
 - b. Thoroughly wet to satisfaction of the Owner's Representative, asbestos-containing insulation to be removed prior to stripping and/or tooling to reduce fiber dispersal into the air. Accomplish wetting by a fine spray (mist) of amended water or removal encapsulant. Saturate material sufficiently to wet the substrate without causing excess dripping. Allow time for removal encapsulant to penetrate material thoroughly. If amended water is used, spray material repeatedly during the work process to maintain a continuously wet condition. If a removal encapsulant is used, apply in strict accordance with manufacturer's written instructions. If insulation is covered with canvas, Contractor will wet the exterior covering and slice it with utility knife while saturating the material.
 - c. Mist work area continuously with amended water whenever necessary to reduce airborne fiber levels using commercially available "foggers."
 - d. Remove saturated asbestos-containing material in small sections from all areas. Do not allow material to dry out. As it is removed, simultaneously pack material while still wet into disposal bags. Twist neck of bags, bend over and seal with minimum three wraps of duct tape. Clean outside and move to wash down station adjacent to material decontamination unit.
 - e. Evacuate air from disposal bags with a HEPA filtered vacuum cleaner before sealing.
 - f. Contractor must always clean area of visible asbestos debris prior to end of shift.
 5. These procedures shall be followed to remove pipe insulation elbows:
 - a. Install critical barriers to isolate the work site. Install 2 or 3 Stage Decontamination Units.

- b. HEPA vacuum the work site.
- c. Provide negative air machine in addition to those required, in the vicinity of the work. Arrange so that exhaust is into the work area, oriented in a direction away from the work. Extend a 2-inch diameter flexible non-collapsing duct from the intake end to a point no more than 4'-0" from any scraping or brushing activity.
- d. Locate intake of duct so that airflow is horizontally and slightly downward into intake. Replace primary filter on negative air machine at an interval of no greater than 30 minutes. Allow no more than one scraping or brushing activity per negative air machine.
- e. Check pipe where the work will be performed. Wrap damaged (broken lagging, hanging, etc.), pipe in 6 mil plastic and "candy-stripe" with duct tape. Place one layer of duct tape around undamaged pipe at each end where the glovebag will be attached.
- f. Place necessary tools into pouch located inside glovebag. This will usually include: bone saw, utility knife, rags, scrub brush, wire cutters, tin snips and pre-wetted cloth.
- g. Place one strip of plastic adhesion tape along the edge of the open top slit of glove bag for reinforcement.
- h. Place the glove bag around section of pipe to be worked on and staple top together through reinforcing tape. Next, tape the ends of glovebag to pipe itself, where previously covered with plastic or tape.
- i. Use smoke tube and aspirator bulb to test seal. Place tube into water sleeve (two-inch opening to glovebag) squeezing bulb and filling bag with visible smoke. Remove smoke tube and twist water sleeve closed. While holding the water sleeve tightly, gently squeeze glovebag and by using a flashlight, look for smoke leaking out, (especially at the top and ends of the glovebag). If leaks are found, tape closed using plastic adhesion tape and re-test.
- j. Insert wand from garden sprayer through water sleeve. Plastic adhesion tape water sleeve tightly around the wand to prevent leakage.
- k. One person places its hands into the long-sleeved gloves while the second person directs garden sprayer at the work.
- l. Use bone saw, if required, to cut insulation at each end of the section to be removed. A bone saw is a serrated heavy gauge wire with ring-type handles at each end. Throughout this process, spray amended water or removal encapsulant on the cutting area to keep dust to a minimum.
- m. Remove insulation using putty knives or other tools. Place pieces in bottom of bag without dropping.
- n. Rinse all tools with water inside the bag and place back into pouch.
- o. Using scrub brush, rags and water, scrub and wipe down the exposed pipe. (Inexpensive horse rub-down mittens work well for this).
- p. Remove water wand from water sleeve and attach the small nozzle from HEPA-filtered vacuum. Turn on the vacuum only briefly to collapse the bag.
- q. Remove the vacuum nozzle, twist water sleeve closed and seal with plastic adhesion tape.

R. Handling And Disposal Of Asbestos-Containing Waste

- 1. All waste and asbestos contaminated waste shall be double bagged in pre-labeled 6-mil airtight puncture resistant bags. Labeling shall be in accordance with OSHA and EPA requirements.
 - a. Bags of asbestos-containing waste shall be sealed with tape in the work area. Asbestos waste shall not be allowed to dry out prior to sealing bags. While in the work area, bags shall be decontaminated of any bulk debris by wet wiping. Bags shall be pre-labeled in accordance with OSHA and EPA.
 - b. The Contractor shall ensure that the sealed bags are transported to the waste disposal site.
- 2. The Contractor shall establish a manifest system to enable the Owner to report the quantity of asbestos waste being deposited at the landfill. Contractor shall report the quantity of waste in pounds or tons as appropriate. The Contractor must be able to demonstrate custody over all asbestos waste from the time it is removed from the work area until it is deposited at the land fill.

- a. Copies of the manifest and any receipts generated during the handling and disposal process shall be provided to the Owner's Representative and the Owner.
 - b. Final manifest and documents must be provided to the Owner's Representative and the Owner within two weeks of the removal of the asbestos materials from the site by the waste hauler.
- S. Encapsulation Of Asbestos-Containing Materials
 - 1. General provisions of Contract, including General and Supplementary Conditions and Division 01, apply to work of this section.
 - a. The work includes the sealing of all piping or vessels from which asbestos-containing insulation has been removed with one coat of a lock down encapsulant.
 - b. Where repair work is being performed, the end will be sealed with a minimum of one coat of bridging encapsulant.
 - 2. Submittals
 - a. Product Data: Submit manufacturer's technical information including label analysis and application instructions for each material proposed for use.
 - b. Installation Instructions: Submit manufacturer's installation instructions with specific project requirements noted.
 - c. Performance Warrantee: Submit manufacturer's performance guarantee.
 - d. Certification: Submit written approval of entity installing the encapsulant from encapsulant manufacturer.
 - e. Material Safety Data Sheet: Submit the Material Safety Data Sheet, or equivalent, in accordance with the OSHA Hazard Communication Standard (29 CFR 1910.1200) for each surfactant and encapsulating material proposed for use on the work. Include a separate attachment for each sheet indicating the specific worker protective equipment proposed for use with the material indicated.
 - 3. Deliver materials to the job site in original, new and unopened packages and containers bearing manufacturer's name and label, and following information:
 - a. Name or title of material
 - b. Manufacturer's stock number and date of manufacture
 - c. Manufacturer's name
 - d. Thinning Instructions
 - e. Application Instructions
 - 4. Deliver materials together with a copy of the OSHA Material Safety Data Sheet for the material.
 - 5. Job Conditions
 - a. Apply encapsulating materials only when environmental conditions in the work area are as required by the manufacturer's instructions.
 - 6. Quality Assurance
 - a. Installation of Spray-on Encapsulation Materials: Install spray-on materials by a firm and personnel approved by the manufacturer of the primary materials.
 - b. Testing: Test material to be encapsulated using methods set forth in ASTM E1494 "Standard Practice for Encapsulants Spray-or-Trowel-Applied for Friable Asbestos-Containing Building Materials."
 - c. Performance Warranty: Submit written Performance Warranty, executed by the manufacturer and co-signed by the Contractor, agreeing to repair/replace spray-on work which has cracked, fallen from substrate, or otherwise deteriorated to a condition where it would not perform effectively for its intended purposes due substantially to defective materials or workmanship and not due to abuse by occupants, improper maintenance, non-foreseeable ambient exposures or other causes beyond anticipated conditions and manufacturer's/contractor's control.
 - d. Compatibility: Selection and use of encapsulant shall be compatible with replacement materials. Submit manufacturer's data indicating compatibility with replacement materials.
 - 7. Product Selection
 - a. Encapsulants: Provide penetrating or bridging type encapsulants specifically designed for application to asbestos-containing material.

- b. Standards: Product shall be rated as acceptable for use intended when field tested in accordance with ASTM E1494 "Standard Practice for Encapsulants Spray-or-Trowel-Applied for Friable Asbestos-Containing Building Materials."
 - c. Fire Safety: Use only materials that have a flame spread index of less than 25, when dry, when tested in accordance with ASTM E84.
- 8. Manufacturers
 - a. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products, which may be incorporated in the work, include, but are not limited to the following:
 - 1) Penetrating Encapsulants: As currently accepted by the EPA. Refer to most recent EPA approval list.
 - 2) Bridging Encapsulants: As currently accepted by the EPA. Refer to most recent EPA approval list.
- 9. General
 - a. Prior to applying any encapsulating material, ensure that application of the sealer will not cause the base material to fail and allow the sealed material to fall of its own weight or separate from the substrate. Should Contractor doubt the ability of the installation to support the sealant, request direction from the Owner's Representative before proceeding with the encapsulating work.
 - b. Do Not Commence Application of encapsulating materials until all removal work within the work area has been completed.
- 10. Worker Protection
 - a. Before beginning work with any material for which a Material Safety Data Sheet has been submitted, provide workers with the required protective equipment. Require that appropriate protective equipment be used at all times.
 - b. In addition to protective breathing equipment required by OSHA requirements or by this specification, use painting pre-filters on respirators to protect the dust filters when organic solvent based encapsulants are used.
- 11. Substrate
 - a. Apply lock down encapsulant to all substrate after all asbestos-containing materials have been removed. Apply in strict accordance with the manufacturer's printed instructions for use of the encapsulation as an asbestos coating. Any deviations from such printed instructions shall be approved by the Owner's Representative in writing prior to commencing work.
 - b. Apply encapsulant with an airless spray gun with air pressure and nozzle orifice as recommended by the encapsulant manufacturer.

T. Removal Of Floor Tile

- 1. This section applies to the removal of floor tile.
 - a. Prior to start of work, wet wipe all surfaces including floor tile to remove any visible dust.
 - b. Isolate the room by sealing hallway or doors and installing critical barriers on all ducting, windows and other penetrations of the room, in the specified area. Install a splash guard a minimum of 4 feet high on the walls of the room with one layer of 6-mil fire retardant poly.
 - c. Install a two-stage decontamination configuration contiguous (under certain conditions may be remote) with the work in accordance with Paragraph "Decontamination Units."
 - d. Using water or amended water in a Hudson-type sprayer or garden sprayer, lightly mist the area where the material is to be removed. This may take several passes with the hose of the sprayer. Allow time for the water to soak into the material.
 - e. Immediately place individual tiles in proper asbestos disposal bags. Vacuum collapse the bag, twist the neck of the bag, tape with duct tape, fold the twisted portion over onto itself and tape again. Wipe the outside of the bag with clean damp cloths and place the bag into a second prelabeled disposal bag. Tape shut the second bag.

U. Removal Of Fireproofing

1. The work of this section applies to the removal of all asbestos containing fireproofing including all over-spray that may be located on concrete block, columns, metal deck, beams, fixtures conduit and ducting.
 - a. Isolate the floor per Paragraph "Temporary Enclosure."
 - b. Construct a decontamination unit as described in Paragraph "Decontamination Units" and attach to the work area.
 - c. Set up pressure differential isolation and ventilation of the work area in accordance to Paragraph "Temporary Pressure Differential and Air Circulation System."
 - d. Upon approval of the enclosure by the Owner's Representative, contractor may proceed to remove the material using the following method.
 - e. Pre-clean columns, beams, electrical, mechanical and plumbing systems in the work area using wet wipe and HEPA vacuuming methods. Mask off with flame retardant polyethylene sheeting to protect from contamination during bulk abatement.
 - f. Thoroughly wet to satisfaction of the Owner's Representative, asbestos-containing fireproofing to be removed prior to stripping and/or tooling to reduce fiber dispersal into the air. Accomplish wetting by a fine spray (mist) of amended water or removal encapsulant. Saturate material sufficiently to wet the substrate without causing excess dripping. Allow time for removal encapsulant to penetrate material thoroughly. If amended water is used, spray material repeatedly during the work process to maintain a continuously wet condition. If a removal encapsulant is used, apply in strict accordance with manufacturer's written instructions.
 - g. Mist work area continuously with amended water whenever necessary to reduce airborne fiber levels using commercially available "foggers."
 - h. Remove saturated asbestos-containing material in small sections from all areas. Do not allow material to dry out. As it is removed, simultaneously pack material while still wet into disposal bags. Twist neck of bags, bend over and seal with minimum three wraps of duct tape. Clean outside and move to wash down station adjacent to material decontamination unit.
 - i. Evacuate air from disposal bags with a HEPA filtered vacuum cleaner before sealing.
 - j. Provide Pressure Differential Machine in addition to those required in Paragraph "Pressure Differential System," in the vicinity of the work. Arrange so that exhaust is into the work area, oriented in a direction away from the work. Extend a 12" diameter flexible non-collapsing duct from the intake end to a point no more than 4'-0" from any scraping or brushing activity.
 - k. Locate intake of duct so that air flow is horizontally and slightly down-ward into intake. Replace primary filter on pressure differential machine at an interval of no greater than 30 minutes. Allow no more than one scraping or brushing activity per pressure differential machine.
- V. Removal Of Wall Plaster: HEPA vacuum work site.
1. Place two layers of 6-mil flame retardant polyethylene sheeting on the floor adjacent to the wall to be demolished. Pull the wall down in manageable sections onto the polyethylene sheeting. Control dust and fiber release by misting the air and lightly wetting the material with amended water from a Hudson-type sprayer or garden sprayer as it is demolished.
 2. Wrap the first layer of polyethylene sheeting around the material and seal with duct tape. Wrap the second layer of polyethylene sheeting around the bundle and seal with duct tape.
 3. Label and dispose of the entire bundle.
 4. Provide Pressure Differential Machine in addition to those required in Paragraph "Pressure Differential System," in the vicinity of the work. Arrange so that exhaust is into the work area, oriented in a direction away from the work. Extend a 12-inch diameter flexible non-collapsing duct from the intake end to a point no more than 4'-0" from any scraping or brushing activity.
 5. Locate intake of duct so that air flow is horizontally and slightly down-ward into intake. Replace primary filter on negative air machine at an interval of no greater than 30 minutes.

W. Clean-Up Of Asbestos-Containing Debris On Ceiling Tile Or Solid Ceiling

1. This section applies to the decontamination of the entire plaster ceiling, removal of existing fiberglass on duct work and removal of all batt insulation covering the existing plaster ceiling.
 - a. Isolate the floor per Paragraph "Temporary Facilities."
 - b. Construct a decontamination unit as described in Paragraph "Decontamination Units" and attach to the work area. General Contractor will give direction regarding exact location of decontamination unit(s).
 - c. Set up pressure differential isolation and ventilation of the work area in accordance to Paragraph "Temporary Pressure Differential and Air Circulation System."
 - d. Upon approval of the enclosure by the Owner's Representative, contractor may proceed to remove the material using the following method:
2. These procedures shall be followed to for clean up of asbestos-containing debris on existing plaster ceiling:
 - a. This work will be performed prior to the removal of fireproofing. The isolation of the work area is considered essential to the pre-cleaning activities for the total area. Isolate the area in accordance with Paragraph "Temporary Facilities."
 - b. Remove asbestos-containing debris and fiberglass batt and duct insulation and decontaminate the area using the following procedures:
 - 1) Remove all small debris with the HEPA vacuum.
 - 2) Gently mist all fiberglass insulation, remove from ducts and ceiling and place into pre-labeled hazardous disposal bags and dispose of in accordance with Paragraph "Disposal of Asbestos Containing Waste Material."
 - 3) Exposure of ducting will expose all fireproofing overspray, this material may be removed during the removal of fireproofing from decks and beams.
 - 4) Pick up all large visible debris on the ceiling or any horizontal surfaces and place in the bottom of a 6-mil polyethylene disposal bag conforming to the requirements of Paragraph "Disposal of Asbestos-Containing Waste." Place pieces in the bag without dropping and avoiding unnecessary disturbance and release of material.
 - 5) HEPA vacuum the entire plaster ceiling surface.
 - c. Upon completion of the decontamination of the area request a visual inspection of the ceiling and other horizontal surfaces. This area will be considered a portion of work area for the duration of the work and will be included in the final encapsulation of the area.

X. Removal Of Adhesive: This section applies to the removal of all asbestos-containing floor tile and adhesive, sheet vinyl flooring, vinyl floor tile, and baseboard adhesive, etc.

1. Ensure that workers are equipped with proper respiratory protection. In addition to the HEPA cartridges, respirators must also be equipped with organic solvent cartridges.
2. Provide HEPA filtered fan units in the vicinity of the work. Arrange so that units exhaust outside the building. Replace primary filters on HEPA filtered fan units at an interval of no greater than 30 minutes.
3. Apply adhesive removal solvent as recommended by manufacturer after removal of floor tile has been completed.
4. Provide tile adhesive (mastic) remover that meets the following criteria:
 - a. Flash Point: 122E or greater.
 - b. Special Precautions: No heavy smoke generated if ignited.
 - c. Health Effects: Limited to mild skin rash or eye irritation.
 - d. Respiratory Protection: MSHA - NIOSH approved Organic vapor cartridges in conjunction with standard HEPA filters.
 - e. Petroleum Distillates: None.
 - f. Odor: Pine, Citrus or none.

Use of diesel fuel in the removal of tile and baseboard adhesive is strictly prohibited.

5. Remove adhesive in small sections from all areas. Do not allow material to dry out. As adhesive is removed, simultaneously pack rags contaminated with adhesive material into disposal bags. Twist

- neck of bags, bend over and seal with minimum three wraps of duct tape. Clean outside of bag and move to material decontamination unit.
6. Upon completion of adhesive removal, thoroughly clean bare substrate of all solvent residue.
 7. Place adhesive residue in proper asbestos disposal bags. Vacuum collapse the bag, twist the neck of the bag, tape with duct tape, fold the twisted portion over onto itself and tape again. Wipe the outside of the bag with clean damp cloths and place bag into second prelabeled disposal bag. Tape shut the second bag.

**CERTIFICATE OF WORKER'S ACKNOWLEDGEMENT**

PROJECT NAME: _____

PROJECT ADDRESS: _____

CONTRACTOR: _____

WORKING WITH ASBESTOS CAN BE DANGEROUS. INHALING ASBESTOS FIBERS HAS BEEN LINKED WITH VARIOUS TYPES OF CANCER IF YOU SMOKE AND INHALE ASBESTOS FIBERS, THE CHANCE THAT YOU WILL DEVELOP LUNG CANCER IS GREATER THAN THAT OF THE NON-SMOKING PUBLIC.

Your employer's contract with the Owner for the above project requires that: You be supplied with the proper respirator and be trained in its use. You be trained in safe work practices and in the use of the equipment found on the job. You receive a medical examination. These things are to have been done at no cost to you. By signing this certification you are assuring the Owner that your employer has met these obligations to you.

RESPIRATORY PROTECTION: I have been trained in the proper use of respirators, and informed of the type respirator to be used on the above referenced project. I have a copy of the written respiratory protection manual issued by my employers. I have been equipped at no cost with the respirator to be used on the above project.

TRAINING COURSE: I have been trained in the dangers inherent in handling asbestos and breathing asbestos dust and in proper work procedures and personal and area protective measures. The topics covered in the course included the following:

- Physical characteristics of asbestos
- Health hazards associated with asbestos
- Respiratory protection
- Use of protective equipment
- Pressure differential systems
- Work practices including hands-on or on-the-job training
- Personal decontamination procedures
- Air monitoring, personal and area

MEDICAL EXAMINATION: I have had a medical examination within the last 12 months which was paid for by my employer. This examination included: health history, pulmonary function tests and may have included an evaluation of a chest x-ray.

Signature _____ Witness _____

Printed Name _____ Social Security Number _____

**CERTIFICATION OF VISUAL INSPECTION****AREA** _____

In accordance with Paragraph "Project Decontamination" the Contractor hereby certifies that it has visually inspected the work area (all surfaces including pipes, beams, ledges, walls, ceiling and floor, Decontamination Unit, sheet plastic, etc.) and has found no dust, debris or residue.

By: _____

Signature _____ Date _____

Print Name _____

Print Title _____

OWNER'S REPRESENTATIVE CERTIFICATION

the Owner's Representative hereby certifies that it has accompanied the Contractor on its visual inspection and verifies that this inspection has been thorough and to the best of its knowledge and belief, the Contractor's certification above is a true and honest one.

Signature _____ Date _____

Print Name _____

Print Title _____

RESPIRATORY PROTECTION PROGRAM

Project Name _____

Location _____

Date _____

Based upon airborne asbestos-fiber counts encountered on previous projects of similar type working on materials similar to those found on the above referenced project. The following level of respiratory protection is proposed for the indicated operations to maintain an Airborne Fiber Count (as measured by the NIOSH 7400 Method) below the specified Permissible Exposure Limit (PEL) inside the respirator face piece.

Operation	Anticipated f/cc	Respiratory Protection	Protection Factor	f/cc in Mask
Installing sheet plastic				
Removing trim in contact with asbestos-containing material				
Removal of architectural finish or fireproofing				
Removal of pipe insulation				
Removal of fitting insulation				
Encapsulation of pipe and boiler insulation				
Gross debris removal				
Cleaning "primary" sheet plastic				
Cleaning "critical" barrier				
Removing Decontamination Unit				
Other				

The Contractor certifies that to the best of its knowledge and belief the above represent a true and accurate representation of Airborne Fiber Counts to be expected for the operations indicated, and are based upon airborne fiber data from past projects with similar materials and operations.

SECTION 02 82 33 00 - R&A REMOVAL AND DISPOSAL OF NON-FRIABLE ACM

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section.

NOTE TO SPECIFIER

INCLUDE this Section if roofing materials are identified within Section 022623 as containing non-friable ACM.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Removal and disposal of non-friable asbestos-containing materials related to roof replacement.

1.2 RELATED SECTIONS

- A. Section 013543 – Environmental Procedures
- B. Section 022623 – Asbestos Laboratory Analysis Report
- C. Section 024100 – Roof Removal and Substrate Preparation

1.3 QUALITY ASSURANCE PROCEDURES

- A. Immediately refer any conflicts between the requirements outlined in this Section and those of regulatory agencies to the Owner for resolution.

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

3.1 GENERAL

- A. Roofing components have been determined to be asbestos-containing materials (ACMs). Refer to the laboratory report located in Section 022623 for location of ACMs identified during sampling of roof membranes and flashings in the project work areas.
- B. Complete PS Form 8210 – Work Authorization – Asbestos. Refer to Section 013543, Sub-paragraph 1.5.H, and the attached form and instructions.
- C. Removal of identified ACM shall be performed by contractor personnel trained for such removal. Prior to work start, the contractor shall provide an ACM removal plan, identifying ACM components to be removed, personnel performing the work, documentation of training provided to personnel performing work, methodology for custody, handling and disposal of ACM, and the schedule for performing removal work. Maintain this documentation on-site. The contractor shall provide all necessary labor, materials, equipment and transportation to perform ACM removal work.
- D. The contractor shall maintain a contact person on-site during work.
- E. If additional suspect ACMs are uncovered, other than those indicated in Section 022623, the contractor shall notify the Contracting Officer immediately.

- F. The contractor shall provide necessary permits and/or licenses necessary for ACM removal.
- G. The contractor shall comply with all applicable local, state, federal, and Owner-mandated regulations and requirements related to removal of ACM.
- H. Remove identified ACMs, following all applicable federal, state, local, and Owner-mandated requirements identified in Section 013543 for removal, handling, and disposal of non-friable ACMs. Dispose of ACMs as required by these regulations and requirements.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 02 82 33 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 85 00 00 - MOLD REMEDIATION**1.1 GENERAL****A. Description Of Work**

1. This specification covers the removal and disposal of mold. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. List of all personnel to be involved in the work with their training and certifications.
2. List of all products and procedures proposed for use in performance of the work.
3. Test reports.
4. Certificates.

C. References

1. U.S. EPA "Mold Remediation in Schools and Commercial Buildings"
2. U.S. EPA "A Brief Guide to Mold, Moisture, and Your Home"

D. Quality Assurance

1. Conform to all Federal, State, and Local regulations which govern the handling and disposal of mold materials.

1.2 PRODUCT - (Not Used)**1.3 EXECUTION**

- A. Environmental Assessment:** The presence of mold, water damage, or musty odors shall be addressed immediately. In all instances, any source(s) of water must be stopped and the extent of water damaged determined. Water damaged materials shall be dried and repaired. Mold damaged materials shall be remediated in accordance with this document.

1. **Visual Inspection:** A visual inspection is the most important initial step in identifying a possible contamination problem. The extent of any water damage and mold growth shall be visually assessed. This assessment is important in determining remedial strategies. Ventilation systems shall also be visually checked, particularly for damp filters but also for damp conditions elsewhere in the system and overall cleanliness. Ceiling tiles, gypsum wallboard (sheetrock), cardboard, paper, and other cellulosic surfaces shall be given careful attention during a visual inspection. The use of equipment such as a boroscope, to view spaces in ductwork or behind walls, or a moisture meter, to detect moisture in building materials, may be helpful in identifying hidden sources of fungal growth and the extent of water damage.

2. **Bulk/Surface Sampling**

- a. Bulk or surface sampling is not required to undertake a remediation. Remediation of visually identified fungal contamination shall proceed without further evaluation.
- b. Bulk or surface samples may need to be collected to identify specific fungal contaminants as part of a medical evaluation if occupants are experiencing symptoms which may be related to fungal exposure or to identify the presence or absence of mold if a visual inspection is equivocal (e.g., discoloration, and staining).
- c. An individual trained in appropriate sampling methodology shall perform bulk or surface sampling. Bulk samples shall be collected from visibly moldy surfaces by scraping or cutting materials with a clean tool into a clean plastic bag. Surface samples shall be collected by wiping a measured area with a sterile swab or by stripping the suspect surface

with clear tape. Surface sampling is less destructive than bulk sampling. Other sampling methods may also be available. A laboratory specializing in mycology shall be consulted for specific sampling and delivery instructions.

3. Air Monitoring
 - a. Air sampling for fungi shall not be part of a routine assessment. This is because decisions about appropriate remediation strategies can usually be made on the basis of a visual inspection. In addition, air-sampling methods for some fungi are prone to false negative results and therefore cannot be used to definitively rule out contamination.
 - b. Air monitoring may be necessary if an individual(s) has been diagnosed with a disease that is or may be associated with a fungal exposure (e.g., pulmonary hemorrhage/hemosiderosis, and aspergillosis).
 - c. Air monitoring may be necessary if there is evidence from a visual inspection or bulk sampling that ventilation systems may be contaminated. The purpose of such air monitoring is to assess the extent of contamination throughout a building. It is preferable to conduct sampling while ventilation systems are operating.
 - d. Air monitoring may be necessary if the presence of mold is suspected (e.g., musty odors) but cannot be identified by a visual inspection or bulk sampling (e.g., mold growth behind walls). The purpose of such air monitoring is to determine the location and/or extent of contamination.
 - e. If air monitoring is performed, for comparative purposes, outdoor air samples shall be collected concurrently at an air intake, if possible, and at a location representative of outdoor air. For additional information on air sampling, refer to the American Conference of Governmental Industrial Hygienists' document, "Bioaerosols: Assessment and Control."
 - f. Personnel conducting the sampling shall be trained in proper air sampling methods for microbial contaminants. A laboratory specializing in mycology shall be consulted for specific sampling and shipping instructions.
4. Analysis of Environmental Samples
 - a. Microscopic identification of the spores/colonies requires considerable expertise. These services are not routinely available from commercial laboratories. Documented quality control in the laboratories used for analysis of the bulk/surface and air samples is necessary. The American Industrial Hygiene Association (AIHA) offers accreditation to microbial laboratories (Environmental Microbiology Laboratory Accreditation Program (EMLAP)). Accredited laboratories must participate in quarterly proficiency testing (Environmental Microbiology Proficiency Analytical Testing Program (EMPAT)).
5. Evaluation of bulk/surface and air sampling data shall be performed by an experienced health professional. The presence of few or trace amounts of fungal spores in bulk/surface sampling shall be considered background. Amounts greater than this or the presence of fungal fragments (e.g., hyphae, and conidiophores) may suggest fungal colonization, growth, and/or accumulation at or near the sampled location. Air samples shall be evaluated by means of comparison (i.e., indoors to outdoors) and by fungal type (e.g., genera, and species). In general, the levels and types of fungi found should be similar indoors (in non-problem buildings) as compared to the outdoor air. Differences in the levels or types of fungi found in air samples may indicate that moisture sources and resultant fungal growth may be problematic.

B. Remediation

1. General
 - a. **In all situations, the underlying cause of water accumulation must be rectified or fungal growth will recur.** Any initial water infiltration shall be stopped and cleaned immediately. An immediate response (within 24 to 48 hours) and thorough clean up, drying, and/or removal of water damaged materials will prevent or limit mold growth. If the source of water is elevated humidity, relative humidity shall be maintained at levels below 60% to inhibit mold growth. Emphasis shall be on ensuring proper repairs of the building infrastructure, so that water damage and moisture buildup does not recur.
 - b. Five different levels of abatement are described below. The size of the area impacted by fungal contamination primarily determines the type of remediation. The sizing levels below

are based on professional judgment and practicality; currently there is not adequate data to relate the extent of contamination to frequency or severity of health effects. **The goal of remediation is to remove or clean contaminated materials in a way that prevents the emission of fungi and dust contaminated with fungi from leaving a work area and entering an occupied or non-abatement area, while protecting the health of workers performing the abatement.** The listed remediation methods were designed to achieve this goal, however, due to the general nature of these methods it is the responsibility of the people conducting remediation to ensure the methods enacted are adequate. The listed remediation methods are not meant to exclude other similarly effective methods. Any changes to the remediation methods listed in these guidelines, however, shall be carefully considered prior to implementation.

- c. Non-porous (e.g., metals, glass, and hard plastics) and semi-porous (e.g., wood, and concrete) materials that are structurally sound and are visibly moldy can be cleaned and reused. Cleaning shall be done using a detergent solution. Porous materials such as ceiling tiles and insulation, and wallboards with more than a small area of contamination shall be removed and discarded. Porous materials (e.g., wallboard, and fabrics) that can be cleaned, can be reused, but should be discarded if possible. A professional restoration consultant shall be contacted when restoring porous materials with more than a small area of fungal contamination. All materials to be reused shall be dry and visibly free from mold. Routine inspections shall be conducted to confirm the effectiveness of remediation work.
- d. The use of gaseous, vapor-phase, or aerosolized biocides for remedial purposes is **not** recommended. The use of biocides in this manner can pose health concerns for people in occupied spaces of the building and for people returning to the treated space if used improperly. Furthermore, the effectiveness of these treatments is unproven and does not address the possible health concerns from the presence of the remaining non-viable mold. For additional information on the use of biocides for remedial purposes, refer to the American Conference of Governmental Industrial Hygienists' document, "Bioaerosols: Assessment and Control."
- 2. **Level I: Small Isolated Areas** (10 sq. ft or less) - e.g., ceiling tiles, small areas on walls
 - a. Remediation can be conducted by regular building maintenance staff. Such persons shall receive training on proper clean up methods, personal protection, and potential health hazards. This training can be performed as part of a program to comply with the requirements of the OSHA Hazard Communication Standard (29 CFR 1910.1200).
 - b. Respiratory protection (e.g., N95 disposable respirator), in accordance with the OSHA respiratory protection standard (29 CFR 1910.134), is recommended. Gloves and eye protection shall be worn.
 - c. The work area shall be unoccupied. Vacating people from spaces adjacent to the work area is not necessary but is recommended in the presence of infants (less than 12 months old), persons recovering from recent surgery, immune suppressed people, or people with chronic inflammatory lung diseases (e.g., asthma, hypersensitivity, pneumonitis, and severe allergies).
 - d. Containment of the work area is not necessary. Dust suppression methods, such as misting (not soaking) surfaces prior to remediation, are recommended.
 - e. Contaminated materials that cannot be cleaned shall be removed from the building in a sealed plastic bag. There are no special requirements for the disposal of moldy materials.
 - f. The work area and areas used by remedial workers for egress shall be cleaned with a damp cloth and/or mop and a detergent solution.
 - g. All areas shall be left dry and visibly free from contamination and debris.
- 3. **Level II: Mid-Sized Isolated Areas** (10 - 30 sq. ft.) - e.g., individual wallboard panels.
 - a. Remediation can be conducted by regular building maintenance staff. Such persons shall receive training on proper clean up methods, personal protection, and potential health hazards. This training can be performed as part of a program to comply with the requirements of the OSHA Hazard Communication Standard (29 CFR 1910.1200).
 - b. Respiratory protection (e.g., N95 disposable respirator), in accordance with the OSHA respiratory protection standard (29 CFR 1910.134), is recommended. Gloves and eye protection shall be worn.

- c. The work area shall be unoccupied. Vacating people from spaces adjacent to the work area is not necessary but is recommended in the presence of infants (less than 12 months old), persons having undergone recent surgery, immune suppressed people, or people with chronic inflammatory lung diseases (e.g., asthma, hypersensitivity, pneumonitis, and severe allergies).
- d. The work area shall be covered with a plastic sheet(s) and sealed with tape before remediation, to contain dust/debris.
- e. Dust suppression methods, such as misting (not soaking) surfaces prior to remediation, are recommended.
- f. Contaminated materials that cannot be cleaned shall be removed from the building in sealed plastic bags. There are no special requirements for the disposal of moldy materials.
- g. The work area and areas used by remedial workers for egress shall be HEPA vacuumed (a vacuum equipped with a High-Efficiency Particulate Air filter) and cleaned with a damp cloth and/or mop and a detergent solution.
- h. All areas shall be left dry and visibly free from contamination and debris.
- 4. **Level III: Large Isolated Areas** (30 - 100 square feet) - e.g., several wallboard panels.
 - a. A health and safety professional with experience performing microbial investigations shall be consulted prior to remediation activities to provide oversight for the project.
 - b. The following procedures *at a minimum* are recommended:
 - 1) Personnel trained in the handling of hazardous materials and equipped with respiratory protection, (e.g., N95 disposable respirator), in accordance with the OSHA respiratory protection standard (29 CFR 1910.134), is recommended. Gloves and eye protection shall be worn.
 - 2) The work area and areas directly adjacent shall be covered with a plastic sheet(s) and taped before remediation, to contain dust/debris.
 - 3) Seal ventilation ducts/grills in the work area and areas directly adjacent with plastic sheeting.
 - 4) The work area and areas directly adjacent shall be unoccupied. Further vacating of people from spaces near the work area is recommended in the presence of infants (less than 12 months old), persons having undergone recent surgery, immune suppressed people, or people with chronic inflammatory lung diseases (e.g., asthma, hypersensitivity, pneumonitis, and severe allergies).
 - 5) Dust suppression methods, such as misting (not soaking) surfaces prior to remediation, are recommended.
 - 6) Contaminated materials that cannot be cleaned shall be removed from the building in sealed plastic bags. There are no special requirements for the disposal of moldy materials.
 - 7) The work area and surrounding areas shall be HEPA vacuumed and cleaned with a damp cloth and/or mop and a detergent solution.
 - 8) All areas shall be left dry and visibly free from contamination and debris.
 - c. If abatement procedures are expected to generate a lot of dust (e.g., abrasive cleaning of contaminated surfaces, demolition of plaster walls) or the visible concentration of the fungi is heavy (blanket coverage as opposed to patchy), then it is recommended that the remediation procedures for Level IV are followed.
- 5. **Level IV: Extensive Contamination** (greater than 100 contiguous square feet in an area)
 - a. A health and safety professional with experience performing microbial investigations shall be consulted prior to remediation activities to provide oversight for the project. The following procedures are recommended:
 - 1) Personnel trained in the handling of hazardous materials equipped with:
 - a) Full-face respirators with high efficiency particulate air (HEPA) cartridges
 - b) Disposable protective clothing covering both head and shoes
 - c) Gloves
 - 2) Containment of the affected area:

- a) Complete isolation of work area from occupied spaces using plastic sheeting sealed with duct tape (including ventilation ducts/grills, fixtures, and any other openings)
 - b) The use of an exhaust fan with a HEPA filter to generate negative pressurization
 - c) Airlocks and decontamination room
 - 3) Vacating people from spaces adjacent to the work area is not necessary but is recommended in the presence of infants (less than 12 months old), persons having undergone recent surgery, immune suppressed people, or people with chronic inflammatory lung diseases (e.g., asthma, hypersensitivity, pneumonitis, and severe allergies).
 - 4) Contaminated materials that cannot be cleaned shall be removed from the building in sealed plastic bags. The outside of the bags shall be cleaned with a damp cloth and a detergent solution or HEPA vacuumed in the decontamination chamber prior to their transport to uncontaminated areas of the building. There are no special requirements for the disposal of moldy materials.
 - 5) The contained area and decontamination room shall be HEPA vacuumed and cleaned with a damp cloth and/or mop with a detergent solution and be visibly clean prior to the removal of isolation barriers.
 - 6) Air monitoring shall be conducted prior to occupancy to determine if the area is fit to reoccupy.
6. **Level V: Remediation of HVAC Systems**
- a. A Small Isolated Area of Contamination (<10 square feet) in the HVAC System
 - 1) Remediation can be conducted by regular building maintenance staff. Such persons shall receive training on proper clean up methods, personal protection, and potential health hazards. This training can be performed as part of a program to comply with the requirements of the OSHA Hazard Communication Standard (29 CFR 1910.1200).
 - 2) Respiratory protection (e.g., N95 disposable respirator), in accordance with the OSHA respiratory protection standard (29 CFR 1910.134), is recommended. Gloves and eye protection shall be worn.
 - 3) The HVAC system shall be shut down prior to any remedial activities.
 - 4) The work area shall be covered with a plastic sheet(s) and sealed with tape before remediation, to contain dust/debris.
 - 5) Dust suppression methods, such as misting (not soaking) surfaces prior to remediation, are recommended.
 - 6) Growth supporting materials that are contaminated, such as the paper on the insulation of interior lined ducts and filters, shall be removed. Other contaminated materials that cannot be cleaned shall be removed in sealed plastic bags. There are no special requirements for the disposal of moldy materials.
 - 7) The work area and areas immediately surrounding the work area shall be HEPA vacuumed and cleaned with a damp cloth and/or mop and a detergent solution.
 - 8) All areas shall be left dry and visibly free from contamination and debris.
 - 9) A variety of biocides are recommended by HVAC manufacturers for use with HVAC components, such as, cooling coils and condensation pans. HVAC manufacturers shall be consulted for the products they recommend for use in their systems.
 - b. Areas of Contamination (>10 square feet) in the HVAC System: A health and safety professional with experience performing microbial investigations shall be consulted prior to remediation activities to provide oversight for remediation projects involving more than a small isolated area in an HVAC system. The following procedures are recommended:
 - 1) Personnel trained in the handling of hazardous materials equipped with:
 - a) Respiratory protection (e.g., N95 disposable respirator), in accordance with the OSHA respiratory protection standard (29 CFR 1910.134), is recommended.
 - b) Gloves and eye protection

- c) Full-face respirators with HEPA cartridges and disposable protective clothing covering both head and shoes shall be worn if contamination is greater than 30 square feet.
 - 2) The HVAC system shall be shut down prior to any remedial activities.
 - 3) Containment of the affected area:
 - a) Complete isolation of work area from the other areas of the HVAC system using plastic sheeting sealed with duct tape.
 - b) The use of an exhaust fan with a HEPA filter to generate negative pressurization.
 - c) Airlocks and decontamination room if contamination is greater than 30 square feet.
 - 4) Growth supporting materials that are contaminated, such as the paper on the insulation of interior lined ducts and filters, shall be removed. Other contaminated materials that cannot be cleaned should be removed in sealed plastic bags. When a decontamination chamber is present, the outside of the bags shall be cleaned with a damp cloth and a detergent solution or HEPA vacuumed prior to their transport to uncontaminated areas of the building. There are no special requirements for the disposal of moldy materials.
 - 5) The contained area and decontamination room shall be HEPA vacuumed and cleaned with a damp cloth and/or mop and a detergent solution prior to the removal of isolation barriers.
 - 6) All areas shall be left dry and visibly free from contamination and debris.
 - 7) Air monitoring shall be conducted prior to re-occupancy with the HVAC system in operation to determine if the area(s) served by the system are fit to reoccupy.
 - 8) A variety of biocides are recommended by HVAC manufacturers for use with HVAC components, such as, cooling coils and condensation pans. HVAC manufacturers shall be consulted for the products they recommend for use in their systems.
- 7. Hazard Communication: When fungal growth requiring large-scale remediation is found, the building owner, management, and/or employer shall notify occupants in the affected area(s) of its presence. Notification shall include a description of the remedial measures to be taken and a timetable for completion. Group meetings held before and after remediation with full disclosure of plans and results can be an effective communication mechanism. Individuals with persistent health problems that appear to be related to bioaerosol exposure should see their physicians for a referral to practitioners who are trained in occupational/environmental medicine or related specialties and are knowledgeable about these types of exposures. Individuals seeking medical attention shall be provided with a copy of all inspection results and interpretation to give to their medical practitioners.

SECTION 03 01 50 00 - R&A CONCRETE ROOF DECK REPAIR

NOTE TO SPECIFIER

*This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. **Edit Section footer information only – do not edit Section contents.***

NOTE TO SPECIFIER

INCLUDE this Section for projects where roof replacement will occur over existing concrete structural decks.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Concrete roof deck repair associated with roof replacement work.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in paragraphs 3.2A, 3.2B and 3.2C.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM C 928 - Standard Specification for Packaged, Dry, Rapid-Hardening Cementitious Materials for Concrete Repairs
 - b. ASTM C 317 - Standard Specification for Gypsum Concrete

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300, including technical data sheets and Material Safety Data Sheets for products proposed for use.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform concrete repair work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 - PRODUCTS

2.1 CONCRETE DECK REPAIR MATERIALS

- A. For use at repair outlined in paragraph 3.2A:
 - 1. Steel plate: 16-gauge galvanized with pre-drilled holes for fasteners and plates.
 - 2. Fasteners and plates: For securing steel plate to concrete deck: Structural concrete deck plate and fastener system such as JM "Structural Concrete Deck Fasteners and Plates", #14 fasteners with knurled thread, and 3-1/2 inch galvalume plates; fastener length as necessary to penetrate 1-inch minimum into roof deck, manufactured by Johns Manville, Denver, CO, or approved equal.
- B. For use at repairs outlined in paragraph 3.2B:

1. Bonding agent and reinforcement protection: Sika "Armotec 110 EpoCem", manufactured by Sika Corporation, Lyndhurst, NJ, or approved equal.
 2. Concrete patch material: Rapid hardening, early strength gaining, cementitious, patching material for concrete, complying with ASTM C 928; such as "SikaQuick 1000", manufactured by Sika Corporation, Lyndhurst, NJ, or approved equal.
- C. For use at repair outlined in paragraph 3.2C:
1. Grout: ASTM C 317, Class A; compressive strength of 500 psi.
 2. Water: Potable.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Inspect existing concrete decks for defects such as holes, spalling, cracks, and other defects. If an opening less than or equal to 8-inches in diameter exists, refer to paragraph 3.2A, "Repair at Opening Caused by Obsolete Roof Penetration Removal". If defects exist that will make installation of the specified adhered underlayment or insulation impossible, refer to paragraph 3.2B, "Localized Concrete Deck Repair".

3.2 CONCRETE DECK REPAIR

- A. Repair at Opening Caused by Obsolete Roof Penetration Removal (*Unit Price Work*):
1. At locations indicated by the Owner, cover the existing opening with 16-gauge steel plate stock. Lap the plate a minimum of 8-inches beyond the opening on all sides. Fasten the steel plate with specified fasteners and plates 12-inches on center. Secure the plate a minimum of 2-inches in from the outside edge of the repair plate.
- B. Localized Concrete Deck Repair (*Unit Price Work*):
1. To the extent indicated by the Owner, remove any damaged or loose existing concrete deck material from the repair area.
 2. Apply bonding agent and reinforcement protection to the repair area following the requirements and recommendations of the product manufacturer.
 3. Apply concrete patch material to the repair area following the requirements and recommendations of the product manufacturer. Ensure finished patch is level and flush with adjacent deck surface.
 4. Allow the patch material time to cure. If necessary, provide temporary protection from inclement weather while the concrete patching material cures. Refer to manufacturer's requirements for cure time. Inspect the completed repair to ensure the roof deck is suitable to receive new roofing materials.
- C. Localized Pre-Cast Concrete Deck Joint Repair (*Unit Price Work*):
1. To the extent indicated by the Owner, remove any damaged or loose existing concrete deck material from the joint repair area.
 2. Apply mortar to the joint area following the requirements and recommendations of the product manufacturer. Ensure finished patch is level and flush with adjacent deck surface.
 3. Allow the patch material time to cure. If necessary, provide temporary protection from inclement weather while the concrete patching material cures. Refer to manufacturer's requirements for cure time. Inspect the completed repair to ensure the roof deck is suitable to receive new roofing materials.

USPS CSF Specifications issued: 10/1/2013
 Last revised: 3/6/2013

NOTE TO SPECIFIER

*Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to **black** text. Review the footer information with the USPS Project Manager for accuracy.*

END OF SECTION 03 01 50 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 10 00 00 - MPF CONCRETE FORMING AND ACCESSORIES**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes
 - 1. Formwork for cast-in place concrete, with shoring, bracing and anchorage.
 - 2. Openings for other work.
 - 3. Form accessories.
 - 4. Form stripping.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 032000 - Concrete Reinforcement: Coordination between formwork and reinforcement.
 - 2. Section 033000 - Cast-in-Place Concrete: Supply of concrete accessories for placement by this section.

1.2 REFERENCES

- A. American Concrete Institute (ACI) Codes and Standards latest editions:
 - 1. ACI 301 - Structural Concrete for Buildings.
 - 2. ACI 318 - Building Code Requirements for Reinforced Concrete.
 - 3. ACI 347 - Recommended Practice For Concrete Formwork.
 - 4. []
- B. United States Department of Commerce Product Standard (PS):
 - 1. PS 1 - Construction and Industrial Plywood.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide data on void form materials and installation requirements. Submit data on form-coating materials.
2. Shop Drawings: Indicate pertinent dimensions, materials, required installation and removal of bracing, shoring [,and reshoring] and arrangement of joints and ties.

NOTE TO SPECIFIER:

Retain section below if LEED criteria is required for project.

- B. LEED Submittals:
 1. Product data and statements for credits being considered.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with ACI 347.
- B. Where necessary, design formwork, shoring [, and reshoring] under direct supervision of a Professional Engineer experienced in design of formwork and licensed in State where Project is located.

NOTE TO SPECIFIER

Retain option below if retained in submittal section of this specification.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver void forms and installation instructions in manufacturer's packaging.
- C. Store off ground in ventilated and protected manner to prevent deterioration from moisture.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Environmental Impact:
 1. Formwork: Reuse forms to greatest extent possible without damaging structural integrity of concrete and without damaging aesthetics of exposed concrete.

PART 2 - PRODUCTS

2.1 WOOD FORMS

- A. Forms for Exposed Finish Concrete: Plywood panels, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on drawings.
 1. Plywood complying with U.S. Product Standard PS-1 "B-B (Concrete Form) Plywood," Class I, Exterior Grade or better, mill-oiled and edge-sealed, with each piece bearing legible inspection trademark.

- B. Forms for Unexposed Finish Concrete: Plywood, lumber, metal, or other acceptable material. Provide lumber dressed on at least 2 edges and one side for tight fit.

- C. Lumber: Construction grade; with grade stamp clearly visible.

NOTE TO SPECIFIER

Edit PREFABRICATED FORMS below for specific requirements of Project design.

2.2 PREFABRICATED FORMS

- A. Preformed Steel Forms: Minimum 16 gage, well matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.
- B. Void Forms (Carton Forms): Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set. Thickness indicated on drawings.
- C. Tubular Column Type: Metal or fiberglass-reinforced plastic. Provide units with sufficient wall thickness to resist wet concrete loads without deformation.
- D. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration to match Architect's control sample. Provide solid backing and form supports to ensure stability of textured form liners.

2.3 ACCESSORIES

- A. Form Ties: Factory-fabricated, removable or snap-off type, metal, of fixed or adjustable length as applicable, with cone ends. Designed to prevent form deflection and to prevent spalling concrete upon removal. Back break dimension, 1-1/2 inch from exposed concrete surface. Provide ties that, when removed, will leave holes not larger than 1 inch diameter in concrete surface.

NOTE TO SPECIFIER

"REQUIRED Article (Form Release Agent) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

- B. Form Release Agent: 100 percent biodegradable colorless agent which will not stain concrete, or absorb moisture, or impair natural bonding or color characteristics of subsequent coatings intended for use on concrete surfaces. Zero VOC.
1. Envirolux by Conspec, Kansas City, KS, (800) 348-7351 or (913) 287-1700.
 2. SMD-10 Soy Form Release by Strategic Market Development (800) 959-1071 or (815) 935-0863.
 3. Bio-Form by Leahy-Wolf, Franklin Park, IL, (888) 873-5327 or (847) 455-5710.
 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Corners: Chamfered, wood strip 3/4 x 3/4 inch size; maximum possible lengths.
- D. Dovetail Anchor Slot: Galvanized steel, 22 gage thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.
- E. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

**NOTE TO SPECIFIER**

Use **WATERSTOPS** below where waterstops are required by Project design.

- F. Waterstops (Rubber/PVC): Rubber or Polyvinyl chloride, minimum 1,750 tensile strength, minimum 50 degrees F to plus 175 degrees F working temperature range, width as indicated on Drawings, maximum possible lengths, ribbed profile, preformed corner sections, heat welded jointing.

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
 - 1. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

NOTE TO SPECIFIER

Use **EARTHFORMS** below where earthforms are permitted for Project.

3.2 EARTH FORMS

- A. Hand trim sides and bottom of earth forms. Remove loose soil prior to placing concrete.

3.3 FORMWORK INSTALLATION

- A. Install formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 347R.
- B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.
- C. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores upon approval by the Professional Engineer responsible for their design.
- D. Align joints and make watertight. Furnish in largest available sizes to minimize number of joints and to conform to joint system indicated on Drawings.
- E. Obtain approval from the Engineer or Architect before framing openings in structural members which are not indicated on Drawings.

- F. Provide chamfer strips on external corners of concrete members, to produce uniform, smooth lines and tight edge joints.

NOTE TO SPECIFIER

Use paragraph below when VOID FORMS are used.

- G. Install void forms in accordance with manufacturer's published instructions. Protect forms from moisture or crushing.

3.4 FORM RELEASE AGENT APPLICATION

- A. Apply form release agent on formwork in accordance with manufacturer's published instructions.
- B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.
- C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings which are effected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.5 INSERTS, EMBEDDED PARTS, AND OPENINGS

- A. Provide formed openings where required for items to be embedded in passing through concrete work.
- B. Locate and set in place items which will be cast directly into concrete.
- C. Coordinate with work of other sections in forming and placing openings, slots, recesses, sleeves, bolts, anchors, other inserts, and components of other Work.
- D. Install accessories in accordance with manufacturer's published instructions, straight, level, and plumb. Ensure items are not disturbed during concrete placement.
- E. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.
- F. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

NOTE TO SPECIFIER

Use paragraph below where waterstops are required by Project design.

- G. Install waterstops in accordance with manufacturer's published instructions continuous without displacing reinforcement. Seal joints watertight.

3.6 FORM CLEANING

- A. Clean forms as erection proceeds, to remove foreign matter within forms.
- B. Clean formed cavities of debris prior to placing concrete.
- C. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.

- D. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

NOTE TO SPECIFIER

Retain option below if retained in submittal section of this specification.

3.7 CONSTRUCTION

- A. Site Tolerances:
1. Construct formwork to maintain tolerances required by ACI 301 and ACI 347.
 2. Camber slabs and beams 1/4 inch per 10 feet in accordance with ACI 301.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing.
- B. Inspect erected formwork, shoring [, and reshoring], and bracing to ensure that work is in accordance with formwork design, and that supports, fastenings, wedges, ties, and items are secure.

3.9 FORM REMOVAL

- A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.
- B. Do not remove shoring without approval from the Professional Engineer responsible for their design.
- C. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.
- D. Store removed forms in manner that surfaces to be in contact with fresh concrete will not be damaged. Discard damaged forms.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 03 10 00 00

SECTION 03 10 00 00 - CSF CONCRETE FORMING AND ACCESSORIES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes
 - 1. Formwork for cast-in place concrete, with shoring, bracing and anchorage.
 - 2. Openings for other work.
 - 3. Form accessories.
 - 4. Form stripping.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 032000 - Concrete Reinforcement: Coordination between formwork and reinforcement.
 - 2. Section 033000 - Cast-in-Place Concrete: Supply of concrete accessories for placement by this section.

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 - 1. ACI 301 - Structural Concrete for Buildings.
 - 2. ACI 318 - Building Code Requirements for Reinforced Concrete.
 - 3. ACI 347 - Recommended Practice For Concrete Formwork.
- B. United States Department of Commerce Product Standard (PS):
 - 1. PS 1 - Construction and Industrial Plywood.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide data on void form materials and installation requirements. Submit data on form-coating materials.
2. Shop Drawings: Indicate pertinent dimensions, materials, bracing, and arrangement of joints and ties.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with ACI 347.
- B. Where necessary, design formwork under direct supervision of a Professional Engineer experienced in design of formwork and licensed in State where Project is located.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver void forms and installation instructions in manufacturer's packaging.
- C. Store off ground in ventilated and protected manner to prevent deterioration from moisture.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Environmental Impact:
 1. Formwork: Reuse forms to greatest extent possible without damaging structural integrity of concrete and without damaging aesthetics of exposed concrete.

PART 2 - PRODUCTS

2.1 WOOD FORMS

- A. Forms for Exposed Finish Concrete: Plywood panels, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on drawings.
 1. Plywood complying with U.S. Product Standard PS-1 "B-B (Concrete Form) Plywood," Class I, Exterior Grade or better, mill-oiled and edge-sealed, with each piece bearing legible inspection trademark.
- B. Forms for Unexposed Finish Concrete: Plywood, lumber, metal, or other acceptable material. Provide lumber dressed on at least 2 edges and one side for tight fit.
- C. Lumber: Construction grade; with grade stamp clearly visible.

NOTE TO SPECIFIER

Edit PREFABRICATED FORMS below for specific requirements of Project design.

2.2 PREFABRICATED FORMS

- A. Preformed Steel Forms: Minimum 16 gage, well matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.
- B. Void Forms (Carton Forms): Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set. Thickness indicated on drawings.
- C. Tubular Column Type: Metal or fiberglass-reinforced plastic. Provide units with sufficient wall thickness to resist wet concrete loads without deformation.
- D. Forms for Textured Finish Concrete: Units of face design, size, arrangement, and configuration to match Architect's control sample. Provide solid backing and form supports to ensure stability of textured form liners.

2.3 ACCESSORIES

- A. Form Ties: Factory-fabricated, removable or snap-off type, metal, of fixed or adjustable length as applicable, with cone ends. Designed to prevent form deflection and to prevent spalling concrete upon removal. Back break dimension, 1-1/2 inch from exposed concrete surface. Provide ties that, when removed, will leave holes not larger than 1 inch diameter in concrete surface.

NOTE TO SPECIFIER

"REQUIRED Article (Form Release Agent) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

- B. Form Release Agent: 100 percent biodegradable colorless agent which will not stain concrete, or absorb moisture, or impair natural bonding or color characteristics of subsequent coatings intended for use on concrete surfaces. Zero VOC.
 - 1. Envirolux by Conspec, Kansas City, KS, (800) 348-7351 or (913) 287-1700.
 - 2. SMD-10 Soy Form Release by Strategic Market Development (800) 959-1071 or (815) 935-0863.
 - 3. Bio-Form by Leahy-Wolf, Franklin Park, IL, (888) 873-5327 or (847) 455-5710.
 - 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Corners: Chamfered, wood strip 3/4 x 3/4 inch size; maximum possible lengths.
- D. Dovetail Anchor Slot: Galvanized steel, 22 gage thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.
- E. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

NOTE TO SPECIFIER

Use WATERSTOPS below where waterstops are required by Project design.

- F. Waterstops (Rubber/PVC): Rubber or Polyvinyl chloride, minimum 1,750 tensile strength, minimum 50 degrees F to plus 175 degrees F working temperature range, width as indicated on Drawings, maximum possible lengths, ribbed profile, preformed corner sections, heat welded jointing.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
 - 1. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

NOTE TO SPECIFIER

Use EARTHFORMS below where earthforms are permitted for Project.

3.2 EARTH FORMS

- A. Hand trim sides and bottom of earth forms. Remove loose soil prior to placing concrete.

3.3 FORMWORK INSTALLATION

- A. Install formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 347R.
- B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.
- C. Arrange and assemble formwork to permit dismantling and stripping. Do not damage concrete during stripping. Permit removal of remaining principal shores.
- D. Align joints and make watertight. Furnish in largest available sizes to minimize number of joints and to conform to joint system indicated on Drawings.
- E. Obtain Contracting Officer approval before framing openings in structural members which are not indicated on Drawings.
- F. Provide chamfer strips on external corners of concrete members, to produce uniform, smooth lines and tight edge joints.

NOTE TO SPECIFIER

Use paragraph below when VOID FORMS are used.

- G. Install void forms in accordance with manufacturer's published instructions. Protect forms from moisture or crushing.

3.4 FORM RELEASE AGENT APPLICATION

- A. Apply form release agent on formwork in accordance with manufacturer's published instructions.
- B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.
- C. Do not apply form release agent where concrete surfaces will receive special finishes or applied coverings which are effected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.5 INSERTS, EMBEDDED PARTS, AND OPENINGS

- A. Provide formed openings where required for items to be embedded in passing through concrete work.
- B. Locate and set in place items which will be cast directly into concrete.
- C. Coordinate with work of other sections in forming and placing openings, slots, recesses, sleeves, bolts, anchors, other inserts, and components of other Work.
- D. Install accessories in accordance with manufacturer's published instructions, straight, level, and plumb. Ensure items are not disturbed during concrete placement.
- E. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.
- F. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

NOTE TO SPECIFIER

Use paragraph below where waterstops are required by Project design.

- G. Install waterstops in accordance with manufacturer's published instructions continuous without displacing reinforcement. Seal joints watertight.

3.6 FORM CLEANING

- A. Clean forms as erection proceeds, to remove foreign matter within forms.
- B. Clean formed cavities of debris prior to placing concrete.
- C. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
- D. During cold weather, remove ice and snow from within forms. Do not use de-icing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 CONSTRUCTION

- A. Site Tolerances:
 - 1. Construct formwork to maintain tolerances required by ACI 301 and ACI 347.
 - 2. Camber slabs and beams 1/4 inch per 10 feet in accordance with ACI 301.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection and testing.
- B. Inspect erected formwork, shoring, and bracing to ensure that work is in accordance with formwork design, and that supports, fastenings, wedges, ties, and items are secure.

3.9 FORM REMOVAL

- A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.
- B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finish concrete surfaces scheduled for exposure to view.
- C. Store removed forms in manner that surfaces to be in contact with fresh concrete will not be damaged. Discard damaged forms.

SECTION 03 20 00 00 - CSF CONCRETE REINFORCEMENT**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.03 20 00 00

NOTE TO SPECIFIER

Use this section where Concrete Reinforcement is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Reinforcing steel bars.
 2. Steel wire fabric.
 3. Reinforcement accessories.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 1. Section 316329 - Drilled Concrete Piers and Shafts: Reinforcement for drilled pier foundations.
 2. Section 031000 - Concrete Forming and Accessories: Coordination between formwork and reinforcing.
 3. Section 033000 - Cast-in-Place Concrete: Coordination between concrete placement and reinforcing.

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 1. ACI 301 - Structural Concrete for Buildings.
 2. ACI 318 - Building Code Requirements For Reinforced Concrete.

3. ACI SP-66 - American Concrete Institute - Detailing Manual.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 184 - Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
2. ASTM A 615 - Deformed and Plain Billet Steel Bars for Concrete Reinforcement.
3. ASTM A 704 - Welded Steel Plain Bar or Rod Mats for Concrete Reinforcement.

C. American Welding Society (AWS):

1. AWS D1.4 - Structural Welding Code for Reinforcing Steel.

D. Concrete Reinforcing Steel Institute (CRSI):

1. CRSI - Manual of Practice.
2. CRSI 63 - Recommended Practice For Placing Reinforcing Bars.
3. CRSI 65 - Recommended Practice For Placing Bar Supports, Specifications and Nomenclature.

1.3 SUBMITTALS

A. Section 013300 – Submittal Procedures: Procedures for submittals.

1. Shop Drawings: Indicate bar sizes, spacings, locations, and quantities of reinforcing steel [and wire fabric, bending and cutting schedules, and supporting and spacing device. Include special reinforcement required for openings through concrete structures.
2. Assurance/Control Submittals;
 - a. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
 - b. Submit certified copies of mill test report of reinforcement materials analysis.
 - c. Welder's Certificates.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with CRSI 63, 65 and Manual of Practice ACI 301, ACI SP-66, ACI 318, and ASTM A 184.
- B. Design reinforcement under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State where the Project is located.
- C. Welders' Certificates: Submit certificate, certifying welders employed on the Work, verifying AWS qualification within the previous 12 months.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Resource Management

1. Recycled Content
 - a. Steel Products: Post-consumer recycled content plus one half of pre-consumer recycled content not less than [] percent.

PART 2 - PRODUCTS

2.1 STEEL REINFORCEMENT

- A. Reinforcing Steel: ASTM A 615, 60 ksi yield grade; deformed billet steel bars, unfinished.

- B. Reinforcing Steel Mat: ASTM A 704, ASTM A 615, 60 ksi yield grade; steel bars or rods, unfinished.
- C. Reinforcing Steel Mesh: ASTM A185; 6X6, w 1.4 X w 1.4.
- D. Dowels at Construction Joints: 1/4" x 4.5" Diamond Dowels by PNA Construction Technologies or approved equal.

2.2 ACCESSORIES

- A. Tie Wire: Minimum 16 gage annealed type.
- B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for strength and support of reinforcement during concrete placement conditions including load bearing pad on bottom to prevent vapor barrier puncture.
- C. Special Chairs, Bolsters, Bar Supports, Spacers Adjacent to Weather Exposed Concrete Surfaces: Plastic coated steel type(CRSI, Class 1) or stainless steel protected(CRSI, Class 2); size and shape as required.

2.3 FABRICATION

- A. Fabricate concrete reinforcing in accordance with ACI SP-66 and ACI 318.
- B. Weld reinforcement in accordance with AWS D1.4.
- C. Locate reinforcing splices not indicated on drawings, at point of minimum stress. Review location of splices with Contracting Officer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PLACEMENT

- A. Place, support and secure reinforcement against displacement. Do not deviate from required position.
- B. Do not displace or damage vapor barrier.
- C. Accommodate placement of formed openings.
- D. Maintain concrete cover around reinforcing in accordance with ACI 318.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect reinforcing locations, bar types and sizes, wire ties, and welding (if applicable).

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 03 20 00 00 - MPF CONCRETE REINFORCEMENT**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

- B. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for strength and support of reinforcement during concrete placement conditions including load bearing pad on bottom to prevent vapor barrier puncture.
- C. Special Chairs, Bolsters, Bar Supports, Spacers Adjacent to Weather Exposed Concrete Surfaces: Plastic coated steel type(CRSI, Class 1) or stainless steel protected(CRSI, Class 2); size and shape as required.

2.3 FABRICATION

- A. Fabricate concrete reinforcing in accordance with ACI SP-66 and ACI 318.

- B. Weld reinforcement in accordance with AWS D1.4.
- C. Locate reinforcing splices not indicated on drawings, at point of minimum stress. Review location of splices with Contracting Officer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PLACEMENT

- A. Place, support and secure reinforcement against displacement. Do not deviate from required position.
- B. Do not displace or damage vapor barrier.
- C. Accommodate placement of formed openings.
- D. Maintain concrete cover around reinforcing in accordance with ACI 318.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect reinforcing locations, bar types and sizes, wire ties, and welding (if applicable).

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/29/2010

END OF SECTION 03 20 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 30 00 00 - CSF CAST-IN-PLACE CONCRETE**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.03 30 00 00

NOTE TO SPECIFIER

Use this section where Cast-in-Place Concrete is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Includes all labor, materials and appliances, and perform all operations in connection with the installation of Concrete Work, and all related work incidental to the completion thereof, as shown on the drawings, complete, in strict accordance with the drawings and as specified herein. Section Includes:
 - 1. Cast-in-place (CIP) concrete in building frame elements, walls, foundations, foundation walls, slabs-on-grade, and mechanical equipment pads.
 - 2. Finishing of concrete floor slabs and toppings. Concrete liquid surface treatment, sealer, and slip-resistant coatings.
 - 3. Expansion and contraction, control joints in CIP concrete.
 - 4. Concrete curing and protection.
 - 5. Non-shrink grout including installation and forming.
 - 6. Testing related services.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents and References in Section 1.2.
- C. Related Sections: Related work specified elsewhere includes but may not be limited to
 - 1. Section 031000: Concrete Forming and Accessories
 - 2. Section 032000: Concrete Reinforcement

1.2 REFERENCES

- A. General:
1. The publications listed below form a part of this specification to the extent referenced.
 2. Where a date is given for reference standards, the edition of that date shall be used. Where no date is given for reference standards, the latest edition available on the date of Notice Inviting Bids shall be used
- B. American Association of State Highway and Transportation Officials (AASHTO)
1. AASHTO M182, "Standard Specification for Burlap Cloth Made from Jute or Kenaf and Cotton Mats."
- C. Unless otherwise shown or specified, the work shall conform to the following standards and recommendations of the American Concrete Institute (ACI), latest editions adopted:
1. ACI 117, "Standard Specification for Tolerances for Concrete Construction and Materials."
 2. ACI 121R, "Quality Assurance Systems for Concrete Construction."
 3. ACI211.1, "Standard Practice for Selecting Proportions for Normal, Heavyweight and Mass Concrete."
 4. ACI 212.2R, "Guide for Use of Admixtures in Concrete."
 5. ACI 214, "Recommended Practice for Evaluation of Strength Test Results of Concrete."
 6. ACI 301, "Specification for Structure /Concrete."
 7. ACI 302.1R, "Guide for Concrete Floor and Slab Construction."
 8. ACI 304R, "Guide for Measuring, Mixing, Transporting, and Placing Concrete."
 9. ACI 304.2-R, "Placing Concrete by Pumping Methods."
 10. ACI 305, "Hot Weather Concreting."
 11. ACI 306, "Cold Weather Concreting."

 26. ASTM C1260, "Standard Test Method for Potential Alkali Reactivity of Aggregates (Mortar-Bar Method)."
 27. ASTM C1567, "Standard Test Method for Potential Alkali Reactivity of Combinations of Cementitious Materials and Aggregate (Accelerated Mortar-Bar Method)."
 28. ASTM E154, "Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Slabs, On Walls, or as Ground Cover."
 29. ASTM E1155, "Standard Test Method for Determining F Floor Flatness and FL Floor Levelness Numbers"
 30. ASTM D2240, "Standard Test Method for Rubber Property-Durometer Hardness."
- F. Concrete Reinforcing Steel Institute (CRSI),
1. CRSI "Manual of Standard Practice."

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Review of submittals will cover general design only. In no case shall submittal review relieve the Contractor of the responsibility for strength of concrete, general or detailed dimension, quality or quantity of materials, or any other conditions, functions, performance or guarantees required.
 2. Product Data:
 - a. Manufacturers' literature containing product and installation specifications and details.
 - b. Where Manufacturer's specifications, recommendations, and/or directions are required in this specification, deliver to the Contracting Officer two (2) copies of such printed specifications, recommendations, and/or directions for approval before any work is commenced.
 - c. Sources of fine and coarse aggregate. Once approved, the source of fine and coarse aggregate shall not be changed without written approval of the Engineer.
 - d. List of manufacturers and brand names for cement, mineral and liquid admixtures, bond breakers, curing compounds, joint sealants, and materials other than aggregates and reinforcing steel. Include product data sheets, instructions, and specifications for use.
 3. Shop Drawings:

- a. All shop drawings and calculations must bear the seal and signature of an engineer registered in the jurisdiction where project is being constructed.
- b. Cast-in-place concrete shown on structural drawings, prepared under the supervision of a registered Professional Engineer, including:
 - 1) Rebar placing drawings (ACI 315, "Detailing Manual SP-66-(04)" or CRSI "Manual of Standard Practice MSP-2-81"): Show bar sizes, bending, placing, spacing, locations, and quantities of reinforcing and wire fabric and supporting and spacing accessories. Provide steel order lists including bending and cutting details for all reinforcement shown on the structural design drawings.
 - 2) Form construction details, including jointing, special formed joints or reveals, location and pattern of form tie placement, and other items that affect exposed concrete visually.
 - 3) Calculations for any formwork, shoring and/or reshoring.
4. Batch Plant Equipment and Procedures
 - a. Supplier of concrete and ready-mix grout. Only one source will be approved for the Contractor, including all subcontractors. All concrete and ready-mixed grout supplied to the project shall originate from the approved single facility.
 - b. The following information shall be submitted:
 - 1) Name of supplier.
 - 2) Plant location.
 - 3) Plant volume and output capacity.
 - 4) Capacity of transit equipment.
 - 5) Estimated travel time from plant to jobsite.
 - c. If the Contractor elects to use an on-site concrete batching plant, the following information shall be submitted:
 - 1) Drawings and data including proposed location of the batch plant on the site.
 - 2) List of and performance data for material handling equipment.
 - 3) Procedures for processing, handling, transporting, sorting, and proportioning the materials for concrete.
 - d. All other data necessary to show the supplier's capability to produce concrete of the quality and quantity required.
5. Concrete Procedures
 - a. The following information shall be submitted:
 - 1) Placement drawings for slab-on-grade shall be submitted indicating location and size, placement sequence, joint locations, and embedded items.
 - 2) Procedure for mixing and transporting concrete to the point of placement.
 - 3) Procedures for placement of concrete.
 - 4) Methods of obtaining and maintaining the required concrete temperature during placement and initial curing.
 - 5) Procedures for consolidating the concrete.
 - 6) Procedures how concrete is finished and cured (slab-on-grade concrete).
6. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - b. Submit laboratory test reports for concrete materials and mix design test, including certified copy of results of aggregate tested by ASTM C1260 or C1567. Mix designs for each strength and type of concrete proposed for use. Details to be included are found in section 2.7.
 - c. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - d. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
7. Delivery Tickets:
 - a. Copies of delivery tickets for each load of concrete delivered to site.

- b. Indicate on each ticket information required by ASTM C94 including additional information required herein.
 - c. Mix identification number on ticket shall match number on submitted and approved mix design
 - d. Indicate number of drum revolution from when water is added until concrete is discharged.
 - e. Submit copies to Testing Laboratory same day as concrete delivery.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents: Accurately record the following:
 - a. Shop drawings shall be corrected to reflect actual field changes and become part of the "Record As-Built Drawings".
 - 2. Extra Products: Submit extra products as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting at least one week prior to commencing Work of this Section.
 - 2. Require attendance of parties directly affecting Work of this Section including subgrade preparation formwork, reinforcement, pumping, or other means of conveying, placement, finishing, sawing, curing, joint sealing, or other pertinent portions of the work.
 - 3. Representatives to be present are personnel who are directly involved in the project and who have authority to control the work..
 - 4. Review conditions of operations, procedures and coordination with related Work. Agenda:
 - a. Tour, inspect, and discuss conditions of concrete work.
 - b. Review concrete testing and their requirements.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Drawings.
 - e. Approve proposed equipment.
 - f. Review concrete batching, transporting, placement, consolidation, finishing, and curing procedures.
 - g. Review and finalize construction schedule related to concrete work and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - h. Review required inspections, testing, certifying, and material usage accounting procedures.
 - i. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - j. Review safety precautions relating to concrete work operations.
 - k. Environmental procedures.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver materials in unopened containers with labels identifying contents.
- C. Store powdered materials in dry area and in manner to prevent damage. Protect liquid materials from freezing or exceeding maximum storage temperatures set by product manufacturer.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Jobsite Requirements:
1. Conform to ACI 305 R when placing concrete during hot weather.
 2. Conform to ACI 306 R when placing concrete during cold weather.

1.7 ENVIRONMENTAL REQUIREMENTS

NOTE TO SPECIFIER

Use when requested and or approved by Contracting Officer and where available and commonly used.

- A. Resource Management:
1. Recycled Content:
 - a. Concrete: Fly ash may be used as a substitute for a maximum of 25 percent of Portland cement.
 - b. Concrete: Ground granulated blast furnace slag (GGBFS) may be used as a substitute for a maximum of 30 percent of Portland cement.
 - c. recycled newsprint joint filler: Post-consumer recycled content plus one half of pre-consumer recycled content not less than [] percent.

- B. Environmental Impact:
1. Concrete placement accessories:
 - a. Mixing equipment: Return excess concrete to supplier; minimize water used to wash equipment.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Applied Concrete Technology, Inc., Post Office Box 548, Grayslake, IL 60030, Toll Free: 800-228-6694, Phone: 847-548-2444, Fax: 847-548-2555. www.procrete.com
 2. The Euclid Chemical Company, 19218 Redwood Road, Cleveland, OH 44110, Phone: 216-1-9222, Toll Free: (800) 321-7628, Fax: 216-531-9596 www.euclidchemical.com.
 3. Fortifiber Corporation, 419 W. Plumb Lane, Reno, NV 89509, Toll Free: 800-773-4777, Fax: 775-333-6411, Website: www.fortifiber.com.
 4. ChemRex Inc., Shakopee, Minnesota 55379, Toll Free: 800-433-9517, Fax: 800-496-6067.
 5. BASF Construction Chemicals North America (former Master Builders), 23700 Chagrin Boulevard, Cleveland, OH 44122, Phone: 216-839-7500, Fax: 216-839-8821.
 6. W.R. Meadows, Inc., PO Box 338, Hampshire, Illinois 60140-0338, Toll Free: 800-342-5976, Phone: 847-683-4500.
 7. Reef Industries, 9209 Alameda Genoa, Houston, Texas 77075, Phone: 713-507-4251, Toll Free: 800-231-6074, Fax: 713-507-4295.
 8. Stego Industries LLC, 27442 Calle Arroyo Suite A, San Juan, Capistrano, CA 92675, Phone: 877-464-7834, Fax: 949-493-5165, www.stegoindustries.com.
 9. L & M Construction Chemicals, Inc. 14851 Calhoun Rd., Omaha, NE 68152-1140; Phone: 402-453-6600, Fax: 402-453-0244.
 10. Curecrete Chemical Company, Inc., 1203 W. Spring Creek Pl., Springville, UT Phone: 801- 489-5663.
 11. Midwest Floor Care Inc., 17202 Princeton Rd, Adams, NE 68301, Phone: 402-788-2820.

12. General Resource Technology, Inc., 2978 Center Court, Eagan, MN 55121, Phone: 800-324-8154, Fax: 651-454-4252, www.grtinc.com.

B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 CONCRETE MATERIALS

A. Concrete:

1. Concrete shall be in accordance with ASTM C94. If a conflict exists between ASTM C94 and these specifications, these specifications shall govern.

B. Portland Cement: ASTM C150 – Type I unless otherwise specified or approved by the Engineer.

1. Assume full responsibility for the quality and soundness of cement. Cement is to be of one type and from the same mill; it is to be of uniform color for all concrete with permanently exposed concrete finishes.

C. Liquid admixtures: All admixtures shall be used in conformance with the manufacturer's recommendations. When air entraining admixtures, water reducing admixtures, high range water reducing admixtures, and non-corrosive accelerating admixtures are used in any combination, all products shall be from the same manufacturer or the ready-mix concrete producer shall certify that they are compatible. The following admixtures are permitted when approved in writing prior to use or are required as specified herein and shall be used in strict accordance with the manufacturer's specifications or recommendations:

1. Calcium chloride: Conform to ACI 301. The water soluble chloride ion level shall not exceed 0.3 percent by weight of cement.
2. Air-entraining admixtures: ASTM C260 shall be used to achieve the specified air content in all permanently exposed exterior concrete. For steel hard trowel interior slab finish, do not use air entrainment admixtures. The total air entrainment (entrained and entrapped air) must not exceed 3 percent. For steel trowel exterior slab finish, comply with ACI 318 and ACI 302.
 - a. Euclid: AEA-92 or Air Mix 200.
 - b. BASF: Micro-Air, MBVR-Standard, and MB AE 90.
 - c. Sika: Sika AEA-14, Sika AEA-15, and Sika Air.
 - d. W.R. Grace: Darex EH, Darex II AEA, Daravair AT60, Daravair 1400, and Daravair 1000.
3. Water-reducing admixtures: Conform to ASTM C494, Type A, containing not more chloride ions than allowed in paragraph C., above.
 - a. Euclid: Eucon WR series or Eucon MR.
 - b. BASF: Masterpave, Masterpave N, PolyHeed 997, Pozzoloth 220N, and Glenium 7500.
 - c. W.R. Grace: Daracem 55 and Daracem 65, WRDA 82 and WRDA with HYCOL.
 - d. Sika: Sikament HP, Plastocrete 161, and Sikament 686.
 - e. General Resource Technology: Polychem 400 NC and Polychem 1000.
4. Water-reducing/accelerating admixtures: Conform to ASTM C494, Type C or E having long-term test results showing non-rusting on metal deck and reinforcing steel.
 - a. Euclid: Accelguard series.
 - b. BASF: Pozzutec 20+, Pozzoloth NC 534, and Rheocrete CNI.
 - c. Sika: Sika Rapid-1 and Plasocrete 161FL.
 - d. W.R. Grace: Lubricon NCA, Polarset, and DCI.
5. Water-reducing/retarding admixtures: Conform to ASTM C494, Type D containing not more than 1 percent chloride ions.
 - a. Euclid: Eucon Retarder series.
 - b. BASF: Delvo Stabilizer, Masterpave series, and Pozzoloth 100XR, 200N, 220N and 322N.
 - c. Sika: Plastimet.
 - d. W.R. Grace: Daratard 17, WRDA-64, and WRDA-82.

6. High-range/water-reducing (HRWR) admixtures: Conform to ASTM C494, Type F or G super plasticizers containing 1 percent maximum chloride ions may be used with low slump (3 inches maximum) concrete to produce flowable concrete (up to 8 inches slump) with early strength gain and 28-day strengths equal to reference concrete. HRWR admixture may be used providing not more than 60 minutes is allowed from addition of admixture to final placement of concrete. HRWR admixture shall be used in concrete with a maximum water/ cement ratio of 0.50 or less and is suggested in the following:
- In pumped concrete.
 - In concrete topping slabs
 - In lieu of the specified water-reducing admixture (Type A) where confinement of placing due to heavy reinforcement or narrow space requires flowable concrete.
 - Where more than 30 minutes is required between the addition of admixtures to final placement of the concrete, a combination of water-reducing, set controlling admixtures (ASTM C494, Types A, D, & E) as in Master Builders Company "Synergized Performance System" may be used.
 - Euclid: Eucon 37 or Eucon 537.
 - BASF: Rheobuild 1000, Glenium 3000 NS, and Glenium 3400NV.
 - Sika: Sikament 300, Viscocrete 2100, and Sikament 686.
 - W.R. Grace: Daracem 100, ADVA Cast 530, Mira 92, and ADVA Cast 575.

NOTE TO SPECIFIER

Use when requested and or approved by Contracting Officer and where fly ash and or ground granulated blast furnace slag are available and commonly used. It provides better durability, workability and minimizes corrosion at no increased cost. It is also environmentally beneficial because it is a recycled product and requires less water in the mix.

- D. Fly ash: Conform to ASTM C618. The use of a quality fly ash will be permitted as a cement-reducing admixture (minimum 15 percent and maximum 25 percent). Fly ash used in concrete shall be from a single source and of a single class in combination with Portland cement of a single source and single class unless otherwise approved by the Engineer. The fly ash shall meet all of the requirements of ASTM C618, Class C or Class F, with the following special requirements: The loss on ignition in Table 1 shall not exceed 3 percent. Compliance to Table 1A shall apply. The amount retained on the 325 sieve in Table 2 shall not exceed 34 percent. Where a Type II low-alkali cement is specified, the total C_3A shall be less than 8 percent of total cementitious material. The chemical analysis of the fly ash shall be reported in accordance with ASTM C311. Quality assurance testing and reports for a minimum of six months shall be submitted by the fly ash supplier. The option to use fly ash must be approved prior to use.
- E. Granulated Blast Furnace Slag is an alternative to fly ash and shall conform to ASTM C989 Grade 100 Or 120. Granulated blast furnace slag may be used as a substitute for a maximum of 30 percent of Portland cement.

- F. Certification: Certification of the above requirements is required from the admixture manufacturer prior to mix design review and approval by the Contracting Officer. Upon request by the Contracting Officer, a qualified representative is to be provided to assure proper use of admixtures. Use of admixtures, other than listed above will be permitted only when approved.
- G. Aggregates:
- Normal-weight concrete - ASTM C33. For slabs, also conform to combined aggregate grading recommendations of ACI 302 and ACI 302.1R, unless otherwise permitted.
 - All concrete exposed to the weather shall conform to the limits of deleterious substances and physical properties of Table 3, ASTM C 33.

3. Local aggregates: Local aggregates not complying with ASTM C33 but which have been shown by special test or actual service to produce concrete of adequate strength and durability may be used when acceptable to the Contracting Officer.
4. The nominal size of an aggregate particle shall not exceed:
 - a. 20 percent of the narrowest dimension between sides of forms.
 - b. 33 percent of the depth of slabs.
 - c. 75 percent of the dimension between reinforcing bars.
 - d. 75 percent of the dimension between reinforcing bars and forms.
5. Maximum size of coarse aggregates and minimum cementitious contents: ACI 301 and ACI 302.1R.
6. Concrete aggregate alkali-silica reactivity (ASR) shall be tested in accordance with ASTM C1260 with a 14-day expansion (no supplementary cementing materials) or ASTM C1567 (with supplementary cementing materials) of less than 0.1 percent. Materials (cement, supplementary cementing materials, and aggregates) to be used in the concrete shall be tested. Coarse aggregates and fine aggregates shall be individually tested. If two grades of coarse aggregates are blended they shall be individually tested.
7. Abrasive aggregates non-slip finishes: Fused aluminum oxide grits, or crushed emery, as abrasive for non-slip finish with emery aggregate containing not less than 40 percent aluminum oxide and not less than 25 percent ferric oxide. Use material that is factory-graded, packaged, rustproof, non-glazing, and unaffected by freezing, moisture, and cleaning materials.

H. Water:

1. Clean, potable, and free of injurious amounts of oil, acid, alkali, organic or other deleterious matter not detrimental to concrete; drinkable.
2. Water shall contain no more than 650 parts per million of chlorides as Cl or more than 1000 parts per million of sulfates as SO₄. In no case shall the water contain an amount of impurities that will cause a change in the setting time of Portland cement of neither more than 25 percent nor a reduction in compressive strength of mortar at 14 days of more than 5 percent when compared to the results obtained with distilled water when tested in accordance with ASTM C109.
3. Water used for curing shall not contain impurities in amounts to cause discoloration of the concrete or mortar or to produce etching of the surface.
4. Recycled water shall conform to ASTM C94.

2.3 GROUT/MORTARS

A. Cement grout: Conform to ASTM C387 "Dry packaged mixtures" or:

1. Mix at the site, in composition of one volume of Portland cement to 2-1/2 volumes of fine aggregate.
2. Mix the materials dry; then add sufficient water to make the mixture flow under its own weight.
3. Submittals: The following laboratory test results shall be submitted to show compliance with the requirements of this specification:
 - a. Initial setting time: 8 hours maximum
 - b. Vertical shrinkage: 0
 - c. Compressive strength: 4500 psi 1 day
 - d. Compressive strength: 8500 psi 7 days
 - e. Compressive strength: 10,000 psi 28 days
4. Field service: When required by the contracting officer, provide a qualified concrete technician employed by the Grout Manufacturer to assist in the initial grouting operations.
 - a. Euclid: NS Grout or Hi Flow Grout or E3 Grout series.
 - b. Sika: SikaGrout #212.
 - c. BASF: Masterflow 555 and Masterflow 928.

NOTE TO SPECIFIER

Exposed slabs shall be sealed in a fashion compatible with the curing method specified.

2.4 CURING/SEALING/HARDENERS

- A. Dissipating liquid membrane-forming compounds for curing concrete; Conform to ASTM C309, Type 1. Curing compound shall be compatible with floor sealer or finish used. Low VOC.
1. Euclid: VOX Kurex DR VOX series; waterborne products.
 2. W.R. Meadows: 1100-Clear series.
 3. Edoco: Burke Aqua Resin Cure.
 4. L&M Construction Chemicals: Cure R.
 5. BASF: Kure 200W
 6. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Method of curing shall be approved by the finish flooring applicator where finishes are indicated.
- C. Exterior Sealers: applied to horizontal concrete surfaces permanently exposed to salts, deicer chemicals and moisture, including parking decks. The manufacturer shall provide a five year labor and materials warranty on performance of the sealer. Sealer shall be compatible with the curing compound used.
1. Euclid: Eucoguard or Diamond Clear or Super Diamond Clear.
 2. ChemREX: Hydrozo Clear 40.
 3. Substitutions: Permitted.

NOTE TO SPECIFIER

The following materials provide varying levels of protection, sealant and hardness. Review products for project appropriateness. Substitutions are permitted.

- D. Liquid Densifier/Sealer/Hardener: to be applied on exposed concrete floors cured with dissipating membrane forming curing compound to harden and densify concrete surfaces. Sealers are to be clear, chemically reactive, a waterborne solution of silicate or silicate materials and proprietary components, odorless, and colorless.
1. ChemMasters: Chemisil Plus
 2. Conspec Marketing and Manufacturing Co., Inc. Intraseal
 3. Euclid Chemical Company: Euco Diamond Hard (Liquid Sealer and Hardener)
 4. L&M Construction Chemicals: Seal Hard (Liquid Sealer and Hardener)
 5. Curecrete Chemical Company: Ashford Formula (Liquid Sealer and Hardener)
 6. W.R. Meadows, Inc.: Liqui-Hard
 7. Sika: Sikafloor 3S
 8. Sonneborn: Kure-N-Harden
 9. Symons Corporation: Buff Hard
 10. Or approved equal.

2.5 JOINTS AND EMBEDDED ITEMS:

- A. Construction and Contraction Joints: Comply with ACI 301 and recommendations of ACI 302.1R. Sealant shall be two-part semi-rigid epoxy, and shall have minimum Shore A Hardness of 80 when measured with ASTM D2240.
- B. Isolation Joints: Fillers shall consist of 1/8 inch width strips of neoprene, synthetic rubber, or approved substitute, extending the full depth of the slab. Sealant shall be two-part elastomeric type, polyurethane base.

2.6 VAPOR BARRIER/RETARDER

NOTE TO SPECIFIER

In the paragraph below, select [below] or [above] based on sub grade conditions and ACI committee 302 recommendations.

- A. Provide cover over prepared soil, [below][above] aggregate subbase material at slabs-on-grade, where shown on the plans. Use only materials which are resistant to decay when coated in accordance with ASTM E154.
 - 1. Vapor Retarder: Polyethylene sheet not less than 10 mils thick, or
 - 2. Vapor Barrier:
 - a. Stego: Stego Wrap Vapor Barrier 10 –mil
 - b. Fortifiber: Moistop and Moistop Ultra 10.
 - c. Insulation Solution Viper Vaporcheck 10.

NOTE TO SPECIFIER

Delete the paragraph above and retain the paragraph below if the thicker barrier is required due to soil condition and the recommendation of geotechnical report. Otherwise, delete the paragraph below.

- 3. Vapor Barrier:
 - a. Stego: Stego Wrap Vapor Barrier 15 –mil
 - b. Fortifiber: Moistop and Moistop Ultra 15.
 - c. W.R. Grace: Florprufe 120.
 - d. Insulation Solution Viper Vaporcheck 16
- 4. Or approved equal.

2.7 PROPORTIONING

- A. Prepare design mixes for each type and strength of concrete by either laboratory trial batch or field experience methods as specified in ACI 301. If laboratory trial batch method is used, use an independent testing facility acceptable to Contracting Officer for preparing and reporting proposed mix designs. The testing facility shall not be the same as used for field quality control testing and inspection unless otherwise acceptable to Contracting Officer.
- B. Submit written reports to the testing laboratory of each proposed mix for each class of concrete at least 15 days prior to start of work. Do not begin concrete production until mixes have been reviewed and approved. Include the following information for each concrete mix design:
 - 1. Method used to determine the proposed mix design.
 - 2. Gradation of fine and coarse aggregates, plus combined aggregate gradation for slabs, ACI 302.1R.
 - 3. Aggregate specific gravities and absorptions.
 - 4. Proportions of all ingredients including reported on a saturated surface dried basis all admixtures added either at the time of batching or at the job site.
 - 5. Water-cementitious ratio.
 - 6. Slump, ASTM C143.
 - 7. Certification of the chloride content of individual admixtures and of the mixes as proposed.
 - 8. Air Content: ASTM C173 (Volumetric Method).
 - 9. Unit weight of concrete, ASTM C138.
 - 10. Strength at 3, 7, and 28 days, ASTM C39.
 - 11. Method of recording batch proportions.
 - 12. Substantiating test reports.
- C. Concrete types and strengths: Minimum 28 Day Compressive Strength shall be per design requirements but not less than:
 - 1. Paving base, columns, beams, walls, foundations, and footings: 3,500 psi.

2. Slab-on-grade: 4,000 psi.
3. Normal or Lightweight concrete on metal deck: 3,000 psi.
4. Tilt-up: 4,000 psi.
5. All concrete exposed to weather shall be air entrained (ASTM C260).
6. All concrete shall be normal weight except as noted above.

When the concrete mix design is developed from laboratory trial batching, adjust proportions to produce a design mix at least 1200 psi greater than the specified strength.

When the field experience method is used, the required average compressive strength shall be determined in accordance with ACI 318. Documentation that proposed concrete proportions will produce an average compressive strength equal to or greater than the required average compressive strength shall consist of a field strength test record representing materials and proportions to be used for this project. A field strength test record shall consist of at least 10 consecutive tests encompassing a period of time of not less than 45 days and made within the past 12 months.

Also, see general and specific notes on structural drawings.

- D. Weights: All concrete shall be normal-weight concrete unless otherwise designated on the structural drawings.
- E. Aggregate gradation: For slabs, also conform to combined aggregate grading recommendations of ACI 302.1R, unless otherwise permitted. For all other concrete not otherwise noted the coarse aggregate gradation shall conform to ASTM C33 size no. 57 or larger.
- F. Durability: Conform to ACI 301.
 1. All concrete exposed to potentially destructive weathering, such as freezing and thawing, or to deicer chemicals is to be air-entrained, 6 percent ± 1 percent, a minimum six sacks cementitious per cubic yard of concrete, 0.45 maximum water-cementitious ratio, and, 4 inch maximum slump.
 2. Water-cement ratio: For concrete subject to freezing and thawing or deicer chemicals, the water-cement ratio shall not exceed 0.53 by weight including any water added to meet specified slump in accordance with the requirements of ASTM C94 unless otherwise noted.
- G. Slump: Conform to ACI 301.
 1. 3 ½ inch maximum for consolidation by vibration
 2. 5 inch maximum for consolidation by other methods
 3. 8 inch maximum for flowable concrete. Concrete containing HRWR admixture (super plasticizer): 3 inch maximum before addition of HRWR
 4. Where field conditions require slump to exceed that specified above, the increased slump shall be obtained by the use of a superplasticizer only, and the Contractor shall obtain written approval from the Contracting Officer who may require an adjustment to the mix.
- H. Slab-On-Grade
 1. Concrete shall conform to ACI 302.1R except that the minimum 28-day compressive strength shall be 4000 psi.
 2. The minimum cementitious content shall be in accordance with ACI 302.1R Table 6.2.
 3. The maximum water-cementitious ratio shall be 0.48.
 4. The maximum water content shall not be greater than 250 lbs per cubic yard of concrete.
 5. The air content shall be less than 3 percent.
- I. Production of concrete: Conform to ACI 301:
 1. Cast-in-place concrete used in the work shall be produced at a single off-site batching plant or may be produced at an on-site batch plant.
 2. All concrete shall be proportioned conforming to the approved mix designs and of the materials contained in those approved mixes. A certified copy of the design weights for each mix shall be kept at the producing plant for each class of concrete used on the project.

3. Plant equipment and facilities are to conform to the "Check List for Certification of Ready -Mixed Concrete Production Facilities" of the National Ready-Mixed Concrete Association (NRMCA) and have NRMCA or approved certification within the past year.
4. Coarse aggregates shall be washed and, if necessary, shall be uniformly moistened just before batching. Each size of coarse aggregate shall be batched from separate bins as required to produce the combined grading requirements.
5. Prior to adding a high-range water reducer (super plasticizer), slump shall not exceed the working limit. The high-range water reducing admixture shall be accurately measured and pressure-injected into the mixer as a single dose. If added at the jobsite, the field dispensing system shall conform to the same requirements as a plant system and tested prior to each day's operation. After the addition of the high-range water reducer, the concrete shall be mixed at mixing speed for a minimum of 5 minutes.
6. Ready-mixed and on-site batched concrete shall be batched, mixed, and transported in accordance with ASTM C94.
 - a. Truck mixers and their operation shall ensure that the discharged concrete is uniformly within acceptable limits of consistency, mix, and grading. All mechanical details of the mixer, such as water-measuring and discharge apparatus, conditions of the blades, speed of rotation, general mechanical condition of the unit, and clearance of the drum shall be checked before the use of the unit will be permitted.
 - b. Truck mixers shall be equipped with approved revolution counters by which the number of revolutions of the drum or blades may readily be verified. The water tank system of the truck shall be equipped with gauges that permit accurate determination of the tank contents.
 - c. Each batch of concrete shall be mixed in a truck mixer for not less than 80 revolutions of the drum or blades and at the rate of rotation designated as mixing speed by the manufacturer of the equipment. Additional mixing, if any, shall be at the speed designated as the agitating speed by the manufacturer of the equipment. All materials, including mixing water but excluding any high-range water reducers added onsite, shall be in the mixer drum before actuating the revolution counter for determining the number of revolutions of mixing.
 - d. The concrete producer shall furnish duplicate delivery tickets, one for the Contractor and one given to the Owner's Representative for each batch of concrete. The information provided on the delivery ticket shall include the quantity of materials batched including the amount of free water in the aggregate and any water added onsite. Show the date, time of day batched, and if ready-mixed the time of discharge from the truck. The quantity of water that can be added at the site without exceeding the maximum water-cementitious ratio specified shall be noted on the delivery ticket.
7. Concrete produced by on-site volumetric batching and continuous mixing if approved shall conform to ASTM C685.
8. For concrete produced on site with a central batch plant, mixing shall be done in an approved batch mixer.
 - a. The Contractor shall maintain and operate the on-site batch plant and transportation equipment in a manner that will produce the results specified in this section.
 - b. The Engineer reserves the right to reject the proposed on-site plant if, in his/her opinion, the on-site plant will interfere with other operations or impair the quality of the concrete.
 - c. The quantities of cement, pozzolanic materials, and aggregates used in each batch shall be determined by automatic weighing. The quantity of water shall be determined by weighing or volumetric measurement.
 - d. The weighing equipment for aggregates shall be readily adjustable both to compensate for variation in moisture content of the aggregates and for changing mix proportions. Moisture-sensing devices shall automatically compensate the aggregate weights for changes in moisture content. The charging of weigh hoppers directly from aggregate handling equipment such as front-end loaders will not be permitted.
 - e. Mixers in centralized batching and mixing plants shall be arranged so that mixing actions can be observed from a location convenient to the mixing-plant operator's station.
 - f. Equipment shall be provided that discharges pozzolanic material into the cement hopper only after the addition of the Portland cement. Pozzolanic materials shall be stored in such a manner as to permit ready access for the purpose of inspection and sampling and be

- suitably protected against contamination of moisture. Should any pozzolan show evidence of contamination or be otherwise unsuitable, the Engineer will reject it and require that it be removed from the site.
- g. Dispensers for admixtures shall have the capacity of the full quantity of the properly diluted solution required for each batch. They shall be maintained in a clean and freely operating condition. Admixtures shall be added to the premeasured water for the batch or shall be discharged into the batch by flowing automatically and uniformly into the stream of mixing water from the beginning to end of its flow into the mixer. Equipment for measurement shall give visual confirmation of the accuracy of the measurement for each batch.
 - h. The central batch mixer shall be rotated at a speed recommended by the manufacturer and mixing shall be continued for a minimum of 1-1/2 minutes after all materials are in the drum.
 - i. Each stationary mixer shall be equipped with a mechanically operated timing and signaling device that will indicate and ensure the completion of the required mixing period and will count the batches.
 - j. All concrete shall be mixed until there is a uniform distribution of the materials and shall be discharged completely before the mixer is recharged.
9. The Engineer may increase the mixing time when the charging and mixing operations fail to produce a delivered batch in which variations of consistency, mix, or grading are within the limits specified.
 10. Variations in consistency during the discharge of a single batch shall not exceed 1 inch of slump, except that a greater variation will be permitted if the slump of the concrete decreases and no water is added. Variations in mix and in grading of different parts of the delivered batch shall be within limits stated in ASTM C94.
 11. Water shall be introduced prior to, during, and following mixer-charging operations.
 12. When a mixer produces unsatisfactory results, it shall be repaired promptly and effectively, or it shall be replaced.
 13. Mixers shall not be loaded in excess of their rated capacity.
 14. Overmixing, such as to require addition of water to preserve the required consistency or to reduce slump, will not be permitted.
 15. All other concrete: Conform to ACI 301
 16. Use of accelerating admixtures in cold weather and retarding admixtures in hot weather shall not relax placement requirements specified herein.
 17. All concrete placed at ambient temperatures below 50 degrees F is to contain an approved accelerator. The concrete temperature when delivered at the site shall be at least 50 degrees F.
 18. All concrete placed at ambient temperatures above 80 degrees F is to contain an approved retarder.
 19. All concrete required to be air-entrained is to contain an approved air-entraining admixture.
 20. When improved workability, pumpability, lower water-cement ratio, or high ultimate and/or early strength is required, the HRWR admixture (super plasticizer) may be used.
 21. Ensure air content for slabs with steel trowel finish is less than 3.0 percent.
 22. The concrete shall be of such consistency and composition that it can be worked readily into the corners and angles of the forms and around reinforcement without permitting materials to segregate or free water to collect on the surfaces. Within the limiting requirements, adjust the consistency of the concrete as may be necessary to produce mixtures which will be placeable with reasonable methods of placing and compacting. Maintain on the job at all times adequate extra cement to be used at rate of 1/2 sack cement per cubic yard concrete for each 2" slump increase for corrections due to wetness desired or obtained. No water shall be added to concrete except under the direct awareness of the project inspector.
 23. No water shall be added to concrete except under the direct awareness of the project inspector. The water-cementitious ratio stated on the approved mix designs shall not be exceeded unless approved by the Engineer. Re-tempered concrete shall be mixed for not less than 80 revolutions of the drum or blades and at the rate of rotation designated as mixing speed by the manufacturer of the equipment.
 24. Adjustments to concrete mixes: Mix design adjustments may be requested by Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant

at no additional cost to Contracting Officer. Laboratory test data for revised mix design and strength results must be submitted and accepted before using in work.

2.8 FORMWORK

- A. Section 031000: Concrete Forming and Accessories

2.9 REINFORCING MATERIALS

- A. Section 032000: Concrete Reinforcement

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION - GENERAL

- A. Install all cast-in-place concrete work in accordance with ACI 301 except as herein specified.
- B. All bearing materials shall be inspected by the Geotechnical Engineer prior to placing concrete. The Geotechnical Engineer shall be the sole judge as to the suitability of the bearing material.
- C. Compact stone base aggregate to thickness indicated on drawings. Roll poof stone screenings topping to provide smooth hard surface on which to place slab. Surface should not show footprints or truck tracks when driven over
- D. Immediately before placing concrete, spaces to be occupied by concrete shall be free from standing water, ice, mud, and debris.
- E. Concrete shall not be deposited under water or where water in motion may injure the surface finish of the concrete.
- F. Immediately before placing concrete for exterior sidewalk, curb and gutter, pavements, and slab-on-grade, subbases and compacted subgrades shall be thoroughly moistened, but not muddied, by sprinkling with water. Surfaces shall be kept moist by frequent sprinkling, as required, up to the time of placing of concrete.
- G. Forms and the reinforcement shall be thoroughly cleaned of ice and other coatings. Remove surplus form releasing agent from the contact face of forms.
- H. Notify all trades concerned and the Owner's Representative sufficiently in advance of the scheduled time for concrete placement to permit installation of all required work by other trades.
- I. Before placing concrete, all required embedded items, including dovetail anchor slots, anchors, inserts, curb angles, metal frames, fixtures, sleeves, drains, stair nosings, accessory devices for Mechanical and Electrical installations shall be properly located, accurately positioned and built into the construction, and maintained securely in place.

- J. Build into construction all items furnished by the Owner and other trades. Provide all offsets, pockets, slabs, chases and recesses as job conditions require.
- K. Place and properly support reinforcing steel and anchor bolts.
- L. The alignment, orientation, spacing, and embedment length of mechanical load transfer devices in slab-on-grade and pavements shall conform to dimensions and tolerances shown on the drawings.
- M. The Contracting Officer Representative should attend the first concrete pour.

3.3 INSTALLATION - FORMWORK

- A. Section 031000 - Concrete Forming and Accessories
- B. Construction and Contraction Joints: Conform to ACI 301 and recommendations of ACI 302.1R.

3.4 REINFORCEMENT

- A. Placement: Section 032000 - Concrete Reinforcement

3.5 METHODS OF PLACEMENT AND PLACING CONCRETE

- A. Placement: Conform to ACI 301:
 1. Maintain concrete cover around reinforcing as per Section 3.3 above and ACI 301.
 2. The methods and equipment used for transporting concrete to the site work and the time that elapses during transportation shall not cause segregation of coarse aggregate or slump loss in excess of 1 inch when measured at the point of discharge.
 3. Concrete shall be placed within 90 minutes after the water has been added to the cement and aggregates. Concrete shall be placed prior to initial concrete set.
 4. Placing of concrete will not be permitted during rainfall or when rain appears imminent. If rain should fall subsequent to placement, the concrete shall be completely protected until curing is complete.
 5. Cold-Weather Placement: Comply with provisions of ACI 306.1 "Standard Specifications for Cold-Weather Concreting" and as follows.
 - a. When air temperature has fallen to or is expected to fall below 40 deg F (4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (27 deg C) at point of placement.
 - b. When necessary, arrangements for heating, covering, insulating, or housing the concrete work shall be made in advance of placement and shall be adequate to maintain the required temperature during the first 24 hours.
 - c. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise accepted in mix designs.
 - d. Concrete shall not be placed on frozen ground or placed when the ambient temperature is 40 deg F or less and dropping.
 - e. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 - f. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures using vented heaters and insulating blankets.
 - g. Vent heater exhaust gases that contain carbon dioxide outside of enclosed areas.
 - h. Concrete temperatures shall be maintained above 50 degrees F for the first 7 days of curing..
 6. Hot-Weather Placement: When hot weather conditions exist that would impair quality and strength of concrete, place concrete complying with ACI 305R "Standard Specification for Hot-Weather Concreting" and as specified.

- a. Cool ingredients before mixing to maintain concrete temperature at time of placement to below 90 deg F (32 deg C). Mixing water may be chilled or chopped ice of a size that will melt completely during mixing may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
- b. Reject any concrete that has a temperature at the point of placement above 90 deg F, unless approved otherwise by the Construction Project Manager. When air temperatures are between 80 and 90 deg F the maximum mixing and delivery time is reduced to 75 minutes. When air temperatures exceed 90 deg F, the maximum mixing and delivery time is reduced to 60 minutes.
- c. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedding in concrete.
- d. Fog spray forms, reinforcing steel, and subgrade just before placing concrete. Keep subgrade moisture uniform without puddles or dry areas.
- e. Use water-reducing retarding admixture when required by high temperatures, low humidity, or other adverse placing conditions, as acceptable to Contracting Officer.
- f. Spray evaporative retardants, wind breaks, misters, or shade concrete when the rate of surface evaporation when calculated in accordance with ACI 305.5 exceeds 0.2 lb/sq. foot per hour.

B. Depositing Concrete

1. Deposit concrete as near its final position as possible to avoid segregation due to rehandling or flowing. Hoppers, tremies, pump line, ducts, chutes, or other methods approved by the Engineer shall be used to deposit concrete in its final position within the specified time limits and without segregation of the mix.
2. The sequence of concrete placement and the number, type, position, and design of joints shall be approved by the Engineer prior to concrete placement.
3. Place floor slabs-on-grade by "strip cast" method.
4. Concrete shall be deposited as nearly as practical in its final position to avoid segregation due to re-handling or flowing. No concrete shall have a free fall of over three feet from truck, mixer, or buggies.
5. The concreting shall be carried on at such a rate that the concrete is plastic at all times and flows readily into the spaces between reinforcing bars. No concrete that has partially hardened or been contaminated by foreign materials shall be deposited in the work
6. When concreting is started, it shall be carried on as a continuous operation until the placing of the section is completed.
7. Except as intercepted by joints, concrete shall be placed in continuous layers. The depth of layers shall not exceed 20 inches. Succeeding layers shall be placed while the previous layer is still plastic. Concrete placement shall begin at the lowest point in each section of concrete to be placed.
8. Protect adjacent surfaces from concrete drippings, spillage, and splashes. Hardened or partially hardened splashes or accumulations of concrete on forms or reinforcement shall be removed before the work proceeds. Clean all damaged surfaces immediately.
9. All conveyances shall be thoroughly cleaned at frequent intervals during the placement of the concrete, and before the beginning a new run of concrete all hardened concrete and foreign materials shall be removed from the surfaces.
10. The Superintendent or Foreman in charge of concrete work shall mark on the drawings the time and date of the placing of each concrete pour. Locations where concrete test cylinders are made shall also be noted on the drawings. Such drawings shall be kept on file at the job until its completion and shall be subject to the inspection of the Owner's Representative at all times.

C. Conveyor Belts and Chutes

1. Chutes or conveyor belts shall not be used except as approved by the Engineer.
2. Concrete shall be conveyed from the mixer to the place of final deposit by methods that will prevent separation and loss of material.
3. Chutes longer than 50 feet and conveyor belts longer than 110 feet will not be permitted.

4. Equipment for conveying and chuting concrete shall be of such size and design as to insure a practically continuous flow of concrete at the delivery point without separation of material.
5. Provide runways or other means for wheeled equipment to convey concrete to point of deposit. Construct runways so that supports will not bear upon reinforcement or fresh concrete.
6. The minimum slope of chutes shall enable concrete of the specified consistency to readily flow.
7. Ends of chutes, hopper gates, and other points of concrete discharge throughout the conveying, hoisting, and placing system shall be designed and arranged so that concrete passing from them will not fall separated into whatever receptacle immediately receiving the concrete. Adequate headroom provision must be made at such points for a vertical drop and for proper baffling.
8. If a conveyor belt is used, it shall be wiped clean by a device operated so that none of the mortar adhering to the belt will be wasted.

D. Pumping of Concrete

1. The type and operation of a concrete pump shall be subject to the approval of the Engineer. The equipment used in placing the concrete and the method of its operation shall introduce the concrete into the forms without high velocity. Placing equipment shall be operated only by experienced operators.
2. During pumping, the Contractor shall have on-site a standby placing system, acceptable to the Engineer, to ensure that in the event of breakdown of the primary placing equipment, the concrete placement can continue without cold joints.
3. The minimum diameter of the hose or conduit shall be 4 inches unless otherwise approved by the engineer. Aluminum conduits shall not be used for conveying the concrete. Pumping equipment, hoses, and conduits that are not functioning properly shall be replaced.

E. Joints

1. Joints shall be vertical in walls and horizontal in slabs.
2. Dowel bars and tie bars shall be inspected
3. Control joints for controlling concrete shrinkage shall be provided in floor slabs, walls, decks, conduits, and channels as shown on the plans or approved by the Engineer.
4. Joint spacing and sawcut depth for slab-on-grade and concrete pavement shall conform to that shown on the pour sequencing plan and/or drawings.
 - a. Sawed control (contraction) joints for pavements and slab-on-grade shall be installed as soon as practical so as not to ravel the concrete but less than 12 hours.
 - b. The minimum sawcut joint depth shall be 1/4 of the slab thickness unless an early-entry SOFF-CUT saw is used in accordance with manufacturer recommendations (typically sawed between 1 to 4 hours after finishing to a 1 inch minimum depth.
 - c. Joint spacing shall in feet shall not exceed 2-1/2 times the slab thickness in inches unless otherwise approved by the Engineer.
 - d. The long dimension of a slab shall not exceed 1.5 times the short dimension unless otherwise approved by the Engineer.
5. Joints in slabs shall align with joints in adjoining walls unless otherwise approved by the Engineer or shown in the drawings. Joints shall also line up with architectural reveals and form lines. All corners shall be relieved by cutting joint to adjacent control joint.
6. When not otherwise shown on the drawings or specified, concrete placement for walls shall be constructed in segments no longer than 30 unless otherwise approved by the Engineer.
7. If there is a delay in casting but prior to concrete initial set, the concrete placed after the delay shall be thoroughly spaded and consolidated at the edge of that previously placed to avoid cold joints. Concrete shall then be brought to correct level and struck off with a straight edge. Bullfoats shall be used to smooth slab surfaces, leaving it free of humps or hollows.
8. Where placing concrete is interrupted long enough for the concrete to take its initial set, the working face shall be made a construction joint.
 - a. Preparation and disposition of unplanned cold joints in walls shall be approved by the Engineer.
 - b. For slab-on-grade, pavements, sidewalk, and curb and gutter, concrete shall be removed back to the nearest planned joint and a construction joint installed.
9. Unless otherwise noted on the drawings, where concrete is to be placed against existing concrete, except in the case of expansion joints, the joint face of the existing concrete shall be roughened.

- a. Before new concrete is placed against hardened concrete, the bonding surface of the existing concrete shall be roughened to an amplitude of 0.25 inch using bush hammers, abrasive blasting, or high-pressure water blasting.
 - b. Fresh concrete may be green-cut with water blasting and hand tools to remove concrete laitance and spillage and to expose sound aggregate.
 - c. The prepared surfaces of hardened concrete shall be kept thoroughly wet during the 24-hour period immediately prior to the placement of the new concrete. Wetting shall be accomplished by continuous sprinkling or by covering exposed surfaces with wet burlap.
 - d. Where shown on the drawings or permitted by the Engineer, bond-preventing compound shall be applied by brush in accordance with the manufacturer's printed instructions.
10. Corner sections of walls shall not be placed until the adjoining wall sections have cured at least 14 days.
- F. Consolidation
1. All concrete shall be thoroughly consolidated by internal mechanical vibrators during the placing operation and shall be thoroughly worked around the reinforcement and embedded fixtures and into corners of the forms.
 2. Concrete for slabs 8 inches thick or less may be consolidated with vibrating screeds. Slabs between 8 to 12 inches thick shall be compacted with internal vibrators and (optionally) with vibrating screeds.
 3. Concrete shall be consolidated by vibration to the maximum practicable density. The concrete shall be free from pockets of coarse aggregate and entrapped air.
 4. Vibrators shall have a minimum diameter of 3 inches with a frequency of at least 7000 vibrations per minute and with an amplitude adequate to consolidate the concrete in the section being placed.
 5. Forms shall contain sufficient windows or shall be limited in height to allow visual observation of the concrete during placement. Sufficient illumination shall be provided in the interior of forms so that at the places of concrete deposition the concrete shall be visible from the deck or runway.
 6. Vibrators shall not be secured to forms or reinforcement.
 7. Keep a minimum of two standby vibrators in operable condition on the job during concreting operations.
 8. Consolidation shall be carried on continuously with the placing of concrete.
 9. The number of vibrators employed shall be sufficient to consolidate the concrete within 15 minutes after it is deposited in the forms.
 10. When consolidating each layer of concrete, the vibrator shall be operated at regular and frequent intervals 18 to 30 inches apart.
 11. The vibrator shall be kept in nearly a vertical position as practicable. The use of vibrators to shift or drag concrete after deposition will not be permitted. Vibrators shall not be laid horizontally or laid over.
 12. The vibrator head shall penetrate 6 to 8 inches into the preceding layer and then be withdrawn at a slow rate. The top part of each layer shall be re-vibrated systematically at the latest time the concrete can be made plastic by means of vibration.
 13. Concrete shall not be placed until the previous layer has been vibrated.
 14. Unless directed otherwise by the Engineer, the top 2 feet of walls shall be re-vibrated approximately 1 hour after placement of concrete and while a running vibrator will still sink under its own weight into the concrete and liquefy it momentarily.
- G. Protection of cast concrete: Conform to ACI 301.
- H. Repair of surface defects: ACI 301.
1. Inspect concrete surfaces and surfaces to be painted immediately upon removal of forms. Irregularities shall be immediately rubbed or ground to secure a smooth, uniform, and continuous surface.
 2. Clean surfaces of tie holes. Tie holes shall be filled solid with patching mortar.
 3. Surfaces to be smoothed shall not be plastered or coated.
- Patch imperfections as needed or as directed by the Contracting Officer. Repairs in accordance with Section 3.8 shall not be made until the surface has been inspected and repair methods have been approved by the Contracting Officer..

3.6 FINISHING

- A. Finishing of formed surfaces: ACI 301:
1. Tops of forms:
 - a. Strike concrete smooth at tops of forms.
 - b. Float to texture comparable to formed surfaces.
 2. Formed surfaces:
 - a. Finished formed surfaces shall conform accurately to the shape, alignment, grades, and sections shown on the drawings or prescribed by the Engineer.
 - b. Surfaces shall be free from fins, bulges, ridges, honeycombing, or roughness of any kind and shall present a finished, smooth, continuous hard surface.
 - c. Permanently exposed surfaces: ACI 301 - "Smooth Form Finish" with the fins ground smooth and air holes shall be filled with a non-shrink mortar. The color of the patch material shall match the color of the surrounding concrete. Surfaces in unfinished areas unexposed to public view: ACI 301- "Rough Form Finish".
- B. Slabs: Minimum slab surface tolerance must satisfy ACI 301 and ACI 302.1R as measured in accordance with ASTM E1155.
1. Slabs-on-grade:
 - a. For exposed slabs, install semi-rigid epoxy sealant in construction and contraction joints after slab has a minimum of 60 days or otherwise approved by the Engineer..
 - b. Separate slabs-on-grade from vertical surfaces with 1/2 inch-thick joint filler. Extend joint filler from bottom of slab to within 1/8 inch of finished slab surface.
 - c. Allowable tolerance for slab on grade surfaces, measured in accordance with ACI 117 and ASTM E1155, shall meet or exceed an overall value of FF35/FL25, with minimum local value of FF24/FL17.
 2. Suspended Floor Slab:
 - a. Minimum surface tolerances: FF25 & FL20 overall and FF20 & FL15 local.
 3. Concrete Finishes:
 - a. The following will not be permitted on slab or floor finishes:
 - 1) Dusting dry cement or sand on the surface to absorb excess moisture.
 - 2) Use of a mortar finishing coat.
 - 3) Excessive troweling or manipulation that brings water or a large amount of fines to the surface.
 - 4) Use of a Fresno.
 - 5) Addition of water to the surface during the finishing operation.
 - 6) Use of the floor during construction in a manner that leads to marring or staining the finish.
 - b. Surface preparation
 - 1) The concrete shall be brought up evenly to slightly above finished grade and shall be thoroughly compacted and consolidated. The top shall be struck off to accurately established grade strips or grade blocks. Complete screeding before any excess moisture or bleedwater is present on the surface.
 - 2) After bull floating, defer additional finishing operations until the concrete has stiffened sufficiently to sustain foot traffic pressure with an indentation of not more than 1/4 inch.
 - c. Floor Slabs: Steel trowel finish unless otherwise noted on the plans. As soon as the moisture sheen has disappeared from the floated surface and the concrete has hardened sufficiently to prevent drawing moisture and fine materials to the surface, the surface shall be steel troweled to produce a smooth, hard, uniform finish. Final steel troweling shall be conducted after the concrete is hard enough that no mortar accumulates on the trowel when manipulated with heavy pressure. Machine finishing may be used for troweling.
 - d. Exposed concrete slabs sealed or sealed and hardened using a liquid compound compatible with the curing method used.
 - e. Exterior Concrete Finishes: Unless otherwise noted on the drawings, floors, walkways, and roof finishes shall be sloped a minimum 0.125 inch per foot to drain water. A light steel

- trowel with broom finish unless otherwise noted on the plans. Apply exterior sealer to surfaces exposed to deicer chemicals that is compatible with the curing method used.
- f. Exposed Ramps, Landings and Stair Treads: A light steel trowel with broom finish unless otherwise noted on the plans. Surfaces shall be sealed or sealed and hardened using a liquid compound compatible with the curing method used.
 - g. A heavy broom finish shall be provided on disabled person ramps, utility ramps, and around exterior loading docks.

3.7 CURING, PROTECTION, LIQUID HARDNERS AND SEALERS

A. Temperature, Wind, and Humidity

1. When concrete slabs and other unformed concrete is placed in warm, dry, dusty, or windy conditions, concrete surfaces shall be protected from rapid drying by use of windbreaks, shading, fogging with properly designed nozzles, or a combination of these measures. Hot weather concreting procedures provided in ACI 305R shall be used when ambient conditions dictate.
2. Cold weather concreting procedures provided in ACI 306R shall be used when ambient conditions dictate.
3. Changes in air temperature immediately adjacent to the concrete during and immediately following the 7-day initial curing period shall be kept as uniform as possible and shall not exceed 5 deg. F in any 1 hour or 50 deg. F. in any 24-hour time period.

B. Curing Compound

1. All curing methods shall be placed immediately after final finishing (i.e., within two hours). Contractor's attention is directed to the fact that experience shows the most important time of curing is from three to four hours after placing and extending five to six hours thereafter. It is extremely important, therefore, to prevent loss of moisture, particularly during this period when concrete is especially vulnerable to plastic shrinkage cracks. All exposed surfaces of concrete including floor slabs, whether or not they receive a finish flooring, shall be protected from premature drying for a minimum of seven days.
2. Apply the specified curing compound in strict accordance with manufacturer's written instructions. Curing compound shall not be diluted by the addition of solvents or thinners, nor shall it be altered in any other manner. Curing compound that has become chilled and is too viscous for satisfactory application shall be heated by steam or hot water bath until it has proper fluidity. The temperature of the compound shall not exceed 100 °F. Curing compound shall not be heated by direct exposure of the container to fire.
3. When used on an unformed concrete surface, application of the first coat of curing compound shall commence immediately after finishing operations have been completed. When curing compound is used on a formed concrete surface, the surface shall first be moistened with a fine spray of water immediately after the forms have been removed. The spray shall be continued until the surface does not readily absorb further water. As soon as the surface film of water has disappeared and the surface is almost dry, the first coat of curing compound shall be applied. In the event that application is delayed on either formed or unformed surfaces, the surface shall be kept continuously moist until the compound has been applied or the specified period of water curing has elapsed.
4. Surfaces shall be sprayed uniformly with 2 coats of curing compound. Each coat shall provide a minimum coverage of 1 gallon per 250 square feet of surface. As soon as the first coat has become dry, a second coat shall be applied in the same manner. The direction of application of the second coat shall be perpendicular to the first coat. The curing compound shall be sprayed using approved pneumatic or pump driven equipment having the following characteristics:
 - a. Separate lines to the nozzle for material and for compressed air
 - b. A filtering system for the removal or entrapment of contaminants
 - c. A constant application pressure
5. Curing compound shall not be used on any concrete surface specified to receive additional concrete, coatings, grout, and chemical treatment

C. Protection

1. Freshly placed concrete shall be protected against wash by rain.
 2. Dust control shall be provided in the surrounding areas during placement. If, in the opinion of the Engineer, these conditions are not satisfactory met, concrete shall not be placed.
 3. During the first 2 day period of curing, no traffic on or loading of the floors will be permitted.
 4. The contractor shall allow no traffic and take precautions to avoid damage to the membrane of the curing compound for a period of not less than 28 days. Damage shall be repaired immediately to the satisfaction of the Engineer.
 5. Special care shall be taken to prevent avoid damaging the surfaces and joints due to load stresses from construction equipment, heavy shock, and excessive vibration. During construction activities, concrete shall be protected against damage with plywood or other approved materials until final acceptance by the Engineer.
 6. Precautions shall be taken to prevent overloading floors, pavements, slabs, beams, and other members. The Contractor shall comply with the Engineer's instructions regarding the loads that will be permitted on these members during construction.
 7. Self-supporting structures shall not be loaded in such a way to overstress the concrete.
- D. All floor slabs shall be cured using products and methods compatible with selected floor adhesives, toppings, and other finish materials.
- E. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
1. Remove curing compounds per the manufacturer's instructions after curing is complete as required to ensure compatibility of any finish treatments, paints, or coatings.
 2. Remove sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
 3. Apply liquid in accordance with manufacturer's instructions and until surface is saturated, scrubbing into surface until a gel forms; rewet; and repeat brooming or scrubbing. Rinse with water to remove excess material until surface is dry. Apply a second coat in a similar manner if surface is rough or porous.
- F. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instruction.

3.8 PATCHING AND REPAIR

- A. Concrete will be considered by the Engineer as not conforming to the intent of the drawings and specifications for the following reasons:
1. Concrete this is not formed as shown on the drawings.
 2. Concrete this is not in true alignment or level.
 3. Concrete which exhibits a defective surface.
 4. Concrete with defects that reduce the structural integrity of a member or members.
 5. Concrete jointed slabs with uncontrolled random cracking.
- B. Non-conforming concrete to required thickness, lines, details, and elevations will be rejected by the Contracting Officer and shall be modified or replaced with concrete that conforms to the contract requirements without a claim by the Contractor for additional cost or extension of contract time.
- C. Do not patch, fill, touch-up, repair, or replace exposed concrete except upon express direction of Contracting Officer for each individual area. Should the Contracting Officer grant permission for the Contractor to attempt restoration of a defective area by patching or other repair methods, such permission shall not be considered a waiver of the Contracting Officer's right to require complete removal of the defective area if, in the Engineer's opinion, the restoration does not provide the structural or aesthetic integrity of the member or members.
- D. All repairs of defective areas shall conform to ACI 301. On areas requiring treatment of defects and until such repairs have been completed, only water cure will be permitted
- E. At any time prior to final acceptance, concrete found to be defective, damaged, or not in accordance with the specifications shall be repaired or removed and replaced with acceptable concrete.
- F. If approved by the Contracting Officer, repair or replace concrete with excessive honeycombing due to improper placement.

1. Honeycombed areas shall be removed down to solid concrete a minimum of 1 inch over the entire area. Feathered edges will not be permitted. If chipping is necessary, the edges shall be perpendicular to the surface or slightly undercut.
2. Laitance and soft material shall be removed prior to patching with a pea gravel concrete mix and bonding agent approved by the Engineer.
3. The area to be patched and an area at least 6 inches wide surrounding it shall be dampened to prevent absorption of water from the patching materials.
4. If a cement slurry bonding grout is approved, the heavy-cream consistency grout shall then be rigorously brushed into the surface. The concrete patch material shall be installed prior to the bonding grout skimming over or drying.
5. If approved, a bonding admixture, bonding compound, or epoxy adhesive may be used in strict accordance with the manufacturer's preparation and application recommendations. Comply with ACI 301 and ACI 503.2 for standard specifications for bonding plastic concrete to hardened concrete with a multiple component epoxy adhesive.
6. The repair concrete shall be thoroughly consolidated in place and struck off so as to leave the patch slightly higher than the surrounding surface. The concrete shall be left undisturbed for at least 1 hour to permit initial shrinkage then finished.
7. The patched area shall be kept damp for 7 days.
8. The color of the patch material shall match the color of the surrounding concrete. Repairs shall be made promptly while the base concrete is less than 28 days old.
9. Metal tools shall not be used in finishing a patch in a formed wall that will be exposed.
- G. Areas requiring patching shall not exceed 2 sq. ft. per 1000 sq. ft. of surface area and shall be widely dispersed. Areas showing excessive defects as determined by the Contracting Officer shall be removed and replaced.
- H. High spots identified in the floor flatness and levelness survey may be removed with bump grinding. Areas to be ground shall not exceed more than 10 percent of any one slab nor more than 5 percent of the total slab-on-grade area. There are no limitations for exterior concrete pavement areas requiring grinding.
- I. If approved by the Contracting Officer, concrete slab random cracking may be routed and sealed. The number of interior/exterior slabs to be routed and sealed shall not exceed more than 20 feet of any one slab nor more than 5 percent of the total number of slab-on-grade/pavement slabs. Slabs with more than one structural crack or with multiple cracks within a slab shall be removed and replaced. If random cracks are attributed to non-working sawcut control joints, uncracked joints parallel to the cracking shall be filled with a structural epoxy.
- J. Interior slab-on-grade subjected to lift truck traffic shall be routed and sealed with a semi-rigid epoxy sealant. Exterior slabs may be routed and sealed with the flexible joint sealant to be installed in pavement joints.

3.9 GROUTING

- A. After steel columns have been installed and leveled, grout the space between the bottom of the plate and concrete, using cement grout completely filling the space and forming solid bearing for the column base plate.

3.10 EVALUATION AND ACCEPTANCE OF CONCRETE

- A. Comply with ACI 301 and modifications in this section.
- B. Compressive strength
 1. Sets of standard-cured quality assurance cylinders will be taken by the Engineer during the progress of the work. The number of cylinder sets taken for each concrete mix design placed each day shall not be less than one set per day, nor less than one set for each 150 cu yds of concrete nor less than one set for each 5000 sq ft of surface area for slabs or walls.
 2. A set of cylinders consists of five cylinders cured in accordance with ASTM C31: one to be tested at 7 days and two to be tested and their strengths averaged at 28 days in accordance with ASTM

C31. The fourth and fifth cylinders may be used to test at other ages or to verify strength after 28 days in the event the 28-day strengths are low.

3. A 28-day compressive strength test shall consist of the average strength of at least two cylinders fabricated from a single load of concrete.
 4. The strength level of the concrete will be considered satisfactory so long as the averages of all sets of three consecutive strength tests equal or exceed the specified strength, f'_c , by more than 500 psi, not more than 10 percent of the tests are less than the specified 28-day strength, and no individual test is more than 500 psi below the 28-day specified strength.
 5. Should cylinder tests fail to meet the strength acceptance requirements or if deficient construction is suspected, core tests may be required and the costs of such tests paid by the Contractor. The Engineer shall identify core locations to least to impair the strength of the structure. Four-inch diameter cores shall be tested in accordance with ASTM C42.
 6. At least three representative cores shall be drilled from each member or area of concrete that is considered potentially deficient. If before testing, one or more cores shows evidence of having been damaged subsequent to or during the removal from the structure, it shall be replaced.
 7. Concrete in the area represented by core tests will be considered adequate if the average strength of the cores is equal to or at least 85 percent of and if no single core is less than 75 percent of the specified strength.
 8. Concrete that is deficient shall be isolated and retested to establish the boundary of deficient concrete. Concrete in the deficient area shall be removed and replaced.
 9. Core holes shall be repaired as directed by the Engineer.
- C. Air content will be determined in accordance with ASTM C231. The air content shall be taken with each set of test cylinders. If the air content is outside the specified range, the concrete shall be rejected. If concrete is to be air entrained for freeze-thaw durability, cores will be located to isolate deficient concrete by evaluating the air-void system in accordance with ASTM C457. Concrete in the deficient area shall be removed and replaced.
- D. Slump tests will be performed prior to placing the concrete. Such tests shall be made for each set of test cylinders defined for compressive strength. If the slump is outside the specified range, the concrete shall be rejected.
- E. The frequency of testing shall be increased if concrete fails to meet the acceptance criteria or if deemed by the Engineer to be too variable.

3.11 ACCEPTANCE OF STRUCTURE

- A. Comply with ACI 301 and modifications in this section.
- B. Completed concrete work, which meets all applicable requirements, will be accepted without qualification.
- C. Completed concrete work which fails to meet one or more requirements but which has been repaired to bring it into compliance will be accepted without qualification.
- D. Completed concrete work which fails to meet one or more requirements and which cannot be brought into compliance may be accepted or rejected by the Contracting officer. In this event, modifications may be required to assure that remaining work complies with the requirements.
- E. The costs of any additional tests or analysis, including additional architectural and engineering services, performed to prove the adequacy of the concrete work, shall be borne by the Contractor without extension of contract time.

3.12 MISCELLANEOUS CONCRETE

- A. Curbs: Provide monolithic finish to interior surface of curbs by stripping forms while concrete is still green and steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

- B. Equipment bases and foundations: Provide machine and equipment bases and foundations as shown on drawings. Set anchor bolts for machines and equipment with template at correct elevations, complying with certified diagrams or templates of manufacturer furnishing machines and equipment.

3.13 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Requirements:
1. Provide and maintain an adequate program of quality control for the materials, production methods, and workmanship to assure conformance of all work to the project contract documents. ACI 121R outlines the essential elements of the Material Control portion of the QA program.
 2. All materials, equipment, and methods shall be subject to verification inspections and/or testing as specified herein; ACI 121R.
 3. Testing and Evaluation:
 - a. Furnish and pay for the services of an independent Testing Laboratory satisfactory to the Contracting Officer. The testing laboratory shall have prime responsibility for review, verification inspection, and testing of the concrete producer's materials, operations, facilities, and quality control procedures and evaluating the results for conformance with these specifications complying with ACI 121R.
 - b. The Testing Laboratory will be required to provide evidence of recent inspection of its facilities by the Cement and Concrete Reference Laboratory of the National Bureau of Standards (NBS) and to show that any deficiencies have been corrected.
 - c. In addition to the requirements and duties in ACI 301 the testing laboratory shall provide the following:
 - 1) One or more additional test cylinders shall be taken during cold weather concrete placement and cured on the job site under conditions of concrete represented to determine safe form-stripping period.
 - 2) Sample (and test when directed by the contracting officer) each shipment of cement and aggregates and verify approved admixtures. Store samples in a protected place until authorized to dispose of them.
 - 3) Inspect concrete batching, mixing, and delivery operations periodically or as directed by the Contracting Officer.
 - 4) Review manufacturer's reports and/or certification for each shipment of cement and reinforcing steel and/or conduct laboratory tests or spot checks of the materials as received for compliance with specifications.
 - 5) Submit to the Contracting Officer and concrete producer, during construction, the results of concrete tests.
 - 6) Include the following information:
 - i. Date of placement.
 - ii. Structure and relative location.
 - iii. The concrete mix design.
 - iv. Unit weight of concrete - ASTM C138
 - v. Slump - ASTM C143
 - vi. Air content of freshly-mixed concrete by the pressure method, ASTM C231 or the volumetric method, ASTM C173.
 - vii. Concrete temperature (at placement time).
 - viii. Air temperature (at placement time).
 - ix. Strength determined in accordance with ASTM C39.
 - x. Other testing or inspection as required.
 - d. The Testing Laboratory shall assess and report floor flatness and levelness in accordance with ASTM E1155.
 - e. Field and concrete plant inspections are to be made by a competent representative of the Testing Laboratory during all structural concreting operations including periodic audit and spot check of the Producer's and/or Contractor's quality control procedures to assure proper and adequate control. When it appears that any material furnished fails to fulfill

specification requirements, the Testing Laboratory is to report such deficiency immediately to the Contracting Officer and appropriately record it in his report.

END OF SECTION

SECTION 03 30 00 00 - MPF CAST-IN-PLACE CONCRETE**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Includes all labor, materials and appliances, and perform all operations in connection with the installation of Concrete Work, and all related work incidental to the completion thereof, as shown on the drawings, complete, in strict accordance with the drawings and as specified herein. Section Includes:
 - 1. Cast-in-place (CIP) concrete in building frame elements, walls, foundations, foundation walls, slabs-on-grade, and mechanical equipment pads.
 - 2. Finishing of concrete floor slabs and toppings. Concrete liquid surface treatment, sealer, and slip-resistant coatings.
 - 3. Expansion and contraction, control joints in CIP concrete.
 - 4. Concrete curing and protection.
 - 5. Non-shrink grout including installation and forming.
 - 6. Testing related services.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents and References in Section 1.2.
- C. Related Sections: Related work specified elsewhere includes but may not be limited to
 - 1. Section 031000: Concrete Forming and Accessories
 - 2. Section 032000: Concrete Reinforcement

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide data technical, testing, and source for mix design materials and additives, steel reinforcement, joint sealant [, and other products as specified on the drawings.]
2. Shop Drawings: Provide shop drawings for reinforcement, layout, detailing, and placing prior to fabrication, site delivery, and installation.
 - a. Mix design submittals.
 - b. Rebar placing drawings (ACI 315, "Detailing Manual SP-66-(04)" or CRSI "Manual of Standard PracticeMSP-2-81"): Show bar sizes, bending, placing, spacing, locations, and quantities of reinforcing and wire fabric and supporting and spacing accessories. Provide steel order lists including bending and cutting details for all reinforcement shown on the structural design drawings.
 - c. Form construction details, including jointing, special formed joints or reveals, location and pattern of form tie placement [, and other items that affect exposed concrete visually.]
 - d. Calculations and layout drawings for formwork, shoring and/or reshoring [, and other submittals indicated on the drawings.] Work shall be prepared and signed and sealed by a Professional Engineer.
3. Assurance/Control Submittals:
 - a. Test Reports: Prepare reports in conformance with Section 014000 - Quality Requirements:
 - b. Submit laboratory test reports for concrete materials and mix designs for each strength and type of concrete proposed for use.
 - c. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
4. Delivery Tickets:
 - a. Copies of delivery tickets for each load of concrete delivered to site.
 - b. Indicate on each ticket the exact time that the mix is batched.
 - c. Mix identification number on ticket shall match number on submitted and approved mix design

- d. Submit copies to Testing Laboratory for verification of compliance with placing time.

NOTE TO SPECIFIER

Retain sub-section below if LEED criteria is required for project.

- B. LEED submittals:
1. Product data and statements for credits being considered.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with the Codes and Standards referenced in section 1.2 of this specification.
1. Provide qualification data for manufacturers and installers.
- B. Pre-Installation Conference:
1. Conduct a pre-installation conference prior to commencing Work of this Section.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver materials in unopened containers with labels identifying contents.
- C. Store powdered materials in dry area and in manner to prevent damage. Protect liquid materials from freezing or exceeding maximum storage temperatures set by product manufacturer.

1.6 ENVIRONMENTAL REQUIREMENTS

NOTE TO SPECIFIER

Specify project locations where fly ash and or ground granulated blast furnace slag are acceptable and areas where use is restricted, such as areas where rapid curing and early strength of concrete is required.

- A. Resource Management:
1. Recycled Content:
a. Concrete: Fly ash may be used as a substitute for a maximum of 25 percent of Portland cement unless otherwise specified by the engineer.
b. Concrete: Ground granulated blast furnace slag (GGBFS) may be used as a substitute for a maximum of 30 percent of Portland cement.
c. Steel Products: Post consumer recycled content plus one-half of preconsumer recycled not less than [] percent.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. Applied Concrete Technology, Inc., Post Office Box 548, Grayslake, IL 60030, Toll Free: 800-228-6694, Phone: 847-548-2444, Fax: 847-548-2555. www.protecrete.com
2. The Euclid Chemical Company, 19218 Redwood Road, Cleveland, OH 44110, Phone: 216-1-9222, Toll Free: (800) 321-7628, Fax: 216-531-9596 www.euclidchemical.com.
3. Fortifiber Corporation, 419 W. Plumb Lane, Reno, NV 89509, Toll Free: 800-773-4777, Fax: 775-333-6411, Website: www.fortifiber.com.
4. ChemRex Inc., Shakopee, Minnesota 55379, Toll Free: 800-433-9517, Fax: 800-496-6067.
5. BASF Construction Chemicals North America (former Master Builders), 23700 Chagrin Boulevard, Cleveland, OH 44122, Phone: 216-839-7500, Fax: 216-839-8821.
6. W.R. Meadows, Inc., PO Box 338, Hampshire, Illinois 60140-0338, Toll Free: 800-342-5976, Phone: 847-683-4500.
7. Reef Industries, 9209 Almeda Genoa, Houston, Texas 77075, Phone: 713-507-4251, Toll Free: 800-231-6074, Fax: 713-507-4295.
8. Stego Industries LLC, 27442 Calle Arroyo Suite A, San Juan, Capistrano, CA 92675, Phone: 877-464-7834, Fax: 949-493-5165, www.stegoindustries.com.
9. L & M Construction Chemicals, Inc. 14851 Calhoun Rd., Omaha, NE 68152-1140; Phone: 402-453-6600, Fax: 402-453-0244.
10. Curecrete Chemical Company, Inc., 1203 W. Spring Creek Pl., Springville, UT Phone: 801- 489-5663.
11. Midwest Floor Care Inc., 17202 Princeton Rd, Adams, NE 68301, Phone: 402-788-2820.
12. General Resource Technology, Inc., 2978 Center Court, Eagan, MN 55121, Phone: 800-324-8154, Fax: 651-454-4252, www.grtinc.com.

B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 CONCRETE MATERIALS

- A. Portland Cement: ASTM C150 – Type [] [supplement with] [fly ash] [ground granulated blast-furnace slag].
- B. Liquid admixtures: The following admixtures are permitted when approved in writing prior to use or are required as specified herein and shall be used in strict accordance with the manufacturer's specifications or recommendations:
1. Calcium chloride: Conform to ACI 301. The water soluble chloride ion level shall not exceed 0.3 percent by weight of cement.
 2. Air-entraining admixtures: ASTM C260 For steel hard trowel interior slab finish, do not use air entrainment admixtures.
 3. Water-reducing admixtures: Conform to ASTM C494, Type A.
 4. Water-reducing/accelerating admixtures: Conform to ASTM C494, Type C or E.
 5. Water-reducing/retarding admixtures: Conform to ASTM C494, Type D.
 - a. High-range/water-reducing (HRWR) admixtures: Conform to ASTM C494, Type F or G super plasticizers. HRWR admixture shall be used in concrete with a maximum water/cement ratio of 0.50 or less.

NOTE TO SPECIFIER

Specify project locations where fly ash and or ground granulated blast furnace slag are acceptable and areas where use is restricted, such as areas where rapid curing and early strength of concrete is required.

- C. Fly ash: Conform to ASTM C618. The use of a quality fly ash will be permitted as a cement-reducing admixture (minimum 15 percent and maximum 25 percent) unless otherwise restricted by the engineer. Fly ash used in concrete shall be from a single source and of a single class in combination with Portland cement of a single source and single class unless otherwise approved by the Engineer.
- D. Granulated Blast Furnace Slag is an alternative to fly ash and shall conform to ASTM C989 Grade 100 or 120. Granulated blast furnace slag may be used as a substitute for a maximum of 30 percent of Portland cement.

- E. Aggregates:
1. Normal-weight concrete - ASTM C33.
 2. Light-weight concrete – ASTM C330.
 3. Aggregates shall be from a single source.
- F. Water:
1. Clean, potable, and free of injurious amounts of oil, acid, alkali, organic or other deleterious matter not detrimental to concrete; drinkable.

2.3 GROUT/MORTARS

- A. Cement grout: Conform to ASTM C387 "Dry packaged mixtures".

NOTE TO SPECIFIER

Exposed slabs shall be sealed in a fashion compatible with the curing method specified.

2.4 CURING/SEALING/HARDENERS

- A. Dissipating liquid membrane-forming compounds for curing concrete; Conform to ASTM C309, Type 1. Curing compound shall be compatible with floor sealer or finish used. Low VOC.
- B. Method of curing shall be approved by the finish flooring applicator where finishes are indicated.
- C. Exterior Sealers: applied to horizontal concrete surfaces permanently exposed to salts, deicer chemicals and moisture, including parking decks. The manufacturer shall provide a five year labor and materials warranty on performance of the sealer. Sealer shall be compatible with the curing compound used.

NOTE TO SPECIFIER

The following materials provide varying levels of protection, sealant and hardness. Review products for project appropriateness.

- D. Liquid Densifier/Sealer/Hardener: to be applied on exposed concrete floors cured with dissipating membrane forming curing compound to harden and densify concrete surfaces. Sealers are to be clear, chemically reactive, a waterborne solution of silicate or silicate materials and proprietary components, odorless, and colorless.

2.5 JOINTS AND EMBEDDED ITEMS:

- A. Construction and Contraction Joints: Sealant shall be two-part semi-rigid epoxy, and shall have minimum Shore A Hardness of 80 when measured with ASTM D2240.

- B. Isolation Joints: Fillers shall consist of 1/8 inch width strips of neoprene, synthetic rubber, or approved substitute, extending the full depth of the slab. Sealant shall be two-part elastomeric type, polyurethane base.

2.6 VAPOR BARRIER/RETARDER

NOTE TO SPECIFIER

In the paragraph below, select [below] or [above] based on sub grade conditions and ACI committee 302 recommendations.

- A. Provide cover over prepared soil, [below][above] aggregate subbase material at slabs-on-grade, where shown on the plans with a minimum thickness of 10 mils.. Use only materials which are resistant to decay.

2.7 PROPORTIONING

- A. Prepare design mixes for each type and strength of concrete by either laboratory trial batch or field experience methods as specified in ACI 301. If laboratory trial batch method is used, use an independent testing facility acceptable to Contracting Officer for preparing and reporting proposed mix designs. The testing facility shall not be the same as used for field quality control testing and inspection unless otherwise acceptable to Contracting Officer.
- B. Submit written reports to the testing laboratory of each proposed mix for each class of concrete. Do not begin concrete production until mixes have been reviewed and approved.
- C. Concrete types and strengths: Minimum 28 Day Compressive Strength shall be per design requirements but not less than:
1. Paving base, columns, beams, walls, foundations, and footings: 3,500 psi.
 2. Slab-on-grade: 4,000 psi.
 3. Normal or Lightweight concrete on metal deck: 3,000 psi.
 4. Tilt-up: 4,000 psi.

NOTE TO SPECIFIER

Insert if applicable to project.

5. All concrete exposed to weather shall be air entrained (ASTM C260).
6. All concrete shall be normal weight except as noted above.
7. []

- D. Durability: Conform to ACI 301.
1. All concrete exposed to potentially destructive weathering, such as freezing and thawing, or to de-icer chemicals is to be air-entrained, [] ± 1 percent.,
 2. Water-cement ratio: For concrete subject to freezing and thawing or deicer chemicals, the water-cement ratio shall not exceed 0.53 by weight including any water added.

- E. Slump: Conform to ACI 301 and to specific project mix requirements.
- F. Production of concrete: Conform to ACI 301:
 - 1. Cast-in-place concrete used in the work shall be produced at a single off-site batching plant or may be produced at an on-site batch plant.
 - 2. All concrete shall be proportioned conforming to the approved mix designs and of the materials contained in those approved mixes.
 - 3. Prior to adding a high-range water reducer (super plasticizer), slump shall not exceed the working limit.
 - 4. Ready-mixed and on-site batched concrete shall be batched, mixed, and transported in accordance with ASTM C94.
 - a. The concrete producer shall furnish duplicate delivery tickets, one for the Contractor and one given to the Owner's Representative for each batch of concrete. The information provided on the delivery ticket shall include the quantity of materials batched including the amount of free water in the aggregate and any water added onsite. Show the date, time of day batched, and if ready-mixed the time of discharge from the truck. The quantity of water that can be added at the site without exceeding the maximum water-cementitious ratio specified shall be noted on the delivery ticket.
 - 5. For concrete produced on site with a central batch plant, mixing shall be done in an approved batch mixer concrete shall be batched, mixed, and transported in accordance with ASTM C94.
 - 6. Variations in consistency during the discharge of a single batch shall not exceed 1 inch of slump, except that a greater variation will be permitted if the slump of the concrete decreases and no water is added.
 - 7. All other concrete: Conform to ACI 301
 - 8. When improved workability, pumpability, lower water-cement ratio, or high ultimate and/or early strength is required, the HRWR admixture (super plasticizer) may be used.
 - 9. Ensure air content for slabs with steel trowel finish is less than 3.0 percent.
 - 10. No water shall be added to concrete except under the direct awareness of the project inspector.
 - 11. Adjustments to concrete mixes: Mix design adjustments may be requested by Contractor for approval by the Engineer at no additional cost to Contracting Officer. Laboratory test data for revised mix design and strength results must be submitted and accepted before using in work.

2.8 FORMWORK

- A. Section 031000: Concrete Forming and Accessories

2.9 REINFORCING MATERIALS

- A. Section 032000: Concrete Reinforcement

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION - GENERAL

- A. Install all cast-in-place concrete work in accordance with ACI 301 except as herein specified.
- B. All bearing materials shall be inspected by the Geotechnical Engineer prior to placing concrete. The Geotechnical Engineer specify site preparation requirements and provide recommendations to the Architect/Engineer prior to placing concrete.
- C. Immediately before placing concrete, spaces to be occupied by concrete shall be free from standing water, ice, mud, and debris.
- D. Concrete shall not be deposited under water or where water in motion may injure the surface finish of the concrete.
- E. Forms and the reinforcement shall be thoroughly cleaned of ice and other coatings. Remove surplus form releasing agent from the contact face of forms.
- F. Notify all trades concerned and the Owner's Representative sufficiently in advance of the scheduled time for concrete placement to permit installation of all required work by other trades.
- G. Before placing concrete, all required embedded items, including dovetail anchor slots, anchors, inserts, curb angles, metal frames, fixtures, sleeves, drains, stair nosings, accessory devices for Mechanical and Electrical installations shall be properly located, accurately positioned and built into the construction, and maintained securely in place.
- H. Build into construction all items furnished by the Owner and other trades. Provide all offsets, pockets, slabs, chases and recesses as job conditions require.
- I. Place and properly support reinforcing steel and anchor bolts.
- J. The alignment, orientation, spacing, and embedment length of mechanical load transfer devices in slab-on-grade and pavements shall conform to dimensions and tolerances shown on the drawings.

3.3 INSTALLATION - FORMWORK

- A. Section 031000 Concrete Forming and Accessories
- B. Construction and Contraction Joints: Conform to ACI 301 and recommendations of ACI 302.1R.

3.4 REINFORCEMENT

- A. Placement: Section 032000 Concrete Reinforcement

3.5 METHODS OF PLACEMENT AND PLACING CONCRETE

- A. Placement: Conform to ACI 301:

1. Concrete shall be placed within 90 minutes after the water has been added to the cement and aggregates. Concrete shall be placed prior to initial concrete set.
 2. Placing of concrete will not be permitted during rainfall or when rain appears imminent. If rain should fall subsequent to placement, the concrete shall be completely protected until curing is complete.
 3. Cold-Weather Placement: Comply with provisions of ACI 306.1 "Standard Specifications for Cold-Weather Concreting" for placement at temperatures below 40 deg F (4 deg C).
 - a. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise accepted in mix designs.
 - b. Concrete shall not be placed on frozen ground or placed when the ambient temperature is 40 deg F or less and dropping.
 - c. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures using vented heaters and insulating blankets.
 - d. Concrete temperatures shall be maintained above 50 degrees F for the first 7 days of curing.
 4. Hot-Weather Placement: When hot weather conditions exist that would impair quality and strength of concrete, place concrete complying with ACI 305R "Standard Specification for Hot-Weather Concreting" for placement at temperatures above 90 deg F (32 deg C).
 - a. Reject any concrete that has a temperature at the point of placement above 90 deg F unless approved otherwise by the Engineer. When air temperatures are between 80 and 90 deg F the maximum mixing and delivery time is reduced to 75 minutes. When air temperatures exceed 90 deg F, the maximum mixing and delivery time is reduced to 60 minutes.
 - b. Use water-reducing retarding admixture when required by high temperatures, low humidity, or other adverse placing conditions, as acceptable to the Engineer.
- B. Depositing Concrete
1. Deposit concrete as near its final position as possible to avoid segregation due to rehandling or flowing.
 2. The number, type, position, and design of joints shall be approved by the Engineer prior to concrete placement.
 3. The concreting shall be carried on at such a rate that the concrete is plastic at all times and flows readily into the spaces between reinforcing bars. No concrete that has partially hardened or been contaminated by foreign materials shall be deposited in the work
 4. When concreting is started, it shall be carried on as a continuous operation until the placing of the section is completed.
 5. Except as intercepted by joints, concrete shall be placed in continuous layers.
 6. Field records shall be kept of the time and date of the placing of each concrete pour. Locations where concrete test cylinders are made shall also be recorded. Records shall be kept on file at the job until its completion and shall be subject to the inspection of the Owner's Representative at all times.
- C. Joints
1. Joints shall be vertical in walls and horizontal in slabs [unless otherwise specified on the drawings].
 2. Dowel bars and tie bars shall be inspected
 3. Control joints for controlling concrete shrinkage shall be provided in floor slabs, walls, decks, conduits, and channels as shown on the plans or approved by the Engineer.
 4. Joint spacing and sawcut depth for slab-on-grade and concrete pavement shall conform to that shown on the pour sequencing plan and/or drawings.
 - a. Sawed control (contraction) joints for pavements and slab-on-grade shall be installed as soon as practical so as not to ravel the concrete but less than 12 hours.
 - b. Joint spacing shall in feet shall not exceed 2-1/2 times the slab thickness in inches unless otherwise approved by the Engineer.
 5. Joints in slabs shall align with joints in adjoining walls unless otherwise approved by the Architect/Engineer or shown in the drawings. Joints shall also line up with architectural reveals and form lines. All corners shall be relieved by cutting joint to adjacent control joint.

6. If there is a delay in casting but prior to concrete initial set, the concrete placed after the delay shall be thoroughly spaded and consolidated at the edge of that previously placed to avoid cold joints.
7. Where placing concrete is interrupted long enough for the concrete to take its initial set, the working face shall be made a construction joint.
 - a. Preparation and disposition of unplanned cold joints in walls shall be approved by the Engineer.
 - b. For slab-on-grade, pavements, sidewalk, and curb and gutter, concrete shall be removed back to the nearest planned joint and a construction joint installed.
8. Unless otherwise noted on the drawings, where concrete is to be placed against existing concrete, except in the case of expansion joints, the joint face of the existing concrete shall be roughened.
9. Corner sections of walls shall not be placed until the adjoining wall sections have cured at least 14 days.

D. Consolidation

1. All concrete shall be thoroughly consolidated by internal mechanical vibrators during the placing operation and shall be thoroughly worked around the reinforcement and embedded fixtures and into corners of the forms.
2. Consolidation shall be carried on continuously with the placing of concrete.
3. The vibrator shall be kept in nearly a vertical position as practicable. The use of vibrators to shift or drag concrete after deposition will not be permitted. Vibrators shall not be laid horizontally or laid over.
4. Concrete shall not be placed until the previous layer has been vibrated.
5. Unless directed otherwise by the Engineer, the top 2 feet of walls shall be re-vibrated approximately 1 hour after placement of concrete and while a running vibrator will still sink under its own weight into the concrete and liquefy it momentarily.

E. Protection of cast concrete: Conform to ACI 301.

F. Repair of surface defects: Conform to ACI 301.

3.6 FINISHING

A. Finishing of formed surfaces: ACI 301:

1. Tops of forms:
 - a. Strike concrete smooth at tops of forms.
 - b. Float to texture comparable to formed surfaces.
2. Formed surfaces:
 - a. Finished formed surfaces shall conform accurately to the shape, alignment, grades, and sections shown on the drawings or prescribed by the Engineer.
 - b. Surfaces shall be free from fins, bulges, ridges, honeycombing, or roughness of any kind and shall present a finished, smooth, continuous hard surface.
 - c. Rough form finish at unfinished areas unexposed to public view. Smooth form finish at surfaces exposed to public view.

B. Slabs: Minimum slab surface tolerance must satisfy ACI 301 and ACI 302.1R.

1. Slabs-on-grade:
 - a. For exposed slabs, install semi-rigid epoxy sealant in construction and contraction joints after slab has a minimum of 60 days or otherwise approved by the Engineer..
 - b. Allowable tolerance for slab on grade surfaces, measured in accordance with ACI 117 shall meet or exceed an overall value of FF35/FL25, with minimum local value of FF24/FL17.
2. Suspended Floor Slab:
 - a. Minimum surface tolerances: FF25 & FL20 overall and FF20 & FL15 local.
3. Concrete Finishes:
 - a. Floor Slabs: Steel trowel finish unless otherwise noted on the plans.
 - b. Exposed concrete slabs sealed or sealed and hardened using a liquid compound compatible with the curing method used.

- c. Exterior Concrete Finishes: Unless otherwise noted on the drawings, floors, walkways, and roof finishes shall be sloped a minimum 0.125 inch per foot to drain water. A light steel trowel with broom finish unless otherwise noted on the plans. Apply exterior sealer to surfaces exposed to deicer chemicals that is compatible with the curing method used.
- d. Exposed Ramps, Landings and Stair Treads: A light steel trowel with broom finish unless otherwise noted on the plans. Surfaces shall be sealed or sealed and hardened using a liquid compound compatible with the curing method used.
- e. A heavy broom finish shall be provided on disabled person ramps, utility ramps, and around exterior loading docks.

3.7 CURING, PROTECTION, LIQUID HARDNERS AND SEALERS

- A. Temperature, Wind, and Humidity
 - 1. When concrete slabs and other unformed concrete is placed in warm, dry, dusty, or windy conditions, concrete surfaces shall be protected from rapid drying by use of windbreaks, shading, fogging with properly designed nozzles, or a combination of these measures. Hot weather concreting procedures provided in ACI 305R shall be used when ambient conditions dictate.
 - 2. Cold weather concreting procedures provided in ACI 306R shall be used when ambient conditions dictate.
- B. Curing Compound
 - 1. All curing methods shall be placed [within two hours] after final finishing. All exposed surfaces of concrete including floor slabs, whether or not they receive a finish flooring, shall be protected from premature drying for a minimum of seven days.
 - 2. Apply the specified curing compound in accordance with manufacturer's written instructions.
 - 3. When used on an unformed concrete surface, application of the first coat of curing compound shall commence immediately after finishing operations have been completed. When curing compound is used on a formed concrete surface, the surface shall first be moistened with a fine spray of water immediately after the forms have been removed.
 - a. Surfaces shall be sprayed uniformly with 2 coats of curing compound. As soon as the first coat has become dry, a second coat shall be applied in the same manner. The direction of application of the second coat shall be perpendicular to the first coat.
 - 4. Curing compound shall not be used on any concrete surface specified to receive additional concrete, coatings, grout, and chemical treatment
- C. Protection
 - 1. Freshly placed concrete shall be protected against wash by rain.
 - 2. Dust control shall be provided in the surrounding areas during placement.
 - 3. During the first 2 day period of curing, no traffic on or loading of the floors will be permitted unless otherwise approved by the Engineer.
 - 4. The contractor shall allow no traffic and take precautions to avoid damage to the membrane of the curing compound for a period of not less than 28 days. Damage shall be repaired immediately.
 - 5. Self-supporting structures shall not be loaded in such a way to overstress the concrete.
- D. All floor slabs shall be cured using products and methods compatible with selected floor adhesives, toppings, and other finish materials.
- E. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.
- F. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete according to manufacturer's written instruction.

3.8 PATCHING AND REPAIR

- A. All repairs of defective areas shall conform to ACI 301. On areas requiring treatment of defects and until such repairs have been completed, only water cure will be permitted
- B. At any time prior to final acceptance, concrete found to be defective, damaged, or not in accordance with the specifications shall be repaired or removed and replaced with acceptable concrete.
- C. Repair or replace concrete with excessive honeycombing due to improper placement.
 - 1. If approved, a bonding admixture, bonding compound, or epoxy adhesive may be used in accordance with the manufacturer's preparation and application recommendations. Comply with ACI 301 and ACI 503.2 for standard specifications for bonding plastic concrete to hardened concrete with a multiple component epoxy adhesive.
 - 2. The repair concrete shall be thoroughly consolidated in place and struck off so as to leave the patch slightly higher than the surrounding surface. The concrete shall be left undisturbed for at least 1 hour to permit initial shrinkage then finished.
 - 3. The patched area shall be kept damp for 7 days.
 - 4. The color of the patch material shall match the color of the surrounding concrete. Repairs shall be made promptly while the base concrete is less than 28 days old
- D. Areas showing excessive defects as determined by the Architect/Engineer shall be removed and replaced.
- E. High spots identified in the floor flatness and levelness survey may be removed with bump grinding. Areas to be ground shall not exceed more than 10 percent of any one slab nor more than 5 percent of the total slab-on-grade area.
- F. If approved by the Architect/Engineer, concrete slab random cracking may be routed and sealed. Slabs with more than one structural crack or with multiple cracks within a slab shall be removed and replaced. If random cracks are attributed to non-working sawcut control joints, uncracked joints parallel to the cracking shall be filled with a structural epoxy.
- G. Interior slab-on-grade subjected to lift truck traffic shall be routed and sealed with a semi-rigid epoxy sealant. Exterior slabs may be routed and sealed with the flexible joint sealant to be installed in pavement joints.

3.9 GROUTING

- A. After steel columns have been installed and leveled, grout the space between the bottom of the plate and concrete, using cement grout completely filling the space and forming solid bearing for the column base plate.

3.10 EVALUATION AND ACCEPTANCE OF CONCRETE

- A. Comply with ACI 301, ACI 318-Chapter 5 and ACI 311 for compressive strength, slump, and frequency of testing.
- B. The frequency of testing indicated in the aforementioned codes and standards shall be increased if concrete fails to meet the acceptance criteria or if deemed by the Engineer to be too variable.

3.11 ACCEPTANCE OF STRUCTURE

- A. Comply with ACI 301 and modifications in this section.
- B. Completed concrete work, which meets all applicable requirements, will be accepted without qualification.

- C. Completed concrete work which fails to meet one or more requirements but which has been repaired to bring it into compliance will be accepted without qualification.
- D. Completed concrete work which fails to meet one or more requirements and which cannot be brought into compliance may be accepted or rejected by the Contracting officer. In this event, modifications may be required to assure that remaining work complies with the requirements.
- E. The costs of any additional tests or analysis, including additional architectural and engineering services, performed to prove the adequacy of the concrete work, shall be borne by the Contractor without extension of contract time.

3.12 MISCELLANEOUS CONCRETE

- A. Curbs: Provide monolithic finish to interior surface of curbs by stripping forms while concrete is still green and steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.
- B. Equipment bases and foundations: Provide machine and equipment bases and foundations as shown on drawings. Set anchor bolts for machines and equipment with template at correct elevations, complying with certified diagrams or templates of manufacturer furnishing machines and equipment.

3.13 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Requirements:
 - 1. Provide and maintain an adequate program of quality control for the materials, production methods, and workmanship to assure conformance of all work to the project contract documents.
 - 2. Testing and Evaluation:
 - a. Furnish and pay for the services of an independent Testing Laboratory satisfactory to the Contracting Officer. The testing laboratory shall have prime responsibility for review, verification inspection, and testing of the concrete producer's materials, operations, facilities, and quality control procedures and evaluating the results for conformance with these specifications.
 - b. In addition to the requirements and duties in ACI 301 the testing laboratory shall provide the following:
 - a. One or more additional test cylinders shall be taken during cold weather concrete placement and cured on the job site under conditions of concrete represented to determine safe form-stripping period.
 - b. Inspect concrete batching, mixing, and delivery operations periodically or as directed by the Contracting Officer.
 - c. Submit to the Contracting Officer and concrete producer, during construction, the results of concrete tests.
 - c. The Testing Laboratory shall assess and report floor flatness and levelness in accordance with the requirements of this specification.
 - d. Field and concrete plant inspections are to be made by a competent representative of the Testing Laboratory during all structural concreting operations including periodic audit and spot check of the Producer's and/or Contractor's quality control procedures to assure proper and adequate control. When it appears that any material furnished fails to fulfill specification requirements, the Testing Laboratory is to report such deficiency immediately to the Contracting Officer and appropriately record it in his report.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 41 16 00 - PRECAST LIGHTWEIGHT ROOF SLABS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of precast lightweight roof deck concrete channels, concrete planks, and gypsum planks. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

- A. Channel Slabs: Slabs shall be composed of Portland cement and lightweight aggregate with minimum compressive strength 3,750 psi. Legs shall be reinforced with deformed bars; web shall have welded wire fabric reinforcement. Channels shall support a 30 psf live load plus a 20 psf superimposed dead load.
- B. Concrete Planks: Planks shall be composed of Portland cement and lightweight aggregate with a minimum compressive strength of 3,750 psi. Planks shall be reinforced with welded wire fabric. Planks shall support a 30 psf live load plus a 20 psf superimposed dead load.
- C. Gypsum Planks shall conform to ASTM C 956, factory-laminated to 2-inch thickness, 2-foot wide panels. Planks shall be continuously supported along sides.
- D. Subpurlins shall be bulb-ties, ASTM A 440.
- E. Grout shall be lightweight concrete or gypsum concrete.

1.3 EXECUTION

- A. Concrete Channels and Planks shall be securely attached to support steel or concrete by metal clips or other approved attachments; minimum support bearing shall be 4 inches. Open joints between channels or planks shall be filled with lightweight concrete grout. Planks with tongue and groove edges may not require grouting.
- B. Gypsum Planks shall be snugly fit between bulb-tee subpurlins. Subpurlins shall be tack-welded or screw-attached to supporting steel or weld bar cast in supporting concrete. Joints at bulb-tees shall be grouted with gypsum grout.

END OF SECTION 03 41 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 41 26 00 - UNBONDED POST-TENSIONED CONCRETE

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for unbonded post-tensioned concrete. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Furnishing post-tensioning reinforcement and accessories including non-encapsulated and encapsulated prestressing tendons, pocket formers, support bars, bar chairs, and slab bolsters.
 - b. Installing post-tensioning tendons.
 - c. Performing post-tensioning operations including stressing and finishing tendons.
 - d. Recording tendon elongations and gage pressures.
 - e. Finishing tendon ends and patching stressing pockets.

C. Definitions

1. Strand Tail: Excess strand length extending past the anchorage device.
2. Stressing Blockout: Opening created in the slab to allow access to stressing-end anchorages.
3. Stressing Pocket: Void formed by pocket former at stressing-end anchorage to provide required cover over wedges and strand tail.
4. Wedge Cavity: Cone-shaped hole in anchorage device designed to hold the wedges that anchor the strand.

D. Performance Requirements

1. Structural Performance: Design cast-in-place, post-tensioned concrete reinforcement as indicated in this Section. Show final effective forces, tendon profiles, and nonprestressed reinforcement on design Shop Drawings.
2. Employ professional Engineer, registered in <Insert State>, and acceptable to the Owner, to perform design. Sign and seal design Shop Drawings and design calculations submitted to the Owner for review. Prepare and seal drawings and calculations for submittal to authorities having jurisdiction. Comply with design intent, criteria, and requirements of the Contract Documents.
3. Design structure to withstand loads according to governing codes, within limits and under conditions indicated.
4. Average Precompression:
 - a. Minimum Average Slab Precompression: 125 psi (0.86 MPa) **OR** 200 psi (1.4 MPa), **as directed**.
 - b. Maximum Average Slab Precompression: 300 psi (2.1 MPa) **OR** 500 psi (3.4 MPa), **as directed**.
 - c. Minimum Average Precompression in T-, L-, and Rectangular-Beam Cross Sections: 200 psi (1.4 MPa).
 - d. Minimum Precompression in Slab Section Not Included in T- or L-Beam Section: 100 psi (0.7 MPa).
 - e. Maximum Precompression in Transfer Girders: 1000 psi (6.9 MPa). Specify stage-stressing sequence to avoid overstress.
5. Comply with ACI 318 (ACI 318M) limits on stresses at transfer of prestress and under service load.
6. Comply with ACI 318 (ACI 318M) requirements for minimum bonded reinforcement.
7. Comply with ACI 318 (ACI 318M) requirements for concrete cover over reinforcement.

8. Design members such that thickness and concrete cover over reinforcement comply with fire-resistance requirements of authorities having jurisdiction.
9. Design members such that thickness and concrete cover over reinforcement comply with the following fire-resistance requirements:
 - a. Slabs: Two hours.
 - b. Beam: Two hours.
10. Deflection Limits Including Creep and Shrinkage Effects:
 - a. Total Dead Load: $L/600$.
 - b. Total Dead Plus Live Load: $L/360$.
11. Slab Design:
 - a. Minimum Slab Thickness: 5-1/2 inches (140 mm).
 - 1) Minimum Thickness if Conduit Is Embedded: 6 inches (150 mm).
 - 2) Maximum Span/Depth Ratio: 45.
 - b. Locate closure strips at midspan and adjust tendon forces and profiles accordingly. Calculate moments in spans with closure strips assuming a continuous slab. Provide only nonprestressed reinforcement within closure strips. Design reinforcement in closure strip to carry ultimate moment at midspan.

E. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittal:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
3. Shop Drawings: Installation drawings including plans, elevations, sections, details, and notes prepared by or under the supervision of a registered professional engineer detailing tendon layout and installation procedures.
4. Product Certificates:
5. Qualification Data: For Installer, manufacturer, and testing agency.
6. Mill Test Reports: For prestressing strand.
7. Field quality-control test reports.
8. Calibration Certificates: For jacks and gages.
9. Stressing Records: Filled out by testing agency during stressing operation with the following information recorded:
 - a. Name of Project.
 - b. Date of approved installation drawings used for installation and stressing.
 - c. Floor number and concrete placement area.
 - d. Date of stressing operation.
 - e. Weather conditions including temperature and rainfall.
 - f. Name and signature of inspector.
 - g. Name of individual in charge of stressing operation.
 - h. Serial or identification numbers of jack and gage.
 - i. Date of jack-and-gage calibration certificates.
 - j. Gage pressure to achieve required stressing force per supplied calibration chart.
 - k. Tendon identification mark.
 - l. Calculated tendon elongation.
 - m. Actual tendon elongation.
 - n. Actual gage pressure.

F. Quality Assurance

1. Installer Qualifications: A qualified installer whose full-time Project superintendent has successfully completed PTI's Level 1 - Field Fundamentals course or has equivalent verifiable experience and knowledge acceptable to the Owner.

- a. Superintendent must have received training from post-tensioning supplier in the operation of stressing equipment to be used on Project.
 2. Manufacturer Qualifications: Fabricating plant certified by PTI.
 3. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated, as documented according to ASTM E 548.
 - a. Testing Agency Inspector: Personnel performing field inspections and measuring elongations shall have successfully completed PTI's Level 1 - Field Fundamentals course or shall have equivalent qualifications acceptable to the Owner.
 4. ACI Publications: Comply with ACI 423.6, "Specification for Unbonded Single Strand Tendons," unless otherwise indicated in the Contract Documents.
 5. Preinstallation Conference: Conduct conference at Project site.
- G. Delivery, Storage, And Handling
1. Deliver, store, and handle post-tensioning materials according to PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
- H. Coordination
1. Attachments and Penetrations:
 - a. Attach permanent fixtures such as curtain-wall systems, handrails, fire-protection equipment, lights, and security devices to the slab using embedded anchors. Drilled anchors are not allowed unless authorized in writing by the Owner.
 - b. Power-driven fasteners are not allowed unless authorized in writing by the Owner.
 - c. Core drilling for sleeves or other penetrations is not allowed unless authorized in writing by the Owner.
 - d. Protect penetrations within 18 inches (460 mm) of an anchorage with ASTM A 53/A 53M, Schedule 40 steel pipe.

1.2 PRODUCTS

- A. Prestressing Tendons
1. Prestressing Strand: ASTM A 416/A 416M, Grade 270 (Grade 1860), uncoated, 7-wire, low-relaxation, 0.5-inch- (12.7-mm-) **OR** 0.6-inch- (15.2-mm-), **as directed**, diameter strand.
 2. Post-Tensioning Coating: Compound with friction-reducing, moisture-displacing, and corrosion-inhibiting properties specified in ACI 423.6; chemically stable and nonreactive with prestressing steel, nonprestressed reinforcement, sheathing material, and concrete.
 - a. Minimum Coating Weight: 2.5 lb (1.14 kg) for 0.5-inch- (12.7-mm-) diameter strand **OR** 3 lb (1.36 kg) for 0.6-inch- (15.2-mm-) diameter strand, **as directed**, per 100 feet (30 m) of strand.
 - b. Completely fill annular space between strand and sheathing over entire tendon length with post-tensioning coating.
 3. Tendon Sheathing: Comply with ACI 423.6.
 - a. Minimum Thickness: 0.050 inch (1.25 mm) for polyethylene or polypropylene with a minimum density of 0.034 lb/cu. in. (0.9 g/cu. cm).
 - b. Continuous over the entire length of tendon to provide watertight encapsulation of strand and between anchorages to prevent intrusion of cement paste or loss of coating for a non-encapsulated system.
 4. Anchorage Device and Coupler Assembly: Assembly of strand, wedges, and anchorage device or coupler complying with static and fatigue testing requirements in ACI 423.6 and capable of developing 95 percent of actual breaking strength of strand.
 - a. Anchorage Bearing Stresses: Comply with ACI 423.6 for stresses at transfer load and service load.
 - b. Fixed-End Anchorage Device Assemblies: Plant fabricated with wedges seated at a load of not less than 80 percent and not more than 85 percent of breaking strength of strand.
 5. Encapsulation System: Watertight encapsulation of prestressing strand consisting of the following:

- a. Wedge-Cavity Caps: Attached to anchorages with a positive mechanical connection and completely filled with post-tensioning coating.
 - 1) Caps for Fixed and Stressing-End Anchorages Devices: Designed to provide watertight encapsulation of wedge cavity. Sized to allow required extension of strand past the wedges.
 - a) Attach cap for fixed-end anchorage device in fabricating plant.
 - 2) Caps at Intermediate Anchorages: Open to allow passage of strand.
 - b. Sleeves: Attached to anchorage device with positive mechanical connection; overlapped a minimum of 4 inches (100 mm) with sheathing and completely filled with post-tensioning coating.
- B. Nonprestressed Steel Bars
1. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 **OR** 60, **as directed**, percent.
 2. Support Bars, Reinforcing Bars, Hairpins: ASTM A 615/A 615M, Grade 60 (Grade 420), deformed. Minimum support bar size is 1/2 inch (13 mm).
 3. Low-Alloy-Steel Support Bars, Reinforcing Bars, Hairpins: ASTM A 706/A 706M, deformed.
 4. Galvanized Support Bars, Reinforcing Bars, Hairpins: ASTM A 615/A 615M, Grade 60 (Grade 420) **OR** ASTM A 706/A 706M, **as directed**, deformed bars, ASTM A 767/A 767M, Class I **OR** II, **as directed**, zinc coated after fabrication and bending.
 - a. Zinc Repair Material: ASTM A 780, zinc-based solder, paint containing zinc dust, or sprayed zinc.
 5. Epoxy-Coated Support Bars, Reinforcing Bars, Hairpins: ASTM A 615/A 615M, Grade 60 (Grade 420) **OR** ASTM A 706/A 706M, **as directed**, deformed bars, ASTM A 775/A 775M epoxy coated with less than 2 percent damaged coating in each 12-inch (300-mm) bar length.
 - a. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on bars and complying with ASTM A 775/A 775M. Repair damaged areas according to ASTM D 3963/D 3963M.
 6. Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening tendons and tendon support bars in place. Manufacture bar supports, according to CRSI's "Manual of Standard Practice," from steel wire, plastic, or precast concrete of greater compressive strength than concrete, and as follows:
 - a. For uncoated bars, use all-plastic **OR** CRSI Class 1 plastic-protected **OR** CRSI Class 2 stainless-steel, **as directed**, bar supports.
 - b. For epoxy-coated bars, use CRSI Class 1A epoxy-coated or other dielectric-polymer-coated wire **OR** all-plastic, **as directed**, bar supports.
 - c. For zinc-coated bars, use galvanized wire or dielectric-polymer-coated wire **OR** all-plastic, **as directed**, bar supports.
- C. Accessories
1. Pocket Formers: Capable of completely sealing wedge cavity; sized to provide the required cover over the anchorage and allow access for cutting strand tail.
 2. Anchorage Fasteners: Stainless-steel **OR** Galvanized steel **OR** Uncoated steel, **as directed**, nails, wires, and screws used to attach anchorage devices to formwork.
 3. Sheathing Repair Tape: Elastic, self-adhesive, moistureproof tape with minimum width of 2 inches (50 mm), in contrasting color to tendon sheathing; nonreactive with sheathing, coating, or prestressing steel.
- D. Patching Material
1. Patching Material: One component, polymer-modified, premixed patching material containing selected silica aggregates and portland cement, suitable for vertical and overhead application. Do not use material containing chlorides or other chemicals known to be deleterious to prestressing steel or material that is reactive with prestressing steel, anchorage device material, or concrete.

1.3 EXECUTION

A. Formwork

1. Provide formwork for post-tensioned elements as specified in Division 03 Section "Cast-in-place Concrete". Design formwork to support load redistribution that may occur during stressing operation. Ensure that formwork does not restrain elastic shortening, camber, or deflection resulting from application of prestressing force.
2. Do not remove forms supporting post-tensioned elements until tendons have been fully stressed and elongations have been approved by the Owner, unless authorized in writing by the Owner.
3. Do not place concrete in supported floors until tendons on supporting floors have been stressed and elongations have been approved by the Owner, unless authorized in writing by the Owner.

B. Nonprestressed Steel Reinforcement Placement

1. Placement of nonprestressed steel reinforcement is specified in Division 03 Section "Cast-in-place Concrete". Coordinate placement of nonprestressed steel reinforcement with installation of post-tensioning tendons.

C. Tendon Installation

1. Install tendons according to approved installation drawings and procedures stated in PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
2. Tendon Supports: Provide continuous slab bolsters or bars supported on individual high chairs spaced at a maximum of 42 inches (1070 mm) o.c. to ensure tendons remain in their designated positions during construction operations and concrete placement.
 - a. Support tendons as required to provide profiles shown on installation drawings. Position supports at high and low points and at intervals not exceeding 48 inches (1220 mm). Ensure that tendon profiles between high and low points are smooth parabolic curves.
 - b. Attach tendons to supporting chairs and reinforcement without damaging tendon sheathing.
 - c. Support slab tendons independent of beam reinforcement.
3. Maintain tendon profile within maximum allowable deviations from design profile as follows:
 - a. 1/4 inch (6.3 mm) for member depth less than or equal to 8 inches (200 mm).
 - b. 3/8 inch (10 mm) for member depth greater than 8 inches (200 mm) and less than or equal to 24 inches (610 mm).
 - c. 1/2 inch (13 mm) for member depth greater than 24 inches (610 mm).
4. Maintain minimum radius of curvature of 480-strand diameters for lateral deviations to avoid openings, ducts, and embedded items. Maintain a minimum of 2 inches (50 mm) of separation between tendons at locations of curvature.
5. Limit tendon bundles to five tendons. Do not twist or entwine tendons within a bundle. Maintain a minimum distance of 12 inches (300 mm) between center of adjacent bundles.
6. If tendon locations conflict with nonprestressed reinforcement or embedded items, tendon placement governs unless changes are authorized in writing by the Owner. Obtain the Owner's approval before relocating tendons or tendon anchorages that interfere with one another.
7. Deviations in horizontal spacing and location of slab tendons are permitted when required to avoid openings and inserts.
8. Installation of Anchorage Devices:
 - a. Place anchorage devices at locations shown on approved installation drawings.
 - b. Do not switch fixed and stressing-end anchorage locations unless authorized in writing by the Owner.
 - c. Attach pocket formers, intermediate anchorage devices, and stressing-end anchorage devices securely to bulkhead forms. Install stressing-end and intermediate anchorage devices perpendicular to tendon axis.
 - d. Install tendons straight, without vertical or horizontal curvature, for a minimum of 12 inches (300 mm) behind stressing-end and intermediate anchorages.
 - e. Embed intermediate anchorage devices at construction joints in first concrete placed at joint.

- f. Minimum splice length in reinforcing bars at anchorages is 24 inches (600 mm). Stagger splices a minimum of 60 inches (1500 mm).
 - g. Place fixed-end anchorage devices in formwork at locations shown on installation drawings. Support anchorages firmly to avoid movement during concrete placement.
 - h. Remove loose caps on fixed-end anchorages, refill with post-tensioning coating, and re-attach caps to achieve a watertight enclosure.
 - 9. Maintain minimum concrete cover as follows:
 - a. From Exterior Edge of Concrete to Wedge Cavity: 1-1/2 inches (38 mm) **OR** 2 inches (50 mm), **as directed**.
 - b. From Exterior Edge of Concrete to Strand Tail: 3/4 inch (19 mm).
 - c. From Exterior Edge of Concrete to Wedge-Cavity Cap: 1 inch (25 mm).
 - d. Top, Bottom, and Edge Cover for Anchorage Devices: 3/4 inch (19 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
 - 10. Maintain minimum clearance of 6 inches (150 mm) between tendons and openings.
 - 11. Prior to concrete placement, mark tendon locations on formwork with spray paint.
 - 12. Do not install sleeves within 36 inches (914 mm) of anchorages after tendon layout has been inspected unless authorized in writing by the Owner.
 - 13. Do not install conduit, pipe, or embeds requiring movement of tendons after tendon layout has been inspected unless authorized in writing by the Owner.
 - 14. Do not use couplers unless location has been approved by the Owner.
- D. Sheathing Inspection And Repair
 - 1. Inspect sheathing for damage after installing tendons. Repair damaged areas by restoring post-tensioning coating and repairing or replacing tendon sheathing.
 - a. Ensure that sheathing is watertight and there are no air voids.
 - b. Follow tape repair procedures in PTI's "Field Procedures Manual for Unbonded Single Strand Tendons."
 - 2. Maximum length of exposed strand behind anchorages is as follows:
 - a. Fixed End: 12 inches (300 mm).
 - b. Intermediate and Stressing End: 0 inches (0 mm) **OR** 1 inch (25 mm), **as directed**.
 - 1) Cover exposed strand with sheathing repair tape to prevent contact with concrete.
 - 3. Immediately remove and replace tendons that have damaged strand.
- E. Concrete Placement
 - 1. Do not place concrete until placement of tendons and nonprestressed steel reinforcement has been inspected by special inspector **OR** testing agency, **as directed**.
 - 2. Provide the Owner and special inspector **OR** testing agency, **as directed**, a minimum of 48 hours' notice before concrete placement.
 - 3. Place concrete as specified in Division 03 Section "Cast-in-place Concrete". Ensure compaction of concrete around anchorages.
 - 4. Ensure that position of tendon and nonprestressed steel reinforcement does not change during concrete placement. Reposition tendons and nonprestressed steel reinforcement moved during concrete placement.
 - 5. Ensure that method of concrete placement does not damage tendon sheathing. Do not support pump lines, chutes, or other concrete placing equipment on tendons.
- F. Tendon Stressing
 - 1. Calibrate stressing jacks and gages at start of job and at least every six months thereafter. Keep copies of calibration certificates for each jack-and-gage pair on Project site and available for inspection. Exercise care in handling stressing equipment to ensure that proper calibration is maintained.
 - 2. Stress tendons only under supervision of qualified post-tensioning superintendent.
 - 3. Do not begin stressing operations until concrete strength has reached 3000 psi (20.7 MPa) as indicated by compression tests of field-cured cylinders.
 - 4. Complete stressing within 96 hours of concrete placement.

5. If concrete has not reached required strength, obtain the Owner's approval to partially stress tendons and delay final stressing until concrete has reached required strength.
 6. Stage stress transfer girders **OR** foundation mats, **as directed**, according to schedule shown on the Contract Drawings.
 7. If detensioning and restressing of tendon is required, discard wedges used in original stressing and provide new wedges.
 8. Mark and measure elongations according to PTI's "Field Procedures Manual for Unbonded Single Strand Tendons." Measure elongations to closest 1/8 inch (3.2 mm).
 9. Submit stressing records within one day of completion of stressing. If discrepancies between measured and calculated elongations exceed plus or minus 7 percent, resolve these discrepancies to satisfaction of the Owner.
 10. Prestressing will be considered acceptable if gage pressures shown on stressing record correspond to required stressing force and calculated and measured elongations agree within 7 percent.
 11. If measured elongations deviate from calculated elongations by more than 7 percent, additional testing, restressing, strengthening, or replacement of affected elements may be required.
- G. Tendon Finishing
1. Do not cut strand tails or cover anchorages until stressing records have been reviewed and approved by the Owner.
 2. Cut strand tails as soon as possible after approval of elongations.
 3. Cut strand tail between 1/2 and 3/4 inch (13 and 19 mm) from wedges. Do not damage tendon or concrete during removal of strand tail. Acceptable methods of cutting strand tail include the following:
 - a. Oxyacetylene flame.
 - b. Abrasive wheel.
 - c. Hydraulic shears.
 - d. Plasma cutting.
 4. Install caps and sleeves on intermediate anchorages within one day of stressing.
 5. Cut strand tails and install caps on stressing-end anchorages within one day of the Owner's acceptance of elongations.
 6. Patch stressing pockets within one day of cutting strand tail. Clean inside surface of pocket to remove laitance or post-tensioning coating before installing patch material. Finish patch material flush with adjacent concrete.
- H. Field Quality Control
1. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports. Cooperate with testing agency to facilitate the execution of its duties.
 - a. Before concrete placement, special inspector **OR** testing agency, **as directed**, will inspect the following for compliance with post-tensioning installation drawings and the Contract Documents:
 - 1) Location and number of tendons.
 - 2) Tendon profiles and cover.
 - 3) Installation of backup bars, hairpins, and other nonprestressed reinforcement shown on post-tensioning installation drawings.
 - 4) Installation of pocket formers and anchorage devices.
 - 5) Repair of damaged sheathing.
 - 6) Connections between sheathing and anchorage devices.
 - b. Special inspector **OR** Testing agency, **as directed**, will record tendon elongations during stressing.
 - c. Special inspector **OR** Testing agency, **as directed**, will immediately report deviations from the Contract Documents to the Owner.
- I. Protection

1. Do not expose tendons to electric ground currents, welding sparks, or temperatures that would degrade component.
2. Protect exposed components within one workday of their exposure during installation.
3. Prevent water from entering tendons during installation and stressing.
4. Provide weather protection to stressing-end anchorages if strand tails are not cut within 10 days of stressing the tendons.

J. Repairs

1. Submit repair procedure to the Owner for evaluation and approval.
2. Do not proceed with repairs requiring removal of concrete unless authorized in writing by the Owner.

END OF SECTION 03 41 26 00

SECTION 03 47 13 00 - MPF TILT-UP CONCRETE**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Tilt-up sitecast concrete wall panels, non-load bearing, erected from mold to final position.
2. Supports, devices, and attachments.
3. Reinforcement, anchorages, and accessories.

B. Related Sections:

1. Section 012300 - Alternates.
2. Section 033000 - Cast-In-Place Concrete: Grout and concrete curing.
3. Section 051200 - Structural Steel Framing: Support plates and angles with anchor studs, expansion bolts, and epoxy bolts which are embedded in or cast into concrete for supporting structural steel, steel joists, and steel deck.
4. Section 055000 - Metal Fabrications: Other metal components cast into concrete.
5. Section 076200 - Sheet Metal Flashing and Trim: Counterflashing receivers or reglets.
6. Section 079200 - Joint Sealants: Installation of panel joint sealers.
7. Section 099100 - Painting: Priming metal inserts.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
2. ASTM C 33 - Specification for Concrete Aggregates.
3. ASTM C 94 - Specification for Ready-mixed Concrete.
4. ASTM C127 - Test Method for Specific Gravity and Absorption of Course Aggregate.
5. ASTM C128 - Test Method for Specific Gravity and Absorption of Fine Aggregate.
6. ASTM C 150 - Specification for Portland Cement.
7. ASTM C 260 - Specification for Air-Entraining Admixtures for Concrete.

C. Concrete Reinforcing Steel Institute (CRSI):

1. CRSI Manual of Practice.

D. Portland Cement Association (PCA):

1. PCA EB 074D - Tilt-Up Load-Bearing Walls.
2. PCA EB 079B - Tilt-Up Concrete Walls.
3. PCA EB 110D - Connections for Tilt-Up Wall Construction.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
1. Concrete tilt-slab panels are designed for in place stresses only. Lifting and handling stress design is responsibility of Contractor and erector. Execute design for lifting, handling, and erection stresses by a registered Professional Engineer in the State in which the project is located.
 2. Design units and connections for wind load as indicated on Drawings and as required by governing codes. Design units and connections to withstand applicable dead loads and erection stresses.
 3. Design tilt-up units and connections in accordance with, as general guides, PCA EB 074D, PCA EB 079 B, and PVA EB 110D.
 4. Provide sealed and finished panel joints to match and coincide with location of vertical rustication joints.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Shop Drawings: Indicate layout, tilt-up unit locations, configuration, unit identification marks, reinforcement, connection details, support items, location of lifting devices, dimensions, openings, and relationship to adjacent components.
 2. Product Data: Adhesive (Alternate 1 Section 012300)
 3. Calculations including load exerted on the slab during forming and lifting panels in place for Alternates 1 Section 012300

1.5 QUALITY ASSURANCE

- A. Qualifications:
1. Fabricator: Company specializing in performing Work of this Section with minimum five years documented experience with established quality control program in effect.
 2. Erector: Company specializing in performing precast concrete erection Work of this Section with minimum five years documented experience.
 3. Welding: AWS D1.1.
 4. Fabricator and Erector: Certify and indicate experienced personnel, physical facilities, management process, and quality control procedures.
- B. Regulatory Requirements: Construct and install precast concrete wall panels to meet requirements of local governing building code.
- C. Mock-Ups:
1. Fabricate and erect at site, one full size panel, illustrating shape, lifting device, and attachment points, and finish.
 2. Fabricate and erect at location determined by Contracting Officer
 3. Prepare a sample of repairs.
 4. Obtain inspection and approval of wall panel and repair samples.
 5. Approved mock-up may remain as part of Work.
- D. Pre-Installation Meeting:
1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section. Require attendance of parties directly affecting Work of this Section, including, but not limited to, Contracting Officer Contractor, Construction Manager, Tilt-up Concrete Wall Panel Fabricator and Tilt-up Concrete Wall Panel Erector.
 2. Contact Construction Manager two weeks prior to pre-installation meeting to confirm schedule.

3. Review preparation and installation procedures and coordinate scheduling required with related Work.
4. Record discussions of meeting and decisions and agreements (or disagreements) reached, and furnish copy of record to each party attending. Review foreseeable methods and procedures related to Manufactured Wall Panel Work, including:
 - a. Discuss procedures for Bid Alternate 1 in Section 012300, and set up guidelines if the Contracting Officer elects to proceed with Bid Alternate 1.
 - b. Tour, inspect, and discuss conditions of wall panel casting, erection, attachment structure components, locations, and other preparatory work performed by other trades.
 - c. Review wall panel system requirements (drawings, specifications, and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to wall panel work and verify availability of materials, erector's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Cast panels on the slab on grade after the slab has reached its designed compressive strength. The formwork shall be secured on the slab on ground with screws using predrilled holes. A repair method must be submitted and a sample of repairs must be prepared with the mock up for approval. The precast concrete panels must be handled with equipment to protect units from dirt and damage. The Contractor upon approval of Contracting Officer may secure the panels on the slab with adhesive.
- C. Do not place panels on ground.
- D. Transport panels in vertical or near-vertical position.
- E. Support panels during shipment on expanded polystyrene or similar non-staining shock-absorbing materials.
- F. Provide lateral support sufficient to prevent excessive bowing and warping. Adequately protect edges of units by padding or other means to prevent staining, chipping, or spalling of concrete.
- G. Minimize lateral movement by casting panels as close as possible to erection location.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Concrete:
 1. Cement: ASTM C 150; Type I. Use same brand, type, and source of supply.
 2. Air Entrainment: ASTM C 260.
 3. Aggregates: ASTM C 33; maximum 2 percent water absorption rate. Use same type of aggregate and source of supply.
 4. Water: Clean potable water, not detrimental to concrete.
 5. Bond Breaker: By same manufacturer as curing compound for casting slab.

- B. Form Release Agent:
 - 1. Polymerized solution of synthetic resins and organic compounds containing no wax, oil, silicates, or varnish.
 - 2. Not sensitive to lime, alkalis, or organic acids.
 - 3. Compatible with coating, adhesives, or sealants applied to panel surfaces.
- C. Reinforcing Steel: ASTM A 615, Grade 60.
- D. Inserts: Galvanized with stainless steel tips.
- E. Flashings Receivers: 28 gage formed galvanized steel.
- F. Bar Supports: Class E; CRSI Manual of Practice.
- G. Bearing Pads: Neoprene, 70 durometer.

2.2 MIXES

- A. Mix concrete in accordance with ASTM C 94.
- B. Provide concrete with the following characteristics:
 - 1. Compressive Strength: 4000 psi at 28 days.
 - 2. Air Content: 5 percent, plus or minus 1.5 percent.
 - 3. Minimum Cement Content: 550 lb./cu yd.
 - 4. Maximum Water/Cement Ratio: 0.53.
 - 5. Maximum Coarse Aggregate Size: 3/4 inch.
 - 6. Slump: Not to exceed 4 inches.

2.3 FABRICATION

- A. Forms: Smooth, rigid, and constructed on materials that shall result in finished products conforming to shape, lines, and dimensions indicated on Drawings.
- B. Finish: Free of honeycomb cast against poured in place casting bed, forms, and accessories. Provide smooth steel troweled true surface, if not a formed surface.
- C. Reinforcing:
 - 1. Cover reinforcing steel with a minimum 1-1/2 inch concrete unless an increased cover is specified by the Engineer.
 - 2. Do not use metal chairs, with or without coatings, or plastic-tip chairs in the finished face of panels. Utilize plastic chairs with configuration to ensure a sufficient amount of concrete encases the tip of the chair.
- D. Curing: As specified in Section 033000.
- E. Panel Identification:
 - 1. Mark each precast panel to correspond to identification mark on Shop Drawings for panel location.
 - 2. Mark each precast panel with date cast.
- F. Embedded Items: Cast connectors, weld plates, and other embedded items detailed on Drawings. Take care to match up pairs of weld plates or other connectors. Coordinate locations of embedded

items with metal building manufacturer. Paint surfaces of embedded items with primer after completion of welding.

G. Allowable Tolerances:

1. Length and width of precast units measured at face adjacent to mold:
 - a. Units 10 Feet or Under: $\pm 1/8$ inch.
 - b. Units 10 Feet to 20 Feet: $+1/8$ inch; $-3/16$ inch.
 - c. Units 20 Feet to 30 Feet: $+1/8$ inch; $-1/4$ inch.
 - d. Units Over 30 Feet: $\pm 1/16$ inch for each additional 10 feet.
2. Thickness of Units: $+1/4$ inch; $-1/8$ inch.
3. Dimensions for Windows, Doors, Louvers, and Other Openings: Maximum of $1/8$ inch per 6 feet, or $1/4$ inch total.
4. Units and Openings Within Units: Not out of square more than $1/8$ inch per 6 feet, or $1/4$ inch total.
5. Location of Inserts, Bolts, and Pipe Sleeves: $\pm 1/4$ inch.
6. Location of Flashing Receivers or Reglets: $\pm 1/4$ inch.
7. Bowing or warping of precast panels after casting: Not to exceed $L/500$.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where wall panels will be cast and erected and verify that conditions conform to requirements. Verify lines, levels, and dimensions of previously constructed Work. Verify that structure and anchorage inserts not within tolerances required to erect panels have been corrected. Verify location of all inserts prior to placing concrete for panels.
- B. Determine field conditions by actual measurements.
- C. Report to Contracting Officer any condition in previously constructed Work that would prevent satisfactory completion of the work under this Section. Do not proceed until conditions are corrected under other Sections.
- D. Beginning of casting and erection indicates acceptance of previously constructed Work and existing conditions

3.2 ERECTION

- A. Set precast concrete wall panels straight, level, plumb, and square.
- B. Non-cumulative Erection Tolerances:
 1. Joint Dimension: Nominal $3/8$ inch; to vary not more than $+3/16$ inch or $-1/8$ inch.
 2. Joint Taper: Panel edges at joint not out of parallel over $1/40$ inch per foot.
 3. Edge Alignment: Misalignment of panel edges not exceeding $1/4$ inch.
 4. Panel Face Offset:
 - a. Faces of adjacent panels offset not over $1/8$ inch.
 - b. Bowed panels, within allowable bowing tolerances, arranged so offset between adjacent panels does not exceed $1/4$ inch.
- C. Set units dry, without mortar, attaining specified joint dimension on bearing pads. Use steel shims as required to level panel.

- D. Fasten precast concrete panels in place by bolting or welding, or both. Protect units from damage by field welding or cutting operations. Provide non-combustible shields as necessary during erection operations. Protect all work and materials of other trades at all times.
- E. Tighten bolted connections with equal torque, or finger tighten as indicated on Structural Drawings.
- F. Secure bolts with lock washers or tack-weld nut to bolt.
- G. Provide temporary bracing for panels. Maintain bracing in place until final support is provided.
- H. Clean field welds with wire brush and protect materials other than stainless steel with primer or with zinc rich coating.
- I. Remove shims and spacers from joints requiring sealant prior to installing sealant.
- J. Grout connection to foundation with non-shrink grout as specified in Section 033000.
- K. Waterproof embedded steel plates and angles below grade with asphaltic mastic prior to backfill.

3.3 SEALING

- A. Seal joints between panels or between panel and adjacent materials as indicated on Drawings and as specified in Section 079200.

3.4 FIELD QUALITY CONTROL

- A. Inspect precast concrete wall panel installation.
- B. Correct deficiencies in Work which inspection indicates are not in compliance with Contract documents.

3.5 PATCHING

- A. Mix and place patching mixture to match color and texture of surrounding concrete and to minimize shrinkage.
- B. Adhere patch to hardened concrete with bonding agent.
- C. Level patch to plane of panel surface.
- D. Replace defective precast concrete wall panels if patching is not acceptable to Construction Manager as directed by Contracting Officer.
- E. Fill bubbles larger than 1/8 inch with sand cement and rub smooth.
- F. Clean and patch concrete floor slabs where temporary brace inserts are located.

3.6 CLEANING

- A. After erection, clean soiled precast concrete wall panel surfaces with detergent and water, using fiber brush and sponge. Rinse thoroughly with clean water.

- B. Do not use acid to clean panels. Consult Special Coating manufacturer for recommended cleaning methods for stains remaining after initial cleaning.
- C. Rinse thoroughly with clear water immediately after using cleaner.

3.7 PROTECTION

- A. Provide protective measures to prevent damage to concrete wall panels and adjacent Work.

SECTION 03 47 13 00 - CSF TILT-UP CONCRETE**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Tilt-Up Precast Concrete Wall Panels is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Tilt-up sitecast concrete wall panels, non-load bearing, erected from mold to final position.
 2. Supports, devices, and attachments.
 3. Reinforcement, anchorages, and accessories.
- B. Related Sections:
 1. Section 012300 - Alternates.
 2. Section 033000 - Cast-In-Place Concrete: Grout and concrete curing.
 3. Section 051200 - Structural Steel Framing: Support plates and angles with anchor studs, expansion bolts, and epoxy bolts which are embedded in or cast into concrete for supporting structural steel, steel joists, and steel deck.
 4. Section 055000 - Metal Fabrications: Other metal components cast into concrete.
 5. Section 076200 - Sheet Metal Flashing and Trim: Counterflashing receivers or reglets.
 6. Section 079200 - Joint Sealants: Installation of panel joint sealers.
 7. Section 099100 - Painting: Priming metal inserts.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 2. ASTM C 33 - Specification for Concrete Aggregates.
 3. ASTM C 94 - Specification for Ready-mixed Concrete.
 4. ASTM C127 - Test Method for Specific Gravity and Absorption of Course Aggregate.
 5. ASTM C128 - Test Method for Specific Gravity and Absorption of Fine Aggregate.
 6. ASTM C 150 - Specification for Portland Cement.
 7. ASTM C 260 - Specification for Air-Entraining Admixtures for Concrete.
- B. American Welding Society (AWS):
 1. AWS D1.1 - Structural Welding Code.

- C. Concrete Reinforcing Steel Institute (CRSI):
 - 1. CRSI Manual of Practice.
- D. Portland Cement Association (PCA):
 - 1. PCA EB 074D - Tilt-Up Load-Bearing Walls.
 - 2. PCA EB 079B - Tilt-Up Concrete Walls.
 - 3. PCA EB 110D - Connections for Tilt-Up Wall Construction.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. Concrete tilt-slab panels are designed for in place stresses only. Lifting and handling stress design is responsibility of Contractor and erector. Execute design for lifting, handling, and erection stresses by a registered Professional Engineer in the State in which the project is located.
 - 2. Design units and connections for wind load as indicated on Drawings and as required by governing codes. Design units and connections to withstand applicable dead loads and erection stresses.
 - 3. Design tilt-up units and connections in accordance with, as general guides, PCA EB 074D, PCA EB 079 B, and PVA EB 110D.
 - 4. Provide sealed and finished panel joints to match and coincide with location of vertical rustication joints.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings: Indicate layout, tilt-up unit locations, configuration, unit identification marks, reinforcement, connection details, support items, location of lifting devices, dimensions, openings, and relationship to adjacent components.
 - 2. Product Data: Adhesive (Alternate 1 Section 012300)
 - 3. Calculations including load exerted on the slab during forming and lifting panels in place for Alternate 1 Section 012300

1.5 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Fabricator: Company specializing in performing Work of this Section with minimum five years documented experience with established quality control program in effect.
 - 2. Erector: Company specializing in performing precast concrete erection Work of this Section with minimum five years documented experience.
 - 3. Welding: AWS D1.1.
 - 4. Fabricator and Erector: Certify and indicate experienced personnel, physical facilities, management process, and quality control procedures.
- B. Regulatory Requirements: Construct and install precast concrete wall panels to meet requirements of local governing building code.
- C. Mock-Ups:
 - 1. Fabricate and erect at site, one full size panel, illustrating shape, lifting device, and attachment points, and finish.
 - 2. Fabricate and erect at location determined by Contracting Officer

3. Prepare a sample of repairs.
 4. Obtain inspection and approval of wall panel and repair samples.
 5. Approved mock-up may remain as part of Work.
- D. Pre-Installation Meeting:
1. Convene a pre-installation meeting at site, one week prior to commencing Work of this Section. Require attendance of parties directly affecting Work of this Section, including, but not limited to, Contracting Officer Contractor, Construction Manager, Tilt-up Concrete Wall Panel Fabricator and Tilt-up Concrete Wall Panel Erector.
 2. Contact Construction Manager two weeks prior to pre-installation meeting to confirm schedule.
 3. Review preparation and installation procedures and coordinate scheduling required with related Work.
 4. Record discussions of meeting and decisions and agreements (or disagreements) reached, and furnish copy of record to each party attending. Review foreseeable methods and procedures related to Manufactured Wall Panel Work, including:
 - a. Discuss procedures for Bid Alternate 1 in Section 012300 and set up guidelines if the Contracting Officer elects to proceed with Bid Alternate 1.
 - b. Tour, inspect, and discuss conditions of wall panel casting, erection, attachment structure components, locations, and other preparatory work performed by other trades.
 - c. Review wall panel system requirements (drawings, specifications, and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to wall panel work and verify availability of materials, erector's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Cast panels on the slab on grade after the slab has reached its designed compressive strength. The formwork shall be secured on the slab on ground with screws using predrilled holes. A repair method must be submitted and a sample of repairs must be prepared with the mock up for approval. The precast concrete panels must be handled with equipment to protect units from dirt and damage. The Contractor upon approval of Contracting Officer may secure the panels on the slab with adhesive in accordance with Bid Alternate 1 in Specification Section 012300.
- C. Do not place panels on ground.
- D. Transport panels in vertical or near-vertical position.
- E. Support panels during shipment on expanded polystyrene or similar non-staining shock-absorbing materials.
- F. Provide lateral support sufficient to prevent excessive bowing and warping. Adequately protect edges of units by padding or other means to prevent staining, chipping, or spalling of concrete.
- G. Minimize lateral movement by casting panels as close as possible to erection location.

PART 2 - PRODUCTS**2.1 MATERIALS**

- A. Concrete:
 - 1. Cement: ASTM C 150; Type I. Use same brand, type, and source of supply.
 - 2. Air Entrainment: ASTM C 260.
 - 3. Aggregates: ASTM C 33; maximum 2 percent water absorption rate. Use same type of aggregate and source of supply.
 - 4. Water: Clean potable water, not detrimental to concrete.
 - 5. Bond Breaker: By same manufacturer as curing compound for casting slab.
- B. Form Release Agent:
 - 1. Polymerized solution of synthetic resins and organic compounds containing no wax, oil, silicates, or varnish.
 - 2. Not sensitive to lime, alkalis, or organic acids.
 - 3. Compatible with coating, adhesives, or sealants applied to panel surfaces.
- C. Reinforcing Steel: ASTM A 615, Grade 60.
- D. Inserts: Galvanized with stainless steel tips.
- E. Flashings Receivers: 28 gage formed galvanized steel.
- F. Bar Supports: Class E; CRSI Manual of Practice.
- G. Bearing Pads: Neoprene, 70 durometer.

2.2 MIXES

- A. Mix concrete in accordance with ASTM C 94.
- B. Provide concrete with the following characteristics:
 - 1. Compressive Strength: 4000 psi at 28 days.
 - 2. Air Content: 5 percent, plus or minus 1.5 percent.
 - 3. Minimum Cement Content: 550 lb./cu yd.
 - 4. Maximum Water/Cement Ratio: 0.53.
 - 5. Maximum Coarse Aggregate Size: 3/4 inch.
 - 6. Slump: Not to exceed 4 inches.

2.3 FABRICATION

- A. Forms: Smooth, rigid, and constructed on materials that shall result in finished products conforming to shape, lines, and dimensions indicated on Drawings.
- B. Finish: Free of honeycomb cast against poured in place casting bed, forms, and accessories. Provide smooth steel troweled true surface, if not a formed surface.
- C. Reinforcing:
 - 1. Cover reinforcing steel with 1-1/2 inch concrete.
 - 2. Do not use metal chairs, with or without coatings, in the finished face of panels. Metal chairs with plastic tips or stainless steel feet may be used.
- D. Curing: As specified in Section 033000.

- E. Panel Identification:
 - 1. Mark each precast panel to correspond to identification mark on Shop Drawings for panel location.
 - 2. Mark each precast panel with date cast.
- F. Embedded Items: Cast connectors, weld plates, and other embedded items detailed on Drawings. Take care to match up pairs of weld plates or other connectors. Coordinate locations of embedded items with metal building manufacturer. Paint surfaces of embedded items with primer after completion of welding.
- G. Allowable Tolerances:
 - 1. Length and width of precast units measured at face adjacent to mold:
 - a. Units 10 Feet or Under: $\pm 1/8$ inch.
 - b. Units 10 Feet to 20 Feet: $+1/8$ inch; $-3/16$ inch.
 - c. Units 20 Feet to 30 Feet: $+1/8$ inch; $-1/4$ inch.
 - d. Units Over 30 Feet: $\pm 1/16$ inch for each additional 10 feet.
 - 2. Thickness of Units: $+1/4$ inch; $-1/8$ inch.
 - 3. Dimensions for Windows, Doors, Louvers, and Other Openings: Maximum of $1/8$ inch per 6 feet, or $1/4$ inch total.
 - 4. Units and Openings Within Units: Not out of square more than $1/8$ inch per 6 feet, or $1/4$ inch total.
 - 5. Location of Inserts, Bolts, and Pipe Sleeves: $\pm 1/4$ inch.
 - 6. Location of Flashing Receivers or Reglets: $\pm 1/4$ inch.
 - 7. Bowing or warping of precast panels after casting: Not to exceed $L/500$.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine surfaces and adjacent areas where wall panels will be cast and erected and verify that conditions conform to requirements. Verify lines, levels, and dimensions of previously constructed Work. Verify that structure and anchorage inserts not within tolerances required to erect panels have been corrected. Verify location of all inserts prior to placing concrete for panels.
- B. Determine field conditions by actual measurements.
- C. Report to Contracting Officer any condition in previously constructed Work that would prevent satisfactory completion of the work under this Section. Do not proceed until conditions are corrected under other Sections.
- D. Beginning of casting and erection indicates acceptance of previously constructed Work and existing conditions

3.2 ERECTION

- A. Set precast concrete wall panels straight, level, plumb, and square.
- B. Non-cumulative Erection Tolerances:
 - 1. Joint Dimension: Nominal $3/8$ inch; to vary not more than $+3/16$ inch or $-1/8$ inch.
 - 2. Joint Taper: Panel edges at joint not out of parallel over $1/40$ inch per foot.
 - 3. Edge Alignment: Misalignment of panel edges not exceeding $1/4$ inch.
 - 4. Panel Face Offset:

- a. Faces of adjacent panels offset not over 1/8 inch.
 - b. Bowed panels, within allowable bowing tolerances, arranged so offset between adjacent panels does not exceed 1/4 inch.
- C. Set units dry, without mortar, attaining specified joint dimension on bearing pads. Use steel shims as required to level panel.
- D. Fasten precast concrete panels in place by bolting or welding, or both. Protect units from damage by field welding or cutting operations. Provide non-combustible shields as necessary during erection operations. Protect all work and materials of other trades at all times.
- E. Tighten bolted connections with equal torque, or finger tighten as indicated on Structural Drawings.
- F. Secure bolts with lock washers or tack-weld nut to bolt.
- G. Provide temporary bracing for panels. Maintain bracing in place until final support is provided.
- H. Clean field welds with wire brush and protect materials other than stainless steel with primer or with zinc rich coating.
- I. Remove shims and spacers from joints requiring sealant prior to installing sealant.
- J. Grout connection to foundation with non-shrink grout as specified in Section 033000.
- K. Waterproof embedded steel plates and angles below grade with asphaltic mastic prior to backfill.

3.3 SEALING

- A. Seal joints between panels or between panel and adjacent materials as indicated on Drawings and as specified in Section 079200.

3.4 FIELD QUALITY CONTROL

- A. Inspect precast concrete wall panel installation.
- B. Correct deficiencies in Work which inspection indicates are not in compliance with Contract documents.

3.5 PATCHING

- A. Mix and place patching mixture to match color and texture of surrounding concrete and to minimize shrinkage.
- B. Adhere patch to hardened concrete with bonding agent.
- C. Level patch to plane of panel surface.
- D. Replace defective precast concrete wall panels if patching is not acceptable to Construction Manager as directed by Contracting Officer.
- E. Fill bubbles larger than 1/8 inch with sand cement and rub smooth.
- F. Clean and patch concrete floor slabs where temporary brace inserts are located.

3.6 CLEANING

- A. After erection, clean soiled precast concrete wall panel surfaces with detergent and water, using fiber brush and sponge. Rinse thoroughly with clean water.
- B. Do not use acid to clean panels. Consult Special Coating manufacturer for recommended cleaning methods for stains remaining after initial cleaning.
- C. Rinse thoroughly with clear water immediately after using cleaner.

3.7 PROTECTION

- A. Provide protective measures to prevent damage to concrete wall panels and adjacent Work.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 51 13 00 - R&A CEMENTITIOUS WOOD FIBER ROOF DECK REPAIR AND REPLACEMENT

NOTE TO SPECIFIER

*This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. **Edit Section footer information only – do not edit Section contents.***

NOTE TO SPECIFIER

Include this Section for projects where roof replacement will occur over existing cementitious wood fiber structural decks.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Cementitious wood fiber roof deck repair and replacement associated with roof replacement.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in paragraphs 3.2A and 3.2B.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM C 317 - Standard Specification for Gypsum Concrete
 - 2. National Roof Deck Contractors Association (NRDCA)

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform cementitious wood fiber deck repair/replacement work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 - PRODUCTS

2.1 CEMENTITIOUS WOOD FIBER DECK REPAIR/REPLACEMENT MATERIALS

- A. For use at repair outlined in paragraph 3.2A:
 - 1. Steel plate: 16-gauge galvanized with pre-drilled holes for fasteners and plates.
 - 2. Fasteners and plates: For securing steel plate to gypsum concrete deck: Glass-filled, nylon auger-type fastener such as Drill-Tec NTB-1HEO with 3-inch steel plate, length as necessary to penetrate 1-inch minimum into roof deck, manufactured by GAF Corporation, Wayne, NJ, or approved equal.
- B. For use at repair outlined in paragraph 3.2B:

1. Cementitious wood fiber roof deck panels: Size, composition, color and texture to match existing.
2. Grout: ASTM C 317, Class A; compressive strength of 500 psi.
3. Water: Potable.
4. Fasteners: Type, configuration and size to match existing panel fastening system.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Inspect existing cementitious wood fiber decks for deterioration and other defects. If an opening less than or equal to 8-inches in diameter exists, refer to paragraph 3.2A, "Repair at Opening Caused by Obsolete Roof Penetration Removal". If a defect exists greater than 8-inches in diameter, refer to the paragraph 3.2B, "Cementitious Wood Fiber Roof Deck Panel Replacement".

3.2 CEMENTITIOUS WOOD FIBER DECK REPAIR AND REPLACEMENT

- A. Repair at Opening Caused by Obsolete Roof Penetration Removal (*Unit Price Work*):
 1. At locations indicated by the Owner, cover the existing opening with 16-gauge steel plate stock. Lap the plate a minimum of 8-inches beyond the opening on all sides. Fasten the steel plate with specified fasteners and plates 12-inches on center. Secure the plate a minimum of 2-inches in from the outside edge of the repair plate.
- B. Cementitious Wood Fiber Roof Deck Panel Replacement (*Unit Price Work*):
 1. Prior to the start of work, inspect the interior area below the area of damaged cementitious wood fiber roof deck. Remove items from the replacement area that may be damaged during work activities. Provide adequate interior protection to protect interior surfaces and finishes from damage prior to the start of work. The Contractor shall provide an "Interior Protection Representative" during replacement work.
 2. To the extent indicated by the Owner, remove all existing defective and damaged cementitious wood fiber roof deck panels, down to the underlying structural supports.
 3. Replace existing damaged panels with new panels. Refer to panel manufacturer's requirements, NRDCA recommendations for installation of cementitious wood fiber roof deck panels and applicable local codes for additional installation requirements.
 4. Fasten panels in a manner to match fastening system of existing panels.
 5. Install grout at joints between replacement deck panels and existing adjacent panels. Level grout after installation to provide a smooth, level surface.
 6. Inspect the completed replacement to ensure roof deck is suitable to receive new roofing materials.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

R&A GYPSUM CONCRETE ROOF DECK
REPAIR/REPLACEMENT

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Gypsum concrete roof deck repair and replacement associated with roof replacement work.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in paragraphs 3.2A, 3.2B, 3.2C and 3.2D.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. Factory Mutual Engineering Corporation (FM)
 - 2. American Society for Testing and Materials (ASTM)
 - a. ASTM C 317 - Standard Specification for Gypsum Concrete
 - 3. National Roof Deck Contractors Association (NRDCA)
 - 4. Steel Deck Institute

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the

specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform gypsum concrete repair/replacement work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 - PRODUCTS

2.1 GYPSUM DECK REPAIR/REPLACEMENT MATERIALS

- A. For use at repair outlined in paragraph 3.2A:
 - 1. Steel plate: 16-gauge galvanized with pre-drilled holes for fasteners and plates.
 - 2. Fasteners and plates: For securing steel plate to gypsum concrete deck: Glass-filled, nylon auger-type fastener such as Drill-Tec NTB-1HEO with 3-inch steel plate, length as

necessary to penetrate 1-inch minimum into roof deck, manufactured by GAF Corporation, Wayne, NJ, or approved equal.

- B. For use at repairs outlined in paragraphs 3.2B and 3.2C:
 - 1. Gypsum Concrete: Ready-mix gypsum which complies with ASTM C 317, such as Pyrofill, manufactured by United States Gypsum or approved equal.
 - 2. Water: Potable.
- C. For use at repair outlined in paragraph 3.2C:
 - 1. Formboard panels: To match existing in type, thickness and quality, or as necessary to comply with requirements of applicable insurance agencies and local codes.
 - 2. Reinforcing steel mesh: To match existing in type, configuration and quality, or as necessary to comply with requirements of applicable insurance agencies and local codes.
 - 3. Galvanized cross tees: Type, configuration and size to match existing.
- D. For use with full gypsum concrete deck replacement, outlined in paragraph 3.2D:
 - 1. Full sections of steel decking; gauge, profile, and finish as necessary to comply with requirements of applicable insurance agencies and local codes.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Inspect existing gypsum concrete decks for deterioration and other defects. If an opening less than or equal to 8-inches in diameter exists, refer to paragraph 3.2A, "Repair at Opening Caused by Obsolete Roof Penetration Removal". If a defect exists that does not extend to the formboard, refer to the paragraph 3.2B, "Localized Gypsum Concrete Deck Repair". If the defect extends to and includes the formboard, refer to paragraph 3.2C, "Gypsum Concrete Deck Replacement". For full gypsum deck removal and replacement with steel deck, refer to paragraph 3.2D, "Full Gypsum Concrete Deck Replacement".

3.2 GYPSUM CONCRETE DECK REPAIR AND REPLACEMENT

- A. Repair at Opening Caused by Obsolete Roof Penetration Removal (*Unit Price Work*):
 - 1. At locations indicated by the Owner, cover the existing opening with 16-gauge steel plate stock. Lap the plate a minimum of 8-inches beyond the opening on all sides. Fasten the steel plate with specified fasteners and plates 12-inches on center. Secure the plate a minimum of 2-inches in from the outside edge of the repair plate.
- B. Localized Gypsum Concrete Deck Repair (*Unit Price Work*):
 - 1. Prior to the start of work, inspect the interior area below the area of damaged gypsum concrete roof deck. Remove items from the replacement area that may be damaged during work activities. Provide adequate interior protection to protect interior surfaces and finishes from damage prior to the start of work. The Contractor shall provide an "Interior Protection Representative" during replacement work.
 - 2. To the extent indicated by the Owner, remove any damaged or loose existing gypsum concrete deck material from the repair area.
 - 3. Replace damaged or deteriorated gypsum decking, excluding formboard and mesh, with gypsum patch material of thickness to match existing adjacent gypsum and to provide a structurally sound roof deck.

4. Allow the patch material time to cure. If necessary, provide temporary protection from inclement weather while gypsum concrete cures. Refer to manufacturer's requirements for cure time. Inspect the completed repair to ensure the roof deck is suitable to receive new roofing materials.
- C. Gypsum Concrete Deck Replacement (*Unit Price Work*):
1. Prior to the start of work, inspect the interior area below the area of damaged gypsum concrete deck. Remove items from the replacement area that may be damaged during work activities. Provide adequate interior protection to protect interior surfaces and finishes from damage prior to the start of work. The Contractor is to provide an "Interior Protection Representative" during replacement work.
 2. To the extent indicated by the Owner, remove damaged, deteriorated and/or loose existing gypsum concrete decking, including reinforcing mesh and formboard. Leave a minimum of 3-inches of fiberglass mesh at each cross tee for tie-in to new reinforced mesh.
 3. Install galvanized cross tees. Install formboard(s) into cross tees.
 4. Install reinforcing mesh. Tie-in to the existing mesh. Refer to the reinforcing mesh manufacturer and the NRDC for tie-in requirements.
 5. Replace removed gypsum concrete decking with matching type and thickness material, to provide a structurally sound roof deck. Refer to gypsum concrete manufacturer, NRDC recommendations for installation of gypsum concrete and applicable local codes for additional installation requirements.
 6. Allow the patch material time to cure. If necessary, provide temporary protection from inclement weather while gypsum concrete cures. Refer to manufacturer's requirements for cure time. Inspect the completed replacement to ensure the roof deck is suitable to receive new roofing materials.
- D. Full Gypsum Concrete Deck Replacement (*Unit Price Work*):
1. To the extent indicated by the Owner, remove all existing gypsum concrete decking, including reinforcing mesh, formboard and bulb-tees, down to the underlying structural supports.
 2. Replace existing gypsum concrete decking with steel deck. Install steel decking in full sections. Install new decking in accordance with the requirements of FM, Steel Deck Institute, and applicable local codes to provide a structurally sound roof deck. Inspect the completed replacement to ensure roof deck is suitable to receive new roofing materials.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 03 51 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 51 16 00a - GYPSUM PLANK DECKING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for gypsum plank decking for interstitial decks **OR** fire rated interstitial decks, **as directed**, and roof decks. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Fire Tests: Fire tests, data and certifications substantiating that Gypsum Plank Decking complies with fire rating requirements.
2. Shop Drawings: Show typical plank layouts, perimeter and framed opening supports and details of construction, installation, fastenings and grouting.
3. Manufacturer's Literature and Data: Each item specified.
4. Load tables for sub-purlins.

C. Quality Control

1. Work performed by experienced, qualified installers approved by manufacturer of gypsum plank.
2. Gypsum materials products of one manufacturer.

D. Delivery And Storage

1. Deliver materials in original packages, containers, or bundles bearing brand name and name of manufacturer.
2. Store materials in a manner that prevents damage before use. When stored under tarpaulins, provide ventilation to prevent moisture accumulation under tarpaulin.
3. Store gypsum planks flat and off ground. Handle and stack in a manner to prevent damage to face, ends, and edges and keep dry until used.
4. Store gypsum concrete off ground and keep dry until used.

1.2 PRODUCTS

A. Materials

1. Structural Steel Tee Sub-purlins:
 - a. Open web truss-tees, hot-rolled bulb-tees or folded sheet metal tees as required by design loads, spans and fire ratings.
 - b. Flanges: Provide 5/8-inch (16 mm) minimum bearing for gypsum planks.
 - c. Galvanize or factory coat sub-purlins with manufacturer's standard primer.
 - d. Open web truss-tees: Fabricate from cold-formed steel wire conforming to ASTM A82.
 - e. Hot-rolled bulb-tees: Rail-shaped, fabricated from hot-rolled steel conforming to ASTM A36/A36M or ASTM A499.
 - f. Folded sheet metal tees: Fabricate from sheet steel conforming to ASTM A653 and ASTM A568/A568M.
2. Cross-Tees:
 - a. Cold-Formed, Fabrication from sheet steel conforming to ASTM A653/A653M or ASTM A568/A568M.
 - b. Size: 1-1/4-inches (30 mm) by 1/2-inch (13 mm) by 0.023-inch (0.6 mm) thick by 24-inches (600 mm) long.
 - c. Tees shall be galvanized or factory coated with manufacturer's standard primer.
3. Gypsum Deck Plank:
 - a. Fabricated of gypsum board: ASTM C442.

- b. Nominal Size: 2-inches (50 mm) **OR** 2-5/8-inches (65 mm), **as directed**, thick by 24-inches (600 mm) wide by main purlin span. Where possible, length should span two main purlin spans.
 - c. Factory laminate from two 1-inch (25 mm) thick gypsum panels with top panel edge set back along sub-purlin edge not more than 1/2-inch (13 mm).
 - d. Offset edges encased in water-resistant paper.
 - 4. Gypsum Deck Panels: ASTM C36, Type "X", 5/8-inch (16 mm) thick by 24-inches (600 mm) wide by main purlin span.
 - 5. Grout: Gypsum Concrete: ASTM C317, Class A, 500 psi (3.5 MPa) minimum compressive strength.
 - 6. Miscellaneous Materials: Adhesives, mastics, cements, tapes and primers shall be as recommended by the gypsum plank manufacturer and shall be compatible with the material to which they are to be bonded.
- B. Deck System
- 1. Interstitial deck: Provide two-hour fire rating as tested by gypsum plank manufacturer under ASTM E119.
 - 2. Roof Deck: Provide one hour **OR** 1-1/2 hour, **as directed**, fire rating per tested assembly by Underwriters' Laboratory Inc. or other testing.

1.3 EXECUTION

A. Installation

- 1. Weld per AWS D1.1.
- 2. Sub-purlins:
 - a. Space at approximately 24-5/8-inches (650 mm) on center to provide minimum 5/8 inch (16 mm) continuous bearing for gypsum plank or deck.
 - b. Install framing of openings.
 - c. Touch up welds with same type of rust-inhibitive paint used for primer.
 - d. Interstitial Decks: Use 3/4-inch (19 mm) fillet welds on both sides of sub-purlins at math purlin.
 - e. Roof Decks: Use minimum 1/2-inch (13 mm) fillet welds on alternate sides of sub-purlins, both sides at end joints to main purlins.
 - f. For fire rated roof decks weld per fire test assembly.
- 3. For Two Hour fire rated interstitial decks **OR** fire-rated roof decks, **as directed**.
 - a. Place gypsum deck panels on bottom flanges of sub-purlins with 5/8-inch (16 mm) minimum continuous bearing.
 - b. Place gypsum deck plank over gypsum deck panels, with off-set edges "up" to form a "T" receptacle for gypsum grout.
 - c. Cut to fit around openings shown.
 - d. Install plank to conform to fire test assembly.
- 4. Gypsum Deck Plank for Roof Decks:
 - a. Place plank on lower flanges of sub-purlins or other framing with ends and edges supported.
 - b. Stagger joints in adjacent courses.
 - c. Support end joints with cross-tees not supported by framing.
 - d. Cut plank to fit at ends and framed openings.
- 5. Provide continuous 5/8-inch (16 mm) minimum bearing for plank support at deck perimeter, plank ends and openings exceeding 8-inches (200 mm).
- 6. Grout:
 - a. Mix gypsum concrete thoroughly using a minimum amount of water to form a thick, pourable consistency.
 - b. Fill edge joints to slight excess with single pour at sub-purlins.
 - 1) Grout end joints on single span system against steel framing.

- 2) After initial set, strike of excess to form smooth, flush joint.
 - 3) Form cant strips and curbs where shown.
- c. Fill joints at roof ridges, hips and valleys.
7. Patching:
 - a. Fill with grout and smooth any surface damage to gypsum plank.
 - b. Remove and replace cracked, broken, and plank damaged beyond repair.
8. Cleaning and Protection:
 - a. Upon completion of gypsum plank decking, remove, debris and sweep surface clean. Leave ready for subsequent work.
 - b. Protect finished deck from weather and subsequent construction operations.
 - c. Provide hardboard or plywood temporary protection over decking subject to repetitive impact or wheeled loads.

END OF SECTION 03 51 16 00a

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 03 51 16 00b - GYPSUM CONCRETE DECKS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of gypsum concrete decks. Products shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

1.2 PRODUCTS

A. Gypsum Concrete: ASTM C 317, Class A.

B. Formboards:

1. Gypsum Board: ASTM C 318.
2. Mineral Fiber Board: ASTM C612.
3. Glass Fiber Board: Lightweight, rigid, composed of pressed glass fibers.

C. Bulb Tees: ASTM A 499, Grade 50.

D. Reinforcing Mesh:

1. Welded Wire Fabric: ASTM A 185, galvanized, 12 x 48-W0.5 x W0.5.
2. Woven Wire Fabric: ASTM A 82, galvanized, 19 gauge wire, 2-inch hexagonal mesh.

1.3 EXECUTION

- A. Support System: Sub-purlins shall be spaced to support formboards and rigidly attached to main supports. Formboards shall fit snugly at sub-purlins and at wall, curbs, and openings.
- B. Reinforcement: Lay wire fabric continuously over sub-purlins. Do not lap side of reinforcement.
- C. Gypsum Concrete: Gypsum concrete shall be placed continuously without interruption until entire panel or section is complete. Immediately after placement, screed, level, and trowel smooth.

SECTION 03 52 16 00 - R&A LIGHTWEIGHT INSULATING CONCRETE REPAIR AND REPLACEMENT

NOTE TO SPECIFIER

*This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. **Edit Section footer information only – do not edit Section contents.***

NOTE TO SPECIFIER

Include this Section for projects where roof replacement will occur over existing lightweight insulating concrete decks intended to remain in place.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Lightweight insulating concrete repair and replacement associated with roof replacement work.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. On the Unit Price Schedule, provide unit prices for the work described in paragraphs 3.2A, 3.2B and 3.2C.

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing

dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform lightweight insulating concrete repair and replacement work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 - PRODUCTS

2.1 LIGHTWEIGHT INSULATING CONCRETE REPAIR/REPLACEMENT MATERIALS

- A. For use at repair outlined in paragraphs 3.2A and 3.2C:
 - 1. Lightweight insulating concrete premix product, suitable for repair of lightweight insulating concrete in a reroofing application, such as NVS Premix, manufactured by Siplast, Irving TX, or approved equal.
 - 2. Water: Potable.
- B. For use at repairs outlined in Items 3.2B:
 - 1. Fast-setting, lightweight insulating concrete patch material, such as Zono-Patch, manufactured by Siplast, Irving TX, or approved equal.
 - 2. Water: Potable.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Inspect existing lightweight insulating concrete for deterioration and other defects. If areas of surface spalling of lightweight insulating concrete are observed, refer to paragraph 3.2A, "Repair of Lightweight Insulating Concrete Surface Spalling". If defects are observed penetrating greater than 1-inch into the LWIC, refer to the paragraph 3.2B, "Localized Lightweight Insulating Concrete Repair".

3.2 LIGHTWEIGHT INSULATING CONCRETE REPAIR

- A. Repair of Lightweight Insulating Concrete Surface Spalling - Greater than 1/8-inch in depth (*Unit Price Work*):
 - 1. Where indicated by the Owner, remove lightweight insulating concrete where material has flaked loose from the surface, sweep away and remove loose and spalled material.
 - 2. At locations where spalling has penetrated to a depth greater than 1/8-inch, square cut the affected area to a minimum depth of 1-inch. Do not feather edge cuts at corners.
 - 3. Install lightweight insulating concrete patch material, following the recommendations and requirements of the patch material manufacturer. Tool patch material flush with the surface of adjacent lightweight insulating concrete.
 - 4. Prior to the installation of roofing materials over the repair area, allow the patch material time to dry.
- B. Repair of Small Holes in Lightweight Insulating Concrete - For holes less than 6-inches in diameter (*Unit Price Work*):
 - 1. To the extent indicated by the Owner, remove lightweight insulating concrete where material has flaked loose from the surface, sweep away and remove loose and spalled material.
 - 2. Install lightweight insulating concrete patch material into the hole or depression, following the recommendations and requirements of the patch material manufacturer. Tool patch material flush with the surface of adjacent lightweight insulating concrete.
 - 3. Prior to the installation of roofing materials over the repair area, allow the patch material time to dry.
- C. Localized Lightweight Insulating Concrete Repair (*Unit Price Work*):
 - 1. To the extent indicated by the Owner, remove damaged existing lightweight insulating concrete and underlying rigid board insulating materials down to the existing structural deck.
 - 2. Replace damaged or deteriorated rigid board insulation. Type and thickness of replacement insulation shall match existing.
 - 3. Install lightweight insulating concrete patch material, following the recommendations and requirements of the patch material manufacturer. Tool patch material flush with the surface of adjacent lightweight insulating concrete.
 - 4. Prior to the installation of roofing materials over the repair area, allow the patch material time to dry.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. SECTION 04 01 20 51 - CLAY MASONRY RESTORATION AND CLEANING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for clay masonry restoration and cleaning. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes maintenance of unit masonry consisting of brick and terra cotta clay masonry restoration and cleaning as follows:
 - a. Unused anchor removal.
 - b. Repairing unit masonry, including replacing units.
 - c. Painting steel uncovered during the work.
 - d. Reanchoring veneers.
 - e. Repointing joints.
 - f. Preliminary cleaning, including removing plant growth.
 - g. Cleaning exposed unit masonry surfaces.
2. Owner-Furnished Material: Salvaged brick (if salvaged brick is available from the Owner for reuse).

C. Definitions

1. Very Low-Pressure Spray: Under 100 psi (690 kPa).
2. Low-Pressure Spray: 100 to 400 psi (690 to 2750 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
3. Medium-Pressure Spray: 400 to 800 psi (2750 to 5510 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
4. High-Pressure Spray: 800 to 1200 psi (5510 to 8250 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
5. Saturation Coefficient: Ratio of the weight of water absorbed during immersion in cold water to weight absorbed during immersion in boiling water; used as an indication of resistance of masonry units to freezing and thawing.

D. Preconstruction Testing

1. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on masonry units as follows.
 - a. Existing Brick and Terra Cotta: Test each type of existing masonry unit indicated for replacement, according to testing methods in ASTM C 67 for compressive strength, 24-hour cold-water absorption, 5-hour boil absorption, saturation coefficient, and initial rate of absorption (suction). Carefully remove five existing units from locations designated by the Owner. Take testing samples from these units.
 - b. Existing Mortar: Test according to ASTM C 295, modified as agreed by testing service and the Owner for Project requirements, to determine proportional composition of original ingredients, sizes and colors of aggregates, and approximate strength. Use X-ray diffraction, infrared spectroscopy, and differential thermal analysis as necessary to supplement microscopical methods. Carefully remove existing mortar from within joints at five locations designated by the Owner or testing service.
 - c. Temporary Patch: as directed by the Owner, provide temporary materials at locations from which existing samples were taken.
 - d. Replacement Brick and Terra Cotta: Test each proposed type of replacement masonry unit, according to sampling and testing methods in ASTM C 67 for compressive strength, 24-hour cold-water absorption, 5-hour boil absorption, saturation coefficient, and initial rate of absorption (suction).

E. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: For the following:
 - a. Full-size patterns with complete dimensions for new terra cotta units, specially molded brick shapes, and brick arches and their jointing, showing relation of existing to new units.
 - b. Setting number of each new terra cotta unit and its location on the structure in annotated plans and elevations.
 - c. Provisions for expansion joints or other sealant joints.
 - d. Provisions for flashing, lighting fixtures, conduits, and weep holes as required.
 - e. Replacement and repair anchors. Include details of anchors within individual masonry units, with locations of anchors and dimensions of holes and recesses in units required for anchors.
3. Samples: For each exposed product and for each color and texture specified.
4. Preconstruction Test Reports.

F. Quality Assurance

1. Restoration Specialist Qualifications: Engage an experienced, preapproved masonry restoration and cleaning firm to perform work of this Section. Firm shall have completed work similar in material, design, and extent to that indicated for this Project with a record of successful in-service performance. Experience installing standard unit masonry is not sufficient experience for masonry restoration work.
 - a. At Contractor's option, work may be divided between two specialist firms: one for cleaning work and one for repair work.
 - b. Field Supervision: Restoration specialist firms shall maintain experienced full-time supervisors on Project site during times that clay masonry restoration and cleaning work is in progress. Supervisors shall not be changed during Project except for causes beyond the control of restoration specialist firm.
 - c. Restoration Worker Qualifications: Persons who are experienced and specialize in restoration work of types they will be performing. When masonry units are being patched, assign at least one worker among those performing patching work who is trained and certified by manufacturer of patching compound to apply its products.
2. Terra Cotta Manufacturer Qualifications: A firm regularly engaged in manufacturing custom architectural terra cotta units for building restoration purposes, of same type and of similar size, complexity, and tolerances as those required for the Work.
3. Mockups: Prepare mockups of restoration and cleaning to demonstrate aesthetic effects and set quality standards for materials and execution and for fabrication and installation.
 - a. Masonry Repair: Prepare sample areas for each type of masonry material indicated to have repair work performed. If not otherwise indicated, size each mockup not smaller than 2 adjacent whole units or approximately 48 inches (1200 mm) in least dimension. Erect sample areas in existing walls unless otherwise indicated, to demonstrate quality of materials, workmanship, and blending with existing work. Include the following as a minimum:
 - 1) Replacement:
 - a) Four brick units replaced.
 - b) Four terra cotta units replaced.
 - 2) Reanchoring Veneers: Install three masonry repair anchors in mockup wall assembly of each anchor type required.
 - 3) Patching: Three small holes at least 1 inch (25 mm) in diameter **OR** as directed, **as directed**, for each type of masonry material indicated to be patched, so as to leave no evidence of repair.
 - 4) Widening Joints: Widen a joint in 2 separate locations, each approximately 12 inches (300 mm) long **OR** as directed, **as directed**.
 - b. Repointing: Rake out joints in 2 separate areas, each approximately 36 inches (900 mm) high by 48 inches (1200 mm) wide **OR** as indicated, **as directed**, for each type of repointing required and repoint one of the areas.

- c. Cleaning: Clean an area approximately 25 sq. ft. (2.3 sq. m) **OR** as indicated, **as directed**, for each type of masonry and surface condition.
- 4. Preinstallation Conference: Conduct conference at Project site.
- G. Delivery, Storage, And Handling
 - 1. Deliver masonry units to Project site strapped together in suitable packs or pallets or in heavy-duty cartons.
 - 2. Deliver each piece of terra cotta with code mark or setting number on unexposed face, corresponding to Shop Drawings, using nonstaining paint.
 - 3. Deliver other materials to Project site in manufacturer's original and unopened containers, labeled with manufacturer's name and type of products.
 - 4. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
 - 5. Store hydrated lime in manufacturer's original and unopened containers. Discard lime if containers have been damaged or have been opened for more than two days.
 - 6. Store lime putty covered with water in sealed containers.
 - 7. Store sand where grading and other required characteristics can be maintained and contamination avoided.
- H. Project Conditions
 - 1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit masonry restoration and cleaning work to be performed according to manufacturers' written instructions and specified requirements.
 - 2. Repair masonry units and repoint mortar joints only when air temperature is between 40 and 90 deg F (4 and 32 deg C) and is predicted to remain so for at least 7 days after completion of the Work unless otherwise indicated.
 - 3. Cold-Weather Requirements: Comply with the following procedures for masonry repair and mortar-joint pointing unless otherwise indicated:
 - a. When air temperature is below 40 deg F (4 deg C), heat mortar ingredients, masonry repair materials, and existing masonry walls to produce temperatures between 40 and 120 deg F (4 and 49 deg C).
 - b. When mean daily air temperature is below 40 deg F (4 deg C), provide enclosure and heat to maintain temperatures above 32 deg F (0 deg C) within the enclosure for 7 days after repair and pointing.
 - c. Hot-Weather Requirements: Protect masonry repair and mortar-joint pointing when temperature and humidity conditions produce excessive evaporation of water from mortar and repair materials. Provide artificial shade and wind breaks and use cooled materials as required to minimize evaporation. Do not apply mortar to substrates with temperatures of 90 deg F (32 deg C) and above unless otherwise indicated.
 - 4. For manufactured repair materials, perform work within the environmental limits set by each manufacturer.
 - 5. Clean masonry surfaces only when air temperature is 40 deg F (4 deg C) and above and is predicted to remain so for at least 7 days after completion of cleaning.

1.2 PRODUCTS

- A. Masonry Materials
 - 1. Face Brick: Provide face brick, including specially molded, ground, cut, or sawed shapes where required to complete masonry restoration work.
 - a. Provide units with physical properties, colors, color variation within units, surface texture, size, and shape to match existing brickwork.
 - 1) Physical Properties per ASTM C 67:
 - 2) For existing brickwork that exhibits a range of colors or color variation within units, provide brick that proportionally matches that range and variation rather than brick that matches an individual color within that range.

- b. Special Shapes:
 - 1) Provide specially molded, 100 percent solid shapes for applications where core holes or "frogs" could be exposed to view or weather when in final position and where shapes produced by sawing would result in sawed surfaces being exposed to view.
 - 2) Provide specially ground units, shaped to match patterns, for arches and where indicated.
 - 3) Mechanical chopping or breaking brick, or bonding pieces of brick together by adhesive, are not acceptable procedures for fabricating special shapes.
- c. Tolerances as Fabricated: Comply with tolerance requirements in ASTM C 216, Type FBX **OR** Comply with tolerance requirements in ASTM C 216, Type FBS, **as directed**.
- 2. Building Brick: Provide building brick complying with ASTM C 62, of same vertical dimension as face brick, for masonry work concealed from view.
 - a. Grade SW where in contact with earth.
 - b. Grade SW, MW, or NW for concealed backup.
- 3. Salvaged Brick: Obtain salvaged brick from the Owner from location shown on Drawings. Clean off residual mortar.
- 4. Glazed Terra Cotta: Provide new terra cotta units to match existing terra cotta units in body composition, physical properties, color, gloss, surface texture, thickness, profile, dimensions, and composition of surface glaze.
 - a. Physical Properties: Provide units with tested physical properties within 10 percent of those determined from preconstruction testing of selected existing units.
 - 1) Physical Properties per ASTM C 67:
 - b. Tolerances as Fabricated: Comply with tolerance requirements in ASTM C 212, Type FTX.
- 5. Brownstone Terra Cotta: Provide new, unglazed, brownstone terra cotta units to match existing terra cotta units in body composition, physical properties, colors, color variation within units, surface texture, unit profile, and dimensions.
 - a. Physical Properties: Provide units with tested physical properties within 10 percent of those determined from preconstruction testing of selected existing units.
 - b. Physical Properties per ASTM C 67:
 - c. Tolerances as Fabricated: Comply with tolerance requirements in ASTM C 212, Type FTX.
 - d. For existing terra cotta that exhibits a range of colors or color variation within units, provide terra cotta that proportionally matches that range and variation rather than terra cotta that matches an individual color within that range.

B. Mortar Materials

- 1. Portland Cement: ASTM C 150, Type I or Type II, white or gray or both where required for color matching of exposed mortar.
 - a. Provide cement containing not more than 0.60 percent total alkali when tested according to ASTM C 114.
- 2. Hydrated Lime: ASTM C 207, Type S.
- 3. Factory-Prepared Lime Putty: ASTM C 1489.
- 4. Quicklime: ASTM C 5, pulverized lime.
- 5. Mortar Sand: ASTM C 144 unless otherwise indicated.
 - a. Color: Provide natural sand or ground marble, granite, or other sound stone of color necessary to produce required mortar color.
 - b. For pointing mortar, provide sand with rounded edges.
 - c. Match size, texture, and gradation of existing mortar sand as closely as possible. Blend several sands if necessary to achieve suitable match.
- 6. Mortar Pigments: Natural and synthetic iron oxides, compounded for mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortars.
- 7. Water: Potable.

C. Manufactured Repair Materials

1. Masonry Patching Compound: Factory-mixed cementitious product that is custom manufactured for patching masonry.
 - a. Use formulation that is vapor- and water permeable (equal to or more than the masonry unit), exhibits low shrinkage, has lower modulus of elasticity than the masonry units being repaired, and develops high bond strength to all types of masonry.
 - b. Use formulation having working qualities and retardation control to permit forming and sculpturing where necessary.
 - c. Formulate patching compound used for patching brick and terra cotta in colors and textures to match each masonry unit being patched.
2. Terra Cotta Glaze Replacement: A high-solids, nonyellowing, fade-resistant, waterborne polyurethane or epoxy coating intended for exterior use as terra cotta glaze replacement. Product shall be custom mixed by manufacturer to match color and gloss of existing terra cotta glaze.

D. Paint Removers

1. Alkaline Paste Paint Remover: Manufacturer's standard alkaline paste formulation for removing paint coatings from masonry.
2. Covered or Skin-Forming Alkaline Paint Remover: Manufacturer's standard covered or skin-forming alkaline formulation for removing paint coatings from masonry.
3. Solvent-Type Paint Remover: Manufacturer's standard water-rinsable, solvent-type gel formulation for removing paint coatings from masonry.
4. Low-Odor, Solvent-Type Paint Remover: Manufacturer's standard low-odor, water-rinsable solvent-type gel formulation, containing no methanol or methylene chloride, for removing paint coatings from masonry.

E. Cleaning Materials

1. Water: Potable.
2. Hot Water: Water heated to a temperature of 140 to 160 deg F (60 to 71 deg C).
3. Job-Mixed Detergent Solution: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium polyphosphate, 1/2 cup (125 mL) of laundry detergent, and 20 quarts (20 L) of hot water for every 5 gal. (20 L) of solution required.
4. Job-Mixed Mold, Mildew, and Algae Remover: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium polyphosphate, 5 quarts (5 L) of 5 percent sodium hypochlorite (bleach), and 15 quarts (15 L) of hot water for every 5 gal. (20 L) of solution required.
5. Nonacidic Gel Cleaner: Manufacturer's standard gel formulation, with pH between 6 and 9, that contains detergents with chelating agents and is specifically formulated for cleaning masonry surfaces.
6. Nonacidic Liquid Cleaner: Manufacturer's standard mildly alkaline liquid cleaner formulated for removing mold, mildew, and other organic soiling from ordinary building materials, including polished stone, brick, aluminum, plastics, and wood.
7. Mild Acidic Cleaner: Manufacturer's standard mildly acidic cleaner containing no muriatic (hydrochloric), hydrofluoric, or sulfuric acid; or ammonium bifluoride or chlorine bleaches.
8. Acidic Cleaner: Manufacturer's standard acidic masonry cleaner composed of hydrofluoric acid or ammonium bifluoride blended with other acids, detergents, wetting agents, and inhibitors.
9. Two-Part Chemical Cleaner: Manufacturer's standard system consisting of potassium or sodium hydroxide based, alkaline prewash cleaner and acidic afterwash cleaner that does not contain hydrofluoric acid.

F. Accessory Materials

1. Liquid Strippable Masking Agent: Manufacturer's standard liquid, film-forming, strippable masking material for protecting glass, metal, and polished stone surfaces from damaging effects of acidic and alkaline masonry cleaners.
2. Terra Cotta Anchors: Type and size indicated or, if not indicated, to match existing anchors in size and type. Fabricate anchors from Type 304 **OR** Type 316, **as directed**, stainless steel.

3. Masonry Repair Anchors, Expansion Type: Mechanical fasteners designed for masonry veneer stabilization consisting of 1/4-inch- (6-mm-) diameter, Type 304 **OR** Type 316, **as directed**, stainless-steel rod with brass expanding shells at each end and water-shedding washer in the middle. Expanding shells shall be designed to provide positive mechanical anchorage to veneer on one end and backup masonry on the other.
4. Masonry Repair Anchors, Spiral Type: Type 304 **OR** Type 316, **as directed**, stainless-steel spiral rods designed to anchor to backing and veneer. Anchors are flexible in plane of veneer but rigid perpendicular to it.
 - a. Provide adhesive-installed anchors complete with manufacturer's standard epoxy adhesive and injection tubes, or other devices required for installation.
 - b. Provide driven-in anchors designed to be installed in drilled holes and relying on screw effect rather than adhesive to secure them to backup and veneer.
5. Masonry Repair Anchors, Rod/Screen Tube Type: Stainless-steel screen tube with or without Type 304 **OR** Type 316, **as directed**, stainless-steel rod, adhesive installed by injection with manufacturer's standard epoxy adhesive, complete with other devices required for installation.
6. Sealant Materials:
 - a. Provide manufacturer's standard chemically curing, elastomeric sealant(s) of base polymer and characteristics indicated below that comply with applicable requirements in Division 07 Section "Joint Sealants".
 - 1) Single-component, nonsag urethane sealant.
 - b. Colors: Provide colors of exposed sealants to match colors of masonry adjoining installed sealant unless otherwise indicated.
 - c. Ground-Mortar Aggregate: Custom crushed and ground pointing mortar sand or existing mortar retrieved from joints. Grind to a particle size that matches the adjacent mortar aggregate and color. Remove all fines passing the 100 sieve.
7. Joint-Sealant Backing:
 - a. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) or Type B (bicellular material with a surface skin), and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.
 - b. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where acceptable.
8. Setting Buttons: Resilient plastic buttons, nonstaining to masonry, sized to suit joint thicknesses and bed depths of masonry units without intruding into required depths of pointing materials.
9. Masking Tape: Nonstaining, nonabsorbent material, compatible with pointing mortar, joint primers, sealants, and surfaces adjacent to joints; that will easily come off entirely, including adhesive.
10. Antirust Coating: Fast-curing, lead- and chromate-free, self-curing, universal modified-alkyd primer complying with MPI #79, Alkyd Anticorrosive Metal Primer or SSPC-Paint 20 or SSPC-Paint 29 zinc-rich coating.
 - a. Use coating requiring no better than SSPC-SP 2, "Hand Tool Cleaning" **OR** SSPC-SP 3, "Power Tool Cleaning" **OR** SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning", **as directed**, surface preparation according to manufacturer's literature or certified statement.
 - b. Use coating with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
11. Miscellaneous Products: Select materials and methods of use based on the following, subject to approval of a mockup:
 - a. Previous effectiveness in performing the work involved.
 - b. Little possibility of damaging exposed surfaces.
 - c. Consistency of each application.
 - d. Uniformity of the resulting overall appearance.
 - e. Do not use products or tools that could do the following:
 - 1) Remove, alter, or in any way harm the present condition or future preservation of existing surfaces, including surrounding surfaces not in contract.

- 2) Leave a residue on surfaces.

G. Mortar Mixes

1. Preparing Lime Putty: Slake quicklime and prepare lime putty according to appendix to ASTM C 5 and manufacturer's written instructions.
2. Measurement and Mixing: Measure cementitious materials and sand in a dry condition by volume or equivalent weight. Do not measure by shovel; use known measure. Mix materials in a clean, mechanical batch mixer.
 - a. Mixing Pointing Mortar: Thoroughly mix cementitious materials and sand together before adding any water. Then mix again adding only enough water to produce a damp, unworkable mix that will retain its form when pressed into a ball. Maintain mortar in this dampened condition for 15 to 30 minutes. Add remaining water in small portions until mortar reaches desired consistency. Use mortar within one hour of final mixing; do not retemper or use partially hardened material.
3. Colored Mortar: Produce mortar of color required by using specified ingredients. Do not alter specified proportions without the Owner's approval.
 - a. Mortar Pigments: Where mortar pigments are indicated, do not exceed a pigment-to-cement ratio of 1:10 by weight.
4. Do not use admixtures in mortar unless otherwise indicated.
5. Mortar Proportions: Mix mortar materials in the following proportions:
 - a. Pointing Mortar for Brick: 1 part portland cement, 2 parts lime, and 6 parts sand **OR** 1 part portland cement, 6 parts lime, and 12 parts sand, **as directed**.
 - 1) Add mortar pigments to produce mortar colors required.
 - b. Pointing Mortar for Terra Cotta: 1 part white portland cement, 1 part lime, and 6 parts sand.
 - 1) Add mortar pigments to produce mortar colors required.
 - c. Rebuilding (Setting) Mortar: Same as pointing mortar except mortar pigments are not required, **as directed**.
 - d. Rebuilding (Setting) Mortar: 1 part portland cement, 2 parts lime, and 6 parts sand **OR** 1 part portland cement, 6 parts lime, and 12 parts sand, **as directed**.
 - e. Rebuilding (Setting) Mortar: Comply with ASTM C 270, Proportion Specification, Type N unless otherwise indicated; with cementitious material limited to portland cement and lime.

H. Chemical Cleaning Solutions

1. Dilute chemical cleaners with water to produce solutions not exceeding concentration recommended by chemical-cleaner manufacturer.
2. Acidic Cleaner Solution for Brick and Brownstone Terra Cotta: Dilute with water to produce hydrofluoric acid content of 3 percent or less, but not greater than that recommended by chemical-cleaner manufacturer.
3. Acidic Cleaner Solution for Glazed Terra Cotta: Dilute with water to concentration demonstrated by testing that does not etch or otherwise damage terra cotta surface, but not greater than that recommended by chemical-cleaner manufacturer.

1.3 EXECUTION

A. Protection

1. Protect persons, motor vehicles, surrounding surfaces of building being restored, building site, plants, and surrounding buildings from harm resulting from masonry restoration work.
 - a. Erect temporary protective covers over walkways and at points of pedestrian and vehicular entrance and exit that must remain in service during course of restoration and cleaning work.
2. Comply with chemical-cleaner manufacturer's written instructions for protecting building and other surfaces against damage from exposure to its products. Prevent chemical-cleaning solutions from coming into contact with people, motor vehicles, landscaping, buildings, and other surfaces that could be harmed by such contact.

- a. Cover adjacent surfaces with materials that are proven to resist chemical cleaners used unless chemical cleaners being used will not damage adjacent surfaces. Use materials that contain only waterproof, UV-resistant adhesives. Apply masking agents to comply with manufacturer's written instructions. Do not apply liquid masking agent to painted or porous surfaces. When no longer needed, promptly remove masking to prevent adhesive staining.
 - b. Keep wall wet below area being cleaned to prevent streaking from runoff.
 - c. Do not clean masonry during winds of sufficient force to spread cleaning solutions to unprotected surfaces.
 - d. Neutralize and collect alkaline and acid wastes for disposal off the Owner's property.
 - e. Dispose of runoff from cleaning operations by legal means and in a manner that prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.
3. Prevent mortar from staining face of surrounding masonry and other surfaces.
 - a. Cover sills, ledges, and projections to protect from mortar droppings.
 - b. Keep wall area wet below rebuilding and pointing work to discourage mortar from adhering.
 - c. Immediately remove mortar in contact with exposed masonry and other surfaces.
 - d. Clean mortar splatters from scaffolding at end of each day.
 4. Remove gutters and downspouts adjacent to masonry and store where indicated during masonry restoration and cleaning. Reinstall when masonry restoration and cleaning are complete.
 - a. Provide temporary rain drainage during work as indicated to direct water away from building.

B. Unused Anchor Removal

1. Remove masonry anchors, brackets, wood nailers, and other extraneous items no longer in use unless identified as historically significant or indicated to remain.
 - a. Remove items carefully to avoid spalling or cracking masonry.
 - b. Where directed, if an item cannot be removed without damaging surrounding masonry, do the following:
 - 1) Cut or grind off item approximately 3/4 inch (20 mm) beneath surface and core drill a recess of same depth in surrounding masonry as close around item as practical.
 - 2) Immediately paint exposed end of item with two coats of antirust coating, following coating manufacturer's written instructions and without exceeding manufacturer's recommended dry film thickness per coat. Keep paint off sides of recess.
 - c. Patch the hole where each item was removed unless directed to remove and replace the masonry unit.

C. Brick Removal And Replacement

1. At locations indicated, remove bricks that are damaged, spalled, or deteriorated or are to be reused. Carefully demolish or remove entire units from joint to joint, without damaging surrounding masonry, in a manner that permits replacement with full-size units.
 - a. When removing single bricks, remove material from center of brick and work toward outside edges.
2. Support and protect remaining masonry that surrounds removal area. Maintain flashing, reinforcement, lintels, and adjoining construction in an undamaged condition.
3. Notify the Owner of unforeseen detrimental conditions including voids, cracks, bulges, and loose units in existing masonry backup, rotted wood, rusted metal, and other deteriorated items.
4. Remove in an undamaged condition as many whole bricks as possible.
 - a. Remove mortar, loose particles, and soil from brick by cleaning with hand chisels, brushes, and water.
 - b. Remove sealants by cutting close to brick with utility knife and cleaning with solvents.
 - c. Store brick for reuse. Store off ground, on skids, and protected from weather.
 - d. Deliver cleaned brick not required for reuse to the Owner unless otherwise indicated.
5. Clean bricks surrounding removal areas by removing mortar, dust, and loose particles in preparation for replacement.

6. Replace removed damaged brick with other removed brick and salvaged brick in good quality, where possible, or with new brick matching existing brick, including size. Do not use broken units unless they can be cut to usable size.
 7. Install replacement brick into bonding and coursing pattern of existing brick. If cutting is required, use a motor-driven saw designed to cut masonry with clean, sharp, unchipped edges.
 - a. Maintain joint width for replacement units to match existing joints.
 - b. Use setting buttons or shims to set units accurately spaced with uniform joints.
 8. Lay replacement brick with completely filled bed, head, and collar joints. Butter ends with sufficient mortar to fill head joints and shove into place. Wet both replacement and surrounding bricks that have ASTM C 67 initial rates of absorption (suction) of more than 30 g/30 sq. in. per min. (30 g/194 sq. cm per min.). Use wetting methods that ensure that units are nearly saturated but surface is dry when laid.
 - a. Tool exposed mortar joints in repaired areas to match joints of surrounding existing brickwork.
 - b. Rake out mortar used for laying brick before mortar sets and point new mortar joints in repaired area to comply with requirements for repointing existing masonry, and at same time as repointing of surrounding area.
 - c. When mortar is sufficiently hard to support units, remove shims and other devices interfering with pointing of joints.
- D. Terra Cotta Removal And Replacement
1. At locations indicated, remove terra cotta units that are damaged, spalled, or deteriorated. Carefully demolish or remove entire units from joint to joint, without damaging surrounding masonry, in a manner that permits replacement with full-size units.
 2. Support and protect remaining masonry that was supported by removed units. Maintain flashing, reinforcement, lintels, and adjoining construction in an undamaged condition.
 3. Notify the Owner of unforeseen detrimental conditions including voids, cracks, bulges, and loose units in existing masonry backup, rotted wood, rusted metal, and other deteriorated items.
 4. Clean masonry surrounding removal areas by removing mortar, dust, and loose particles in preparation for replacement.
 5. Install replacement units into bonding and coursing pattern of existing units.
 - a. Do not cut or grind glazed terra cotta.
 - b. If minor cutting of replacement brownstone terra cotta is required, use a motor-driven grinder or saw designed to cut masonry with clean, sharp, unchipped edges. Do not cut or grind more than 1/8 inch (3 mm) along any edge.
 - c. Use setting buttons or shims to set units accurately spaced with uniform joints.
 6. Set replacement units in a full bed of mortar. Replace existing anchors with new anchors of size and type indicated.
 - a. Embed anchors in mortar and fill voids behind units with mortar.
 - b. Tool exposed mortar joints in repaired areas to match joints of surrounding existing terra cotta.
 - c. Rake out mortar used for laying terra cotta before mortar sets and point new mortar joints in repaired area to comply with requirements for repointing existing masonry, and at same time as repointing of surrounding area.
 - d. When mortar is sufficiently hard to support units, remove shims and other devices interfering with pointing of joints.
- E. Reanchoring Veneers
1. Install masonry repair anchors in horizontal mortar joints and according to manufacturer's written instructions. Install at not more than 16 inches (400 mm) o.c. vertically and 32 inches (800 mm) o.c. horizontally unless otherwise indicated. Install at locations to avoid penetrating flashing.
 2. Recess anchors at least 5/8 inch (16 mm) from surface of mortar joint and fill recess with pointing mortar.
- F. Painting Steel Uncovered During The Work

1. Inspect steel exposed during masonry removal. Where the Owner determines that it is structural, or for other reasons cannot be totally removed, prepare and paint it as follows:
 - a. Remove paint, rust, and other contaminants according to SSPC-SP 2, "Hand Tool Cleaning" **OR** SSPC-SP 3, "Power Tool Cleaning" **OR** SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning", **as directed**, as applicable to meet paint manufacturer's recommended preparation.
 - b. Immediately paint exposed steel with two coats of antirust coating, following coating manufacturer's written instructions and without exceeding manufacturer's recommended rate of application (dry film thickness per coat).
2. If on inspection and rust removal, the cross section of a steel member is found to be reduced from rust by more than 1/16 inch (1.6 mm), notify the Owner before proceeding.

G. Masonry Unit Patching

1. Patch the following masonry units unless another type of replacement or repair is indicated:
 - a. Units indicated to be patched.
 - b. Units with holes.
 - c. Units with chipped edges or corners.
 - d. Units with small areas of deep deterioration.
2. Remove and replace existing patches unless otherwise indicated or approved by the Owner.
3. Patching Bricks:
 - a. Remove loose material from masonry surface. Carefully remove additional material so patch will not have feathered edges but will have square or slightly undercut edges on area to be patched and will be at least 1/4 inch (6 mm) thick, but not less than recommended by patching compound manufacturer.
 - b. Mask adjacent mortar joint or rake out for repointing if patch will extend to edge of masonry unit.
 - c. Mix patching compound in individual batches to match each unit being patched. Combine one or more colors of patching compound, as needed, to produce exact match.
 - d. Rinse surface to be patched and leave damp, but without standing water.
 - e. Brush-coat surfaces with slurry coat of patching compound according to manufacturer's written instructions.
 - f. Place patching compound in layers as recommended by patching compound manufacturer, but not less than 1/4 inch (6 mm) or more than 2 inches (50 mm) thick. Roughen surface of each layer to provide a key for next layer.
 - g. Trowel, scrape, or carve surface of patch to match texture and surrounding surface plane or contour of the masonry unit. Shape and finish surface before or after curing, as determined by testing, to best match existing masonry unit.
 - h. Keep each layer damp for 72 hours or until patching compound has set.
4. Patching Terra Cotta:
 - a. Remove deteriorated material as determined by sounding gently with a small hammer. Carefully remove additional material so patch will not have feathered edges but will have square or slightly undercut edges on area to be patched and will be at least 1/4 inch (6 mm) thick, but not less than recommended by patching compound manufacturer.
 - b. Where mortar joints adjacent to patch are open, fill back of joints with pointing mortar and allow to cure before patching terra cotta. Leave space for pointing joints according to "Repointing Masonry" Article.
 - c. Mask adjacent mortar joint or rake out for repointing if patch will extend to edge of unit.
 - d. Rinse surface to be patched and leave damp, but without standing water.
 - e. Brush-coat surfaces with slurry coat of patching compound according to manufacturer's written instructions.
 - f. Place patching compound in layers as recommended by patching compound manufacturer, but not less than 1/4 inch (6 mm) or more than 2 inches (50 mm) thick. Roughen surface of each layer to provide a key for next layer.
 - g. Do not apply patching compound over mortar joints. If patching compound bridges mortar joints, cut out joints after patching compound hardens.

- h. Trowel, scrape, or carve surface of patch to match texture, details, and surrounding surface plane or contour of terra cotta. Shape and finish surface before or after curing, as determined by testing to best match existing terra cotta.
 - i. Keep each layer damp for 72 hours or until patching compound has set.
 - j. After final layer of patching compound has cured, apply glaze replacement according to manufacturer's written instructions. Apply two or more coats, as needed, to match glaze of adjacent terra cotta units.
- H. Widening Joints
- 1. Do not widen a joint, except where indicated or approved by the Owner.
 - 2. Location Guideline: Where an existing masonry unit abuts another or the joint is less than 1/8 inch (3 mm), widen the joint for length indicated and to depth required for repointing after obtaining the Owner's approval.
 - 3. Carefully perform widening by cutting, grinding, routing, or filing procedures demonstrated in an approved mockup.
 - 4. Widen joint to width equal to or less than predominant width of other joints on building. Make sides of widened joint uniform and parallel. Ensure that edges of units along widened joint are in alignment with joint edges at unaltered joints.
- I. Cleaning Masonry, General
- 1. Proceed with cleaning in an orderly manner; work from bottom to top **OR** top to bottom, **as directed**, of each scaffold width and from one end of each elevation to the other. Ensure that dirty residues and rinse water will not wash over cleaned, dry surfaces.
 - 2. Use only those cleaning methods indicated for each masonry material and location.
 - a. Do not use wire brushes or brushes that are not resistant to chemical cleaner being used. Do not use plastic-bristle brushes if natural-fiber brushes will resist chemical cleaner being used.
 - b. Use spray equipment that provides controlled application at volume and pressure indicated, measured at spray tip. Adjust pressure and volume to ensure that cleaning methods do not damage masonry.
 - 1) Equip units with pressure gages.
 - c. For chemical-cleaner spray application, use low-pressure tank or chemical pump suitable for chemical cleaner indicated, equipped with cone-shaped spray tip.
 - d. For water-spray application, use fan-shaped spray tip that disperses water at an angle of 25 to 50 degrees.
 - e. For high-pressure water-spray application, use fan-shaped spray tip that disperses water at an angle of at least 40 degrees.
 - f. For heated water-spray application, use equipment capable of maintaining temperature between 140 and 160 deg F (60 and 71 deg C) at flow rates indicated.
 - g. For steam application, use steam generator capable of delivering live steam at nozzle.
 - 3. Perform each cleaning method indicated in a manner that results in uniform coverage of all surfaces, including corners, moldings, and interstices, and that produces an even effect without streaking or damaging masonry surfaces.
 - 4. Water Application Methods:
 - a. Water-Soak Application: Soak masonry surfaces by applying water continuously and uniformly to limited area for time indicated. Apply water at low pressures and low volumes in multiple fine sprays using perforated hoses or multiple spray nozzles. Erect a protective enclosure constructed of polyethylene sheeting to cover area being sprayed.
 - b. Water-Spray Applications: Unless otherwise indicated, hold spray nozzle at least 6 inches (150 mm) from surface of masonry and apply water in horizontal back and forth sweeping motion, overlapping previous strokes to produce uniform coverage.
 - 5. Steam Cleaning: Apply steam to masonry surfaces at the very low pressures indicated for each type of masonry material. Hold nozzle at least 6 inches (150 mm) from surface of masonry and apply steam in horizontal back and forth sweeping motion, overlapping previous strokes to produce uniform coverage.

6. Chemical-Cleaner Application Methods: Apply chemical cleaners to masonry surfaces to comply with chemical-cleaner manufacturer's written instructions; use brush or spray application. Do not spray apply at pressures exceeding 50 psi (345 kPa). Do not allow chemicals to remain on surface for periods longer than those indicated or recommended by manufacturer.
 7. Rinse off chemical residue and soil by working upward from bottom to top of each treated area at each stage or scaffold setting. Periodically during each rinse, test pH of rinse water running off of cleaned area to determine that chemical cleaner is completely removed.
 - a. Apply neutralizing agent and repeat rinse if necessary to produce tested pH of between 6.7 and 7.5.
 8. After cleaning is complete, remove protection no longer required. Remove tape and adhesive marks.
- J. Preliminary Cleaning
1. Removing Plant Growth: Completely remove visible plant, moss, and shrub growth from masonry surfaces. Carefully remove plants, creepers, and vegetation by cutting at roots and allowing to dry as long as possible before removal. Remove loose soil and debris from open masonry joints to whatever depth they occur.
 2. Preliminary Cleaning: Before beginning general cleaning, remove extraneous substances that are resistant to cleaning methods being used. Extraneous substances include paint, calking, asphalt, and tar.
 - a. Carefully remove heavy accumulations of material from surface of masonry with a sharp chisel. Do not scratch or chip masonry surface.
 - b. Remove paint and calking with alkaline paint remover.
 - 1) Comply with requirements in "Paint Removal" Article.
 - 2) Repeat application up to two times if needed.
 - c. Remove asphalt and tar with solvent-type paint remover.
 - 1) Comply with requirements in "Paint Removal" Article.
 - 2) Apply paint remover only to asphalt and tar by brush without prewetting.
 - 3) Allow paint remover to remain on surface for 10 to 30 minutes.
 - 4) Repeat application if needed.
- K. Paint Removal
1. Paint Removal with Alkaline Paste Paint Remover:
 - a. Remove loose and peeling paint using low **OR** medium **OR** high, **as directed**, -pressure spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 - b. Apply paint remover to dry, painted masonry with brushes.
 - c. Allow paint remover to remain on surface for period recommended by manufacturer.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and paint residue.
 - e. Repeat process if necessary to remove all paint.
 - f. Apply acidic cleaner or manufacturer's recommended afterwash to masonry, while surface is still wet, using low-pressure spray equipment or soft-fiber brush. Let cleaner or afterwash remain on surface as a neutralizing agent for period recommended by chemical cleaner or afterwash manufacturer.
 - g. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 2. Paint Removal with Covered or Skin-Forming Alkaline Paint Remover:
 - a. Remove loose and peeling paint using low **OR** medium **OR** high, **as directed**, -pressure spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 - b. Apply paint remover to dry, painted masonry with trowel, spatula, or as recommended by manufacturer.
 - c. Apply cover, if required by manufacturer, per manufacturer's written instructions.
 - d. Allow paint remover to remain on surface for period recommended by manufacturer or as determined in test panels.
 - e. Scrape off paint and remover and collect for disposal.

- f. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and paint residue.
- g. Use alkaline paste paint remover, according to "Paint Removal with Alkaline Paste Paint Remover" Paragraph, if necessary to remove remaining paint.
- h. Apply acidic cleaner or manufacturer's recommended afterwash to masonry, while surface is still wet, using low-pressure spray equipment or soft-fiber brush. Let cleaner or afterwash remain on surface as a neutralizing agent for period recommended by chemical-cleaner or afterwash manufacturer.
- i. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
3. Paint Removal with Solvent-Type Paint Remover:
 - a. Remove loose and peeling paint using low **OR** medium **OR** high, **as directed**, -pressure spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 - b. Apply thick coating of paint remover to painted masonry with natural-fiber cleaning brush, deep-nap roller, or large paint brush.
 - c. Allow paint remover to remain on surface for period recommended by manufacturer. Agitate periodically with stiff-fiber brush.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and paint residue.
- L. Cleaning Brickwork
 1. Cold-Water Soak:
 - a. Apply cold water by intermittent spraying to keep surface moist.
 - b. Use perforated hoses or other means that will apply a fine water mist to entire surface being cleaned.
 - c. Apply water in cycles with at least 30 minutes between cycles.
 - d. Continue spraying until surface encrustation has softened sufficiently to permit its removal by water wash, as indicated by cleaning tests.
 - e. Continue spraying for 72 hours.
 - f. Remove soil and softened surface encrustation from masonry with cold water applied by low-pressure spray.
 2. Cold-Water Wash: Use cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray.
 3. Hot-Water Wash: Use hot water applied by low **OR** medium **OR** high, **as directed**, -pressure spray.
 4. Steam Cleaning: Apply steam at very low pressures not exceeding 30 psi (207 kPa) **OR** 80 psi (550 kPa), **as directed**. Remove dirt softened by steam with wood scrapers, stiff-nylon or -fiber brushes, or cold-water wash, as indicated by cleaning tests.
 5. Detergent Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Scrub masonry with detergent solution using medium-soft brushes until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from mortar joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that masonry surface remains wet.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove detergent solution and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
 6. Mold, Mildew, and Algae Removal:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply mold, mildew, and algae remover by brush or low-pressure spray.
 - c. Scrub masonry with medium-soft brushes until mold, mildew, and algae are thoroughly dislodged and can be removed by rinsing. Use small brushes for mortar joints and crevices. Dip brush in mold, mildew, and algae remover often to ensure that adequate fresh cleaner is used and that masonry surface remains wet.

- d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove mold, mildew, and algae remover and soil.
- e. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
- 7. Nonacidic Gel Chemical Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply nonacidic gel cleaner in 1/8-inch (3-mm) thickness by brush, working into joints and crevices. Apply quickly and do not brush out excessively so area will be uniformly covered with fresh cleaner and dwell time will be uniform throughout area being cleaned.
 - c. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - d. Remove bulk of nonacidic gel cleaner by squeegeeing into containers for disposal.
 - e. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
- 8. Nonacidic Liquid Chemical Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply cleaner to masonry in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
- 9. Mild Acidic **OR** Acidic, **as directed**, Chemical Cleaning:
 - a. Wet masonry with cold water applied by low-pressure spray.
 - b. Apply cleaner to masonry in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use a steam cleaning.

M. Cleaning Brownstone Terra Cotta

- 1. Cold-Water Soak:
 - a. Apply cold water by intermittent spraying to keep surface moist.
 - b. Use perforated hoses or other means that will apply a fine water mist to entire surface being cleaned.
 - c. Apply water in cycles with at least 30 minutes between cycles.
 - d. Continue spraying until surface encrustation has softened sufficiently to permit its removal by water wash, as indicated by cleaning tests.
 - e. Continue spraying for 72 hours.
 - f. Remove soil and softened surface encrustation from masonry with cold water applied by low-pressure spray.

2. Cold-Water Wash: Use cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray.
3. Hot-Water Wash: Use hot water applied by low **OR** medium **OR** high, **as directed**, -pressure spray.
4. Steam Cleaning: Apply steam at very low pressures not exceeding 30 psi (207 kPa) **OR** 80 psi (550 kPa), **as directed**. Remove dirt softened by steam with wood scrapers, stiff-nylon or -fiber brushes, or cold-water wash, as indicated by cleaning tests.
5. Detergent Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Scrub masonry with detergent solution using medium-soft brushes until soil is thoroughly dislodged and can be removed by rinsing. Use small brushes to remove soil from mortar joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that masonry surface remains wet.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove detergent solution and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
6. Mold, Mildew, and Algae Removal:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply mold, mildew, and algae remover by brush or low-pressure spray.
 - c. Scrub masonry with medium-soft brushes until mold, mildew, and algae are thoroughly dislodged and can be removed by rinsing. Use small brushes for mortar joints and crevices. Dip brush in mold, mildew, and algae remover often to ensure that adequate fresh cleaner is used and that masonry surface remains wet.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove mold, mildew, and algae remover and soil.
 - e. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
7. Nonacidic Gel Chemical Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply nonacidic gel cleaner in 1/8-inch (3-mm) thickness by brush, working into joints and crevices. Apply quickly and do not brush out excessively so area will be uniformly covered with fresh cleaner and dwell time will be uniform throughout area being cleaned.
 - c. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - d. Remove bulk of nonacidic gel cleaner by squeegeeing into containers for disposal.
 - e. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
8. Nonacidic Liquid Chemical Cleaning:
 - a. Wet masonry with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply cleaner to masonry in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
9. Mild Acidic **OR** Acidic, **as directed**, Chemical Cleaning:
 - a. Wet masonry with cold water applied by low-pressure spray.

- b. Apply cleaner to masonry in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
- c. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
- d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use a steam cleaning.

N. Cleaning Glazed Terra Cotta

1. Hot-Water Wash: Use hot water applied by low **OR** medium **OR** high, **as directed**, -pressure spray.
2. Steam Cleaning: Apply steam at very low pressures not exceeding 30 psi (207 kPa) **OR** 80 psi (550 kPa), **as directed**. Remove dirt softened by steam with wood scrapers, stiff-nylon or -fiber brushes, or cold-water wash, as indicated by cleaning tests.
3. Nonacidic Gel Chemical Cleaning:
 - a. Wet terra cotta with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply nonacidic gel cleaner in 1/8-inch (3-mm) thickness by brush, working into joints and crevices. Apply quickly and do not brush out excessively so area will be uniformly covered with fresh cleaner and dwell time will be uniform throughout area being cleaned.
 - c. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - d. Remove bulk of nonacidic gel cleaner by squeegeeing into containers for disposal.
 - e. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
4. Nonacidic Liquid Chemical Cleaning:
 - a. Wet terra cotta with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply cleaner to terra cotta in two applications, **as directed**. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
5. Mild Acidic Chemical Cleaning:
 - a. Wet terra cotta with cold water applied by low-pressure spray.
 - b. Apply cleaner to terra cotta in two applications, **as directed**. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

6. Two-Part Chemical Cleaning:
 - a. Wet terra cotta with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply alkaline prewash cleaner to terra cotta by brush or roller. Let cleaner remain on surface for period recommended by chemical-cleaner manufacturer unless otherwise indicated.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by medium-pressure spray to remove chemicals and soil.
 - d. Apply acidic afterwash cleaner to terra cotta in two applications, **as directed**, while surface is still wet, using low-pressure spray equipment, deep-nap roller or soft-fiber brush. Let neutralizer remain on surface for period recommended by manufacturer unless otherwise indicated.
 - e. Rinse with cold water applied by medium-pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

- O. Repointing Masonry
 1. Rake out and repoint joints to the following extent:
 - a. All joints in areas indicated.
 - b. Joints where mortar is missing or where they contain holes.
 - c. Cracked joints where cracks can be penetrated at least 1/4 inch (6 mm) by a knife blade 0.027 inch (0.7 mm) thick.
 - d. Cracked joints where cracks are 1/16 inch (1.6 mm) **OR** 1/8 inch (3 mm), **as directed**, or more in width and of any depth.
 - e. Joints where they sound hollow when tapped by metal object.
 - f. Joints where they are worn back 1/4 inch (6 mm) or more from surface.
 - g. Joints where they are deteriorated to point that mortar can be easily removed by hand, without tools.
 - h. Joints where they have been filled with substances other than mortar.
 - i. Joints indicated as sealant-filled joints.
 2. Do not rake out and repoint joints where not required.
 3. Rake out joints as follows, according to procedures demonstrated in approved mockup:
 - a. Remove mortar from joints to depth of joint width plus 1/8 inch (3 mm) **OR** 2 times joint width **OR** 2-1/2 times joint width, **as directed**, but not less than 1/2 inch (13 mm) or not less than that required to expose sound, unweathered mortar.
 - b. Remove mortar from masonry surfaces within raked-out joints to provide reveals with square backs and to expose masonry for contact with pointing mortar. Brush, vacuum, or flush joints to remove dirt and loose debris.
 - c. Do not spall edges of masonry units or widen joints. Replace or patch damaged masonry units as directed by the Owner.
 - 1) Cut out mortar by hand with chisel and resilient mallet. Do not use power-operated grinders without the Owner's written approval based on approved quality-control program.
 - 2) Cut out center of mortar bed joints using angle grinders with diamond-impregnated metal blades. Remove remaining mortar by hand with chisel and resilient mallet. Strictly adhere to approved quality-control program.
 4. Notify the Owner of unforeseen detrimental conditions including voids in mortar joints, cracks, loose masonry units, rotted wood, rusted metal, and other deteriorated items.
 5. Pointing with Mortar:
 - a. Rinse joint surfaces with water to remove dust and mortar particles. Time rinsing application so, at time of pointing, joint surfaces are damp but free of standing water. If rinse water dries, dampen joint surfaces before pointing.
 - b. Apply pointing mortar first to areas where existing mortar was removed to depths greater than surrounding areas. Apply in layers not greater than 3/8 inch (9 mm) until a uniform depth is formed. Fully compact each layer thoroughly and allow it to become thumbprint hard before applying next layer.

- c. After low areas have been filled to same depth as remaining joints, point all joints by placing mortar in layers not greater than 3/8 inch (9 mm). Fully compact each layer and allow to become thumbprint hard before applying next layer. Where existing masonry units have worn or rounded edges, slightly recess finished mortar surface below face of masonry to avoid widened joint faces. Take care not to spread mortar beyond joint edges onto exposed masonry surfaces or to featheredge the mortar.
 - d. When mortar is thumbprint hard, tool joints to match original appearance of joints as demonstrated in approved mockup. Remove excess mortar from edge of joint by brushing.
 - e. Cure mortar by maintaining in thoroughly damp condition for at least 72 consecutive hours including weekends and holidays.
 - 1) Acceptable curing methods include covering with wet burlap and plastic sheeting, periodic hand misting, and periodic mist spraying using system of pipes, mist heads, and timers.
 - 2) Adjust curing methods to ensure that pointing mortar is damp throughout its depth without eroding surface mortar.
 - f. Hairline cracking within the mortar or mortar separation at edge of a joint is unacceptable. Completely remove such mortar and repoint.
6. Pointing with Sealant:
- a. After raking out, keep joints dry and free of mortar and debris.
 - b. Clean and prepare joint surfaces according to Division 07 Section "Joint Sealants". Prime joint surfaces unless sealant manufacturer recommends against priming. Do not allow primer to spill or migrate onto adjoining surfaces.
 - c. Fill sealant joints with specified joint sealant according to Division 07 Section "Joint Sealants" and the following:
 - 1) Install cylindrical sealant backing beneath the sealant, except where space is insufficient. There, install bond-breaker tape.
 - 2) Install sealant using only proven installation techniques that will ensure that sealant will be deposited in a uniform, continuous ribbon, without gaps or air pockets, and with complete wetting of the joint bond surfaces equally on both sides. Fill joint flush with surrounding masonry and matching the contour of adjoining mortar joints.
 - 3) Install sealant as recommended by sealant manufacturer but within the following general limitations, measured at the center (thin) section of the bead:
 - a) Fill joints to a depth equal to joint width, but not more than 1/2 inch (13 mm) deep or less than 1/4 inch (6 mm) deep.
 - 4) Immediately after first tooling, apply ground-mortar aggregate to sealant, gently pushing aggregate into the surface of sealant. Retool sealant to form smooth, uniform beads, slightly concave. Remove excess sealant and aggregate from surfaces adjacent to joint.
 - 5) Do not allow sealant to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces, particularly rough textures. Remove excess and spillage of sealant promptly as the work progresses. Clean adjoining surfaces by the means necessary to eliminate evidence of spillage, without damage to adjoining surfaces or finishes, as demonstrated in an approved mockup.
 - d. Cure sealant according to Division 07 Section "Joint Sealants".
7. Where repointing work precedes cleaning of existing masonry, allow mortar to harden at least 30 days before beginning cleaning work.
- P. Final Cleaning
1. After mortar has fully hardened, thoroughly clean exposed masonry surfaces of excess mortar and foreign matter; use wood scrapers, stiff-nylon or -fiber brushes, and clean water, spray applied at low pressure.
 - a. Do not use metal scrapers or brushes.
 - b. Do not use acidic or alkaline cleaners.
 2. Wash adjacent woodwork and other nonmasonry surfaces. Use detergent and soft brushes or cloths.

3. Clean mortar and debris from roof; remove debris from gutters and downspouts. Rinse off roof and flush gutters and downspouts.
4. Sweep and rake adjacent pavement and grounds to remove mortar and debris. Where necessary, pressure wash pavement surfaces to remove mortar, dust, dirt, and stains.

Q. Field Quality Control

1. Inspectors: Engage qualified independent inspectors to perform inspections and prepare test reports. Allow inspectors use of lift devices and scaffolding, as needed, to perform inspections.
2. the Owner's Project Representatives: the Owner will assign Project representatives to help carry out the Owner's responsibilities at the site, including observing progress and quality of portion of the Work completed. Allow the Owner's Project representatives use of lift devices and scaffolding, as needed, to observe progress and quality of portion of the Work completed.
3. Notify inspectors and the Owner's Project representatives in advance of times when lift devices and scaffolding will be relocated. Do not relocate lift devices and scaffolding until inspectors and the Owner's Project representatives have had reasonable opportunity to make inspections and observations of work areas at lift device or scaffold location.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 01 40 52 - STONE RESTORATION AND CLEANING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for stone restoration and cleaning. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes maintenance of stone assemblies consisting of stone restoration and cleaning as follows:
 - a. Unused anchor removal.
 - b. Repairing stone masonry, including replacing whole and partial units.
 - c. Painting steel uncovered during the work.
 - d. Repointing joints.
 - e. Preliminary cleaning, including removing plant growth.
 - f. Cleaning exposed stone surfaces.
 - g. Stone consolidation treatment.

C. Definitions

1. Very Low-Pressure Spray: Under 100 psi (690 kPa).
2. Low-Pressure Spray: 100 to 400 psi (690 to 2750 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
3. Medium-Pressure Spray: 400 to 800 psi (2750 to 5510 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
4. High-Pressure Spray: 800 to 1200 psi (5510 to 8250 kPa); 4 to 6 gpm (0.25 to 0.4 L/s).
5. Stone Terminology: ASTM C 119.
6. Face Bedding: Setting of stone with the natural bedding planes (strata) vertical and parallel to the wall plane rather than horizontal or "naturally bedded," which holds bedding planes together by gravity.

D. Preconstruction Testing

1. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on stone units as follows:
 - a. Existing Stone: Test each type of existing stone indicated for replacement, according to ASTM C 170 for compressive strength, wet and dry, perpendicular and parallel to rift; ASTM C 99 for modulus of rupture, wet and dry, perpendicular and parallel to rift; and ASTM C 97 for absorption and bulk specific gravity. Carefully remove five existing stones from locations designated by the Owner. Take testing samples from these stones.
 - b. Existing Mortar: Test according to ASTM C 295, modified as agreed by testing service and the Owner for Project requirements, to determine proportional composition of original ingredients, sizes and colors of aggregates, and approximate strength. Use X-ray diffraction, infrared spectroscopy, and differential thermal analysis as necessary to supplement microscopical methods. Carefully remove existing mortar from within joints at five locations designated by the Owner or testing service.
 - c. Temporary Patch: as directed by the Owner, provide temporary materials at locations from which existing samples were taken.
 - d. Replacement Stone: Test each proposed type of replacement stone, according to ASTM C 170 for compressive strength, ASTM C 99 for modulus of rupture, and ASTM C 97 for absorption and bulk specific gravity.

E. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: For the following:

- a. Replacement stone units and their jointing, showing relation of existing to new units.
- b. Partial replacement stone units (dutchmen).
- c. Setting number of each new stone unit and its location on the structure in annotated plans and elevations.
- d. Provisions for expansion joints or other sealant joints.
- e. Provisions for flashing, lighting fixtures, conduits, and weep holes as required.
- f. Replacement and repair anchors, including drilled-in pins. Include details of anchors within individual stone units, with locations of anchors and dimensions of holes and recesses in stone required for anchors, including direction and angle of holes for pins.
3. Samples: For each exposed product and for each color and texture specified.
4. Preconstruction Test Reports.

F. Quality Assurance

1. Restoration Specialist Qualifications: Engage an experienced, preapproved stone restoration and cleaning firm to perform work of this Section. Firm shall have completed work similar in material, design, and extent to that indicated for this Project with a record of successful in-service performance. Experience installing standard unit masonry or new stone masonry is not sufficient experience for stone restoration work.
 - a. At Contractor's option, work may be divided between two specialist firms: one for cleaning work and one for repair work.
 - b. Field Supervision: Restoration specialist firms shall maintain experienced full-time supervisors on Project site during times that stone restoration and cleaning work is in progress. Supervisors shall not be changed during Project except for causes beyond control of restoration specialist firm.
 - c. Restoration Worker Qualifications: Persons who are experienced and specialize in restoration work of types they will be performing. When stone units are being patched, assign at least one worker among those performing patching work who is trained and certified by manufacturer of patching compound to apply its products.
2. Mockups: Prepare mockups of restoration and cleaning to demonstrate aesthetic effects and set quality standards for materials and execution and for fabrication and installation.
 - a. Stone Repair: Prepare sample areas for each type of stone indicated to have repair work performed. If not otherwise indicated, size each mockup not smaller than 2 adjacent whole units or approximately 48 inches (1200 mm) in least dimension. Erect sample areas in existing walls unless otherwise indicated, to demonstrate quality of materials, workmanship, and blending with existing work. Include the following as a minimum:
 - 1) Replacement: Four stone units replaced.
 - 2) Partial Stone Replacement: Two partial stone replacements (dutchman repairs).
 - 3) Stone Plug Repair: Two stone plug repairs for each type of stone indicated to be plugged.
 - 4) Crack Injection: Apply crack injection in 2 separate areas, each approximately 36 inches (900 mm) long.
 - 5) Patching: Three small holes at least 1 inch (25 mm) in diameter.
 - b. Repointing: Rake out joints in 2 separate areas, each approximately 36 inches (900 mm) high by 48 inches (1200 mm) wide, for each type of repointing required and repoint one of the areas.
 - c. Consolidation: Apply stone consolidation treatment to an area approximately 4 sq. ft. (0.4 sq. m).
 - d. Cleaning: Clean an area approximately 25 sq. ft. (2.3 sq. m) for each type of stone and surface condition.
3. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

1. Deliver stone units to Project site strapped together in suitable packs or pallets or in heavy-duty crates.

2. Deliver each piece of granite with code mark or setting number on unexposed face, corresponding to Shop Drawings, using nonstaining paint.
3. Deliver other materials to Project site in manufacturer's original and unopened containers, labeled with manufacturer's name and type of products.
4. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
5. Store hydrated lime in manufacturer's original and unopened containers. Discard lime if containers have been damaged or have been opened for more than two days.
6. Store lime putty covered with water in sealed containers.
7. Store sand where grading and other required characteristics can be maintained and contamination avoided.

H. Project Conditions

1. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit stone restoration and cleaning work to be performed according to manufacturers' written instructions and specified requirements.
2. Repair stone units and repoint mortar joints only when air temperature is between 40 and 90 deg F (4 and 32 deg C) and is predicted to remain so for at least 7 days after completion of the Work unless otherwise indicated.
3. Cold-Weather Requirements: Comply with the following procedures for stone repair and mortar-joint pointing unless otherwise indicated:
 - a. When air temperature is below 40 deg F (4 deg C), heat mortar ingredients, repair materials, and existing stone to produce temperatures between 40 and 120 deg F (4 and 49 deg C).
 - b. When mean daily air temperature is below 40 deg F (4 deg C), provide enclosure and heat to maintain temperatures above 32 deg F (0 deg C) within the enclosure for 7 days after repair and pointing.
4. Hot-Weather Requirements: Protect stone repair and mortar-joint pointing when temperature and humidity conditions produce excessive evaporation of water from mortar and patching materials. Provide artificial shade and wind breaks and use cooled materials as required to minimize evaporation. Do not apply mortar to substrates with temperatures of 90 deg F (32 deg C) and above unless otherwise indicated.
5. For manufactured repair materials, perform work within the environmental limits set by each manufacturer.
6. Clean stone surfaces only when air temperature is 40 deg F (4 deg C) and above and is predicted to remain so for at least 7 days after completion of cleaning.
7. Apply stone consolidation treatment only when surface and air temperatures are between 50 and 90 deg F (10 and 32 deg C) and rain is not expected within 24 hours.

1.2 PRODUCTS

A. Stone Materials

1. Stone: Provide natural building stone of variety, color, texture, grain, veining, finish, size, and shape to match existing stone and with physical properties within 10 percent of those determined from preconstruction testing of selected existing stone.
 - a. For existing stone that exhibits a range of colors, texture, grain, veining, finishes, sizes, or shapes, provide stone that proportionally matches that range rather than stone that matches an individual color, texture, grain, veining, finish, size, or shape within that range.
2. Stone: Provide natural building stone of variety, color, texture, grain, veining, finish, and physical properties to match the Owner's sample. Match existing stone in size and shape.
 - a. For the Owner's sample that exhibits a range of colors, texture, grain, veining, finishes, sizes, or shapes, provide stone that proportionally matches that range rather than stone that matches an individual color, texture, grain, veining, finish, size, or shape within that range.

3. Quarrying New Stone: Have quarry clearly label the direction of bedding planes when rough stone is quarried, to facilitate cutting stones so that natural bedding planes will be as required in "Cutting New Stone" Paragraph.
4. Cutting New Stone: Regardless of how existing stone was cut and set, cut each new stone so that, when it is set in final position, natural bedding planes are essentially horizontal except for arches, where bedding planes are essentially radial or vertical, but perpendicular to the wall plane.
5. Salvaged Stone: Obtain salvaged stone from the Owner from location shown on Drawings. Clean off residual mortar.

B. Mortar Materials

1. Portland Cement: ASTM C 150, Type I or Type II, white or gray or both where required for color matching of exposed mortar.
 - a. Provide cement containing not more than 0.60 percent total alkali when tested according to ASTM C 114.
2. Hydrated Lime: ASTM C 207, Type S.
3. Factory-Prepared Lime Putty: ASTM C 1489.
4. Quicklime: ASTM C 5, pulverized lime.
5. Mortar Sand: ASTM C 144 unless otherwise indicated.
 - a. Color: Provide natural sand or ground marble, granite, or other sound stone of color necessary to produce required mortar color.
 - b. For pointing mortar, provide sand with rounded edges.
 - c. Match size, texture, and gradation of existing mortar sand as closely as possible. Blend several sands if necessary to achieve suitable match.
6. Mortar Pigments: Natural and synthetic iron oxides, compounded for mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortars.
7. Water: Potable.

C. Manufactured Repair Materials

1. Stone Patching Compound: Factory-mixed cementitious product that is custom manufactured for patching stone.
 - a. Use formulation that is vapor- and water permeable (equal to or more than the stone), exhibits low shrinkage, has lower modulus of elasticity than the stone units being repaired, and develops high bond strength to all types of stone.
 - b. Use formulation having working qualities and retardation control to permit forming and sculpturing where necessary.
 - c. Formulate patching compound in colors, textures, and grain to match stone being patched. Provide sufficient number of **OR** not less than three, **as directed**, colors to enable matching each piece of stone.
2. Cementitious Crack Filler: An ultrafine superplasticized grout that can be injected into cracks, is suitable for application to wet or dry cracks, exhibits low shrinkage, and develops high bond strength to all types of stone.
3. Stone-to-Stone Adhesive: 2-part polyester or epoxy-resin stone adhesive with a 15- to 45-minute cure at 70 deg F (21 deg C) or 1-part cementitious stone adhesive, recommended by adhesive manufacturer for type of stone repair indicated, and matching stone color.
4. Stone Consolidation Treatment: Ready-to-use product designed for consolidation of stone that has deteriorated due to weathering and exposure to pollutants. Treatment shall be composed of silicic-ethyl esters, a neutral catalyst, and solvents.
5. Stone Consolidation and Water-Repellent Treatment: Ready-to-use product designed for consolidation and water-repellent treatment of stone that has deteriorated due to weathering and exposure to pollutants. Treatment shall be composed of silicic-ethyl esters, a neutral catalyst, a silane water repellent, and solvents.

D. Paint Removers

1. Alkaline Paste Paint Remover: Manufacturer's standard alkaline paste formulation for removing paint coatings from masonry.
 2. Covered or Skin-Forming Alkaline Paint Remover: Manufacturer's standard covered or skin-forming alkaline formulation for removing paint coatings from masonry.
 3. Solvent-Type Paint Remover: Manufacturer's standard water-rinsable, solvent-type gel formulation for removing paint coatings from masonry.
 4. Low-Odor, Solvent-Type Paint Remover: Manufacturer's standard low-odor, water-rinsable solvent-type gel formulation, containing no methanol or methylene chloride, for removing paint coatings from masonry.
- E. Cleaning Materials
1. Water: Potable.
 2. Hot Water: Water heated to a temperature of 140 to 160 deg F (60 to 71 deg C).
 3. Job-Mixed Detergent Solution: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium polyphosphate, 1/2 cup (125 mL) of laundry detergent, and 20 quarts (20 L) of hot water for every 5 gal. (20 L) of solution required.
 4. Job-Mixed Mold, Mildew, and Algae Remover: Solution prepared by mixing 2 cups (0.5 L) of tetrasodium polyphosphate, 5 quarts (5 L) of 5 percent sodium hypochlorite (bleach), and 15 quarts (15 L) of hot water for every 5 gal. (20 L) of solution required.
 5. Nonacidic Gel Cleaner: Manufacturer's standard gel formulation, with pH between 6 and 9, that contains detergents with chelating agents and is specifically formulated for cleaning masonry surfaces.
 6. Nonacidic Liquid Cleaner: Manufacturer's standard mildly alkaline liquid cleaner formulated for removing mold, mildew, and other organic soiling from ordinary building materials, including polished stone, brick, aluminum, plastics, and wood.
 7. Mild Acidic Cleaner: Manufacturer's standard mildly acidic cleaner containing no muriatic (hydrochloric), hydrofluoric, or sulfuric acid; or ammonium bifluoride or chlorine bleaches.
 8. Acidic Cleaner: Manufacturer's standard acidic masonry cleaner composed of hydrofluoric acid or ammonium bifluoride blended with other acids, detergents, wetting agents, and inhibitors.
 9. One-Part Limestone Cleaner: Manufacturer's standard one-part acidic formulation for cleaning limestone.
 10. Two-Part Limestone Cleaner: Manufacturer's standard system consisting of potassium or sodium hydroxide based, alkaline prewash cleaner and acidic afterwash cleaner that does not contain hydrofluoric acid.
- F. Accessory Materials
1. Liquid Strippable Masking Agent: Manufacturer's standard liquid, film-forming, strippable masking material for protecting glass, metal, and polished stone surfaces from damaging effects of acidic and alkaline masonry cleaners.
 2. Stone Anchors and Pins: Type and size indicated or, if not indicated, to match existing anchors in size and type. Fabricate anchors and pins from Type 304 **OR** Type 316, **as directed**, stainless steel.
 3. Sealant Materials:
 - a. Provide manufacturer's standard chemically curing, elastomeric sealant(s) of base polymer and characteristics indicated below that comply with applicable requirements in Division 07 Section "Joint Sealants".
 - 1) Single-component, nonsag urethane sealant.
 - b. Colors: Provide colors of exposed sealants to match colors of stonework adjoining installed sealant unless otherwise indicated.
 - c. Ground-Mortar Aggregate: Custom crushed and ground pointing mortar sand or existing mortar retrieved from joints. Grind to a particle size that matches the adjacent mortar aggregate and color. Remove all fines passing the 100 sieve.
 4. Joint-Sealant Backing:
 - a. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) or Type B (bicellular material with a surface skin), and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

- b. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.
- 5. Setting Buttons: Resilient plastic buttons, nonstaining to stone, sized to suit joint thicknesses and bed depths of stone units without intruding into required depths of pointing materials.
- 6. Masking Tape: Nonstaining, nonabsorbent material, compatible with pointing mortar, joint primers, sealants, and surfaces adjacent to joints; that will easily come off entirely, including adhesive.
- 7. Antirust Coating: Fast-curing, lead- and chromate-free, self-curing, universal modified-alkyd primer complying with MPI #79, Alkyd Anticorrosive Metal Primer **OR** SSPC-Paint 20 **OR** SSPC-Paint 29 zinc-rich coating, **as directed**.
 - a. Use coating requiring no better than SSPC-SP 2, "Hand Tool Cleaning" **OR** SSPC-SP 3, "Power Tool Cleaning" **OR** SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning", **as directed**, surface preparation according to manufacturer's literature or certified statement.
 - b. Use coating with a VOC content of 420 g/L (3.5 lb/gal.) or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- 8. Miscellaneous Products: Select materials and methods of use based on the following, subject to approval of a mockup:
 - a. Previous effectiveness in performing the work involved.
 - b. Little possibility of damaging exposed surfaces.
 - c. Consistency of each application.
 - d. Uniformity of the resulting overall appearance.
 - e. Do not use products or tools that could do the following:
 - 1) Remove, alter, or in any way harm the present condition or future preservation of existing surfaces, including surrounding surfaces not in contract.
 - 2) Leave a residue on surfaces.

G. Mortar Mixes

- 1. Preparing Lime Putty: Slake quicklime and prepare lime putty according to appendix to ASTM C 5 and manufacturer's written instructions.
- 2. Measurement and Mixing: Measure cementitious materials and sand in a dry condition by volume or equivalent weight. Do not measure by shovel; use known measure. Mix materials in a clean, mechanical batch mixer.
 - a. Mixing Pointing Mortar: Thoroughly mix cementitious materials and sand together before adding any water. Then mix again adding only enough water to produce a damp, unworkable mix that will retain its form when pressed into a ball. Maintain mortar in this dampened condition for 15 to 30 minutes. Add remaining water in small portions until mortar reaches desired consistency. Use mortar within one hour of final mixing; do not retemper or use partially hardened material.
- 3. Colored Mortar: Produce mortar of color required by using specified ingredients. Do not alter specified proportions without the Owner's approval.
 - a. Mortar Pigments: Where mortar pigments are indicated, do not exceed a pigment-to-cement ratio of 1:10 by weight.
- 4. Do not use admixtures in mortar unless otherwise indicated.
- 5. Mortar Proportions: Mix mortar materials in the following proportions:
 - a. Pointing Mortar for Stone: 1 part white portland cement, 1 part lime, and 6 parts sand **OR** 1 part white portland cement, 2 parts lime, and 6 parts sand **OR** 1 part white portland cement, 6 parts lime, and 12 parts sand, **as directed**.
 - 1) Add mortar pigments to produce mortar colors required.
 - b. Rebuilding (Setting) Mortar: Same as pointing mortar except mortar pigments are not required, **as directed**.
 - c. Rebuilding (Setting) Mortar: 1 part white portland cement, 1 part lime, and 6 parts sand **OR** 1 part white portland cement, 2 parts lime, and 6 parts sand **OR** 1 part white portland cement, 6 parts lime, and 12 parts sand, **as directed**.

- d. Rebuilding (Setting) Mortar: Comply with ASTM C 270, Proportion Specification, Type N unless otherwise indicated, with cementitious material limited to portland cement and lime.

H. Chemical Cleaning Solutions

1. Dilute chemical cleaners with water to produce solutions not exceeding concentration recommended by chemical-cleaner manufacturer.
2. Acidic Cleaner Solution for Unpolished Stone: Dilute with water to produce hydrofluoric acid content of 3 percent or less, but not greater than that recommended by chemical-cleaner manufacturer.
 - a. Use only on unpolished granite, unpolished dolomite marble, and siliceous sandstone.
3. Acidic Cleaner for Polished Stone: Dilute with water to concentration demonstrated by testing that does not etch or otherwise damage polished surface, but not greater than that recommended by chemical-cleaner manufacturer.
 - a. Use only on polished granite and polished dolomite marble.

1.3 EXECUTION

A. Protection

1. Protect persons, motor vehicles, surrounding surfaces of building being restored, building site, plants, and surrounding buildings from harm resulting from stone restoration work.
 - a. Erect temporary protective covers over walkways and at points of pedestrian and vehicular entrance and exit that must remain in service during course of restoration and cleaning work.
2. Comply with chemical-cleaner manufacturer's written instructions for protecting building and other surfaces against damage from exposure to its products. Prevent chemical cleaning solutions from coming into contact with people, motor vehicles, landscaping, buildings, and other surfaces that could be harmed by such contact.
 - a. Cover adjacent surfaces with materials that are proven to resist chemical cleaners used unless chemical cleaners being used will not damage adjacent surfaces. Use materials that contain only waterproof, UV-resistant adhesives. Apply masking agents to comply with manufacturer's written instructions. Do not apply liquid masking agent to painted or porous surfaces. When no longer needed, promptly remove masking to prevent adhesive staining.
 - b. Keep wall wet below area being cleaned to prevent streaking from runoff.
 - c. Do not clean stone during winds of sufficient force to spread cleaning solutions to unprotected surfaces.
 - d. Neutralize and collect alkaline and acid wastes for disposal off the Owner's property.
 - e. Dispose of runoff from cleaning operations by legal means and in a manner that prevents soil erosion, undermining of paving and foundations, damage to landscaping, and water penetration into building interiors.
3. Prevent mortar from staining face of surrounding stone and other surfaces.
 - a. Cover sills, ledges, and projections to protect from mortar droppings.
 - b. Keep wall area wet below rebuilding and pointing work to discourage mortar from adhering.
 - c. Immediately remove mortar in contact with exposed stone and other surfaces.
 - d. Clean mortar splatters from scaffolding at end of each day.
4. Remove gutters and downspouts adjacent to stone and store where indicated during stone restoration and cleaning. Reinstall when stone restoration and cleaning are complete.
 - a. Provide temporary rain drainage during work as indicated to direct water away from building.

B. Unused Anchor Removal

1. Remove stone anchors, brackets, wood nailers, and other extraneous items no longer in use unless identified as historically significant or indicated to remain.
 - a. Remove items carefully to avoid spalling or cracking stone.

- b. Where directed, if an item cannot be removed without damaging surrounding stone, do the following:
 - 1) Cut or grind off item approximately 3/4 inch (20 mm) beneath surface and core drill a recess of same depth in surrounding stone as close around item as practical.
 - 2) Immediately paint exposed end of item with two coats of antirust coating, following coating manufacturer's written instructions and without exceeding manufacturer's recommended dry film thickness per coat. Keep paint off sides of recess.
- c. Patch **OR** Plug, **as directed**, the hole where each item was removed unless directed to remove and replace the stone unit.

C. Stone Removal And Replacement

1. At locations indicated, remove stone that has deteriorated or is damaged beyond repair or is to be reused. Carefully demolish or remove entire units from joint to joint, without damaging surrounding stone, in a manner that permits replacement with full-size units.
2. Support and protect remaining stonework that surrounds removal area. Maintain flashing, reinforcement, lintels, and adjoining construction in an undamaged condition.
3. Notify the Owner of unforeseen detrimental conditions including voids, cracks, bulges, and loose units in existing stone or unit masonry backup, rotted wood, rusted metal, and other deteriorated items.
4. Remove in an undamaged condition as many whole stone units as possible.
 - a. Remove mortar, loose particles, and soil from stone by cleaning with hand chisels, brushes, and water.
 - b. Remove sealants by cutting close to stone with utility knife and cleaning with solvents.
 - c. Store stone for reuse. Store off ground, on skids, and protected from weather.
 - d. Deliver cleaned stone not required for reuse to the Owner unless otherwise indicated.
5. Clean stone surrounding removal areas by removing mortar, dust, and loose particles in preparation for replacement.
6. Replace removed damaged stone with other removed stone and salvaged stone in good quality, where possible, or with new stone matching existing stone, including size. Do not use broken units unless they can be cut to usable size.
7. Do not allow face bedding of stone. Before setting, inspect to verify that each stone has been cut so that, when it is set in final position, natural bedding planes are essentially horizontal except for arches, where bedding planes are essentially radial or vertical, but perpendicular to the wall. Reject and replace stone with vertical bedding planes except as required for arches, lintels, and copings.
8. Install replacement stone into bonding and coursing pattern of existing stone. If cutting is required, use a motor-driven saw designed to cut stone with clean, sharp, unchipped edges. Finish edges to blend with appearance of edges of existing stone.
 - a. Maintain joint width for replacement stone to match existing joints.
 - b. Use setting buttons or shims to set stone accurately spaced with uniform joints.
9. Set replacement stone with completely filled bed, head, and collar joints. Butter vertical joints for full width before setting and set units in full bed of mortar unless otherwise indicated. Replace existing anchors with new anchors of size and type indicated.
 - a. Tool exposed mortar joints in repaired areas to match joints of surrounding existing stonework.
 - b. Rake out mortar used for laying stone before mortar sets and point new mortar joints in repaired area to comply with requirements for repointing existing stone, and at same time as repointing of surrounding area.
 - c. When mortar is sufficiently hard to support units, remove shims and other devices interfering with pointing of joints.

D. Painting Steel Uncovered During The Work

1. Inspect steel exposed during stone removal. Where the Owner determines that it is structural, or for other reasons cannot be totally removed, prepare and paint it as follows:

- a. Remove paint, rust, and other contaminants according to SSPC-SP 2, "Hand Tool Cleaning" **OR** SSPC-SP 3, "Power Tool Cleaning" **OR** SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning", **as directed**, as applicable to meet paint manufacturer's recommended preparation.
 - b. Immediately paint exposed steel with two coats of antirust coating, following coating manufacturer's written instructions and without exceeding manufacturer's recommended rate of application (dry film thickness per coat).
2. If on inspection and rust removal, the cross section of a steel member is found to be reduced from rust by more than 1/16 inch (1.6 mm), notify the Owner before proceeding.

E. Partial Stone Replacement

1. Remove defective portion of existing stone unit (backing stone). Carefully remove defective portion of stone by making vertical and horizontal saw cuts at face of backing stone and demolishing defective material to depth required for fitting partial replacement (dutchman).
 - a. Make edges of backing stone at cuts smooth and square to each other and to finished surface; essentially rectangular. Make back of removal area flat and parallel to stone face.
 - b. Do not overcut at corners and intersections. Hand trim to produce clean sharp corners with no rounding and no damage to existing work to remain.
 - c. If existing stone that is to remain becomes damaged, remove damaged area and enlarge partial replacement as required.
2. Remove mortar from joints that abut area of stone removal to same depth as stone was removed. Remove loose mortar particles and other debris from surfaces to be bonded and surfaces of adjacent stone units that will receive mortar by cleaning with stiff-fiber brush.
3. Cut and trim partial replacement to accurately fit area where material was removed from backing stone. Fabricate to size required to produce joints between partial replacement and backing stone of no more than 1/16 inch (1.6 mm) in width, and joints between partial replacement and other stones that match existing joints between stones. Cut partial replacement so that, when it is set in final position, natural bedding planes will match the orientation of bedding planes of the backing stone unless otherwise indicated.
4. Pinning: Before applying adhesive, prepare for mechanical anchorage consisting of 1/4-inch- (6-mm-) diameter, plain **OR** threaded, **as directed**, stainless-steel pins set into 1/4-inch- (6-mm-) diameter holes drilled at a 45-degree downward angle through face of partial replacement and into backing stone. Center and space pins between 3 and 5 inches (75 and 125 mm) apart and at least 2 inches (50 mm) from any edge. Insert pins at least 2 inches (50 mm) into backing stone and 2 inches (50 mm) into partial replacement with end countersunk at least 3/4 inch (19 mm) from exposed face of partial replacement.
5. Concealed Pinning: Before applying adhesive, prepare for concealed mechanical anchorage consisting of 1/4-inch- (6-mm-) diameter, plain **OR** threaded, **as directed**, stainless-steel pins set into 1/4-inch- (6-mm-) diameter holes drilled into backing stone and into, but not through, the partial replacement. Center and space pins between 3 and 5 inches (75 and 125 mm) apart and at least 2 inches (50 mm) from any edge. Insert pins at least 2 inches (50 mm) into backing stone and 2 inches (50 mm) into partial replacement, but no closer than 3/4 inch (19 mm) from exposed face of partial replacement.
6. Apply stone-to-stone adhesive to comply with adhesive manufacturer's written instructions. Coat bonding surfaces of backing stone and partial replacement, completely filling all crevices and voids.
7. Apply partial replacement while adhesive is still tacky and hold securely in place until adhesive has cured. Use shims, clamps, wedges, or other devices as necessary to align face of partial replacement with face of backing stone.
8. Clean adhesive residue from exposed surfaces and patch chipped areas and exposed drill holes as specified in "Stone Patching" Article.

F. Stone Plug Repair

1. Remove cylindrical piece of damaged stone by core-drilling perpendicular to stone surface.
2. Prepare a replacement plug by core-drilling replacement stone. Use a drill sized to produce a core that will fit into hole drilled in damaged stone with only minimum gap necessary for

adhesive. Cut and install plug so that, when it is set in final position, natural bedding planes will match the orientation of bedding planes of the backing stone unless otherwise indicated.

3. Apply stone-to-stone adhesive to comply with adhesive manufacturer's written instructions. Coat bonding surfaces of existing stone and plug, completely filling all crevices and voids.
4. Apply plug while adhesive is still tacky and hold securely in place until adhesive has cured.
5. Clean adhesive residue from exposed surfaces.

G. Stone-Fragment Repair

1. Carefully remove cracked or fallen stone fragment indicated to be repaired. Reuse only stone fragment that is in sound condition.
2. Remove soil, loose particles, mortar, and other debris or foreign material, from fragment surfaces to be bonded and from parent stone where fragment had broken off, by cleaning with stiff-fiber brush.
3. Pinning: Before applying adhesive, prepare for mechanical anchorage consisting of 1/4-inch- (6-mm-) diameter, plain **OR** threaded, **as directed**, stainless-steel pins set into 1/4-inch- (6-mm-) diameter holes drilled at a 45-degree downward angle through face of fragment and into parent stone. Center and space pins between 3 and 5 inches (75 and 125 mm) apart and at least 2 inches (50 mm) from any edge. Insert pins at least 2 inches (50 mm) into parent stone and 2 inches (50 mm) into fragment with end countersunk at least 3/4 inch (19 mm) from exposed face of fragment.
4. Concealed Pinning: Before applying adhesive, prepare for concealed mechanical anchorage consisting of 1/4-inch- (6-mm-) diameter, plain **OR** threaded, **as directed**, stainless-steel pins set into 1/4-inch- (6-mm-) diameter holes drilled into parent stone and into, but not through, the fragment. Center and space pins between 3 and 5 inches (75 and 125 mm) apart and at least 2 inches (50 mm) from any edge. Insert pins at least 2 inches (50 mm) into parent stone and 2 inches (50 mm) into fragment, but no closer than 3/4 inch (19 mm) from exposed face of fragment.
5. Apply stone-to-stone adhesive to comply with adhesive manufacturer's written instructions. Coat bonding surfaces of fragment and parent stone, completely filling all crevices and voids.
6. Fit stone fragment onto parent stone while adhesive is still tacky and hold fragment securely in place until adhesive has cured. Use shims, clamps, wedges, or other devices as necessary to align face of fragment with face of parent stone.
7. Clean adhesive residue from exposed surfaces and patch chipped areas and exposed drill holes as specified in "Stone Patching" Article.

H. Crack Injection

1. General: Comply with cementitious crack-filler manufacturer's written instructions.
2. Drill 1/4-inch- (6-mm-) diameter injection holes as follows:
 - a. Transverse Cracks Less Than 3/8 inch (9 mm) Wide: Drill holes through center of crack at 12 to 18 inches (300 to 500 mm) o.c.
 - b. Transverse Cracks More Than 3/8 inch (9 mm) Wide: Drill holes through center of crack at 18 to 36 inches (500 to 900 mm) o.c.
 - c. Delaminations: Drill holes at approximately 18 inches (500 mm) o.c. both vertically and horizontally.
 - d. Drill holes 2 inches (50 mm) deep. Where possible drill holes in mortar joints.
3. Clean out drill holes and cracks with compressed air and water. Remove dirt and organic matter, loose material, sealants, and failed crack repair materials.
4. Place plastic injection ports in drilled holes and seal face of cracks between injection ports with clay or other nonstaining, removable plugging material. Leave openings at upper ends of cracks for air release.
5. Inject cementitious crack filler through ports sequentially, beginning at one end of area and working to opposite end; where possible, begin at lower end of injection area and work upward. Inject filler until it extrudes from adjacent ports. After port has been injected, plug with clay or other suitable material and begin injecting filler at adjacent port, repeating process until all ports have been injected.

6. Clean cementitious crack filler from face of stone before it sets by scrubbing with water.
7. After cementitious crack filler has set, remove injection ports, plugging material, and excess filler. Patch injection holes and surface of cracks as specified in "Stone Patching" Article.

I. Stone Patching

1. Patch the following stone units unless another type of replacement or repair is indicated:
 - a. Units indicated to be patched.
 - b. Units with holes.
 - c. Units with chipped edges or corners.
 - d. Units with small areas of deep deterioration.
2. Remove and replace existing patches unless otherwise indicated or approved by the Owner.
3. Remove deteriorated material and remove adjacent material that has begun to deteriorate. Carefully remove additional material so patch will not have feathered edges but will have square or slightly undercut edges on area to be patched and will be at least 1/4 inch (6 mm) thick, but not less than recommended by patching compound manufacturer.
4. Mask adjacent mortar joint or rake out for repointing if patch will extend to edge of stone unit.
5. Mix patching compound in individual batches to match each stone unit being patched. Combine one or more colors of patching compound, as needed, to produce exact match.
6. Brush-coat stone surfaces with slurry coat of patching compound according to manufacturer's written instructions.
7. Place patching compound in layers as recommended by patching compound manufacturer, but not less than 1/4 inch (6 mm) or more than 2 inches (50 mm) thick. Roughen surface of each layer to provide a key for next layer.
 - a. Trowel, scrape, or carve surface of patch to match texture and surrounding surface plane or contour of the stone. Shape and finish surface before or after curing, as determined by testing, to best match existing stone.
 - b. Build patch up 1/4 inch (6 mm) above surrounding stone and carve surface to match adjoining stone after patching compound has hardened.
8. Keep each layer damp for 72 hours or until patching compound has set.
9. Remove and replace patches with hairline cracks or that show separation from stone at edges, and those that do not match adjoining stone in color or texture.

J. Cleaning Stone, General

1. Proceed with cleaning in an orderly manner; work from bottom to top **OR** top to bottom, **as directed**, of each scaffold width and from one end of each elevation to the other. Ensure that dirty residues and rinse water will not wash over cleaned, dry surfaces.
2. Use only those cleaning methods indicated for each stone material and location.
 - a. Do not use wire brushes or brushes that are not resistant to chemical cleaner being used. Do not use plastic-bristle brushes if natural-fiber brushes will resist chemical cleaner being used.
 - b. Use spray equipment that provides controlled application at volume and pressure indicated, measured at spray tip. Adjust pressure and volume to ensure that cleaning methods do not damage stone.
 - 1) Equip units with pressure gages.
 - c. For chemical-cleaner spray application, use low-pressure tank or chemical pump suitable for chemical cleaner indicated, equipped with cone-shaped spray tip.
 - d. For water-spray application, use fan-shaped spray tip that disperses water at an angle of 25 to 50 degrees.
 - e. For high-pressure water-spray application, use fan-shaped spray tip that disperses water at an angle of at least 40 degrees.
 - f. For heated water-spray application, use equipment capable of maintaining temperature between 140 and 160 deg F (60 and 71 deg C) at flow rates indicated.
 - g. For steam application, use steam generator capable of delivering live steam at nozzle.
3. Perform each cleaning method indicated in a manner that results in uniform coverage of all surfaces, including corners, moldings, and interstices, and that produces an even effect without streaking or damaging stone surfaces.

4. Water Application Methods:
 - a. Water-Soak Application: Soak stone surfaces by applying water continuously and uniformly to limited area for time indicated. Apply water at low pressures and low volumes in multiple fine sprays using perforated hoses or multiple spray nozzles. Erect a protective enclosure constructed of polyethylene sheeting to cover area being sprayed.
 - b. Water-Spray Applications: Unless otherwise indicated, hold spray nozzle at least 6 inches (150 mm) from surface of stone and apply water in horizontal back and forth sweeping motion, overlapping previous strokes to produce uniform coverage.
5. Steam Cleaning: Apply steam to stone surfaces at the very low pressures indicated for each type of stonework. Hold nozzle at least 6 inches (150 mm) from surface of stone and apply steam in horizontal back and forth sweeping motion, overlapping previous strokes to produce uniform coverage.
6. Chemical-Cleaner Application Methods: Apply chemical cleaners to stone surfaces to comply with chemical-cleaner manufacturer's written instructions; use brush or spray application. Do not spray apply at pressures exceeding 50 psi (345 kPa), **unless directed otherwise**. Do not allow chemicals to remain on surface for periods longer than those indicated or recommended by manufacturer.
7. Rinse off chemical residue and soil by working upward from bottom to top of each treated area at each stage or scaffold setting. Periodically during each rinse, test pH of rinse water running off of cleaned area to determine that chemical cleaner is completely removed.
 - a. Apply neutralizing agent and repeat rinse if necessary to produce tested pH of between 6.7 and 7.5.
8. After cleaning is complete, remove protection no longer required. Remove tape and adhesive marks.

K. Preliminary Cleaning

1. Removing Plant Growth: Completely remove visible plant, moss, and shrub growth from stone surfaces. Carefully remove plants, creepers, and vegetation by cutting at roots and allowing to dry as long as possible before removal. Remove loose soil or debris from open joints to whatever depth they occur.
2. Preliminary Cleaning: Before beginning general cleaning, remove extraneous substances that are resistant to cleaning methods being used. Extraneous substances include paint, calking, asphalt, and tar.
 - a. Carefully remove heavy accumulations of material from surface of stone with sharp chisel. Do not scratch or chip stone surface.
 - b. Remove paint and calking with alkaline paint remover.
 - 1) Comply with requirements in "Paint Removal" Article.
 - 2) Repeat application up to two times if needed.
 - c. Remove asphalt and tar with solvent-type paint remover.
 - 1) Comply with requirements in "Paint Removal" Article.
 - 2) Apply paint remover only to asphalt and tar by brush without prewetting.
 - 3) Allow paint remover to remain on surface for 10 to 30 minutes.
 - 4) Repeat application if needed.

L. Paint Removal

1. Paint Removal with Alkaline Paste Paint Remover:
 - a. Remove loose and peeling paint using low **OR** medium **OR** high, **as directed**,-pressure spray, scrapers, stiff brushes, or a combination of these. Let surface dry thoroughly.
 - b. Apply paint remover to dry, painted stone with brushes.
 - c. Allow paint remover to remain on surface for period recommended by manufacturer.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**,-pressure spray to remove chemicals and paint residue.
 - e. Repeat process if necessary to remove all paint.
 - f. Apply acidic cleaner or manufacturer's recommended afterwash to stone, while surface is still wet, using low-pressure spray equipment or soft-fiber brush. Let cleaner or afterwash

- 2014
USPS Master Specifications Updated 5-1-2014

- joints and crevices. Dip brush in solution often to ensure that adequate fresh detergent is used and that stone surface remains wet.
- c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove detergent solution and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
6. Mold, Mildew, and Algae Removal:
- a. Wet stone with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply mold, mildew, and algae remover by brush or low-pressure spray.
 - c. Scrub stone with medium-soft brushes until mold, mildew, and algae are thoroughly dislodged and can be removed by rinsing. Use small brushes for mortar joints and crevices. Dip brush in mold, mildew, and algae remover often to ensure that adequate fresh cleaner is used and that stone surface remains wet.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove mold, mildew, and algae remover and soil.
 - e. Repeat cleaning procedure above where required to produce cleaning effect established by mockup.
7. Nonacidic Gel Chemical Cleaning:
- a. Wet stone with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply nonacidic gel cleaner in 1/8-inch (3-mm) thickness by brush, working into joints and crevices. Apply quickly and do not brush out excessively so area will be uniformly covered with fresh cleaner and dwell time will be uniform throughout area being cleaned.
 - c. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - d. Remove bulk of nonacidic gel cleaner by squeegeeing into containers for disposal.
 - e. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
8. Nonacidic Liquid Chemical Cleaning:
- a. Wet stone with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply cleaner to stone in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.
9. Mild Acidic **OR** Acidic, **as directed**, Chemical Cleaning:
- a. Wet stone with cold water applied by low-pressure spray.
 - b. Apply cleaner to stone in two applications, **as directed**, by brush or low-pressure spray. Let cleaner remain on surface for period indicated below:
 - 1) As recommended by chemical-cleaner manufacturer.
 - 2) As established by mockup.
 - 3) Two to three minutes.
 - c. Rinse with cold water applied by low **OR** medium **OR** high, **as directed**, -pressure spray to remove chemicals and soil.
 - d. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once. If additional cleaning is required, use steam cleaning.

10. One-Part Limestone Chemical Cleaning:
 - a. Wet stone with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply cleaner to stone by brush or low-pressure spray. Let cleaner remain on surface for period recommended by chemical-cleaner manufacturer.
 - c. Immediately repeat application of one-part limestone cleaner as indicated above over the same area.
 - d. Rinse with cold **OR** hot, **as directed**, water applied by medium-pressure spray to remove chemicals and soil.
 11. Two-Part Limestone Chemical Cleaning:
 - a. Wet stone with cold **OR** hot, **as directed**, water applied by low-pressure spray.
 - b. Apply alkaline prewash cleaner to stone by brush or roller. Let cleaner remain on surface for period recommended by chemical-cleaner manufacturer unless otherwise indicated.
 - c. Rinse with cold **OR** hot, **as directed**, water applied by medium-pressure spray to remove chemicals and soil.
 - d. Apply acidic afterwash cleaner to stone in two applications, **as directed**, while surface is still wet, using low-pressure spray equipment, deep-nap roller or soft-fiber brush. Let neutralizer remain on surface for period recommended by manufacturer unless otherwise indicated.
 - e. Rinse with cold water applied by medium-pressure spray to remove chemicals and soil.
 - f. Repeat cleaning procedure above where required to produce cleaning effect established by mockup. Do not repeat more than once.
- N. Repointing Stonework
1. Rake out and repoint joints to the following extent:
 - a. All joints in areas indicated.
 - b. Joints where mortar is missing or where they contain holes.
 - c. Cracked joints where cracks can be penetrated at least 1/4 inch (6 mm) by a knife blade 0.027 inch (0.7 mm) thick.
 - d. Cracked joints where cracks are 1/16 inch (1.6 mm) **OR** 1/8 inch (3 mm), **as directed**, or more in width and of any depth.
 - e. Joints where they sound hollow when tapped by metal object.
 - f. Joints where they are worn back 1/4 inch (6 mm) or more from surface.
 - g. Joints where they are deteriorated to point that mortar can be easily removed by hand, without tools.
 - h. Joints where they have been filled with substances other than mortar.
 - i. Joints indicated as sealant-filled joints.
 2. Do not rake out and repoint joints where not required.
 3. Rake out joints as follows, according to procedures demonstrated in approved mockup:
 - a. Remove mortar from joints to depth of joint width plus 1/8 inch (3 mm) **OR** 2 times joint width **OR** 2-1/2 times joint width, **as directed**, but not less than 1/2 inch (13 mm) or not less than that required to expose sound, unweathered mortar.
 - b. Remove mortar from stone surfaces within raked-out joints to provide reveals with square backs and to expose stone for contact with pointing mortar. Brush, vacuum, or flush joints to remove dirt and loose debris.
 - c. Do not spall edges of stone units or widen joints. Replace or patch damaged stone units as directed by the Owner.
 - 1) Cut out mortar by hand with chisel and resilient mallet. Do not use power-operated grinders without the Owner's written approval based on approved quality-control program.
 - 2) Cut out center of mortar bed joints using angle grinders with diamond-impregnated metal blades. Remove remaining mortar by hand with chisel and resilient mallet. Strictly adhere to approved quality-control program.
 4. Notify the Owner of unforeseen detrimental conditions including voids in mortar joints, cracks, loose stone, rotted wood, rusted metal, and other deteriorated items.
 5. Pointing with Mortar:

- a. Rinse joint surfaces with water to remove dust and mortar particles. Time rinsing application so, at time of pointing, joint surfaces are damp but free of standing water. If rinse water dries, dampen joint surfaces before pointing.
 - b. Apply pointing mortar first to areas where existing mortar was removed to depths greater than surrounding areas. Apply in layers not greater than 3/8 inch (9 mm) until a uniform depth is formed. Fully compact each layer thoroughly and allow it to become thumbprint hard before applying next layer.
 - c. After low areas have been filled to same depth as remaining joints, point all joints by placing mortar in layers not greater than 3/8 inch (9 mm). Fully compact each layer and allow to become thumbprint hard before applying next layer. Where existing stone has worn or rounded edges, slightly recess finished mortar surface below face of stone to avoid widened joint faces. Take care not to spread mortar beyond joint edges onto exposed stone surfaces or to featheredge the mortar.
 - d. When mortar is thumbprint hard, tool joints to match original appearance of joints as demonstrated in approved mockup. Remove excess mortar from edge of joint by brushing.
 - e. Cure mortar by maintaining in thoroughly damp condition for at least 72 consecutive hours, including weekends and holidays.
 - 1) Acceptable curing methods include covering with wet burlap and plastic sheeting, periodic hand misting, and periodic mist spraying using system of pipes, mist heads, and timers.
 - 2) Adjust curing methods to ensure that pointing mortar is damp throughout its depth without eroding surface mortar.
 - f. Hairline cracking within the mortar or mortar separation at edge of a joint is unacceptable. Completely remove such mortar and repoint.
6. Pointing with Sealant:
- a. After raking out, keep joints dry and free of mortar and debris.
 - b. Clean and prepare joint surfaces according to Division 07 Section "Joint Sealants". Prime joint surfaces unless sealant manufacturer recommends against priming. Do not allow primer to spill or migrate onto adjoining surfaces.
 - c. Fill sealant joints with specified joint sealant according to Division 07 Section "Joint Sealants" and the following:
 - 1) Install cylindrical sealant backing beneath the sealant except where space is insufficient. There, install bond-breaker tape.
 - 2) Install sealant using only proven installation techniques that will ensure that sealant will be deposited in a uniform, continuous ribbon, without gaps or air pockets, and with complete wetting of the joint bond surfaces equally on both sides. Fill joint flush with surrounding stonework and matching the contour of adjoining mortar joints.
 - 3) Install sealant as recommended by sealant manufacturer but within the following general limitations, measured at the center (thin) section of the bead:
 - a) Fill joints to a depth equal to joint width, but not more than 1/2 inch (13 mm) deep or less than 1/4 inch (6 mm) deep.
 - 4) Immediately after first tooling, apply ground-mortar aggregate to sealant, gently pushing aggregate into the surface of sealant. Retool sealant to form smooth, uniform beads, slightly concave. Remove excess sealant and aggregate from surfaces adjacent to joint.
 - 5) Do not allow sealant to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces, particularly rough textures. Remove excess and spillage of sealant promptly as the work progresses. Clean adjoining surfaces by the means necessary to eliminate evidence of spillage, without damage to adjoining surfaces or finishes, as demonstrated in an approved mockup.
 - d. Cure sealant according to Division 07 Section "Joint Sealants".
7. Where repointing work precedes cleaning of existing stone, allow mortar to harden at least 30 days before beginning cleaning work.

O. Stone Consolidation Treatment

1. Apply treatment to clean, dry surfaces according to manufacturer's written instructions. Remove areas of blind exfoliation, delamination, and flaking before applying.
 2. Apply in cycles to small sections of stonework, not more than 100 sq. ft. (9 sq. m) in area. Each cycle shall consist of 3 successive saturating applications, applied at 5- to 15-minute intervals depending on drying conditions.
 3. Apply by low-pressure spray to point of rejection in each application. Apply from bottom of section to top.
 4. Apply 3 cycles, allowing treated surface to dry for 60 to 90 minutes between cycles.
 5. Protect treated surfaces from rain for 48 hours after treatment.
 6. Allow treated surfaces to dry for at least 21 days before repointing, patching, or applying water repellents or sealants.
- P. Final Cleaning
1. After mortar has fully hardened, thoroughly clean exposed stone surfaces of excess mortar and foreign matter; use wood scrapers, stiff-nylon or -fiber brushes, and clean water, spray applied at low pressure.
 - a. Do not use metal scrapers or brushes.
 - b. Do not use acidic or alkaline cleaners.
 2. Wash adjacent woodwork and other nonstone surfaces. Use detergent and soft brushes or cloths.
 3. Clean mortar and debris from roof; remove debris from gutters and downspouts. Rinse off roof and flush gutters and downspouts.
 4. Sweep and rake adjacent pavement and grounds to remove mortar and debris. Where necessary, pressure wash pavement surfaces to remove mortar, dust, dirt, and stains.
- Q. Field Quality Control
1. Inspectors: Engage qualified independent inspectors to perform inspections and prepare test reports. Allow inspectors use of lift devices and scaffolding, as needed, to perform inspections.
 2. the Owner's Project Representatives: the Owner will assign Project representatives to help carry out the Owner's responsibilities at the site, including observing progress and quality of portion of the Work completed. Allow the Owner's Project representatives use of lift devices and scaffolding, as needed, to observe progress and quality of portion of the Work completed.
 3. Notify inspectors and the Owner's Project representatives in advance of times when lift devices and scaffolding will be relocated. Do not relocate lift devices and scaffolding until inspectors and the Owner's Project representatives have had reasonable opportunity to make inspections and observations of work areas at lift device or scaffold location.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 04 01 40 91 - STONE MASONRY

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for stone masonry. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes the following applications of stone masonry:
 - a. Anchored or Adhered to concrete backup.
 - b. Anchored or Adhered to unit masonry backup.
 - c. Anchored or Adhered to wood framing and sheathing.
 - d. Anchored or Adhered to cold-formed metal framing and sheathing.

C. Submittals

1. Product Data: For each type of product indicated.
 - a. For stone varieties proposed for use on Project, include test data indicating compliance with physical properties specified or required by referenced ASTM standards.
2. Samples:
 - a. For each stone type indicated.
 - b. For each color of mortar required.

D. Delivery, Storage, And Handling

1. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
2. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
3. Deliver preblended, dry mortar mix in moisture-resistant containers designed for lifting and emptying into dispensing silo. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in a metal dispensing silo with weatherproof cover.
4. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

E. Project Conditions

1. Protection of Stone Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed stone masonry when construction is not in progress.
 - a. Extend cover a minimum of 24 inches (600 mm) down both sides and hold cover securely in place.
2. Stain Prevention: Immediately remove mortar and soil to prevent them from staining the face of stone masonry.
 - a. Protect base of walls from rain-splashed mud and mortar splatter by coverings spread on the ground and over the wall surface.
 - b. Protect sills, ledges, and projections from mortar droppings.
 - c. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
 - d. Turn scaffold boards near the wall on edge at end of each day to prevent rain from splashing mortar and dirt on completed stone masonry.
3. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace stone masonry damaged by

frost or freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

- a. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and above and will remain so until masonry has dried, but not less than 7 days after completing cleaning.
4. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1.2 PRODUCTS

A. Granite

1. Granite: Comply with ASTM C 615.

B. Limestone

1. Limestone: Comply with ASTM C 568.

C. Quartz-Based Stone

1. Quartz-Based Stone: Comply with ASTM C 616, Classification I Sandstone **OR** II Quartzitic Sandstone **OR** III Quartzite, **as directed**.

D. Mortar Materials

1. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
 - a. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.
2. Hydrated Lime: ASTM C 207, Type S.
3. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C 150, Type I or III, and hydrated lime complying with ASTM C 207.
4. Mortar Cement: ASTM C 1329.
5. Masonry Cement: ASTM C 91.
6. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with a record of satisfactory performance in stone masonry mortar.
7. Colored Cement Product: Packaged blend made from portland cement and lime **OR** masonry cement **OR** mortar cement, **as directed**, and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 - a. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
8. Aggregate: ASTM C 144 and as follows:
 - a. For pointing mortar, use aggregate graded with 100 percent passing No. 16 (1.18-mm) sieve.
 - b. White Aggregates: Natural white sand or ground white stone.
 - c. Colored Aggregates: Natural-colored sand or ground marble, granite, or other sound stone; of color necessary to produce required mortar color.
9. Latex Additive: Manufacturer's standard **OR** acrylic-resin **OR** styrene-butadiene-rubber, **as directed**, water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement mortar bed, and not containing a retarder.
10. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
11. Water: Potable.

E. Veneer Anchors

1. Materials:
 - a. Hot-Dip Galvanized-Steel Wire: ASTM A 82, with ASTM A 153/A 153M, Class B-2.
 - b. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304 **OR** Type 316, **as directed**.
 - c. Hot-Dip Galvanized-Steel Sheet: ASTM A 1008/A 1008M, cold-rolled, carbon-steel sheet hot-dip galvanized after fabrication to comply with ASTM A 153/A 153M, Class B-2.
 - d. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 **OR** Type 316, **as directed**.
2. Size: Sufficient to extend at least halfway, but not less than 1-1/2 inches (38 mm), through stone masonry and with at least 5/8-inch (16-mm) cover on outside face.
3. Wire Veneer Anchors: Wire ties formed from W1.7 or 0.148-inch- (3.8-mm-) diameter, hot-dip galvanized **OR** stainless, **as directed**, steel wire.
4. Corrugated-Metal Veneer Anchors: Not less than 0.030-inch- (0.76-mm-) thick by 7/8-inch- (22-mm-) wide hot-dip galvanized **OR** stainless, **as directed**, steel sheet with corrugations having a wavelength of 0.3 to 0.5 inch (7.6 to 13 mm) and an amplitude of 0.06 to 0.10 inch (1.5 to 2.5 mm).
5. Adjustable, Screw-Attached Veneer Anchors: Units consisting of a wire tie section and a metal anchor section that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, and as follows:
 - a. Structural Performance Characteristics: Capable of withstanding a 100-lbf (445-N) load in both tension and compression without deforming or developing play in excess of 0.05 inch (1.3 mm).
 - b. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches (70 mm) wide by 3 inches (75 mm) high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit veneer anchor section.
 - c. Anchor Section: Sheet metal plate, 1-1/4 inches (32 mm) wide by 6 inches (150 mm) **OR** 9 inches (225 mm), **as directed**, long, with screw holes top and bottom and with raised rib-stiffened strap, 5/8 inch (16 mm) wide by 3-5/8 inches (92 mm) **OR** 5-1/2 inches (140 mm), **as directed**, long, stamped into center to provide a slot between strap and plate for inserting wire tie.
 - d. Anchor Section: Gasketed sheet metal plate, 1-1/4 inches (32 mm) wide by 6 inches (150 mm) long, with screw holes top and bottom; top and bottom ends bent to form pronged legs of length to match thickness of insulation or sheathing; and raised rib-stiffened strap, 5/8 inch (16 mm) wide by 6 inches (150 mm) long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.
 - e. Anchor Section: Zinc-alloy barrel section with flanged head with eye and corrosion-resistant, self-drilling screw. Eye designed to receive wire tie and to serve as head for drilling fastener into framing. Barrel length to suit sheathing thickness, allowing screw to seat directly against framing with flanged head covering hole in sheathing.
 - f. Fabricate sheet metal anchor sections and other sheet metal parts from 0.067-inch- (1.7-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.097-inch- (2.5-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.078-inch- (2.0-mm-) thick, stainless-steel sheet **OR** 0.109-inch- (2.8-mm-) thick, stainless-steel sheet, **as directed**.
 - g. Wire Ties: Triangular-, rectangular-, or T-shaped wire ties fabricated from 0.188-inch- (4.8-mm-) **OR** 0.25-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized **OR** stainless, **as directed**, steel wire.
6. Seismic Veneer Anchors: Units consisting of a metal anchor section and a connector section designed to engage a continuous wire embedded in stone masonry mortar joint.
 - a. Structural Performance Characteristics: Capable of withstanding a 100-lbf (445-N) load in both tension and compression without deforming or developing play in excess of 0.05 inch (1.3 mm).
 - b. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches (70 mm) wide by 3 inches (75 mm) high; with projecting tabs having slotted holes for inserting vertical leg of connector section.

- c. Connector Section: Rib-stiffened, sheet metal bent plate with down-turned leg designed to fit in anchor section slot and with integral tabs designed to engage continuous wire. Size connector to extend at least halfway through stone masonry but with at least 5/8-inch (16-mm) cover on outside face.
 - d. Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, 2-3/4 inches (70 mm) wide by 3 inches (75 mm) high; with projecting tabs having slotted holes for inserting vertical legs of wire tie specially formed to fit anchor section. Size wire tie to extend at least 1-1/2 inches (38 mm) into stone masonry but with at least 5/8-inch (16-mm) cover on outside face.
 - e. Connector Section: Sheet metal clip welded to wire tie with integral tabs designed to engage continuous wire.
 - f. Anchor Section: Gasketed sheet metal plate, 1-1/4 inches (32 mm) wide by 6 inches (150 mm) long, with screw holes top and bottom; top and bottom ends bent to form pronged legs to bridge insulation or sheathing and contact studs; and raised rib-stiffened strap, 5/8 inch (16 mm) wide by 6 inches (150 mm) long, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.
 - g. Connector Section: Triangular wire tie and rigid PVC extrusion with snap-in grooves for inserting continuous wire.
 - h. Fabricate sheet metal anchor sections and other sheet metal parts from 0.067-inch- (1.7-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.097-inch- (2.5-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.078-inch- (2.0-mm-) thick, stainless-steel sheet **OR** 0.109-inch- (2.8-mm-) thick, stainless-steel sheet, **as directed**.
 - i. Fabricate wire connector sections from 0.188-inch- (4.8-mm-) **OR** 0.25-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized, carbon **OR** stainless, **as directed**, steel wire.
 - j. Continuous Wire: 0.188-inch- (4.8-mm-) diameter, hot-dip galvanized **OR** stainless, **as directed**, steel wire.
7. Polymer-Coated, Steel Drill Screws for Steel Studs: ASTM C 954 except manufactured with hex washer head and neoprene washer, No. 10 (4.8-mm diameter) by length required to penetrate steel stud flange with not less than 3 exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.
 8. Stainless-Steel Drill Screws for Steel Studs: Proprietary fastener consisting of carbon-steel drill point and 300 Series stainless-steel shank, complying with ASTM C 954 except manufactured with hex washer head and neoprene washer, No. 10 (4.8-mm diameter) by length required to penetrate steel stud flange with not less than three exposed threads.
 9. Polymer-Coated, Steel Drill Screws for Wood Studs: Self-drilling, bugle-head or wafer-head wood screws recommended by veneer anchor manufacturer for fastening to wood studs; not less than No. 10 (4.8-mm diameter), 1-1/2 inches (38 mm) long, and with organic polymer coating with salt-spray resistance to red rust of more than 500 hours per ASTM B 117.
 10. Polymer-Coated, Steel Tapping Screws for Concrete Masonry: Self-tapping screws with specially designed threads for tapping and wedging into masonry, with hex washer head and neoprene washer, 3/16-inch (4.8-mm) diameter by 1-1/2-inch (38-mm) length, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.

F. Stone Trim Anchors

1. Stone Trim Anchors: Units fabricated with tabs or dowels designed to engage kerfs or holes in stone trim units and holes for fasteners or postinstalled anchor bolts for fastening to substrates or framing as indicated.
2. Materials: Fabricate anchors from stainless steel, ASTM A 240/A 240M, Type 304. Fabricate dowels from stainless steel, ASTM A 276, Type 304.
3. Fasteners for Stone Trim Anchors: Annealed stainless-steel bolts, nuts, and washers; ASTM F 593 (ASTM F 738M) for bolts and ASTM F 594 (ASTM F 836M) for nuts, Alloy Group 1 (A1).

4. Postinstalled Anchor Bolts for Fastening Stone Trim Anchors: Chemical anchors **OR** torque-controlled expansion anchors **OR** undercut anchors, **as directed**, made from stainless-steel components complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2 (ASTM F 738M and ASTM F 836M, Alloy Group A1 or A4) for bolts and nuts; ASTM A 666 or ASTM A 276, Type 304 or 316, for anchors.
- G. Embedded Flashing Materials
1. Metal Flashing: Provide metal flashing, where flashing is exposed or partly exposed and where indicated, complying with SMACNA's "Architectural Sheet Metal Manual **OR** Division 07 Section "Sheet Metal Flashing And Trim", **as directed**, and as follows:
 - a. Stainless Steel: ASTM A 240/A 240M, Type 304, 0.016 inch (0.4 mm) thick.
 - b. Copper: ASTM B 370, Temper H00 or H01, cold-rolled copper sheet, 10-oz./sq. ft. (3-kg/sq. m) weight or 0.0135 inch (0.34 mm) thick for fully concealed flashing; 16-oz./sq. ft. (5-kg/sq. m) weight or 0.0216 inch (0.55 mm) thick elsewhere.
 - c. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.6 m). Provide splice plates at joints of formed, smooth metal flashing.
 - d. Fabricate through-wall metal flashing embedded in masonry from stainless steel **OR** copper, **as directed**, with ribs at 3-inch (75-mm) intervals along length of flashing to provide an integral mortar bond.
 - e. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
 - f. Fabricate through-wall flashing with drip edge where **OR** unless otherwise, **as directed**, indicated. Fabricate by extending flashing 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees and hemmed, **as directed**.
 - g. Fabricate through-wall flashing with sealant stop where **OR** unless otherwise, **as directed**, indicated. Fabricate by bending metal back on itself 3/4 inch (19 mm) at exterior face of wall and down into joint 3/8 inch (10 mm) to form a stop for retaining sealant backer rod.
 - h. Fabricate metal drip edges and sealant stops for ribbed metal flashing from plain metal flashing of same metal as ribbed flashing and extending at least 3 inches (75 mm) into wall with hemmed inner edge to receive ribbed flashing and form a hooked seam. Form hem on upper surface of metal so that completed seam will shed water.
 - i. Metal Drip Edges: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees and hemmed, **as directed**.
 - j. Metal Flashing Terminations: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 3/8 inch (10 mm) to form a stop for retaining sealant backer rod.
 - k. Metal Expansion-Joint Strips: Fabricate from stainless steel **OR** copper, **as directed**, to shapes indicated.
 2. Flexible Flashing: For flashing not exposed to the exterior, use one of the following unless otherwise indicated:
 - a. Copper-Laminated Flashing: 5-oz./sq. ft. (1.5-kg/sq. m) **OR** 7-oz./sq. ft. (2-kg/sq. m), **as directed**, copper sheet bonded with asphalt between 2 layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.
 - b. Asphalt-Coated Copper Flashing: 5-oz./sq. ft. (1.5-kg/sq. m) **OR** 7-oz./sq. ft. (2-kg/sq. m), **as directed**, copper sheet coated with flexible asphalt. Use only where flashing is fully concealed in masonry.
 - c. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.030 inch (0.8 mm) **OR** 0.040 inch (1.0 mm), **as directed**.
 - d. Elastomeric Thermoplastic Flashing: Composite flashing product consisting of a polyester-reinforced ethylene interpolymers alloy as follows:
 - 1) Monolithic Sheet: Elastomeric thermoplastic flashing, 0.040 inch (1.0 mm) thick.

- 2) Self-Adhesive Sheet: Elastomeric thermoplastic flashing, 0.025 inch (0.6 mm) thick, with a 0.015-inch- (0.4-mm-) thick coating of rubberized-asphalt adhesive.
- 3) Self-Adhesive Sheet with Drip Edge: Elastomeric thermoplastic flashing, 0.025 inch (0.6 mm) thick, with a 0.015-inch- (0.4-mm-) thick coating of rubberized-asphalt adhesive. Where flashing extends to face of masonry, rubberized-asphalt coating is held back approximately 1-1/2 inches (38 mm) from edge.
 - a) Color: Gray **OR** White **OR** Tan/buff **OR** Black, **as directed**.
- 4) Accessories: Provide preformed corners, end dams, other special shapes, and seaming materials produced by flashing manufacturer.
- e. EPDM Flashing: Sheet flashing product made from ethylene-propylene-diene terpolymer, complying with ASTM D 4637, 0.040 inch (1.0 mm) thick.
3. Solder and Sealants for Sheet Metal Flashings
 - a. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
 - b. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
 - c. Elastomeric Sealant: ASTM C 920, chemically curing urethane **OR** polysulfide **OR** silicone, **as directed**, sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
4. Adhesives, Primers, and Seam Tapes for Flexible Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

H. Miscellaneous Masonry Accessories

1. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene **OR** urethane **OR** PVC, **as directed**.
2. Cementitious Dampproofing: Cementitious formulations that are recommended by ILI and that are nonstaining to stone, compatible with joint sealants, and noncorrosive to veneer anchors and attachments.
3. Asphalt Dampproofing: Cut-back asphalt complying with ASTM D 4479, Type I **OR** asphalt emulsion complying with ASTM D 1227, Type III or IV, **as directed**.
4. Weep Hole/Vent Products: Use one of the following unless otherwise indicated:
 - a. Wicking Material: Absorbent rope, made from cotton **OR** UV-resistant synthetic fiber, **as directed**, 1/4 to 3/8 inch (6 to 10 mm) in diameter, in length required to produce 2-inch (50-mm) exposure on exterior and 18 inches (450 mm) in cavity behind stone masonry. Use only for weep holes.
 - b. Round Plastic Tubing: Medium-density polyethylene, 3/8-inch (10-mm) OD by thickness of stone masonry.
 - c. Rectangular Plastic Tubing: Clear butyrate, 3/8 by 1-1/2 inches (10 by 38 mm) by thickness of stone masonry.
 - d. Mesh Weep Holes/Vents: Free-draining mesh; made from polyethylene strands, full width of head joint and 2 inches (50 mm) high by thickness of stone masonry; in color selected from manufacturer's standard.
 - e. Aluminum Weep Holes/Vents: One-piece, L-shaped units made from sheet aluminum, designed to fit into head joint and consisting of vertical channel with louvers stamped in web and with top flap to keep mortar out of head joint; painted to comply with Division 07, before installation, in color approved to match that of mortar.
 - f. Vinyl Weep Holes/Vents: One-piece, offset, T-shaped units made from flexible, injection-molded PVC, designed to fit into head joint and consisting of louvered vertical leg, flexible wings to seal against ends of stone units, and top flap to keep mortar out of head joint; in color approved to match that of mortar.
5. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
 - a. Provide one of the following configurations:

- 1) Strips, full-depth of cavity and 10 inches (250 mm) wide, with dovetail shaped notches 7 inches (175 mm) deep that prevent mesh from being clogged with mortar droppings.
 - 2) Strips, not less than 3/4 inch (19 mm) **OR** 1-1/2 inches (38 mm), **as directed**, thick and 10 inches (250 mm) wide, with dimpled surface designed to catch mortar droppings and prevent weep holes from being clogged with mortar.
 - 3) Sheets or strips full depth of cavity and installed to full height of cavity.
 - 4) Sheets or strips not less than 3/4 inch (19 mm) **OR** 1 inch (25 mm), **as directed**, thick and installed to full height of cavity with additional strips 4 inches (100 mm) high at weep holes and thick enough to fill entire depth of cavity and prevent weep holes from being clogged with mortar.
6. Expanded Metal Lath: 3.4 lb/sq. yd. (1.8 kg/sq. m), self-furring, diamond-mesh lath complying with ASTM C 847. Fabricate from structural-quality, zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, G60 (Z180).
 7. Woven-Wire Lath: ASTM C 1032, fabricated into 1-1/2-inch (38-mm) hexagonal-shaped mesh with minimum 0.0510-inch- (1.3-mm-) diameter, galvanized-steel wire.
 8. Welded-Wire Lath: ASTM C 933, fabricated into 2-by-2-inch (50-by-50-mm) mesh with minimum 0.0625-inch- (1.6-mm-) diameter, galvanized-steel wire.
 9. Lath Attachment Devices: Material and type required by ASTM C 1063 for installations indicated.
- I. Cavity-Wall Insulation
1. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV **OR** Type X, **as directed**, closed-cell product extruded with an integral skin.
 2. Extruded-Polystyrene Board Insulation with Increased R-Value: ASTM C 578, Type IV, but with an aged thermal resistance (R-value) for 1-inch (25-mm) thickness of 5.6 deg F x h x sq. ft./Btu at 75 deg F (1.0 K x sq. m/W at 24 deg C) at 5 years; closed-cell product with a carbon-black filler and extruded with an integral skin.
 3. Molded-Polystyrene Board Insulation: ASTM C 578, Type I.
 4. Polyisocyanurate Board Insulation: ASTM C 1289, Type I (aluminum-foil faced), Class 2 (glass-fiber reinforced).
 5. Adhesive: Type recommended by insulation board manufacturer for application indicated.
- J. Masonry Cleaners
1. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar and grout stains, efflorescence, and other new construction stains from stone masonry surfaces without discoloring or damaging masonry surfaces; expressly approved for intended use by cleaner manufacturer and stone producer.
- K. Mortar Mixes
1. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
 - a. Do not use calcium chloride.
 - b. Limit cementitious materials in mortar to portland cement **OR** mortar cement, **as directed**, and lime.
 - c. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
 - d. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding water. Then mix again, adding only enough water to produce a damp, unworkable mix that will retain its form when pressed into a ball. Maintain mortar in this dampened condition for one to two hours. Add remaining water in small portions until mortar reaches desired consistency. Use mortar within 30 minutes of final mixing; do not retemper or use partially hardened material.
 2. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in the form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

3. Mortar for Stone Masonry: Comply with ASTM C 270, Proportion **OR** Property, **as directed**, Specification.
 - a. Mortar for Setting Stone: Type S **OR** Type N, **as directed**.
 - b. Mortar for Pointing Stone: Type N **OR** Type O, **as directed**.
4. Latex-Modified Portland Cement Setting Mortar: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions.
5. Cement-Paste Bond Coat: Mix either neat cement and water or cement, sand, and water to a consistency similar to that of thick cream.
 - a. For latex-modified portland cement setting-bed mortar, substitute latex admixture for part or all of water, according to latex-additive manufacturer's written instructions.
6. Mortar for Scratch Coat over Metal Lath: 1 part portland cement, 1/2 part lime, 5 parts loose damp sand, and enough water to produce a workable consistency.
7. Mortar for Scratch Coat over Unit Masonry: 1 part portland cement, 1 part lime, 7 parts loose damp sand, and enough water to produce a workable consistency.
8. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
 - a. Pigments shall not exceed 10 percent of portland cement by weight.
 - b. Pigments shall not exceed 5 percent of masonry cement **OR** mortar cement, **as directed**, by weight.
 - c. Mix to match sample.
9. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
 - a. Mix to match sample.

L. Fabrication

1. Fabricate stone to comply with sizes, shapes, and tolerances recommended by applicable stone association or, if none, by stone source, for faces, edges, beds, and backs.
 - a. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - b. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
2. Cut **OR** Select, **as directed**, stone to produce pieces of thickness, size, and shape indicated, including details on Drawings. Dress joints (bed and vertical) straight and at right angle to face unless otherwise indicated.
3. Cut and drill sinkages and holes in stone for anchors and supports.
4. Carefully inspect stone at quarry or fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units before shipment.
 - a. Clean sawed backs of stone to remove rust stains and iron particles.
5. Gage backs of stones for adhered veneer if more than 81 sq. in. (522 sq. cm) in area.
6. Thickness of Stone: Provide thickness indicated, but not less than the following:
 - a. Thickness for anchored veneer: 4 inches (100 mm) plus or minus 1/4 inch (6 mm) **OR** 1/2 inch (13 mm), **as directed**. Thickness does not include projection of pitched faces.
 - b. Thickness for adhered veneer: 1 inch (25 mm) plus or minus 1/8 inch (3 mm) **OR** 1/4 inch (6 mm), **as directed**.
7. Shape stone for type of masonry (pattern) as follows:
 - a. Sawed-bed, range ashlar with uniform course heights and uniform lengths as indicated on Drawings.
 - b. Sawed-bed, range ashlar with uniform course heights as indicated on Drawings and with random lengths.
 - c. Sawed-bed, broken-range ashlar with uniform course heights as indicated on Drawings and with random lengths.
 - d. Sawed **OR** Split, **as directed**, -bed, random-range ashlar with random course heights and random lengths (interrupted coursed).
 - e. Coursed rubble.
 - f. Uncoursed rubble (fieldstone).
 - g. Polygonal or mosaic.

8. Finish exposed faces and edges of stone to comply with requirements indicated for finish and to match approved samples and mockups.
 - a. Finish: Split face **OR** Rock face (pitched face) **OR** Natural cleft **OR** Mixed split face and seam face **OR** Mixed split face, seam face, and rock face (pitched face) **OR** Smooth **OR** Sand rubbed **OR** As indicated, **as directed**.
 - b. Finish for Sills: Smooth **OR** Sand rubbed **OR** Split face with sand-rubbed washes **OR** Rock face (pitched face) with sand-rubbed washes **OR** Rock face (pitched face) with tooled (boasted) washes, **as directed**
 - c. Finish for Lintels: Smooth **OR** Sand rubbed **OR** Split face **OR** Rock face (pitched face), **as directed**.
 - d. Finish for Copings: Smooth **OR** Sand rubbed **OR** Split faces **OR** Rock face (pitched face), front and back; sand-rubbed top **OR** Rock face (pitched face), front and back; tooled (boasted) top, **as directed**.
 - 1) Finish exposed ends of copings same as front and back faces.

1.3 EXECUTION

A. Preparation

1. Accurately mark stud centerlines on face of weather-resistant sheathing paper before beginning stone installation.
2. Coat concrete and unit masonry backup with asphalt dampproofing.
3. Clean dirty or stained stone surfaces by removing soil, stains, and foreign materials before setting. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

B. Setting Of Stone Masonry, General

1. Perform necessary field cutting and trimming as stone is set.
 - a. Use power saws to cut stone that is fabricated with saw-cut surfaces. Cut lines straight and true, with edges eased slightly to prevent snapping.
 - b. Use hammer and chisel to split stone that is fabricated with split surfaces. Make edges straight and true, matching similar surfaces that were shop or quarry fabricated.
 - c. Pitch face at field-split edges as needed to match stones that are not field split.
2. Sort stone before it is placed in wall to remove stone that does not comply with requirements relating to aesthetic effects, physical properties, or fabrication, or that is otherwise unsuitable for intended use.
3. Arrange stones in range ashlar pattern with course heights as indicated, uniform **OR** random, **as directed** lengths, and uniform joint widths, with offset between vertical joints as indicated.
4. Arrange stones in broken-range ashlar pattern with uniform course heights, random lengths, and uniform joint widths.
5. Arrange stones in three-course, random-range ashlar pattern with random course heights, random lengths (interrupted coursed), and uniform joint widths.
6. Arrange stones in coursed **OR** uncoursed, **as directed**, rubble pattern with joint widths within tolerances indicated. Insert small stones into spaces between larger stones as needed to produce joints as uniform in width as practical, **as directed**.
7. Arrange stones in polygonal (mosaic) pattern with uniform joint widths.
8. Arrange stones with color and size variations uniformly dispersed for an evenly blended appearance.
9. Set stone to comply with requirements indicated on Drawings. Install supports, fasteners, and other attachments indicated or necessary to secure stone masonry in place. Set stone accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.
10. Maintain uniform joint widths except for variations due to different stone sizes and where minor variations are required to maintain bond alignment if any. Lay walls with joints not less than 1/4 inch (6 mm) **OR** 3/8 inch (10 mm), **as directed**, at narrowest points or more than 3/8 inch (10

- mm) **OR** 1/2 inch (13 mm) **OR** 5/8 inch (16 mm) **OR** 1 inch (25 mm) **OR** 1-1/2 inches (38 mm), **as directed**, at widest points.
11. Provide sealant joints of widths and at locations indicated.
 - a. Keep sealant joints free of mortar and other rigid materials.
 - b. Sealing joints is specified in Division 07 Section "Joint Sealants".
 12. Install metal expansion strips in sealant joints at locations indicated. Build flanges of expansion strips into masonry by embedding in mortar between stone masonry and backup wythe. Lap each joint 4 inches (100 mm) in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
 13. Install embedded flashing and weep holes, **as directed**, at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated.
 - a. At stud-framed walls, extend flashing through stone masonry, up the face of sheathing at least 8 inches (200 mm) **OR** 12 inches (300 mm) **OR** 16 inches (400 mm), **as directed**, and behind weather-resistant sheathing paper.
 - b. At multiwythe masonry walls, including cavity walls, extend flashing through stone masonry, turned up a minimum of 4 inches (100 mm) **OR** 8 inches (200 mm) **OR** 12 inches (300 mm) **OR** 16 inches (400 mm), **as directed**, and extend into or through inner wythe to comply with requirements in Division 04 Section "Unit Masonry".
 - c. At concrete backing, extend flashing through stone masonry, turned up a minimum of 4 inches (100 mm) **OR** 6 inches (150 mm) **OR** 8 inches (200 mm) **OR** 12 inches (300 mm), **as directed**, and insert in reglet. Reglets are specified Division 07 Section "Sheet Metal Flashing And Trim".
 - d. At lintels and shelf angles, extend flashing full length of angles but not less than 6 inches (150 mm) into masonry at each end.
 - e. At sills, extend flashing not less than 4 inches (100 mm) at ends.
 - f. At ends of head and sill flashing turn up not less than 2 inches (50 mm) to form end dams.
 - g. Interlock end joints of ribbed sheet metal flashing by overlapping ribs not less than 1-1/2 inches (38 mm) or as recommended by flashing manufacturer, and seal lap with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.
 - h. Install metal drip edges and sealant stops with ribbed sheet metal flashing by interlocking hemmed edges to form hooked seam. Seal seam with elastomeric sealant complying with requirements in Division 07 Section "Joint Sealants" for application indicated.
 - i. Extend sheet metal flashing 1/2 inch (13 mm) beyond face of masonry at exterior and turn flashing down to form a drip.
 - j. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal drip edge.
 - k. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal flashing termination.
 - l. Cut flexible flashing flush with face of wall after masonry wall construction is completed.
 14. Coat limestone with cementitious dampproofing as follows:
 - a. Stone at Grade: Beds, joints, and back surfaces to at least 12 inches (300 mm) above finish-grade elevations.
 - b. Stone Extending below Grade: Beds, joints, back surfaces, and face surfaces below grade.
 - c. Allow cementitious dampproofing formulations to cure before setting dampproofed stone. Do not damage or remove dampproofing in the course of handling and setting stone.
 15. Place weep holes and vents in joints where moisture may accumulate, including at base of cavity walls, above shelf angles, and at flashing.
 - a. Use wicking material **OR** round plastic tubing **OR** rectangular plastic tubing **OR** mesh weep holes/vents **OR** aluminum weep holes/vents **OR** vinyl weep holes/vents **OR** open head joints, **as directed**, to form weep holes.

- b. Use wicking material to form weep holes above flashing in stone sills. Turn wicking down at lip of sill to be as inconspicuous as possible.
 - c. Space weep holes 16 inches (400 mm) **OR** 24 inches (600 mm), **as directed**, o.c.
 - d. Space weep holes formed from plastic tubing **OR** wicking material, **as directed**, 16 inches (400 mm) o.c.
 - e. Trim wicking material used in weep holes flush with outside face of wall after mortar has set.
 - f. Place pea gravel in cavities as soon as practical to a height of not less than 2 inches (50 mm) above top of flashing, to maintain drainage.
 - g. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.
16. Install vents in vertical head joints at the top of each continuous cavity at spacing indicated. Use round plastic tubing **OR** rectangular plastic tubing **OR** mesh weep holes/vents **OR** aluminum weep holes/vents **OR** vinyl weep holes/vents **OR** open head joints, **as directed**, to form vents.
- a. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.

C. Construction Tolerances

- 1. Variation from Plumb: For vertical lines and surfaces, do not exceed 1/4 inch in 10 feet (6 mm in 3 m), 3/8 inch in 20 feet (10 mm in 6 m), or 1/2 inch in 40 feet (13 mm in 12 m) or more. For external corners, expansion joints, control joints, and other conspicuous lines, do not exceed 1/4 inch in 20 feet (6 mm in 6 m) or 1/2 inch in 40 feet (13 mm in 12 m) or more.
- 2. Variation from Level: For bed joints and lines of exposed lintels, sills, parapets, horizontal grooves, and other conspicuous lines, do not exceed 1/4 inch in 20 feet (6 mm in 6 m) or 1/2 inch in 40 feet (13 mm in 12 m) or more.
- 3. Variation of Linear Building Line: For position shown in plan, do not exceed 1/2 inch in 20 feet (13 mm in 6 m) or 3/4 inch in 40 feet (19 mm in 12 m) or more.
- 4. For rough stone, measure variation from level, plumb, and position shown in plan as variation of the average plane of the face of each stone from level, plumb, or dimensioned plane.
- 5. Variation in Mortar-Joint Thickness: Do not vary from joint size range indicated.
- 6. Variation in Plane between Adjacent Stones for Rough Stone: Do not exceed one-half of tolerance specified for thickness of stone.

D. Installation Of Anchored Stone Masonry

- 1. Anchor stone masonry to concrete with corrugated-metal veneer anchors unless otherwise indicated. Secure anchors by inserting dovetailed ends into dovetail slots in concrete.
- 2. Anchor stone masonry to unit masonry with corrugated-metal **OR** individual wire, **as directed**, veneer anchors unless otherwise indicated. Embed anchors in unit masonry mortar joints or grouted cells for distance at least one-half of unit masonry thickness.
- 3. Anchor stone masonry to unit masonry with wire anchors unless otherwise indicated. Connect anchors to masonry joint reinforcement by inserting pintles into eyes of masonry joint reinforcement projecting from unit masonry.
- 4. Anchor stone masonry to unit masonry with wire anchors unless otherwise indicated. Connect anchors to masonry joint reinforcement with vertical rods inserted through anchors and through eyes of masonry joint reinforcement projecting from unit masonry.
- 5. Anchor stone masonry to unit masonry with adjustable, screw-attached **OR** seismic, **as directed**, veneer anchors unless otherwise indicated. Fasten anchors to unit masonry with two screws.
- 6. Anchor stone masonry to stud framing with adjustable, screw-attached **OR** seismic, **as directed**, veneer anchors unless otherwise indicated. Fasten anchors through sheathing to framing with two screws.
- 7. Anchor stone masonry to stud framing with screw-attached veneer anchors unless otherwise indicated.
- 8. Anchor stone masonry to wood stud framing with corrugated-metal veneer anchors unless otherwise indicated. Fasten anchors through sheathing to studs with corrosion-resistant roofing nails.

9. Anchor stone masonry to wood stud framing with wire anchors unless otherwise indicated. Fasten anchors through sheathing to wood studs with corrosion-resistant roofing nails.
10. Anchor stone masonry to metal stud framing with wire anchors unless otherwise indicated. Tie anchors to studs.
11. Embed veneer anchors in mortar joints of stone masonry at least halfway, but not less than 1-1/2 inches (38 mm), through stone masonry and with at least 5/8-inch (16-mm) cover on outside face.
 - a. Install continuous wire reinforcement in horizontal joints and attach to seismic veneer anchors as stone is set.
12. Space anchors to provide not less than 1 anchor per 2 sq. ft. (0.2 sq. m) of wall area. Install additional anchors within 12 inches (300 mm) of openings, sealant joints, and perimeter at intervals not exceeding 12 inches (300 mm).
13. Space anchors not more than 16 inches (400 mm) o.c. vertically and 24 inches (600 mm) o.c. horizontally. Install additional anchors within 12 inches (300 mm) of openings, sealant joints, and perimeter at intervals not exceeding 12 inches (300 mm).
14. Anchor stone trim with stone trim anchors where indicated. Install anchors by fastening to substrate and inserting tabs and dowels into kerfs and holes in stone units. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with mortar.
15. Set stone in full bed of mortar with full head joints unless otherwise indicated. Build anchors into mortar joints as stone is set.
16. Fill collar joint **OR** space between back of stone masonry and weather-resistant sheathing paper, **as directed**, with mortar as stone is set.
17. Provide 1-inch (25-mm) **OR** 2-inch (50-mm), **as directed**, cavity between stone masonry and backup construction unless otherwise indicated. Keep cavity free of mortar droppings and debris.
 - a. Place mortar spots in cavity at veneer anchors to maintain spacing.
 - b. Slope beds toward cavity to minimize mortar protrusions into cavity.
 - c. Do not attempt to trowel or remove mortar fins protruding into cavity.
18. Rake out joints for pointing with mortar to depth of not less than 1/2 inch (13 mm) **OR** 3/4 inch (19 mm), **as directed**, before setting mortar has hardened. Rake joints to uniform depths with square bottoms and clean sides.

E. Installation Of Adhered Stone Masonry Veneer

1. Install flashing over sheathing and behind weather-resistant sheathing paper by fastening through sheathing into framing.
2. Install lath over weather-resistant sheathing paper by fastening through sheathing into framing to comply with ASTM C 1063.
3. Install lath over unit masonry and concrete to comply with ASTM C 1063.
4. Install scratch coat over metal lath 3/8 inch (10 mm) thick to comply with ASTM C 926.
5. Coat backs of stone units and face of scratch coat **OR** masonry backup, **as directed**, with cement-paste bond coat, then butter both surfaces with setting mortar. Use sufficient setting mortar so a slight excess will be forced out the edges of stone units as they are set. Tap units into place, completely filling space between units and scratch coat **OR** masonry backup, **as directed**.
6. Rake out joints for pointing with mortar to depth of not less than 1/2 inch (13 mm) **OR** 3/4 inch (19 mm), **as directed**, before setting mortar has hardened. Rake joints to uniform depths with square bottoms and clean sides.

F. Pointing

1. Prepare stone-joint surfaces for pointing with mortar by removing dust and mortar particles. Where setting mortar was removed to depths greater than surrounding areas, apply pointing mortar in layers not more than 3/8 inch (10 mm) deep until a uniform depth is formed.
2. Point stone joints by placing and compacting pointing mortar in layers not more than 3/8 inch (10 mm) deep. Compact each layer thoroughly and allow to become thumbprint hard before applying next layer.

3. Tool joints, when pointing mortar is thumbprint hard, with a smooth jointing tool to produce the following joint profile:
 - a. Joint Profile: Concave **OR** Smooth, flat face slightly below edges of stone **OR** Smooth, flat face recessed 1/4 inch (6 mm) below edges of stone (raked joint) **OR** Flush, with a 3/8-inch (10-mm) half-round raised bead in middle of joint **OR** As indicated, **as directed**.
- G. Adjusting And Cleaning
1. Remove and replace stone masonry of the following description:
 - a. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved.
 - b. Defective joints.
 - c. Stone masonry not matching approved samples and mockups.
 - d. Stone masonry not complying with other requirements indicated.
 2. Replace in a manner that results in stone masonry matching approved samples and mockups, complying with other requirements, and showing no evidence of replacement.
 3. In-Progress Cleaning: Clean stone masonry as work progresses. Remove mortar fins and smears before tooling joints.
 4. Final Cleaning: After mortar is thoroughly set and cured, clean stone masonry as follows:
 - a. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
 - b. Test cleaning methods on mockup; leave one-half of panel uncleaned for comparison purposes. Obtain approval of sample cleaning before cleaning stone masonry.
 - c. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent, polyethylene film, or waterproof masking tape.
 - d. Wet wall surfaces with water before applying cleaner; remove cleaner promptly by rinsing thoroughly with clear water.
 - e. Clean stone masonry by bucket and brush hand-cleaning method described in BIA Technical Note No. 20 Revised II, using job-mixed detergent solution.
 - f. Clean stone masonry with proprietary acidic cleaner applied according to manufacturer's written instructions.
 - g. Clean limestone masonry to comply with recommendations in ILI's "Indiana Limestone Handbook."
- H. Excess Materials And Waste
1. Disposal as Fill Material: Dispose of clean masonry waste, including mortar and excess or soil-contaminated sand, by crushing and mixing with fill material as fill is placed.
 - a. Crush masonry waste to less than 4 inches (100 mm) in greatest dimension.
 - b. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Division 31 Section "Earth Moving".
 - c. Do not dispose of masonry waste as fill within 18 inches (450 mm) of finished grade.
 2. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other waste, and legally dispose of off the Owner's property.

SECTION 04 05 13 26 - UNIT MASONRY ASSEMBLIES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for unit masonry assemblies. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes unit masonry assemblies consisting of the following:
 - a. Concrete masonry units (CMUs).
 - b. Decorative concrete masonry units.
 - c. Pre-faced concrete masonry units.
 - d. Concrete brick.
 - e. Face brick.
 - f. Building (common) brick.
 - g. Hollow brick.
 - h. Glazed brick.
 - i. Structural-clay facing tile.
 - j. Firebox brick.
 - k. Clay flue lining units.
 - l. Stone trim units.
 - m. Mortar and grout.
 - n. Reinforcing steel.
 - o. Masonry joint reinforcement.
 - p. Ties and anchors.
 - q. Embedded flashing.
 - r. Miscellaneous masonry accessories.
 - s. Masonry-cell insulation.
 - t. Cavity-wall insulation.

C. Definitions

1. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

D. Performance Requirements

1. Provide structural unit masonry that develops indicated net-area compressive strengths (f'_m) at 28 days.
2. Determine net-area compressive strength (f'_m) of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602 **OR** Table 21-D in the Uniform Building Code, **as directed**.
OR
 Determine net-area compressive strength (f'_m) of masonry by testing masonry prisms according to ASTM C 1314 **OR** UBC Standard 21-17, **as directed**.

E. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: For reinforcing steel. Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement." Show elevations of reinforced walls.
3. Samples for each type and color of exposed masonry units and colored mortars.

4. Material Certificates: For each type of product indicated. Include statements of material properties indicating compliance with requirements including compliance with standards and type designations within standards.
5. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
 - a. For masonry units include material test reports substantiating compliance with requirements.
6. Cold-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with cold-weather requirements.

F. Quality Assurance

1. Preconstruction Testing Service: the Owner will engage a qualified independent testing agency to perform preconstruction testing indicated below. Payment for these services will be made by the Owner.
 - a. Clay Masonry Unit Test: For each type of unit required, per ASTM C 67.
 - b. Concrete Masonry Unit Test: For each type of unit required, per ASTM C 140.
 - c. Mortar Test (Property Specification): For each mix required, per ASTM C 780 **OR** UBC Standard 21-16, **as directed**.
 - d. Grout Test (Compressive Strength): For each mix required, per ASTM C 1019 **OR** UBC Standard 21-18, **as directed**.
2. Fire-Resistance Ratings: Where indicated, provide materials and construction identical to those of assemblies with fire-resistance ratings determined per ASTM E 119 by a testing and inspecting agency, by equivalent concrete masonry thickness, or by other means, as acceptable to authorities having jurisdiction.
3. Sample Panels: Build sample panels to verify selections made under sample submittals and to demonstrate aesthetic effects.
 - a. Build sample panels for each type of exposed unit masonry construction **OR** typical exterior wall, **as directed**, in sizes approximately 48 inches (1200 mm) long by 48 inches (1200 mm) high.

G. Delivery, Storage, And Handling

1. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.
2. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.
3. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.
4. Deliver preblended, dry mortar mix in moisture-resistant containers designed for lifting and emptying into dispensing silo. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in a metal dispensing silo with weatherproof cover.
5. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

H. Project Conditions

1. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602 **OR** Section 2104.3 in the Uniform Building Code, **as directed**.
2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1.2 PRODUCTS

A. Concrete Masonry Units (CMUs)

1. Shapes: Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Integral Water Repellent: Provide units made with liquid polymeric, integral water-repellent admixture that does not reduce flexural bond strength for exposed units and where indicated.
3. Concrete Masonry Units: ASTM C 90 **OR** UBC Standard 21-4, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi (13.1 MPa) **OR** 2150 psi (14.8 MPa) **OR** 2800 psi (19.3 MPa) **OR** 3050 psi (21.0 MPa), **as directed**.
 - b. Weight Classification: Lightweight **OR** Medium weight **OR** Normal weight, **as directed**.
4. Decorative Concrete Masonry Units: ASTM C 90 **OR** UBC Standard 21-4, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi (13.1 MPa) **OR** 2150 psi (14.8 MPa) **OR** 2800 psi (19.3 MPa) **OR** 3050 psi (21.0 MPa), **as directed**.
 - b. Weight Classification: Lightweight **OR** Medium weight **OR** Normal weight, **as directed**.
 - c. Pattern and Texture:
 - 1) Standard pattern, ground finish.
 - 2) Standard pattern, split-face finish.
 - 3) Standard pattern, split-ribbed finish.
 - 4) Scored vertically, standard finish.
 - 5) Triple scored vertically, standard finish.
5. Pre-faced Concrete Masonry Units: Lightweight hollow **OR** solid, **as directed**, concrete units complying with ASTM C 90 **OR** UBC Standard 21-4, **as directed**, with manufacturer's standard smooth resinous facing complying with ASTM C 744.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi (13.1 MPa) **OR** 2150 psi (14.8 MPa) **OR** 2800 psi (19.3 MPa) **OR** 3050 psi (21.0 MPa), **as directed**.
 - b. Size: Manufactured with pre-faced surfaces having 1/16-inch- (1.5-mm-) wide returns of facing to create 1/4-inch- (6.5-mm-) wide mortar joints with modular coursing.
6. Concrete Building Brick: ASTM C 55 **OR** UBC Standard 21-3, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 2500 psi (17.3 MPa) **OR** 3500 psi (24.1 MPa), **as directed**.
 - b. Weight Classification: Lightweight **OR** Medium weight **OR** Normal weight, **as directed**.

B. Concrete And Masonry Lintels

1. General: Provide either concrete or masonry lintels, at Contractor's option, complying with requirements below.
2. Concrete Lintels:
 - a. Precast units matching concrete masonry units and with reinforcing bars indicated or required to support loads indicated.
OR
Precast or formed-in-place concrete lintels complying with requirements in Division 03 Section "Cast-in-place Concrete".
3. Masonry Lintels: Made from bond beam concrete masonry units with reinforcing bars placed as indicated and filled with coarse grout.

C. Brick

1. General: Provide shapes indicated and as follows:
 - a. For ends of sills and caps and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
 - b. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

2. Face Brick: ASTM C 216 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW, **as directed**, Type FBX **OR** FBS **OR** FBA, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3000 psi (20.7 MPa) **OR** 4400 psi (30.3 MPa) **OR** 5500 psi (37.9 MPa) **OR** 6400 psi (44.1 MPa) **OR** 8000 psi (55.2 MPa) **OR** 8400 psi (57.9 MPa), **as directed**.
 - b. Initial Rate of Absorption: Less than 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested per ASTM C 67.
 - c. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
 - d. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing per ASTM C 67 with no observable difference in the applied finish when viewed from 10 feet (3 m).
 - e. Size: **As directed**.
3. Building (Common) Brick: ASTM C 62 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW **OR** NW, MW, or SW, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3000 psi (20.7 MPa) **OR** 4400 psi (30.3 MPa) **OR** 5500 psi (37.9 MPa) **OR** 6400 psi (44.1 MPa) **OR** 8000 psi (55.2 MPa) **OR** 8400 psi (57.9 MPa), **as directed**.
 - b. Size: Match size of face brick.
4. Hollow Brick: ASTM C 652 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW, **as directed**, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area) **OR** H60V (void areas between 40 and 60 percent of gross cross-sectional area) , **as directed**, Type HBX **OR** HBS **OR** HBA **OR** HBB, **as directed**.
 - a. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3000 psi (20.7 MPa) **OR** 4400 psi (30.3 MPa) **OR** 5500 psi (37.9 MPa) **OR** 6400 psi (44.1 MPa) **OR** 8000 psi (55.2 MPa) **OR** 8400 psi (57.9 MPa), **as directed**.
 - b. Efflorescence: Provide brick that has been tested according to ASTM C 67 and is rated "not effloresced."
 - c. Surface Coating: Brick with colors or textures produced by application of coatings shall withstand 50 cycles of freezing and thawing per ASTM C 67 with no observable difference in the applied finish when viewed from 10 feet (3 m).
 - d. Size: **As directed**.
5. Glazed Face Brick: ASTM C 216 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW, **as directed**, Type FBX **OR** FBS **OR** FBA, **as directed**; with glaze complying with ASTM C 126.
6. Glazed Face Brick: ASTM C 1405, Class Exterior **OR** Interior, **as directed**, Grade S (Select) **OR** SS (Select Sized or Ground Edge), **as directed**.
7. Glazed Face Brick: Either ASTM C 1405, Class Exterior **OR** Interior, **as directed**, Grade S (Select) or ASTM C 216 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW, **as directed**, Type FBX; with glaze complying with ASTM C 126.
8. Glazed Hollow Brick: Hollow brick complying with ASTM C 652 **OR** UBC Standard 21-1, **as directed**, Grade SW **OR** MW or SW, **as directed**, Class H40V (void areas between 25 and 40 percent of gross cross-sectional area) **OR** H60V (void areas between 40 and 60 percent of gross cross-sectional area), **as directed**, Type HBX **OR** HBS **OR** HBA, **as directed**; with glaze complying with ASTM C 126.
 - a. Size: **As directed**.
 - b. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.

D. Structural-Clay Facing Tile

1. General:
 - a. Provide solid, multicored, or hollow units, with shape and direction of cores optional, unless otherwise indicated.
 - b. Provide multicored units designed for use in reinforced, grouted masonry.

- c. Provide special shapes where required for corners, jambs, coved bases, sills, and other special conditions indicated that cannot be produced by sawing standard units.
 2. Glazed Structural-Clay Facing Tile: ASTM C 126, Grade S (Select) **OR** SS (Select Sized or Ground Edged), **as directed**.
 - a. Size: **As directed**.
 - b. Provide Type I (single-faced units) where only one finished face is exposed when units are installed, and Type II (double-faced units) where two opposite finished faces are exposed when units are installed.
 3. Unglazed Structural-Clay Facing Tile: ASTM C 212, Type FTX **OR** FTS, **as directed**, Standard **OR** Special-Duty, **as directed**, class.
 - a. Number of Faces: Single faced where only one finished face is exposed when units are installed **OR** Double faced where both finished faces are exposed when units are installed, **as directed**.
- E. Fireplace And Chimney Lining Units
 1. Firebox Brick: ASTM C 1261, size required to produce lining thickness indicated.
 2. Clay Flue Lining Units: ASTM C 315.
- F. Stone Trim Units
 1. Granite: ASTM C 615.
 - a. Description: Fine **OR** Medium, **as directed**, -grained, white **OR** pink **OR** gray **OR** black, **as directed**, stone. Uniform pattern, without veining.
 2. Limestone: ASTM C 568, Classification I Low **OR** II Medium **OR** III High, **as directed**, -Density.
 3. Marble: ASTM C 503, Classification I Calcite **OR** II Dolomite **OR** III Serpentine **OR** IV Travertine, **as directed**.
 - a. Description: Uniform, fine- to medium-grained, white stone with only slight veining.
 4. Quartz-Based Stone: ASTM C 616, Classification I Sandstone **OR** II Quartzitic Sandstone **OR** III Quartzite, **as directed**.
 5. Finish: Polished **OR** Honed **OR** Smooth **OR** Machine tooled, 4 bats per 1 inch (25 mm) **OR** Machine tooled, 6 bats per 1 inch (25 mm) **OR** Machine tooled, 8 bats per 1 inch (25 mm) **OR** Chat sawed **OR** Split face **OR** Rock face (pitched face), **as directed**.
 - a. Finish for Tops of Sills and Soffits of Lintels: Sand rubbed **OR** Split face, **as directed**.
 6. Provide stone units accurately shaped, with exposed faces dressed true, and with beds and joints at right angles to faces.
 - a. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
 - b. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."
 - c. For marble, comply with recommendations in MIA's "Dimensional Stone--Design Manual IV."
- G. Mortar And Grout Materials
 1. Portland Cement: ASTM C 150, Type I or II, except Type III may be used for cold-weather construction.
 2. Hydrated Lime: ASTM C 207 **OR** UBC Standard 21-13, **as directed**, Type S.
 3. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C 150, Type I or Type III, and hydrated lime complying with ASTM C 207, Type S.
 4. Masonry Cement: ASTM C 91 **OR** UBC Standard 21-11, **as directed**.
 5. Mortar Cement: ASTM C 1329 **OR** UBC Standard 21-14, **as directed**.
 6. Mortar Pigments: Iron oxides and chromium oxides, compounded for use in mortar mixes. Use only pigments with a record of satisfactory performance in masonry mortar.
 7. Colored Cement Product: Packaged blend made from portland cement and lime or masonry cement and mortar pigments, all complying with specified requirements, and containing no other ingredients.
 - a. Formulate blend as required to produce color indicated or, if not indicated, as selected from manufacturer's standard colors.
 - b. Pigments shall not exceed 10 percent of portland cement by weight.

- c. Pigments shall not exceed 5 percent of masonry cement or mortar cement by weight.
- 8. Aggregate for Mortar: ASTM C 144.
 - a. For joints less than 1/4 inch (6.5 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
 - b. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
 - c. White-Mortar Aggregates: Natural white sand or crushed white stone.
 - d. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
- 9. Aggregate for Grout: ASTM C 404.
- 10. Epoxy Pointing Mortar: ASTM C 395, epoxy-resin-based material formulated for use as pointing mortar for structural-clay tile facing units.
- 11. Refractory Mortar Mix: Ground fireclay or non-water-soluble, calcium aluminate, medium-duty refractory mortar that passes ASTM C 199 test; or an equivalent product acceptable to authorities having jurisdiction.
- 12. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C 494/C 494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
- 13. Water-Repellent Admixture: Liquid water-repellent mortar admixture intended for use with concrete masonry units, containing integral water repellent by same manufacturer.
- 14. Water: Potable.

H. Reinforcement

- 1. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60 (Grade 420).
- 2. Masonry Joint Reinforcement, General: ASTM A 951 **OR** UBC Standard 21-10, **as directed**.
 - a. Interior Walls: Mill- **OR** Hot-dip, **as directed**, galvanized, carbon steel.
 - b. Exterior Walls: Hot-dip galvanized, carbon **OR** Stainless, **as directed**, steel.
 - c. Wire Size for Side Rods: W1.7 or 0.148-inch (3.8-mm) **OR** W2.8 or 0.188-inch (4.8-mm), **as directed**, diameter.
 - d. Wire Size for Cross Rods: W1.7 or 0.148-inch (3.8-mm) **OR** W2.8 or 0.188-inch (4.8-mm), **as directed** diameter.
 - e. Wire Size for Veneer Ties: W1.7 or 0.148-inch (3.8-mm) **OR** W2.8 or 0.188-inch (4.8-mm), **as directed** diameter.
 - f. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches (407 mm) o.c.
 - g. Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.
 - h. Multiwythe Masonry:
 - 1) Ladder type with 1 side rod at each face shell of hollow masonry units more than 4 inches (100 mm) in width, plus 1 side rod at each wythe of masonry 4 inches (100 mm) or less in width.
 - 2) Tab type, with 1 side rod at each face shell of backing wythe and with rectangular tabs sized to extend at least halfway through facing wythe but with at least 5/8-inch (16-mm) cover on outside face.
 - 3) Adjustable (two-piece) type, with one side rod at each face shell of backing wythe and with ties that extend into facing wythe. Ties engage eyes or slots in reinforcement and extend at least halfway through facing wythe but with at least 5/8-inch (16-mm) cover on outside face. Ties have hooks or clips to engage a continuous wire in the facing wythe.
 - i. Veneers Anchored with Seismic Masonry-Veneer Anchors: Single 0.188-inch- (4.8-mm-) diameter, hot-dip galvanized, carbon-steel continuous wire.

I. Ties And Anchors

- 1. Materials:
 - a. Mill-Galvanized, Carbon-Steel Wire: ASTM A 82; with ASTM A 641/A 641M, Class 1 coating.

- b. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82; with ASTM A 153/A 153M, Class B-2 coating.
 - c. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304 **OR** 316, **as directed**.
 - d. Galvanized Steel Sheet: ASTM A 653/A 653M, Commercial Steel, G60 (Z180) zinc coating.
 - e. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, hot-dip galvanized after fabrication to comply with ASTM A 153/A 153M.
 - f. Stainless-Steel Sheet: ASTM A 666, Type 304 **OR** 316, **as directed**.
 - g. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
 - h. Stainless Steel bars: ASTM A 276 or ASTM a 666, Type 304.
- 2. Corrugated Metal Ties: Metal strips not less than 7/8 inch (22 mm) wide with corrugations having a wavelength of 0.3 to 0.5 inch (7.6 to 12.7 mm) and an amplitude of 0.06 to 0.10 inch (1.5 to 2.5 mm) made from steel sheet, galvanized after fabrication **OR** stainless-steel sheet, **as directed**, not less than 0.043 inch (1.1 mm) **OR** 0.053 inch (1.3 mm) **OR** 0.067 inch (1.7 mm) **OR** 0.097 inch (2.5 mm), **as directed**, thick. Ties made from galvanized steel sheet may be used in interior walls, unless otherwise indicated.
- 3. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch (16-mm) cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches (50 mm) parallel to face of veneer.
- 4. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches (100 mm) wide.
 - a. Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches (50 mm) long may be used for masonry constructed from solid units or hollow units laid with cells horizontal.
 - b. Where wythes do not align **OR** are of different materials, **as directed**, use adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches (32 mm).
 - c. Wire: Fabricate from 3/16-inch- (4.8-mm-) **OR** 1/4-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized steel **OR** stainless-steel, **as directed**, wire. Mill-galvanized wire ties may be used in interior walls, unless otherwise indicated.
- 5. Adjustable Anchors for Connecting to Structure: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
 - a. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch- (6.4-mm-) diameter, hot-dip galvanized steel **OR** stainless-steel, **as directed**, wire. Mill-galvanized wire may be used at interior walls, unless otherwise indicated.
 - b. Tie Section for Steel Frame: Triangular-shaped wire tie, sized to extend within 1 inch (25 mm) of masonry face, made from 0.188-inch- (4.8-mm-) **OR** 0.25-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized steel **OR** stainless-steel, **as directed** wire. Mill-galvanized wire may be used at interior walls, unless otherwise indicated.
 - c. Connector Section for Concrete: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.053-inch- (1.3-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.097-inch- (2.5-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.062-inch- (1.6-mm-) thick, stainless-steel sheet **OR** 0.109-inch- (2.8-mm-) thick, stainless-steel sheet, **as directed**. 0.064-inch- (1.6-mm-) **OR** 0.108-inch- (2.7-mm-), **as directed**, thick, galvanized sheet may be used at interior walls, unless otherwise indicated.
 - d. Tie Section for Concrete: Corrugated metal ties with dovetail tabs for inserting into dovetail slots in concrete and sized to extend to within 1 inch (25 mm) of masonry face.
- 6. Partition Top anchors: 0.097-inch- (2.5-mm-) thick metal plate with 3/8-inch- (10-mm-) diameter metal rod 6 inches (150 mm) long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication **OR** stainless-steel, **as directed**.
- 7. Rigid Anchors: Fabricate from steel bars 1-1/2 inches (38 mm) wide by 1/4 inch (6.4 mm) thick by 24 inches (600 mm) long, with ends turned up 2 inches (50 mm) or with cross pins.
 - a. Corrosion Protection: Hot-dip galvanized to comply with ASTM A 153/A 153M **OR** Epoxy coating 0.020 inch (0.51 mm) thick **OR** Rust-inhibitive paint, **as directed**.
- 8. Stone Anchors: Fabricate dowels, cramps, and other stone anchors from stainless steel.

9. Adjustable Masonry-Veneer Anchors

- a. General: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to wood or metal studs, and as follows:
 - 1) Structural Performance Characteristics: Capable of withstanding a 100-lbf (445-N) load in both tension and compression without deforming or developing play in excess of 0.05 inch (1.3 mm).
- b. Screw-Attached, Masonry-Veneer Anchors: Units consisting of a wire tie and a metal anchor section.
 - 1) Anchor Section:
 - a) Rib-stiffened, sheet metal plate with screw holes top and bottom, and slotted holes for inserting wire tie.
 - b) Sheet metal plate with screw holes top and bottom and with raised rib-stiffened strap, stamped into center to provide a slot between strap and plate for inserting wire tie.
 - c) Gasketed sheet metal plate with screw holes top and bottom; top and bottom ends bent to form pronged legs of length to match thickness of insulation or sheathing; and raised rib-stiffened strap, stamped into center to provide a slot between strap and plate for inserting wire tie. Provide anchor manufacturer's standard, self-adhering, modified bituminous gaskets manufactured to fit behind anchor plate and extend beyond pronged legs.
 - 2) Fabricate sheet metal anchor sections and other sheet metal parts from 0.067-inch- (1.7-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.097-inch- (2.5-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.078-inch- (2.0-mm-) thick, stainless-steel sheet **OR** 0.109-inch- (2.8-mm-) thick, stainless-steel sheet, **as directed**.
 - 3) Wire Ties: Triangular-, rectangular-, or T-shaped wire ties fabricated from 0.188-inch- (4.8-mm-) **OR** 0.25-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized steel **OR** stainless-steel, **as directed**, wire.
- c. Slip-in, Masonry-Veneer Anchors: Units consisting of a wire tie section and an anchor section designed to interlock with metal studs and be slipped into place as sheathing is installed.
 - 1) Wire-Type Anchor: Bent wire anchor section with an eye to receive the wire tie. Wire tie has a vertical leg that slips into the eye of anchor section and allows vertical adjustment. Both sections are made from 3/16-inch (4.8-mm), hot-dip galvanized wire.
 - 2) Strap-and-Wire Type Anchor: Flat metal strap with notch to interlock with flange of metal stud and two holes for inserting vertical legs of wire tie specially formed to fit anchor section. Strap is made from 0.067-inch- (1.7-mm-) thick, steel sheet, galvanized after fabrication; anchor wire tie is made from 3/16-inch (4.8-mm), hot-dip galvanized wire.
- d. Seismic Masonry-Veneer Anchors: Units consisting of a metal anchor section and a connector section designed to engage a continuous wire embedded in the veneer mortar joint.
 - 1) Anchor Section: Rib-stiffened, sheet metal plate with screw holes top and bottom, and slotted holes for inserting connector section.
 - 2) Connector Section: Rib-stiffened, sheet metal bent plate; sheet metal clip; or wire tie and rigid extruded vinyl clip designed to engage continuous wire. Size connector to extend at least halfway through veneer but with at least 5/8-inch (16-mm) cover on outside face.
 - 3) Fabricate sheet metal anchor sections and other sheet metal parts from 0.067-inch- (1.7-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.097-inch- (2.5-mm-) thick, steel sheet, galvanized after fabrication **OR** 0.078-inch- (2.0-mm-) thick, stainless-steel sheet **OR** 0.109-inch- (2.8-mm-) thick, stainless-steel sheet, **as directed**.

- 4) Fabricate wire connector sections from 0.188-inch- (4.8-mm-) **-OR** 0.25-inch- (6.4-mm-), **as directed**, diameter, hot-dip galvanized, carbon **OR** stainless, **as directed**, steel wire.
 - e. Polymer-Coated, Steel Drill Screws for Steel Studs: ASTM C 954 except manufactured with hex washer head and neoprene washer, No. 10 (4.8-mm) diameter by length required to penetrate steel stud flange with not less than 3 exposed threads, and with organic polymer coating with salt-spray resistance to red rust of more than 800 hours per ASTM B 117.
 - f. Stainless-Steel Drill Screws for Steel Studs: Proprietary fastener consisting of carbon-steel drill point and 300 Series stainless-steel shank, complying with ASTM C 954 except manufactured with hex washer head and neoprene washer, No. 10 (4.8-mm) diameter by length required to penetrate steel stud flange with not less than three exposed threads.
- J. Miscellaneous Anchors
1. Unit Type Inserts in Concrete: Cast-iron or malleable-iron wedge-type inserts.
 2. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from 0.034-inch (0.9-mm), galvanized steel sheet.
 3. Anchor Bolts: Headed or L-shaped steel bolts complying with ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6); with ASTM A 563 (ASTM A 563M) hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.
 4. Postinstalled Anchors: Provide chemical or torque-controlled expansion anchors, with capability to sustain, without failure, a load equal to six times the load imposed when installed in solid or grouted unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
 - a. Corrosion Protection:
 - 1) Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (5 microns) for Class SC 1 service condition (mild).
 - 2) Stainless-steel components complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2 (ASTM F 738M and ASTM F 836M, Alloy Group 1 or 4) for bolts and nuts; ASTM A 666 or ASTM A 276, Type 304 or 316, for anchors.
- K. Embedded Flashing Materials
1. Metal Flashing: Provide metal flashing, where flashing is exposed or partly exposed and where indicated, complying with SMACNA's "Architectural Sheet Metal Manual OR Division 07 Section "Sheet Metal Flashing And Trim" as directed.
 - a. Stainless Steel: ASTM A 240/A 240M, Type 304, 0.016 inch (0.4 mm) thick.
 - b. Copper: ASTM B 370, Temper H00 or H01, cold-rolled copper sheet, 10-oz./sq. ft. (3-kg/sq. m) weight or 0.0135 inch (0.34 mm) thick for fully concealed flashing; 16-oz./sq. ft. (5-kg/sq. m) weight or 0.0216 inch (0.55 mm) thick elsewhere.
 - c. Fabricate continuous flashings in sections 96 inches (2400 mm) long minimum, but not exceeding 12 feet (3.6 m). Provide splice plates at joints of formed, smooth metal flashing.
 - d. Fabricate through-wall metal flashing embedded in masonry from stainless steel **OR** copper, **as directed**, with ribs at 3-inch (75-mm) intervals along length of flashing to provide an integral mortar bond.
 - e. Metal Drip Edges: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and 1/2 inch (13 mm) out from wall, with outer edge bent down 30 degrees and hemmed.
 - f. Metal Flashing Terminations: Fabricate from stainless steel. Extend at least 3 inches (75 mm) into wall and out to exterior face of wall. At exterior face of wall, bend metal back on itself for 3/4 inch (19 mm) and down into joint 3/8 inch (10 mm) to form a stop for retaining sealant backer rod.
 - g. Metal Expansion-Joint Strips: Fabricate from stainless steel **OR** copper, **as directed**, to shapes indicated.
 2. Flexible Flashing: For flashing not exposed to the exterior, use one of the following, unless otherwise indicated:

- a. Copper-Laminated Flashing: 5-oz./sq. ft. (1.5-kg/sq. m) **OR** 7-oz./sq. ft. (2-kg/sq. m), **as directed**, copper sheet bonded with asphalt between 2 layers of glass-fiber cloth. Use only where flashing is fully concealed in masonry.
- b. Asphalt-Coated Copper Flashing: 5-oz./sq. ft. (1.5-kg/sq. m) **OR** 7-oz./sq. ft. (2-kg/sq. m), **as directed**, copper sheet coated with flexible asphalt. Use only where flashing is fully concealed in masonry.
- c. Rubberized-Asphalt Flashing: Composite flashing product consisting of a pliable, adhesive rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.030 inch (0.8 mm) **OR** 0.040 inch (1.0 mm), **as directed**.
- d. Elastomeric Thermoplastic Flashing: Composite flashing product consisting of a polyester-reinforced ethylene interpolymers alloy 0.025 inch (0.6 mm) thick, with a 0.015-inch- (0.4-mm-) thick coating of rubberized-asphalt adhesive.
- e. EPDM Flashing: Sheet flashing product made from ethylene-propylene-diene terpolymer, complying with ASTM D 4637, 0.040 inch (1.0 mm) thick.
3. Single-Wythe CMU Flashing System: System of CMU cell flashing pans and interlocking CMU web covers made from high-density polyethylene incorporating chemical stabilizers that prevent UV degradation. Cell flashing pans have integral weep spouts that are designed to be built into mortar bed joints and weep collected moisture to the exterior of CMU walls and that extend into the cell to prevent clogging with mortar.
4. Solder and Sealants for Sheet Metal Flashings:
 - a. Solder for Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.
 - b. Solder for Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
 - c. Elastomeric Sealant: ASTM C 920, chemically curing urethane **OR** polysulfide silicone **as directed**, sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.
5. Adhesives, Primers, and Seam Tapes for Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer.
- L. Miscellaneous Masonry Accessories
 1. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; formulated from neoprene, urethane or PVC.
 2. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 or PVC, complying with ASTM D 2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall.
 3. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).
 4. Weep/Vent Products: Use one of the following, unless otherwise indicated:
 - a. Wicking Material: Absorbent rope, made from cotton or UV-resistant synthetic fiber, 1/4 to 3/8 inch (6 to 10 mm) in diameter, in length required to produce 2-inch (50-mm) exposure on exterior and 18 inches (450 mm) in cavity between wythes. Use only for weeps.
 - b. Round Plastic Weep/Vent Tubing: Medium-density polyethylene, 3/8-inch (9-mm) OD by 4 inches (100 mm) long.
 - c. Rectangular Plastic Weep/Vent Tubing: Clear butyrate, 3/8 by 1-1/2 by 3-1/2 inches (9 by 38 by 89 mm) long.
 - d. Cellular Plastic Weep/Vent: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch (3 mm) less than depth of outer wythe, in color selected from manufacturer's standard.
 - e. Mesh Weep/Vent: Free-draining mesh; made from polyethylene strands, full height and width of head joint and depth 1/8 inch (3 mm) less than depth of outer wythe; in color selected from manufacturer's standard.
 - f. Aluminum Weep Hole/Vent: One-piece, L-shaped units made from sheet aluminum, designed to fit into a head joint and consisting of a vertical channel with louvers stamped in web and with a top flap to keep mortar out of the head joint; painted before installation to

- comply with Division 09 Section(s) "Exterior Painting" OR "Interior Painting", in color approved to match that of mortar.
- g. Vinyl Weep Hole/Vent: One-piece, offset, T-shaped units made from flexible, injection-molded PVC, designed to fit into a head joint and consisting of a louvered vertical leg, flexible wings to seal against ends of masonry units, and a top flap to keep mortar out of the head joint; in color approved by Architect to match that of mortar.
5. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity.
 - a. Provide one of the following configurations:
 - 1) Strips, full-depth of cavity and 10 inches (250 mm) wide, with dovetail shaped notches 7 inches (175 mm) deep.
 - 2) Strips, not less than 1-1/2 inches (38 mm) thick and 10 inches (250 mm) wide, with dimpled surface designed to catch mortar droppings and prevent weep holes from being clogged with mortar.
 - 3) Sheets or strips full depth of cavity and installed to full height of cavity.
 6. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells with loops for holding reinforcing bars in center of cells. Units are formed from 0.142-inch (3.6-mm) steel wire, hot-dip galvanized after fabrication. Provide units with either two loops or four loops as needed for number of bars indicated.
- M. Insulation
1. Loose-Granular Fill Insulation: Perlite complying with ASTM C 549, Type II (surface treated for water repellency and limited moisture absorption) or Type IV (surface treated for water repellency and to limit dust generation).
 2. Molded-Polystyrene Insulation Units: Rigid, cellular thermal insulation formed by the expansion of polystyrene-resin beads or granules in a closed mold to comply with ASTM C 578, Type I. Provide specially shaped units designed for installing in cores of masonry units.
 3. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV **OR X, as directed**, closed-cell product extruded with an integral skin.
 4. Molded-Polystyrene Board Insulation: ASTM C 578, Type I.
 5. Polyisocyanurate Board Insulation: ASTM C 1289, Type I (aluminum-foil-faced), Class 2 (glass-fiber-reinforced).
 6. Adhesive: Type recommended by insulation board manufacturer for application indicated.
- N. Masonry Cleaners
1. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains from new masonry without damaging masonry. Use product approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.
- O. Mortar And Grout Mixes
1. General: Do not use admixtures, unless otherwise indicated.
 - a. Do not use calcium chloride in mortar or grout.
 - b. Limit cementitious materials in mortar for exterior and reinforced masonry to portland cement and lime.
 - c. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.
 2. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.
 3. Mortar for Unit Masonry: Comply with ASTM C 270 **OR** BIA Technical Notes 8A **OR** UBC Standard 21-15, **as directed**, Proportion Specification.
 4. Mortar for Unit Masonry: Comply with ASTM C 270 **OR** BIA Technical Notes 8A **OR** UBC Standard 21-15, **as directed**, Property Specification.
 - a. For masonry below grade or in contact with earth, use Type M **OR** S, **as directed**.
 - b. For reinforced masonry, use Type S **OR** N, **as directed**.
 - c. For mortar parge coats, use Type S or N.

- d. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.
- e. For interior non-load-bearing partitions, Type O may be used instead of Type N.
- 5. Pigmented Mortar: Use colored cement product or select and proportion pigments with other ingredients to produce color required. Do not add pigments to colored cement products.
 - a. Pigments shall not exceed 10 percent of portland cement by weight.
 - b. Pigments shall not exceed 5 percent of masonry cement or mortar cement by weight.
- 6. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.
- 7. Grout for Unit Masonry: Comply with ASTM C 476 **OR** UBC Standard 21-19, **as directed**.
 - a. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 **OR** Table 21-C in the Uniform Building Code, **as directed**, for dimensions of grout spaces and pour height.
 - b. Provide grout with a slump of 8 to 11 inches (200 to 280 mm) as measured according to ASTM C 143/C 143M.
- 8. Epoxy Pointing Mortar: Mix epoxy pointing mortar to comply with mortar manufacturer's written instructions.

1.3 EXECUTION

A. Installation, General

- 1. Use full-size units without cutting if possible. If cutting is required, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
- 2. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.
- 3. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.
- 4. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. (30 g/194 sq. cm) per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.
- 5. Comply with tolerances in ACI 530.1/ASCE 6/TMS 602 and with the following:
 - a. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.
 - b. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet (3 mm in 3 m), 1/4 inch in 20 feet (6 mm in 6 m), or 1/2 inch (12 mm) maximum.

B. Laying Masonry Walls

- 1. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.
- 2. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less than nominal 4-inch (100-mm) horizontal face dimensions at corners or jambs.
- 3. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.
- 4. Fill space between steel frames and masonry solidly with mortar, unless otherwise indicated.
- 5. Fill cores in hollow concrete masonry units with grout 24 inches (600 mm) under bearing plates, beams, lintels, posts, and similar items, unless otherwise indicated.

C. Mortar Bedding And Jointing

1. Lay hollow brick and concrete masonry units as follows:
 - a. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
 - b. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
 - c. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
 - d. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.
2. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.
3. Lay structural-clay tile as follows:
 - a. Lay vertical-cell units with full head joints, unless otherwise indicated. Provide bed joints with full mortar coverage on face shells and webs.
 - b. Lay horizontal-cell units with full bed joints, unless otherwise indicated. Keep drainage channels, if any, free of mortar. Form head joints with sufficient mortar so excess will be squeezed out as units are placed in position.
 - c. Maintain joint thicknesses indicated except for minor variations required to maintain bond alignment. If not indicated, lay walls with 1/4- to 3/8-inch- (6- to 10-mm-) thick joints.
 - d. Where epoxy-mortar pointed joints are indicated, rake out setting mortar to a uniform depth of 1/4 inch (6 mm) and point with epoxy mortar.
4. Set firebox brick in full bed of refractory mortar with full head joints. Form joints by buttering both surfaces of adjoining brick and sliding it into place. Make joints just wide enough to accommodate variations in size of brick, approximately 1/8 inch (3 mm). Tool joints smooth on surfaces exposed to fire or smoke.
5. Install clay flue liners to comply with ASTM C 1283. Install flue liners ahead of surrounding masonry. Set clay flue liners in full bed of refractory mortar 1/16 to 1/8 inch (1.6 to 3 mm) thick. Strike joints flush on inside of flue to provide smooth surface. Maintain expansion space between flue liner and surrounding masonry except where surrounding masonry is required to provide lateral support for flue liners.
6. Set stone **OR** cast-stone, **as directed**, trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
7. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness, unless otherwise indicated.
8. Cut joints flush for masonry walls to receive plaster or other direct-applied finishes (other than paint), unless otherwise indicated.

D. Composite Masonry

1. Bond wythes of composite masonry together using one of the following methods:
 - a. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 4.5 sq. ft. (0.42 sq. m) **OR** 2.67 sq. ft. (0.25 sq. m), **as directed**, of wall area spaced not to exceed 36 inches (914 mm) **OR** 24 inches (610 mm), **as directed**, o.c. horizontally and 16 inches (406 mm) o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches (305 mm) of openings and space not more than 36 inches (915 mm) apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches (610 mm) o.c. vertically.
 - 1) Where bed joints of wythes do not align, use adjustable (two-piece) type ties.
 - b. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
 - 1) Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes **OR** tab-type reinforcement, **as directed**.
 - 2) Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.
2. Collar Joints: Solidly fill collar joints by parging face of first wythe that is laid and shoving units of other wythe into place.
3. Collar Joints in Clay Tile Masonry: After each course is laid, fill the vertical, longitudinal joint between wythes solidly with mortar at exterior walls, except cavity walls, and interior walls and partitions.

4. Corners: Provide interlocking masonry unit bond in each wythe and course at corners, unless otherwise indicated.
5. Intersecting and Abutting Walls: Unless vertical expansion or control joints are shown at juncture, bond walls together as follows:
 - a. Provide individual metal ties not more than 8 inches (203 mm) **OR** 16 inches (406 mm), **as directed**, o.c.
 - b. Provide continuity with masonry joint reinforcement by using prefabricated T-shaped units.
 - c. Provide rigid metal anchors not more than 24 inches (610 mm) **OR** 48 inches (1220 mm), **as directed**, o.c. If used with hollow masonry units, embed ends in mortar-filled cores.

E. Cavity Walls

1. Bond wythes of cavity walls together using one of the following methods:
 - a. Individual Metal Ties: Provide ties as shown installed in horizontal joints, but not less than one metal tie for 4.5 sq. ft. (0.42 sq. m) **OR** 2.67 sq. ft. (0.25 sq. m), **as directed**, of wall area spaced not to exceed 36 inches (914 mm) **OR** 24 inches (610 mm), **as directed**, o.c. horizontally and 16 inches (406 mm) o.c. vertically. Stagger ties in alternate courses. Provide additional ties within 12 inches (305 mm) of openings and space not more than 36 inches (915 mm) apart around perimeter of openings. At intersecting and abutting walls, provide ties at no more than 24 inches (610 mm) o.c. vertically.
 - b. Masonry Joint Reinforcement: Installed in horizontal mortar joints.
 - 1) Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes **OR** tab-type reinforcement, **as directed**.
 - 2) Where bed joints of wythes do not align, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties.
 - 3) Where one wythe is of clay masonry and the other of concrete masonry, use adjustable (two-piece) type reinforcement with continuous horizontal wire in facing wythe attached to ties to allow for differential movement regardless of whether bed joints align.
 - c. Masonry Veneer Anchors: Comply with requirements for anchoring masonry veneers.
2. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.
3. Parge cavity face of backup wythe in a single coat approximately 3/8 inch (10 mm) thick. Trowel face of parge coat smooth.
OR
Coat cavity face of backup wythe to comply with Division 07 Section "Bituminous Dampproofing".

- #### F. Installing Cavity-Wall Insulation:
- Place small dabs of adhesive, spaced approximately 12 inches (300 mm) o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit insulation between wall ties and other confining obstructions, with edges butted tightly. Press units firmly against inside wythe of masonry.

G. Masonry-Cell Insulation

1. Pour granular insulation into cavities to fill void spaces. Maintain inspection ports to show presence of insulation at extremities of each pour area. Close the ports after filling has been confirmed. Limit the fall of insulation to 1 story in height, but not more than 20 feet (6 m).
2. Install molded-polystyrene insulation units into masonry unit cells before laying units.

H. Masonry Joint Reinforcement

1. General: Install in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (150 mm).
2. Interrupt joint reinforcement at control and expansion joints, unless otherwise indicated.
3. Provide continuity at wall intersections by using prefabricated T-shaped units.
4. Provide continuity at corners by using prefabricated L-shaped units.

- I. Anchoring Masonry To Structural Members
 1. Anchor masonry to structural members where masonry abuts or faces structural members to comply with the following:
 - a. Provide an open space not less than 1/2 inch (13 mm) **OR** 1 inch (25 mm), **as directed**, in width between masonry and structural member, unless otherwise indicated.
 - b. Anchor masonry to structural members with anchors embedded in masonry joints and attached to structure.
 - c. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (915 mm) o.c. horizontally.
- J. Anchoring Masonry Veneers
 1. Anchor masonry veneers to wall framing **OR** concrete and masonry backup, **as directed**, with seismic masonry-veneer anchors to comply with the following requirements:
 - a. Fasten screw-attached and seismic anchors through sheathing to wall framing and to concrete and masonry backup with metal fasteners of type indicated. Use two fasteners.
 - b. Insert slip-in anchors in metal studs as sheathing is installed. Provide one anchor at each stud in each horizontal joint between sheathing boards.
 - c. Embed tie sections **OR** connector sections and continuous wire, **as directed**, in masonry joints. Provide not less than 2 inches (50 mm) of air space between back of masonry veneer and face of sheathing.
 - d. Locate anchor sections to allow maximum vertical differential movement of ties up and down.
 - e. Space anchors as indicated, but not more than 16 inches (406 mm) o.c. vertically and 32 inches (813 mm) **OR** 24 inches (610 mm), **as directed**, o.c. horizontally with not less than 1 anchor for each 3.5 sq. ft. (0.33 sq. m) **OR** 2.67 sq. ft. (0.25 sq. m), **as directed**, of wall area. Install additional anchors within 12 inches (305 mm) of openings and at intervals, not exceeding 36 inches (914 mm), around perimeter.
- K. Control And Expansion Joints
 1. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.
 2. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Division 07 Section "Joint Sealants", but not less than 3/8 inch (10 mm).
 - a. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.
- L. Lintels
 1. Provide concrete or masonry lintels where shown and where openings of more than 12 inches (305 mm) for brick-size units and 24 inches (610 mm) for block-size units are shown without structural steel or other supporting lintels.
 2. Provide minimum bearing of 8 inches (200 mm) at each jamb, unless otherwise indicated.
- M. Flashing, Weep Holes, Cavity Drainage, And Vents
 1. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.
 2. Install flashing as follows, unless otherwise indicated:
 - a. Prepare masonry surfaces so they are smooth and free from projections that could puncture flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing as recommended by flashing manufacturer.
 - b. At lintels and shelf angles, extend flashing a minimum of 6 inches (150 mm) into masonry at each end. At heads and sills, extend flashing 6 inches (150 mm) at ends and turn up not less than 2 inches (50 mm) to form end dams.

- c. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal drip edge.
- d. Install metal flashing termination beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch (13 mm) back from outside face of wall and adhere flexible flashing to top of metal flashing termination.
- 3. Install single-wythe CMU flashing system in bed joints of CMU walls where indicated to comply with manufacturer's written instructions. Install CMU cell pans with upturned edges located below face shells and webs of CMUs above and with weep spouts aligned with face of wall. Install CMU web covers so that they cover upturned edges of CMU cell pans at CMU webs and extend from face shell to face shell.
- 4. Install reglets and nailers for flashing and other related construction where they are shown to be built into masonry.
- 5. Install weep holes in head joints in exterior wythes of first course of masonry immediately above embedded flashing and as follows:
 - a. Use specified weep/vent products or open head joints to form weep holes.
 - b. Space weep holes 24 inches (600 mm) o.c., unless otherwise indicated.
 - c. Cover cavity side of weep holes with plastic insect screening at cavities insulated with loose-fill insulation.
- 6. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in Part 2 "Miscellaneous Masonry Accessories" Article.
- 7. Install vents in head joints in exterior wythes at spacing indicated. Use specified weep/vent products or open head joints to form vents.
 - a. Close cavities off vertically and horizontally with blocking in manner indicated. Install through-wall flashing and weep holes above horizontal blocking.

N. Reinforced Unit Masonry Installation

- 1. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
 - a. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
 - b. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other temporary loads that may be placed on them during construction.
- 2. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602 **OR** Section 2104.5 in the Uniform Building Code, **as directed**.
 - a. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
 - b. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 **OR** Section 2104.6 in the Uniform Building Code, **as directed**, for cleanouts and for grout placement, including minimum grout space and maximum pour height.
 - c. Limit height of vertical grout pours to not more than 60 inches (1520 mm).

O. Field Quality Control

- 1. Inspectors: the Owner will engage qualified independent inspectors to perform inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform inspections.
 - a. Place grout only after inspectors have verified compliance of grout spaces and grades, sizes, and locations of reinforcement.
- 2. Testing Agency: the Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections indicated below and prepare test reports:
 - a. Payment for these services will be made by the Owner.

3. Testing Frequency: One set of tests for each 5000 sq. ft. (465 sq. m) of wall area or portion thereof.
 4. Clay Masonry Unit Test: For each type of unit provided, per ASTM C 67.
 5. Concrete Masonry Unit Test: For each type of unit provided, per ASTM C 140.
 6. Mortar Test (Property Specification): For each mix provided, per ASTM C 780 **OR** UBC Standard 21-16, **as directed**. Test mortar for mortar air content and compressive strength.
 7. Grout Test (Compressive Strength): For each mix provided, per ASTM C 1019 **OR** UBC Standard 21-18, **as directed**.
- P. Parging
1. Parge exterior faces of below-grade masonry walls, where indicated, in 2 uniform coats to a total thickness of 3/4 inch (19 mm) with a steel-trowel finish. Form a wash at top of parging and a cove at bottom. Damp-cure parging for at least 24 hours and protect parging until cured.
- Q. Cleaning
1. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.
 2. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
 - a. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes.
 - b. Protect adjacent surfaces from contact with cleaner.
 - c. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
 - d. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
 - e. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
 - f. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
- R. Masonry Waste Disposal
1. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
 - a. Do not dispose of masonry waste as fill within 18 inches (450 mm) of finished grade.
 - b. Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off the Owner's property.

SECTION 04 05 14 00 - CSF MASONRY MORTARING AND GROUTING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Clay Unit Masonry or Concrete Unit Masonry veneer is a part of the Work. EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Mortar and for unit masonry.
 2. Grout for unit masonry.
- B. Related Sections:
 1. Section 042100 - Clay Unit Masonry: Installation of mortar and grout, reinforcement and anchorages.
 2. Section 042200 - Concrete Unit Masonry: Installation of mortar and grout, reinforcement and anchorages.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C 94 - Specification for Ready-Mixed Concrete.
 2. ASTM C 143 - Test Method for Slump of Hydraulic Cement Concrete.
 3. ASTM C 144 - Specification for Aggregate for Masonry Mortar.
 4. ASTM C 150 - Specification for Portland Cement.
 5. ASTM C 207 - Specification for Hydrated Lime for Masonry Purposes.
 6. ASTM C 270 - Specification for Mortar for Unit Masonry.
 7. ASTM C 387 - Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
 8. ASTM C 404 - Specification for Aggregates for Masonry Grout.
 9. ASTM C 476 - Specification for Grout for Masonry.
 10. ASTM C 1019 - Method of Sampling and Testing Grout.
 11. ASTM C 1142 - Specification for Extended Life Mortar for Unit Masonry.
- B. IMIAC - International Masonry Industry All-Weather Council: Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Samples: Submit two samples 3 inch x 3 inch in size illustrating mortar color and color range.
 - 2. Assurance/Control Submittals:
 - a. Design Data: Design mix in accordance with the Proportion specification of ASTM C 270 and required environmental conditions.
 - b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - 1) Conformance to Proportion specification of ASTM C 270.
 - 2) Test and evaluation reports to ASTM C 780.
 - c. Certificates: Submit manufacturer's certificate that Products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Store sand for mortar on plastic sheeting to prevent contamination by extraneous chemicals in earth beneath.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Cold Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.
 - 2. Specific Cold Weather Requirements: When the ambient air temperature is below 40 degrees F, heat mixing water to maintain mortar temperature between 40 degrees F and 120 degrees F until placed. When the ambient air temperature is below 32 degrees F, heat the sand and water to maintain this mortar temperature.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Portland Cement: ASTM C 150, normal-Type I or Type II; gray color. Fly ash, slag, and pozzolans not permitted as substitutes for Portland cement.
- B. Mortar Aggregate: ASTM C 144, standard masonry type; clean, dry, protected against dampness, freezing, and foreign matter.
- C. Grout Aggregate: ASTM C 404; use of blast furnace slag is not permitted. Maximum coarse aggregate size, 3/8 inch.

- D. Calcium chloride is not permitted in mortar or grout. Admixtures or other chemicals containing Thiocyanates, Calcium Chloride or more than 0.1 percent chloride ions are not permitted.
- E. Hydrated Lime: ASTM C 207, Type S.
- F. Water: Potable.
- G. Admixtures: Not permitted unless approved by Contracting Officer prior to construction.

2.2 MIXES - MORTAR

- A. Mortar: Type "N" or Type "S", as recommended by manufacturer, in accordance with the Proportion specification of ASTM C 270.
 - 1. Mixing of components on-site is acceptable.
 - 2. Mixing on-site water and packaged dry blended mix for mortar (ASTM C 387), that contains no masonry cement, is acceptable.
- B. Pointing Mortar: Duplicate original mortar proportions. Add aluminum tristearate, calcium stearate, or ammonium stearate equal to 2 Percent of Portland cement weight.

NOTE TO SPECIFIER

Edit below for mortar color:

- C. Mortar Color: [_____].

2.3 MIXING - MORTAR

- A. Thoroughly mix mortar ingredients in accordance with ASTM C 270, in quantities needed for immediate use.
 - 1. Maintain sand uniformly damp immediately before the mixing process.
 - 2. Provide uniformity of mix and coloration.
 - 3. Do not use anti-freeze compounds.
 - 4. If water is lost by evaporation, retemper only within 2 hours of mixing. Do not retemper mortar more than 2 hours after mixing.

2.4 MIXES - GROUT FILL

- A. Grout fill is for concrete masonry unit bond beams, lintels, and reinforced cells with reinforcing bars and embedded plates.
 - 1. Compressive Strength: 2000 psi minimum at 28 days, as determined in accordance with the provisions of ASTM C 1019.
 - 2. Slump: 8 inches, minimum; 10 inches, maximum, taken in accordance with ASTM C 143.
 - 3. Use coarse grout when grout space is equal to or greater than 4 inches in both directions.
 - 4. Use fine grout when grout space is smaller than 4 inches in either direction.
 - 5. Do not use air-entrainment admixtures.

2.5 MIXING - GROUT

- A. Grout: Batch and mix grout in accordance with ASTM C 94 or ASTM C476 for site batched and mixed grout. Do not use anti-freeze compounds to lower the freezing point of grout.

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. After reinforcing of masonry is securely tied in place, plug cleanout holes with masonry units. Brace against wet grout pressure.
- B. Install mortar and grout under provisions of Section [042100] [042200].

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Procedures for testing.
- B. Testing - Masonry Grout: Conduct strength tests in accordance with ASTM C 1019.
 - 1. Take two strength samples for each 5000 square feet of masonry wall surface for each type of grout placed each day.
 - 2. Create test samples by forming with wood surface on bottom and concrete block on sides. The samples shall be 3 inches square and 6 inches high.
 - 3. Initial cure during first 48 hours. Protect samples from loss of moisture by covering with wet cloth and keeping moist. Protect from freezing and variations in temperature. Record maximum and minimum temperatures by using a max/min thermometer.
 - 4. Remove masonry units that form samples after 48 hours and transport grout samples to laboratory. Keep samples protected from vibration, freezing, and moisture loss during transportation.
 - 5. Test samples with test method ASTM C 39 at 28 days. Compressive strength shall be the average of the two samples and shall be adequate if it equals the designated compression strength as defined on the Drawings, but not less than 2000 psi.
- C. Testing - Masonry Mortar: Conduct strength tests in accordance with the following:
 - 1. Spread mortar on the masonry units 1/2 inch to 5/8 inch thick, and allow to stand for one minute.
 - 2. Remove mortar and place in a 2-inch by 4-inch cylinder in two layers, compressing the mortar into the cylinder using a flat-end stick or fingers. Lightly tap mold on opposite sides, level off and immediately cover molds and keep them damp until taken to the laboratory.
 - 3. After 48 hours' set, have the laboratory remove molds and place them in the fog room until tested in damp condition.

SECTION 04 05 14 00 - MPF MASONRY MORTARING AND GROUTING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Mortar and for unit masonry.
 - 2. Grout for unit masonry.
- B. Related Sections:
 - 1. Section 042100 - Clay Unit Masonry: Installation of mortar and grout, reinforcement and anchorages.
 - 2. Section 042200 - Concrete Unit Masonry: Installation of mortar and grout, reinforcement and anchorages.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM C 94 - Specification for Ready-Mixed Concrete.
 - 2. ASTM C 143 - Test Method for Slump of Hydraulic Cement Concrete.
 - 3. ASTM C 144 - Specification for Aggregate for Masonry Mortar.
 - 4. ASTM C 150 - Specification for Portland Cement.
 - 5. ASTM C 207 - Specification for Hydrated Lime for Masonry Purposes.
 - 6. ASTM C 270 - Specification for Mortar for Unit Masonry.
 - 7. ASTM C 387 - Specification for Packaged, Dry, Combined Materials for Mortar and Concrete.
 - 8. ASTM C 404 - Specification for Aggregates for Masonry Grout.
 - 9. ASTM C 476 - Specification for Grout for Masonry.
 - 10. ASTM C 1019 - Method of Sampling and Testing Grout.
 - 11. ASTM C 1142 - Specification for Extended Life Mortar for Unit Masonry.
- B. IMIAC - International Masonry Industry All-Weather Council: Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Samples: Submit two samples 3 inch x 3 inch in size illustrating mortar color and color range.
 - 2. Assurance/Control Submittals:
 - a. Design Data: Design mix in accordance with the Proportion specification of ASTM C 270 and required environmental conditions.

- b. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - 1) Conformance to Proportion specification of ASTM C 270.
 - 2) Test and evaluation reports to ASTM C 780.
- c. Certificates: Submit manufacturer's certificate that Products meet or exceed specified requirements.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Store sand for mortar on plastic sheeting to prevent contamination by extraneous chemicals in earth beneath.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Cold Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.
 - 2. Specific Cold Weather Requirements: When the ambient air temperature is below 40 degrees F, heat mixing water to maintain mortar temperature between 40 degrees F and 120 degrees F until placed. When the ambient air temperature is below 32 degrees F, heat the sand and water to maintain this mortar temperature.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Portland Cement: ASTM C 150, normal-Type I or Type II; gray color. Fly ash, slag, and pozzolans not permitted as substitutes for Portland cement.
- B. Mortar Aggregate: ASTM C 144, standard masonry type; clean, dry, protected against dampness, freezing, and foreign matter.
- C. Grout Aggregate: ASTM C 404; use of blast furnace slag is not permitted. Maximum coarse aggregate size, 3/8 inch.
- D. Calcium chloride is not permitted in mortar or grout. Admixtures or other chemicals containing Thiocyanates, Calcium Chloride or more than 0.1 percent chloride ions are not permitted.
- E. Hydrated Lime: ASTM C 207, Type S.
- F. Water: Potable.

- G. Admixtures: Not permitted unless approved by Contracting Officer prior to construction.

2.2 MIXES - MORTAR

- A. Mortar: Type "N" or Type "S", as recommended by manufacturer, in accordance with the Proportion specification of ASTM C 270.
1. Mixing of components on-site is acceptable.
 2. Mixing on-site water and packaged dry blended mix for mortar (ASTM C 387), that contains no masonry cement, is acceptable.
- B. Pointing Mortar: Duplicate original mortar proportions. Add aluminum tristearate, calcium stearate, or ammonium stearate equal to 2 Percent of Portland cement weight.

NOTE TO SPECIFIER

Edit below for mortar color:

- C. Mortar Color: [_____].

2.3 MIXING - MORTAR

- A. Thoroughly mix mortar ingredients in accordance with ASTM C 270, in quantities needed for immediate use.
1. Maintain sand uniformly damp immediately before the mixing process.
 2. Provide uniformity of mix and coloration.
 3. Do not use anti-freeze compounds.
 4. If water is lost by evaporation, retemper only within 2 hours of mixing. Do not retemper mortar more than 2 hours after mixing.

2.4 MIXES - GROUT FILL

- A. Grout fill is for concrete masonry unit bond beams, lintels, and reinforced cells with reinforcing bars and embedded plates.
1. Compressive Strength: 2000 psi minimum at 28 days, as determined in accordance with the provisions of ASTM C 1019.
 2. Slump: 8 inches, minimum; 10 inches, maximum, taken in accordance with ASTM C 143.
 3. Use coarse grout when grout space is equal to or greater than 4 inches in both directions.
 4. Use fine grout when grout space is smaller than 4 inches in either direction.
 5. Do not use air-entrainment admixtures.

2.5 MIXING - GROUT

- A. Grout: Batch and mix grout in accordance with ASTM C 94 or ASTM C476 for site batched and mixed grout. Do not use anti-freeze compounds to lower the freezing point of grout.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. After reinforcing of masonry is securely tied in place, plug cleanout holes with masonry units. Brace against wet grout pressure.
- B. Install mortar and grout under provisions of Section 042200

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Procedures for testing.
- B. Testing - Masonry Grout: Conduct strength tests in accordance with ASTM C 1019.
 - 1. Take two strength samples for each 5000 square feet of masonry wall surface for each type of grout placed each day.
 - 2. Create test samples by forming with wood surface on bottom and concrete block on sides. The samples shall be 3 inches square and 6 inches high.
 - 3. Initial cure during first 48 hours. Protect samples from loss of moisture by covering with wet cloth and keeping moist. Protect from freezing and variations in temperature. Record maximum and minimum temperatures by using a max/min thermometer.
 - 4. Remove masonry units that form samples after 48 hours and transport grout samples to laboratory. Keep samples protected from vibration, freezing, and moisture loss during transportation.
 - 5. Test samples with test method ASTM C 39 at 28 days. Compressive strength shall be the average of the two samples and shall be adequate if it equals the designated compression strength as defined on the Drawings, but not less than 2000 psi.
- C. Testing - Masonry Mortar: Conduct strength tests in accordance with the following:
 - 1. Spread mortar on the masonry units 1/2 inch to 5/8 inch thick, and allow to stand for one minute.
 - 2. Remove mortar and place in a 2-inch by 4-inch cylinder in two layers, compressing the mortar into the cylinder using a flat-end stick or fingers. Lightly tap mold on opposite sides, level off and immediately cover molds and keep them damp until taken to the laboratory.
 - 3. After 48 hours' set, have the laboratory remove molds and place them in the fog room until tested in damp condition.

SECTION 04 05 26 00 - SCAFFOLDING TUBULAR STEEL**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of scaffolding-tubular steel. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.

1.2 PRODUCTS

- A. Tubular steel or aluminum scaffolding system shall comply with OSHA Safety and Health Standards, Section 29 CFR, 1926/1910.

1.3 EXECUTION - (Section not used.)

SECTION 04 21 00 00 - CSF CLAY UNIT MASONRY

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Clay Unit Masonry veneer is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Facing Brick Masonry.
 2. Building Brick Masonry.
 3. Anchors and Reinforcement.
 4. Plastic Weep-Hole.
 5. Embedded Flashing.
 6. Cleaning of Brick.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 040514 - Masonry Mortaring and Grouting
 2. Section 055000 - Metal Fabrications - Steel Lintels.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM A153, "Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware."
 2. ASTM C5, "Specification for Quicklime for Structural Purposes."
 3. ASTM C144, "Specification for Aggregate for Masonry Mortar."
 4. ASTM C150, "Specification for Portland Cement."
 5. ASTM C207, "Specification for Hydrated Lime for Masonry Purposes."

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data:
 - a. Submit product data for each different masonry unit, accessory, and other manufactured products indicated.
2. Shop Drawings:
 - a. Reinforcement: Include masonry notes on shop drawings that concern proper placing of reinforcing and submit shop drawings for field use.
3. Samples:
 - a. Submit samples of each specified type of brick masonry.
 - b. Submit samples of proposed masonry for use in exposed work for preliminary approval by the Contracting Officer before assembling mock-ups.
 - c. Submit samples of mortar colors.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Mock-Ups:
 1. Erect a sample wall panel of brick masonry which will be exposed to view in the finished project for approval by the Contracting Officer. Mock-ups shall be as follows:
 - a. Approximately 4 feet (1.2 m) long by 3 feet (1 m) high, showing the proposed color range, texture, bond, mortar and workmanship. All brick shipped for the sample shall be included in the panel.
 - b. Erect panel in the presence of the Contracting Officer before installation of materials.
 - c. When required, provide a separate panel for each type of brick or mortar.
 - d. Do not start work until Contracting Officer has accepted sample panel.
 - e. Use panel as standard of comparison for all masonry work built of same material.
 - f. Do not destroy or move panel until work is completed and accepted by Contracting Officer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Materials shall be delivered and stored so as to avoid damage from breakage, moisture, staining or damage of any kind.
- C. Storage of Materials: Store materials under cover in a dry place and in a manner to prevent damage or intrusion of foreign matter. During freezing weather protect all masonry units with tarpaulins or other suitable material. Store cement, lime and air-setting mortars in watertight sheds with elevated floors. Protect reinforcement from the elements; immediately before placing, reinforcement shall be free from loose rust, ice or other foreign coatings that will destroy or reduce the bond.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. No masonry work shall be installed in an atmosphere with temperature less than 40 degrees F. unless work is protected in a manner previously approved by the Contracting Officer.

2. Hot Weather Construction - Protect masonry construction from direct exposure to wind and sun when erected in an ambient air temperature of 99 degrees F. in shade with relative humidity less than 50 percent.
3. Cover work at end of each day's work with non-staining waterproof material so as to prevent entrance of excess water at top of wall.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, product numbers, and availability at time of Project Manual preparation for Project. Face brick and mortar color should be selected by the architect during the design phase of the project. Modify sections to include selected materials.

2.1 MATERIALS

- A. General: Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
- B. Face Brick: To be selected.
 1. Allowance: Per 1000 count, as directed by Contracting Officer.
- C. Colored Mortar: Mortar coloring shall be added and mixed into the brick mortar as directed by the Contracting Officer.
- D. Anchors and Ties: Anchors and ties shall be of zinc-coated steel or copper-coated steel. Except for steel wire, zinc coating shall conform to ASTM A153. Steel wire shall be zinc-coated in accordance with ASTM A116 for Class 2 coating. The extent and location of anchors and ties shall be as indicated on the drawings and as hereinafter specified under the laying requirements for the various items of masonry.
 1. Anchor shall be DW-10 anchors as manufactured by Hohmann & Barnard, Inc., or approved substitution. Anchors shall be constructed of 12 Ga. hot-dipped galvanized steel. Average tensile load of the anchor shall be 128 lb. Ties shall be 3/16-inch Vees with a hot-dipped finish. Length of ties depends on the location of the substrate.
- E. Joint Reinforcement: Steel reinforcement for use in every sixth horizontal bed joint of brick 8-inch thick masonry walls shall be prefabricated type formed of zinc-coated cold-drawn steel wire conforming to ASTM A116 for Class 2 coating. Side wires shall be formed of No. 9 gauge or larger and be deformed; cross rods shall be of No. 12 gauge or larger, smooth or deformed wire, butt welded to side wires in the same plane at contact points. Provide special formed pieces at corners and intersections of walls. Reinforcing shall be of proper widths for the partition and wall thicknesses shown. Reinforcing shall be Dur-O-Wall as manufactured by Southern Wire Mesh Company or approved substitution.
- F. Embedded Flashing:
 1. Copper-Fabric laminate: 5 oz./sq. ft. copper sheet bonded with asphalt between 2 layers of glass-fiber cloth, as manufactured by AFCO Products, Inc.
- G. Cavity Drainage Protection Mesh: Recycled polyester/polyethylene trapezoidal-shaped 90% open mesh. Thicknesses to fit wall in accordance with the manufacturer's recommendations. Height as recommended by manufacturer, but not to exceed height of the top of the flashing. Product as manufactured by Mortar Net USA, Limited.

NOTE TO SPECIFIER

Select one of the two paragraphs below.

- H. Weep-holes: Plastic tube type 3/8 inch O.D. x 3-1/2 inch long (round in cross section).
- I. Weep-hole Vent Filler: Three dimensional, ultraviolet resistant, weave of polyester. Size matching full head joint size of the masonry unit unless shown otherwise. Color selected by Contracting Officer to match mortar color. Product as manufactured by Mortar Net USA, Limited.
- J. Masonry Cleaner: All masonry work shall be thoroughly cleaned with Vana Trol Sure Klean as manufactured by the Process Solvent Co., Inc. or approved substitution.
- K. Mortar Materials: See Section 040514.
- L. Mortar for Masonry Units: See Section 040514.
- M. Mixing Mortar: See Section 040514
- N. Wire joint reinforcement for seismic zone design of brick veneer: ladder type, galvanized, 9 gauge wire.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 LAYING BRICK

- A. Lay brick in accordance with detailed drawings, using continuous stretcher bond except where otherwise noted with veneer securely anchored to back-up masonry as described under anchors.
- B. Lay all brick masonry straight, plumb and true to line with joints matching existing masonry.
- C. Lay each brick in full joint of mortar on its bed and ends. Slush and fill each joint with mortar each course of brick as work progresses.
- D. Take precautions to prevent mortar droppings in cavity or air space between face brick and concrete block. Install weep-hole ventilators at all waterproofed edges.
- E. Anchor brick veneer at a minimum of 16 inches horizontally and 16 inches vertically.
- F. Protect all freshly constructed masonry from injury of any kind. Replace injured work in a manner satisfactory to the Contracting Officer. Completely point and thoroughly wash all finished exposed masonry surfaces down with masonry cleaner in accordance with manufacturer's printed instructions.

3.3 JOINTS

- A. Nominal thickness shall be 3/8 inch and uniform.
- B. Shove vertical joints tight.
- C. Strike joints flush in surfaces to be covered.
- D. Tool joints slightly concave in surfaces to be exposed or painted.

3.4 BUILT-UP WORK

- A. Cooperate with other trades in building in items in masonry work.
- B. Grout solid around built-in items and in door frames.

3.5 LINTELS

- A. Install rebars and grout solid as indicated. Provide temporary shoring for openings wider than 36 inches.
- B. Lintels shall extend into side walls at jambs, minimum of 8 inches.
- C. Coordinate steel lintels with Section 055000.

3.6 FLASHING, WEEP HOLES, VENTS

- A. General: Install embedded flashing and weepholes in masonry at shelf angles, lintels, ledges, other obstructions to the downward flow of water in the wall, and where indicated.
- B. At masonry-veneer walls, extend flashing from exterior face of veneer, through the veneer, up face of sheathing at least 8 inches and behind air-infiltration/building paper.
 - 1. At lintels and shelf angles, extend flashing a minimum of 4 inches into masonry at each end. AT head and sills, extend flashing 4 inches at ends and turn up not less than 2 inches to form a pan.
 - 2. Cut off flashing flush with face of wall after masonry wall construction is completed.
- C. Install weep holes in the head joints in exterior wythes of the first course of masonry immediately above embedded flashing, and as follows:
 - 1. Space weep holes 24 inches o.c.
 - 2. In cavities, place pea gravel to a height equal to height of first course, but not less than 2 inches, immediately above top of flashing embedded in the wall, as masonry construction progresses, to splatter mortar droppings and to maintain drainage.

3.7 POINTING AND CLEANING

- A. Dry brush masonry surfaces after mortar has set, at end of each day's work and after final points.
- B. Cut out and repoint defective joints.
- C. At final completion of masonry work, fill holes in joints and tool to match adjacent work.
- D. Leave work and surrounding surfaces clean and free of mortar spots and droppings.

SECTION 04 22 00 00 - MPF CONCRETE UNIT MASONRY

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Concrete unit masonry veneer.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 040514 - Masonry Mortaring and Grouting: Mortar and grout.

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 - 1. ACI 530 - Building Code Requirements for Masonry Structures.
 - 2. ACI 530.1 - Specifications for Masonry Structures.
- B. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 - 2. ASTM C 55 - Specification for Concrete Brick.
 - 3. ASTM C 129 - Specification for Non-Load Bearing Concrete Masonry Units
- C. International Masonry Industry All- Weather Council (IMIAC): Recommended Practices and Guide Specifications for Cold Weather Masonry construction.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data for each masonry unit type, accessory, and other manufactured products indicated.
 - 2. Shop Drawings: Precast inserts and keys showing sizes, profiles, and locations of each precast unit required.
 - 3. Samples: Two samples of each masonry unit type to illustrate color, texture, and extremes of color range.
 - 4. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

- b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- 5. Submit layout of control joint placement for Contracting Officer's approval prior to starting any work.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with ACI 530 and ACI 530.1.
- B. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- C. Mock-Up:
 - 1. Construct a sample wall panel of block masonry which will be exposed to view in the finished project, for approval by the Contracting Officer. Mock-up shall be as follows:
 - a. Approximately 4 feet long by 3 feet (high, showing the proposed color range, texture, bond, mortar and workmanship. All block shipped for the sample shall be included in the panel.
 - b. Erect panel in the presence of the Contracting Officer before installation of materials.
 - c. When required, provide a separate panel for each type of block or mortar.
 - d. Do not start work until Contracting Officer has accepted sample panel.
 - e. Use panel as standard of comparison for all masonry work built of same material.
 - f. Do not destroy or move panel until work is completed and accepted by Contracting Officer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Materials shall be delivered and stored so as to avoid damage from breakage, moisture, staining or damage of any kind.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Cold Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.
 - 2. Hot Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Hot Weather Masonry Construction.

PART 2 - PRODUCTS

2.1 CONCRETE MASONRY UNITS

- A. Lightweight units used for non-load bearing walls, meeting requirements of ASTM C129, Type I. Provide units meeting fire resistance ratings.
- B. Lightweight units used for load bearing walls, meeting requirements of ASTM C90, Grade N, Type I. Provide units meeting fire resistance ratings.

- C. Units to be high precision block or split face block. Sizes as designated on Drawings. Colors selected from standard manufacturer's colors.
- D. Special shaped units, U-blocks, etc., shall meet same specifications as adjacent units.

2.2 CONCRETE BUILDING BRICK

- A. Concrete brick shall be solid units meeting ASTM C55, Type I, Grade N.

2.3 MORTAR

- A. Specified in Section 040514.

2.4 REINFORCING

- A. Horizontal reinforcing for concrete masonry units shall be mill galvanized, ladder type with 9 gauge parallel wires in each face and 9 gauge cross members a maximum of 24 inches on center, butt welded to side rods. Provide prefabricated corners and tees.
- B. Reinforcing bars for lintels shall meet ASTM A615, Grade 60.

2.5 CONTROL JOINTS

- A. Joint filler shall be preformed neoprene or poly-vinyl chloride.
- B. Control joint placement in non-reinforced masonry:
 1. Vertical control joints shall be generally be located:
 - a. At major changes in wall height.
 - b. At changes in wall thickness.
 - c. At control joints in foundations, in roof, and in floors.
 - d. At chases and recesses for piping, columns, fixtures, etc.
 - e. At one or both sides of wall openings.
 - f. Near wall intersections.
 - g. Near return angles in L, T, and U-shaped structures.
 2. Maximum spacing of control joints shall be in no case exceed 24 feet.

2.6 CAVITY DRAINAGE PROTECTION MESH

- A. Recycled polyester/polyethylene trapezoidal-shaped 90% open mesh. Thicknesses to fit wall in accordance with the manufacturer's recommendations. Height as recommended by manufacturer, but not to exceed height of the top of the flashing. Product as manufactured by Mortar Net USA, Limited.

2.7 WEEP-HOLE VENT FILLER

- A. Three dimensional, ultraviolet resistant, weave of polyester. Size matching full head joint size of the masonry unit unless shown otherwise. [White] [Brown] [Tan] [Gray] [Red] [Almond] color. Product as manufactured by Mortar Net USA, Limited or equal.

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide temporary bracing during installation of masonry Work. Maintain in place until building structure provides permanent bracing.
- B. Lay out work to avoid use of less than 8 inch x 8 inch faced units at jambs in exposed work.
- C. Lintel block shall extend into side walls at jambs, at least 8 inches.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Procedures for testing.
- B. Test and evaluate grout in accordance with ASTM C1019. See Section 040514 - Masonry Mortaring and Grouting.

3.4 INSTALLATION

- A. CMU Base Drainage Course: Lay base drainage course of CMU, consisting of 2 wythes separated by a cavity sized to accommodate through-wall flashing and mesh.
- B. Weep-Vents: Set weep-hole vent filler in place, aligning front of weep vent with exterior face of CMU. Apply adequate mortar to remainder of head joint, carefully removing excess mortar to prevent plugging of weep vent with mortar.
 - 1. Install weep-hole vent filler at drainage courses at base of wall and at all lintels and bond beams where through-wall flashing is required.
 - 2. Install weep-hole vent filler at top of wall and below lintels and bond beams to provide continuous air ventilation within wall.
- C. Mesh
 - 1. Select correct thickness of mesh for size of single-wythe CMU wall and thickness of cavity formed by drainage course units.
 - 2. Set mesh in cavity of drainage base course on either side of vertical reinforcing approximately 3 inches (7.5 cm) from the reinforcing on both sides. Set mesh against outside wythe units. No fasteners, adhesives are required, and mortar need not have set.

3. Construct single-wythe CMU wall above the drainage course. Web-bed and face shell-bed the vertical grout cell to prevent migration of grout to adjoining cells.
 4. Grout reinforcing bar in place to within 1 inch (2.5 cm) of the top of the drainage course cavity. Install grout at reinforced cells in vertical lifts not to exceed 5 feet (1.5 m).
 5. Set mesh in similarly constructed drainage course at lintels and bond beams.
 6. Mesh may be compressed to allow insertion into cavities slightly smaller than its nominal thickness without affecting mesh or wall performance.
 7. When forcing mesh into a tight-fitting cavity, ensure that mortar has set sufficiently to allow masonry units to resist outward pressure from product.
 8. Protect installed product from damage during construction.
- D. Mortar shall be thoroughly mixed and kept moist but shall not be retempered for use after initial set.
 - E. Lay only dry masonry units.
 - F. Use masonry saw for cutting exposed surfaces. Cut units to provide 1/8 inch clearance around electrical boxes and similar items.
 - G. Do not use chipped, cracked or broken units.
 - H. Set units plumb, true to line, and level.
 - I. Adjust units to final position while mortar is soft and plastic. If unit is displaced after mortar has stiffened, remove unit, clean joints and unit of mortar and reset with fresh mortar.
 - J. When joining fresh work to set or partially set masonry clean exposed surface and remove loose mortar before laying fresh masonry.
 - K. When necessary to stop a horizontal, run rack back one-half block length in each course, do not tooth.
 - L. Unless indicated otherwise partitions shall extend from floor to bottom of floor or roof construction above.
 - M. Where rated partitions run perpendicular to deck, fill voids at deck with grout.

3.5 BOND

- A. Lay units in running bond with vertical joints centered on unit in course below unless indicated otherwise on drawings.

3.6 MORTAR BEDS

- A. Lay hollow units with full mortar coverage on horizontal and vertical face shells. Provide full mortar coverage on horizontal and vertical face shells and webs where adjacent to cells or cavities to be filled with grout and on starting courses.
- B. Lay block with full horizontal and vertical joints.

3.7 WIRE REINFORCEMENT

- A. Wire Reinforcements shall be placed as follows:
 1. Four inch concrete block walls with ends adjoining other partitions.
 - a. Concrete block on slab on grade - continuous horizontal reinforcements 24 inches on center vertically (every third course).

- b. Concrete block on slabs above grade - Continuous horizontal reinforcement 16 inches on center vertically (every other course).
 - 2. Eight inch concrete block walls
 - a. Concrete block walls on slab on grade - continuous horizontal reinforcement 16 inches on center vertically (every other course).
 - b. Concrete block walls on slabs above grade - continuous horizontal reinforcements 24 inches on center vertically (every third course).
 - 3. Wire reinforcement shall be completely embedded in mortar or grout. Joints with wire reinforcement shall be at least the thickness of the wire.
 - 4. Wire reinforcement shall be lapped at least 8 inches at splices and shall contain at least one cross wire of each piece of reinforcement in the lapped distance.

3.8 JOINTS

- A. Nominal thickness shall be 3/8 inch (9 mm) and uniform.
- B. Shove vertical joints tight.
- C. Strike joints flush in surfaces to be exposed or painted.
- D. Tool joints slightly concave in surfaces to be exposed or painted.

3.9 BUILT-UP WORK

- A. Cooperate with other trades in building in items in masonry work.
- B. Grout solid around built-in items and in door frames.

3.10 LINTELS

- A. Install rebars and grout solid as indicated. Provide temporary shoring for openings wider than 36 inches.
- B. Lintel blocks shall extend into side walls at jambs, minimum at 8 inches.

3.11 CLEANING AND POINTING

- A. Dry brush masonry surfaces after mortar has set, at end of each day's work and after final points.
- B. Cut out and repaint defective joints.
- C. At final completion of masonry work fill holes in joints and tool to match adjacent work.
- D. Leave work and surrounding surfaces clean and free of mortar spots and droppings.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/29/2010

END OF SECTION 04 22 00 00

SECTION 04 22 00 00 - CSF CONCRETE UNIT MASONRY

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Concrete Masonry Unit Wall Veneer is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Concrete unit masonry veneer.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 040514 - Masonry Mortaring and Grouting: Mortar and grout.

1.2 REFERENCES

- A. American Concrete Institute (ACI):
 - 1. ACI 530 - Building Code Requirements for Masonry Structures.
 - 2. ACI 530.1 - Specifications for Masonry Structures.
- B. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
 - 2. ASTM C 55 - Specification for Concrete Brick.
 - 3. ASTM C 129 - Specification for Non-Load Bearing Concrete Masonry Units
- C. International Masonry Industry All- Weather Council (IMIAC): Recommended Practices and Guide Specifications for Cold Weather Masonry construction.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Data for each masonry unit type, accessory, and other manufactured products indicated.
2. Shop Drawings: Precast inserts and keys showing sizes, profiles, and locations of each precast unit required.
3. Samples: Two samples of each masonry unit type to illustrate color, texture, and extremes of color range.
4. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
5. Submit layout of control joint placement for Contracting Officer's approval prior to starting any work.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with ACI 530 and ACI 530.1.
- B. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- C. Mock-Up:
 1. Construct a sample wall panel of block masonry which will be exposed to view in the finished project, for approval by the Contracting Officer. Mock-up shall be as follows:
 - a. Approximately 4 feet long by 3 feet (high, showing the proposed color range, texture, bond, mortar and workmanship. All block shipped for the sample shall be included in the panel.
 - b. Erect panel in the presence of the Contracting Officer before installation of materials.
 - c. When required, provide a separate panel for each type of block or mortar.
 - d. Do not start work until Contracting Officer has accepted sample panel.
 - e. Use panel as standard of comparison for all masonry work built of same material.
 - f. Do not destroy or move panel until work is completed and accepted by Contracting Officer.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Materials shall be delivered and stored so as to avoid damage from breakage, moisture, staining or damage of any kind.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Cold Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Cold Weather Masonry Construction.
 2. Hot Weather Requirements: IMIAC - Recommended Practices and Guide Specifications for Hot Weather Masonry Construction.

PART 2 - PRODUCTS

2.1 CONCRETE MASONRY UNITS

- A. Lightweight units used for non-load bearing walls, meeting requirements of ASTM C129, Type I. Provide units meeting fire resistance ratings.
- B. Lightweight units used for load bearing walls, meeting requirements of ASTM C90, Grade N, Type I. Provide units meeting fire resistance ratings.
- C. Units to be high precision block or split face block. Sizes as designated on Drawings. Colors selected from standard manufacturer's colors.
- D. Special shaped units, U-blocks, etc., shall meet same specifications as adjacent units.

2.2 CONCRETE BUILDING BRICK

- A. Concrete brick shall be solid units meeting ASTM C55, Type I, Grade N.

2.3 MORTAR

- A. Specified in Section 040514.

2.4 REINFORCING

- A. Horizontal reinforcing for concrete masonry units shall be mill galvanized, ladder type with 9 gauge parallel wires in each face and 9 gauge cross members a maximum of 24 inches on center, butt welded to side rods. Provide prefabricated corners and tees.
- B. Reinforcing bars for lintels shall meet ASTM A615, Grade 60.

2.5 CONTROL JOINTS

- A. Joint filler shall be preformed neoprene or poly-vinyl chloride.
- B. Control joint placement in non-reinforced masonry:
 - 1. Vertical control joints shall be generally be located:
 - a. At major changes in wall height.
 - b. At changes in wall thickness.
 - c. At control joints in foundations, in roof, and in floors.
 - d. At chases and recesses for piping, columns, fixtures, etc.
 - e. At one or both sides of wall openings.
 - f. Near wall intersections.
 - g. Near return angles in L, T, and U-shaped structures.
 - 2. Maximum spacing of control joints shall be in no case exceed 24 feet.

2.6 CAVITY DRAINAGE PROTECTION MESH

- A. Recycled polyester/polyethylene trapezoidal-shaped 90% open mesh. Thicknesses to fit wall in accordance with the manufacturer's recommendations. Height as recommended by manufacturer, but

not to exceed height of the top of the flashing. Product as manufactured by Mortar Net USA, Limited or equal.

2.7 WEEP-HOLE VENT FILLER

- A. Three dimensional, ultraviolet resistant, weave of polyester. Size matching full head joint size of the masonry unit unless shown otherwise. [White] [Brown] [Tan] [Gray] [Red] [Almond] color. Product as manufactured by Mortar Net USA, Limited.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide temporary bracing during installation of masonry Work. Maintain in place until building structure provides permanent bracing.
- B. Lay out work to avoid use of less than 8 inch x 8 inch faced units at jambs in exposed work.
- C. Lintel block shall extend into side walls at jambs, at least 8 inches.

3.3 INSTALLATION

- A. CMU Base Drainage Course: Lay base drainage course of CMU, consisting of 2 wythes separated by a cavity sized to accommodate through-wall flashing and mesh.
- B. Weep-Vents: Set weep-hole vent filler in place, aligning front of weep vent with exterior face of CMU. Apply adequate mortar to remainder of head joint, carefully removing excess mortar to prevent plugging of weep vent with mortar.
 - 1. Install weep-hole vent filler at drainage courses at base of wall and at all lintels and bond beams where through-wall flashing is required.
 - 2. Install weep-hole vent filler at top of wall and below lintels and bond beams to provide continuous air ventilation within wall.
- C. Mesh
 - 1. Select correct thickness of mesh for size of single-wythe CMU wall and thickness of cavity formed by drainage course units.

2. Set mesh in cavity of drainage base course on either side of vertical reinforcing approximately 3 inches (7.5 cm) from the reinforcing on both sides. Set mesh against outside wythe units. No fasteners, adhesives are required, and mortar need not have set.
 3. Construct single-wythe CMU wall above the drainage course. Web-bed and face shell-bed the vertical grout cell to prevent migration of grout to adjoining cells.
 4. Grout reinforcing bar in place to within 1 inch (2.5 cm) of the top of the drainage course cavity. Install grout at reinforced cells in vertical lifts not to exceed 5 feet (1.5 m).
 5. Set mesh in similarly constructed drainage course at lintels and bond beams.
 6. Mesh may be compressed to allow insertion into cavities slightly smaller than its nominal thickness without affecting mesh or wall performance.
 7. When forcing mesh into a tight-fitting cavity, ensure that mortar has set sufficiently to allow masonry units to resist outward pressure from product.
 8. Protect installed product from damage during construction.
- D. Mortar shall be thoroughly mixed and kept moist but shall not be retempered for use after initial set.
- E. Lay only dry masonry units.
- F. Use masonry saw for cutting exposed surfaces. Cut units to provide 1/8 inch clearance around electrical boxes and similar items.
- G. Do not use chipped, cracked or broken units.
- H. Set units plumb, true to line, and level.
- I. Adjust units to final position while mortar is soft and plastic. If unit is displaced after mortar has stiffened, remove unit, clean joints and unit of mortar and reset with fresh mortar.
- J. When joining fresh work to set or partially set masonry clean exposed surface and remove loose mortar before laying fresh masonry.
- K. When necessary to stop a horizontal, run rack back one-half block length in each course, do not tooth.
- L. Unless indicated otherwise partitions shall extend from floor to bottom of floor or roof construction above.
- M. Where rated partitions run perpendicular to deck, fill voids at deck with grout.
- 3.4 BOND
- A. Lay units in running bond with vertical joints centered on unit in course below unless indicated otherwise on drawings.
- 3.5 MORTAR BEDS
- A. Lay hollow units with full mortar coverage on horizontal and vertical face shells. Provide full mortar coverage on horizontal and vertical face shells and webs where adjacent to cells or cavities to be filled with grout and on starting courses.
- B. Lay block with full horizontal and vertical joints.
- 3.6 WIRE REINFORCEMENT
- A. Wire Reinforcements shall be placed as follows:

1. Four inch concrete block walls with ends adjoining other partitions.
 - a. Concrete block on slab on grade - continuous horizontal reinforcements 24 inches on center vertically (every third course).
 - b. Concrete block on slabs above grade - Continuous horizontal reinforcement 16 inches on center vertically (every other course).
2. Eight inch concrete block walls
 - a. Concrete block walls on slab on grade - continuous horizontal reinforcement 16 inches on center vertically (every other course).
 - b. Concrete block walls on slabs above grade - continuous horizontal reinforcements 24 inches on center vertically (every third course).
3. Wire reinforcement shall be completely embedded in mortar or grout. Joints with wire reinforcement shall be at least the thickness of the wire.
4. Wire reinforcement shall be lapped at least 8 inches at splices and shall contain at least one cross wire of each piece of reinforcement in the lapped distance.

3.7 JOINTS

- A. Nominal thickness shall be 3/8 inch (9 mm) and uniform.
- B. Shove vertical joints tight.
- C. Strike joints flush in surfaces to be exposed or painted.
- D. Tool joints slightly concave in surfaces to be exposed or painted.

3.8 BUILT-UP WORK

- A. Cooperate with other trades in building in items in masonry work.
- B. Grout solid around built-in items and in door frames.

3.9 LINTELS

- A. Install rebars and grout solid as indicated. Provide temporary shoring for openings wider than 36 inches.
- B. Lintel blocks shall extend into side walls at jambs, minimum at 8 inches.

3.10 CLEANING AND POINTING

- A. Dry brush masonry surfaces after mortar has set, at end of each day's work and after final points.
- B. Cut out and repaint defective joints.
- C. At final completion of masonry work fill holes in joints and tool to match adjacent work.
- D. Leave work and surrounding surfaces clean and free of mortar spots and droppings.

SECTION 05 12 00 00 - MPF STRUCTURAL STEEL FRAMING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Structural steel framing members, support members, with required bracing, welds, and fasteners.
 2. Base plates.
 3. Grouting under base plates.
- B. Related Sections:
 1. Section 033000 – Cast-In Place Concrete: Anchorages cast in concrete. Grouting base plates and bearing plates.
 2. Section 052100 - Steel Joist Framing: Steel bracing for joists and joist girders.
 3. Section 053100 - Steel Decking: Support framing for small openings in deck.
 4. Section 055000 - Metal Fabrications: Steel fabrications affecting structural steel work.

1.2 REFERENCES

- A. American Institute of Steel Construction (AISC):

3. SSPC-Paint 22 - Epoxy Polyamide Paints.
4. SSPC-Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.
5. SSPC-SP 2 - Hand Tool Cleaning.
6. SSPC-SP 6 - Commercial Blast Cleaning.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings:
 - a. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.
 - b. Connections.
 - c. Cambers and loads.
 - d. Indicate welded connections with AWS A2.0 welding symbols. Indicate net weld lengths.
2. Assurance/Control Submittals:
 - a. Erection Procedure: Submit descriptive data to illustrate structural erection procedure including sequence of erection and temporary staying and bracing.
 - b. Field Welding Equipment: Submit descriptive data for field welding equipment including type, voltage, and amperage.
 - c. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Welding inspection.
 - 2) Bolted connection inspection.
 - d. Certificates: Certify welders employed on Work, verifying AWS qualification within previous 12 months.
 - e. Qualification Documentation: Submit documentation of fabricator and erector experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Fabricator: Company specializing in performing the work of this section with minimum 5 years documented experience.
 - 2. Erector:
 - a. A company specialized in performing the work of this section with a minimum of 5 years documented experience.
 - b. A qualified company that participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CASE or CSE.
 - 3. Qualifications for Welding Work: Qualify welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that welders employed in work have satisfactorily passed AWS qualification tests within previous 12 months. If rectification of welders is required, provide without additional cost to Owner.
- B. Fabricate structural steel members in accordance with AISC Code of Standard Practice.
- C. Perform Work in accordance with AISC Section 10.
- D. Design connections not detailed on the Drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in State where Project is located.
- E. Survey: Employ a Registered Professional Surveyor registered in State in which Project is located, experienced in survey work, to establish permanent bench marks as shown and as necessary for accurate erection of structural steel. Check elevations of concrete and masonry bearing surfaces, and locations of anchor bolts and similar devices, before erection work proceeds, and report discrepancies to Owner. Do not proceed with erection until corrections have been made, or until compensating adjustments to structural steel work have been agreed upon with Owner.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Store steel above ground on platforms, skids, or other supports.
- C. Protect steel from corrosion.
- D. Store packaged materials in their original, unbroken packages or containers.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Structural Steel Shapes, Plates and Bars: ASTM A 36.
- B. Structural Tubing: ASTM A 500, Grade B.
- C. Bolts, Nuts, and Washers: AISC Specification Section 1.4.4.
 - 1. Unfinished Bolts: ASTM A 307.
 - 2. High Strength Bolts: ASTM A 325 or A 490.
 - 3. Anchor Bolts and Nuts: ASTM A 307 Grade A.
 - 4. High Strength Anchor Bolts: ASTM A 490.

- D. Welding Materials: AWS D1.1; type required for materials being welded or as indicated on Drawings.
- E. Rivets: AISC Specification Section 1.4.3.
 - 1. Steel Structural Rivets: ASTM A 502.
- F. Grout: Specified in Section 033000.
- G. Shop and Touch-Up Primer: AISC Specification Section 1-24.

2.2 FABRICATION

- A. Fabricate structural steel members in accordance with AISC Code Section 6 and AISC Specification.
- B. Connections not detailed on Drawings: Engineer by fabricator, which is subject to review.
- C. Fabricator's Responsibility:
 - 1. Errors of detailing, fabrications, and for correct fitting of structural steel members.
 - 2. Do not splice structural steel members. Members having splice not indicated on Drawings will be rejected.
- D. Continuously seal joined members by continuous welds. Grind exposed welds smooth.
- E. Fabricate connections for bolt, nut, and washer connectors.
- F. Develop required camber for members.

2.3 FINISH

- A. Clean, prepare, and shop prime structural steel members in accordance with SSPC - Painting Manual. Do not paint surfaces in contact with concrete, or surfaces specified to be galvanized.
- B. Shop prime structural steel members. Do not prime surfaces that will be field welded, in contact with concrete, and high strength bolted.

2.4 SOURCE QUALITY CONTROL AND TESTS

- A. Provide shop testing of structural steel sections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Supply items required to be cast into concrete or embedded in masonry with setting diagrams to appropriate Sections.

3.3 ERECTION

- A. Erect structural steel in accordance with AISC Code, Section 7, and AISC Specification Section 1.25 except as specified herein.
- B. Make provision for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of permanent bracing.
- C. Do not field cut or alter structural members without approval of the Engineer.
- D. Field weld components indicated on Drawings.
- E. Field connect members with threaded fasteners; torque to required resistance.
- F. After erection, prime welds, abrasions, and surfaces not shop painted that are to receive finish painting, except surfaces to be in contact with concrete. Use a primer consistent with shop coat.
- G. Anchor Bolts: Install anchor bolts and other connectors required for securing structural steel to foundations and other in-place work. Furnish templates and other devices as necessary for presetting bolts and other anchors to accurate locations.
- H. Setting Bases and Bearing Plates: Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surfaces of base and bearing plates.
 - 1. Set loose and attached base plates and bearing plates for structural members on steel wedges or other adjusting devices.
 - 2. Tighten anchor bolts after the supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base or bearing plate prior to grouting.
 - 3. Grout solidly between bearing surfaces and bases of plates immediately after erecting member and before additional load is placed on member. Finish exposed surfaces, protect installed materials, and allow to cure. For proprietary grout materials, comply with manufacturer's installation instructions.
 - 4. Slide bearings: Permanently affixed to member and support, respectively, by welding or bolting as indicated. Align and level member faces to maintain full contact between surfaces before completing installation.
- I. High-strength Bolting: Comply with specifications for Structural Joints using ASTM A 325 or A 490 Bolts.
- J. Erection Bolts:
 - 1. Comply with ASTM A 307.
 - 2. On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.
- K. Touch-up Painting: Immediately after erection, clean exposed field welds, bolted connections, and abraded areas of shop paint. Apply paint to exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

3.4 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maximum Variation From Plumb: 1/4 inch.
 - 2. Maximum Offset From True Alignment: 1/4 inch.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Quality Assurance Program:
 - 1. AISC Code Section 8 and AISC Specification Section 1.26.
 - 2. AISC Quality Criteria and Inspection Standards, except as specified herein.
- C. Welding:
 - 1. AWS D1.1 Section 6.
 - 2. Inspectors: AWS Certified in accordance with AWS QCI, Standard for Qualifications and Certification of Welding Inspectors.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 05 12 00 00

SECTION 05 12 00 00 - CSF STRUCTURAL STEEL

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Structural Steel columns and beams are a part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Structural steel framing members, support members, with required bracing, welds, and fasteners.
 2. Base plates.
 3. Grouting under base plates.
- B. Related Sections:
 1. Section 033000 – Cast-In-Place Concrete: Anchorages cast in concrete. Grouting base plates and bearing plates.
 2. Section 052100 - Steel Joist Framing: Steel bracing for joists and joist girders.
 3. Section 053100 - Steel Decking: Support framing for small openings in deck.
 4. Section 055000 - Metal Fabrications: Steel fabrications affecting structural steel work.

1.2 REFERENCES

- A. American Institute of Steel Construction (AISC):
 1. Specification for the Design, Fabrication and Erection of Structural Steel for Buildings.
 2. AISC - Code of Standard Practice - Manual of Steel Construction - Allowable Stress Design (ASD).
 3. AISC - Section 10 - Architecturally Exposed Structural Steel.
- B. American Society for Testing and Materials (ASTM):
 1. ASTM A36/A36M - Specification for Structural Steel.
 2. ASTM A53 - Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
 3. ASTM A108 - Specification for Steel Bars, Carbon, Cold-Finished, Standard Quality.
 4. ASTM A123 - Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 5. ASTM A153 - Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware.
 6. ASTM A242/A242M - Specification for High-Strength Low-Alloy Structural Steel.
 7. ASTM A 307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.

8. ASTM A 325 - Specification for Structural Bolts, Heat Treated, 120/105 ksi Minimum Tensile Strength.
9. ASTM A449 - Specification for Quenched and Tempered Steel Bolts and Studs.
10. ASTM A490 - Specification for Heat-Treated Steel Structural 150 ksi Minimum Tensile Strength.
11. ASTM A 500 - Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
12. ASTM A 501 - Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.
13. ASTM A514/A514M - Specification for High-Yield Strength, Quenched and Tempered Alloy Steel Plate, Suitable for Welding.
14. ASTM A529/A529M - Specification for High-Strength Carbon-Manganese Steel of Structural Quality.
15. ASTM A563 - Specification for Carbon and Alloy Steel Nuts.
16. ASTM A568/A568M - Specification for Steel, Sheet, Carbon and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.
17. ASTM A572/A572M - Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.

C. American Welding Society (AWS):

1. AWS D1.1 - Structural Welding Code.
2. AWS A2.4 - Symbols for Welding, Brazing, and Nondestructive Examination.

D. Factory Mutual (FM):

1. FM - Roof Assembly Classifications.

E. Underwriters Laboratories, Inc. (UL):

1. UL - Fire Resistance Directory.

F. Steel Structures Painting Council (SSPC):

1. SSPC - Painting Manual.
2. SSPC-Paint 20 Type II - Zinc Rich Primers - Organic.
3. SSPC-Paint 22 - Epoxy Polyamide Paints.
4. SSPC-Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.
5. SSPC-SP 2 - Hand Tool Cleaning.
6. SSPC-SP 6 - Commercial Blast Cleaning.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings:
 - a. Indicate profiles, sizes, spacing, locations of structural members, openings, attachments, and fasteners.
 - b. Connections.
 - c. Cambers and loads.
 - d. Indicate welded connections with AWS A2.0 welding symbols. Indicate net weld lengths.
2. Assurance/Control Submittals:
 - a. Erection Procedure: Submit descriptive data to illustrate structural erection procedure including sequence of erection and temporary staying and bracing.
 - b. Field Welding Equipment: Submit descriptive data for field welding equipment including type, voltage, and amperage.
 - c. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Welding inspection.
 - 2) Bolted connection inspection.

- d. Certificates: Certify welders employed on Work, verifying AWS qualification within previous 12 months.
- e. Qualification Documentation: Submit documentation of fabricator and erector experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Fabricator: Company specializing in performing the work of this section with minimum 5 years documented experience.
 - 2. Erector:
 - a. A company specialized in performing the work of this section with a minimum of 5 years documented experience.
 - b. A qualified company that participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category CASE or CSE.
 - 3. Qualifications for Welding Work: Qualify welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that welders employed in work have satisfactorily passed AWS qualification tests within previous 12 months. If rectification of welders is required, provide without additional cost to Owner.
- B. Fabricate structural steel members in accordance with AISC Code of Standard Practice.
- C. Perform Work in accordance with AISC Section 10.
- D. Design connections not detailed on the Drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in State where Project is located.
- E. Survey: Employ Professional Engineer registered in State in which Project is located, experienced in survey work, to establish permanent bench marks as shown and as necessary for accurate erection of structural steel. Check elevations of concrete and masonry bearing surfaces, and locations of anchor bolts and similar devices, before erection work proceeds, and report discrepancies to Owner. Do not proceed with erection until corrections have been made, or until compensating adjustments to structural steel work have been agreed upon with Owner.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Store steel above ground on platforms, skids, or other supports.
- C. Protect steel from corrosion.
- D. Store packaged materials in their original, unbroken packages or containers.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Structural Steel Shapes, Plates and Bars: ASTM A 36.
- B. Structural Tubing: ASTM A 500, Grade B.

- C. Bolts, Nuts, and Washers: AISC Specification Section 1.4.4.
 - 1. Unfinished Bolts: ASTM A 307.
 - 2. High Strength Bolts: ASTM A 325 or A 490.
 - 3. Anchor Bolts and Nuts: ASTM A 307 Grade A.
 - 4. High Strength Anchor Bolts: ASTM A 490.
- D. Welding Materials: AWS D1.1; type required for materials being welded or as indicated on Drawings.
- E. Rivets: AISC Specification Section 1.4.3.
 - 1. Steel Structural Rivets: ASTM A 502.
- F. Grout: Specified in Section 033000.
- G. Shop and Touch-Up Primer: AISC Specification Section 1-24.

2.2 FABRICATION

- A. Fabricate structural steel members in accordance with AISC Code Section 6 and AISC Specification.
- B. Connections not detailed on Drawings: Engineer by fabricator, which is subject to review.
- C. Fabricator's Responsibility:
 - 1. Errors of detailing, fabrications, and for correct fitting of structural steel members.
 - 2. Do not splice structural steel members. Members having splice not indicated on Drawings will be rejected.
- D. Continuously seal joined members by continuous welds. Grind exposed welds smooth.
- E. Fabricate connections for bolt, nut, and washer connectors.
- F. Develop required camber for members.

2.3 FINISH

- A. Clean, prepare, and shop prime structural steel members in accordance with SSPC - Painting Manual. Do not paint surfaces in contact with concrete, or surfaces specified to be galvanized.
- B. Shop prime structural steel members. Do not prime surfaces that will be field welded, in contact with concrete, and high strength bolted.

2.4 SOURCE QUALITY CONTROL AND TESTS

- A. Provide shop testing of structural steel sections.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Supply items required to be cast into concrete or embedded in masonry with setting diagrams to appropriate Sections.

3.3 ERECTION

- A. Erect structural steel in accordance with AISC Code, Section 7, and AISC Specification Section 1.25 except as specified herein.
- B. Make provision for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of permanent bracing.
- C. Do not field cut or alter structural members without approval of Contracting Officer.
- D. Field weld components indicated on Drawings.
- E. Field connect members with threaded fasteners; torque to required resistance.
- F. After erection, prime welds, abrasions, and surfaces not shop painted that are to receive finish painting, except surfaces to be in contact with concrete. Use a primer consistent with shop coat.
- G. Anchor Bolts: Install anchor bolts and other connectors required for securing structural steel to foundations and other in-place work. Furnish templates and other devices as necessary for presetting bolts and other anchors to accurate locations.
- H. Setting Bases and Bearing Plates: Clean concrete and masonry bearing surfaces of bond-reducing materials and roughen to improve bond to surfaces. Clean bottom surfaces of base and bearing plates.
 - 1. Set loose and attached base plates and bearing plates for structural members on steel wedges or other adjusting devices.
 - 2. Tighten anchor bolts after the supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base or bearing plate prior to grouting.
 - 3. Grout solidly between bearing surfaces and bases of plates immediately after erecting member and before additional load is placed on member. Finish exposed surfaces, protect installed materials, and allow to cure. For proprietary grout materials, comply with manufacturer's installation instructions.
 - 4. Slide bearings: Permanently affixed to member and support, respectively, by welding or bolting as indicated. Align and level member faces to maintain full contact between surfaces before completing installation.
- I. High-strength Bolting: Comply with specifications for Structural Joints using ASTM A 325 or A 490 Bolts.
- J. Erection Bolts:
 - 1. Comply with ASTM A 307.

2. On exposed welded construction, remove erection bolts, fill holes with plug welds, and grind smooth at exposed surfaces.

- K. Touch-up Painting: Immediately after erection, clean exposed field welds, bolted connections, and abraded areas of shop paint. Apply paint to exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

3.4 CONSTRUCTION

- A. Site Tolerances:
 1. Maximum Variation From Plumb: 1/4 inch.
 2. Maximum Offset From True Alignment: 1/4 inch.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Quality Assurance Program:
 1. AISC Code Section 8 and AISC Specification Section 1.26.
 2. AISC Quality Criteria and Inspection Standards, except as specified herein.
- C. Welding:
 1. AWS D1.1 Section 6.
 2. Inspectors: AWS Certified in accordance with AWS QCI, Standard for Qualifications and Certification of Welding Inspectors.

SECTION 05 21 00 00 - MPF STEEL JOIST FRAMING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Open web steel joists, with extended ends, and extended bottom chords.
 - 2. Bridging and bridging anchors.
 - 3. Headers and loose bearing plates.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 051200 - Structural Steel Framing: Building structural frame.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 36 - Specification for Carbon Structural Steel.
 - 2. ASTM A 307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile.
 - 3. ASTM A 325 - Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
- B. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
- C. Steel Joist Institute (SJI):
 - 1. SJI - Standard Specifications Load Tables and Weight Tables for Steel Joists and Joist Girders.
- D. Steel Structures Painting Council (SSPC):
 - 1. SSPC SP 2 - Hand Tool Cleaning.
 - 2. SSPC Paint 15 - Steel Joist Shop Paint.

1.3 SUBMITTALS

- A. Section 013300 – Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings:
 - a. Indicate joist types using standard SJI designations, spacing, location, bridging, anchorages, and special conditions.

- b. Indicate welded field connections using standard AWS welding symbols.
- c. Indicate paint primer type, accessories, and installation details.
- d. Joist setting plans.
- 2. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from testing laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Welding inspection.
 - 2) Bolted connection inspection.
 - b. Certificate: Manufacturer certificate, signed and sealed by a registered structural engineer, certifying that joists are designed in accordance to and comply with SJI specifications and are certified by SJI.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with SJI, Load Tables and Weight Tables.
- B. Qualifications:
 - 1. Fabricator: Company specializing in performing Work of this Section with minimum 5 years documented experience.
 - 2. Erector: Company specializing in performing Work of this Section with minimum 5 years documented experience, certified by AISC Quality Certification Program.
 - 3. Qualifications for Welding Work: Qualify welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that welders employed in work have satisfactorily passed AWS qualification tests within previous 12 months. If recertification of welders is required, provide without additional cost to United States Postal Service.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Comply with recommendations of SJI Specifications.
- C. Protect from corrosion, deformation, and other damage.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Open Web Joist Members: SJI Type K Open Web.
- B. Bridging: ASTM A 36.
- C. Welding Materials: AWS D1.1; type required for materials being welded.
 - 1. Open Web Steel Joists: Conform to SJI Specifications for Open Web Steel Joists and to SJI Technical Digest No. 8, Welding of Open Web Steel Joists.
 - 2. Longspan and Deep Longspan Steel Joists and Joist Girders: Conform to applicable Welding Electrodes section in SJI Specifications.
- D. Anchor Bolts, Nuts, and Washers: ASTM A 307 and ASTM A 325.

- E. Primer: SSPC 15, Type 1, red oxide.
- F. Accessories: Provide anchors and fasteners required for installation and attachment of joists and bridging.
- G. Structural Steel Building Framing: Specified in Section 051200.

2.2 FABRICATION

- A. Design and fabricate joists, including headers and other supporting framing, in accordance with SJI Standard Specifications.
 - 1. Verify Drawing dimensions and field conditions before beginning fabrication.
 - 2. Provide for concentrated loads indicated on Drawings.
- B. Bottom Chord Extensions: Provide joist bottom chord extensions at columns, not framed in minimum two directions, with structural steel members. Connect to columns as indicated on Drawings.
- C. Extended Ends: Provide extended joist ends at locations indicated on Drawings. Comply with load tables and design loads indicated on Drawings.
- D. Bridging: Provide horizontal or diagonal type bridging for open web joists, including bridging anchors for ends of bridging lines ending at walls or beams.
- E. End Anchorage: Provide anchorages to connect joists to adjacent construction.
- F. Header Units: Provide header units to support tail joists at openings in roof system not framed with steel shapes.

2.3 FINISH

- A. Prepare joist component surfaces in accordance with SSPC SP 2.
- B. Shop prime joists. Do not prime surfaces that will be field welded and in contact with concrete.
 - 1. Apply one shop coat of primer to joists and joist accessories to provide a continuous dry film thickness of 0.50 mils.

2.4 SOURCE QUALITY CONTROL

- A. Inspection: Contracting Officer reserves the right to have Contracting Officer's Representative make a visual inspection of joists at fabricators' shop before shipment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 ERECTION

- A. Erect steel joists, joist girders, and bridging in accordance with SJI Standard Specifications and SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Girders.
- B. Do not start erection of joists until supporting Work is in place and connections made.
- C. Erect and bear joists on supports.
- D. Allow for erection loads. Provide temporary bracing to maintain joists safe, plumb, and in true alignment.
- E. Install bridging simultaneously with joist erection, before construction loads are applied. Connect ends of bridging lines at top and bottom chords terminating at walls or beams.
- F. After joist alignment and installation of framing, field weld joist seat to bearing member.
- G. Position and field weld joist chord extensions and wall attachments.
- H. Do not permit installation of roof decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.
- I. Do not field cut or alter joists.
- J. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.3 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate placement of anchorages in concrete and masonry construction for making connections to joists and joist girders, and for securing bearing plates.
 - 2. Furnish anchor bolts and other devices built into concrete and masonry construction to appropriate installer for installation.
- B. Site Tolerances:
 - 1. Minimum Variation From Plumb: 1/4 inch.
 - 2. Maximum Offset From True Alignment: 1/4 inch.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Testing laboratory will inspect bolted connections and field welds.
 - 1. Bolted: Visually inspected.
 - 2. Welded: Visually inspected.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Open web steel joists, with extended ends, and extended bottom chords.
 - 2. Bridging and bridging anchors.
 - 3. Headers and loose bearing plates.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 051200 - Structural Steel Framing: Building structural frame.
 - 2. Section 099100 - Painting: Field painting of exposed joists and roof deck.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 36 - Specification for Carbon Structural Steel.
 - 2. ASTM A 307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile.
 - 3. ASTM A 325 - Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
- B. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
- C. Steel Joist Institute (SJI):
 - 1. SJI - Standard Specifications Load Tables and Weight Tables for Steel Joists and Joist Girders.
- D. Steel Structures Painting Council (SSPC):
 - 1. SSPC SP 2 - Hand Tool Cleaning.
 - 2. SSPC Paint 15 - Steel Joist Shop Paint.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings:
 - a. Indicate joist types using standard SJI designations, spacing, location, bridging, anchorages, and special conditions.
 - b. Indicate welded field connections using standard AWS welding symbols.
 - c. Indicate paint primer type, accessories, and installation details.
 - d. Joist setting plans.
 - 2. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from testing laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Welding inspection.
 - 2) Bolted connection inspection.
 - b. Certificate: Manufacturer certificate, signed and sealed by a registered structural engineer, certifying that joists are designed in accordance to and comply with SJI specifications and are certified by SJI.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with SJI, Load Tables and Weight Tables.
- B. Qualifications:
 - 1. Fabricator: Company specializing in performing Work of this Section with minimum 5 years documented experience.
 - 2. Erector: Company specializing in performing Work of this Section with minimum 5 years documented experience, certified by AISC Quality Certification Program.
 - 3. Qualifications for Welding Work: Qualify welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that welders employed in work have satisfactorily passed AWS qualification tests within previous 12 months. If recertification of welders is required, provide without additional cost to United States Postal Service.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Comply with recommendations of SJI Specifications.
- C. Protect from corrosion, deformation, and other damage.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Open Web Joist Members: SJI Type K Open Web.
- B. Bridging: ASTM A 36.
- C. Welding Materials: AWS D1.1; type required for materials being welded.

1. Open Web Steel Joists: Conform to SJI Specifications for Open Web Steel Joists and to SJI Technical Digest No. 8, Welding of Open Web Steel Joists.
 2. Longspan and Deep Longspan Steel Joists and Joist Girders: Conform to applicable Welding Electrodes section in SJI Specifications.
- D. Anchor Bolts, Nuts, and Washers: ASTM A 307 and ASTM A 325.
- E. Primer: SSPC 15, Type 1, red oxide.
- F. Accessories: Provide anchors and fasteners required for installation and attachment of joists and bridging.
- G. Structural Steel Building Framing: Specified in Section 051200.

2.2 FABRICATION

- A. Design and fabricate joists, including headers and other supporting framing, in accordance with SJI Standard Specifications.
1. Verify Drawing dimensions and field conditions before beginning fabrication.
 2. Provide for concentrated loads indicated on Drawings.
- B. Bottom Chord Extensions: Provide joist bottom chord extensions at columns, not framed in minimum two directions, with structural steel members. Connect to columns as indicated on Drawings.
- C. Extended Ends: Provide extended joist ends at locations indicated on Drawings. Comply with load tables and design loads indicated on Drawings.
- D. Bridging: Provide horizontal or diagonal type bridging for open web joists, including bridging anchors for ends of bridging lines ending at walls or beams.
- E. End Anchorage: Provide anchorages to connect joists to adjacent construction.
- F. Header Units: Provide header units to support tail joists at openings in roof system not framed with steel shapes.

2.3 FINISH

- A. Prepare joist component surfaces in accordance with SSPC SP 2.
- B. Shop prime joists. Do not prime surfaces that will be field welded and in contact with concrete.
1. Apply one shop coat of primer to joists and joist accessories to provide a continuous dry film thickness of 0.50 mils.
- C. Field Painting: Field paint joists, indicated on Drawings to receive paint finish, as specified in Section 099100.

2.4 SOURCE QUALITY CONTROL

- A. Inspection: Contracting Officer reserves the right to have Contracting Officer's Representative make a visual inspection of joists at fabricators' shop before shipment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 ERECTION

- A. Erect steel joists, joist girders, and bridging in accordance with SJI Standard Specifications and SJI Technical Digest No. 9 - Handling and Erection of Steel Joists and Girders.
- B. Do not start erection of joists until supporting Work is in place and connections made.
- C. Erect and bear joists on supports.
- D. Allow for erection loads. Provide temporary bracing to maintain joists safe, plumb, and in true alignment.
- E. Install bridging simultaneously with joist erection, before construction loads are applied. Connect ends of bridging lines at top and bottom chords terminating at walls or beams.
- F. After joist alignment and installation of framing, field weld joist seat to bearing member.
- G. Position and field weld joist chord extensions and wall attachments.
- H. Do not permit installation of roof decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.
- I. Do not field cut or alter joists.
- J. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.3 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate placement of anchorages in concrete and masonry construction for making connections to joists and joist girders, and for securing bearing plates.
 - 2. Furnish anchor bolts and other devices built into concrete and masonry construction to appropriate installer for installation.
- B. Site Tolerances:
 - 1. Minimum Variation From Plumb: 1/4 inch.

2. Maximum Offset From True Alignment: 1/4 inch.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Testing laboratory will inspect bolted connections and field welds.
 1. Bolted: Visually inspected.
 2. Welded: Visually inspected.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 31 00 00 - MPF STEEL DECKING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Steel roof deck, form deck and composite deck.
- B. Deck accessories such as metal closure strips, pour stops, cant strips, cover plates, sump pans and closed cell foam rubber flute closures.

1.2 SUBMITTALS

- A. Shop Drawings: Required.

1.3 QUALITY ASSURANCE

- A. Design Requirements: Steel Deck Institute (SDI) Design Manual for Composite Decks, Form Decks, Roof Decks; and AISI Specification For the Design of Cold-Formed Steel Structural Members.
- B. Fabricate and install in accordance with Steel Deck Institute (SDI) standards.
- C. Fabricator shall be a member of the SDI.
- D. Certify welders employed on work, verifying AWS qualification within previous 12 months.

PART 2 – PRODUCTS

2.1 FABRICATION

- A. Non-cellular Decking: Fabricate from structural quality sheet steel.
 - 1. Shop primed underside and phosphatized/uncoated upperside.
- B. Span design: Multiple, where possible.
- C. Nominal height: 1-1/2 inch 38 mm., fluted profile.
- D. Formed sheet width: 24 to 36 inch.
- E. Gage: As required by design but not lighter than 22gage.
- F. Side joints: Lapped.
- G. Composite Deck: Ribbed for improved concrete bond.

1. Galvanized to a minimum G 60 coating weight.

H. Roof Decking – galvanized metal roof deck (G60 coating, minimum).

I. Shop/Factory finishing: Galvanized to a minimum G 60 coating weight.

2.2 FIELD QUALITY CONTROL

A. Field Tests: If required by State and local code.

B. Field Inspection: As required by code but not less than the following:

1. Select 6 random sheets for each type of deck used. Inspect for deck thickness, type, and material.
2. Inspect 10 percent of deck welds over entire roof area for quality, size and spacing.
3. Inspect 10 percent of side lap connectors over entire roof area for quality, type, size, and spacing of side lap connectors.

PART 3 – EXECUTION

3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 05 31 00 00

SECTION 05 31 00 00 - CSF STEEL DECKING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.05 31 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel roof deck and accessories.
 - 2. Framed openings up to 10 inches by 10 inches.
 - 3. Welding, fasteners, and accessories for attachment of deck.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 051200 - Structural Steel Framing: Support framing for openings larger than 10 inches x 10 inches.
 - 2. Section 052100 - Steel Joist Framing: Support framing for steel decking.

1.2 REFERENCES

- A. American Iron and Steel Institute (AISI):
 - 1. Specification for the Design of Cold-Formed Steel Structural Members.
- B. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 1008 - Specification for Structural Steel, Sheet, Carbon, Cold-Rolled.
 - 2. ASTM A 653 - Specification for Steel Sheet, Zinc Coated, Galvanized.
- C. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
 - 2. AWS D1.3 - Structural Welding Code - Sheet Steel.
- D. Steel Deck Institute (SDI):
 - 1. Design Manual for Composite Decks, Form Decks, Roof Decks, (Publication No. 25).
 - a. Code of Recommended Standard Practice.

- b. Specifications and Commentary for Steel Roof Deck.
- 2. SDI Diaphragm Design Manual 1st Edition.

E. Steel Structures Painting Council (SSPC):

- 1. SSPC-Paint 20 Type II - Zinc Rich Primers - Organic.
- 2. SSPC-Paint 25 - Red Iron Oxide, Zinc Oxide, Raw Linseed Oil, and Alkyd Primer.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

- 1. Product Data: Deck profile characteristics and dimensions, structural properties, and finishes.
- 2. Shop Drawings: Indicate deck plan, support locations, projections, openings and reinforcement, pertinent details, and accessories.
- 3. Assurance/Control Submittals:
 - a. Certificates: Certify welders employed on Work, verifying AWS qualification within previous 12 months.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

A. Qualifications:

- 1. Fabricator: Company specializing in performing the work of this section with minimum 5 years documented experience.
- 2. Erector: Company specializing in performing the work of this section with minimum 5 years documented experience, certified by AISC Quality Certification Program.
- 3. Qualifications for Welding Work: Qualify welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that welders employed in work have satisfactorily passed AWS qualification tests within previous 12 months. If recertification of welders is required, provide without additional cost to United States Postal Service.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Prevent damage to edges, ends and surfaces.
- C. Cut plastic wrap to encourage ventilation. Keep materials dry.
- D. Separate sheets and store materials on dry wood sleepers off ground or concrete; slope for positive drainage.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Sheet Steel:

- 1. ASTM A 1008 structural quality; with G60 galvanized coating conforming to ASTM A 653.

B. Bearing Plates and Angles: ASTM A 36 steel.

- C. Welding Materials: AWS D1.1.
- D. Shop and Touch-Up Primer: SSPC 15, Type 1, red oxide.
- E. Touch-Up Primer for Galvanized Surfaces: SSPC 20, Type 1, inorganic.
- F. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to decking.
- G. Closure Strips, Cover Plates, and related Accessories: Fabricated of metal of same type and finish as deck.

NOTE TO SPECIFIER

EDIT THE FOLLOWING SECTIONS BY ADDING AND/OR DELETING TEXT BASED ON SPECIFIC PROJECT REQUIREMENTS.

- H. Screw Fasteners: Self-drilling, self tapping No. 12 HWH Tek's, by ITW-Buildex Corp., Itasca, IL, (800) 323-0720.
 - 1. Substitutions: Permitted
- I. Powder Actuated Fasteners: Minimum 0.145 inch diameter knurled hardened steel shank; minimum 0.5625 inch diameter washer; meet SDI design requirements.
 - 1. ENP2-21-L15, by Hilti, Inc., Tulsa, Oklahoma, (918) 252-6000, (800) 879-8000.
 - 2. Substitutions: Permitted.
- J. Air Actuated Fasteners: Minimum 0.130 inch diameter knurled hardened steel shank; minimum 0.500 inch diameter steel washer or head; meet SDI design requirements.
 - 1. X-EDNK22 HSN or X-EDN19 HSN, by Hilti, Inc., Tulsa, Oklahoma, (918) 252-6000.
 - 2. K-65056 or SDK-63075, by Pneutek, Inc., Hudson, New Hampshire, (603) 883-1660, (800) 431-8665.
 - 3. Substitutions: Permitted.
- K. Side Lap Fasteners: Self-drilling screws; #10-16 TEKS/1, by ITW-Buildex Corp., Itasca, IL, (800) 323-0720, or acceptable substitute.

2.2 FABRICATION

- A. Steel Roof Deck: Minimum gage sheet steel as indicated on Drawings, 1-1/2 inch high, fluted profile to SDI WR; multiple span; lapped joints.
- B. Fabricate metal decking in accordance with the SDI Design Manual for Composite Decks, Form Decks, Roof Decks, and AISI, to accommodate maximum working stress of 20,000 psi and maximum span deflection of 1/240.
- C. Fabricate roof sump pan of 14 gage sheet steel, flat bottom, sloped sides, recessed 1-1/2 inches below roof deck surface, bearing flange 3 inches wide, sealed watertight.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Erect metal decking and connect to structure in accordance with SDI Design Manual for Composite Decks, Form Decks, Roof Decks. Coordinate attachment sequence and procedure with placing of units; show on shop drawings.
- B. On steel support members provide 1-1/2 inch minimum bearing. On masonry support surfaces provide 3 inch minimum bearing.
- C. Align and level deck on supports.
- D. Provide welds, fasteners, and side lap connectors of size, spacing, and location as indicated on Drawings.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT BASED ON THE FASTENERS SELECTED FOR THE SPECIFIC PROJECT.

- E. Install Hilti powder actuated fasteners using the DX-450 or DX-750 decking system, by Hilti. Installed pin height shall be in accordance with manufacturer's recommendations, and verified with manufacturer approved inspection gage. Determine power level by jobsite testing.
- F. Install Hilti air actuated fasteners using the R4x12 decking system, by Hilti. Installed pin height shall be in accordance with manufacturer's recommendations, and verified with manufacturer approved inspection gage. Determine power level by jobsite testing.
- G. Install Pneutek air actuated fasteners using decking system, by Pneutek. Install pins in accordance with manufacturer's recommendations. Pin head shall clamp deck tightly to supporting member without gaps between underside of head and top side of deck. Pin shall not cause excessive dimpling of the deck greater than 1/2 the thickness of the pin head.
- H. Powder and air actuated fasteners shall be installed by a tool operator licensed by the pin manufacturer. A representative of the pin manufacturer shall be on site to verify proper installation of fasteners, and shall submit written verification to Owner.
- I. Welding: In accordance with AWS D1.1 and D1.3. Provide welding washers when welding 26 gauge or lighter steel deck.
- J. Install 6 inch wide sheet steel cover plates where deck changes direction. Spot weld in place 12 inches on center maximum. Install sheet steel closures and angle flashings to close openings between deck and walls, columns, and openings.
- K. Position roof sump pans with flange bearing on top surface of deck. Weld at each deck flute.

- L. Immediately after welding deck in place, touch-up welds, burned areas, and surface coating damage with compatible primer paint.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspection:
 - 1. Select 6 random sheets for each type of deck used. Inspect for deck thickness, type, and material.
 - 2. Inspect 10 percent of deck welds over entire roof area for size and spacing (CWI to perform inspection).
 - 3. Inspect 10 percent of side lap connectors over entire roof area for type, size, and spacing of side lap connectors.

SECTION 05 31 23 00 - R&A STEEL ROOF DECK REPAIR AND REPLACEMENT

NOTE TO SPECIFIER

*This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. **Edit Section footer information only – do not edit Section contents.***

NOTE TO SPECIFIER

Include this Section for projects where roof replacement will occur over existing steel structural decks.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Steel deck repair and replacement associated with roof replacement.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in paragraphs 3.3A, 3.3B, and Article 3.4.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. Steel Deck Institute (SDI)
 - 2. Factory Mutual Global (FM)

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in

compliance with specified regulatory requirements.

- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform steel deck repair/replacement work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 STEEL DECK REPAIR/REPLACEMENT MATERIALS

- A. For use at "Steel Deck Brushing and Priming" outlined in paragraph 3.3A:
 - 1. "Rust-Oleum Industrial Enamel Quick Dry Primer" manufactured by Rust-Oleum Corporation, Vernon Hills, Illinois, "Carboline Carbocoat 150 Universal Primer," manufactured by Carboline, St. Louis, Missouri, or approved equal.
- B. For use at "Steel Deck Repair" outlined in paragraph 3.3B:
 - 1. Steel plate: 16-gauge galvanized with pre-drilled holes for fasteners.
 - 2. For securing steel plate to steel deck: No. 14 fluorocarbon-coated screws; length as necessary to penetrate minimum 1-inch depth through the deck.
 - 3. For securing steel plate to underlying structural steel (1/2-inch thick max.): 12-24 x 1-1/4 inch Hex Washer Head, Teks 5, or approved equal.

- C. For use at "Steel Deck Replacement" outlined in Article 3.4:
 - 1. Full sections to match existing in gauge, profile, and finish; as necessary to comply with requirements of applicable insurance agencies and local codes.
 - 2. Refer to paragraph 2.1B for fastener requirements.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

3.2 STEEL DECK INSPECTION

- A. Inspect exposed steel decks for surface corrosion, severe corrosion, openings, and other defects.

3.3 STEEL DECK REPAIR

- A. Steel Deck Brushing and Priming (*Unit Price Work*): For use at areas of light corrosion, as determined by the Owner:
 - 1. Wire-brush or scrape the surface rust. Remove debris by power vacuum.
 - 2. Apply primer to the repair area; allow primer time to dry.
- B. Steel Deck Repair (*Unit Price Work*): For use to repair at openings caused by obsolete roof penetration removal or other defects less than 12" by 12" in size, as determined by the Owner:
 - 1. At locations encountered and other locations indicated by the Owner, cover the existing opening with 16-gauge steel plate stock. Lap the plate a minimum of 8-inches beyond the opening on all sides. Fasten the steel plate with specified fasteners and plates 6-inches on center. Secure the plate a minimum of 2-inches in from the outside edge of the repair plate.

3.4 STEEL DECK REPLACEMENT (*Unit Price Work*)

- A. Prior to the start of work, inspect the interior area below the area of damaged steel roof deck. Remove items from the replacement area that may be damaged during work activities. Provide adequate interior protection to protect interior surfaces and finishes from damage prior to the start of work. The Contractor shall provide an "Interior Protection Representative" during replacement work.
- B. At deck replacement locations, as indicated by the Owner: Remove defective steel deck panels and install full decking sections to match existing. Install new decking in accordance with the requirements of FM, Steel Deck Institute, and applicable local codes.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

 - 1. ASTM A653 - Standard Specification for Steel Sheet, Zinc-coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - 2. ASTM A1101- Hot-Rolled Carbon Steel Sheet & Strip, Carbon Hot-Rolled Structural Quality.
 - 3. ASTM A1008- Standard Specification for Structural Steel Sheet, Carbon, Cold-Rolled.
 - 4. ASTM C955 - Standard Specification for Load Bearing Steel Studs, Runners (Track), Bracing, and Bridging for Screw Application of Gypsum Panel Products.
- D. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code and D1.3 - Specifications for Welding Sheet Steel in Structures.
 - 2. AWS - Standard Qualification Procedure.
- E. Federal Specification.
 - 1. FS TT-P-636C - Rust-Inhibitive Paint.
- F. Metal Lath/Steel Framing Association (ML/SFA) - Lightweight Steel Framing Systems Manual, Latest Edition.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: The supplier shall design and/or verify the size and strength of all light gauge cold-formed Metal Framing members and connections in accordance with the ML/SFA Lightweight Steel Framing Systems Manual.
1. Design shall use the superimposed design loads specified in the Design Criteria section of the Structural General Notes in the Contract Drawings.
 2. Design shall be based upon information shown on the drawings and specified herein.
 3. Additional Design Criteria - ANSI A58.1 or:
 - a. Load-bearing live loads:
 - 1) Load-bearing partitions:
 - i. Lateral pressures: 5 psf
 - 2) Non-load-bearing partitions:
 - i. Lateral pressures: 5 psf
 - 3) Exterior curtain walls:
 - i. Wind loads based on wind speeds of [] MPH.
 - 4) 4) Maximum allowable deflection with brick veneer:
 - i. Calculated on 18 ga. stud capacity alone: 1/600.
 4. Design shall conform to: AISI Specification for the Design of Cold-Formed Steel Structural Members. Wall bridging shall be designed to provide resistance to minor axis bending and rotation of wall studs. Designated selected exterior and/or interior walls shall be designed to provide frame stability and lateral load resistance. All connections (member to member, and member to structure) shall be designed and detailed.
 5. Qualification of Field Welding: Qualify welding process and welding operators in accordance with AWS Standard Qualification Procedure.
 6. Design non-axial load-bearing framing to accommodate 1/2 inch (13 mm) vertical deflection.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. All shop drawings and calculations must bear the seal and signature of an engineer registered in the jurisdiction where project is being constructed.
 2. Product Data:
 - a. Manufacturers' literature containing product and installation specifications and details.
 3. Shop Drawings:
 - a. Documents illustrating materials, shop coatings, steel thickness, details of fabrication and erection, details of attachment, spacing of fasteners, required accessories and critical installation procedures.
 4. Calculations:
 - a. Engineering calculations or data verifying the framing assembly's ability to meet or exceed design requirements as stated here-in and required by local codes, prepared under the supervision of a Professional Engineer.
 5. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Testing/Inspection reports conducted on shop and field-bolted and welded connections. Include data on type(s) of tests conducted and test results. Note inspection findings.
 - b. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - c. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Pre-Installation Meetings:
 - 1. Convene a pre-installation meeting one week prior to commencing Work of this Section. Notify the Architect and Contracting Officer of the meeting date and time at least 7 days prior.
 - 2. Require attendance of parties directly affecting Work of this Section.
 - 3. Review conditions of operations, procedures and coordination with related Work.
 - 4. Agenda:
 - a. Tour, inspect, and discuss conditions of installation of other work including door and window frames and mechanical and electrical work.
 - b. Review areas of potential interference and conflicts, and coordinate layout and support provisions for interfacing work.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Drawings.
 - e. Review and finalize construction schedule related to cold formed metal framing installation and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - h. Review safety precautions relating to operations.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Protect metal framing units from rusting and damage. Deliver to project site in manufacturer's unopened containers or bundles, fully identified with name, brand, type and grade. Store off ground in a dry ventilated space or protect with suitable waterproof coverings and protect against mechanical damage to units. Store materials on a flat plane. Any damaged materials shall be removed from the site.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MATERIALS

- A. All studs and/or joists and accessories shall be of the type, size, gauge and spacing shown on the plans or as required by manufacturer design, if called for. Studs, runners (track), bracing, and bridging shall be manufactured per ASTM Specification C-955.
- B. All painted studs, joists and accessories shall be formed from steel that conforms to the requirements of ASTM A570 or A611, as set forth in Section 1.2 of the AISI Specification for the Design of Cold-Formed Steel Structural Members (latest edition).

- C. All galvanized studs, joists and accessories shall be formed from steel that conforms to the requirements of ASTM A653, as set forth in Section 1.2 of the AISI Specification for Design of Cold-Formed Steel Structural Members (latest edition).
- D. All painted studs, joists and accessories shall be prime-painted with a rust-inhibitive paint, FS TT-P-636C.
- E. All galvanized studs, joists and accessories shall have a minimum G-60 coating.
- F. All section properties shall be calculated in accordance with the AISI Specification for the Design of Cold-Formed Steel Structural Members (latest edition).
- G. Framing Accessories:
 - 1. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - a. B&D Industries, LLC, Albany, NY (800) 924-4807.
 - b. Deitrich, Pittsburgh, PA (800) 873-2443.
 - c. The Steel Network, Incorporated., Raleigh, NC (888) 474-4876.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
 - 3. Interior or Exterior non-axial-load-bearing Wall Head Condition Deflection Accessories:
 - a. Deitrich: Double-Deep-Leg Track.
 - b. The Steel Network: VertiClip® SLD (interior), SL (exterior).
 - 4. Exterior non-axial-load-bearing Wall Slab Bypass Deflection Accessories:
 - a. B&D: Quick Clip®.
 - b. The Steel Network: VertiClip® SLB or SLS Series.

2.2 FABRICATION

- A. General: Framing components may be prefabricated prior to erection. Fabricate components plumb, square, true to line and braced against racking with joints welded. Perform lifting of prefabricated components in a manner to prevent damage or distortion.
- B. Fastenings: Attach similar components by welding. Attach dissimilar components by bolting, or screw fasteners, as standard with manufacturer.
- C. Cutting of steel framing members may be accomplished with a saw or shear. Torch cutting of load carrying members is not permitted.
- D. Wire tying of framing components is not permitted.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION AND STUDWALLS

- A. Manufacturer's Instructions: Install metal framing systems in accordance with manufacturer's printed or written instructions and recommendations, unless otherwise indicated.
- B. Stud Walls:
 - 1. Runner Tracks: Install continuous tracks sized to match studs. Align tracks accurately to layout at base and tops of studs. Secure tracks as recommended by stud manufacturer for type of construction involved, except do not exceed 24 inches on center spacing for nail or power-driven fasteners, or 16 inches on center for other types of attachment. Provide fasteners at corners and ends of tracks.
 - 2. Position studs plumb in runners and space no greater than 16 inches and not more than 2 inches from abutting walls and at each side of openings. Connect studs to upper and lower tracks using self-drilling, screws or welding in accordance with Manufacturer's recommendations such that the connection meets or exceeds the design loads required at that connection.
 - 3. Brace all studs at mid-height for added strength, stiffness, and fire-stopping.
 - 4. Construct corners using minimum of three studs. Double studs at door, window, and sidelight jambs. Install intermediate studs above and below openings to match wall stud spacing.
 - 5. Provide deflection allowance below supported horizontal building framing in ceiling or head track for non-load-bearing framing in a method recommended by stud manufacturer.
 - a. Where walls and partitions must close out against the deck for smoke and fire separation provide a top track rigidly attached to vertical studs but free to move vertically in a 14 gauge break-formed deep leg track rigidly attached to deck with slack to accommodate structural live load deflections noted on drawings; or head condition vertical slide clips in coordination with alignment track (20 gage at exterior walls, 25 gage at interior walls).
 - b. Where wall or partition studs pass by the structural deck provide vertical slide clips welded or screw attached to the structural support but do not attach rigidly to studs.

3.3 INSTALLATION: PRE-FABRICATED AND PANELIZED CONSTRUCTION

- A. Panels shall be designed to resist construction and handling loads as well as service loads.

3.4 INSTALLATION: NON-PANELIZED (STICK-BUILT) MEMBERS

- A. Align track accurately at supporting structure and fasten to structure as shown on shop drawings.
- B. Track intersections shall butt evenly.
- C. Studs shall be plumbed, aligned, and securely attached to flanges or webs of upper and lower tracks. Axially loaded studs shall be seated squarely in both top and bottom tracks.

3.5 INSTALLATION: JOISTS

- A. Joist shall be located directly over bearing studs or a load distribution member shall be provided to transfer loads.

- B. Provide web stiffeners where necessary at reaction points, and at points of concentrated loads, as shown on the shop drawings.
- C. Bridging, either strap or solid, shall be provided as shown on the shop drawings.
- D. Provide additional joists under parallel partitions where the partition length exceeds 1/2 of the joist span.
- E. Provide additional joists around all floor/roof openings which are larger than the joist spacing and as noted on the shop drawings.
- F. End blocking shall be provided where joist ends are not otherwise restrained from rotation.

3.6 FASTENINGS AND ATTACHMENTS

- A. Anchorage of the tracks to the structure shall be with methods designed for the specific application of sheet to that surface. Size, penetration, type and spacing shall be determined by design.
- B. Welds shall conform to the requirements of AWS D1.1, AWS D1.3, and AISI Manual Section 4.2. Welds may be butt, fillet, spot, or groove type, the appropriateness of which shall be determined by, and within the design calculations. All welds shall be touched-up using zinc rich paint to galvanized members, and paint similar to that used by the manufacturer for painted members.
- C. Steel drill screws shall be of the minimum diameter indicated by the design of that particular attachment detail. Penetration through joined materials shall not be less than 3 exposed threads.
- D. Wire tying in structural applications is not permitted.

3.7 CONSTRUCTION

- A. Site Tolerances:
 - 1. Vertical alignment (plumbness) of studs shall be within 1/960th (1/8 inch in 10.0 inches) of the span.
 - 2. Horizontal alignment (levelness) of walls shall be within 1/960th (1/8 inch in 10.0 inches) of their respective lengths.
 - 3. Spacing of studs shall not be more than $\pm 1/8$ inch from the designed spacing providing that the cumulative error does not exceed the requirements of the finishing materials.
 - 4. Squareness - Prefabricated panels shall not be more than 1/8 inch out of square within the length of that panel.

3.8 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
 - 1. Inspect all work in order to assure strict conformance to the shop drawings at all phases of construction.
 - 2. All members shall be checked for proper alignment, bearing, completeness of attachments, proper placement, reinforcement, etc.
 - 3. All attachments shall be checked for conformance with the shop drawings. All welds shall be touched-up as specified herein.
 - 4. General Inspection of structure shall be completed prior to applying loads to those members.
 - 5. Inspections where and as required by local codes shall be controlled inspections.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 40 00 00 - CSF COLD-FORMED METAL FRAMING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.05 40 00 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Load-bearing and metal stud wall and partition framing, with anchorage and bracing.

NOTE TO SPECIFIER

Verify option with specific project

2. Skylight support framing.

- #### B. Related Documents:
- The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.3 SYSTEM DESCRIPTION

A. Design Requirements: The supplier shall design and/or verify the size and strength of all light gauge cold-formed Metal Framing members and connections in accordance with the ML/SFA Lightweight Steel Framing Systems Manual.

1. Design shall use the superimposed design loads specified in the Design Criteria section of the Structural General Notes in the Contract Drawings.
2. Design shall be based upon information shown on the drawings and specified herein.
3. Additional Design Criteria - ANSI A58.1 or:
 - a. Load-bearing live loads:
 - 1) Load-bearing partitions:
 - i. Lateral pressures: 5 psf
 - 2) Non-load-bearing partitions:
 - i. Lateral pressures: 5 psf

NOTE TO SPECIFIER

Enter design wind speed below

- 3) Exterior curtain walls:
 - i. Wind loads based on wind speeds of [] MPH.
- 4) Maximum allowable deflection with brick veneer:
 - i. Calculated on 18 ga. stud capacity alone: 1/600.
4. Design shall conform to: AISI Specification for the Design of Cold-Formed Steel Structural Members. Wall bridging shall be designed to provide resistance to minor axis bending and rotation of wall studs. Designated selected exterior and/or interior walls shall be designed to provide frame stability and lateral load resistance. All connections (member to member, and member to structure) shall be designed and detailed.
5. Qualification of Field Welding: Qualify welding process and welding operators in accordance with AWS Standard Qualification Procedure.
6. Design non-axial load-bearing framing to accommodate 1/2 inch (13 mm) vertical deflection.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. All shop drawings and calculations must bear the seal and signature of an engineer registered in the jurisdiction where project is being constructed.
2. Product Data:
 - a. Manufacturers' literature containing product and installation specifications and details.
3. Shop Drawings:
 - a. Documents illustrating materials, shop coatings, steel thickness, details of fabrication and erection, details of attachment, spacing of fasteners, required accessories and critical installation procedures.

4. Calculations:
 - a. Engineering calculations or data verifying the framing assembly's ability to meet or exceed design requirements as stated here-in and required by local codes, prepared under the supervision of a Professional Engineer.
5. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Testing/Inspection reports conducted on shop and field-bolted and welded connections. Include data on type(s) of tests conducted and test results. Note inspection findings.
 - b. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - c. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- B. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing Work of this Section. Notify the Architect and Contracting Officer of the meeting date and time at least 7 days prior.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of operations, procedures and coordination with related Work.
 4. Agenda:
 - a. Tour, inspect, and discuss conditions of installation of other work including door and window frames and mechanical and electrical work.
 - b. Review areas of potential interference and conflicts, and coordinate layout and support provisions for interfacing work.
 - c. Review required submittals, both completed and yet to be completed.
 - d. Review Drawings.
 - e. Review and finalize construction schedule related to cold formed metal framing installation and verify availability of materials, personnel, equipment, and facilities needed to make progress and avoid delays.
 - f. Review required inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions.
 - h. Review safety precautions relating to operations.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Protect metal framing units from rusting and damage. Deliver to project site in manufacturer's unopened containers or bundles, fully identified with name, brand, type and grade. Store off ground in a dry ventilated space or protect with suitable waterproof coverings and protect against mechanical damage to units. Store materials on a flat plane. Any damaged materials shall be removed from the site.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MATERIALS

- A. All studs and/or joists and accessories shall be of the type, size, gauge and spacing shown on the plans or as required by manufacturer design, if called for. Studs, runners (track), bracing, and bridging shall be manufactured per ASTM Specification C-955.
- B. All painted studs, joists and accessories shall be formed from steel that conforms to the requirements of ASTM A570 or A611, as set forth in Section 1.2 of the AISI Specification for the Design of Cold-Formed Steel Structural Members (latest edition).
- C. All galvanized studs, joists and accessories shall be formed from steel that conforms to the requirements of ASTM A653, as set forth in Section 1.2 of the AISI Specification for Design of Cold-Formed Steel Structural Members (latest edition).
- D. All painted studs, joists and accessories shall be prime-painted with a rust-inhibitive paint, FS TT-P-636C.
- E. All galvanized studs, joists and accessories shall have a minimum G-60 coating.
- F. All section properties shall be calculated in accordance with the AISI Specification for the Design of Cold-Formed Steel Structural Members (latest edition).
- G. Framing Accessories:
 - 1. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - a. B&D Industries, LLC, Albany, NY (800) 924-4807.
 - b. Deitrich, Pittsburgh, PA (800) 873-2443.
 - c. The Steel Network, Incorporated., Raleigh, NC (888) 474-4876.
 - 2. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
 - 3. Interior or Exterior non-axial-load-bearing Wall Head Condition Deflection Accessories:
 - a. Deitrich: Double-Deep-Leg Track.
 - b. The Steel Network: VertiClip® SLD (interior), SL (exterior).
 - 4. Exterior non-axial-load-bearing Wall Slab Bypass Deflection Accessories:
 - a. B&D: Quick Clip®.
 - b. The Steel Network: VertiClip® SLB or SLS Series.

2.2 FABRICATION

- A. General: Framing components may be prefabricated prior to erection. Fabricate components plumb, square, true to line and braced against racking with joints welded. Perform lifting of prefabricated components in a manner to prevent damage or distortion.
- B. Fastenings: Attach similar components by welding. Attach dissimilar components by bolting, or screw fasteners, as standard with manufacturer.

- C. Cutting of steel framing members may be accomplished with a saw or shear. Torch cutting of load carrying members is not permitted.
- D. Wire tying of framing components is not permitted.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION AND STUDWALLS

- A. Manufacturer's Instructions: Install metal framing systems in accordance with manufacturer's printed or written instructions and recommendations, unless otherwise indicated.
- B. Stud Walls:
 - 1. Runner Tracks: Install continuous tracks sized to match studs. Align tracks accurately to layout at base and tops of studs. Secure tracks as recommended by stud manufacturer for type of construction involved, except do not exceed 24 inches on center spacing for nail or power-driven fasteners, or 16 inches on center for other types of attachment. Provide fasteners at corners and ends of tracks.
 - 2. Position studs plumb in runners and space no greater than 16 inches and not more than 2 inches from abutting walls and at each side of openings. Connect studs to upper and lower tracks using self-drilling screws or welding in accordance with Manufacturer's recommendations such that the connection meets or exceeds the design loads required at that connection.
 - 3. Brace all studs at mid-height for added strength, stiffness, and fire-stopping.
 - 4. Construct corners using minimum of three studs. Double studs at door, window, and sidelight jambs. Install intermediate studs above and below openings to match wall stud spacing.
 - 5. Provide deflection allowance below supported horizontal building framing in ceiling or head track for non-load-bearing framing in a method recommended by stud manufacturer.
 - a. Where walls and partitions must close out against the deck for smoke and fire separation provide a top track rigidly attached to vertical studs but free to move vertically in a 14 gauge break-formed deep leg track rigidly attached to deck with slack to accommodate structural live load deflections noted on drawings; or head condition vertical slide clips in coordination with alignment track (20 gage at exterior walls, 25 gage at interior walls).
 - b. Where wall or partition studs pass by the structural deck provide vertical slide clips welded or screw attached to the structural support but do not attach rigidly to studs.

3.3 INSTALLATION: PRE-FABRICATED AND PANELIZED CONSTRUCTION

- A. Panels shall be designed to resist construction and handling loads as well as service loads.

3.4 INSTALLATION: NON-PANELIZED (STICK-BUILT) MEMBERS

- A. Align track accurately at supporting structure and fasten to structure as shown on shop drawings.
- B. Track intersections shall butt evenly.
- C. Studs shall be plumbed, aligned, and securely attached to flanges or webs of upper and lower tracks. Axially loaded studs shall be seated squarely in both top and bottom tracks.

3.5 INSTALLATION: JOISTS

- A. Joist shall be located directly over bearing studs or a load distribution member shall be provided to transfer loads.
- B. Provide web stiffeners where necessary at reaction points, and at points of concentrated loads, as shown on the shop drawings.
- C. Bridging, either strap or solid, shall be provided as shown on the shop drawings.
- D. Provide additional joists under parallel partitions where the partition length exceeds 1/2 of the joist span.
- E. Provide additional joists around all floor/roof openings which are larger than the joist spacing and as noted on the shop drawings.
- F. End blocking shall be provided where joist ends are not otherwise restrained from rotation.

3.6 FASTENINGS AND ATTACHMENTS

- A. Anchorage of the tracks to the structure shall be with methods designed for the specific application of sheet to that surface. Size, penetration, type and spacing shall be determined by design.
- B. Welds shall conform to the requirements of AWS D1.1, AWS D1.3, and AISI Manual Section 4.2. Welds may be butt, fillet, spot, or groove type, the appropriateness of which shall be determined by, and within the design calculations. All welds shall be touched-up using zinc rich paint to galvanized members, and paint similar to that used by the manufacturer for painted members.
- C. Steel drill screws shall be of the minimum diameter indicated by the design of that particular attachment detail. Penetration through joined materials shall not be less than 3 exposed threads.
- D. Wire tying in structural applications is not permitted.

3.7 CONSTRUCTION

- A. Site Tolerances:
 - 1. Vertical alignment (plumbness) of studs shall be within 1/960th (1/8 inch in 10.0 inches) of the span.
 - 2. Horizontal alignment (levelness) of walls shall be within 1/960th (1/8 inch in 10.0 inches) of their respective lengths.
 - 3. Spacing of studs shall not be more than $\pm 1/8$ inch from the designed spacing providing that the cumulative error does not exceed the requirements of the finishing materials.
 - 4. Squareness - Prefabricated panels shall not be more than 1/8 inch out of square within the length of that panel.

3.8 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field testing and inspection.

1. Inspect all work in order to assure strict conformance to the shop drawings at all phases of construction.
2. All members shall be checked for proper alignment, bearing, completeness of attachments, proper placement, reinforcement, etc.
3. All attachments shall be checked for conformance with the shop drawings. All welds shall be touched-up as specified herein.
4. General Inspection of structure shall be completed prior to applying loads to those members.
5. Inspections where and as required by local codes shall be controlled inspections.

SECTION 05 50 00 00 - CSF METAL FABRICATIONS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.05 50 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel lintels for masonry openings.
 - 2. Counter and equipment supports.
 - 3. Miscellaneous framing and supports.
 - 4. Security grilles for ductwork over 8 inches square penetrating the roof or wall structure.
 - 5. Pipe Bollards.
 - 6. Pipe bollard plastic covers.
 - 7. Access Ladders.
 - 8. Angular steel floor guides for the Bulk Mail Containers or General Post Mail Containers, (where applicable).
 - 9. Alternating tread stair
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

4. ASTM A153, "Zinc Coating (Hot-Dip) on Iron and Steel Hardware."
5. ASTM A307, "Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength."
6. ASTM A500, "Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes."
7. ASTM A568, "Specification for General Requirements for Steel Sheet, Carbon, and High-Strength, Low Alloy Hot-Rolled and Cold Rolled."
8. ASTM A627, "Specification for Homogeneous Tool-Resisting Steel Bars for Security Applications."
9. ASTM A780, "Practice for Repair of Damaged and Uncoated Areas of Hot-Dipped Galvanized Coatings."
10. ASTM B221, "Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tube."

D. American Welding Society (AWS):

1. AWS D1.1 - Structural Welding Code.

E. Steel Structures Painting Council Specification (SSPC):

1. Steel Structures Painting Manual.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data:
 - a. Submit complete descriptive data for all stock items.
2. Shop Drawings:
 - a. Prepare Shop Drawings under seal of professional structural engineer registered in state where Project is located for products requiring structural engineering.
 - b. Include profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners and accessories, erection drawings, elevations, welded connections using standard AWS welding symbol with net weld lengths.
 - c. Take field measurements prior to preparation of shop drawings and fabrication when possible. Allow for trimming and fitting whenever taking of field measurements before fabrication might delay construction.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MATERIALS

- A. Steel plates, angles, and other structural shapes shall conform to ASTM A36.
- B. Steel pipe shall conform to ASTM A53, Grade B, Schedule 40.
- C. Galvanized steel pipe and tube shall conform to ASTM A53.

- D. Steel Tubing shall conform to ASTM A500.
- E. Sheet Steel, Galvanized: ASTM A446.
- F. Sheet and Strip Steel, Hot Rolled: ASTM A568.
- G. Extruded Aluminum: ASTM B221.
- H. Anchors and Fasteners for Aluminum: Stainless steel.
- I. Welding Materials: AWS D1.1; type required for materials being welded.
- J. Anchors
 - 1. Threaded Type Concrete Inserts: Galvanized malleable iron or cast steel capable of receiving 3/4 inch diameter machine bolts.
 - 2. Slotted Type Concrete Inserts: Welded box type fabricated with minimum 1/8 inch thick galvanized pressed steel plate with slot to receive 3/4 inch diameter square head bolt and knockout cover.
 - 3. Expansion Shield for Masonry Anchorage: FS FF-2-325.
 - 4. Toggle Bolts: FS FF-B-588.
- K. Fasteners
 - 1. Bolts, Nuts and Washers for Exterior Locations: ASTM A307, galvanized in accordance with ASTM A153.
 - 2. Bolts, Nuts and Washers for Interior Locations: ASTM A307, Grade A, regular hexagon head.
 - 3. Bolts, Round Head: ANSI B-18.5
 - 4. Wood Screws, Flat Head Carbon Steel: ANSI B-18.6.1.
 - 5. Plain Washers, Helical Spring Type Carbon Steel: FS FF-W-84.

NOTE TO SPECIFIER

"REQUIRED Article (Security Grilles) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, Contracting Officer."

- L. Security Grilles:
 - 1. All grilles are to be factory fabricated of 1/2 inch (1.25 cm) diameter tool-resistant, round steel bars spaced a maximum eight inches (20 cm) on center each direction. The bars are to be framed with a minimum 1/8 inch (0.625 cm) by 1 inch (2.5 cm) flat steel.
 - 2. Grilles must be securely fastened to the structural framing around the opening with welded or non-removable fasteners at a maximum 6 inches (15.25 cm) on center.
- M. Primers:
 - 1. Primer for Painting: One of following:
 - a. Tnemec, Kansas City, MO, (816) 474-3400: No. 99 red primer.
 - b. Chessman-Elliott Company: Ceko No. 15 Primox.
 - c. Rowe Products, Inc.: No. 7-C-19.
 - d. Section 016000 – Product Substitutions. Substitutions: Permitted.
 - 2. Touch-Up Primer for Galvanized Surfaces: FS TT-P-641.

2.2 FABRICATION

- A. Fabricate steel items according to approved shop drawings and to applicable portions of AISC Specifications. Conceal welds where possible; grind exposed welds smooth and flush with adjacent finished surface. Ease exposed edges to small uniform radius.

- B. Pre-assemble products in shop to greatest extent possible. Disassemble units to extent necessary for shipping and handling. Clearly mark units for re-assemble and installation.
- C. For exposed to view fabrications, use materials which are smooth and free of surface blemishes including pitting, seams marks, roller marks, roller trade names and roughness. Remove blemishes by grinding or by welding and grinding, prior to cleaning, treating and application of surface finishes including zinc coating.
- D. Fabricate items with joints tightly fitted and secured.
- E. Fit and shop assemble in largest practical sections for delivery to Project site.
- F. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of structure, except where specifically noted otherwise.
- G. Make exposed joints butt tight, flush and hairline.
- H. Fabricate anchorage and related components of same material and finish as metal fabrication, unless indicated otherwise.

2.3 ROUGH HARDWARE

- A. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels, and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Division 6 sections.
- B. Fabricate items to sizes, shapes, and dimensions required. Furnish malleable-iron washers for heads and nuts which bear on wood structural connections; elsewhere, furnish steel washers.

2.4 LOOSE STEEL LINTELS

- C. Fabricate loose structural steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated.
- D. Weld adjoining members together to form a single unit where indicated.
- E. Size loose lintels for equal bearing of one inch per foot of clear span but not less than 8 inches bearing at each side of openings, unless otherwise indicated.
- F. Galvanize all surfaces of loose steel lintels located in exterior walls.

2.4 MISCELLANEOUS FRAMING AND SUPPORTS

- A. General: Provide steel framing and supports for applications indicated or which are not a part of structural steel framework, as required to complete work.
- B. Fabricate units to sizes, shapes, and profiles indicated and required to receive adjacent other construction retained by framing and supports. Fabricate from structural steel shapes, plates, and steel bars of welded construction using mitered joints for field connection. Cut, drill, and tap units to receive hardware, hangers, and similar items.
 - 1. Equip units with integrally welded anchors for casting into concrete or building into masonry. Furnish inserts if units must be installed after concrete is placed.

- a. Except as otherwise indicated, space anchors 24 inches on center and provide minimum anchor units in the form of steel straps 1-1/4 inch x 8 inches long.

NOTE TO SPECIFIER

Use Paragraph below if suspended (ceiling hung) toilet partitions are part of the Work. Delete if floor-mounted partitions are provided. Processing and Distribution Centers and CSF Medium Buildings typically use suspended (ceiling hung); CSF Small Buildings typically use floor-mounted.

- C. Fabricate support for suspended toilet partitions as follows:
1. Beams: Continuous steel shapes of size required to limit deflection to L/360 between hangers, but use not less than C 8 x 11.5 channels or another shape with equivalent structural properties.
 2. Hangers: Steel rods, 1/2 inch in diameter, spaced not more than 36 inches on center. Thread rods to receive anchor and stop nuts. Fit hangers with wedge shape washers for full bearing on sloping flanges of support beam.
 3. Braces and Angels: Steel angles of size required for rigid support of beam and for secure anchorage.

2.5 MISCELLANEOUS STEEL TRIM

- A. Provide shapes and sizes indicated for profiles shown. Unless otherwise indicated, fabricate units from structural steel shapes, plates, and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings, and anchorages as required for coordination of assembly and installation with other work.
- B. Galvanize miscellaneous framing and supports in the following locations:
1. Exterior locations.

2.6 SHELF AND RELIEVING ANGLES

- A. Fabricate shelf and relieving angles from steel angles of sizes indicated and for attachment to concrete farming. Provide slotted holes to receive 3/4 inch bolts, spaced not more than 6 inches from ends and not more than 24 inches on center, unless otherwise indicated.
- B. Galvanize shelf angles to be installed on exterior concrete framing.

2.7 PIPE BOLLARDS

NOTE TO SPECIFIER

Select article below, and delete the paragraph titled "PIPE BOLLARD PLASTIC COVERS" for painted finish bollards.

- A. Fabricate pipe bollards from Schedule 80 steel pipe. Exterior bollards to be galvanized. Fill bollards with concrete rounded off at top. Paint bollards per Section 099100.

NOTE TO SPECIFIER

Select article below for plastic covered bollards.

- B. Fabricate pipe bollards from Schedule 80 steel pipe. Exterior bollards are to be galvanized. Fill bollards with concrete flush at top. Do not paint bollards. Install pipe bollard plastic cover.

- C. Fabricate sleeves for bollard anchorage from steel pipe with 1/4 inch thick steel plate welded to bottom of sleeve. Exterior sleeves are to be galvanized.

2.8 PIPE BOLLARD PLASTIC COVERS

- A. Exterior shell cover of low density polyethylene and interior steel sleeve. Covers are to be 1/4 inch nominal wall thickness with ultraviolet and anti-static additives and a dome top. Install over steel pipe posts as indicated on Drawings. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Ideal Shield, L.L.C., Detroit, MI (313) 842-7290, (800) 731-1722.
 2. Liberty Equipment Sales, Houston, TX (281) 987-8708, (888) 987-8708.

NOTE TO SPECIFIER

Use if Access Ladders are required.

2.9 ACCESS LADDERS

- A. General: Fabricate ladders for the locations shown, with dimensions, spacings, details and anchorages as indicated. Comply with requirements of ANSI A14.3.
- B. Siderails: Continuous steel flat bars, with eased edges.
- C. Bar Rungs: Square steel bars.
- D. Fit rungs in centerline of side rails, plug weld and grind smooth on outer rail faces.
- E. Support each ladder at top and bottom and at intermediate points spaced not more than 5 feet on center. by means of welded or bolted steel brackets.
1. Size brackets to support design dead and live loads indicated and to hold centerline of ladder rungs clear of the wall surface by not less than 7 inches.
- F. Provide non-slip surface on top of each rung, either by coating the rung with aluminum oxide granules set in epoxy resin adhesive, or by using a type of manufactured rung which is filled with aluminum oxide grout.

2.10 ALTERNATING STAIRS

- A. Manufacturers: Subject to compliance with requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Basis of Design: Lapeyre Stair, Inc., (800) 535-7631
 2. Section 016000 – Product Substitutions. Substitutions: Permitted.
- B. Performance Requirements:
1. Stair Treads: Treads shall be capable of withstanding a concentrated load of 1000 lbs. without deformation.
 2. Handrail: Handrails shall be capable of withstanding a load of 200 lbs. applied in any direction at any point on the rail.
- C. Material: Carbon Steel
- D. Finish: Safety Yellow powder coat finish

- E. Angle of Incline: 56 deg or 68 deg from horizontal, to be determined by Architect.

2.11 FINISHES, GENERAL

- A. Comply with NAAMM "Metal Finishes Manual" for recommendations relative to application and designations of finishes.
- B. Finish metal fabrications after assembly.

2.12 STEEL AND IRON FINISHES

- A. Galvanizing: For those items indicated for galvanizing, apply zinc-coating by the hot-dip process compliance with the following requirements:
 - 1. ASTM A153 for galvanizing iron and steel hardware.
 - 2. ASTM A123 for galvanizing both fabricated and unfabricated iron and steel products made of uncoated rolled, pressed, and forged shapes, plates, bars, and strip 0.0299 inch thick and heavier.
- B. Preparation for Shop Priming: Prepare uncoated ferrous metal surfaces to comply with minimum requirements indicated below for SSPC surface preparation specifications and environmental exposure conditions of installed metal fabrications:
 - 1. Interiors (SSPC Zone 1A): SSPC-SP3 "Power Tool Cleaning":
- C. Apply shop primer to uncoated surfaces of metal fabrications, except those with galvanized finish or to be embedded in concrete, sprayed-on fireproofing, or masonry, unless otherwise indicated. Comply with requirements of SSPC-PA1 "Paint Application Specification No. 1" for shop painting.

2.13 SHOP PAINTING AND PROTECTIVE COATING

- A. Conform to Steel Structures Painting Council Specification 15-68T, Type 1, including preparation for painting.
- B. Hot-Dip galvanizing and zinc coatings applied on products fabricated from rolled, pressed, and forged steel shapes, plates, bars and strips shall comply with ASTM Specification A123. Galvanized surfaces for which a shop coat of paint is specified shall be chemically treated to provide a bond for the paint. Except for bolts and nuts, all galvanizing shall be done after fabrication.
- C. Clean surfaces of rust, scale, grease and foreign matter in accordance with SSPC SP-1 solvent cleaning, prior to finishing. Prepare surfaces for painting in accordance with SSPC-SP2 Hand Tool Cleaning, SSPC-SP3 Power Tool Cleaning or SSPC SP-7 Brush Off Blast Cleaning.
- D. Do not prime surfaces in direct contact bond with concrete or where field welding is required.
- E. Prime paint items scheduled with one coat.
- F. Protect aluminum surfaces in contact with steel with zinc chromate primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, including concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to project site.

3.3 INSTALLATION

- A. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction; include threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as required.
- B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installation of miscellaneous metal fabrications. Set metal fabrication accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.
- C. Provide temporary bracing or anchors in formwork for items that are to be built into concrete masonry or similar construction.
- D. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Do not weld, cut or abrade the surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.
- E. Field Welding: Comply with AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of welds made, methods used in correcting welding work, and the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.

3.4 INSTALLATION - SECURITY GRILLES

- A. Securely fasten to structural framing around opening with tamper-proof fasteners.

3.5 INSTALLATION - BOLLARDS

- F. Anchor bollards in concrete by means of pipe sleeves preset and anchored into concrete. After bollards have been inserted into sleeves, fill annular space between bollard and sleeve solid with nonshrink, nonmetallic grout, mixed and placed to comply with grout manufacturer's directions.
- G. Install pipe bollard plastic covers per manufacturer's recommendation.

3.4 ADJUSTING AND CLEANING

- A. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 requirements for touch-up of field painted surfaces.
 - 1. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. For galvanized surfaces clean welds, bolted connections and abraded areas and apply galvanizing repair paint to comply with ASTM A780.

USPS CSF Specifications issued: 10/1/2013

Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 50 00 00 - MPF METAL FABRICATIONS**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Major Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1. SUMMARY

- A. Miscellaneous steel that is not covered in Section 051200.
- B. Door frames for special doors.
- C. Stairs, landing sand associated guardrails and handrails.
- D. Ladders.
- E. Loose lintels and shelf angles.
- F. Pipe bollards.
- G. Metal joint covers.
- H. Interior pedestrian guardrails
- I. Pipe bollard plastic covers

1.2 SUBMITTALS

- A. Shop Drawings: Required
- B. Samples: Required
- C. Product Data: Required

1.3 QUALITY ASSURANCE

- A. Quality Standards: Comply with ASTM and AISC requirements.
- B. Regulatory Requirements:
 - 1. Design stair assembly to support live load of 100 pounds per square foot with deflection of stringer or landing framing not to exceed 1/240 of span.
 - 2. Design guardrail system for the following loads applied to the top rail:
 - a. Uniform load of 50 pounds per linear foot applied horizontally and concurrently with uniform load of 100 pounds per linear foot applied vertically downward.
 - b. Concentrated load of 250 pounds applied at any point and in any direction.
 - c. Concentrated and uniform loadings shall not be applied simultaneously.

3. Design handrails for the following loads:
 - a. Uniform load of 50 pounds per linear foot applied in any direction.
 - b. Concentrated load of 250 pounds applied at any point and in any direction.
 - c. Concentrated and uniform load shall not be applied concurrently.
4. Conform to applicable Building Code and OSHA requirements.

PART 2 – PRODUCTS

2.1 MATERIALS

- A. Structural Steel Members: Conform to ASTM A 36.
- B. Tubing, Pipe: Conform to ASTM A 53.
- C. Sheet: Conform to ASTM A 568.
- D. Welding: Conform to AWS D1.1 “Structural Welding Code.”
- E. Bolts, Nuts and Washers: Conform to ASTM A 307.
- F. Handrail Fittings: Cast or Machined steel.
- G. Pipe Bollard: 6” dia., Schedule 40 pipe, concrete filled with end cap.
- H. Extruded Aluminum: ASTM B 221
- I. Interior Pedestrian Guardrail: W beam rail elements fabricated from corrugated sheet steel conforming to AASHTO M 180, Type 3, Class A with W6 x 9 post and base plate for bolted connection to slab.
- J. Anchors and Fasteners for Aluminum: Stainless Steel, ASTM A 304
- K. Pipe Bollard Plastic Covers: Exterior shell cover of low density polyethylene and interior steel sleeve. Covers are to be 1/4 inch nominal wall thickness with ultraviolet and anti-static additives and a dome top. Install over steel pipe posts as indicated on Drawings. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Ideal Shield, L.L.C., Detroit, MI (313) 842-7290, (800) 731-1722.
 2. Liberty Equipment Sales, Houston, TX (281) 987-8708, (888) 987-8708.

2.2 FABRICATION

- A. Stairs and Landings:
 1. Closed risers and concrete filled metal pan treads construction.
 2. Form treads, landings, and riser of sheet steel stock.
 3. Form stringers with rolled steel channels or rectangular hollow sections.
- B. Handrails:
 1. Form posts and railings from steel pipe sections.
- C. Shop/Factory Finishing:
 1. Interior components: Prime painted.
 2. Exterior components: Galvanized.

2.3 FIELD QUALITY CONTROL

- A. Field Test: If required by Local codes.

- B. Field Inspection: If required by Local codes.

2.4 SCHEDULES

- A. Door Frames for Exterior Overhead Door Openings: Channel sections; galvanized finish.
- B. Frames for Interior Impact, Overhead Coiling and Rapid Roll-up Doors: Channel sections; primed finish.
- C. Dock leveler edge angles: Galvanized finish.
- D. Dock edge channels: Galvanized finish.
- E. Pipe bollards: Primed finish for interior and galvanized finish for exterior.
- F. Interior Pedestrian Guardrails: primed finish with safety yellow top coat.
- G. Interior ladders: Primed finish.
- H. Exterior ladders: Galvanized finish.
- I. Stair nosings at concrete stairs: Provide cast non-corrosive metal safety nosing (minimum 3" x 3/8") with cross-hatched abrasive surface and integrally cast anchors at each exposed concrete stair tread.
- J. Expansion joint covers: Extruded aluminum clear anodized finish.
- K. Loose steel lintels in masonry openings: Galvanized finish, exterior; primed finish, interior.
- L. Shelf angles: Galvanized finish.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

SECTION 05 52 13 00 - CSF PIPE AND TUBE RAILINGS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

This specification is for steel handrail and railing, specification should be modified if aluminum rail is used in the project for coastal and cold climate sites due to salt contents in the air or ground.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.05 52 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel pipe handrails.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 099100 - Painting: Field paint finish.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 53 - Specification for Hot-Dipped, Zinc-coated Welded and Seamless Steel Pipe.
 - 2. ASTM 123 - Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
 - 3. ASTM E 894 - Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings.
 - 4. ASTM E 935 - Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings.
 - 5. ASTM E 985 - Permanent Metal Railing Systems and Rails for Buildings.
- B. Steel Structures Painting council (SSPC):
 - 1. SSPC Paint 15 - Type 1, Red Oxide.
 - 2. SSPC Paint 20 - Type 1 Inorganic Zinc Rich.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. Design, engineer, fabricate and install handrails and railing systems to comply with requirements of ASTM E 985 for structural performance based on testing performed in accordance with ASTM E 894 and E 935.
 - 2. Railing assembly, wall rails, and attachments to comply with local code requirements and to resist minimum lateral force according to IBC or more stringent local building code at any point without damage or permanent set.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Pipe: ASTM A 53, Grade B Schedule 80.
- B. Rails and Posts: Steel pipe; with welded joints, of sizes and shapes as indicated on Drawings.
- C. Fittings: Elbows, T-shapes, wall brackets, escutcheons; machined steel.
- D. Mounting on Concrete Floor: Steel sleeves, sized to receive railing post with 1/4 inch clearance.
- E. Mounting on Masonry or Concrete Walls: Brackets with anchors for building in masonry.
- F. Mounting on Stud Walls: Brackets and anchor plates, predrilled to receive bolts.
- G. Splice Connectors: Steel threaded collars.

2.2 FABRICATION

- A. Fit and shop assemble sections in largest practical sizes, for delivery to site and installation.
- B. Supply components required for secure anchorage of handrails and railings.
- C. Fully weld joints. Grind exposed welds smooth and flush with adjacent surfaces.
- D. Wake exposed joint butt tight, flush, and hairline.

- E. Accurately form components required for anchorage of railings to each other and to building structure.
- F. Prime railings which will be exposed.

2.3 FINISH

- A. At Building Exterior:
 - 1. Galvanizing: ASTM A123; provide minimum 2.0 ounces per square foot.
 - 2. Touch-Up Primer for Galvanized Surfaces: SSPC 20 Type I Inorganic zinc rich.
- B. At Building Interior: SSPC 15, Type 1, red oxide.
- C. Field paint as specified in Section 099100.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify field dimensions prior to shop fabrication.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Furnish items required to be cast into concrete, embedded in masonry, placed in partitions with setting templates, to appropriate Sections.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's published instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects.
- C. Anchor railings to structure with anchors in conformance with ASTM E 985.
- D. Field weld anchors as indicated on Drawings. Touch-up welds with primer. Grind welds smooth.
- E. Insert railing posts in sleeves and pack sleeves with non-shrink grout.

3.4 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maximum Variation From Plumb: 1/4 inch.
 - 2. Maximum Offset From True Alignment: 1/4 inch.
 - 3. Maximum Out-of-Position: 1/4 inch.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect railings and handrail installation and attachment to structure.
- C. Inspect paint finish applied to surfaces.

 - 3. ASTM E 894 - Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings.
 - 4. ASTM E 935 - Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings.
 - 5. ASTM E 985 - Permanent Metal Railing Systems and Rails for Buildings.
- B. Steel Structures Painting council (SSPC):
 - 1. SSPC Paint 15 - Type 1, Red Oxide.
 - 2. SSPC Paint 20 - Type 1 Inorganic Zinc Rich.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements:
 - 1. Design, engineer, fabricate and install handrails and railing systems to comply with requirements of ASTM E 985 for structural performance based on testing performed in accordance with ASTM E 894 and E 935.

2. Railing assembly, wall rails, and attachments to comply with local code requirements and to resist minimum lateral force according to IBC or more stringent local building code at any point without damage or permanent set.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.
 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Pipe: ASTM A 53, Grade B Schedule 80.
- B. Rails and Posts: Steel pipe; with welded joints, of sizes and shapes as indicated on Drawings.
- C. Fittings: Elbows, T-shapes, wall brackets, escutcheons; machined steel.
- D. Mounting on Concrete Floor: Steel sleeves, sized to receive railing post with 1/4 inch clearance.
- E. Mounting on Masonry or Concrete Walls: Brackets with anchors for building in masonry.
- F. Mounting on Stud Walls: Brackets and anchor plates, predrilled to receive bolts.
- G. Splice Connectors: Steel threaded collars.

2.2 FABRICATION

- A. Fit and shop assemble sections in largest practical sizes, for delivery to site and installation.
- B. Supply components required for secure anchorage of handrails and railings.
- C. Fully weld joints. Grind exposed welds smooth and flush with adjacent surfaces.
- D. Wake exposed joint butt tight, flush, and hairline.
- E. Accurately form components required for anchorage of railings to each other and to building structure.
- F. Prime railings which will be exposed.

2.3 FINISH

- A. At Building Exterior:
 - 1. Galvanizing: ASTM A123; provide minimum 2.0 ounces per square foot.
 - 2. Touch-Up Primer for Galvanized Surfaces: SSPC 20 Type I Inorganic zinc rich.
- B. At Building Interior: SSPC 15, Type 1, red oxide.
- C. Field paint as specified in Section 099100.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify field dimensions prior to shop fabrication.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Furnish items required to be cast into concrete, embedded in masonry, placed in partitions with setting templates, to appropriate Sections.

3.3 INSTALLATION

- A. Install in accordance with manufacturer's published instructions.
- B. Install components plumb and level, accurately fitted, free from distortion or defects.
- C. Anchor railings to structure with anchors in conformance with ASTM E 985.
- D. Field weld anchors as indicated on Drawings. Touch-up welds with primer. Grind welds smooth.
- E. Insert railing posts in sleeves and pack sleeves with non-shrink grout.

3.4 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maximum Variation From Plumb: 1/4 inch.
 - 2. Maximum Offset From True Alignment: 1/4 inch.
 - 3. Maximum Out-of-Position: 1/4 inch.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect railings and handrail installation and attachment to structure.
- C. Inspect paint finish applied to surfaces.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/5/2012

END OF SECTION 05 52 13 00

SECTION 05 53 13 00 - GRATINGS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for gratings. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Metal bar gratings.
 - b. Expanded-metal gratings.
 - c. Formed-metal plank gratings.
 - d. Extruded-aluminum plank gratings.
 - e. Glass-fiber-reinforced plastic gratings.
 - f. Metal frames and supports for gratings.

C. Performance Requirements

1. Delegated Design: Design gratings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
2. Structural Performance: Gratings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
 - a. Loads in subparagraphs below are examples based on the 2006 International Building Code and ASCE/SEI 7. Adjust to local Project requirements.
 - 1) Floors (light manufacturing): Uniform load of 125 lbf/sq. ft. (6.00 kN/sq. m) or concentrated load of 2000 lbf (8.90 kN), whichever produces the greater stress.
 - 2) Floors (heavy manufacturing): Uniform load of 250 lbf/sq. ft. (11.97 kN/sq. m) or concentrated load of 3000 lbf (13.40 kN), whichever produces the greater stress.
 - 3) Walkways and Elevated Platforms Other Than Exits: Uniform load of 60 lbf/sq. ft. (2.87 kN/sq. m).
 - 4) Walkways and Elevated Platforms Used as Exits: Uniform load of 100 lbf/sq. ft. (4.79 kN/sq. m).
 - 5) Sidewalks and Vehicular Driveways, Subject to Trucking: Uniform load of 250 lbf/sq. ft. (11.97 kN/sq. m) or concentrated load of 8000 lbf (35.60 kN), whichever produces the greater stress.
 - 6) Limit deflection to L/240 **OR** L/360, **as directed**, or 1/4 inch (6.4 mm), whichever is less.
3. Seismic Performance: Provide gratings capable of withstanding the effects of earthquake motions determined according to ASCE/SEI 7.

D. Submittals

1. Product Data: For the following:
 - a. Formed-metal plank gratings.
 - b. Extruded-aluminum plank gratings.
 - c. Glass-fiber-reinforced plastic gratings.
 - d. Clips and anchorage devices for gratings.
 - e. Paint products.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: Indicating percentages by weight of postconsumer and preconsumer recycled content for products having recycled content. Include statement indicating costs for each product having recycled content.
3. Shop Drawings: Include plans, sections, details, and attachments to other work.

4. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
5. Qualification Data: For qualified professional engineer.
6. Mill Certificates: Signed by manufacturers of stainless-steel sheet certifying that products furnished comply with requirements.
7. Welding certificates.
8. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

E. Quality Assurance

1. Metal Bar Grating Standards: Comply with NAAMM MBG 531, "Metal Bar Grating Manual" and NAAMM MBG 532, "Heavy-Duty Metal Bar Grating Manual."
2. Welding Qualifications: Qualify procedures and personnel according to the following:
 - a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - b. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - c. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - d. AWS D1.6, "Structural Welding Code - Stainless Steel."

F. Project Conditions

1. Field Measurements: Verify actual locations of walls and other construction contiguous with gratings by field measurements before fabrication.

G. Coordination

1. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.
2. Coordinate installation of anchorages for gratings, grating frames, and supports. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.2 PRODUCTS

A. Ferrous Metals

1. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
2. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.
3. Steel Bars for Bar Gratings: ASTM A 36/A 36M or steel strip, ASTM A 1011/A 1011M or ASTM A 1018/A 1018M.
4. Wire Rod for Bar Grating Crossbars: ASTM A 510 (ASTM A 510M).
5. Uncoated Steel Sheet: ASTM A 1011/A 1011M, structural steel, Grade 30 (Grade 205).
6. Galvanized-Steel Sheet: ASTM A 653/A 653M, structural quality, Grade 33 (Grade 230), with G90 (Z275) coating.
7. Expanded-Metal Carbon Steel: ASTM F 1267, Class 1.
8. Expanded-Metal Galvanized Steel: ASTM F 1267, Class 2, Grade A.
9. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, Type 304 **OR** Type 316, **as directed**.
10. Stainless-Steel Bars and Shapes: ASTM A 276, Type 304 **OR** Type 316, **as directed**.
11. Expanded-Metal Stainless Steel: ASTM F 1267, Class 3, made from stainless-steel sheet, ASTM A 666, Type 304 **OR** Type 316, **as directed**.

B. Aluminum

1. Aluminum, General: Provide alloy and temper recommended by aluminum producer for type of use indicated, and with not less than the strength and durability properties of alloy and temper designated below for each aluminum form required.
 2. Extruded Bars and Shapes: ASTM B 221 (ASTM B 221M), alloys as follows:
 - a. 6061-T6 or 6063-T6, for bearing bars of gratings and shapes.
 - b. 6061-T1, for grating crossbars.
 3. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 5052-H32.
- C. Fasteners
1. General: Unless otherwise indicated, provide Type 304 **OR** Type 316, **as directed**, stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.
 - a. Provide stainless-steel fasteners for fastening aluminum.
 - b. Provide stainless steel fasteners for fastening stainless steel.
 2. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6); with hex nuts, ASTM A 563 (ASTM A 563M); and, where indicated, flat washers.
 3. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, nuts, and, where indicated, flat washers; ASTM F 593 (ASTM F 738M) for bolts and ASTM F 594 (ASTM F 836M) for nuts, Alloy Group 1 (A1) **OR** Group 2 (A4), **as directed**.
 4. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563 (ASTM A 563M); and, where indicated, flat washers.
 - a. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.
 5. Plain Washers: Round, ASME B18.22.1 (ASME B18.22M).
 6. Lock Washers: Helical, spring type, ASME B18.21.1 (ASME B18.21.2M).
 7. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 - b. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 1 (A1) **OR** Group 2 (A4), **as directed**, stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).
- D. Miscellaneous Materials
1. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy that is welded.
 2. Shop Primers: Provide primers that comply with Division 07 **OR** Division 09 Section(s) "High-performance Coatings" **OR** Division 07 **AND** Division 09 Section(s) "High-performance Coatings", **as directed**.
 3. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - a. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
 4. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
 5. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
 6. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
- E. Fabrication
1. Shop Assembly: Fabricate grating sections in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling

limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

2. Cut, drill, and punch material cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.
3. Form from materials of size, thickness, and shapes indicated, but not less than that needed to support indicated loads.
4. Fit exposed connections accurately together to form hairline joints.
5. Welding: Comply with AWS recommendations and the following:
 - a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - b. Obtain fusion without undercut or overlap.
 - c. Remove welding flux immediately.
6. Provide for anchorage of type indicated; coordinate with supporting structure. Fabricate and space the anchoring devices to secure gratings, frames, and supports rigidly in place and to support indicated loads.
 - a. Fabricate toeplates to fit grating units and weld to units in shop unless otherwise indicated.
OR
Fabricate toeplates for attaching in the field.
 - b. Toeplate Height: 4 inches (100 mm) unless otherwise indicated.

F. Metal Bar Gratings

1. Welded Steel Grating:
 - a. Bearing Bar Spacing: 7/16 or 1/2 inch (11 or 13 mm) **OR** 11/16 inch (17 mm) **OR** 15/16 inch (24 mm) **OR** 1-3/16 inches (30 mm) **OR** 1-3/8 inches (35 mm) **OR** 1-7/8 inches (48 mm) **OR** 2-3/8 inches (60 mm), **as directed**, o.c.
 - b. Bearing Bar Depth: 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** 3 inches (76 mm) **OR** 3-1/2 inches (89 mm) **OR** 4 inches (102 mm) **OR** 4-1/2 inches (114 mm) **OR** 5 inches (127 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Thickness: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - d. Crossbar Spacing: 2 inches (51 mm) **OR** 4 inches (102 mm), **as directed**, o.c.
 - e. Grating Mark W-11-4 (1 x 3/16) STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - f. Grating Mark W-15-4 (1 x 1/8) STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - g. Grating Mark W-19-4 (1-1/4 x 3/16) STEEL: 1-1/4-by-3/16-inch (32-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - h. Grating Mark W-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - i. Grating Mark W-19-4 (2 x 1/4) STEEL: 2-by-1/4-inch (51-by-6.4-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - j. Grating Mark W-30-4 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars at 1-7/8 inches (60 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - k. Grating Mark: As indicated.
 - l. Traffic Surface: Plain **OR** Serrated **OR** Knurled **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
 - m. Steel Finish: Shop primed **OR** Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface, **as directed**.
2. Pressure-Locked Steel Grating: Fabricated by pressing rectangular flush-top crossbars into slotted bearing bars or swaging crossbars between bearing bars.

- a. Bearing Bar Spacing: 7/16 or 1/2 inch (11 or 13 mm) **OR** 11/16 inch (17 mm) **OR** 15/16 inch (24 mm) **OR** 1-3/16 inches (30 mm), **as directed**, o.c.
 - b. Bearing Bar Depth: 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Thickness: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - d. Crossbar Spacing: 2 inches (51 mm) **OR** 4 inches (102 mm), **as directed**, o.c.
 - e. Grating Mark P-11-4 (1 x 3/16) STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - f. Grating Mark P-15-4 (1-1/4 x 1/8) STEEL: 1-1/4-by-1/8-inch (32-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - g. Grating Mark P-19-4 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - h. Grating Mark: As indicated.
 - i. Traffic Surface: Plain **OR** Serrated **OR** Knurled **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
 - j. Steel Finish: Shop primed **OR** Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface, **as directed**.
3. Riveted Steel Grating:
- a. Bearing Bar Spacing: 3/4 inch (19 mm) **OR** 1-1/8 inches (29 mm) **OR** 2-5/16 inches (59 mm), **as directed**, clear.
 - b. Bearing Bar Depth: 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** 3 inches (76 mm) **OR** 3-1/2 inches (89 mm) **OR** 4 inches (102 mm) **OR** 4-1/2 inches (114 mm) **OR** 5 inches (127 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Thickness: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - d. Rivet Spacing: 3-1/2 inches (89 mm) **OR** 5 inches (127 mm) **OR** 7 inches (178 mm), **as directed**, o.c. along bearing bar.
 - e. Grating Mark R-12-3-1/2 (1 x 1/8) STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars with 3/4-inch (19-mm) clear space between bearing bars, and rivets at 3-1/2 inches (89 mm) o.c. along bearing bar.
 - f. Grating Mark R-18-7 (1-1/2 x 3/16) STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars with 1-1/8-inch (29-mm) clear space between bearing bars, and rivets at 7 inches (178 mm) o.c. along bearing bar.
 - g. Grating Mark R-37-5 (4 x 1/4) STEEL: 4-by-1/4-inch (102-by-6.4-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 - h. Grating Mark R-37-5 (5 x 3/8) STEEL: 5-by-3/8-inch (127-by-9.5-mm) bearing bars with 2-5/16-inch (59-mm) clear space between bearing bars, and rivets at 5 inches (127 mm) o.c. along bearing bar.
 - i. Grating Mark: As indicated.
 - j. Traffic Surface: Plain **OR** Serrated **OR** Knurled **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
 - k. Steel Finish: Shop primed **OR** Hot-dip galvanized with a coating weight of not less than 1.8 oz./sq. ft. (550 g/sq. m) of coated surface, **as directed**.
4. Pressure-Locked, Stainless-Steel Grating: Fabricated by pressing rectangular flush-top crossbars into slotted bearing bars or swaging crossbars between bearing bars, **as directed**.
- a. Bearing Bar Spacing: 7/16 or 1/2 inch (11 or 13 mm) **OR** 11/16 inch (17 mm) **OR** 15/16 inch (24 mm) **OR** 1-3/16 inches (30 mm) **OR** 1-3/8 inches (35 mm) **OR** 1-7/8 inches (48 mm) **OR** 2-3/8 inches (60 mm), **as directed**, o.c.

- b. Bearing Bar Depth: 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** 3 inches (76 mm) **OR** 3-1/2 inches (89 mm) **OR** 4 inches (102 mm) **OR** 4-1/2 inches (114 mm) **OR** 5 inches (127 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Thickness: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - d. Crossbar Spacing: 2 inches (51 mm) **OR** 4 inches (102 mm), **as directed**, o.c.
 - e. Grating Mark P-11-4 (1 x 3/16) STAINLESS STEEL: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - f. Grating Mark P-15-2 (1 x 1/8) STAINLESS STEEL: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 2 inches (51 mm) o.c.
 - g. Grating Mark P-19-4 (1-1/2 x 3/16) STAINLESS STEEL: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - h. Grating Mark P-30-4 (3 x 3/8) STAINLESS STEEL: 3-by-3/8-inch (76-by-9.5-mm) bearing bars at 1-7/8 inches (48 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - i. Grating Mark: As indicated.
 - j. Traffic Surface: Plain **OR** Serrated **OR** Knurled **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
 - k. Finish: Mill finish **OR** Abrasive blasted **OR** Electropolished, **as directed**.
5. Pressure-Locked, Rectangular Bar Aluminum Grating: Fabricated by pressing rectangular flush-top crossbars into slotted bearing bars or swaging crossbars between bearing bars.
- a. Bearing Bar Spacing: 7/16 or 1/2 inch (11 or 13 mm) **OR** 11/16 inch (17.5 mm) **OR** 15/16 inch (24 mm) **OR** 1-3/16 inches (30 mm), **as directed**, o.c.
 - b. Bearing Bar Depth: 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Thickness: 1/8 inch (3.2 mm) **OR** 3/16 inch (4.8 mm) **OR** 1/4 inch (6.4 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - d. Crossbar Spacing: 2 inches (51 mm) **OR** 4 inches (102 mm), **as directed**, o.c.
 - e. Grating Mark P-7-4 (1 x 1/8) ALUMINUM: 1-by-1/8-inch (25-by-3.2-mm) bearing bars at 7/16 inch (11 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - f. Grating Mark P-11-4 (1 x 3/16) ALUMINUM: 1-by-3/16-inch (25-by-4.8-mm) bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - g. Grating Mark P-15-4 (1-1/2 x 3/16) ALUMINUM: 1-1/2-by-3/16-inch (38-by-4.8-mm) bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - h. Grating Mark P-19-4 (2 x 3/16) ALUMINUM: 2-by-3/16-inch (51-by-4.8-mm) bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
 - i. Grating Mark: As indicated.
 - j. Traffic Surface: Plain **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
 - k. Aluminum Finish: Mill finish **OR** Class I, clear, anodized finish, **as directed**.
6. Pressure-Locked, Aluminum I-Bar Grating: Fabricated by swaging crossbars between bearing bars.
- a. Bearing Bar Spacing: 7/16 or 1/2 inch (11 or 13 mm) **OR** 11/16 inch (17 mm) **OR** 15/16 inch (24 mm) **OR** 1-3/16 inches (30 mm), **as directed**, o.c.
 - b. Bearing Bar Depth: 1 inch (25 mm) **OR** 1-1/4 inches (32 mm) **OR** 1-1/2 inches (38 mm) **OR** 1-3/4 inches (44 mm) **OR** 2 inches (51 mm) **OR** 2-1/4 inches (57 mm) **OR** 2-1/2 inches (64 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Bearing Bar Flange Width: 1/4 inch (6.4 mm).
 - d. Crossbar Spacing: 2 inches (51 mm) **OR** 4 inches (102 mm), **as directed**, o.c.
 - e. Grating Mark P-11-4 (1 I-Bar) ALUMINUM: 1-inch (25-mm) I-bar bearing bars at 11/16 inch (18 mm) o.c., and crossbars at 4 inches (102 mm) o.c.

- f. Grating Mark P-15-2 (1 I-Bar) ALUMINUM: 1-inch (25-mm) I-bar bearing bars at 15/16 inch (24 mm) o.c., and crossbars at 2 inches (51 mm) o.c.
- g. Grating Mark P-19-4 (1-1/2 I-Bar) ALUMINUM: 1-1/2-inch (38-mm) I-bar bearing bars at 1-3/16 inches (30 mm) o.c., and crossbars at 4 inches (102 mm) o.c.
- h. Grating Mark: As indicated.
- i. Traffic Surface: Plain **OR** Grooved **OR** Applied abrasive finish consisting of aluminum-oxide aggregate in an epoxy-resin adhesive **OR** As indicated, **as directed**.
- j. Aluminum Finish: Mill finish **OR** Class I, clear, anodized finish, **as directed**.
7. Removable Grating Sections: Fabricate with banding bars attached by welding to entire perimeter of each section. Include anchors and fasteners of type indicated or, if not indicated, as recommended by manufacturer for attaching to supports.
 - a. Provide no fewer than four weld lugs for each heavy-duty grating section, with each lug shop welded to two bearing bars.
 - b. Provide no fewer than four saddle clips for each grating section composed of rectangular bearing bars 3/16 inch (4.8 mm) or less in thickness and spaced 15/16 inch (24 mm) or more o.c., with each clip designed and fabricated to fit over two bearing bars.
 - c. Provide no fewer than four weld lugs for each grating section composed of rectangular bearing bars 3/16 inch (4.8 mm) or less in thickness and spaced less than 15/16 inch (24 mm) o.c., with each lug shop welded to three or more bearing bars. Interrupt intermediate bearing bars as necessary for fasteners securing grating to supports.
 - d. Provide no fewer than four flange blocks for each section of aluminum I-bar grating, with block designed to fit over lower flange of I-shaped bearing bars.
 - e. Furnish threaded bolts with nuts and washers for securing grating to supports.
 - f. Furnish self-drilling fasteners with washers for securing grating to supports.
 - g. Furnish galvanized malleable-iron flange clamp with galvanized bolt for securing grating to supports. Furnish as a system designed to be installed from above grating by one person.
8. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
 - a. Edge-band openings in grating that interrupt four or more bearing bars with bars of same size and material as bearing bars.
9. Do not notch bearing bars at supports to maintain elevation.
- G. Expanded-Metal Gratings
 1. Provide expanded-metal gratings in material, finish, style, size, thickness, weight, and type indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
 - a. Material: Steel **OR** Stainless steel **OR** Aluminum, **as directed**.
 - b. Steel Finish: Unfinished, oiled **OR** Shop primed **OR** Galvanized, **as directed**.
 - c. Stainless-Steel Finish: Mill finish, as fabricated.
 - d. Aluminum Finish: Mill finish, as fabricated.
 - e. Style Designation (for steel): 4.27 lb **OR** 3/4 number 9, **as directed**.
 - f. Style Designation (for stainless steel): 1-1/2 number 9 **OR** 3/4 number 9, **as directed**.
 - g. Size (for aluminum): 2 lb **OR** 3/4 0.188 **OR** 1-1/2 0.125, **as directed**.
 - h. Type: I, expanded **OR** II, expanded and flattened, **as directed**.
 2. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with bars having a thickness not less than overall grating thickness at contact points.
 3. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than 1/8 inch (3 mm) thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.
- H. Formed-Metal Plank Gratings
 1. C-shaped channels rolled from heavy sheet metal of thickness indicated, and punched in serrated diamond shape to produce raised slip-resistant surface and drainage holes.

- a. Channel Width: 4-3/4 inches (121 mm) **OR** 7 inches (178 mm) **OR** 9-1/2 inches (241 mm) **OR** 11-3/4 inches (298 mm) **OR** 18-3/4 inches (476 mm) **OR** 24 inches (610 mm) **OR** As indicated **OR** As required to comply with structural performance requirements, **as directed**.
 - b. Channel Depth: 1-1/2 inches (38 mm) **OR** 2 inches (51 mm) **OR** 2-1/2 inches (64 mm) **OR** 3 inches (76 mm) **OR** As indicated **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Material: 0.074-inch- (1.9-mm-) thick steel sheet, shop primed **OR** 0.104-inch- (2.65-mm-) thick steel sheet, shop primed **OR** 0.079-inch- (2.0-mm-) thick, hot-dip galvanized-steel sheet **OR** 0.108-inch- (2.8-mm-) thick, hot-dip galvanized-steel sheet **OR** 0.074-inch- (1.9-mm-) thick steel sheet, hot-dip galvanized after fabrication **OR** 0.104-inch- (2.65-mm-) thick steel sheet, hot-dip galvanized after fabrication **OR** 0.062-inch- (1.6-mm-) thick, stainless-steel sheet **OR** 0.078-inch- (2.0-mm-) thick, stainless-steel sheet **OR** 0.080-inch- (2.0-mm-) thick aluminum sheet **OR** 0.100-inch- (2.5-mm-) thick aluminum sheet, **as directed**.
2. Fabricate cutouts in grating sections for penetrations of sizes and at locations indicated. Cut openings neatly and accurately to size. Edge-band openings with metal sheet or bars having a thickness not less than grating material.
 3. Where gratings are pierced by pipes, ducts, and structural members, cut openings neatly and accurately to size and weld a strap collar not less than 1/8 inch (3 mm) thick to the cut ends. Divide panels into sections only to extent required for installation where grating platforms and runways are to be placed around previously installed pipe, ducts, and structural members.
- I. Extruded-Aluminum Plank Gratings
1. Provide extruded-aluminum plank gratings in type, size, and finish indicated or, if not indicated, as recommended by manufacturer for indicated applications and as needed to support indicated loads.
 - a. Type: Extruded-aluminum planks approximately 6 inches (152 mm) wide with multiple flanges approximately 1.2 inches (30 mm) o.c., acting as bearing bars connected by a web that serves as a walking surface. Top surface has raised ribs to increase slip resistance.
 - b. Depth: 1 inch (25 mm) **OR** 1-1/2 inches (38 mm) **OR** 2 inches (51 mm) **OR** As required to comply with structural performance requirements, **as directed**.
 - c. Perforations: None **OR** Rectangular, 19/32 by 3 inches (15 by 76 mm), with adjacent rows staggered **OR** 19/32 inch (15 mm) square, with adjacent rows aligned, **as directed**.
 - d. Finish: Mill finish, as fabricated.
 2. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
- J. Glass-Fiber-Reinforced Plastic Gratings
1. Molded Glass-Fiber-Reinforced Gratings: Bar gratings made by placing glass-fiber strands that have been saturated with thermosetting plastic resin in molds in alternating directions to form interlocking bars without voids and with a high resin content.
 - a. Configuration: 1-1/2-inch- (38-mm-) square mesh, 1 inch (25 mm) thick **OR** 1-1/2-inch- (38-mm-) square mesh, 1-1/4 inches (32 mm) thick **OR** 1-1/2-inch- (38-mm-) square mesh, 1-1/2 inches (38 mm) thick **OR** 2-inch- (51-mm-) square mesh, 2 inches (51 mm) thick **OR** 1-1/2-inch- (38-mm-) square mesh, thickness as required to comply with structural performance requirements **OR** As required to comply with structural performance requirements, **as directed**.
 - b. Weight: 2.5 lb/sq. ft. (12.2 kg/sq. m) **OR** 2.7 lb/sq. ft. (13.2 kg/sq. m) **OR** 3.2 lb/sq. ft. (15.6 kg/sq. m) **OR** 3.5 lb/sq. ft. (17.1 kg/sq. m) **OR** 3.7 lb/sq. ft. (18.1 kg/sq. m) **OR** 4.1 lb/sq. ft. (20.0 kg/sq. m) **OR** 5.0 lb/sq. ft. (24.4 kg/sq. m), **as directed**.
 - c. Resin: Polyester **OR** Vinylester, **as directed**.
 - 1) Flame-Spread Index: 25 or less when tested according to ASTM E 84.
 - 2) U.S.D.A. Acceptance: Accepted for food-processing applications.
 - d. Color: Beige **OR** Gray **OR** Green **OR** Orange **OR** Yellow **OR** Manufacturer's standard, **as directed**.
 - e. Traffic Surface: Plain, meniscus **OR** Applied abrasive finish **OR** As indicated, **as directed**.

2. Pultruded Glass-Fiber-Reinforced Gratings: Bar gratings assembled from components made by simultaneously pulling glass fibers and extruding thermosetting plastic resin through a heated die under pressure to produce a product without voids and with a high glass-fiber content.
 - a. Configuration: I4010; 1-inch (25-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open) **OR** I6010; 1-inch (25-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open) **OR** I4015; 1-1/2-inch (38-mm) I-bars spaced 1 inch (25 mm) o.c. (40 percent open) **OR** I6015; 1-1/2-inch (38-mm) I-bars spaced 1-1/2 inches (38 mm) o.c. (60 percent open) **OR** T3320; 2-inch (51-mm) T-bars spaced 1-1/2 inches (38 mm) o.c. (33 percent open) **OR** T5020; 2-inch (51-mm) T-bars spaced 2 inches (51 mm) o.c. (50 percent open) **OR** As required to comply with structural performance requirements, **as directed**.
 - b. Weight: 2.35 lb/sq. ft. (11.5 kg/sq. m) **OR** 2.83 lb/sq. ft. (13.8 kg/sq. m) **OR** 3.10 lb/sq. ft. (15.1 kg/sq. m) **OR** 3.41 lb/sq. ft. (16.6 kg/sq. m) **OR** 4.10 lb/sq. ft. (20.0 kg/sq. m) **OR** 4.13 lb/sq. ft. (20.2 kg/sq. m), **as directed**.
 - c. Resin Type: Polyester **OR** Vinylester, **as directed**.
 - 1) Flame-Spread Index: 25 or less when tested according to ASTM E 84.
 - 2) U.S.D.A. Acceptance: Accepted for food processing applications.
 - d. Color: Beige **OR** Gray **OR** Green **OR** Orange **OR** Yellow **OR** Manufacturer's standard, **as directed**.
 - e. Traffic Surface: Plain, grooved **OR** Applied abrasive finish **OR** As indicated, **as directed**.
 3. Fabricate cutouts in grating sections for penetrations indicated. Arrange cutouts to permit grating removal without disturbing items penetrating gratings.
- K. Grating Frames And Supports
1. Frames and Supports for Metal Gratings: Fabricate from metal shapes, plates, and bars of welded construction to sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter and weld connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 - a. Unless otherwise indicated, fabricate from same basic metal as gratings.
 - b. Equip units indicated to be cast into concrete or built into masonry with integrally welded anchors. Unless otherwise indicated, space anchors 24 inches (600 mm) o.c. and provide minimum anchor units in the form of steel straps 1-1/4 inches (32 mm) wide by 1/4 inch (6 mm) thick by 8 inches (200 mm) long.
 2. Frames and Supports for Glass-Fiber-Reinforced Plastic Gratings: Fabricate from glass-fiber-reinforced plastic shapes of sizes, shapes, and profiles indicated and as necessary to receive gratings. Miter connections for perimeter angle frames. Cut, drill, and tap units to receive hardware and similar items.
 - a. Unless otherwise indicated, use shapes made from same resin as gratings.
 - b. Equip units indicated to be cast into concrete or built into masonry with integral anchors.
 3. Galvanize steel frames and supports in the following locations:
 - a. Exterior.
 - b. Interior, where indicated.
- L. Aluminum Finishes
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 2. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
- M. Steel Finishes
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 2. Finish gratings, frames, and supports after assembly.
 3. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

- a. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
4. Shop prime gratings, frames and supports not indicated to be galvanized unless otherwise indicated.
 - a. Shop prime with universal shop primer **OR** primers specified in Division 07, **as directed**, unless zinc-rich primer is **OR** primers specified in Division 09 Section "High-performance Coatings" are, **as directed**, indicated.
5. Preparation for Shop Priming: Prepare surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning" **OR** SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning" **OR** requirements indicated below, **as directed**:
 - a. Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - b. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - c. Items Indicated to Receive Primers Specified in Division 9 Section "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
 - d. Other Items: SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."
6. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

1.3 EXECUTION

A. Installation, General

1. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary for securing gratings to in-place construction. Include threaded fasteners for concrete and masonry inserts, through-bolts, lag bolts, and other connectors.
2. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing gratings. Set units accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.
3. Provide temporary bracing or anchors in formwork for items that are to be built into concrete or masonry.
4. Fit exposed connections accurately together to form hairline joints.
 - a. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade the surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.
5. Attach toeplates to gratings by welding at locations indicated.
6. Field Welding: Comply with the following requirements:
 - a. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - b. Obtain fusion without undercut or overlap.
 - c. Remove welding flux immediately.
7. Corrosion Protection: Coat concealed surfaces of aluminum that will come into contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Installing Metal Bar Gratings

1. General: Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.
2. Attach removable units to supporting members with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.
3. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting as indicated above.

- C. Installing Expanded-Metal Gratings
 - 1. General: Comply with manufacturer's written instructions for installing gratings.
 - 2. Place units with straight edge of bond up and with long direction of diamond-shaped openings parallel to direction of span.
 - 3. Attach removable units to supporting members by bolting at 6-inch (150-mm) intervals.
 - 4. Attach nonremovable units to supporting members by welding unless otherwise indicated. Space welds at 6-inch (150-mm) intervals.
 - 5. Attach aluminum units to steel supporting members by bolting at 6-inch (150-mm) intervals.
 - 6. Butt edges parallel to long direction of diamond-shaped openings and weld at every second bond point. Place individual grating sections so diamonds of one piece are aligned with those of adjacent sections.
- D. Installing Metal Plank Gratings
 - 1. General: Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard anchor clips and hold-down devices for bolted connections.
 - 2. Attach removable units to supporting members by bolting at every point of contact.
 - 3. Attach nonremovable units to supporting members by welding unless otherwise indicated. Comply with manufacturer's written instructions for size and spacing of welds.
 - 4. Attach aluminum units to steel supporting members by bolting at side channels at every point of contact and by bolting intermediate planks at each end on alternate sides. Bolt adjacent planks together at midspan.
- E. Installing Glass-Fiber-Reinforced Plastic Gratings
 - 1. Comply with manufacturer's written instructions for installing gratings. Use manufacturer's standard stainless-steel anchor clips and hold-down devices for bolted connections.
- F. Adjusting And Cleaning
 - 1. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 requirements for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.

OR

Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 07.
 - 2. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 05 58 16 00 - ORNAMENTAL FORMED METAL

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for ornamental formed metal. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Beam wraps.
 - b. Closures and trim.
 - c. Column covers.
 - d. Decorative-metal-clad, hollow-metal doors and frames.
 - e. Elevator cab and entrance finishes.
 - f. Escalator enclosures.
 - g. Filler panels at demountable partitions and/or between dissimilar construction.
 - h. Heating-cooling unit enclosures.
 - i. Lighting coves.
 - j. Metal base.
 - k. Mullion cladding.
 - l. Pipe system covers.
 - m. Pockets for window treatment.
 - n. Window stools.
 - o. Exterior fins.
 - p. Exterior formed-metal-shaped panels.
 - q. Exterior sunshades.
 - r. Exterior trellises.
 - s. Exterior window covers.
 - t. Metal shapes as part of roof construction.

C. Performance Requirements

1. Delegated Design: Design exterior decorative formed metal items, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
2. Structural Performance: Decorative formed metal items, including anchors and connections, shall withstand the effects of gravity loads and the following loads and stresses without exceeding the allowable design working stress of materials involved and without exhibiting permanent deformation in any components:
 - a. Wind Loads on Exterior Items: As indicated on Drawings **OR** 20 lbf/sq. ft. (957 Pa) **OR** 30 lbf/sq. ft. (1436 Pa) **OR** As required to meet local Project requirements.
 - b. Live Loads on Heating-Cooling Unit Enclosures: 100 lbf/sq. ft. (4.8 kN/sq. m) or a concentrated load of 300 lbf (1.3 kN) on an area of 4 sq. in. (26 sq. cm), whichever produces the greater stress.
3. Seismic Performance: Exterior decorative formed metal items, including anchors and connections, shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.
 - a. Component Importance Factor is 1.0.
4. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

- a. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
5. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

D. Submittals

1. Product Data: For each type of product indicated. Include finishing materials.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: Show fabrication and installation details for decorative formed metal.
 - a. Include plans, elevations, component details, and attachments to other work.
 - b. Indicate materials and profiles of each decorative formed metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.
4. Samples: For each type of exposed finish required, prepared on 6-inch- (150-mm-) square Samples of metal of same thickness and material indicated for the Work.
5. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
6. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments, and necessary clearances.
7. Qualification Data: For qualified Installer, fabricator, organic-coating applicator, anodic finisher, powder-coating applicator and professional engineer.
8. Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.
9. Welding certificates.
10. Maintenance Data: For mirrorlike stainless-steel finish and statuary conversion coating copper-alloy finish to include in maintenance manuals.

E. Quality Assurance

1. Fabricator Qualifications: A firm experienced in producing decorative formed metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
2. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
3. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
4. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated to metals of types indicated and that employs competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.
5. Installer Qualifications: Fabricator of products.
6. Welding Qualifications: Qualify procedures and personnel according to the following:
 - a. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
 - b. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
 - c. AWS D1.3, "Structural Welding Code - Sheet Steel."
 - d. AWS D1.6, "Structural Welding Code - Stainless Steel."

7. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling

1. Deliver decorative formed metal products wrapped in protective coverings and strapped together in suitable packs or in heavy-duty cartons. Remove protective coverings before they stain or bond to finished surfaces.
2. Store products on elevated platforms in a dry location.

G. Project Conditions

1. Field Measurements: Verify actual locations of walls, columns, beams, and other construction contiguous with decorative formed metal by field measurements before fabrication and indicate measurements on Shop Drawings.

H. Coordination

1. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
2. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim, and joint sealants, are protected against damage from the effects of weather, age, corrosion, and other causes.

1.2 PRODUCTS

A. Sheet Metal

1. General: Provide sheet metal without pitting, seam marks, roller marks, stains, discolorations, or other imperfections where exposed to view on finished units.
2. Recycled Content of Steel Products: Provide products with an average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
3. Aluminum Sheet: Flat sheet complying with ASTM B 209 (ASTM B 209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than strength and durability properties of Alloy 5005-H32.
4. Galvanized-Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating, either commercial steel or forming steel.
5. Steel Sheet: Uncoated, cold-rolled, ASTM A 1008/A 1008M, commercial steel, exposed or electrolytic zinc-coated, ASTM A 879/A 879M, with steel sheet substrate complying with ASTM A 1008/A 1008M, commercial steel, exposed.
6. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304 **OR** Type 316, **as directed**, stretcher-leveled standard of flatness.
7. Bronze Sheet: ASTM B 36/B 36M, Alloy UNS No. C28000 (muntz metal, 60 percent copper) or Alloy UNS No. C23000 (red brass, 85 percent copper).
8. Brass Sheet: ASTM B 36/B 36M, Alloy UNS No. C26000 (cartridge brass, 70 percent copper).
9. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
10. Titanium Sheet: ASTM B 265, Grade 1.

B. Miscellaneous Materials

1. Gaskets: As required to seal joints in decorative formed metal and remain airtight **OR** weathertight, **as directed**; as recommended in writing by decorative formed metal manufacturer.
 - a. ASTM D 1056, Type 1, Class A, grade as recommended by gasket manufacturer to obtain seal for application indicated.
 - b. Closed-cell polyurethane foam, adhesive on two sides, release paper protected.
2. Sealants, Exterior: ASTM C 920; elastomeric silicone **OR** polyurethane **OR** polysulfide, **as directed**, sealant; of type, grade, class, and use classifications required to seal joints in

- decorative formed metal and remain weathertight; and as recommended in writing by decorative formed metal manufacturer.
3. Sealants, Interior: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C 834; of type and grade required to seal joints in decorative formed metal; and as recommended in writing by decorative formed metal manufacturer.
 - a. Use sealant that has a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 4. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items.
 - a. Use filler metals that will match the color of metal being joined and will not cause discoloration.
 5. Fasteners: Fabricated from same basic metal and alloy as fastened metal unless otherwise indicated. Do not use metals that are incompatible with materials joined.
 - a. Provide concealed fasteners for interconnecting decorative formed metal items and for attaching them to other work unless otherwise indicated **OR** exposed fasteners are unavoidable or are the standard fastening method, **as directed**.
 - b. Provide Phillips **OR** tamper-resistant **OR** square or hex socket, **as directed**, flat-head machine screws for exposed fasteners unless otherwise indicated.
 6. Structural Anchors: For applications indicated to comply with certain design loads, provide chemical or torque-controlled expansion anchors with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
 7. Nonstructural Anchors: For applications not indicated to comply with design loads, provide powder-actuated fasteners **OR** metal expansion sleeve anchors **OR** metal-impact expansion anchors, **as directed**, of type, size, and material necessary for type of load and installation indicated, as recommended by manufacturer, unless otherwise indicated.
 8. Anchor Materials:
 - a. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
 - b. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) **OR** Group 2 (A4), **as directed**, stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).
 9. Sound-Deadening Materials:
 - a. Insulation: Unfaced, mineral-fiber blanket insulation complying with ASTM C 665, Type I, and passing ASTM E 136 test.
 - b. Mastic: Cold-applied asphalt emulsion complying with ASTM D 1187.
 10. Backing Materials: Provided or recommended by decorative formed metal manufacturer.
 11. Laminating Adhesive: Adhesive recommended by metal fabricator that will fully bond metal to metal and that will prevent telegraphing and oil canning and is compatible with substrate and noncombustible after curing.
 - a. Contact Adhesive: VOC content of not more than 80 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Metal-to-Metal Adhesive: VOC content of not more than 30 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - c. Multipurpose Construction Adhesive: VOC content of not more than 70 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - d. Special-Purpose Contact Adhesive: (Contact adhesive used to bond melamine-covered board, metal, unsupported vinyl, ultrahigh molecular weight polyethylene, and rubber or wood veneer, 1/16 inch thick or less, to any surface): 250 g/L.
 12. Isolation Coating: Manufacturer's standard alkali-resistant coating **OR** bituminous paint **OR** epoxy coating, **as directed**.

C. Paints And Coatings

1. Etching Cleaner for Galvanized Metal: Complying with MPI#25.
2. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.
3. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.
4. Shop Primers: Comply with Division 07 OR Division 09 Section(s) "High-performance Coatings", **as directed**.
5. Universal Shop Primer for Ferrous Metal: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.
 - a. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.
6. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.
7. Shop Primer for Galvanized Steel: Cementitious galvanized metal primer complying with MPI#26 **OR** Vinyl wash primer complying with MPI#80 **OR** Water-based galvanized metal primer complying with MPI#134, **as directed**.
8. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

D. Fabrication, General

1. Shop Assembly: Preassemble decorative formed metal items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
2. Coordinate dimensions and attachment methods of decorative formed metal items with those of adjoining construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned unless otherwise indicated.
3. Form metal to profiles indicated, in maximum lengths to minimize joints. Produce flat, flush surfaces without cracking or grain separation at bends. Fold back exposed edges of unsupported sheet metal to form a 1/2-inch- (12-mm-) wide hem on the concealed side, or ease edges to a radius of approximately 1/32 inch (1 mm) and support with concealed stiffeners.
4. Increase metal thickness or reinforce with concealed stiffeners, backing materials, or both, as needed to provide surface flatness equivalent to stretcher-leveled standard of flatness and sufficient strength for indicated use.
 - a. Support joints with concealed stiffeners as needed to hold exposed faces of adjoining sheets in flush alignment.
5. Build in straps, plates, and brackets as needed to support and anchor fabricated items to adjoining construction. Reinforce decorative formed metal items as needed to attach and support other construction.
6. Provide support framing, mounting and attachment clips, splice sleeves, fasteners, and accessories needed to install decorative formed metal items.
7. Where welding or brazing is indicated, weld or braze joints and seams continuously. Grind, fill, and dress to produce smooth, flush, exposed surfaces in which joints are not visible after finishing is completed.
 - a. Use welding and brazing procedures that will blend with and not cause discoloration of metal being joined.

E. Beam Wraps

1. Form beam wraps from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Steel Sheet: 0.060 inch (1.52 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.

- c. Stainless-Steel Sheet: 0.050 inch (1.27 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.
- 2. Fabricate with calk stop angle to retain backer rod and sealant.

F. Closures And Trim

- 1. Form closures and trim from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction, with weathertight joints at exterior installations.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Galvanized-Steel Sheet: 0.052 inch (1.32 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - c. Steel Sheet: 0.048 inch (1.21 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
 - d. Closures and trim may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view and not exposed to weather.
- 2. Conceal fasteners where possible; otherwise, locate where they are as inconspicuous as possible. Size fasteners to support closures and trim, with fasteners spaced to prevent buckling or waviness in finished surfaces.
- 3. Drill and tap holes needed for securing closures and trim to other surfaces.
- 4. Incorporate gaskets where indicated or needed for concealed, continuous seal at abutting surfaces.
- 5. Miter or cope trim members at corners and reinforce with bent metal splice plates to form tight joints.

G. Column Covers

- 1. Spackled-Seam Type: Form column covers from 0.125-inch (3.2-mm) aluminum, rolled to radii indicated. Taper edges of adjoining pieces of column covers, for taping and spackling, to 0.094-inch (2.4-mm) thickness in approximately 1 inch (25 mm) of width. Punch tapered edges for gypsum board screws at 1/2 inch (12 mm) o.c., and mill grooves in tapered edge to improve bond with joint compound.
 - a. Support Framing: At vertical joints, provide 1-1/2-by-3-5/8-inch (38-by-89-mm) steel channel support posts formed from 0.040-inch (1.0-mm) galvanized steel.
 - b. Joint Treatment Materials: Provide joint treatment compounds and reinforcing tape complying with requirements in Division 9 Section "Gypsum Board."
- 2. Snap-Together Type: Form column covers to shapes indicated from metal of type and minimum thickness indicated below. Return vertical edges and bend to form hook that will engage continuous mounting clips.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Steel Sheet: 0.060 inch (1.52 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
 - c. Stainless-Steel Sheet: 0.050 inch (1.27 mm) **OR** Thickness required to comply with performance requirements, **as directed**.

- 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.
 - d. Bronze Sheet: 0.051 inch (1.29 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Buffed finish, lacquered **OR** Hand-rubbed finish, lacquered **OR** Statuary conversion coating over satin finish, **as directed**.
 - e. Brass Sheet: 0.051 inch (1.29 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: Buffed **OR** Hand-rubbed, **as directed**, finish, lacquered.
 - f. Column covers may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
 - g. Form returns at vertical joints to provide hairline V-joints.

OR

Form returns at vertical joints to provide 1/2-inch- (12-mm-) **OR** 3/4-inch- (18-mm-), **as directed**, wide reveal at joints. Provide snap-in metal filler strips at reveals that leave reveals 1/2 inch (12 mm) deep **OR** flush, **as directed**.

OR

Form returns at vertical joints to accommodate backer rod and sealant.
 - h. Fabricate column covers with hairline horizontal V-joints produced by forming returns on mating ends of column cover sections. Locate horizontal joints as indicated.

OR

Fabricate column covers without horizontal joints.

OR

Fabricate column covers with horizontal butt joints, tightly fitted and backed with a sleeve for field splicing with adhesive.

OR

Fabricate column covers with 1/2-inch- (12-mm-) wide, **as directed**, reveals at horizontal joints produced by forming returns on mating ends of column cover sections. Provide snap-in metal filler strips at reveals matching reveals at vertical joints. Locate horizontal joints as indicated.
 - i. Fabricate base **OR** ceiling, **as directed**, ring to match **OR** contrast with, **as directed**, column covers.
 - j. Fabricate with calk stop/stiffener ring.
 - k. Apply manufacturer's recommended sound-deadening insulation **OR** mastic, **as directed**, to backs of column covers.
- H. Decorative-Metal-Clad Doors And Frames
1. Laminate metal sheets, of type and thickness indicated below, to faces of hollow-metal doors and frames and elevator entrances where indicated:
 - a. Bronze Sheet: 0.040 inch (1.02 mm).
 - 1) Finish: Buffed finish, lacquered **OR** Hand-rubbed finish, lacquered **OR** Statuary conversion coating over satin finish, lacquered, **as directed**.
 - b. Brass Sheet: 0.040 inch (1.02 mm).
 - 1) Finish: Buffed **OR** Hand-rubbed, **as directed**, finish lacquered.
 - c. Stainless-Steel Sheet: 0.038 inch (0.95 mm).
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.
 - d. Titanium Sheet: 0.025 inch (0.64 mm).
 - 1) Finish: Dull **OR** Bright, **as directed**, matte.
- I. Escalator Enclosures
1. Form escalator enclosures from metal of type and thickness indicated below. Coordinate size of enclosures, location of cutouts, and method of attachment to adjoining construction.
 - a. Stainless-Steel Sheet: 0.062 inch (1.59 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.
 - b. Bronze Sheet: 0.081 inch (2.05 mm) **OR** Thickness required to comply with performance requirements, **as directed**.

- 1) Finish: Buffed finish, lacquered **OR** Hand-rubbed finish, lacquered **OR** Statuary conversion coating over satin finish, **as directed**.

J. Filler Panels

1. Form filler panels for closing ends of partition systems and for other applications indicated. Form from two sheets of metal of type and thickness indicated below, separated by channels formed from the same material, producing a panel of same thickness as partitions **OR** mullions, **as directed**, unless otherwise indicated. Incorporate reveals, trim, and concealed anchorages for attaching to adjacent surfaces.
 - a. Galvanized-Steel Sheet: 0.064 inch (1.63 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - b. Steel Sheet: 0.060 inch (1.52 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
 - c. Filler panels may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
2. Fill interior of panel with sound-deadening insulation permanently attached to inside panel faces.
3. Adhesively attach gaskets to filler panel edges where they abut mullions or glazing. Use 1-inch- (25-mm-) square material, unless otherwise indicated, set approximately 1/4 inch (6 mm) into channeled edge of filler panel.
OR
Attach gaskets to all edges of panels that abut adjacent surfaces to form a continuous seal. Use compressible gaskets or mastic sealing tape, applied to center of panel edges to be concealed from view, unless otherwise indicated.
4. Do not mechanically fasten filler panels to mullions.

K. Heating-Cooling Unit Enclosures

1. Fabricate heating-cooling unit enclosures from metal of type and thickness indicated below:
 - a. Galvanized-Steel Sheet:
 - 1) Framing: 0.108 inch (2.74 mm) **OR** Thickness required to comply with performance requirements.
 - 2) Sills and Stools: 0.079 inch (2.01 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 3) Front Panels and Bases: 0.064 inch (1.63 mm).
 - 4) Concealed Panels and Trim: 0.040 inch (1.02 mm).
 - 5) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - b. Steel Sheet:
 - 1) Framing: 0.105 inch (2.66 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 2) Sills and Stools: 0.075 inch (1.90 mm) **OR** Thickness required to comply with performance requirements, **as directed**.
 - 3) Front Panels and Bases: 0.060 inch (1.52 mm).
 - 4) Concealed Panels and Trim: 0.036 inch (0.91 mm).
 - 5) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
2. Weld seams and connections unless otherwise indicated or unless other methods are necessary for access to heating and cooling equipment.
3. Incorporate stiffeners or laminated backing using noncombustible materials as needed for strength and rigidity.
 - a. Fill space between stiffeners with sound-deadening insulation attached to face sheet with insulation adhesive unless otherwise indicated.
OR
Coat concealed faces of metal panels more than 6 inches (150 mm) wide with a heavy coating of sound-deadening mastic applied at the minimum rate of 20 sq. ft./gal. (0.5 sq. m/L).

4. Provide louvers and grilles of size, type, and materials indicated.
 - a. For removable grilles, use modular units with recessed openings formed into surfaces of enclosures and without blank filler panels between grilles, so face panels and stools are continuous. Fabricate removable grilles and openings to precise tolerances to produce well-fitted assemblies free of warp or rattle, with grilles supported continuously along parallel edges and with tops flush with top of enclosure.
 5. Incorporate removable tops and fronts where indicated or needed for access to heating-cooling units and to piping, ductwork, controls, and electrical service, with panels and openings as follows:
 - a. Fabricate with a fitting tolerance of not less than 1/32 inch (0.8 mm) and not more than 1/16 inch (1.6 mm) at each edge, with face of panels flush with adjoining fixed surfaces of enclosure.
 - b. Form panels for easy removal without interfering with adjoining construction or furniture. Hold panels in place with concealed clips and hardware that prevent warp and rattle.
 6. Incorporate hinged access panels in enclosures for access to heating-cooling unit controls, as either separate elements or integrated with grille openings, as indicated or needed.
 7. Coordinate construction, configuration, and dimensions of enclosures with those of heating-cooling units. Provide support for heating-cooling units and controls where indicated. Provide blind knockouts and supports for piping, ductwork, control lines, electrical conduit, and wiring where indicated or needed.
 8. Locate fixed surfaces of enclosure to coincide precisely with window mullions and partition system terminations. Provide closures at ends of units, at recessed openings in base of units, and at other locations where needed to conceal unfinished wall or floor surfaces, piping, conduit, ductwork, or heating-cooling units.
 - a. Provide built-in partitions (bulkheads) within enclosures between heating-cooling units, located to coincide with mullions and partition system terminations. Seal partitions to faces of enclosures with compressible gaskets or mastic sealing tape, and cover both sides of partitions with sound-deadening insulation attached to partitions with insulation adhesive.
- L. Lighting Coves
1. Form lighting coves from metal of type and thickness indicated below. Coordinate size of coves, location of cutouts for electrical wiring, and method of attachment to adjoining construction.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm).
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Galvanized-Steel Sheet: 0.052 inch (1.32 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - c. Steel Sheet: 0.048 inch (1.21 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
 - d. Fabricate light coves with hairline butt joints **OR** tapered edges for taping and spackling, **as directed**.
 - e. Provide mitered corners, factory welded with backplates **OR** factory endcaps, **as directed**.
 - f. Lighting coves may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
- M. Metal Base
1. Form metal base from metal of type and thickness indicated below:
 - a. Aluminum Sheet: 0.063 inch (1.60 mm).
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Stainless-Steel Sheet: 0.050 inch (1.27 mm).
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.

**N. Mullion Cladding**

1. Form mullion cladding from metal of type and thickness indicated below. Fabricate to fit tightly to adjoining construction.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm).
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Galvanized-Steel Sheet: 0.052 inch (1.32 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - c. Stainless-Steel Sheet: 0.050 inch (1.27 mm).
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.

O. Pipe System Covers

1. Form pipe system covers from metal of type and thickness indicated below. Coordinate size of covers, location of cutouts for piping, and method of attachment to adjoining construction.
 - a. Galvanized-Steel Sheet: 0.052 inch (1.32 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - b. Steel Sheet: 0.048 inch (1.21 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.

P. Pockets For Window Treatment

1. Form pockets from metal of type and thickness indicated below, with end closures. Coordinate dimensions and attachment methods with window treatment equipment, window frames, ceiling suspension system, and other related construction to produce a coordinated, closely fitting assembly.
 - a. Aluminum Sheet: 0.063 inch (1.60 mm).
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Galvanized-Steel Sheet: 0.052 inch (1.32 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - c. Steel Sheet: 0.048 inch (1.21 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Powder coat, **as directed**.
 - d. Pockets for window treatment may be fabricated from prefinished metal sheet in lieu of finishing after fabrication provided unfinished edges are concealed from view.
2. Reinforce pockets for attaching window treatment equipment and hardware, or increase metal thickness.
3. Divide continuous pockets with built-in partitions located to separate adjoining drapery and blind units, to coincide with window mullions, and to receive filler panels at ends of partitions.

Q. Window Stools

1. Form window stools from metal of type and thickness indicated below, with end closures:
 - a. Aluminum Sheet: 0.063 inch (1.60 mm).
 - 1) Finish: Baked enamel or powder coat **OR** Siliconized polyester **OR** High-performance organic coating **OR** Mill **OR** Clear anodic **OR** Color anodic, **as directed**.
 - b. Galvanized-Steel Sheet: 0.052 inch (1.32 mm).
 - 1) Finish: Factory primed **OR** Baked enamel **OR** Siliconized polyester **OR** High-performance organic coating **OR** Powder coat, **as directed**.
 - c. Stainless-Steel Sheet: 0.050 inch (1.27 mm) **OR** 1.3 mm, **as directed**.
 - 1) Finish: No. 2B **OR** No. 4 **OR** No. 6 **OR** No. 7 **OR** No. 8, **as directed**.
 - d. Bronze Sheet: 0.051 inch (1.29 mm).

- 1) Finish: Buffed finish, lacquered **OR** Hand-rubbed finish, lacquered **OR** Statuary conversion coating over satin finish, **as directed**.
 2. Weld seams at end closures.
OR
Braze seams at end closures.
 3. Apply sound-deadening insulation **OR** mastic, **as directed**, to underside of window stools.
- R. General Finish Requirements
1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 2. Complete mechanical finishes of flat sheet metal surfaces before fabrication where possible. After fabrication, finish all joints, bends, abrasions, and other surface blemishes to match sheet finish.
 3. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 4. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
 5. Finish items indicated on Drawings after assembly.
 6. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- S. Aluminum Finishes
1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 2. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm **OR** AA-M12C22A31, Class II, 0.010 mm, **as directed**, or thicker.
 3. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm **OR** AA-M12C22A32/A34, Class II, 0.010 mm, **as directed**, or thicker.
 - a. Color: Champagne **OR** Light bronze **OR** Medium bronze **OR** Dark bronze **OR** Black **OR** As selected from full range of industry colors and color densities, **as directed**.
 4. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 5. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 6. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 **OR** AAMA 2605, **as directed**, and containing not less than 50 **OR** 70, **as directed**, percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.

OR

High-Performance Organic Finish: Three **OR** Four, **as directed**, -coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 **OR** 70, **as directed**, percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

 - b. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.

T. Galvanized-Steel Sheet Finishes

1. Preparing Galvanized Items for Factory Priming: Thoroughly clean galvanized decorative formed metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.
2. Preparing Galvanized Items for Factory Finishing: Clean surfaces with nonpetroleum solvent so surfaces are free of oil and other contaminants. After cleaning, apply a conversion coating suited to the organic coating to be applied over it.
3. Repairing Galvanized Surfaces: Clean welds and abraded areas and repair galvanizing to comply with ASTM A 780.
4. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
5. Factory-Painted Finish: Comply with Division 09 Section(s) "Exterior Painting" OR "High-performance Coatings", **as directed**.
 - a. Color: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
6. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat, with a minimum dry film thickness of 1 mil (0.025 mm) for topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
7. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
8. Siliconized-Polyester Coating: Immediately after cleaning and pretreating, apply manufacturer's standard epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
9. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2604 **OR** AAMA 2605, **as directed**, and containing not less than 50 **OR** 70, **as directed**, percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.

OR

High-Performance Organic Finish: Three **OR** Four, **as directed**, -coat fluoropolymer finish complying with AAMA 2605 and containing not less than 50 **OR** 70, **as directed**, percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

- a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.

U. Steel Sheet Finishes

1. Surface Preparation: Clean surfaces to comply with SSPC-SP 1, "Solvent Cleaning," to remove dirt, oil, grease, or other contaminants that could impair paint bond. Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or with SSPC-SP 8, "Pickling."
2. Pretreatment: Immediately after cleaning, apply a conversion coating of type suited to organic coating applied over it.

3. Factory Priming for Field-Painted Finish: Where field painting after installation is indicated, apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.
 4. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 5. Powder-Coat Finish: Immediately after cleaning and pretreating, apply manufacturer's standard thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 1.5 mils (0.04 mm). Prepare, treat, and coat metal to comply with resin manufacturer's written instructions.
 - a. Color and Gloss: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
- V. Stainless-Steel Finishes
1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 3. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
 4. Directional Satin Finish: No. 4.
 5. Dull Satin Finish: No. 6.
 6. Satin, Reflective, Directional Polish: No. 7.
 7. Mirrorlike Reflective, Nondirectional Polish: No. 8 finish.
 8. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
- W. Copper-Alloy Finishes
1. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."
 2. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).
 3. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).
 4. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).
 5. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).
 6. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear organic, air drying, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 7. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear organic, air drying, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 8. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below).
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 9. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear organic, air drying, as specified below).

- a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
- 10. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide), with color matching the Owner's sample.
- 11. Statuary Conversion Coating over Satin Finish, Lacquered: M31-C55-O6x (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide; Coating: clear, organic, air drying, as specified below) , with color matching the Owner's sample:
 - a. Clear, Organic Coating: Lacquer specified for copper alloys, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

X. Titanium Finishes

- 1. General: Fabricate items from finished titanium sheet, taking care not to damage finish during fabrication. Protect finish as needed during fabrication by applying a strippable, temporary protective covering.
- 2. Dull Matte Finish: Pickled and annealed.
- 3. Bright Matte Finish: Vacuum annealed.

1.3 EXECUTION

A. Examination

- 1. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative formed metal.
- 2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Installation

- 1. Locate and place decorative formed metal items level and plumb and in alignment with adjacent construction. Perform cutting, drilling, and fitting required to install decorative formed metal.
 - a. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.
- 2. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where needed to protect metal surfaces and to make a weathertight connection.
- 3. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers as indicated.
- 4. Install concealed gaskets, joint fillers, insulation, sealants, and flashings, as the Work progresses, to make exterior decorative formed metal items weatherproof.
- 5. Install concealed gaskets, joint fillers, sealants, and insulation, as the Work progresses, to make interior decorative formed metal items soundproof or lightproof as applicable to type of fabrication indicated.
- 6. Corrosion Protection: Apply bituminous paint or other permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with substrate materials that are incompatible or could result in corrosion or deterioration of either material or finish.
- 7. Install decorative-formed-metal-clad doors and frames to comply with requirements specified in Division 08 Section "Hollow Metal Doors And Frames".
- 8. Apply joint treatment at joints of spackled-seam-type metal column covers. Comply with requirements in Division 09 Section "Gypsum Board".

C. Adjusting And Cleaning

- 1. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.

2. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.
 3. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - a. Apply by brush or spray to provide a minimum 2.0-mil (0.05-mm) dry film thickness.
 4. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 07 OR Division 09 Section(s) "High-performance Coatings" **OR** Division 07 AND Division 09 Section(s) "High-performance Coatings", **as directed**.
 5. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.
- D. Protection
1. Protect finishes of decorative formed metal items from damage during construction period. Remove temporary protective coverings at time of Final Completion.

SECTION 06 01 20 91 - WOOD RESTORATION

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for wood restoration. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Work Included

1. Provide labor, materials and equipment necessary to complete the work of this Section including, but not limited to the following:
 - a. Removal of exterior finish systems at areas of wood restoration or repair
 - b. Preservation and sealing of seams and joints
 - c. Removal of decayed and contaminated wood
 - d. Installation of borate wood preservatives
 - e. Installation of wood repair compound materials
2. Extent of wood restoration work is as required to meet Project requirements.

C. Submittals:

1. Product data, installation instructions, and general recommendations from manufacturer for types of repair required including technical data sheets defining performance properties.
2. Restoration Schedule: Submit schedule for each window, door, cornice, or area of wood trim to be restored, outlining in detail proposed restoration work to be performed on each component. Obtain written approval prior to commencement of repair work.
3. Certification that materials comply with local VOC limitations.
4. Qualification data for firms and persons specified in the "Quality Assurance" article to demonstrate their capabilities and experience. Include a list of completed projects with project name, address, names of Architects and Owners, and information specified.
 - a. Five (5) business days after bid opening, submit a written qualification and experience of all lead personnel for work on the Project. List project manager or foreman's name and experience relative to this Project.
 - b. All work shall be performed by persons whose qualifications have been submitted and approved.

D. Quality Assurance

1. Restorations Specialist: Work must be performed by a firm having not less than (5) years successful experience in comparable wood restoration work including work on at least three (3) buildings listed in the National Register of Historic Places under the direction of federal and state preservation agencies in the last five (5) years and employing personnel skilled in the restoration process and operations indicated.
 - a. Restoration Specialist firm must be acceptable to, or certified by, manufacturer of primary restoration materials.
 - b. Work associated with work of this section, including (but limited to) paint removal and substrate preparation, is to be performed by Installer of the work.
 - c. Only skilled workers who are thoroughly trained and experienced in wood repairs and restoration work at areas as noted, have the skills required for the work of this section, and are completely familiar with the materials and methods specified shall be used for wood restoration work.
 - d. At least one skilled worker shall be present at all times during the execution of the work and shall personally direct the wood repairs and restoration work.
 - e. In acceptance or rejection of the wood restoration work, no allowance will be made for lack of skill on the part of the workers.

2. Manufacturer: Obtain primary repair materials from a single manufacturer. Provide secondary materials as recommended by the manufacturer of the primary materials.

E. Delivery Storage And Handling

1. Deliver all materials in original unopened containers labeled with the manufacturer's name, brand name, item name and installation instructions.
2. Store materials in compliance with the manufacturer's requirements for temperature, maximum and minimum, and other conditions. Keep all materials under cover and dry. Protect against exposure to the weather.
3. Discard and remove from the job site any materials damaged in handling or storage and any materials that have been subjected to conditions contrary to the manufacturer's recommendations or whose maximum shelf life has expired.

F. Project Conditions

1. Lead: Existing paint may contain lead. Take all necessary precautions to ensure the safety of all persons engaged in removing lead-based paint and dispose of all residues generated from lead-based paint stripping in a legal manner in accordance with all local, state and federal codes.
2. Coordination: Coordinate wood repair with paint stripping so that the effected surfaces are exposed for a minimal time to avoid further damage to bare wood. Coordinate with painting so that all restored surfaces are primed as soon as possible after repair.
3. Weather: Proceed with the work of this section only when existing and foreseen weather conditions permit the work to be performed in accordance with the manufacturer's recommendations for temperature and humidity range, minimum and maximum.
4. Substrate Conditions: Do not proceed with product applications until substrates have been inspected and are determined to be in satisfactory conditions. Substrate moisture content shall not be in excess of 18% during preparation and application.
 - a. Remove all decayed wood to a clean, sound, unaffected substrate.
 - b. Remove all built up paints, and other debris to a clean sound substrate.
 - c. Remove all wood sawdust to a clean sound substrate.
5. Protection:
 - a. Use all necessary means to protect interior of building from all damage caused by precipitation and other environmental conditions during the work of the Section.
 - b. Protect all adjacent building surfaces from damage, staining or deterioration resulting from wood restoration work.
 - c. Protect the restoration work in progress to prevent further deterioration exposed wood surfaces. Protect the completed work until the time of final inspection and acceptance by the Owner.
6. Safety: Contractor shall use all means necessary to ensure that no person (whether involved in the work of the Section or not) is harmed or injured due to the work of this Section. Comply with all applicable laws codes and regulations.
7. Security: Coordinate work with the Owner's project manager to ensure that the building is secured at the end of each work period. Review security procedures with the Owner prior to proceeding with the work in this Section.

1.2 PRODUCTS

A. General

1. Compatibility: provide products recommended by the manufacturers to be fully compatible with indicated substrate.

B. Epoxy Repair Products

1. Epoxy repair materials shall consist of 2 separate systems, a 2 part low viscosity epoxy primer/coupling agent and a 2 part thixotropic paste meeting the manufacturer's criteria.
2. Manufacturer of Repair Products and Equipment

- a. Manufacturer: Subject to compliance with the requirements, provide product of the following or approved equal.
 - 1) Advanced Repair Technology
Cherry Valley, NY
 - 2) Window Care Systems
Pembroke, MA
 - 3) or approved equal
- C. Repair Products
 - 1. Low viscosity epoxy coupling/bonding agent
 - 2. Epoxy repair compound
 - 3. Injectable Borate gel
 - 4. Borate rods
- D. Paint Strippers
 - 1. Chemical Stripping Agent. Methylene chloride based, Thixotropic stripper
 - 2. Products: Subject to compliance with requirements, provide the following, or approved equal
 - a. 509 Stripper
 - b. ProSoCo
 - c. or approved equal
 - 3. Low Temperature heat gun or heat plate, no open flame.

1.3 EXECUTION

- A. Inspection
 - 1. Inspect all wood surfaces determine the extent of restoration and methods to be used.
 - a. The decision regarding the extent of required repair, and extent of profile replication work shall be final.
 - b. In wood surfaces where decay is present, determine the methods and treatment of repair.
 - c. Areas that do not attach existing profiles, determine the level of restoration and replication to be achieved.
 - 2. Joints, Joinery and edges: Check wood members at joints, seams and edges for:
 - a. Any open seams or failed conditions.
 - b. Wood moisture content.
 - c. The presence of wood decay, by probing surfaces.
 - 3. Sills and Trim
 - a. Inspect wood surfaces for natural defects (knots) cracks and checks.
 - b. Determine wood moisture content.
 - c. Probe for the presence for wood decay.
- B. Removal
 - 1. Removal of Finishes:
 - a. Remove all peeling and loose paint by scraping, taking care not to damage sound wood and profiles.
 - b. Strip all painted wood surface to bare wood, taking care not to damage sound wood and profiles by the application of stripping paste or by the use of a heat gun or plate
 - 1) Remove stripper and finishes as directed by manufacturer.
 - 2) Dispose of debris in accordance with approved methods.
 - c. Wash all surfaces with recommended neutralizing agents to remove any foreign particle, dust and chemical residue, allow surface to thoroughly dry.
- C. Preventative Systems
 - 1. Preservation and Sealing of seams and joints. Repair of wood "checking" due to weathering.
 - a. Open or failed seams and checks shall be dilated to a width of 3/16" and depth of 1/2".
 - b. Remove all decayed, soft and weathered wood.

- c. Check the moisture content and hardness of wood at and around the repair, maximum allowable moisture content 18%/0.
- d. Sand bare wood to remove all loose fibers, paint, compounds. Remove all sawdust and dirt.
- e. Pre-treat bare and sanded wood thoroughly with low viscosity epoxy coupling/bonding agent
- f. Allow coupling agent to penetrate wood surface for a minimum of 10 minutes and maximum of 30 minutes, or as recommended by the manufacturer. Avoid applying in direct sunlight
- g. Remove any excess bonding agent with absorbing paper
- h. Apply epoxy repair compound over epoxy bonding agent while still tacky.
- i. Epoxy compound shall have optimal contact with wood
- j. Avoid inclusion of air pockets during application
- k. Fill joints fill, even and smooth in one application
- l. Allow full cure time as specified by manufacturer before application of paint or varnish.
- m. After curing, sand surface even and smooth. Transitions and irregularities between wood and epoxy shall not be visible after sanding
- n. If required, smooth any remaining irregularities with an additional application of epoxy repair compound. Always sand between coats.

D. Curative Systems

1. Preservation and Repair of Damaged/Decayed Wood:
 - a. Remove all paint and other coatings from area to be repaired.
 - b. Remove all decayed soft and discolored wood, to sound bright unaffected material
 - c. Check area of removal to determine complete elimination of decayed material.
 - 1) Remaining wood should be even color without red-brown and/or gray spots.
 - 2) No soft wood, existing brittle compound, or other previous repair materials should remain.
 - d. Check moisture content and hardness of the wood in and around the repair area
 - 1) Moisture content of wood to be 18%/0 or less
 - e. Sand bare wood to remove all loose fibers, paint, compounds. Remove all sawdust and dirt.
 - f. Drill holes in effected area to receive borate gel and rods. Follow manufacturer's dose recommendations for dimensional lumber.
 - g. Inject recommended dose of borate gel. Gel should not come in contact with exposed wood surface.
 - h. Install borate rod in same hole as gel. Gel should not come in contact with exposed wood surface.
 - i. Pre-treat bare and sanded wood thoroughly with low viscosity epoxy coupling/bonding agent.
 - 1) Allow coupling/bonding agent to penetrate wood surface for a minimum of 10 minutes and maximum of 30 minutes, or as recommended by the manufacturer. Avoid applying in direct sunlight
 - 2) Remove any excess bonding agent with absorbing paper.
 - j. Apply epoxy repair compound over the uncured epoxy coupling agent.
 - 1) Epoxy fill shall have optimal contact with wood
 - 2) Avoid inclusion of air pockets during application
 - 3) Fill joints fill, even and smooth in one application
 - 4) Allow full cure time as specified by manufacturer before preparing for finishes.
 - k. After curing, sand surface even and smooth. Transitions and irregularities between wood and epoxy shall not be visible after sanding.
 - l. If required, smooth any remaining irregularities with an additional application of epoxy repair compound. Always sand between coats.

E. Adjustments: Repair or replace all defective work at no additional cost to the Owner.

Task	Specification	Specification Description
06 05 73 13	01 22 16 00	No Specification Required

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 05 73 33 - WOOD DECKING

1.1 GENERAL

- A. Description Of Work
 - 1. This specification covers the furnishing and installation of materials for wood decking. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
- B. Summary
 - 1. Section Includes:
 - a. Solid-sawn wood roof and floor decking.
 - b. Glued-laminated wood roof and floor decking.
- C. Submittals
 - 1. Product Data: For each type of product indicated.
 - a. For glued-laminated wood decking, include installation instructions and data on lumber, adhesives, and fabrication.
 - b. For preservative-treated wood products, include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
 - 2. LEED Submittals:
 - a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that wood used for decking complies with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
 - 1) Include statement indicating costs for each certified wood product.
 - b. Product Data for Credit EQ 4.1: For sealants and installation adhesives, including printed statement of VOC content.
 - c. Product Data for Credit EQ 4.4: For laminating adhesive used for glued-laminated decking, indicating that product contains no urea formaldehyde.
- D. Quality Assurance
 - 1. Standard for Solid-Sawn Wood Decking: Comply with AITC 112.
 - 2. Forest Certification: Provide wood decking produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- E. Delivery, Storage, And Handling
 - 1. Schedule delivery of wood decking to avoid extended on-site storage and to avoid delaying the Work.
 - 2. Store materials under cover and protected from weather and contact with damp or wet surfaces. Provide for air circulation within and around stacks and under temporary coverings. Stack wood decking with surfaces that are to be exposed in the final Work protected from exposure to sunlight.

1.2 PRODUCTS

- A. Wood Decking, General
 - 1. General: Comply with DOC PS 20 and with applicable grading rules of inspection agencies certified by ALSC's Board of Review.
 - 2. Moisture Content: Provide wood decking with 15 **OR** 19, **as directed**, percent maximum moisture content at time of dressing.

B. Solid-Sawn Wood Decking

1. Decking Species: Alaska cedar **OR** Balsam fir **OR** Douglas fir-larch or Douglas fir-larch (North) **OR** Eastern spruce **OR** Hem-fir or hem-fir (North) **OR** Southern pine, **as directed**.
2. Decking Nominal Size: 2x6 **OR** 2x8 **OR** 3x6 **OR** 4x6, **as directed**.
3. Decking Grade:
 - a. Select(ed) **OR** Commercial, **as directed**, Decking.
OR
 Dense Standard **OR** Dense Select **OR** Select **OR** Dense Commercial **OR** Commercial, **as directed**, Decking.
OR
 Select(ed) Decking or Select Dex **OR** Commercial Decking or Commercial Dex, **as directed**.
4. Grade Stamps: Factory mark each item with grade stamp of grading agency. Apply grade stamp to surfaces that will not be exposed to view.
5. Face Surface: Rough sanded or wire brushed **OR** Saw textured **OR** Smooth, **as directed**.
6. Edge Pattern: Beaded edge **OR** Bullnosed **OR** Channel grooved **OR** Vee grooved, **as directed**.
7. Preservative Treatment: Pressure treat solid-sawn wood decking according to AWPAC31 with inorganic boron (SBX) and redry wood to 15 **OR** 19, **as directed**, percent maximum moisture content.

C. Glued-Laminated Wood Decking

1. Face Species: Alaska cedar **OR** Douglas fir-larch or Douglas fir-larch (North) **OR** Ponderosa pine **OR** Southern pine **OR** Western cedars or western cedars (North), **as directed**.
2. Decking Nominal Size: 2x6 **OR** 2x8 **OR** 3x6 **OR** 3x8 **OR** 4x6 **OR** 4x8 **OR** 5x6 **OR** 5x8, **as directed**.
3. Decking Configuration: For glued-laminated wood decking indicated to be of diaphragm design and construction, provide tongue-and-groove configuration that complies with research/evaluation report.
4. Face Grade:
 - a. Custom or Supreme: Clear face is required. Occasional pieces may contain a small knot or minor characteristic that does not detract from the overall appearance.
OR
 Decorative: Sound knots and natural characteristics are allowed, including chipped edge knots, short end splits, seasoning checks, and some pin holes. Face knot holes, stain, end splits, skip, roller split, and planer burn are not allowed.
OR
 Service: Face knot holes, stain, end splits, skip, roller split, planer burn, and other nonstrength-reducing characteristics are allowed. Strength-reducing characteristics are not allowed.
5. Face Surface: Rough sanded or wire brushed **OR** Saw textured **OR** Smooth, **as directed**.
6. Edge Pattern: Beaded edge **OR** Bullnosed **OR** Channel grooved **OR** Vee grooved, **as directed**.
7. Laminating Adhesive: Wet-use type complying with ASTM D 2559.
 - a. Use adhesive that contains no urea-formaldehyde resins.
8. Preservative Treatment: Pressure treat lumber before gluing according to AWPAC28 for aboveground use.
 - a. Use oxine copper (copper-8-quinolinolate) in a light petroleum solvent.
OR
 Use copper naphthenate in a light petroleum solvent.
OR
 Use waterborne preservative that is acceptable to authorities having jurisdiction and that contains no arsenic or chromium. After treating, redry wood to 15 **OR** 19, **as directed**, percent maximum moisture content.
OR
 Use preservative solution without water repellents or substances that might interfere with application of indicated finishes.

**OR**

After dressing and fabricating decking, apply copper naphthenate according to AWP A M4 to surfaces cut to a depth of more than 1/16 inch (1.5 mm).

D. Accessory Materials

1. Fasteners for Solid-Sawn Decking: Provide fastener size and type complying with decking standard for thickness of deck used.
2. Fasteners for Glued-Laminated Decking: Provide fastener size and type complying with requirements in "Installation" Article for installing laminated decking.
3. Nails: Common; complying with ASTM F 1667, Type I, Style 10.
4. Spikes: Round; complying with ASTM F 1667, Type III, Style 3.
5. Fastener Material: Hot-dip galvanized **OR** Stainless, **as directed**, steel.
6. Bolts for Anchoring Decking to Walls:
 - a. Carbon steel; complying with ASTM A 307 (ASTM F 568M) with ASTM A 563/A 563M hex nuts and, where indicated, flat washers, all hot-dip zinc coated, **as directed**.

OR

- a. Stainless steel; complying with ASTM F 593, Alloy Group 1 or 2 (ASTM F 738M, Grade A1 or A4); with ASTM F 594, Alloy Group 1 or 2 (ASTM F 836M, Grade A1 or A4) hex nuts and, where indicated, flat washers.
7. Installation Adhesive: For glued-laminated wood decking indicated to be of diaphragm design and construction, provide adhesive that complies with research/evaluation report.
 - a. Use adhesive that has a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
8. Sealant: Latex sealant compatible with substrates **OR** Elastomeric joint sealant complying with requirements in Division 07 Section "Joint Sealants" for Use NT (nontraffic) and for Uses M, G, A, and, as applicable to joint substrates indicated, O joint substrates, **as directed**.
 - a. Use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
9. Penetrating Sealer: Clear sanding sealer complying with Division 09 Section "Staining And Transparent Finishing" and compatible with topcoats specified for use over it.

E. Fabrication

1. Shop Fabrication: Where preservative-treated decking is indicated, complete cutting, trimming, surfacing, and sanding before treating.
2. Predrill decking for lateral spiking to adjacent units to comply with referenced decking standard.
3. Seal Coat: After fabricating and surfacing decking, apply a saturation coat of penetrating sealer in fabrication shop, **as directed**.

1.3 EXECUTION**A. Installation**

1. Install solid-sawn wood decking to comply with referenced decking standard.
 - a. Locate end joints for two-span continuous lay-up **OR** combination simple and two-span continuous lay-up **OR** controlled random lay-up **OR** lay-up indicated, **as directed**.
2. Install laminated wood decking to comply with manufacturer's written instructions.
 - a. Locate end joints for two-span continuous lay-up **OR** combination simple and two-span continuous lay-up **OR** controlled random lay-up **OR** lay-up indicated, **as directed**.
 - b. Nail each course of glued-laminated wood decking at each support with one nail slant nailed above the tongue and one nail straight nailed through the face.
 - 1) Use 12d nails for 2x6 and 2x8 decking.
 - 2) Use 30d nails for 3x6 and 3x8 decking.
 - 3) Use 60d nails for 4x6 and 4x8 decking. Predrill decking to prevent splitting.
 - 4) Use 30d tongue nails in bottom tongue and 3/8-inch (10-mm) face spikes for 5x6 and 5x8 decking. Predrill decking at spikes to prevent splitting.

- c. Slant nail each course of glued-laminated wood decking to the tongue of the adjacent course at 30 inches (750 mm) o.c. and within 12 inches (300 mm) of the end of each unit. Stagger nailing in adjacent courses 15 inches (380 mm).
 - 1) Use 6d nails for 2x6 and 2x8 decking.
 - 2) Use 8d nails for 3x6 and 3x8 decking.
 - 3) Use 10d nails for 4x6 and 4x8 decking.
 - 4) Use 16d nails for 5x6 and 5x8 decking.
 - d. Glue adjoining decking courses together by applying a 3/8-inch (10-mm) bead of adhesive on the top of tongues according to research/evaluation report.
 - 3. Anchor wood roof decking, where supported on walls, with bolts as indicated.
 - 4. Where preservative-treated decking must be cut during erection, apply a field-treatment preservative to comply with AWP A M4.
 - a. For solid-sawn decking, use inorganic boron (SBX).
 - b. For laminated decking, use copper naphthenate.
 - 5. Apply joint sealant to seal roof decking at exterior walls at the following locations:
 - a. Between decking and supports located at exterior walls.
 - b. Between decking and exterior walls that butt against underside of decking.
 - c. Between tongues and grooves of decking over exterior walls and supports at exterior walls.
- B. Adjusting
- 1. Repair damaged surfaces and finishes after completing erection. Replace damaged decking if repairs are not approved by the Owner.
- C. Protection
- 1. Provide temporary waterproof covering as the Work progresses to protect roof decking until roofing is applied.

END OF SECTION 06 05 73 33

SECTION 06 10 00 00 - CSF ROUGH CARPENTRY

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.06 10 00 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concealed blocking behind wall mounted items.
2. Sheathing material.
3. Wood treatment.
4. Building paper.

B. Section Includes:

1. Wood Framing.
2. Concealed blocking behind wall mounted items.
3. Sheathing material.
4. Wood treatment.
5. Building paper.

- C. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

D. Related Sections:

1. Section 061753 - Shop-Fabricated Wood Trusses: Roof trusses.

1.2 REFERENCES

A. American Lumber Standards Committee (ALSC):

1. Softwood Lumber Standards.

B. American Plywood Association (APA):

1. Grades and Standards.

C. American Society for Testing and Materials (ASTM):

1. ASTM A307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
2. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.

- D. American Wood Preservers Association(AWPA):
 - 1. AWP - C1 - All Timber Products - Preservative Treatment by Pressure Process.
 - 2. AWP - C15 - Wood for Commercial-Residential Construction Preservative Treatment by Pressure Processes.
 - 3. AWP - C20 - Structural Lumber - Fire-Retardant Treatment by Pressure Processes.
 - 4. AWP - C27 - Plywood - Fire-Retardant Treatment by Pressure Processes.
 - 5. AWP - P5 - Waterborne Preservatives.
- E. Underwriters' Laboratories, Inc. (UL):
 - 1. UL FR S - Fire Rated Treated Wood with Flame Spread and Smoke Developed Ratings of 25 or less in accordance with ASTM E84.
 - 2. UL 723 - Test for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Assurance/Control Submittals:
 - a. Certificates:
 - 1) Pressure Treated Wood: Certification from treating plant stating chemicals and process used and net amount of preservative retained are in conformance with specified standards.
 - 2) Preservative Treated Wood: Certification for water-borne preservative that moisture content was reduced to 19 percent maximum, after treatment.
 - 3) Fire-Retardant Treated Wood: Certification from treating plant stating that fire-retardant treatment materials comply with governing code, ordinances and requirements of local authority having jurisdiction, and treatment will not bleed through finished surfaces.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with the following agencies:
 - 1. Lumber Grading Agency: Certified by ALSC.
 - 2. Plywood Grading Agency: Certified by APA.
- B. Regulatory Requirements: Conform to applicable codes for fire-retardant treatment of wood surfaces for flame/smoke ratings.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
 - 1. Inspect wood materials for conformance to specified grades, species, and treatment at time of delivery to Project Site.
 - 2. Reject and return unsatisfactory wood materials.
- B. Provide facilities for handling and storage of materials to prevent damage to edges, ends and surfaces.
- C. Keep materials dry. Stack materials off ground minimum 12 inches or, if on concrete slab-on-grade, minimum 1-1/2 inches, fully protected from weather. Provide for air circulation within and around stacks and under temporary coverings.

- D. For materials pressure treated with waterborne chemicals, place spacers between each bundle to provide air circulation.

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Environmental Impact:
1. Formaldehyde: Products containing urea-formaldehyde will not be permitted.
 2. Wood pressure treatment products: Products containing chromium will not be permitted. Products containing arsenic will not be permitted.
 3. Use exterior plywood only. Interior plywood is not permitted.

NOTE TO SPECIFIER

Add FSC certification of products requirement where available and commonly specified.

4. All wood products to be FSC Certified.

PART 2 - PRODUCTS

2.1 LUMBER MATERIALS

- A. Lumber, finished 4 sides, 15 percent maximum moisture content. Each piece of lumber to be factory marked with type, grade, mill and grading agency.
1. Light framing: Construction grade Douglas fir or southern pine, appearance grade where exposed.
 2. Structural framing and timbers: No. 2 grade Douglas Fir, Southern Pine, or Spruce, appearance grade where exposed.
 3. Boards: Construction grade.

2.2 NAILERS, BLOCKING, FURRING AND SLEEPERS

- A. Wood for nailers, blocking, furring and sleepers: Construction grade, finished 4 sides, 15 percent maximum moisture content. Pressure preservative treat items in contact with roofing, flashing, waterproofing, masonry, concrete or the ground.

2.3 SHEATHING MATERIALS

- A. Plywood, APA rated for use and exposure:
1. Exterior wall sheathing: APA C-D rated 32/16 Sheathing, 1/2 inch minimal thickness, exterior type.
 2. Roof sheathing: APA rated 48/24 sheathing, 5/8 inch minimum thickness, exterior type.
 3. Backing panels: APA C-D plugged, 3/4 inch thick, exterior type.
 4. Security Ceiling: APA rated 48/24 sheathing, 5/8 inch minimum thickness, tongue and groove, exterior type.

2.4 BUILDING PAPER

- A. Asphalt saturated felt, non-perforated.

2.5 FASTENERS

- A. Fasteners: Provide manufacturers recommended power tools for each type of fastener.
1. Bolts, Nuts, Washers, Lag Screws, and Wood Screws: ASTM A307, Medium carbon steel; size and type to suit application; galvanized for treated wood; plain finish for other interior locations, of size and type to suit application, unless otherwise noted.
 2. Expansion Shield Fasteners: For anchorage of non-structural items to solid masonry and concrete.
 3. Powder or Pneumatically Activated Fasteners: For anchorage of non-structural items to steel.
 4. Fasteners for Wood and Plywood (over 1/2 inch) to Light Gage Metal Framing and Metal Deck (up to 1/8 inch thick):
 - a. Hilti PWH #3 with wings.
 - b. ITW TEKS/4 with wings.
 - c. Substitutions: Permitted
 5. Fasteners for Wood and Plywood (up to 2 inches thick) to Metal (from 1/8 inch to 1/4 inch thick):
 - a. Hilti PFH #4 with wings.
 - b. ITW TEKS/4 with wings.
 - c. Substitutions: Permitted
 6. Fasteners for Non-Structural Wood Members to Masonry: 1/4 inch diameter x 3-1/4 inch with phillips flat head.
 - a. Tapcon masonry anchors, by ITW Buildex.
 - b. Kwik-Con II fastener, by Hilti.
 - c. Substitutions: Permitted
 7. Fasteners for preservative treated lumber must be hot dipped galvanized, type 304 or 316 stainless steel, or zinc-polymer coated.

2.6 WOOD TREATMENT

NOTE TO SPECIFIER

Type B ACQ is primarily used for west coast species such as Douglas Fir and Western Hemlock due to ability to penetrate these denser woods. Type D ACQ is primarily used for pine species such as Southern Yellow Pine.

- A. Preservative Pressure Treated Lumber, Alkaline Copper Quat (ACQ): Type B, Ammoniacal Copper Quat or Type D, Amine Copper Quat.
1. Manufacturers:
 - a. Chemical Specialties, Incorporated, Charlotte, NC (800) 421-8661.
 - b. Arch Wood Protection, Inc., Smyrna, GA (770) 801-6600
 - c. Osmose Inc., Griffin, GA, (800) 241-0240
 2. Products:
 - a. CSI: "Preserve".
 - b. Arch Wood: "Natural Select"
 - c. Osmose: "Nature Wood"
 3. Impregnate lumber with preservative treatment conforming to AWPAC Standard C1 and P5. Apply the preservative in a closed cylinder by pressure process in accordance with AWPAC Standard C15.
 4. Retention of preservative:
 - a. Moderate service conditions (weather exposure): 0.25 pounds per cubic foot (oxide basis).
 - b. Severe conditions (constant contact with ground or water): 0.40 pounds per cubic foot (oxide basis).
 5. Remove excess moisture where shrinkage is a serious fault or where treated lumber will be in contact with plaster, or stucco, and where water-borne treated lumber is to be painted or stained.
 6. Lumber shall be dried to 15 to 19 percent moisture content after treatment, and material to be painted or stained shall have knots and pitch streaks sealed as with untreated wood.

7. Liberally brush freshly cut surfaces, bolt holes and machined areas with the same preservative in accordance with AWWPA Standard M4.
 8. Treatment material shall provide protection against termites and fungal decay and shall be registered for use as a wood preservative by the U. S. Environmental Protection Agency.
- B. Fire Retardant Treatment:
1. Manufacturers:
 - a. Chemical Specialties, Incorporated, Charlotte, NC (800) 421-8661.
 - b. Hickson Corporation, Smyrna, GA: (770) 801-6600.
 - c. Hoover Treated Wood Products, Incorporated, Thomson, GA: (800) 832-9663.
 2. Products:
 - a. CSI: "D-Blaze".
 - b. Hickson: "Dricon".
 - c. Hoover: "Pyro-Guard".
 3. Lumber and plywood shall be treated as follows:
 - a. Each piece of treated material shall bear the UL FR-S rating (flamespread and smoke developed less than 25) indicating compliance with an extended 30 minute tunnel test in accordance with ASTM E84 or UL 723.
 - b. After treatment, all lumber shall be dried to an average moisture content of 19 percent or less.
 - c. After treatment, all plywood, shall be dried to an average moisture content of 15 percent or less.
 - d. All treated material shall meet interior Type A requirements in AWWPA standard C-20 for lumber and C-27 for plywood.
 - e. Chemicals used to treat material shall be free of halogens, sulfates and formaldehyde.
- C. Wood Requiring Treatment:
1. Lumber, Preservative Treated: Nailers, blocking, stripping, and similar items in conjunction with roofing, flashing, and other construction. Sills, blocking, furring, stripping, and similar items in contact with masonry or concrete.

NOTE TO SPECIFIER

OPTION 1 AND 3: Use for CSF Medium Building and RSD.

2. Lumber, Fire Retardant Treated: Interior framing, furring, blocking, nailers, and miscellaneous exposed wood. Do not treat furring in contact with masonry or concrete.
3. Interior Plywood, Fire Retardant Treated: Exterior type plywood backing for electrical and telephone equipment.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that spacing, direction and details of supports are correct to accommodate installation of blocking, backing, stripping, furring and nailing strips.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION - FRAMING

- A. Set structural members level and plumb, in correct position.
- B. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of permanent bracing.
- C. Place horizontal members, crown side up.
- D. Construct load bearing framing and curb members full length without splices.
- E. Double members at openings as indicated on Drawings. Space short studs over and under opening to stud spacing.
- F. Construct double joist headers at ceiling openings and under wall stud partitions that are parallel to roof trusses. Frame rigidly into roof trusses.
- G. Bridge roof trusses as specified in Section 061753. Fit solid bridging at ends of members.
- H. Place full width continuous sill flashings under framed walls on cementitious foundations. Lap flashing joint 4 inches.
- I. Place sill gasket directly on sill flashing. Puncture gasket clean and fit tight to protruding foundation anchor bolts.
- J. Coordinate installation of wood decking and prefabricated wood trusses.
- K. Install miscellaneous blocking, nailing strips and framing where required as backing for attachment of wall mounted fixtures, cabinetwork, and other items, and as detailed on Drawings. Coordinate to allow proper attachment of work of other Sections.
 - 1. Secure in place using fasteners specified. Use only recommended power tools for placement of fasteners.
 - 2. Recess heads of fasteners below surface of wood members.
- L. Secure in place with appropriate fasteners. Use fasteners of correct size that will not penetrate members where opposite side will be exposed to view or require finishing. Do not split wood with fasteners; set panel products to allow expansion at joints.
- M. Construct members of continuous pieces of longest possible lengths.

3.3 INSTALLATION - PLYWOOD

- A. Secure roof sheathing with longer edge perpendicular to framing members and with ends staggered and sheet ends over bearing.
- B. Use sheathing clips between sheets between roof framing members or provide solid edge blocking between sheets.
- C. Secure wall sheathing with long dimension perpendicular to wall studs, with ends over firm bearing and staggered.

- D. Install plywood in combination single and two span continuous.
- E. Install telephone and electrical panel back boards with plywood sheathing material where required. Size the back board by 12 inches (25 cm) beyond size of electrical panel.

3.4 INSTALLATION - AIR INFILTRATION SEAL

- A. Place material horizontally over wall sheathing, minimum 2 inch (5 cm) overlap and 6 inch (15 cm) endlap; weather lap edges and ends; fasten to sheathing with corrosion resistant fasteners.

3.5 SITE TREATMENT OF WOOD MATERIALS

- A. Apply preservative treatment in accordance with manufacturer's published instructions.
- B. Brush apply two coats of preservative treatment on wood in contact with cementitious materials and roofing and related metal flashings. Treat site-sawn cuts.
- C. Allow preservative to dry prior to erecting members.

3.6 CONSTRUCTION

- A. Site Tolerances:
 - 1. Framing Members: 1/4 inch from true position, maximum.

3.7 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Framing Inspection:
 - 1. Inspect wood framing installation and connections at completion of each phase of wood construction for correct installation, nailing, connections, and fasteners.
 - 2. Inspect and verify that types and spacing of fasteners are installed in locations specified or indicated on Drawings.
 - 3. Inspect types, locations, and fasteners for structural metal framing connectors.
 - 4. Inspect types, locations, and connections of hold-down anchors.
 - 5. Inspect wood to steel beam connections.

NOTE TO SPECIFIER

Nailing Schedule below is taken from Table in Uniform Building Code. Nailing indicated is minimum, edit and modify as required for specific Project and authority having jurisdiction. Indicate nailing for other conditions and requirements on the Drawings and Framing Details.

3.8 SCHEDULE - NAILING

CONNECTION	NAILING
Joist to sill or girder, toenail	3 - 8d
Bridging to joist, toenail each end	2 - 8d
Bottom Plate to joist or blocking, face nail	16d at 16 inches o.c.
Top plate to stud, end nail	2-16d
Stud to bottom plate	4-8d, toenail or

	2-16d, end nail
Double studs, face nail	16d at 24 inches o.c.
Double top plates, face nail	16d at 16 inches o.c.
Top plates, laps and intersections, face nail	2 - 16d
Continuous header, two pieces	16d at 16 inches o.c. along each edge
Ceiling joists to plate, toenail	3 - 8d
Continuous header to stud, toenail	4 - 8d
Ceiling joists, laps over partitions, face nail	3 - 16d
Ceiling joists to parallel rafters, face nail	3 - 16d
Rafter to plate, toenail	3 - 16d
Built-up corner studs	16d at 24 inches o.c.
Built-up beams	20d at 32 inches o.c. at top and bottom staggered 2 - 20d at ends and at each splice

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 06 10 53 00 - R&A MISCELLANEOUS ROUGH CARPENTRY FOR ROOF REPLACEMENT

MISCELLANEOUS ROUGH CARPENTRY FOR ROOF REPLACEMENT

NOTE TO SPECIFIER

*This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. **Edit Section footer information only – do not edit Section contents.***

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. Miscellaneous rough carpentry associated with roof replacement.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for removal and replacement of existing damaged or deteriorated wood nailers and blocking not included in the Base Proposal.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Wood Preservers Association (AWPA)
 - 2. American Wood Preservers Institute (AWPI)
 - 3. American National Standard Institute (ANSI)
 - 4. Western Wood Products Association (WWPA)

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 WOOD NAILERS AND WOOD BLOCKING

- A. Species and Grade (for non-exposed use): Douglas Fir or Yellow Pine; WWPA Structural Joist and Plank Class, No. 2 Grade.
- B. For exposed wood blocking (such as rooftop conduit and pipe support):
 - 1. Preservative treated lumber: ACQ-treated or pressure-treated.
- C. Dimensions: As indicated on drawings or required by conditions encountered.

2.2 PLYWOOD

- A. Standards: PS 1/ANSI A199.1 for plywood panels.

- B. Grade: C-C EXT-APA.
- C. Dimensions: Thickness as indicated in drawings or specifications.

2.3 FASTENERS

- A. For securing wood to masonry: 1/4-inch diameter "Tapcon" screws or other fastener type suitable to adequately secure the wood to the building wall.
- B. For securing wood to wood: No. 14 fluorocarbon-coated screws, or double-dipped galvanized nails; length as necessary to penetrate minimum 1-1/4-inch depth into wood for screws and 1-1/2 inches into wood for nails.
- C. For fastening to ACQ-treated lumber: Stainless steel screws; size as necessary for conditions encountered.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

3.2 WOOD NAILER AND BLOCKING INSPECTION/REPLACEMENT

- A. During roof removal, inspect exposed wood nailers and blocking for damage, deterioration, and other defects.
- B. To the extent indicated by the Owner, remove and discard damaged, deteriorated, or otherwise defective wood nailers and blocking and install new wood nailers and blocking to match the adjacent nailers and blocking in size and shape. Refer to Article 3.3 of this Section.

3.3 WOOD NAILER AND BLOCKING INSTALLATION

- A. Provide new wood nailers and blocking as follows:
 - 1. Where indicated on drawings.
 - 2. Where wood nailers and blocking were removed and discarded.
 - 3. Where conditions allow, for support beneath rooftop conduit and pipes.
 - 4. As necessary for other conditions encountered, such as raising curb heights to allow for minimum 8-inch flashing height.
- B. Wood securement to wood deck and building construction:
 - 1. Secure wood members with the specified fasteners at not more than 18-inches o.c., and, in addition, within 6 inches of each end, to adequately secure nailers to the deck or building construction.
- C. Wood securement to other wood nailers and blocking: Secure the top nailer(s) to the lower secured nailer with the specified nails or screws, of sufficient length to penetrate a minimum of 1-1/2 inches into the lower wood nailer (for nails) and 1-1/4 inches into the wood (for screws). Fasteners shall be spaced 18 inches o.c. and staggered. In addition, provide fasteners within 6

inches of all ends of nailers.

1. Within 10 feet of any outside building corner, reduce the indicated fastener spacing by one-half.

3.4 PLYWOOD INSTALLATION

- A. Install plywood at locations indicated on drawings or as required by conditions encountered.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 UNIT PRICES

- A. Provide unit prices for the work described in Articles 3.2 and 3.3.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Wood Preservers Association (AWPA)
 - 2. American Wood Preservers Institute (AWPI)
 - 3. American National Standard Institute (ANSI)
 - 4. Western Wood Products Association (WWPA)

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed to install the specified products and is eligible to receive a manufacturer's warranty. The firm shall have a minimum of 5 years documented experience performing work equal or similar to the specified work.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 PRODUCT DELIVERY, HANDLING AND STORAGE

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform wood deck repair/replacement work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 WOOD DECK REPAIR/REPLACEMENT MATERIALS

- A. For use at "Wood Deck Inspection/Repair" outlined in Article 3.2:
 - 1. Steel plate: 16-gauge galvanized with pre-drilled holes for fasteners and plates.
 - 2. For securing wood to wood and wood to steel: No. 14 fluorocarbon-coated screws; length as necessary to penetrate minimum 1-inch depth through the deck.
 - 3. For securing wood to underlying structural steel (1/2-inch thick max.): 12-24 x 1-1/4 inch Hex Washer Head, Teks 5, or approved equal.
- B. For use at "Wood Deck Inspection/Replacement" outlined in Article 3.3:
 - 1. Replacement wood plank:

- a. Wood plank dimensions and type: As required by conditions encountered; Type, grade and species to match dimensions and type of existing wood plank deck.
- 2. Replacement plywood:
 - a. Plywood dimensions and type: As required by conditions encountered; Type, grade and species to match dimensions and type of existing wood plank deck.
- 3. Fasteners:
 - a. For securing wood to wood and wood to steel: No. 14 fluorocarbon-coated screws; length as necessary to penetrate minimum 1-inch depth through the deck.
 - b. For securing wood to underlying structural steel (1/2-inch thick max.): 12-24 x 1-1/4 inch Hex Washer Head, Teks 5, or approved equal.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

3.2 WOOD DECK INSPECTION AND REPAIR (*Unit Price Work*)

- A. Repair at openings caused by obsolete roof penetration removal or other defects less than 12" by 12" in size:
 - 1. At locations encountered and other locations indicated by the Owner, cover the existing opening with 16-gauge steel plate stock. Lap the plate a minimum of 8-inches beyond the opening on all sides. Fasten the steel plate with specified fasteners and plates 6-inches on center. Secure the plate a minimum of 2-inches in from the outside edge of the repair plate.

3.3 WOOD DECK INSPECTION AND REPLACEMENT (*Unit Price Work*)

- A. Prior to the start of work, inspect the interior area below the area of damaged wood roof deck. Remove items from the replacement area that may be damaged during work activities. Provide adequate interior protection to protect interior surfaces and finishes from damage prior to the start of work. The Contractor shall provide an "Interior Protection Representative" during replacement work.
- B. Inspect deck for structurally unsound or otherwise defective areas and for fastening deficiencies. Perform treatments as indicated:
 - 1. Remove defective decking and repair resultant openings:
 - a. Install replacement decking with the long dimension across the supports. Leave a 1/8-inch gap at all edges and end joints. Install shims as necessary between the replacement decking and the structural members to ensure that the replacement decking is flush with adjacent decking.
 - b. Mechanically attach the new wood decking to the underlying supports using the specified fasteners.
 - 2. Install additional fasteners where the existing fasteners missed the underlying supports or where the number of fasteners installed does not meet minimum code requirements.
 - 3. Remove loose or protruding nails or hammer them down flush with the deck surface.
- B. Sweep deck clean before installing new materials.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 06 15 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 16 23 00 - SHEATHING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for sheathing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Wall sheathing.
 - b. Roof sheathing.
 - c. Composite nail base insulated roof sheathing.
 - d. Subflooring.
 - e. Underlayment.
 - f. Building paper.
 - g. Building wrap.
 - h. Sheathing joint-and-penetration treatment.
 - i. Flexible flashing at openings in sheathing.

C. Submittals

1. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
 - a. Include data for wood-preserved treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Indicate type of preservative used and net amount of preservative retained.
 - b. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated plywood complies with requirements. Include physical properties of treated materials.
 - c. For fire-retardant treatments specified to be High-Temperature (HT) type, include physical properties of treated plywood both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5516.
 - d. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
 - e. Include copies of warranties from chemical treatment manufacturers for each type of treatment.
 - f. For building wrap, include data on air-/moisture-infiltration protection based on testing according to referenced standards.
2. LEED Submittals:
 - a. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.
 - b. Product Data for Credit EQ 4.4: For composite-wood products, documentation indicating that product contains no urea formaldehyde.
 - c. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
 - 1) Include statement indicating costs for each certified wood product.
3. Research/Evaluation Reports: For the following, showing compliance with building code in effect for Project:
 - a. Preservative-treated plywood.
 - b. Fire-retardant-treated plywood.

- c. Foam-plastic sheathing.
- d. Building wrap.

D. Quality Assurance

1. Fire-Test-Response Characteristics: For assemblies with fire-resistance ratings, provide materials and construction identical to those of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.
2. Forest Certification: For the following wood products, provide materials produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship":
 - a. Plywood.
 - b. Oriented strand board.
 - c. Fiberboard wall sheathing.
 - d. Particleboard underlayment.
 - e. Hardboard underlayment.

E. Delivery, Storage, And Handling

1. Stack plywood and other panels flat with spacers between each bundle to provide air circulation. Provide for air circulation around stacks and under coverings.

1.2 PRODUCTS

A. Wood Panel Products, General

1. Plywood: DOC PS 1 **OR** Either DOC PS 1 or DOC PS 2, unless otherwise indicated, **as directed**.
2. Oriented Strand Board: DOC PS 2.
3. Thickness: As needed to comply with requirements specified, but not less than thickness indicated.
4. Factory mark panels to indicate compliance with applicable standard.

B. Preservative-Treated Plywood

1. Preservative Treatment by Pressure Process: AWWA C9.
 - a. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium.
2. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.
3. Application: Treat all plywood, unless otherwise indicated **OR** Treat items indicated on Drawings, **as directed**, and plywood in contact with masonry or concrete or used with roofing, flashing, vapor barriers, and waterproofing.

C. Fire-Retardant-Treated Plywood

1. General: Comply with performance requirements in AWWA C27.
 - a. Use treatment that does not promote corrosion of metal fasteners.
 - b. Use Exterior type for exterior locations and where indicated.
 - c. Use Interior Type A, High Temperature (HT) for roof sheathing and where indicated.
 - d. Use Interior Type A, unless otherwise indicated.
2. Kiln-dry material after treatment to a maximum moisture content of 15 percent. Do not use material that is warped or does not comply with requirements for untreated material.
3. Identify fire-retardant-treated plywood with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
4. Application: Treat all plywood, unless otherwise indicated **OR** Treat plywood indicated on Drawings, and the following, **as directed**:
 - a. Roof and wall sheathing within 48 inches (1220 mm) of fire **OR** party, **as directed**, walls.

- b. Roof sheathing.
 - c. Subflooring and underlayment for raised platforms.
- D. Wall Sheathing
- 1. Plywood Wall Sheathing: Exterior, Structural I **OR** Exterior **OR** Exposure 1, Structural I **OR** Exposure 1, **as directed**, sheathing.
 - 2. Oriented-Strand-Board Wall Sheathing: Exposure 1, Structural I **OR** Exposure 1, **as directed**, sheathing.
 - 3. Paper-Surfaced Gypsum Wall Sheathing: ASTM C 79/C 79M or ASTM C 1396/C 1396M, gypsum sheathing; with water-resistant-treated core and with water-repellent paper bonded to core's face, back, and long edges.
 - a. Type and Thickness: Regular, 1/2 inch (13 mm) **OR** Type X, 5/8 inch (15.9 mm), **as directed**, thick.
 - 4. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.
 - a. Type and Thickness: Regular, 1/2 inch (13 mm) **OR** Type X, 5/8 inch (15.9 mm), **as directed**, thick.
 - 5. Cellulose Fiber-Reinforced Gypsum Sheathing: ASTM C 1278/C 1278M, gypsum sheathing.
 - a. Type and Thickness: Regular, 1/2 inch (13 mm) **OR** Type X, 5/8 inch (15.9 mm), **as directed**, thick.
 - 6. Fiberboard Wall Sheathing: ASTM C 208, Type IV, Grade 1 (Regular) **OR** 2 (Structural), **as directed**, cellulosic fiberboard sheathing with square edges, 1/2 inch (13 mm) **OR** 25/32 inch (20 mm), **as directed**, thick.
 - 7. Extruded-Polystyrene-Foam Wall Sheathing: ASTM C 578, Type IV, in manufacturer's standard lengths and widths with tongue-and-groove or shiplap long edges as standard with manufacturer.
 - a. Thickness: 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** As indicated, **as directed**.
 - 8. Foil-Faced, Polyisocyanurate-Foam Wall Sheathing: ASTM C 1289, Type I, Class 2, aluminum-foil-faced, glass-fiber-reinforced, rigid, cellular, polyisocyanurate thermal insulation. Foam-plastic core and facings shall have a flame-spread index of 25 or less when tested individually.
 - a. Thickness: 7/16 inch (11.1 mm) **OR** 1/2 inch (13 mm) **OR** 5/8 inch (15.9 mm) **OR** 3/4 inch (19 mm) **OR** 1 inch (25 mm) **OR** As indicated, **as directed**.
- E. Roof Sheathing
- 1. Plywood Roof Sheathing: Exterior, Structural I **OR** Exterior **OR** Exposure 1, Structural I **OR** Exposure 1, **as directed**, sheathing.
 - 2. Oriented-Strand-Board Roof Sheathing: Exposure 1, Structural I **OR** Exposure 1, **as directed**, sheathing.
- F. Composite Nail Base Insulated Roof Sheathing
- 1. Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing: Rigid, cellular, polyisocyanurate thermal insulation with oriented strand board laminated to one face complying with ASTM C 1289, Type V.
 - 2. Vented, Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing:
 - a. Rigid, cellular, polyisocyanurate thermal insulation complying with ASTM C 1289, Type II, Class 1, with oriented strand board adhered to spacers on one face.
OR
Rigid, cellular, polyisocyanurate thermal insulation with oriented strand board laminated to one face complying with ASTM C 1289, Type V. Oriented-strand-board face has a second layer of oriented strand board adhered to it with spacers between.
 - 1) Polyisocyanurate-Foam Thickness: 1 inch (25 mm) **OR** 1-1/2 inches (38 mm) **OR** 2 inches (50 mm) **OR** 2-1/2 inches (64 mm) **OR** 3 inches (76 mm) **OR** 3-1/2 inches (89 mm) **OR** 4 inches (102 mm), **as directed**.
 - 2) Oriented-Strand-Board Nominal Thickness: 7/16 inch (11.1 mm) **OR** 5/8 inch (15.9 mm), **as directed**.
 - 3) Spacers: Wood furring strips or blocks not less than 3/4 inch (19 mm) thick and spaced not more than 12 inches (300 mm) **OR** 16 inches (400 mm) **OR** 24 inches (600 mm), **as directed**, o.c.

G. Subflooring And Underlayment

1. Plywood Combination Subfloor-Underlayment: DOC PS 1, Exterior, Structural I, C-C Plugged **OR** Exterior, C-C Plugged **OR** Exposure 1, Structural I, Underlayment **OR** Exposure 1, Underlayment, **as directed**, single-floor panels.
2. Oriented-Strand-Board Combination Subfloor-Underlayment: Exposure 1 single-floor panels.
3. Plywood Subflooring: Exterior, Structural I **OR** Exterior **OR** Exposure 1, Structural I **OR** Exposure 1, **as directed**, single-floor panels or sheathing.
4. Oriented-Strand-Board Subflooring: Exposure 1, Structural I sheathing **OR** single-floor panels or sheathing, **as directed**.
5. Underlayment, General: Provide underlayment in nominal thicknesses indicated or, if not indicated, not less than 1/4 inch (6.4 mm) over smooth subfloors and not less than 3/8 inch (9.5 mm) over board or uneven subfloors.
6. Plywood Underlayment for Resilient Flooring: DOC PS 1, Exterior A-C **OR** Exterior B-C **OR** Exterior, C-C Plugged **OR** Exposure 1 Underlayment, **as directed**, with fully sanded face.
7. Plywood Underlayment for Ceramic Tile: DOC PS 1, Exterior, C-C Plugged, not less than 5/8-inch (15.9-mm) nominal thickness, for ceramic tile set in organic **OR** epoxy, **as directed**, adhesive.
8. Plywood Underlayment for Carpet: DOC PS 1, Exterior, C-C Plugged **OR** Exposure 1, Underlayment **OR** Interior, Underlayment, **as directed**.
9. Particleboard Underlayment: ANSI A208.1, Grade PBU **OR** M-2, Exterior Glue, complying with dimensional tolerances and thickness swell requirements of Grade PBU, **as directed**.
10. Hardboard Underlayment: AHA A135.4, Class 4 (Service), Surface S1S; with back side sanded.

H. Fasteners

1. General: Provide fasteners of size and type indicated that comply with requirements specified in this Article for material and manufacture.
 - a. For roof and wall, **as directed**, sheathing, provide fasteners with hot-dip zinc coating complying with ASTM A 153/A 153M **OR** of Type 304 stainless steel, **as directed**.
2. Nails, Brads, and Staples: ASTM F 1667.
3. Power-Driven Fasteners: NES NER-272.
4. Wood Screws: ASME B18.6.1.
5. Screws for Fastening Wood Structural Panels to Cold-Formed Metal Framing: ASTM C 954, except with wafer heads and reamer wings, length as recommended by screw manufacturer for material being fastened.
 - a. For wall and roof sheathing panels, provide screws with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
6. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117.
 - a. For steel framing less than 0.0329 inch (0.835 mm) thick, attach sheathing to comply with ASTM C 1002.
 - b. For steel framing from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick, attach sheathing to comply with ASTM C 954.
7. Screws for Fastening Oriented-Strand-Board-Surfaced, Polyisocyanurate-Foam Sheathing to Metal Roof Deck: Steel drill screws, in type and length recommended by sheathing manufacturer for thickness of sheathing board to be attached, with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117. Provide washers or plates if recommended by sheathing manufacturer.

I. Weather-Resistant Sheathing Paper

1. Building Paper:
 - a. ASTM D 226, Type 1 (No. 15 asphalt-saturated organic felt), unperforated.**OR**

- UBC Standard 14-1, Grade D (water-vapor-permeable, kraft building paper), except that water resistance shall be not less than 1 hour and water-vapor transmission shall be not less than 75 g/sq. m x 24 h.
2. Building Wrap: ASTM E 1677, Type I air retarder; with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, when tested according to ASTM E 84; UV stabilized; and acceptable to authorities having jurisdiction.
 - a. Water-Vapor Permeance: Not less than 535 **OR** 152 **OR** 125 **OR** 63, **as directed**, g through 1 sq. m of surface in 24 hours per ASTM E 96, Desiccant Method (Procedure A).
 - b. Allowable UV Exposure Time: Not less than three months.
 3. Building-Wrap Tape: Pressure-sensitive plastic tape recommended by building-wrap manufacturer for sealing joints and penetrations in building wrap.
- J. Sheathing Joint-And-Penetration Treatment Materials
1. Sealant for Paper-Surfaced **OR** Glass-Mat, **as directed**, Gypsum Sheathing Board:
 - a. Elastomeric, medium-modulus, neutral-curing silicone joint sealant compatible with joint substrates formed by gypsum sheathing and other materials, recommended by sheathing manufacturer for application indicated, and complying with requirements for elastomeric sealants specified in Division 07 Section "Joint Sealants".

OR

Silicone emulsion sealant complying with ASTM C 834, compatible with sheathing tape and sheathing, and recommended by tape and sheathing manufacturers for use with glass-fiber sheathing tape and for covering exposed fasteners.
 2. Sheathing Tape for Glass-Mat Gypsum Sheathing Board: Self-adhering glass-fiber tape, minimum 2 inches (50 mm) wide, 10 by 10 or 10 by 20 threads/inch (390 by 390 or 390 by 780 threads/m), of type recommended by sheathing and tape manufacturers for use with silicone emulsion sealant in sealing joints in glass-mat gypsum sheathing board and with a history of successful in-service use.
 3. Sheathing Tape for Foam-Plastic Sheathing: Pressure-sensitive plastic tape recommended by sheathing manufacturer for sealing joints and penetrations in sheathing.
- K. Miscellaneous Materials
1. Adhesives for Field Gluing Panels to Framing: Formulation complying with APA AFG-01 **OR** ASTM D 3498, **as directed**, that is approved for use with type of construction panel indicated by manufacturers of both adhesives and panels.
 - a. Use adhesives that have a VOC content of 50 **OR** 70, **as directed**, g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, rubberized-asphalt compound, bonded to a high-density, cross-laminated polyethylene film to produce an overall thickness of not less than 0.025 inch (0.6 mm) **OR** 0.030 inch (0.8 mm) **OR** 0.040 inch (1.0 mm), **as directed**.
 3. Primer for Flexible Flashing: Product recommended by manufacturer of flexible flashing for substrate.

1.3 EXECUTION

- A. Installation, General
1. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
 2. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction, unless otherwise indicated.
 3. Securely attach to substrate by fastening as indicated, complying with the following:
 - a. NES NER-272 for power-driven fasteners.
 - b. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."
 - c. Table 23-II-B-1, "Nailing Schedule," and Table 23-II-B-2, "Wood Structural Panel Roof Sheathing Nailing Schedule," in ICBO's "Uniform Building Code."

- d. Table 2305.2, "Fastening Schedule," in BOCA's "BOCA National Building Code."
- e. Table 2306.1, "Fastening Schedule," in SBCCI's "Standard Building Code."
- f. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's "International Residential Code for One- and Two-Family Dwellings."
- g. Table 602.3(1), "Fastener Schedule for Structural Members," and Table 602.3(2), "Alternate Attachments," in ICC's "International One- and Two-Family Dwelling Code."
- 4. Use common wire nails, unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections. Install fasteners without splitting wood.
- 5. Coordinate wall and roof sheathing installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.
- 6. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.
- 7. Coordinate sheathing installation with installation of materials installed over sheathing so sheathing is not exposed to precipitation or left exposed at end of the workday when rain is forecast.

B. Wood Structural Panel Installation

- 1. General: Comply with applicable recommendations in APA Form No. E30S, "Engineered Wood Construction Guide," for types of structural-use panels and applications indicated.
- 2. Fastening Methods: Fasten panels as indicated below:
 - a. Combination Subfloor-Underlayment:
 - 1) Glue and nail **OR** Nail, **as directed**, to wood framing.
 - 2) Screw to cold-formed metal framing.
 - 3) Space panels 1/8 inch (3 mm) apart at edges and ends.
 - b. Subflooring:
 - 1) Glue and nail **OR** Nail **OR** Nail or staple, **as directed**, to wood framing.
 - 2) Screw to cold-formed metal framing.
 - 3) Space panels 1/8 inch (3 mm) apart at edges and ends.
 - c. Wall and Roof Sheathing:
 - 1) Nail **OR** Nail or staple, **as directed**, to wood framing. Apply a continuous bead of glue to framing members at edges of wall sheathing panels.
 - 2) Screw to cold-formed metal framing.
 - 3) Space panels 1/8 inch (3 mm) apart at edges and ends.
 - d. Underlayment:
 - 1) Nail **OR** Nail or staple, **as directed**, to subflooring.
 - 2) Space panels 1/32 inch (0.8 mm) apart at edges and ends.
 - 3) Fill and sand edge joints of underlayment receiving resilient flooring right before installing flooring.

C. Gypsum Sheathing Installation

- 1. Comply with GA-253 and with manufacturer's written instructions.
 - a. Fasten gypsum sheathing to wood framing with nails **OR** screws, **as directed**.
 - b. Fasten gypsum sheathing to cold-formed metal framing with screws.
 - c. Install boards with a 3/8-inch (9.5-mm) gap where non-load-bearing construction abuts structural elements.
 - d. Install boards with a 1/4-inch (6.4-mm) gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.
- 2. Apply fasteners so heads bear tightly against face of sheathing boards but do not cut into facing.
- 3. Horizontal Installation: Install sheathing with V-grooved edge down and tongue edge up. Interlock tongue with groove to bring long edges in contact with edges of adjacent boards without forcing. Abut ends of boards over centers of studs, and stagger end joints of adjacent boards not

- less than one stud spacing. Attach boards at perimeter and within field of board to each steel stud.
 - a. Space fasteners approximately 8 inches (200 mm) o.c. and set back a minimum of 3/8 inch (9.5 mm) from edges and ends of boards.
 - b. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- 4. Vertical Installation: Install board vertical edges centered over studs. Abut ends and edges of each board with those of adjacent boards. Attach boards at perimeter and within field of board to each stud.
 - a. Space fasteners approximately 8 inches (200 mm) o.c. and set back a minimum of 3/8 inch (9.5 mm) from edges and ends of boards.
 - b. For sheathing under stucco cladding, boards may be initially tacked in place with screws if overlying self-furring metal lath is screw-attached through sheathing to studs immediately after sheathing is installed.
- D. Fiberboard Sheathing Installation
 - 1. Comply with ASTM C 846 and with manufacturer's written instructions.
 - 2. Fasten fiberboard sheathing panels to intermediate supports and then at edges and ends. Use galvanized roofing nails or galvanized staples, **as directed**; comply with manufacturer's recommended spacing and referenced fastening schedule. Drive fasteners flush with surface of sheathing and locate perimeter fasteners at least 3/8 inch (9.5 mm) from edges and ends.
 - 3. Install sheathing vertically with long edges parallel to, and centered over, studs. Install solid wood blocking where end joints do not occur over framing. Allow 1/8-inch (3-mm) open space between edges and ends of adjacent units. Stagger horizontal joints if any.
 - 4. Cover sheathing as soon as practical after installation to prevent deterioration from wetting.
- E. Foam-Plastic Sheathing Installation
 - 1. Comply with manufacturer's written instructions.
 - 2. Foam-Plastic Wall Sheathing: Install vapor-relief strips or equivalent for permitting escape of moisture vapor that otherwise would be trapped in stud cavity behind sheathing.
- F. Particleboard Underlayment Installation
 - 1. Comply with the National Particleboard Association's recommendations for type of subfloor indicated. Fill and sand gouges, gaps, and chipped edges. Sand uneven joints flush.
 - a. Fastening Method: Glue and nail **OR** Nail **OR** Nail or staple, **as directed**, underlayment to subflooring.
- G. Hardboard Underlayment Installation
 - 1. Comply with AHA's "Application Instructions for Basic Hardboard Products" and with hardboard manufacturer's written instructions for preparing and applying hardboard underlayment.
 - a. Fastening Method: Nail **OR** Nail or staple, **as directed**, underlayment to subflooring.
- H. Weather-Resistant Sheathing-Paper Installation
 - 1. General: Cover sheathing with weather-resistant sheathing paper as follows:
 - a. Cut back barrier 1/2 inch (13 mm) on each side of the break in supporting members at expansion- or control-joint locations.
 - b. Apply barrier to cover vertical flashing with a minimum 4-inch (100-mm) overlap, unless otherwise indicated.
 - 2. Building Paper: Apply horizontally with a 2-inch (50-mm) overlap and a 6-inch (150-mm) end lap; fasten to sheathing with galvanized staples or roofing nails.
 - 3. Building Wrap: Comply with manufacturer's written instructions.
 - a. Seal seams, edges, fasteners, and penetrations with tape.
 - b. Extend into jambs of openings and seal corners with tape.
- I. Sheathing Joint-And-Penetration Treatment

1. Seal sheathing joints according to sheathing manufacturer's written instructions.
 - a. Apply elastomeric sealant to joints and fasteners and trowel flat. Apply sufficient quantity of sealant to completely cover joints and fasteners after troweling. Seal other penetrations and openings.
 - b. Apply glass-fiber sheathing tape to glass-mat gypsum sheathing board joints, and apply and trowel silicone emulsion sealant to embed entire face of tape in sealant. Apply sealant to exposed fasteners with a trowel so fasteners are completely covered. Seal other penetrations and openings.
 - c. Apply sheathing tape to joints between foam-plastic sheathing panels and at items penetrating sheathing. Apply at upstanding flashing to overlap both flashing and sheathing.

J. Flexible Flashing Installation

1. Apply flexible flashing where indicated to comply with manufacturers written instructions.
 - a. Prime substrates as recommended by flashing manufacturer.
 - b. Lap seams and junctures with other materials at least 4 inches (100 mm), except that at flashing flanges of other construction, laps need not exceed flange width.
 - c. Lap flashing over weather-resistant building paper at bottom and sides of openings.
 - d. Lap weather-resistant building paper over flashing at heads of openings.
 - e. After flashing has been applied, roll surfaces with a hard rubber or metal roller to ensure that flashing is completely adhered to substrates.

K. Protection

1. Paper-Surfaced Gypsum Sheathing: Protect sheathing by covering exposed exterior surface of sheathing with weather-resistant sheathing paper securely fastened to framing. Apply covering immediately after sheathing is installed.

**SECTION 06 17 53 00 - CSF SHOP-FABRICATED WOOD TRUSSES****

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.06 17 53 00

PART 1 - GENERAL**1.1 SUMMARY**

- A. Section Includes:
 - 1. Shop fabricated wood trusses for roof framing.
 - 2. Bridging, bracing, and anchorage.
 - 3. Wood treatment.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Edit DESIGN REQUIREMENTS below for roof live and dead loads.

1.2 DESIGN REQUIREMENTS

- A. Design Roof Live and Dead Load: [____] pounds per square foot with deflection limited to [1/240] [____] of span including ceiling load.
- B. Maximum Truss Clear Span: 60 feet.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Metal plate connectors and metal framing connectors.
 - 2. Shop Drawings: Indicate sizes and spacing of trusses and associated components, web and cord sizes, plate sizes, fastener descriptions and spacings, loads and truss cambers, lifting points, and framed openings. Include truss elevation showing chords, connection plates, bracing requirements and support conditions.

- a. Drawings signed and sealed by Professional Engineer licensed in State where Project is located.
- 3. Assurance/Control Submittals:
 - a. Design Data: Design calculations.
 - 1) Calculations signed and sealed by Professional Engineer licensed in State where Project is located
 - b. Inspection Report: Submit the following reports directly to Contracting Officer form Delegated Engineer, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - 1) Preparatory.
 - 2) Initial.
 - c. Certificate: Fabricator certificate indicating that Products meet or exceed specified requirements.
 - d. Qualification Documentation: Truss fabricator documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Fabricator Experience: Company specializing in manufacture of prefabricated open web wood trusses with three years minimum experience.
- B. Regulatory Requirements: Conform to applicable local code for loads, seismic zoning, other governing load criteria, and fire retardant requirements.
- C. Truss Design, Fabrication, and Installation: In accordance with Truss Plate Institute I-95, DSB-89, HET-80, and HIB-91.
- D. Lumber Grading Agency: Certified by ALSC.
- E. Design trusses under direct supervision of Professional Structural Engineer experienced in design of this Work and licensed in State where Project is located.

NOTE TO SPECIFIER

Add FSC certification of products requirement where available and commonly specified.

- F. All wood products to be FSC Certified

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Handle and erect trusses in accordance with TPI HIB-91.
- C. Transport and store trusses in vertical position resting on bearing ends.
- D. Protect trusses from moisture, warpage, and distortion during transit and when stored. Stack materials off ground a minimum of 12 inches or concrete slab-on-grade a minimum of 1-1/2 inches on level, flat forms.
- E. Do not erect members until preparations to receive are completed including installation of miscellaneous metal and connecting hardware.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Lumber: PS 20; S4S.
 - 1. Non-Structural Framing (2 inches to 4 inches thick, 2 inches to 4 inches wide): Construction Grade, any species available in grade; maximum moisture content of 19 percent.
 - 2. Trusses: Douglas Fir, Hem-Fir graded by WWPA or WCLIB; Western Larch graded by WWPA or WCLIB; Southern Pine graded by SPIB or Spruce Pine graded by NLGA. Provide trusses all of the same species. Any grade of lumber fulfilling requirements indicated for species and stress ratings. Maximum moisture content of 19 percent for 2x at time of dressing.
- B. Fasteners: Galvanized for exterior, high humidity, and at treated wood locations; plain finish elsewhere; size and type to suit condition.
- C. Connector Plate Material: Steel complying with following requirements unless otherwise indicated; not less than 0.036 inch galvanized, coated thickness.
 - 1. Truss Connection Plates: Conform to TPI standards.
 - 2. Galvanized sheet steel: ASTM A 153.
 - 3. Electrolytic Zinc Coated Steel Sheet: ASTM A 591, Coating Class C, with minimum structural quality equivalent to ASTM A 153, Grade A.
- D. Truss Bridging: Type, size, and spacing recommended by truss manufacturer.

2.2 FABRICATION

- A. Fabricate trusses to achieve structural requirements specified.
- B. Brace wood trusses for support in accordance with TPI DSB-89.
- C. Cut truss members to accurate lengths, angles, and sizes to produce close fitting joints with wood-to-wood bearing in assembled units.
- D. Fabricate metal connector plates to size, configuration, thickness, and anchorage details required for types of joint design indicated.
- E. Assemble truss members in design configuration indicated using jigs or other means to ensure uniformity and accuracy of assembly with close fitting joints. Position members to produce design camber indicated. Provide camber in accordance with TPI standards.
- F. Connect truss members by means of metal connector plates accurately located and securely fastened to wood members by approved fasteners.

2.3 WOOD TREATMENT

- A. Wood Preservative (Pressure Treatment): AWPAC Treatment C2 using water borne preservative with 0.25 percent retainage. Non-corrosive to connector plates.
 - 1. Pressure treat items in contact with roofing, flashing, or masonry.
- B. Fire Retardant: AWPAC Treatment C20, Interior Type, chemically treated and pressure impregnated; capable of providing a maximum flame spread.
 - 1. Fire Retardant: Treat where indicated and where required by local code.

PART 3 - EXECUTION

3.1 ERECTION

- A. Install trusses in accordance with manufacturer's instructions, and TPI HIB-91, at spacing indicated on Drawings.
- B. Set members level and plumb, in correct position.
- C. Make provisions for erection loads, and for sufficient temporary bracing to maintain structure plumb, and in true alignment until completion of erection and installation of permanent bracing.
- D. Place permanent bridging, bracing, and anchors to maintain trusses straight and in correct position before inducing loads.
- E. Do not field cut trusses.
- F. Place headers and supports to frame openings required.
- G. Frame openings between trusses with lumber.
- H. Coordinate placement of roof decking with work of this Section.

3.2 CONSTRUCTION

- A. Site Tolerances:
 - 1. Framing Members: 1/2 inch maximum from true position.

NOTE TO SPECIFIER

****REQUIRED ARTICLE (FIELD QUALITY CONTROL) IS INCLUDED BELOW. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Field Inspection:
 - 1. Delegated Engineer: Perform two inspections at Project Site.
 - a. Inspect building structure ready to receive roof truss erection just prior to start of roof truss erection.
 - b. Inspect at time roof trusses are being erected.
- C. Inspect roof truss installation, alignment, blocking and bridging, and connection to structure.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.06 20 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Interior running and standing trim.
 - 2. Adjustable shelving, shelf standards, and brackets.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 REFERENCES

- A. American Woodworking Institute (AWI):
 - 1. AWI AWQS - Architectural Woodwork Quality Standards, 6th Edition Version 1.0.
- B. United States Department of Commerce Product Standard (PS):
 - 1. PS 20 - American Softwood Lumber Standard.

1.3 QUALITY ASSURANCE

- A. Perform work in accordance with AWI Custom quality.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.

NOTE TO SPECIFIER

REQUIRED ARTICLE (Environmental Requirements) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Environmental Impact:

1. Formaldehyde: Products containing formaldehyde will not be permitted.

NOTE TO SPECIFIER

Add FSC certification of products requirement where available and commonly specified.

2. All wood products to be FSC Certified.

1.6 SITE ENVIRONMENTAL PROCEDURES

A. Indoor Air Quality:

1. Temporary ventilation: As specified in Section 013543 - Environmental Procedures.

PART 2 - PRODUCTS

2.1 ADJUSTABLE SHELVING

- A. Standards: adjustable, flush mount shelf standards. Style [], Finish [], MFR [].
- B. Standards: Brackets. Style [], Finish [], MFR [].
- C. Sheathing for Shelves: 3/4 inch thick x 24 inches deep in maximum possible length. Formaldehyde free board product sanded smooth and painted each side and each edge as specified in Section 099100 - Painting.
 1. PrimeBoard, Incorporated, Wahpeton, ND (701) 642-1152.
 2. Medite, Roseville, CA (800) 676-3339.
 3. Naturall Fibre Board, Minneapolis, KS (785) 392-9922.
 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- D. Fasteners: Size and type to suit application.

2.2 INTERIOR FINISH CARPENTRY

- A. Trim and boards for transparent finish: Rift sawn oak.
- B. Trim for painted finish: Softwood suitable for exposure and use.
- C. Sheathing : Formaldehyde free board product sanded smooth and painted each exposed side and each exposed edge as specified in Section 099100 - Painting.
 1. PrimeBoard, Incorporated, Wahpeton, ND (701) 642-1152.
 2. Medite, Roseville, CA (800) 676-3339.
 3. Naturall Fibre Board, Minneapolis, KS (785) 392-9922.
 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.3 ACCESSORIES

- A. Adhesive: Type recommended by AWI to suit application. Low VOC
 - 1. Titebond by Franklin International, Columbus, OH, (800) 877-4583.
 - 2. Famowood/Famobond by Eclectic Products (800) 767-4667.
 - 3. Almighty Adhesive by American Formulating & Manufacturing (619) 239-0321.
 - 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Fasteners: Size and type to suit application.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify existing conditions under provisions of Section 013100 – Project Management and Coordination.
- B. Site Verification of Conditions:
 - 1. Examine areas in which Work of this Section is to be performed.
 - 2. Verify that surfaces and site conditions are ready to receive Work.
- C. Report in writing to Construction Manager prevailing conditions that will adversely affect satisfactory execution of Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. Beginning of installation means acceptance of existing conditions.

3.2 INSTALLATION

- A. Install work in accordance with AWI AWQS, Section 1700 - Installation of Woodwork.
- B. Install Work plumb, level, and straight without distortion; use concealed shims. Scribe and cut Work to fit adjoining work. Anchor Work items to nailers or blocking or directly to substrate using concealed fasteners.
- C. Install shelving units, standards, and brackets at locations as indicated on Drawings.

3.3 ADJUSTING

- A. Adjust installed work. Test installed work for rigidity and ability to support loads.
- B. Adjust moving or operating parts to function smoothly and correctly.

3.4 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Clean shelves, hardware, fittings, and fixtures.

3.5 SITE ENVIRONMENTAL PROCEDURES

- A. Indoor Air Quality:
 - 1. Temporary ventilation: As specified in Section 013543 - Environmental Procedures.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 06 25 16 00 - PANELING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for paneling. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Board paneling.
 - b. Flush wood paneling.
 - c. Plastic-laminate-clad flush paneling.
 - d. Stile and rail wood paneling.

C. Definitions

1. Paneling includes wood furring, blocking, and shims for installing paneling, unless concealed within other construction before paneling installation.

D. Submittals

1. Product Data: For each type of product indicated, including finishing materials and processes.
 - a. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements.
2. Shop Drawings: Show location of paneling, large-scale details, attachment devices, and other components. Include dimensioned plans and elevations.
 - a. For paneling produced from premanufactured sets, show finished panel sizes, set numbers, sequence numbers within sets, and method of cutting panels to produce indicated sizes.
 - b. For paneling veneered in fabrication shop, show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
 - c. Apply WI-certified compliance label to first page of Shop Drawings, **as directed**.
3. Samples:
 - a. Lumber and panel products for transparent finish, for each species and cut, finished on one side and one edge.
 - b. Veneer leaves representative of and selected from flitches to be used for transparent-finished paneling.
 - c. Veneer-faced panel products with or for transparent finish, for each species and cut. Include at least one face-veneer seam and finish as specified.
 - d. Lumber and panel products with shop-applied opaque finish, for each finish system and color, with 1/2 of exposed surface finished.
 - e. Plastic laminates, 8 by 10 inches (200 by 250 mm), for each type, color, pattern, and surface finish, with 1 sample applied to core material.
 - f. Corner pieces for stile and rail paneling, 18 inches (450 mm) high by 18 inches (450 mm) wide by 6 inches (150 mm) deep.
4. LEED Submittals:
 - a. Product Data for Credit EQ 4.1: For installation adhesives, including printed statement of VOC content.
 - b. Product Data for Credit EQ 4.4: For composite-wood products and fabrication adhesives, documentation indicating that products contain no urea formaldehyde.

- c. Product Data for Credit(s) MR 4.1 and MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
- d. Certificates for Credit MR 7: Chain-of-custody certificates certifying that products specified to be made from certified wood comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
 - 1) Include statement indicating costs for each certified wood product.
- 5. Woodwork Quality Standard Compliance Certificates: AWI Quality Certification Program certificates **OR** WIC-certified compliance certificates, **as directed**.

E. Quality Assurance

- 1. Installer Qualifications: Fabricator of products.
- 2. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" **OR** WIC's "Manual of Millwork," **as directed**.
 - a. Provide AWI Quality Certification Program labels and certificates for woodwork, including installation.
 - b. Provide WIC-certified compliance labels and certificates for woodwork, including installation.
- 3. Fire-Test-Response Characteristics: Where fire-retardant materials or products are indicated, provide materials and products with specified fire-test-response characteristics as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by authorities having jurisdiction, imprint on surfaces of materials that will be concealed from view after installation.
- 4. Forest Certification: Provide paneling produced from wood obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
- 5. Preinstallation Conference: Conduct conference at Project site.

F. Delivery, Storage, And Handling

- 1. Do not deliver paneling until painting and similar operations that could damage paneling have been completed in installation areas. If paneling must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

G. Project Conditions

- 1. Environmental Limitations: Do not deliver or install paneling until building is enclosed, wet work is complete, and HVAC system is operating and will maintain temperature and relative humidity at occupancy levels during the remainder of the construction period.

1.2 PRODUCTS

A. Materials

- 1. General: Provide materials that comply with requirements of AWI's **OR** WIC's, **as directed**, quality standard for quality grade specified, unless otherwise indicated.
- 2. Wood Products: Comply with the following:
 - a. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
 - b. Particleboard: ANSI A208.1, Grade M-2 **OR** M-2-Exterior Glue, **as directed**.
 - c. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.

- d. Softwood Plywood: DOC PS 1, Medium Density Overlay.
 - e. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no urea formaldehyde.
 3. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated, or if not indicated, as required by woodwork quality standard.
 4. Adhesives: Do not use adhesives that contain urea formaldehyde.
 5. Adhesive for Bonding Plastic Laminate: Unpigmented contact cement **OR** Contact cement **OR** PVA **OR** Urea formaldehyde **OR** Resorcinol, **as directed**.
 - a. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.
 6. VOC Limits for installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
 - a. Wood Glues: 30 g/L.
 - b. Panel Adhesives: 50 g/L.
 - c. Contact Adhesive: 80 g/L.
 - d. Special Purpose Contact Adhesive (contact adhesive that is used to bond melamine covered board, metal, unsupported vinyl, Teflon, ultra-high molecular weight polyethylene, rubber or wood veneer 1/16 inch or less in thickness to any surface): 250 g/L.
- B. Fire-Retardant-Treated Materials
1. General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and that comply with requirements in this Article and with fire-test-response characteristics specified.
 - a. Do not use treated materials that do not comply with requirements of referenced woodworking standard or that are warped, discolored, or otherwise defective.
 - b. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
 - c. Identify fire-retardant-treated materials with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.
 2. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Comply with performance requirements of AWWA C20 (lumber) and AWWA C27 (plywood). Use the following treatment type:
 - a. Exterior Type: Organic-resin-based formulation thermally set in wood by kiln drying.
 - b. Interior Type A: Low-hygroscopic formulation.
 - c. Mill lumber after treatment, within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking plant certified by testing and inspecting agency.
 - d. Mill lumber before treatment and implement special procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.
 - e. Kiln-dry materials before and after treatment to levels required for untreated materials.
 3. Fire-Retardant Particleboard: Panels complying with the following requirements, made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less per ASTM E 84.
 4. Fire-Retardant Fiberboard: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less per ASTM E 84.
- C. Installation Materials
1. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, fire-retardant-treated, **as directed**, kiln-dried to less than 15 percent moisture content.

2. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

D. Fabrication, General

1. Paneling Grade: Provide Premium **OR** Custom **OR** Economy, **as directed**, grade paneling complying with referenced quality standard.
2. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.
3. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.
4. Arrange paneling in shop or other suitable space in proposed sequence for examination by the Owner. Mark units with temporary sequence numbers to indicate position in proposed layout.
 - a. Lay out one elevation at a time if approved by the Owner.
 - b. Notify the Owner seven days in advance of the date and time when layout will be available for viewing.
 - c. Provide lighting of similar type and level as that of final installation for viewing layout, unless otherwise approved by the Owner.
 - d. Rearrange paneling as directed by the Owner until layout is approved.
 - e. Do not trim end units and other nonmodular size units to less than modular size until after the Owner's approval of layout. Indicate trimming by masking edges of units with nonmarking material.
 - f. Obtain the Owner's approval of layout before start of assembly. Mark units and Shop Drawings with assembly sequence numbers based on approved layout.
5. Complete fabrication, including assembly and finishing, **as directed**, to maximum extent possible, before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
6. Shop cut openings, to maximum extent possible, to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

E. Board Paneling For Transparent Finish

1. Grade: Provide Premium **OR** Custom **OR** Economy, **as directed**.
2. Wood Species and Cut: Hickory, quarter sawn **OR** Red gum, plain sawn **OR** Western white pine, plain sawn **OR** Cypress, plain sawn, **as directed**.
3. Pattern: 1-by-6, vee joint, tongue and groove, 5-1/16-inch (129-mm) coverage **OR** 1-by-8, pickwick paneling (WWPA Pattern WP-2), 6-3/4-inch (172-mm) coverage **OR** 1-by-4, beaded ceiling, 3-3/16-inch (81-mm) coverage **OR** As indicated, **as directed**.
4. Shop fabricate board paneling in lengths to provide pieces that are uninterrupted by joints **OR** random-lengths, **as directed**. Machine edges of boards to provide joint profiles indicated.
5. Preassemble board paneling into largest units that can be delivered into installation areas using permanent or temporary backing members as indicated. To maximum extent possible, fabricate units in sizes determined by field measurements of existing conditions and that will avoid fitting in the field; make provision for separate scribing pieces to be fitted to adjoining finished surfaces. Provide shop-prepared detachable pieces for forming joints with other units at Project site and with other types of architectural woodwork.

F. Board Paneling For Opaque Finish

1. Grade: Provide Premium **OR** Custom **OR** Economy, **as directed**.
2. Wood Species: Eastern white pine, sugar pine, or western white pine **OR** Any closed-grain hardwood, **as directed**.

3. Pattern: 1-by-6, vee joint, tongue and groove, 5-1/16-inch (129-mm) coverage **OR** 1-by-8, pickwick paneling (WWPA Pattern WP-2), 6-3/4-inch (172-mm) coverage **OR** 1-by-4, beaded ceiling, 3-3/16-inch (81-mm) coverage **OR** As indicated, **as directed**.
 4. Shop fabricate board paneling in lengths to provide pieces that are uninterrupted by joints **OR** random-lengths, **as directed**. Machine edges of boards to provide joint profiles indicated.
 5. Preassemble board paneling into largest units that can be delivered into installation areas using permanent or temporary backing members as indicated. To maximum extent possible, fabricate units in sizes determined by field measurements of existing conditions and that will avoid fitting in the field; make provision for separate scribing pieces to be fitted to adjoining finished surfaces. Provide shop-prepared detachable pieces for forming joints with other units at Project site and with other types of architectural woodwork.
- G. Flush Wood Paneling For Transparent Finish
1. Grade: Provide Premium **OR** Custom **OR** Economy, **as directed**.
 2. Wood Species and Cut: White oak, rift sliced **OR** Cherry, plain sliced **OR** Butternut, plain sliced **OR** Avodire, quarter sliced, **as directed**.
 - a. Lumber Trim and Edges: At paneling fabricator's option, trim and edges indicated as solid wood (except moldings) may be either lumber or veneered construction of same species and cut as panel faces and compatible with grain and color of panel faces.
 3. Matching of Adjacent Veneer Leaves: Book **OR** Slip **OR** Random, **as directed** match.
 4. Matching within Panel Face: Running **OR** Balance **OR** Center-balance, **as directed**, match.
 5. Panel-Matching Method:
 - a. No matching is required between panels. Select and arrange panels for similarity of grain pattern and color between adjacent panels.
OR
Premanufactured sets used full width **OR** Premanufactured sets selectively reduced in width **OR** Sequence-matched, uniform-size sets **OR** Blueprint-matched panels and components, **as directed**, within each separate area.
 6. Vertical Panel-Matching Method: Continuous match; veneer leaves of upper panels are continuations of veneer leaves of lower panels **OR** Vertical book match; veneer leaves are individually book matched from lower panels to upper panels **OR** Vertical slip match; veneer leaves are individually slip matched from lower panels to upper panels **OR** Panel vertical book match; panels are book matched from lower panels to upper panels **OR** Panel vertical slip match; panels are slip matched from lower panels to upper panels, **as directed**.
 7. Panel Core Construction: Hardwood veneer-core plywood **OR** Particleboard or medium-density fiberboard **OR** Fire-retardant particleboard or fire-retardant, medium-density fiberboard, **as directed**.
 8. Exposed Panel Edges: Solid wood or wood veneer matching faces **OR** Legs of metal channels forming reveals **OR** Bronze flat bars 1/16 inch (1.6 mm) thick by depth of panels, **as directed**.
 9. Panel Reveals: Matte black plastic laminate **OR** Bronze sheet **OR** Stainless-steel sheet **OR** Bronze channels, 1 by 1 by 1/8 inch (25.4 by 25.4 by 3.2 mm) thick **OR** Stainless-steel channels, 1 by 1 by 1/16 inch (25.4 by 25.4 by 1.6 mm) thick, **as directed**.
 10. Fire-Retardant-Treated Paneling: Provide panels consisting of wood-veneer and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of 75 **OR** 25, **as directed**, or less and a smoke-developed index of 450 or less per ASTM E 84.
 - a. Provide paneling of 3/4-inch (19-mm) minimum thickness.
- H. Plastic-Laminate-Clad Flush Paneling
1. Grade: Provide Premium **OR** Custom **OR** Economy, **as directed**.
 2. Plastic-Laminate Cladding: High-pressure decorative laminate, in the following grades:
 - a. Faces: Grade HGS **OR** VGS **OR** SGF **OR** HGF **OR** VGF, **as directed**.
 - b. Backs: Grade BKH **OR** BKV **OR** BKL, **as directed**.
 - c. Exposed Edges: Same as faces or Grade VGS.
 3. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed surfaces complying with the following requirements:

- a. As indicated by manufacturer's designations.
 - b. Match the Owner's samples.
 - c. As selected by the Owner from laminate manufacturer's full range in the following categories:
 - 1) Solid colors, gloss **OR** matte, **as directed**, finish.
 - 2) Solid colors with core same color as surface, gloss **OR** matte, **as directed**, finish.
 - 3) Wood grains, gloss **OR** matte, **as directed**, finish.
 - 4) Patterns, gloss **OR** matte, **as directed**, finish.
 4. Panel Core Construction: Particleboard or medium-density fiberboard **OR** Fire-retardant particleboard or fire-retardant, medium-density fiberboard, **as directed**.
 5. Fire-Retardant-Treated Paneling: Provide panels consisting of fire-retardant plastic laminate and fire-retardant particleboard or fire-retardant, medium-density fiberboard. Panels shall have a flame-spread index of 75 **OR** 25, **as directed**, or less and a smoke-developed index of 450 or less per ASTM E 84.
 - a. Provide paneling of 3/4-inch (19-mm) minimum thickness.
- I. Stile And Rail Wood Paneling For Transparent Finish
1. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 2. Wood Species: White oak, rift sawn/sliced **OR** Figured English ash, quarter sawn/sliced **OR** Butternut, plain sawn/sliced **OR** Figured red gum, plain-sawn/sliced panels, quarter-sawn/sliced stiles and rails, **as directed**.
 3. Stiles and Rails: At fabricator's option, stiles and rails may be either lumber or veneered construction with edges banded or with lumber moldings, as indicated, to conceal core and veneer joints.
 4. Panels: Flat panels **OR** Raised panels with veneered faces and solid lumber rims **OR** Raised panels with veneered faces extending across rims **OR** Raised panels made from edge-glued solid lumber, **as directed**.
 5. Insert Panels:
 - a. Blueprint matched in a horizontal sequence for adjacent panels and doors, with continuous vertical matching between adjacent panels. Book and balance **OR** Book, balance, and center, **as directed**, match face-veneer leaves within each panel.
OR
 Cut panels from premanufactured, sequence-matched sets of book-matched veneered panels. Cut panels with an even **OR** even or odd, **as directed**, number of veneer leaves centered in each panel and with each of the remainders at least half as wide as the full veneer leaves, **as directed**. Cut panels with continuous matching between vertically adjacent panels; veneer leaves of upper panels are continuations of veneer leaves of panels below them.
OR
 Book and balance match face veneers within panels. No matching is required between adjacent panels; select and arrange panels for similarity of grain pattern and color between adjacent panels.
 6. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
 - a. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.
- J. Stile And Rail Wood Paneling For Opaque Finish
1. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 2. Wood Species: Any closed-grain hardwood **OR** Eastern white pine, ponderosa pine, sugar pine, or western white pine, **as directed**.

3. Stiles and Rails: Either solid lumber or particleboard, shop filled on face, with veneered or lumber-banded edges, at paneling fabricator's option.
 4. Flat Insert Panels: Medium-density fiberboard or particleboard with shop-filled face.
 5. Raised Insert Panels: Medium-density overlaid softwood plywood (Exterior) APA MDO EXT, machined to profile indicated and shop filled on exposed machined surfaces **OR** Medium-density fiberboard, machined to profile indicated, **as directed**.
 6. Provide fire-retardant treatment of stile and rail paneling as indicated below. For components of paneling fabricated from solid lumber, mill pieces before treatment.
 - a. For stiles and rails, use fire-retardant-treated lumber or fire-retardant medium-density fiberboard.
 - b. For built-up stiles and rails, use fire-retardant particleboard with fire-retardant lumber edge-bands or fire-retardant medium-density fiberboard.
 - c. For insert panels, use fire-retardant medium-density fiberboard.

OR

For insert panels, use fire-retardant particleboard with closed-grain hardwood veneer on face and back.
 7. Shop assemble stile and rail paneling into largest units practical for delivery and installation. Provide shop-prepared detachable joints for necessary field connections. Sand and pull joints tight in shop so field joints will comply with joint tolerances for specified grade. Unless otherwise indicated, provide continuous mortise-and-tenon joints between panel units and provide removable temporary protection for joints during handling and delivery.
 - a. Outside Corner of Stile and Rail Paneling: Shop prepare using lock-mitered or mitered-and-splined construction. Assemble, sand, and glue in shop, if site conditions permit.
- K. Shop Finishing
1. Grade: Provide finishes of same grades as paneling to be finished.
 2. General:
 - a. Finish paneling at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

OR

Shop finish transparent-finished paneling at fabrication shop as specified in this Section. Refer to Division 07 for finishing of opaque-finished paneling.

OR

Drawings indicate paneling that is required to be shop finished. Finish such paneling at fabrication shop as specified in this Section. Refer to Division 07 for finishing paneling not indicated to be shop finished.
 3. Shop Priming: Shop apply the prime coat including backpriming, if any, for transparent-finished paneling specified to be field finished. Refer to Division 07 for material and application requirements.
 4. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing paneling, as applicable to each unit of work.
 - a. Backpriming: Apply two coats of sealer or primer, compatible with finish coats, to concealed surfaces of paneling. Concealed surfaces of plastic-laminate-clad paneling do not require backpriming when surfaced with plastic laminate.
 5. Transparent Finish:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. AWI Finish System: TR-0, synthetic penetrating oil **OR** TR-3, cellulose acetate butyrate or water-reducible acrylic lacquer **OR** TR-4, conversion varnish **OR** TR-5, catalyzed vinyl lacquer, **as directed**.
 - c. WIC Finish System: 2, water-reducible acrylic lacquer **OR** 3b., catalyzed vinyl lacquer **OR** 4, conversion varnish **OR** 6, penetrating oil, **as directed**.
 - d. Staining: None required **OR** Match approved sample for color **OR** Match the Owner's sample, **as directed**.
 - e. Wash Coat for Stained Finish: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.

- f. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
- g. Filled Finish for Open-Grain Woods: After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
 - 1) Apply wash-coat sealer after staining and before filling.
- h. Sheen: Flat, 15-30 **OR** Satin, 31-45 **OR** Semigloss, 46-60 **OR** Gloss, 61-100, **as directed**, gloss units measured on 60-degree gloss meter per ASTM D 523.
- 6. Opaque Finish: Comply with requirements indicated below for grade, finish system, color, effect, and sheen, with sheen measured on 60-degree gloss meter per ASTM D 523.
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. AWI Finish System: OP-4, conversion varnish **OR** OP-5, catalyzed vinyl, **as directed**.
 - c. WIC Finish System: 3b., catalyzed vinyl lacquer **OR** 4, conversion varnish **OR** 7a., synthetic enamel, **as directed**.
 - d. Color: As indicated by manufacturer's designations **OR** Match sample **OR** As selected from manufacturer's full range, **as directed**.
 - e. Sheen: Flat, 10-25 **OR** Satin, 30-50 **OR** Semigloss, 55-75 **OR** Gloss, 80-100, **as directed**, gloss units.

1.3 EXECUTION

A. Preparation

- 1. Before installation, condition paneling to average prevailing humidity conditions in installation areas.
- 2. Before installing paneling, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

B. Installation

- 1. Grade: Install paneling to comply with requirements for same grade specified in Part 1.2 for fabrication of type of paneling involved.
- 2. Install paneling level, plumb, true, and straight with no distortions. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm). Install with no more than 1/16 inch in 96-inch (1.6 mm in 2400-mm) vertical cup or bow and 1/8 inch in 96-inch (3 mm in 2400-mm) horizontal variation from a true plane.
 - a. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding 1/32 inch (0.8 mm) **OR** 1/16 inch (1.5 mm), **as directed**.
- 3. Scribe and cut paneling to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
- 4. Anchor paneling to supporting substrate with concealed panel-hanger clips **OR** splined connection strips **OR** blind nailing, **as directed**. Do not use face fastening unless covered by trim **OR** otherwise indicated, **as directed**.
- 5. Complete finishing work specified in this Section to extent not completed at shop or before installation of paneling. Fill nail holes with matching filler where exposed. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are applied in shop.
- 6. Refer to Division 07 for final finishing of installed paneling.

C. Adjusting And Cleaning

- 1. Repair damaged and defective paneling, where possible, to eliminate functional and visual defects; where not possible to repair, replace paneling. Adjust for uniform appearance.
- 2. Clean paneling on exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 25 16 00

SECTION 06 41 16 00 - MPF PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

The section includes miscellaneous non Postal case work such as cabinets in the Lunch Room.

PART 1 – GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Custom wood casework with plastic laminate finish.

1.2 REFERENCES

- A. Architectural Woodwork Quality Standards (AWI)
 - 1. AWI Quality Standard: "Architectural Woodwork Quality Standards" of the Architectural Woodwork Institute.
- B. ANSI
 - 1. ANSI 161.2-79: Performance Standard for Fabricated High Pressure Decorative Laminate Countertops.

1.3 SUBMITTALS

- A. Product Data: Required for all manufactured products.
- B. Shop Drawings: Required for all fabricated sections of millwork.
- C. Samples: Required of all manufactured products.

1.4 QUALITY ASSURANCE

- A. AWI Section 400 requirements for custom grade finish overlay laminate – clad cabinets and countertops.
- B. Fabricator: Company specializing in fabrication of millwork with a minimum of 5 years documented experience.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. All materials to be in compliance with AWI 400 requirements.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Execution Requirements: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install all millwork to AWI tolerances and requirements.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 03/31/2010

SECTION 06 42 19 00 - PLASTIC PANELING

1.1 GENERAL

- A. Description Of Work
 - 1. This specification covers the furnishing and installation of materials for plastic paneling. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
- B. Summary
 - 1. Section includes glass-fiber reinforced plastic (FRP) wall paneling and trim accessories.
- C. Submittals
 - 1. Product Data: For each type of product indicated.
 - 2. LEED Submittals:
 - a. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content and chemical components.
 - b. Product Data for Credit EQ 4.4: For laminating adhesive and composite wood products used in factory-laminated plastic panels, indicating that product contains no urea formaldehyde.
 - 3. Samples: For plastic paneling and trim accessories.
- D. Quality Assurance
 - 1. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Flame-Spread Index: 25 **OR** 200, **as directed**, or less.
 - b. Smoke-Developed Index: 450 or less.
 - c. Testing Agency: Acceptable to authorities having jurisdiction **OR** FM Approvals **OR** UL, **as directed**.

1.2 PRODUCTS

- A. Plastic Sheet Paneling
 - 1. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319.
 - a. Nominal Thickness: Not less than 0.075 inch (1.9 mm) **OR** 0.09 inch (2.3 mm) **OR** 0.12 inch (3.0 mm), **as directed**.
 - b. Surface Finish: Smooth **OR** Molded pebble texture **OR** Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile **OR** As selected by the Owner from manufacturer's full range, **as directed**.
 - c. Color: White **OR** As selected by the Owner from manufacturer's full range, **as directed**.
- B. Factory-Laminated Plastic Panels
 - 1. General: Gelcoat-finished, glass-fiber reinforced plastic panels complying with ASTM D 5319, laminated to plywood **OR** oriented strand board **OR** fire-retardant particleboard **OR** gypsum board **OR** high-impact gypsum board **OR** moisture- and mold-resistant gypsum board, **as directed**.
 - a. Glass-Fiber Reinforced Plastic Panel Nominal Thickness: Not less than 0.03 inch (0.76 mm) **OR** 0.05 inch (1.3 mm) **OR** 0.075 inch (1.9 mm) **OR** 0.09 inch (2.3 mm), **as directed**.
 - b. Surface Finish: Smooth **OR** Molded pebble texture **OR** Smooth surface with filled grooves at 4 inches (102 mm) o.c. to resemble tile **OR** As selected by the Owner from manufacturer's full range, **as directed**.
 - c. Color: White **OR** As selected by the Owner from manufacturer's full range, **as directed**.

- d. Plywood: DOC PS 1, Exterior B-C, 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm) **OR** 5/8 inch (15.9 mm) **OR** 3/4 inch (19.1 mm), **as directed**, thick.
- e. Oriented Strand Board: DOC PS 2, 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm) **OR** 3/4 inch (19.1 mm), **as directed**, thick.
- f. Fire-Retardant Particleboard: Product complying with ANSI A208.1, Grade M-S, except for modulus of rupture; with flame-spread index of 25 or less per ASTM E 84; and 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm), **as directed**, thick.
- g. Gypsum Board: ASTM C 1396/C 1396M, Regular, 1/2 inch (12.7 mm) **OR** Type X, 5/8 inch (15.9 mm), **as directed**.
- h. High-Impact Gypsum Board: ASTM C 1396/C 1396M, 5/8 inch (15.9 mm), with Type X core, and 0.010-inch (0.254-mm) **OR** 0.020-inch (0.508-mm) **OR** 0.030-inch (0.762-mm) **OR** 0.081-inch (2.057-mm), **as directed**, plastic film laminated to back side for greater resistance to through penetration (impact resistance).
- i. Moisture- and Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M or ASTM C 1178/C 1178M, 5/8 inch (15.9 mm), Type X, with moisture- and mold-resistant core and surfaces.
- j. Laminating Adhesive: Manufacturers standard adhesive that does not contain urea formaldehyde.

C. Accessories

- 1. Trim Accessories: Manufacturer's standard one-piece **OR** two-piece, snap-on, **as directed**, vinyl extrusions designed to retain and cover edges of panels. Provide division bars, inside corners, outside corners, and caps as needed to conceal edges.
 - a. Color: White **OR** Match panels **OR** As selected by the Owner from manufacturer's full range, **as directed**.
- 2. Exposed Fasteners: Nylon drive rivets recommended by panel manufacturer.
- 3. Concealed Mounting Splines: Continuous, H-shaped aluminum extrusions designed to fit into grooves routed in edges of factory-laminated panels and to be fastened to substrate.
- 4. Adhesive: As recommended by plastic paneling manufacturer.
 - a. VOC Content: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- 5. Sealant: Single-component, mildew-resistant, neutral-curing silicone **OR** Single-component, mildew-resistant, acid-curing silicone **OR** Latex, **as directed**, sealant recommended by plastic paneling manufacturer and complying with requirements in Division 07 Section "Joint Sealants".
 - a. VOC Content: 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1.3 EXECUTION

A. Preparation

- 1. Remove wallpaper, vinyl wall covering, loose or soluble paint, and other materials that might interfere with adhesive bond.
- 2. Prepare substrate by sanding high spots and filling low spots as needed to provide flat, even surface for panel installation.
- 3. Clean substrates of substances that could impair bond of adhesive, including oil, grease, dirt, and dust.
- 4. Condition panels by unpacking and placing in installation space before installation according to manufacturer's written recommendations.
- 5. Lay out paneling before installing. Locate panel joints where indicated **OR** to provide equal panels at ends of walls not less than half the width of full panels **OR** so that trimmed panels at corners are not less than 12 inches (300 mm) wide, **as directed**.
 - a. Mark plumb lines on substrate at trim accessory **OR** panel joint, **as directed**, locations for accurate installation.

- b. Locate trim accessories **OR** panel joints, **as directed**, to allow clearance at panel edges according to manufacturer's written instructions.

B. Installation

- 1. Install plastic paneling according to manufacturer's written instructions.
 - OR**
 - Install panels in a full spread of adhesive.
 - OR**
 - Install panels with fasteners. Layout fastener locations and mark on face of panels so that fasteners are accurately aligned.
 - a. Drill oversized fastener holes in panels and center fasteners in holes.
 - b. Apply sealant to fastener holes before installing fasteners.
- 2. Install factory-laminated panels using concealed mounting splines in panel joints.
- 3. Install trim accessories with adhesive and nails or staples. Do not fasten through panels.
- 4. Fill grooves in trim accessories with sealant before installing panels and bed inside corner trim in a bead of sealant.
- 5. Maintain uniform space between panels and wall fixtures. Fill space with sealant.
- 6. Maintain uniform space between adjacent panels and between panels and floors, ceilings, and fixtures. Fill space with sealant.
- 7. Remove excess sealant and smears as paneling is installed. Clean with solvent recommended by sealant manufacturer and then wipe with clean dry cloths until no residue remains.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 06 51 13 00 - PLASTIC LUMBER

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses

1. For both residential and municipal applications, high-density polyethylene (HDPE) products are well suited for decking, porch flooring, docks, piers, furnishings, fencing, and lawn and garden items. HDPE products are cost-effective alternatives for ground contact and animal contact, wet, and environmentally harsh conditions.

C. Limitations

1. Plastic lumber has less rigidity (modulus of elasticity) and greater elongation than wood lumber. Therefore, it is not recommended for use as a true structural member. Examples of applications that are inappropriate would be load-bearing walls, deck framing, and floor joists. It is recommended that an engineering study be performed prior to use of HDPE products if the application involves structural requirements. For commercial applications where the system design calls for concentrated loads, structural plastic lumber should be considered.
2. When utilizing HDPE products for decking or flooring, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

D. Quality Assurance

1. Plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber and hygrothermal testing.
2. Plastic lumber shall pass testing by UL and meet flammability standards established by ASTM.

1.2 PRODUCTS

A. Materials

1. High-density polyethylene (HDPE), UV-inhibited pigment systems, foaming compounds, and selected process additives, shall be derived from post-consumer bottle waste, such as milk and detergent bottles, then compounded into a rigid board stock material, with the resulting finished product containing minimum 75% recycled plastic by weight.
2. Plastic lumber shall have exceptional resistance to corrosive substances, oil and fuels, insects, fungi, salt spray, and other environmental stresses. They shall not absorb moisture; nor shall they rot, splinter, or crack.
3. HDPE products shall be manufactured in standard dimensional lumber sizes, and shapes.
4. Color of plastic lumber shall be selected from manufacturer's standard colors.

1.3 EXECUTION

A. Installation

1. HDPE products shall have the capability of being fabricated and installed with the same tools used to work wood lumber. The product shall cut and drill very cleanly, as there is no grain to split or chip. It shall not be necessary to pre-drill the plastic lumber when fastening. Stainless steel or coated decking nails and screws are recommended for use with HDPE products. Screws

offer the best form of attachment; however, nails and staples may also be utilized in some applications.

2. The use of full length boards is suggested to avoid unattractive butt-to-butt joints.
3. HDPE products offer multiple deck board attachment options to accommodate expansion and contraction concerns in different climatic conditions and to address specific installation parameters. These options include:
 - a. Tongue and groove deck board attachment with toe screwing options.
 - b. Direct screw attachment with feature strip options.
 - c. Floating attachment with clip options.
 - d. Floating attachment with groove & groove options.

B. Maintenance

1. HDPE products are unaffected by most corrosive substances and will not absorb moisture. To maintain the original finish, clean the lumber with soap and water. No sealing or painting is required; as a general rule, paint will not adhere to HDPE products.
2. Clean graffiti from the plastic lumber with the use of a conventional all-purpose cleaner or petroleum-based cleaner.
3. If the skin or surface layer of an HDPE product becomes marred or blemished, sand off the top skin. The surface can also be buffed to eliminate abrasions.

END OF SECTION 06 51 13 00

SECTION 06 51 13 00a - COMPOSITE PLASTIC LUMBER**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of composite plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses

1. Composite plastic lumber or boards are well designed for deck, porch, boardwalk, dock, and similar applications. These boards may also be used for many lumber applications, where a non-load bearing member is required. This material is particularly well suited for outdoor uses due to its durability characteristics. Composite boards have many beneficial properties for decking applications, including:
 - a. Low moisture absorption.
 - b. No rotting, splitting or splintering.
 - c. Inherent termite and UV resistance.
 - d. Excellent dimensional stability and wet/dry traction.
 - e. No toxic compounds (CCA) to leach into soil or groundwater.
 - f. Workability and appearance of natural lumber products.

C. Limitations

1. Composite plastic lumber has less rigidity (modulus of elasticity) than wood lumber and is more flexible. Therefore, this material should not be employed as a structural component unless an engineering study indicates that its use is appropriate. These boards are not intended to be used as joists, beams, studs, columns or stringers.
2. When utilizing composite plastic lumber products for decking, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

D. Quality Assurance

1. Composite plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber.
2. Plastic lumber shall meet flammability standards established by ASTM.

E. Handling

1. This material is more flexible and more dense than wood, which should be considered when handling boards.
2. Storing boards on uneven or unsupported surfaces may lead to deformation of the material. Therefore, always store boards on a flat surface, or support with dunnage on centers of 24" or less.

1.2 PRODUCTS**A. Materials**

1. Composite plastic lumber products shall be composed of approximately 65% recycled wood/natural fiber and 35% recycled plastic, with selected process additives. The plastic raw material utilized in this product is recycled plastic. It shall be processed to a uniform feedstock, compounded with recovered fibers and extruded into a rigid board product.
2. Colors and sizes of composite plastic lumber shall be selected from manufacturer's standard.

1.3 EXECUTION

A. Installation

1. Composite plastic lumber products shall have the capability of being fabricated and installed with the same tools used to work wood lumber. The product shall cut and drill very cleanly, as there is no grain to split or chip. For best results, use carbide-tipped blades and bits.
2. For optimum water drainage, allow a gap of 3/16" to 1/4" between boards.
3. Both nails and screws may be used to attach USPL composite boards; stainless steel or coated screw type fasteners are recommended.
4. #8, 2 1/2" stainless steel or ceramic-coated deck screws are recommended for 5/4x6 boards, and #10, 3" stainless steel or ceramic-coated deck screws are recommended for 2x6 boards for best results.
5. In cold weather, consider pre-drilling screw holes. Do not use fasteners within 3/4" of the edge of a board. Pneumatic nail guns work with this material.

B. Maintenance

1. Composite boards will weather to a lighter hue during the first few months; fading may take much longer in shaded areas.
2. To clean dirt and most stains from the deck boards, use common deck cleaners available in hardware stores, home centers and lumberyards. Oil stains from grills and foods may require the use of a degreasing cleaner or light sanding to remove the stain. Mold and mildew are common on many exterior surfaces, and they may form on composite plastic lumber. Use common deck washes that contain sodium hypochlorite for best cleaning results.

END OF SECTION 06 51 13 00a

SECTION 06 51 13 00b - STRUCTURAL PLASTIC LUMBER

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of structural plastic lumber. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Basic Uses

1. Structural plastic lumber products are used in a variety of commercial and marine applications and are often the product of choice for exterior applications where resistance to salt and fresh water, marine borers, and other environmentally harsh conditions is required. Due to the unique composition of structural plastic lumber, the product can be used for a number of structural members in commercial and shoreline timberwork.
2. It is well suited for:
 - a. Dock and deck planks
 - b. Wale timbers
 - c. Sheet piling
 - d. Camels
 - e. Pilings
 - f. Fenders
 - g. Channel markers
 - h. Posts, beams, and joists

C. Limitations

1. This type of plastic lumber product has a significantly higher modulus of elasticity (MOE) than conventional forms of plastic lumber. However, the MOE of structural plastic lumber is lower than wood timber in good condition; therefore, it is important to evaluate the suitability of this product for specific uses. It is recommended that an engineering study be performed prior to use of structural plastic lumber products for structural applications. Building code regulations vary by region, so all users should consult local building and safety codes prior to installation for specific requirements.

D. Quality Assurance

1. Structural plastic lumber shall meet applicable standards established by ASTM for recycled plastic lumber and hygrothermal testing.
2. Plastic lumber shall meet flammability standards established by ASTM.

1.2 PRODUCTS

A. Materials

1. Structural plastic lumber shall be a high-performance construction material consisting of a patented formula of recycled plastic, fiberglass, and selected additives. The plastic raw material utilized in structural plastic lumber is derived from post-consumer bottle waste such as milk and detergent bottles. This material is compounded into a consistent, reinforced plastic timber product using reactive compatibilizers, creating a strong and stable plastic/fiber matrix.
2. Colors, sizes, and shapes of structural plastic lumber shall be selected from manufacturer's standard.

1.3 EXECUTION

A. Installation

1. Structural plastic lumber can be fabricated and installed with the same tools used to work wood lumber. The product will cut and drill very cleanly, as there is no grain to split or chip, or knots to bind tools and bend fasteners. It is reinforced with glass fibers, and precautions should be taken when fabricating this product. Maintain adequate ventilation when generating fabrication dust, and personal respiratory protection such as dust masks should be employed during fabrication, as well as safety glasses or goggles.
2. Pilings and sheet piling products can be driven with piledriving equipment such as vibratory hammers, land-based or barge-mounted drop hammers, or waterjets. For sheet piling installations, backfill soils should always be analyzed to determine that the proper amount of force would be exerted on the sheet piling system. For shoreline timberwork applications, structural plastic lumber is used with conventional hardware such as stainless or galvanized bolts, tie rods, nuts, washers, and anchor systems.
3. When utilizing structural plastic lumber products for decking, pay careful attention to joist spacing and joist spans. Consult manufacturer for allowable live loads, deflection limits, joist spacing, and joist spans.

B. Maintenance

1. Structural plastic lumber products are unaffected by most corrosive substances and will not absorb moisture. To maintain the original finish, clean the lumber with soap and water. No sealing or painting is required; as a general rule, paint will not adhere well to these products.
2. Clean graffiti from the plastic lumber with the use of a conventional all-purpose cleaner or petroleum-based cleaner. If the skin or surface layer of plastic lumber becomes marred or blemished, sand off the top skin. The surface can also be buffed to eliminate abrasions.

END OF SECTION 06 51 13 00b

SECTION 06 74 13 00 - PULTRUDED FIBERGLASS INDUSTRIAL GRATING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for pultruded fiberglass industrial grating. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Shop drawings of all fabricated gratings and accessories in accordance with the provisions of this Section.
2. Manufacturer's shop drawings clearly showing material sizes, types, styles, part or catalog numbers, complete details for the fabrication of and erection of components including, but not limited to, location, lengths, type and sizes of fasteners, clip angles, member sizes, and connection details.
3. Manufacturer's published literature including structural design data, structural properties data, grating load/deflection tables, corrosion resistance tables, certificates of compliance, test reports as applicable, concrete anchor systems and their allowable load tables, and design calculations for systems not sized or designed in the contract documents.
4. Sample pieces of each item specified herein for acceptance as to quality and color. Sample pieces shall be manufactured by the method to be used in the work.

C. Quality Assurance

1. All items to be provided under this Section shall be furnished only by manufacturers having experience in the design and manufacture of similar products and systems. If requested, experience shall be demonstrated by a record of at least five (5) previous, separate, similar successful installations in the last five (5) years.

D. Product Delivery And Storage

1. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.
2. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Store items in an enclosed area and free from contact with soil and water. Store adhesives, resins and their catalysts and hardeners in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21 to 29 degrees Celsius) until they are required.

1.2 PRODUCTS

A. General

1. All FRP items furnished under this Section shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions as specified or required.
2. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.
3. Resins shall be vinyl ester or isophthalic with chemical formulations as necessary to provide the corrosion resistance, strength and other physical properties as required.

4. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.
5. All pultruded structural shapes shall be further protected from ultraviolet (UV) light with 1) integral UV inhibitors in the resin and 2) a synthetic surfacing veil to help produce a resin rich surface.
6. All FRP products shall have a tested flame spread rating of 15 or less per ASTM E-84 Tunnel Test. Gratings shall also have a tested burn time of less than 30 seconds and an extent of burn rate of less than or equal to 10 millimeters per ASTM D-635.
7. All grating clips shall be manufactured of Type 316SS (stainless steel).

B. Pultruded Grating

1. **Manufacture:** Grating components shall be high strength and high stiffness pultruded elements having a maximum of 70% and a minimum of 60% glass content (by weight) of continuous roving and continuous strand mat fiberglass reinforcements. The finished surface of the product shall be provided with a surfacing veil to provide a resin rich surface which improves corrosion resistance and resistance to ultraviolet degradation. Bearing bars shall be interlocked and epoxied in place with a two piece cross rod system to provide a mechanical and chemical lock.
2. **Non-slip surfacing:** Grating shall be provided with a quartz grit bonded and baked to the top surface of the finished grating product.
3. **Fire rating:** Grating shall be fire retardant with a tested flame spread rating of 15 or less when tested in accordance with ASTM E 84. Manufacturer may be required to provide certification of ASTM E84 test on grating panels from an independent testing laboratory. Certification shall be dated within the past two years. Test data shall be from full scale testing of actual production grating, of the same type and material supplied on the project. Test data performed only on the base resin shall not be acceptable.
4. **Resin system:** The resin system used in the manufacture of the grating shall be VEFR, vinyl ester or ISOFR, isophthalic. Manufacturer may be required to submit corrosion data from tests performed on actual grating products in standard chemical environments. Corrosion resistance data of the base resin from the manufacturer is not a true indicator of grating corrosion resistance and shall not be accepted.
5. **Color:** Gray or Yellow.
6. **Depth:** 2" deep load bars with a tolerance of plus or minus 1/32".
7. **Mesh Configuration:** 2" load bar spacing, 6" tie bar spacing on centers.
8. **Load/Deflection:** Grating shall meet manufacturer's published safe recommended loadings with deflection not to exceed the following:
 - a. Uniform distributed load over a 66" span: 50 pounds per square foot, with a maximum deflection of 0.13".
9. **Substitutions:** Other products of equal strength, stiffness, corrosion resistance and overall quality may be submitted with the proper supporting data to the engineer for approval.

C. Grating Fabrication

1. **Measurements:** Grating supplied shall meet the minimum dimensional requirements as shown or specified. The Contractor shall provide and/or verify measurements in field for work fabricated to fit field conditions as required by grating manufacturer to complete the work.
 - a. Determine correct size and locations of required holes or cutouts from field dimensions before grating fabrication.
2. **Layout:** Each grating section shall be readily removable, except where indicated on drawings. Manufacturer to provide openings and holes where located on the contract drawings. Grating supports shall be provided at openings in the grating by contractor where necessary to meet load/deflection requirements specified herein. Grating openings which fit around protrusions (pipes, cables, machinery, etc.) shall be discontinuous at approximately the centerline of opening so each section of grating is readily removable. Gratings shall be fabricated free from warps, twists, or other defects which affect appearance and serviceability.

3. Sealing: All shop fabricated grating cuts shall be coated with vinyl ester resin to provide maximum corrosion resistance. All field fabricated grating cuts shall be coated similarly by the contractor in accordance with the manufacturer's instructions.
4. Hardware: Type 316 stainless steel hold-down clips shall be provided and spaced at a maximum of four feet apart with a minimum of four per piece of grating, or as recommended by the manufacturer.

1.3 EXECUTION

A. Inspection

1. Shop inspection is authorized as required by the Owner and shall be at Owner's expense. The fabricator shall give ample notice to Contractor prior to the beginning of any fabrication work so that inspection may be provided.
2. The grating shall be as free, as commercially possible, from visual defects such as foreign inclusions, delamination, blisters, resin burns, air bubbles and pits.

B. Installation

1. Contractor shall install gratings in accordance with manufacturer's assembly drawings. Lock grating panels securely in place with hold-down fasteners as specified herein. Field cut and drill fiberglass reinforced plastic products with carbide or diamond tipped bits and blades. Seal cut or drilled surfaces in accordance with manufacturer's instructions. Follow manufacturer's instructions when cutting or drilling fiberglass products or using resin products; provide adequate ventilation.

SECTION 06 81 13 00 - PULTRUDED FIBERGLASS STRUCTURAL SHAPES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of pultruded fiberglass structural shapes. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Shop drawings of all fabricated structural systems and accessories.
2. Manufacturer's shop drawings clearly showing material sizes, types, styles, part or catalog numbers, complete details for the fabrication of and erection of components including, but not limited to, location, lengths, type and sizes of fasteners, clip angles, member sizes, and connection details.
3. Manufacturer's published literature including structural design data, structural properties data, corrosion resistance tables, certificates of compliance, test reports as applicable, and design calculations for systems not sized or designed in the contract documents, sealed by a Professional Engineer.
4. Sample pieces of each item specified herein for acceptance as to quality and color. Sample pieces shall be manufactured by the method to be used in the work.

C. Quality Assurance

1. All items to be provided under this Section shall be furnished only by manufacturers having experience in the design and manufacture of similar products and systems. If requested, experience shall be demonstrated by a record of at least five (5) previous, separate, similar successful installations in the last five (5) years.

D. Product Delivery and Storage

1. Delivery of Materials: Manufactured materials shall be delivered in original, unbroken pallets, packages, containers, or bundles bearing the label of the manufacturer. Adhesives, resins and their catalysts and hardeners shall be crated or boxed separately and noted as such to facilitate their movement to a dry indoor storage facility.
2. Storage of Products: All materials shall be carefully handled to prevent them from abrasion, cracking, chipping, twisting, other deformations, and other types of damage. Store items in an enclosed area and free from contact with soil and water. Store adhesives, resins and their catalysts and hardeners in dry indoor storage facilities between 70 and 85 degrees Fahrenheit (21 to 29 degrees Celsius) until they are required.

1.2 PRODUCTS

A. Materials

1. All structural shapes shall be manufactured by the pultrusion process with a glass content minimum of 45%, maximum of 55% by weight for maximum sunlight and chemical resistance. The structural shapes shall be composed of fiberglass reinforcement and resin in qualities, quantities, properties, arrangements and dimensions as necessary to meet the design requirements and dimensions as specified in the Contract Documents.
2. Fiberglass reinforcement shall be a combination of continuous roving, continuous strand mat, and surfacing veil in sufficient quantities as needed by the application and/or physical properties required.
3. Resins shall be ISO, non-fire retardant isophthalic polyester; ISOFR, fire retardant isophthalic polyester or VEFR, vinyl ester, with chemical formulation necessary to provide the corrosion resistance, strength and other physical properties as required.

4. All finished surfaces of FRP items and fabrications shall be smooth, resin-rich, free of voids and without dry spots, cracks, crazes or unreinforced areas. All glass fibers shall be well covered with resin to protect against their exposure due to wear or weathering.
5. All pultruded structural shapes shall be further protected from ultraviolet (UV) attack with 1) integral UV inhibitors in the resin and 2) a synthetic surfacing veil to help produce a resin rich surface.
6. All FRP products shall have a tested flame spread rating of 25 or less per ASTM E-84 Tunnel Test.

B. Pultruded structural shapes shall have the minimum longitudinal mechanical properties listed below:

Property	ASTM Method	Value	Units
Tensile Strength	D-638	30,000 (206)	psi (MPa)
Tensile Modulus	D-638	2.5×10^6 (17.2)	psi (GPa)
Flexural Strength	D-790	30,000 (206)	psi (MPa)
Flexural Modulus	D-790	1.8×10^6 (12.4)	psi (GPa)
Flexural Modulus (Full Section)	N/A	2.8×10^6 (19.3)	psi (GPa)
Short Beam Shear (Transverse)	D-2344	4,500 (31)	psi (MPa)
Shear Modulus (Transverse)	N/A	4.5×10^5 (3.1)	psi (GPa)
Coefficient of Thermal Expansion	D-696	8.0×10^{-6} (1.4×10^{-6})	in/in/°F (cm/cm/°C)
Flame Spread	E-84	25 or less	N/A

1.3 EXECUTION

A. Fabrication

1. Measurements: Structural Shapes supplied shall meet the minimum dimensional requirements as shown or specified. The Contractor shall provide and/or verify measurements in field for work fabricated to fit field conditions as required by manufacturer to complete the work. Determine correct size and locations of required holes or coping from field dimensions before structural shape fabrication.
2. Sealing: All shop fabricated cuts or drilling shall be coated with vinyl ester resin to provide maximum corrosion resistance. All field fabricated cuts or drilling shall be coated similarly by the contractor in accordance with the manufacturer's instructions.
3. Hardware: Type 316 stainless steel connection hardware shall be provided.

B. Inspection

1. Shop inspection shall be authorized as required by the Owner and shall be at Owner's expense. The fabricator shall give ample notice to Contractor prior to the beginning of any fabrication work so that inspection may be provided.
2. The structural shapes shall be as free, as commercially possible, from visual defects such as foreign inclusions, delamination, blisters, resin burns, air bubbles and pits.

SECTION 07 01 51 00 - R&A BITUMINOUS ROOFING REPAIR

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section where roofing repairs are specified for bituminous roofing systems, such as modified bitumen and built-up roof membranes. For single-ply roofing repairs, use Section 070152 – SINGLE-PLY ROOFING REPAIR.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

NOTE TO SPECIFIER

Review available field data. EDIT Article 1.1 SUMMARY below to reflect actual roofing membrane types being repaired, and the roof areas specified for repair on this project. DELETE roofing membrane types not applicable to this project.

1.1 SUMMARY

- A. This Section includes built-up and modified bitumen roofing repair procedures and requirements for specified roofing repairs within Roof Areas XX, XX, XX and XX.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Provide a mechanism for contractors to submit unit prices, add or deduct, for bituminous roofing repairs listed in Article 3.2.

1.3 UNIT PRICES

- A. Provide unit prices for the repair work described in Item 3.2.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, to reflect references applicable to bituminous roofing repairs applicable to this project. DELETE references that are not applicable. Refer to PART 2 – PRODUCTS.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)

- a. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
- b. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings
- c. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
- d. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
- e. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
- f. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
- g. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
- 2. National Roofing Contractors Association (NRCA)
- 3. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.

- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Protect foam insulation from direct sunlight exposure. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. Refer to the roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

A two-year contractor guarantee is recommended for bituminous roofing repairs.

1.9 CONTRACTOR GUARANTEE

- A. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other Contract Documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

NOTE TO SPECIFIER

EDIT PART 2 - PRODUCTS below, to reflect products applicable to bituminous roofing repairs specified for this project. ADD and/or DELETE products as necessary.

Re-letter/number paragraphs and sub-paragraphs after editing.

PART 2 – PRODUCTS**2.1 BITUMEN**

- A. Asphalt: ASTM D 312, Type III.

2.2 ROOFING FELTS, SHEETS, AND FABRICS

- A. Modified bitumen flashing stripping sheet:
1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: To match existing, or as determined by Owner.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

2.3 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen flashing cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Metal roof primer: "Rust-Oleum Industrial Enamel Quick Dry Primer" manufactured by Rust-Oleum Corporation, Vernon Hills, Illinois, "Carboline Carbocoat 150 Universal Primer," manufactured by Carboline, St. Louis, Missouri, or approved equal.
- D. Asphalt primer: ASTM D 41.
- E. Aluminum coating: Fibrated aluminum coating; ASTM D 2824, Type III.

2.4 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types acceptable for the substrate encountered.
- B. Sheet metal fasteners:
1. For galvanized: Galvanized or cadmium-plated steel fasteners. Where fastener heads are exposed, provide gasketed washers.
 2. For copper: Copper or bronze fasteners.
 3. For securing aluminum anchor bar: Fasteners appropriate for substrate encountered, and approved by the roofing manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D 1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 MISCELLANEOUS MATERIALS

- A. Miscellaneous sheet metal accessories:

1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Refer to Article 3.2 for repair identification and procedures. Refer to Article 3.3 for repair quantities and locations.
- C. Roof repair locations shall be identified on the roof prior to the start of work.

NOTE TO SPECIFIER

Article 3.2 ROOF REPAIR SUMMARY contains examples of typical repairs associated with bituminous roofing systems. EDIT Article 3.2 below, to reflect repair procedures applicable to bituminous roofing repairs specified for this project. ADD and/or DELETE repairs as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

NOTE TO SPECIFIER

Repairs listed below may or may not be Unit Price Work. If repair work is included as part of the Base Proposal, DELETE "(Unit Price Work)" from Article 3.2. If repair work is included only as Unit Price Work, with repair quantities to be determined at a later date, do not edit.

3.2 ROOF REPAIR SUMMARY (Unit Price Work)

- A. Repair No. B1 – Base Flashing Vertical Lap Repair (LF)
 1. Remove dirt, debris, and existing loose or deteriorated repair materials from the base flashing vertical lap area.
 2. Prime the repair area with asphalt primer prior to application of stripping.
 3. Install a 3-course stripping, using woven glass fabric and modified bitumen flashing cement, over the defect.
 4. Apply a continuous and uniform application of aluminum coating over the roof flashing in repair area. Delay the application of aluminum coating 30 days to allow for proper curing of the repair.
- B. Repair No. B2 – Roof Membrane Coating (SF)
 1. Remove dust, dirt and existing loose or disbanded coating material from the existing flashing surface.
 2. Prior to coating application, inspect the roof surface. If additional defects are observed requiring the attention of the Owner, contact the Owner for further instruction.
 3. Thoroughly mix the aluminum coating to a uniform consistency prior to application.
 4. Apply **two** continuous and uniform applications of fibrated aluminum coating over the membrane surface.
- C. Repair No. B3 – Perimeter Edge Metal Repair (LF)
 1. Remove dust and dirt from the repair area. If aggregate exists, spud back aggregate 12-inches, minimum from the roof edge.
 2. Remove loose and/or deteriorated stripping materials.

3. Inspect securement of the existing perimeter edge metal. Add fasteners as necessary to provide securement of the perimeter edge metal flange 3-inches o.c., minimum.
 4. Apply asphalt primer to the repair area.
 5. Apply a 3-course stripping of modified bitumen flashing cement and woven glass fabric over the flange. Apply a modified bitumen flashing cap sheet set in modified bitumen flashing cement over the completed 3-course stripping. Extend the flashing cap sheet onto the roofing membrane 6-inches, minimum.
- D. Repair No. B4 – Metal Roof Repair (SF)
1. Wire-brush the roof surface. After completion of wire brushing work, remove dust and dirt from the repair area.
 2. Prior to primer and coating application, inspect the roof surface. If additional defects are observed requiring the attention of the Owner, contact the Owner for further instruction.
 3. Apply primer to the repair area. Allow the primer time to dry, following the requirements and recommendations of the primer manufacturer.
 4. Thoroughly mix the aluminum coating to a uniform consistency prior to application.
 5. Apply **two** continuous and uniform application of fibrated aluminum coating over the metal roof surface.
- E. Repair No. B5 – Flood Coat and Aggregate Installation (SF)
1. Within the repair area, sweep loose aggregate from the roof surface.
 2. Inspect the roofing membrane for defects. If defects are observed, contact the Owner immediately.
 3. Apply asphalt primer to the roofing membrane. Install primer at a rate of one gallon per square.
 4. Aggregate application: Embed aggregate uniformly into a pour coat of hot and fluid asphalt applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.
- F. Repair No. B6 – Base Flashing Replacement (LF)
1. At perimeters, temporarily displace sheet metal edge cover metal.
 2. Remove aggregate for a distance of 12-inches from the bottom edge of base flashing. Remove loose or deteriorated base flashing repair materials.
 3. Prime the repair area with asphalt primer prior to installation of repair materials.
 4. Install a modified bitumen surfacing sheet over the repair area. Extend the sheet onto the horizontal roof membrane surface 4-inches, minimum beyond the existing flashing sheet. Extend the flashing up the vertical wall to an elevation equal to or greater than the existing flashing elevation.
 5. Secure the flashing using roofing mails with 1" metal caps, 6-inches o.c., or aluminum termination bar, secured 12-inches o.c. max. Apply a 3-course stripping of roofing cement and woven glass fabric to the top edge of flashing.
 6. Re-embed aggregate into a top coating of roofing cement in the repair area. Ensure that gravel is clean and embeds soundly into roofing cement. If aggregate is not clean and does not embed, replace with new aggregate.
- G. Repair No. B7 – Roof Sump Flashing Repair (EA)
1. Remove and discard of existing roof sump gravel stops.
 2. Temporarily displace and remove the roof drain strainer and clamping ring.
 3. Clean the existing roof sump area of debris, dirt and dust. Apply asphalt primer at the rate of one gallon per square in the sump area. Allow the primer time to dry.
 4. Inspect and clean the clamping ring. If the drain assembly, strainer, and/or clamping ring are damaged, provide replacement components (*Unit Price Work*). Refer to Section 024100.

5. Re-flash the roof sump area using two 36-inch by 36-inch layers of woven glass fabric set in, and coated with, roofing cement. Extend the flashing materials into the roof drain clamping ring. Tightly secure the flashing materials with the clamping ring.
6. Remove existing aggregate as necessary to install a new copper gravel stop and stripping at sump areas around roof drains. Prior to installation, prime both sides of the gravel stop flange with asphalt primer and allow the primer time to dry.
7. Set the flange in roofing cement and strip in the flange to the roofing membrane with a 5-course stripping of woven glass fabric and roofing cement. Apply aggregate to the top of the gravel stop flange stripping.
8. Apply a continuous and uniform application of aluminum coating over the roof drain sump area. Delay the application of aluminum coating 30 days to allow for proper curing of the repair.

NOTE TO SPECIFIER

Article 3.3 ROOF REPAIR QUANTITIES AND LOCATIONS contains a roof area listing for the project, and specified quantities of individual roofing repairs identified in Article 3.2, per roof area. EDIT Article 3.3 below, to reflect actual roof areas specified for repair, and base proposal quantities for each roof area. Re-letter/number paragraphs and sub-paragraphs after editing.

3.3 ROOF REPAIR QUANTITIES AND LOCATIONS

- A. The following repair quantities are to be completed in the indicated roof area. Refer to Article 3.2 for specific repair procedures:

Roof Area XX:

Repair B1:	X,000 LF
Repair B2:	X,000 SF
Repair B3:	X,000 LF
Repair B4:	X,000 SF
Repair B5:	X,000 SF
Repair B6:	X,000 LF
Repair B7:	X,000 EA

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 01 51 00

SECTION 07 01 52 00 - R&A SINGLE-PLY ROOFING REPAIR

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where roofing repairs are specified for bituminous roofing systems, such as modified bitumen and built-up roof membranes. For bituminous roofing repairs, use Section 070151 – BITUMINOUS ROOFING REPAIR.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

NOTE TO SPECIFIER

Review available field data. EDIT Article 1.1 SUMMARY below to reflect actual roofing membrane types being repaired, and the roof areas specified for repair on this project. DELETE roofing membrane types not applicable to this project. EDIT Section 079100 title, choosing "Repair" or "Replacement and Repair".

1.1 SUMMARY

- A. This Section includes EPDM, TPO and PVC roofing repair procedures and requirements for specified roofing repairs within Roof Areas XX, XX, XX and XX.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 079201 – Sealants for Roof Replacement
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Provide a mechanism for contractors to submit unit prices, add or deduct, for single-ply roofing repairs listed in Article 3.2.

1.3 UNIT PRICES

- A. Provide unit prices for the repair work described in Article 3.2.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, to reflect references applicable to single-ply roofing repairs applicable to this project. DELETE references that are not applicable. Refer to PART 2 – PRODUCTS.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:

1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 4637 - Standard Specification for EPDM Sheet Used In Single-Ply Roof Membrane
 - b. ASTM D 4434 - Standard Specification for Polyvinyl Chloride (PVC) Sheet Roofing
 - c. ASTM D 6878 - Standard Specification for Thermoplastic Polyolefin Based Sheet Roofing
2. National Roofing Contractors Association (NRCA)
3. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Protect foam insulation from direct sunlight exposure. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store

materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install EPDM roofing at temperatures below 35°F (2°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Be aware of potential condensation formation on the EPDM roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 - 4. Refer to the EPDM roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

A two-year contractor guarantee is recommended for single-ply roofing repairs.

1.9 CONTRACTOR GUARANTEE

- A. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other Contract Documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

NOTE TO SPECIFIER

EDIT PART 2 - PRODUCTS below, to reflect products applicable to single-ply roofing repairs specified for this project. ADD and/or DELETE products as necessary.

Re-letter/number paragraphs and sub-paragraphs after editing.

PART 2 – PRODUCTS

2.1 EPDM ROOFING MEMBRANE AND FLASHING

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the EPDM roofing membrane mil thickness required for the project. EDIT paragraph 2.2A below to reflect the specified thickness.

- A. EPDM roofing membrane; fire resistant, cured, non-reinforced, minimum 90-mil thickness, black color; in compliance with ASTM D 4637. Meeting or exceeding the standards established by the following test methods:
- B. EPDM flashing membrane:
 - 1. Cured: fire-resistant, non-reinforced, minimum 60-mil or 90-mil thickness, black color; in compliance with ASTM D 4637. Meeting or exceeding the standards listed in paragraph 2.2A.
 - 2. Uncured: Non-reinforced, minimum 60-mil thickness, black color. Type approved by roofing manufacturer for specific flashing conditions encountered.

2.2 EPDM MEMBRANE SPLICE SYSTEM

- A. Cleaner/primer: Product approved by roofing membrane manufacturer.
- B. In-seam splice tape: Splice tape; minimum 6-inch width, product approved by the roofing membrane manufacturer.
- C. Reinforced perimeter fastening strip: Product approved by the roofing membrane manufacturer.

2.3 EPDM OUTERSEAM AND PERIMETER EDGE METAL FLASHING AND STRIPPINGS

- A. EPDM pressure-sensitive flashing product, 5-inch, 6-inch and 9-inch width(s). Product approved by the EPDM flashing manufacturer for application as an outerseam flashing at field-fabricated seams.

2.4 RELATED EPDM REPAIR PRODUCTS

- A. Adhesives, cements, sealants, water cut-off mastics, prefabricated accessories, and other related items: Unless otherwise indicated, products manufactured by, or approved by the roofing membrane manufacturer.

2.5 INSULATION FOR REPAIR:

- A. For use at Repair No. S9 – Localized Roof Replacement: Type, thickness and configuration to match existing.
- B. For use at Repair No. S6 – Roof Drain Flashing Repair: Tapered edge strips: ASTM C208; 1-1/2 inches thick x 18 inches wide.
- C. For use at Repair No. S6 – Roof Drain Flashing Repair: Tapered insulation: insulation as necessary to allow for proper drainage to roof drains; ASTM C1289, Type II, Class 1; Minimum 20 psi.

2.6 SHEET METAL FLASHING AND ACCESSORIES FOR REPAIR:

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.
- B. For securing sheet metal flashings: Fasteners appropriate for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene washers.
- C. For securing aluminum anchor bar: Fasteners appropriate for substrate encountered, and approved by the roofing manufacturer.

2.7 SEALANTS

- A. Refer to Section 079201.

2.8 MISCELLANEOUS REPAIR MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150, manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
 - 1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Acrylic elastomeric coating (or use with Repair S13):

1. Coating product such as "GAF Matrix 531 Weathercote", manufactured by GAF Materials Corporation, Wayne, NJ, or equal product approved by Owner.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.
- B. Refer to Article 3.2 for repair identification and procedures. Refer to Article 3.3 for repair quantities and locations.
- C. Roof repair locations shall be identified on the roof prior to the start of work.

NOTE TO SPECIFIER

Article 3.2 ROOF REPAIR SUMMARY contains examples of typical repairs associated with bituminous roofing systems. EDIT Article 3.2 below, to reflect repair procedures applicable to single-ply roofing repairs specified for this project. ADD and/or DELETE repairs as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

NOTE TO SPECIFIER

Repairs listed below may or may not be Unit Price Work. If repair work is included as part of the Base Proposal, DELETE "(Unit Price Work)" from Article 3.2. If repair work is included only as Unit Price Work, with repair quantities to be determined at a later date, do not edit Article 3.2.

3.2 ROOF REPAIR SUMMARY (Unit Price Work)

- A. Repair No. S1 – Field Seam Repair (LF)
 1. Clean the repair area with soap and water, rinse with clean water, and dry the area.
 2. Apply primer over the prepared area.
 3. Install 5-inch outer seam tape to seam following manufacturers requirements for installation.
 4. Install lap sealant to all cut edges of the pressure-sensitive flashing.
- B. Repair No. S2 – Roof perimeter stripping repair (LF)
 1. Remove damaged and deteriorated EPDM stripping materials at perimeter metal flanges.
 2. Inspect existing fasteners at exposed flanges. Remove "backed out" fasteners. Reposition the flange and install fasteners to achieve a stagger-nailed pattern, 3 inches o.c.
 3. Clean the repair area free of dirt and debris. Wash the repair area with EPDM splice cleaner. Apply the splice cleaner from the lip of the perimeter edge to a minimum distance of 8 inches out from the edge of the flange. Also extend the cleaner a minimum 3 inches onto adjacent stripping materials. Allow the cleaner time to dry. Apply primer in the prepared area in accordance with the EPDM manufacturer's requirements.
 4. Install 9-inch pressure-sensitive flashing, centered full-width, over the prepared flange area. Install the flashing tape in accordance with the requirements and recommendations of the flashing manufacturer.
 5. Install lap sealant to all cut edges of the pressure-sensitive flashing.
- C. Repair No. S3 – Roof wall/curb flashing repair (LF)

1. Where indicated, cut roofing membrane at the roof-to-wall transition, leaving sufficient material to allow the existing membrane to relax and be re-secured.
 2. Install a perimeter fastening strip beneath the existing membrane. Secure with plates and fasteners 12-inches o.c.
 3. Remove wall flashing minimum 12-inches up wall.
 4. Fully adhere EPDM roof membrane in the repair area. Extend roof membrane a minimum of 6-inches onto the roof surface, and extend up the wall to meet the existing wall flashing. Install the specified membrane splice system to laps, and install outerseam flashing over the completed splice.
- D. Repair No. S4 - Remove debris and vegetation (SF)
1. Remove and discard of existing debris and/or vegetation on the roof membrane.
 2. Inspect the underlying roof membrane for damage. If defects are observed, contact Owner for further instruction.
- E. Repair No. S5 - Replace damaged/missing roof drain strainer (EA)
1. Install new cast iron roof drain strainer where existing is missing or broken.
- F. Repair No. S6 – Roof drain flashing repair (EA)
1. Loosen roof drain components as necessary to allow for removal of roof drain flashing materials. Exercise caution to avoid damage to roofing membrane plies.
 2. At the roof drain, remove and discard of a 4-foot by 4-foot area of roof membrane and underlying insulation components down to the structural deck.
 3. Inspect and clean the clamping ring. If the clamping ring is damaged, provide a replacement clamping ring (*Unit Price Work*).
 4. Re-flash the roof sump area using insulation to match existing. Provide tapered edge strips/tapered insulation to provide a flush transition into the sump area, and a minimum 36-inch by 36-inch tapered sump area. Install new EPDM roof membrane over the repair area, following industry standards for roof drain flashing requirements. Install the specified membrane splice system to laps, and install outerseam flashing over the completed splice.
 5. Install water cutoff mastic beneath the membrane at the clamping ring prior to re-installation. Tightly secure the roof membrane with the clamping ring.
 6. Re-install the roof drain strainer after completion of work.
- G. Repair No. S7 – Roof drain debris removal (EA)
1. Remove and discard of existing debris and/or vegetation at roof drain strainers.
- H. Repair No. S8 – Gas Line/Conduit Support Repair (EA)
1. Temporarily displace existing gas line/conduit support.
 2. Remove and discard existing damaged or deteriorated supports
 3. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 4. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 5. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
 6. Reinstall existing gas line/conduit support to its original location.
- I. Repair No. S9 – Localized roof replacement (SF)
1. Within the repair area, remove and discard of the roof membrane and underlying insulation components down to the structural deck.
 2. Inspect the underlying structural deck for damage and deterioration. If damage or deterioration of the structural deck is observed, contact the Owner immediately.
 3. Install new insulation components to match existing in the repair area. Secure to the deck with appropriate fasteners.

4. Fully-adhere EPDM roof membrane over the repair area, following industry standards and manufacturer requirements and recommendations for installation. Install the specified membrane splice system to laps, and install outerseam flashing over the completed splice.
 5. Flash penetrations, roof drains, walls and other components within the repair area, following industry standards and roofing membrane manufacturer requirements and recommendations for installation.
- J. Repair No. S10 - Replace missing walkpad (EA)
1. At locations indicated, install walkpad(s). Adhere walkpad to roof surface with approved adhesive or primer.
 2. At locations where walkpads are being installed under supports, re-install existing conduit/pipe and wood supports onto new walkpad(s).
- K. Repair No. S11 – Expansion joint flashing repair (LF)
1. Remove existing disbonded and deteriorated flashing materials from the repair area.
 2. Clean the repair area with soap and water, rinse the area with clean water, and dry the area.
 3. Fully adhere EPDM roof membrane over the existing expansion joint. Install pressure-sensitive flashing over resulting field seams.
 4. Tie-in repair ends to adjacent vertical walls and edges using pressure-sensitive flashing and/or sheet metal counterflashing. Ensure completed condition is watertight.
- L. Repair No. S12 – Sheet metal cover/expansion joint lap repair (EA)
1. If existing, remove failed joint covers at parapet cap joint/expansion joint cap laps.
 2. Clean the repair area with soap and water, rinse the area with clean water, and dry the area.
 3. Cut the pressure sensitive EPDM patching material to dimensions to cover the joint and extend a minimum of 3-inches on both sides of the existing joint. Prime the repair area and pressure sensitive EPDM patching material.
 4. Install the pressure-sensitive EPDM patching membrane and seal all edges with lap sealant.
- M. Repair No. S13 – Capped curb repair (EA)
1. Clean obsolete sheet metal cap free of debris, dirt and dust.
 2. Apply sealant to holes in cap.
 3. Apply elastomeric coating to the horizontal and vertical cap surfaces, following the recommendations and requirements of the coating manufacturer.
- N. Repair No. S14 – Expansion joint cover replacement (LF)
1. Remove and discard of existing deteriorated or damaged expansion joint cover. Do not damage underlying EPDM flashing.
 2. Install new cover, following the requirements and recommendations of the cover manufacturer.
 3. Tie-in cover ends to adjacent cover and vertical wall using pressure-sensitive flashing and/or sheet metal counterflashing. Ensure completed condition is watertight.
- O. Repair No. S15 – Counterflashing sealant repair (LF)
1. Remove loose or deteriorated sealant, repair materials and other contaminants from the surface-mounted counterflashing caulk lip.
 2. Clean surfaces immediately before installation of sealants to provide surfaces suitable for the installation of sealant,
 3. Apply primer if required by the sealant manufacturer for the type of sealant and conditions encountered. Apply primer in accordance with the sealant manufacturers' requirements and recommendations. Do not allow primer to spill onto adjacent surfaces.

4. Install sealant in accordance with the requirements and recommendations of the sealant manufacturer. Tool the joint immediately after installation.
- P. Repair No. S16 – Repair clogged roof drain (EA)
1. At clogged roof drains, mechanically clear roof drains to ensure that they are free of debris. Obtain the services of a licensed plumber to perform this work. The plumber shall provide a letter certifying that all such penetrations have been checked and that they are free of debris.
- Q. Repair No. S17 – Perimeter base securement flashing repair (LF)
1. Remove damaged and deteriorated EPDM stripping materials at roof-to-wall securement flashings and strippings.
 2. Clean the repair area free of dirt and debris. Wash the repair area with EPDM splice cleaner. Apply the splice cleaner to the repair area. Allow the cleaner time to dry. Apply primer in the prepared area in accordance with the EPDM manufacturer's requirements.
 3. Install 9-inch pressure-sensitive flashing, centered full-width, over the existing securement stripping. Install the flashing in accordance with the requirements and recommendations of the flashing manufacturer.
 4. Install lap sealant to all cut edges of the pressure-sensitive flashing.
- R. Repair No. S18 – Replace missing counterflashing (LF)
1. Where existing counterflashing is missing, install new counterflashing.
 2. Secure counterflashing with gasketed fasteners appropriate for the underlying substrate encountered. Secure counterflashing 12-inches o.c., and within 2-inches of each end.
- S. Repair No. S19 – Re-secure loose counterflashing (LF)
1. Where existing counterflashing is loose or displaced, remove displaced or obsolete fasteners. Re-position counterflashing to its original location.
 2. Secure counterflashing with gasketed fasteners appropriate for the underlying substrate encountered. Secure counterflashing 12-inches o.c., and within 2-inches of each end.

NOTE TO SPECIFIER

Article 3.3 ROOF REPAIR QUANTITIES AND LOCATIONS contains a roof area listing for the project, and specified quantities of individual roofing repairs identified in Article 3.2, per roof area. EDIT Article 3.3 below, to reflect actual roof areas specified for repair, and base proposal quantities for each roof area. Re-letter/number paragraphs and sub-paragraphs after editing.

3.3 ROOF REPAIR QUANTITIES AND LOCATIONS

- A. The following repair quantities are to be completed in the indicated roof area. Refer to Article 3.2 for specific repair procedures:

Roof Area XX:

Repair S1:	X,000 LF
Repair S2:	X,000 LF
Repair S3:	X,000 LF
Repair S4:	X,000 SF
Repair S5:	X,000 EA
Repair S6:	X,000 EA
Repair S7:	X,000 EA
Repair S8:	X,000 EA
Repair S9:	X,000 SF
Repair S10:	X,000 EA

Repair S11: X,000 LF
 Repair S12: X,000 EA
 Repair S13: X,000 EA
 Repair S14: X,000 LF
 Repair S15: X,000 LF
 Repair S16: X,000 EA
 Repair S17: X,000 LF
 Repair S18: X,000 LF
 Repair S19: X,000 LF

USPS CSF Specifications issued: 10/1/2013
 Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 01 52 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 11 13 00 - CSF BITUMINOUS DAMPPROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Bituminous Dampproofing is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 11 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Cold applied asphalt bitumen dampproofing.
 2. Application on masonry or concrete surfaces behind veneer finish material.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM D 41 - Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing.
 2. ASTM D 1227 - Specification for Emulsified Asphalt Used as a Protective Coating for Roofing.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Provide properties of primer, bitumen, and mastics.
 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Maintain ambient temperatures above 40 degrees F for 24 hours before and during application until membrane has cured.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering Products which may be incorporated in the Work include the following:
 1. ChemRex Incorporated; Shakopee, MN. (800) 433-9517.
 2. Karnak Chemical Corporation, Clark, NJ. (800) 526-4236.
 3. W.R. Meadows Incorporated, Hampshire, IL. (800) 342-5976.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 COLD-APPLIED ASPHALT EMULSION DAMPPROOFING

- A. Primer: ASTM D 41 asphalt, compatible with substrate.
- B. Trowel Grade: Emulsified asphalt mastic, prepared with mineral-colloid emulsifying agents and containing fibers other than asbestos, complying with ASTM D 1227, Type III or IV.
 1. ChemRex: Hydrocide 700 Mastic.
 2. Karnak: 920 Fibrated (Trowel Grade) Dampproofing.
 3. Meadows: Sealmastic Type 3 - Trowel Grade.
- C. Spray Grade: Emulsified asphalt, prepared with mineral-colloid emulsifying agents without fibrous reinforcement, complying with ASTM 1227, Type III.
 1. ChemRex: Hydrocide 600.
 2. Karnak: 100 non-Fibrated Emulsion Coating.
 3. Meadows: Sealmastic Type I - Spray Grade.
- D. Semimastic Grade: Emulsified asphalt semimastic, prepared with mineral-colloid emulsifying agents and containing fibers other than asbestos, complying with ASTM D 1227, Type III or IV.
 1. ChemRex: Hydrocide 700B Semimastic.

2. Karnak: 220 AF Fibrated Dampproofing.
3. Meadows: Sealmastic Type 2 - Brush-On or Spray Grade.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify substrate surfaces are durable, free of matter detrimental to adhesion or application of dampproofing.
 2. Verify items which penetrate surfaces to receive dampproofing are securely installed.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Protect adjacent surfaces not designated to receive dampproofing.
- B. Clean and prepare surfaces to receive dampproofing in accordance with manufacturer's published instructions.
- C. Apply mastic to seal penetrations, small cracks or minor honeycomb in substrate.

3.3 INSTALLATION

- A. Prime surfaces in accordance with manufacturer's published instructions.
- B. Trowel Grade: Trowel apply at minimum rate of 7 gallons per 100 square feet to produce a minimum dry film thickness of 60 mils.
- C. Spray Grade: Spray apply at rate of 1.5 to 2.5 gallons per 100 square feet, depending on substrate texture, to produce a minimum dry-film thickness of 15 mils. Apply in two coats, if necessary, to obtain required thickness. Allow first coat to completely dry before application of second coat.
- D. Semimastic: Brush or spray apply at a rate of 5 gallons to produce minimum dry film thickness of 30 mils.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect dampproofing application and test for minimum dry film thickness specified.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 07 19 00 00 - CSF WATER REPELLENTS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Clear Waterproofing over masonry is a part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 19 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Zero VOC water repellent coating applied to exterior masonry surfaces.
- B. Related Sections:
 - 1. Section 042200 - Concrete Unit Masonry: Substrate for application of water repellent.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Product description, tests performed, limitations to coating, and VOC content.
 - 2. Assurance/Control Submittals:
 - a. Test Reports: Manufacturer's Material Safety Data Sheets (MSDS).
 - b. Certificates: Manufacturer certificate that Products meet or exceed specified requirements.
 - c. Manufacturer's Instructions: Indicate special procedures and conditions requiring special attention; cautionary procedures required during application.
 - d. Qualification Documentation: Submit manufacturer and applicator documentation of experience indicating compliance with specified qualification requirements.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Applicator: Company specializing in performing the work of this Section with minimum 5 years documented experience.

- B. Regulatory Requirements: Comply with applicable rules and regulations of Pollution-Control Regulatory Agency having jurisdiction regarding volatile organic compounds (VOC) and use of hydrocarbon solvents.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Protect coating liquid from freezing.

1.5 PROJECT CONDITIONS

- A. Environmental Requirements: Do not apply Product during the following conditions;
 - 1. Ambient temperature below 40 degrees F.
 - 2. Substrate surfaces have cured less than 30 days.
 - 3. Rain or temperatures below 40 degrees F are predicted for a period of 24 hours.
 - 4. Surfaces not dry for minimum 24 hours.
 - 5. Substrate frozen or surface temperature is below 40 degrees F.

1.6 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Warranty:
 - 1. Submit written warranty signed by water repellent manufacturer and applicator agreeing to repair or reapply materials that fail to provide water repellency because of failure of Product or improper application.
 - 2. Warranty Period: 3 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. The Euclid Chemical Company, Cleveland, OH (216) 531-9222, (800) 321-7628
 - 2. H&C Concrete Protection, Cleveland, OH, (800) 867-8246.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Siloxane: Clear penetrating water repellent. Alkylalkoxysiloxanes that are oligomeric with alcohol, ethanol, water, or other proprietary carrier.
- B. Products:
 - 1. Euclid: Loxon Siloxane.
 - 2. H&C: SX-7.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify joint sealants are installed and cured.
 - 2. Verify surfaces to be coated are dry, clean, and free of efflorescence, oil, or other matter detrimental to application of coating.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Remove loose particles and foreign matter. Remove oil or foreign substance with a cleaning agent which will not affect coating.
- B. Scrub and rinse surfaces with water, and let dry.
- C. Protect adjacent surfaces not scheduled to receive coating. If applied on unscheduled surfaces, remove immediately, by approved method.
- D. Protect landscaping, property, and vehicles from over spray and drift.

3.3 APPLICATION

- A. Delay work until masonry mortar is cured for seven days.
- B. Apply coating in accordance with manufacturer's published instructions, using appropriate method and coverage rate.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 21 00 00 - MPF THERMAL INSULATION

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Perimeter and cavity wall insulation.
- B. Loose insulation.
- C. Batt insulation.
- D. Fiberglass board insulation

1.2 SUBMITTALS

- A. Product Data: Required.
- B. Samples: Required.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to ASTM E 119 and ASTM E 84 for Fire-Resistance Ratings and Surface Burning Characteristics respectively.
- B. Products containing Urea- Formaldehyde are prohibited.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Source: Celotex, Certainteed, Owens-Corning or approved equal.
- B. Perimeter and Cavity Wall Insulation: Extruded cellular type polystyrene insulation board complying with ASTM C578 Type 25PSI R value 5.0 (per inch of thickness).
- C. Loose Insulation: No CFCs allowed.
 - 1. Granular Insulation: Vermiculite perlite type, water repellent, fire resistant.
 - 2. Beaded Polystyrene: Loose polystyrene beads.
 - 3. Insulation Inserts: Rigid Polysterene inserted in factory.
- D. Batt Fiberglass Insulation with 25% recycled glass: Foil faced glass fiber batts complying with ASTM C-578 Type III R of 11.0 (per 3-inch thickness).
- E. Fiberglass Board Insulation: Thermal insulation complying with ASTM C612, Type IA or Type IA and IB, nominal density of 4 lb./cu. ft.

Adhesive: Type recommended by insulation manufacturer.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Foundation perimeter-board insulation:
 - 1. Install boards on foundation perimeter with adhesive.
 - 2. Tape insulation board joints.
- B. Exterior walls - board insulation:
 - 1. Install boards on wall surface.
 - 2. Tape insulation board joints.
- C. Exterior walls - loose fill insulation:
 - 1. Place in lifts not exceeding 6 feet pouring height.
- D. Perimeter Insulation: Extruded polystyrene, adhesive application, plus ½ inch (13 mm) thick protection board or applied interior without protection.
- E. Vermiculite or polystyrene insulation is to be placed in masonry cores when required to meet the minimum U - Value requirements.

USPS Mail Processing Facility Specification issued: 10/1/2013

END OF SECTION 07 21 00 00

SECTION 07 21 00 00 - CSF THERMAL INSULATION**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 21 00 00

PART 1 - GENERAL

1.1 SUMMARY

NOTE TO SPECIFIER

Select type of insulation used for Project.

- A. Section Includes:
 1. Batt Insulation in exterior wall [and ceiling] construction.
 2. [Board Insulation [under slab and] at foundation perimeter.]
 3. [Vapor retardant.]
 4. [Air infiltration seal.]
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
 2. ASTM C665 - Standard Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.
 3. ASTM D226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.
 4. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
- B. Federal Specifications (FS):
 1. FS HH-I-1972/GEN - Insulation Board, Thermal, Faced, Polyurethane or Polyisocyanurate.

1.3 SUBMITTALS

- A. Section 013300 – Submittal Procedures: Procedures for submittals.
- a. Product Data: Indicate product characteristics, performance criteria, and limitations.

NOTE TO SPECIFIER

Use QUALITY ASSURANCE below for projects in California.

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: Conform to insulation flame spread and smoke developed requirements of local authority having jurisdiction.
- B. Certification: For projects California provide Products certified by manufacturer that meet California Quality Standards for Insulating Materials.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Protect insulation from moisture, soiling and other damaging items.
- C. Store in dry location protected from sunlight.

NOTE TO SPECIFIER

“REQUIRED Article (Environmental Requirements) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.”

1.6 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
1. Recycled Content: Provide fiberglass insulation manufactured from minimum 30 percent recycled glass.
- B. Environmental Impact:
1. Only Greenguard indoor air quality certified products will be permitted.
 2. Chlorofluorocarbons (CFCs): Products and equipment requiring or using CFCs during the manufacturing process will not be permitted.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 BATT INSULATION

- A. Manufacturers:
1. Johns Manville Corporation, Denver, Co (800) 654-3103.
 2. Knauf Fiberglass, Shelbyville, IN (317) 398-4434, (800) 825-4434.
 3. Owens-Corning Fiberglass Corporation, Toledo, OH (419) 248-8000, (800) 438-7465.
 4. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Materials: Fiberglass insulation manufactured from minimum 30 percent recycled glass.
1. Unfaced Glass Fiber: ASTM C 665, Type I, unfaced. Thermal resistance R-value as indicated on Drawings.
 2. Faced Glass Fiber: ASTM C 665, Type III, Class A, with reflective covering one side. Thermal resistance R-value as indicated on Drawings.

NOTE TO SPECIFIER

Use BOARD INSULATION below when Project conditions require foundation insulation.

2.2 BOARD INSULATION

- A. Manufacturers:
1. Tenneco Building Products, Smyrna, GA (800) 241-4402.
 2. Owens Corning, Toledo, OH (800) 828-7155.
 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Materials:
1. Extruded Polystyrene: ASTM C578, Type IV (density 1.6 pcf minimum); square edges. Thermal resistance R-value as indicated on Drawings.
 - a. Tenneco: Amofoam.
 - b. Owens Corning: Foamular 250.
 2. Thickness:
 - a. Under Floor Slab: 2 inches (5.08 cm).
 - b. Foundation Perimeter: 1 inch (2.54 cm).

NOTE TO SPECIFIER

Use VAPOR RETARDANT below when Project conditions require Vapor Retardant building envelope.

2.3 VAPOR RETARDANT

- A. ASTM D 4397, 6 mils thick, maximum permeance rating of 0.13 perm.
- B. Vapor Retardant Tape: Pressure-sensitive of type recommended by vapor retardant manufacturer for sealing joints and penetrations in vapor retardant.

NOTE TO SPECIFIER

Use AIR INFILTRATION SEAL below when Project conditions require an Air Infiltration Barrier around building envelope.

2.4 AIR INFILTRATION SEAL

- A. Manufacturer:
 - 1. Tenneco Building Products, Smyrna, GA (800) 241-4402.
 - 2. DuPont, Wilmington, DE (800) 448-9835.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- B. Materials: One of the following two types of materials:
 - 1. 15 pound, type 1, grade D, 10 minute unperforated asphalt saturated organic felt in accordance with ASTM D22.
 - 2. Coated, cross-woven polyethylene or polypropylene fabric:
 - a. Tenneco: Amowrap Housewrap.
 - b. DuPont: Tyvek Housewrap.
 - c. Air Infiltration Seal Tape: Pressure sensitive of type recommended by vapor retardant manufacturer for sealing joints and penetrations in air infiltration seal.

2.5 ACCESSORIES

- A. Tape: Polyethylene or polyester self-adhering type; 2 inches (5.08 cm) wide.
- B. Adhesive: Waterproof type, acceptable to manufacturer of insulation board.
- C. Wire Mesh: Galvanized steel, hexagonal wire mesh.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Batt Insulation:
 - a. Verify adjacent materials are dry and ready to receive installation.
 - b. Verify mechanical and electrical services within walls have been installed and tested.

NOTE TO SPECIFIER

Use paragraph below when BOARD INSULATION is a part of the Work.

- 2. Board Insulation:
 - a. Verify substrate and adjacent materials and insulation boards are dry and ready to receive insulation and adhesive.
 - b. Verify insulation boards are unbroken, free of damage.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION - BATT INSULATION

- A. Install batt insulation in accordance with manufacturer's instructions, without gaps or voids.
- B. Trim insulation neatly to fit spaces. Use batts free of damage. Fit insulation tight in spaces and tight to exterior side of mechanical and electrical services within the plane of insulation.
- C. Install insulation with factory applied membrane facing warm side of building spaces. Lap ends and side flanges of membrane. Attach insulation in place to framing; tape seal butt ends and lapped side flanges. Tape seal tears or cuts in membrane.

NOTE TO SPECIFIER

Use paragraph below when FOUNDATION PERIMETER BOARD INSULATION is a part of the Work.

3.3 INSTALLATION - BOARD INSULATION FOUNDATION PERIMETER

- A. Apply adhesive in three continuous beads to board insulation.
- B. Install boards on foundation wall or grade beam perimeter. Place boards by method to maximize contact bedding. Stagger joints. Butt edges and ends tight to adjacent board and to protrusions.
- C. Extend boards over joints, unbonded to foundation 2 inches (5.08 cm) both sides of joint. Backfill carefully to prevent damage to insulation boards.

NOTE TO SPECIFIER

Use paragraph below when BOARD INSULATION UNDER CONCRETE SLAB is a part of the Work.

3.4 INSTALLATION - BOARD INSULATION UNDER CONCRETE SLAB

- A. Place insulation under slabs on grade after base for slab has been compacted.
- B. Prevent insulation from being displaced or damaged while placing slab.

NOTE TO SPECIFIER

Use paragraph below for Small Standard Buildings when VAPOR BARRIER or AIR INFILTRATION BARRIER is a part of the Work. NOT USED for CSF Medium Buildings and StorCADD (Postal Retail Stores.)

3.5 INSTALLATION - [VAPOR RETARDANT] [AIR INFILTRATION SEAL]

- A. Install [vapor retardant] [air infiltration seal] over entire building exterior walls and adjacent surfaces
- B. Seal vertical joints over framing by lapping minimum 2 stud spaces. Fasten to framing at top, end, and bottom edges; at perimeter of wall openings; and at lap joints.
- C. Seal joints caused by pipes, conduits, electrical boxes, and similar items with manufacturer's sealing tape. Seal penetrations air-tight.

NOTE TO SPECIFIER

Coordinate the following items with Contract Drawings:

DRAWING COORDINATION ITEMS

Drawings should indicate the following information related to this Section.

1. *Extent of each type of building insulation, using specified generic names.*
2. *Required thermal resistance R-value of each insulation location.*
3. *Where a Vapor Barrier is required thoroughly detail barrier conditions throughout entire envelope. Any penetrations not sealed or causing a break in the barrier will defeat the barrier envelope.*

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 07 22 15 00 - R&A INSULATION UNDERLAYMENT FOR ROOF REPLACEMENT

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Include this Section for projects where roof replacement will occur over existing concrete, gypsum concrete, cementitious wood fiber, lightweight insulating concrete (remaining in place), and/or wood decks, and an insulation underlayment is specified.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

NOTE TO SPECIFIER

EDIT paragraph 1.1A to reflect the actual deck types present. DELETE references to deck types not present on the project.

1.1 SUMMARY

- A. Installation of insulation underlayment over concrete, cementitious wood fiber, gypsum concrete, lightweight insulating concrete and wood structural roof decks.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Review available field data. EDIT Article 1.4 – REFERENCES below, based on the existing structural deck type(s), and underlayment(s) specified.

1. Over existing concrete structural decks, where a single-ply or cold-applied roofing membrane is specified, a self-adhering underlayment is recommended. DELETE sub-paragraphs 1.3.A.1.a, b, c and d.
2. Over existing concrete structural decks, where a hot-applied roofing membrane is specified, a two-ply underlayment consisting of asphalt felts is recommended. DELETE sub-paragraph 1.3.A.1.b.
3. Over existing gypsum concrete, cementitious wood fiber and lightweight insulating concrete structural decks, a mechanically-attached, asphalt-coated base sheet is recommended. DELETE sub-paragraphs 1.3.A.1.a, c and d.
4. Over existing wood structural decks, where a single-ply or cold-applied roofing membrane is specified, an underlayment of red rosin paper is recommended. DELETE sub-paragraphs 1.3.A.1.a, b, c and d.
5. Over existing wood structural decks, where a hot-applied roofing membrane is specified, an underlayment of a mechanically-attached, asphalt-coated base sheet over red rosin paper is recommended. DELETE sub-paragraphs 1.3.A.1.a, c and d.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 2178 - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing
 - b. ASTM D 4601 - Standard Specification for Asphalt-Coated Glass Fiber Base Sheet Used in Roofing
 - c. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - d. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - e. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - 2. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.

- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

EDIT paragraph 2.1 to reflect underlayment(s) and roof system(s) specified for this project. DELETE references to underlayment(s) not specified for this project. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 INSULATION UNDERLAYMENT

- A. At concrete structural decks (for use with cold-applied and single-ply roof membranes):
 - 1. Self-adhering modified bitumen base sheet; product type acceptable to roofing manufacturer.
 - a. The submitted product shall have a minimum thickness of 70 mils.
 - b. The submitted product shall be approved for use by the roofing membrane manufacturer on concrete decks, and as an underlayment for application of polyisocyanurate insulation with low-rise urethane foam adhesive.
 - c. The submitted product shall be capable of achieving the specified wind uplift requirements within the specified roof system assembly.
- B. At concrete structural decks (for use with hot-applied roof membranes):
 - 1. Asphalt-saturated glass fiber felt; Type IV, ASTM D 2178, product type acceptable to roofing membrane manufacturer.
- C. At cementitious wood fiber, gypsum concrete, and lightweight insulating concrete structural decks (cold-applied, hot-applied, and single-ply roof membranes):
 - 1. Asphalt-coated base sheet, glass fiber reinforced; No. 43, ASTM D 4601, Type II; product type acceptable to the roofing membrane manufacturer.
- D. At wood structural decks (for use with cold-applied and single-ply roof membranes):
 - 1. Red rosin paper; 36-inch width, minimum; 3 pounds per 100 square feet, minimum.
- E. At wood structural decks (for use with hot-applied roof membranes):
 - 1. Asphalt-coated base sheet, glass fiber reinforced; No. 43, ASTM D 4601, Type II; product type acceptable to the roofing membrane manufacturer.

- F. At acoustical steel decks:
1. Red rosin paper; 36-inch width, minimum; 3 pounds per 100 square feet, minimum.

NOTE TO SPECIFIER

EDIT Article 2.2 to reflect fasteners required for specified underlayment(s). DELETE references to underlayment(s) not specified for this project. Re-letter/number paragraphs and sub-paragraphs after editing.

2.2 FASTENERS

- A. For securing red rosin paper and asphalt-saturated base sheet to wood structural deck:
1. Large-headed roofing nails with a 1-inch diameter metal cap. Fastener length as necessary to penetrate 1-inch, minimum, into wood deck.
- B. For securing asphalt-coated base sheet to cementitious wood fiber, gypsum concrete and lightweight insulating concrete:
1. Locking impact nail-type fastener with integrated plate/tube assembly and locking barbs/wires. Plate and tube shall be fabricated of galvalume or galvanized steel.
 - a. The submitted fastener length shall be as necessary to achieve the wind uplift requirements for the project location, based on the fastening patterns provided in Sections 072221 and 072223.
 - b. The submitted fastener shall have a minimum plate diameter of 2-5/8 inches.
 - c. The submitted fastener shall be approved for use by the roofing membrane manufacturer in the specified application.

NOTE TO SPECIFIER

EDIT Article 2.3 to reflect fasteners required for specified underlayment(s). DELETE references to underlayment(s) not specified for this project. Do not delete paragraph 2.3C. Re-letter/number paragraphs and sub-paragraphs after editing.

2.3 ADHESIVES, PRIMERS AND CEMENTS

- A. For adhering self-adhering underlayment associated with cold-applied and single-ply roofing membranes:
1. Primer and adhesive recommended by the product manufacturer for adhesion to the existing substrate.
- B. For adhering asphalt-saturated glass fiber felt underlayment to concrete deck associated with hot-applied roofing membranes:
1. Asphalt primer: ASTM D 41.
 2. Asphalt; ASTM D 312, Type III.
- C. For sealing roof penetrations and roof-to-wall transitions:
1. Flashing cement: ASTM D 4586, Type I.

PART 3 - EXECUTION

3.1 GENERAL

- A. Prior to installation, inspect the existing roof deck. Ensure that the roof deck has been prepared as required in Section 024100, and is ready and acceptable to receive insulation underlayment materials.

NOTE TO SPECIFIER

EDIT paragraph 3.2 to reflect underlayment(s) specified for this project. DELETE references to underlayment(s) not specified for this project. Re-letter/number paragraphs and sub-paragraphs after editing.

3.2 INSULATION UNDERLAYMENT INSTALLATION

- A. Installation of asphalt-saturated glass fiber felts over concrete structural deck associated with hot-applied roofing membranes:
1. Apply asphalt primer over any bare areas of the concrete deck at the rate of one gallon per square; allow primer time to dry.
 2. Install two plies of asphalt-saturated glass fiber roofing felt in full and uniform moppings of hot and fluid Type III asphalt applied at a rate of 25 pounds per square. Install the felts with 19-inch side laps and 6-inch end laps.
 3. Seal roof penetrations and roof-to-wall terminations (including roof-to-wall and roof-to-roof curb terminations) with roofing cement.

NOTE TO SPECIFIER

Review available field data. Two options are available for paragraph 3.2B:

1. *For project locations with field wind uplift pressures calculated less than or equal to 45 psf per ASCE 7-05, RETAIN sub-paragraph 3.2.B.1 below as-is.*
2. *For project locations with field wind uplift pressures calculated at greater than 45 psf per ASCE 7-05, enhancements to the design must be made. Refer to qualified testing and inspection agencies, and the roofing membrane manufacturer for direction. REVISE the fastener spacing and patterns listed in sub-paragraph 3.2.B.1 below as necessary to achieve the required wind uplift rating for calculated wind uplift pressures.*

- B. Mechanical attachment of bottom layer of asphalt-coated base sheet over cementitious wood fiber, gypsum concrete and lightweight insulating concrete:
1. Mechanically fasten the asphalt-coated base sheet into the deck. Refer to the roofing manufacturer for instructions related to fastening pattern requirements. At a minimum, install fasteners at the following rates:
 - a. Field of roof: Fasten laps 9-inches o.c., and 18-inches o.c. in two equally spaced, staggered rows between laps.
 - b. At perimeters: Fasten laps 6-inches o.c., and 9-inches o.c. in two equally spaced, staggered rows between laps.
 - c. At corners Fasten laps 7-inches o.c., and 7-inches o.c. in three equally spaced, staggered rows between laps.
- C. Installation of asphalt-coated base sheet over wood structural decks:
1. Attach the underlayment in a manner recommended by the manufacturer, and sufficient to hold the base sheet in place during installation of the overlying insulation and roofing system.
- D. Installation of self-adhering underlayments over concrete structural decks:
1. If required by the product manufacturer, apply primer or adhesive to the substrate encountered. Allow primer time to dry.

2. Install the self-adhering underlayment, following the requirements and recommendations of the product manufacturer.
 3. Seal roof penetrations and roof-to-wall terminations (including roof-to-wall and roof-to-roof curb terminations) with roofing cement.
- E. Installation of red rosin paper over wood structural decks:
1. Attach the underlayment in a manner recommended by the manufacturer, and sufficient to hold the red rosin paper in place during installation of the overlying insulation and roofing system.
- F. Installation of red rosin paper over acoustical steel structural decks:
1. Loose-lay the underlayment on the deck. Tack in place, if necessary, in a manner sufficient to hold the red rosin paper in place during installation of the overlying insulation and roofing system.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 22 15 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 22 21 00 - R&A ROOF INSULATION AND COVER BOARD OVER INSULATION UNDERLAYMENT

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section where rigid board polyisocyanurate insulation and a cover board are being installed over an existing concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck. Where rigid board polyisocyanurate insulation and a cover board are being installed over an existing steel or wood structural deck, use Section 072223 – ROOF INSULATION AND COVER BOARD OVER STEEL AND WOOD DECKS.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

NOTE TO SPECIFIER

EDIT paragraph 1.1A to reflect the actual deck types present. DELETE references to deck types not present on the project.

NOTE TO SPECIFIER

Review available field data. If existing low flashing heights, existing masonry wall weep locations, or other conditions create a situation where a completed finish roof membrane slope of 1/4-inch will not be practical, consideration may be given to allowing a completed finished roof membrane slope of 1/8-inch per foot. The USPS Roofing Design Standards require a finish roof slope of 1/4-inch per foot; a specified finished roof slope of 1/8-inch per foot will require a deviation. Only in circumstances where a 1/4-inch slope is not practical may this be considered. EDIT paragraph 1.1B below, if necessary.

1.1 SUMMARY

- A. Installation of roof insulation and cover board over underlayment in roof areas with existing concrete, gypsum concrete, cementitious wood fiber, and lightweight insulating concrete structural roof decks.
- B. **NOTE:** This project requires a minimum completed finish roof membrane slope of 1/4-inch per foot to existing drainage components.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 030150 – Concrete Roof Deck Repair
- E. Section 035113 – Cementitious Wood Fiber Roof Deck Repair and Replacement
- F. Section 035116 – Gypsum Concrete Roof Deck Repair and Replacement
- G. Section 035216 – Lightweight Insulating Concrete Repair and Replacement
- H. Section 072215 – Insulation Underlayment

- I. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES, based on the system specified.

1. *If a hot-applied or other roofing system is specified requiring a wood fiber cover board, DELETE “ASTM C 1177 - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing and ASTM C 1278 - Standard Specification for Fiber-Reinforced Gypsum Panel from the reference list.*
2. *If a cold-applied roofing system is specified, do not edit the reference list.*
3. *If a single-ply thermoplastic or thermoset roofing system is chosen, DELETE “ASTM C 208 - Standard Specification for Cellulosic Fiber Insulating Board” from the reference list.*

Re-letter/number paragraphs and sub-paragraphs after editing.

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM C 1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
 - b. ASTM C 208 - Standard Specification for Cellulosic Fiber Insulating Board
 - c. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - d. ASTM C 1177 - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing
 - e. ASTM C 1278 - Standard Specification for Fiber-Reinforced Gypsum Panel
 2. Factory Mutual Global (FM)
 3. Florida Building Code
 4. Miami-Dade County
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in

compliance with specified regulatory requirements.

- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 ROOF INSULATION

NOTE TO SPECIFIER

Within paragraphs 2.1A and 2.1B below, two options are listed:

1. List project roof areas located over conditioned space within sub-paragraphs 2.1A.1 and 2.2B.1. These roof areas will require a minimum R-value of 20 per ASHRAE requirements and the USPS Roofing Design Standards.
2. List project roof areas located over unconditioned space within sub-paragraphs 2.1A.2 and 2.2B.2. These roof areas will not require a minimum R-value of 20 per ASHRAE requirements and the USPS Roofing Design Standards.

3. If roof areas over conditioned/unconditioned space are not applicable to the project, **DELETE** the non-applicable sub-item from both Articles 2.1A.2 and 2.2B.2 below.

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

NOTE TO SPECIFIER

Review available field data. If existing low flashing heights, existing weep hole locations, or other conditions create a situation where a completed finish roof membrane slope of 1/4-inch will not be practical, consideration may be given to allowing a minimum completed finish roof membrane slope of 1/8-inch per foot. The USPS Roofing Design Standards require a finish roof slope of 1/4-inch per foot. Only in circumstances where a 1/4-inch slope is not practical may this be considered. Discuss any deviation from the USPS Roofing Design Standards with the USPS Project Manager for this project. **EDIT** paragraphs 2.1A, 2.1B, 2.1B.1.a and 2.1B.2.a below, if necessary.

- A. For existing deck slopes greater than or equal to 1/4-inch: Polyisocyanurate roof insulation; ASTM C 1289, Type II, Class 1, Grade 2 (20 psi); HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing membrane manufacturer.
 - 1. Roof Areas (List Applicable Roof Areas):
 - a. Thickness: One layer of 2-inch thick insulation over one layer of 2-inch thick insulation (4-inches total).
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size:
 - 1) Bottom layer (2-inch thick): 4-feet by 4-feet.
 - 2) Top layer (2-inch thick): 4-feet by 4-feet.
 - 2. Roof Areas (List Applicable Roof Areas):
 - a. Thickness: One layer of 1-1/2 inch thick insulation.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 4-feet.
- B. For existing deck slopes less than 1/4-inch: Tapered polyisocyanurate roof insulation system; ASTM C 1289, Type II, Class 1, Grade 2 (20 psi); HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing manufacturer.
 - 1. Roof Areas (List Applicable Roof Areas):
 - a. Slope and Thickness: Tapered insulation, 1/4-inch per foot slope, starting thickness of 1/2-inch, over one layer of 2-inch thick insulation.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 4-feet.
 - 2. Roof Areas (List Applicable Roof Areas):
 - a. Slope and Thickness: Tapered insulation, 1/4-inch per foot slope, starting thickness of 1-1/2 inch.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 4-feet.

2.2 ROOF COVER BOARD

NOTE TO SPECIFIER

EDIT Article 2.2 – ROOF COVER BOARD, based on the system specified.

- 1. If a hot-applied or other roofing system is specified requiring a wood fiber cover board, **DELETE** paragraphs 2.2A, 2.2B and 2.2C below.
- 2. If a cold-applied roofing system is specified, **DELETE** paragraphs 2.2D, 2.2E and 2.2F below.
- 3. If a single-ply thermoplastic or thermoset roofing system is specified, **DELETE** paragraphs 2.2D, 2.2E and 2.2F below.

Re-letter/number items after editing.

- A. Type: Glass-mat or gypsum-fiber cover board with the meeting the following requirements:
 - 1. Approved for roofing applications.
 - 2. Approved by the roofing membrane manufacturer for use within the assembly.
 - 3. Conforming to ASTM C 1177 or C 1278.
 - 4. Achieving the specified wind uplift requirements within the specified roof assembly.
- B. Thickness: 1/2-inch.
- C. Board Size: 4-feet by 8-feet or 4-feet by 4-feet; as recommended by the roofing membrane manufacturer.
- D. Type: Wood fiber cover board; ASTM C 208, Type II, Grade 1. Cover board approved by the roofing manufacturer and capable of achieving the specified wind uplift requirements within the specified roof assembly. Fiberboard containing bagasse fibers (sugarcane or sorghum stocks) will not be accepted.
- E. Thickness: 1/2-inch.
- F. Board Size: 4-feet by 4-feet.

2.3 CRICKET AND SADDLE INSULATION

- A. Tapered polyisocyanurate roof insulation as necessary to achieve slopes and dimensions indicated in Article 3.3 and on the drawings, and as necessary to allow for proper drainage to existing drainage accessories; ASTM C 1289, Type II, Class 1; Minimum 20 psi; HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing manufacturer.

2.4 TAPERED EDGE AND CANT STRIPS

NOTE TO SPECIFIER

Revise Article 2.4 – TAPERED EDGE AND CANT STRIPS, based on the system specified.

- 1. *If a hot-applied or cold-applied other roofing system is specified, do not edit the list below.*
- 2. *If a single-ply thermoplastic or thermoset roofing system is specified, DELETE paragraph 2.4B.*

Re-letter/number paragraph/sub-paragraph after editing.

- A. Tapered Edge Strips: Fiberboard, ASTM C 208; 1-1/2 inches thick x 18 inches wide (or as indicated by conditions shown in drawings); product type acceptable to the roofing manufacturer.
- B. Cant Strips: Fiberboard, ASTM C208; minimum 4-inch face except as indicated on the drawings.

NOTE TO SPECIFIER

Article 2.5 – BATT INSULATION AND POLYETHYLENE, may be deleted if batt insulation will not be required on this project.

Re-letter/number Articles after editing.

2.5 BATT INSULATION AND POLYETHYLENE

- A. Batt fiberglass insulation; 25 percent recycled glass content, R-Value of 3.1 per inch, minimum.

- B. Polyethylene film: 6-mil thickness.

2.6 ADHESIVE

NOTE TO SPECIFIER

EDIT Article 2.6 – ADHESIVE, based on the system specified.

1. *If a hot-applied roofing system is specified, where asphalt may be used to adhere layers of insulation above the bottom layer of insulation, and the overlying cover board, DELETE paragraph 2.6B below.*
2. *If a cold-applied roofing system is specified, where low-rise urethane foam may be used to adhere layers of insulation above the bottom layer of insulation, and the overlying cover board, DELETE paragraph 2.6A below.*

Re-letter/number paragraph/sub-paragraphs after editing.

- A. For adhering cover board, insulation, and tapered insulation used in saddle and cricket construction: Asphalt: ASTM D 312, Type III.
- B. For adhering cover board, insulation, and tapered insulation used in saddle and cricket construction: Urethane foam adhesive; product acceptable to the roofing manufacturer and is capable of meeting wind uplift requirements for the project location.

PART 3 - EXECUTION

3.1 GENERAL

- A. Ensure that the substrate has been prepared as necessary, and is ready and acceptable to receive insulation materials. Refer to Section 024100 for material removals and general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. EDIT paragraph 3.1B as necessary:

1. *If project roof areas do not have an existing underlying concrete deck, DELETE references to Section 030150 within paragraph 3.1B below.*
2. *If project roof areas do not have an existing underlying cementitious wood fiber deck, DELETE references to Section 035113 within paragraph 3.1B below.*
3. *If project roof areas do not have an existing underlying gypsum concrete deck, DELETE references to Section 035116 within paragraph 3.1B below.*
4. *If project roof areas do not have an existing underlying lightweight insulating concrete deck, DELETE references to Section 035216 within paragraph 3.1B below.*
5. *If project areas contain all listed deck types, do not edit paragraph 3.1B.*

- B. Refer to Sections 030150, 035113, 035116 and 035216 for deck repair and replacement requirements.

NOTE TO SPECIFIER

Review available field data. EDIT paragraph 3.1B as necessary:

1. *If an underlayment will not be used on the project, delete paragraph 3.1C below. Please note that underlayment's are typically required on USPS projects with the listed deck types applicable to this Section. If an underlayment will not be used, contact the USPS Project Manager to*

determine if a deviation is required.

2. *If project roof areas will include an underlayment, do not edit paragraph 3.1C.*

Re-letter/number paragraph/sub-paragraphs after editing.

- C. Refer to Section 072215 for underlayment requirements specific to the existing structural deck type.

NOTE TO SPECIFIER

Review available field data. Revise paragraph 3.1D as necessary:

1. *If all project roof areas are over conditioned space, DELETE paragraph 3.1D.2.a below.*
2. *If this project includes roof areas over unconditioned space, edit paragraph 3.1D.2.a as necessary. Project roof areas over unconditioned spaces shall not be subject to this requirement.*

- D. Using the specified insulation, provide a completed insulation system that results in the following:
1. A roof system with a minimum completed **finish slope** of 1/4-inch per foot.
 2. An insulation system resulting in an average polyisocyanurate insulation thickness of 4-inches, minimum.
 - a. Roof Areas (list applicable roof areas over unconditioned space) are not subject to the requirement for an average polyisocyanurate thickness of 4-inches, minimum.

3.2 INSULATION INSTALLATION

- A. Closely butt the insulation boards and roof cover boards.
- B. Stagger board joints by the maximum dimensions possible.
- C. Neatly cut insulation and roof cover boards to fit around all penetrations through the roof deck. At locations where less than a full-sized sheet of insulation or cover board is required, use the largest size practical to fill in the area. Do not install numerous small sections of cover board or insulation at these locations.
- D. Fill gaps between boards, and between boards and walls, curbs, blocking, and equipment with additional insulation material.
- E. Protect all insulation and cover board from weather and standing water at all times. Install no more product than can be completely covered with the roofing membrane on the same day.
- F. Install temporary water cut-offs at the edges of insulation at the end of each workday.
- G. Prior to installing the insulation, inspect the underside of the roof deck to determine if objects, such as sprinklers, lights, conduits, fans, or gas lines are attached to the deck. Exercise caution to ensure that insulation fasteners do not penetrate these objects.

NOTE TO SPECIFIER

Review available field data. Two options are available for paragraph 3.2H:

1. *For project locations with field wind uplift pressures calculated less than or equal to 45 psf per ASCE 7-05, RETAIN sub-paragraph 3.2.H.1 below, and DELETE sub-paragraphs 3.2.H.2 and 3.*
2. *For project locations with field wind uplift pressures calculated at greater than 45 psf per ASCE 7-05, enhancements to the design must be made. Refer to the listed qualified testing and inspection agencies listed below, and the roofing membrane manufacturer for direction. At a*

minimum, RETAIN sub-paragraphs 3.2.H.2 and 3 below or REVISE sub-paragraph 3.2.H.1 to achieve the necessary securement for calculated wind uplift pressures.

Re-letter/number paragraph/sub-paragraphs after editing.

- H. Adhesion of intermediate and top layer(s) of insulation, and cover board:
1. Adhere insulation and cover board, using the specified urethane foam adhesive. Refer to the roofing manufacturer for application instructions and requirements. At a minimum, apply the adhesive at the following rates:
 - a. Field of roof: 3/4-inch wide bands of adhesive, 12-inches o.c.
 - b. At perimeters: 3/4-inch bands of adhesive, 6-inches o.c.
 - c. At corners: 3/4-inch wide bands of adhesive, 4-inches o.c.
 2. Adhere the insulation and cover board using the submitted adhesive in a manner that has been successfully tested by a qualified testing and inspecting agency such as FM Global, Florida Building Code or Miami-Dade County. Roof systems must resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units. Provide documentation from the roofing manufacturer that indicates the submitted system meets wind uplift pressure that the system meets the specified wind uplift pressure requirements within the field, perimeters and corners.
 3. Provide recommended enhancements at perimeters and corners, as determined by a qualified testing agency.

3.3 INSULATION SADDLE AND CRICKET INSTALLATION

- A. Install insulation saddles and crickets to provide positive drainage to drainage accessories, and where indicated on the drawings. Ensure width of saddles is one-half their length, minimum, or as shown on the drawing (whichever is greater). Use tapered insulation material with a slope that is double the existing finish slope of the roof area, creating insulation saddles and crickets with a **finish slope** equal to or greater than the slope in the field of the roof area. Adhere saddles and crickets using the specified adhesive.

NOTE TO SPECIFIER

Article 3.4 – BATT INSULATION INSTALLATION, may be deleted if batt insulation will not be required on this project.

Re-letter/number Articles after editing.

3.4 BATT INSULATION INSTALLATION

- A. Install polyethylene sheathing at locations indicated on the drawings. Drape sheathing into expansion joints as shown on drawings. Secure sheathing with fasteners spaced 12-inches o.c., maximum. Install unfaced batt insulation into the space created.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

*Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to **black text**. Review the footer information with the USPS Project Manager for accuracy.*

END OF SECTION 07 22 21 00

SECTION 07 22 23 00 - R&A ROOF INSULATION AND COVER BOARD OVER STEEL AND WOOD ROOF DECKS

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section.

NOTE TO SPECIFIER

Use this Section where rigid board polyisocyanurate insulation and a cover board are being installed over existing steel and/or wood structural roof decks. Where rigid board polyisocyanurate insulation and a cover board are being installed over an underlayment over an existing concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, use Section 072221 – ROOF INSULATION AND COVER BOARD OVER UNDERLAYMENT.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

NOTE TO SPECIFIER

Edit the Section title and footer as necessary to reflect the actual deck types present. If steel deck is not present, remove references to steel deck from the title and footer. If wood deck is not present, remove references to wood deck from the title and footer.

PART 1 - GENERAL

NOTE TO SPECIFIER

EDIT paragraph 1.1A to reflect the actual deck types present. DELETE references to deck types not present on the project.

NOTE TO SPECIFIER

Review available field data. If existing low flashing heights, existing masonry wall weep locations, or other conditions create a situation where a completed finish roof membrane slope of 1/4-inch will not be practical, consideration may be given to allowing a completed finished roof membrane slope of 1/8-inch per foot. The USPS Roofing Design Standards require a finish roof slope of 1/4-inch per foot; a specified finished roof slope of 1/8-inch per foot will require a deviation. Only in circumstances where a 1/4-inch slope is not practical may this be considered. EDIT paragraph 1.1B below, if necessary.

1.1 SUMMARY

- A. Installation of roof insulation and cover board over existing steel and wood structural roof decks.
- B. **NOTE:** This project requires a minimum completed finish roof membrane slope of 1/4-inch per foot to existing drainage components.

NOTE TO SPECIFIER

Review available field data:

1. *For projects that do not include roof areas with underlying steel decks, DELETE paragraph 1.2D from the list below.*
2. *For projects that do not include roof areas with underlying wood decks, DELETE paragraph 1.2E from the list below.*
3. *For projects that include roof areas with both underlying steel and wood decks, do not edit the list below.*

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures

- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 053123 – Steel Roof Deck Repair and Replacement
- E. Section 061516 – Wood Roof Deck Repair and Replacement
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES, based on the system specified.

1. *If a hot-applied or other roofing system is specified requiring a wood fiber cover board, DELETE “ASTM C 1177 - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing and ASTM C 1278 - Standard Specification for Fiber-Reinforced Gypsum Panel from the reference list.*
2. *If a cold-applied roofing system is specified, do not edit the reference list.*
3. *If a single-ply thermoplastic or thermoset roofing system is chosen, DELETE “ASTM C 208 - Standard Specification for Cellulosic Fiber Insulating Board” from the reference list.*

Re-letter/number paragraphs and sub-paragraphs after editing.

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM C 1289 - Standard Specification for Faced Rigid Cellular Polyisocyanurate Thermal Insulation Board
 - b. ASTM C 208 - Standard Specification for Cellulosic Fiber Insulating Board
 - c. ASTM C 1177 - Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing
 - d. ASTM C 1278 - Standard Specification for Fiber-Reinforced Gypsum Panel
 2. Factory Mutual Global (FM)
 3. Florida Building Code
 4. Miami-Dade County
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing

R&A ROOF INSULATION AND COVER BOARD OVER STEEL
AND WOOD ROOF DECKS

system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.

- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 ROOF INSULATION

NOTE TO SPECIFIER

Within paragraphs 2.1A and 2.1B below, two options are listed:

R&A ROOF INSULATION AND COVER BOARD OVER
STEEL AND WOOD ROOF DECKS

2014

1. List project roof areas located over conditioned space within sub-paragraphs 2.1A.1 and 2.2B.1. These roof areas will require a minimum R-value of 20 per ASHRAE requirements and the USPS Roofing Design Standards.
2. List project roof areas located over unconditioned space within sub-paragraphs 2.1A.2 and 2.2B.2. These roof areas will not require a minimum R-value of 20 per ASHRAE requirements and the USPS Roofing Design Standards.
3. If roof areas over conditioned/unconditioned space are not applicable to the project, DELETE the non-applicable sub-item from both Articles 2.1A.2 and 2.2B.2 below.

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

NOTE TO SPECIFIER

Review available field data. If existing low flashing heights, existing weep hole locations, or other conditions create a situation where a completed finish roof membrane slope of 1/4-inch will not be practical, consideration may be given to allowing a minimum completed finish roof membrane slope of 1/8-inch per foot. The USPS Roofing Design Standards require a finish roof slope of 1/4-inch per foot. Only in circumstances where a 1/4-inch slope is not practical may this be considered. Discuss any deviation from the USPS Roofing Design Standards with the USPS Project Manager for this project. EDIT paragraphs 2.1A, 2.1B, 2.1B.1.a and 2.1B.2.a below, if necessary.

- A. For existing deck slopes greater than or equal to 1/4-inch: Polyisocyanurate roof insulation; ASTM C 1289, Type II, Class 1, Grade 2 (20 psi); HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing membrane manufacturer.
 1. Roof Areas (List Applicable Roof Areas):
 - a. Thickness: One layer of 2-inch thick insulation over one layer of 2-inch thick insulation (4-inches total).
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size:
 - 1) Bottom layer (2-inch thick): 4-feet by 8-feet.
 - 2) Top layer (2-inch thick): 4-feet by 4-feet.
 2. Roof Areas (List Applicable Roof Areas):
 - a. Thickness: One layer of 1-1/2 inch thick insulation.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 8-feet.
- B. For existing deck slopes less than 1/4-inch: Tapered polyisocyanurate roof insulation system; ASTM C 1289, Type II, Class 1, Grade 2 (20 psi); HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing manufacturer.
 1. Roof Areas (List Applicable Roof Areas):
 - a. Slope and Thickness: Tapered insulation, 1/4-inch per foot slope, starting thickness of 1/2-inch; over one layer of 2-inch thick insulation.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 4-feet.
 2. Roof Areas (List Applicable Roof Areas):
 - a. Slope and Thickness: Tapered insulation, 1/4-inch per foot slope, starting thickness of 1-1/2 inch.
 - b. Long Term Thermal Resistance (LTTR) Value: 6.0 minimum per inch.
 - c. Board Size: 4-feet by 4-feet.

2.2 ROOF COVER BOARD

NOTE TO SPECIFIER

EDIT Article 2.2 – ROOF COVER BOARD, based on the system specified.

R&A ROOF INSULATION AND COVER BOARD OVER STEEL
AND WOOD ROOF DECKS

1. *If a hot-applied or other roofing system is specified requiring a wood fiber cover board, DELETE paragraphs 2.2A, 2.2B and 2.2C below.*
2. *If a cold-applied roofing system is specified, DELETE paragraphs 2.2D, 2.2E and 2.2F below.*
3. *If a single-ply thermoplastic or thermoset roofing system is specified, DELETE paragraphs 2.2D, 2.2E and 2.2F below.*

Re-letter/number items after editing.

- A. Type: Glass-mat or gypsum-fiber cover board with the meeting the following requirements:
 1. Approved for roofing applications.
 2. Approved by the roofing membrane manufacturer for use within the assembly.
 3. Conforming to ASTM C 1177 or C 1278.
 4. Achieving the specified wind uplift requirements within the specified roof assembly.
- B. Thickness: 1/2-inch.
- C. Board Size: 4-feet by 8-feet or 4-feet by 4-feet; as recommended by the roofing membrane manufacturer.
- D. Type: Wood fiber cover board; ASTM C 208, Type II, Grade 1. Cover board approved by the roofing manufacturer and capable of achieving the specified wind uplift requirements within the specified roof assembly. Fiberboard containing bagasse fibers (sugarcane or sorghum stocks) will not be accepted.
- E. Thickness: 1/2-inch.
- F. Board Size: 4-feet by 4-feet.

2.3 CRICKET AND SADDLE INSULATION

- A. Tapered polyisocyanurate roof insulation as necessary to achieve slopes and dimensions indicated in Article 3.3 and on the drawings, and as necessary to allow for proper drainage to existing drainage accessories; ASTM C 1289, Type II, Class 1; Minimum 20 psi; HCFC-Free and Zero Ozone Depletion Potential (ODP); product type acceptable to the roofing manufacturer.

2.4 TAPERED EDGE AND CANT STRIPS

NOTE TO SPECIFIER

Revise Article 2.4 – TAPERED EDGE AND CANT STRIPS, based on the system specified.

1. *If a hot-applied or cold-applied other roofing system is specified, do not edit the list below.*
2. *If a single-ply thermoplastic or thermoset roofing system is specified, DELETE paragraph 2.4B.*

Re-letter/number paragraph/sub-paragraph after editing.

- A. Tapered Edge Strips: Fiberboard, ASTM C 208; 1-1/2 inches thick x 18 inches wide (or as indicated by conditions shown in drawings); product type acceptable to the roofing manufacturer.
- B. Cant Strips: Fiberboard, ASTM C208; minimum 4-inch face except as indicated on the drawings.

NOTE TO SPECIFIER

Article 2.5 – BATT INSULATION AND POLYETHYLENE, may be deleted if batt insulation will not be required on this project.

Re-letter/number Articles after editing.

2.5 BATT INSULATION AND POLYETHYLENE

- A. Batt fiberglass insulation; 25 percent recycled glass content, R-Value of 3.1 per inch, minimum.
- B. Polyethylene film: 6-mil thickness.

2.6 INSULATION FASTENERS AND PLATES

NOTE TO SPECIFIER

EDIT Sub-paragraphs 2.6.A.1 and 2.6.A.2 based on the required wind uplift.

- 1. *At high-wind locations, consider use of insulation plates with a diameter greater than 3-inches, if available. Consult with the roofing membrane manufacturer.*
- 2. *At high-wind locations, consider use of heavy-duty, minimum No. 14 fasteners. Consult with the roofing membrane manufacturer.*

- A. For securing polyisocyanurate insulation: FM-approved fluorocarbon coated or galvanized self-drilling screw and plate system; product type acceptable to the roofing manufacturer. Fastener length as necessary to penetrate through the bottom layer of insulation and through the top deck flange a minimum of 3/4-inch and a maximum of 1-inch for steel decks, and a penetration of 1-inch into wood decks.
 - 1. Minimum insulation plate diameter: 3-inches.
 - 2. Minimum fastener size: No. 12.

NOTE TO SPECIFIER

EDIT Article 2.7 – ADHESIVE, based on the system specified.

- 1. *If a hot-applied roofing system is specified, where asphalt may be used to adhere layers of insulation above the bottom layer of insulation, and the overlying cover board, DELETE paragraph 2.2B below.*
- 2. *If a cold-applied roofing system is specified, where low-rise urethane foam may be used to adhere layers of insulation above the bottom layer of insulation, and the overlying cover board, DELETE paragraph 2.2A below.*

Re-letter/number paragraph/sub-paragraphs after editing.

2.7 ADHESIVE

- A. For adhering cover board and top and intermediate layer(s) of polyisocyanurate insulation: Asphalt: ASTM D 312, Type III.
- B. For adhering cover board, top and intermediate layers of insulation, and tapered insulation used in saddle and cricket construction: Urethane foam adhesive; product acceptable to the roofing manufacturer and is capable of meeting the specified wind uplift requirements.

PART 3 - EXECUTION

3.1 GENERAL

**NOTE TO SPECIFIER**

Review available field data. *EDIT* paragraph 3.1A as necessary:

1. If project roof areas do not have an existing underlying steel deck, *DELETE* references to Section 053123 within paragraph 3.1A below.
2. If project roof areas do not have an existing underlying wood deck, *DELETE* references to Section 061516 within paragraph 3.1A below.
3. If project areas contain both steel and wood decks, do not edit paragraph 3.1A.

- A. Ensure that the substrate has been prepared as necessary, and is ready and acceptable to receive insulation materials. Refer to Section 024100 for material removals and general work and substrate preparation requirements. Refer to Sections 053123 and 061516 for deck repair and replacement requirements.

NOTE TO SPECIFIER

Review available field data. *Revise* paragraph 3.1B as necessary:

1. If all project roof areas are over conditioned space, *DELETE* paragraph 3.1B.2.a below.
2. If this project includes roof areas over unconditioned space, edit paragraph 3.1B.2.a as necessary. Project roof areas over unconditioned spaces shall not be subject to this requirement.

- B. Using the specified insulation, provide a completed insulation system that results in the following:
 1. A roof system with a minimum completed **finish slope** of 1/4-inch per foot.
 2. An insulation system resulting in an average polyisocyanurate insulation thickness of 4-inches, minimum.
 - a. Roof Areas (list applicable roof areas over unconditioned space) are not subject to the requirement for an average polyisocyanurate thickness of 4-inches, minimum.

3.2 INSULATION INSTALLATION

- A. Closely butt the insulation boards and roof cover boards.
- B. Stagger board joints by the maximum dimensions possible.
- C. Neatly cut insulation and roof cover boards to fit around all penetrations through the roof deck. At locations where less than a full-sized sheet of insulation or cover board is required, use the largest size practical to fill in the area. Do not install numerous small sections of cover board or insulation at these locations.
- D. Fill gaps between boards, and between boards and walls, curbs, blocking, and equipment with additional insulation material.
- E. Protect all insulation and cover board from weather and standing water at all times. Install no more product than can be completely covered with the roofing membrane on the same day.
- F. Install temporary water cut-offs at the edges of insulation at the end of each workday.
- G. Prior to installing the insulation, inspect the underside of the roof deck to determine if objects, such as sprinklers, lights, conduits, fans, or gas lines are attached to the deck. Exercise caution to ensure that insulation fasteners do not penetrate these objects.

**NOTE TO SPECIFIER**

Review available field data. Two options are available for paragraph 3.2H:

1. For project locations with field wind uplift pressures calculated less than or equal to 45 psf per ASCE 7-05, **RETAIN** sub-paragraph 3.2.H.1 below, and **DELETE** sub-paragraphs 3.2.H.2 and 3.
2. For project locations with field wind uplift pressures calculated at greater than 45 psf per ASCE 7-05, enhancements to the design must be made. Refer to the listed qualified testing and inspection agencies listed below, and the roofing membrane manufacturer for direction. At a minimum, **RETAIN** sub-paragraphs 3.2.H.2 and 3 below or **REVISE** sub-paragraph 3.2.H.1 to achieve the necessary securement for calculated wind uplift pressures.

Re-letter/number paragraph/sub-paragraphs after editing.

NOTE TO SPECIFIER

Review available field data. Revise paragraphs 3.2H and 3.2I as necessary:

1. If project roof areas are located over unconditioned space, such as canopies, consideration may be given to mechanical attachment of all insulation layers and cover board, if necessary, to achieve the required wind uplift ratings.

H. Mechanical attachment of bottom layer of polyisocyanurate insulation:

1. Mechanically fasten the insulation into the deck, penetrating a minimum of 3/4-inch and a maximum of 1-inch into steel deck, and 1-inch into wood deck. Refer to the roofing manufacturer for instructions related to fastening pattern requirements. At a minimum, install fasteners at the following rates:
 - a. Field of roof: One fastener per 4.00 square feet (8 fasteners per 4-foot x 8-foot board).
 - b. At perimeters: One fastener per 1.33 square feet (24 fasteners per 4-foot x 8-foot board).
 - c. At corners: One fastener per 1.00 square feet (32 fasteners per 4-foot x 8-foot board).
2. Mechanically attach the bottom layer of insulation, using the submitted fasteners and plates in a manner that has been successfully tested by a qualified testing and inspecting agency such as FM Global, Florida Building Code or Miami-Dade County. Roof systems must resist uplift pressures calculated according to ASCE 7 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units. Provide documentation from the roofing manufacturer that indicates the submitted system meets wind uplift pressure that the system meets the specified wind uplift pressure requirements within the field, perimeters and corners.
3. Provide recommended enhancements at perimeters and corners, as determined by a qualified testing agency.

NOTE TO SPECIFIER

Review available field data. Two options are available for paragraph 3.2I:

1. For project locations with field wind uplift pressures calculated less than or equal to 45 psf per ASCE 7-05, **RETAIN** sub-paragraph 3.2.I.1 below, and **DELETE** sub-paragraphs 3.2.I.2 and 3.
2. For project locations with field wind uplift pressures calculated at greater than 45 psf per ASCE 7-05, enhancements to the design must be made. Refer to the listed qualified testing and inspection agencies listed below, and the roofing membrane manufacturer for direction. At a minimum, **RETAIN** sub-paragraphs 3.2.I.2 and 3 below or **REVISE** sub-paragraph 3.2.I.1 to achieve the necessary securement for calculated wind uplift pressures.

Re-letter/number paragraph/sub-paragraphs after editing.

I. Adhesion of intermediate and top layer(s) of insulation, and cover board:

1. Adhere insulation and cover board, using the specified urethane foam adhesive. Refer

to the roofing manufacturer for application instructions and requirements. At a minimum, apply the adhesive at the following rates:

- a. Field of roof: 3/4-inch wide bands of adhesive, 12-inches o.c.
 - b. At perimeters: 3/4-inch bands of adhesive, 6-inches o.c.
 - c. At corners: 3/4-inch wide bands of adhesive, 4-inches o.c.
2. Adhere the insulation and cover board using the submitted adhesive in a manner that has been successfully tested by a qualified testing and inspecting agency such as FM Global, Florida Building Code or Miami-Dade County. Roof systems must resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units. Provide documentation from the roofing manufacturer that indicates the submitted system meets wind uplift pressure that the system meets the specified wind uplift pressure requirements within the field, perimeters and corners.
 3. Provide recommended enhancements at perimeters and corners, as determined by a qualified testing agency.

3.3 INSULATION SADDLE AND CRICKET INSTALLATION

- A. Install insulation saddles and crickets to provide positive drainage to drainage accessories, and where indicated on the drawings. Ensure width of saddles is one-half their length, minimum, or as shown on the drawing (whichever is greater). Use tapered insulation material with a slope that is double the existing finish slope of the roof area, creating insulation saddles and crickets with a **finish slope** equal to or greater than the slope in the field of the roof area. Adhere saddles and crickets using the specified adhesive.

NOTE TO SPECIFIER

Article 3.4 – BATT INSULATION INSTALLATION, may be deleted if batt insulation will not be required on this project.

Re-letter/number Articles after editing.

3.4 BATT INSULATION INSTALLATION

- A. Install polyethylene sheathing at locations indicated on the drawings. Drape sheathing into expansion joints as shown on drawings. Secure sheathing with fasteners spaced 12-inches o.c., maximum. Install unfaced batt insulation into the space created.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 22 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 24 13 00 - WATER-DRAINAGE EXTERIOR INSULATION AND FINISH SYSTEM (EIFS)**1.1 GENERAL****A. Description Of Work:**

1. This specification covers the furnishing and installation of materials for water drainage exterior insulation and finish system (EIFS). Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes water-drainage exterior insulation and finish system (EIFS) applied over water-resistant coating over sheathing, weather-resistant sheathing paper over sheathing, weather-resistant sheathing paper over exterior cement board, and exterior cement board over weather-resistant sheathing paper.

C. System Description

1. Class PB EIFS: A non-load-bearing, exterior wall cladding system that consists of an insulation board attached adhesively, mechanically, or both to the substrate; an integrally reinforced base coat; and a textured protective finish coat.
2. Water-Drainage EIFS: EIFS with a means that allows water entering into an EIFS assembly to drain to the exterior.

D. Performance Requirements

1. EIFS Performance: Comply with the following:
 - a. Bond Integrity: Free from bond failure within EIFS components or between system and supporting wall construction, resulting from exposure to fire, wind loads, weather, or other in-service conditions.
 - b. Weathertightness: Resistant to water penetration from exterior into water-drainage EIFS and assemblies behind it or through them into interior of building that results in deterioration of thermal-insulating effectiveness or other degradation of EIFS and assemblies behind it, including substrates, supporting wall construction, and interior finish, and including a means that allows water entering into an EIFS assembly to drain to the exterior.
2. Class PB EIFS: Provide EIFS having physical properties and structural performance that comply with the following:
 - a. Abrasion Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for a minimum of 28 days; and showing no cracking, checking, or loss of film integrity after exposure to 528 quarts (500 L) of sand when tested per ASTM D 968, Method A.
 - b. Absorption-Freeze Resistance: No visible deleterious effects and negligible weight loss after 60 cycles per EIMA 101.01.
 - c. Accelerated Weathering: Five samples per ICC-ES AC235 showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, delamination, or other characteristics that might affect performance as a wall cladding after testing for 2000 hours when viewed under 5 times magnification per ASTM G 153 or ASTM G 154 **OR** ASTM G 153 or ASTM G 155, **as directed**.
 - d. Freeze-Thaw: No surface changes, cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination, or indications of delamination between components when viewed under 5 times magnification after 60 cycles per EIMA 101.01 **OR** 10 cycles per ICC-ES AC235, **as directed**.

- e. Mildew Resistance of Finish Coat: Sample applied to 2-by-2-inch (50.8-by-50.8-mm) clean glass substrate, cured for 28 days, and showing no growth when tested per ASTM D 3273 and evaluated according to ASTM D 3274.
- f. Salt-Spray Resistance: No deleterious affects when tested according to ICC-ES AC235.
- g. Tensile Adhesion: No failure in the EIFS, adhesive, base coat, or finish coat when tested per EIMA 101.03 **OR** ICC-ES AC235, **as directed**.
- h. Water Penetration: Sample consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board, cured for 28 days, and showing no water penetration into the plane of the base coat to expanded polystyrene board interface of the test specimen after 15 minutes at 6.24 lbf/sq. ft. (299 Pa) of air pressure difference or 20 percent of positive design wind pressure, whichever is greater, across the specimen during a test period when tested per EIMA 101.02.
- i. Water Resistance: Three samples, each consisting of 1-inch- (25.4-mm-) thick EIFS mounted on 1/2-inch- (12.7-mm-) thick gypsum board; cured for 28 days; and showing no cracking, checking, crazing, erosion, rusting, blistering, peeling, or delamination after testing for 14 days per ASTM D 2247.
- j. Impact Resistance: Sample consisting of 1-inch- (25.4-mm-) thick EIFS when constructed, conditioned, and tested per EIMA 101.86; and meeting or exceeding the following:
 - 1) Standard Impact Resistance: 25 to 49 inch-lb (2.8 to 5.6 J).
 - 2) Medium Impact Resistance: 50 to 89 inch-lb (5.7 to 10.1 J).
 - 3) High Impact Resistance: 90 to 150 inch-lb (10.2 to 17 J).
 - 4) Ultra-High Impact Resistance: More than 150 inch-lb (17 J).
- k. Drainage: According to ICC-ES AC24 **OR** ICC-ES AC235, **as directed**.
- l. Structural Performance Testing: EIFS assembly and components shall comply with ICC-ES AC235 when tested per ASTM E 330.

E. Submittals

- 1. Product Data: For each type and component of EIFS indicated.
- 2. LEED Submittal:
 - a. Product Data for Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, including printed statement of VOC content.
- 3. Shop Drawings: For EIFS. Include plans, elevations, sections, details of components, details of penetration and termination, flashing details, joint locations and configurations, fastening and anchorage details including mechanical fasteners, and connections and attachments to other work.
- 4. Samples: For each exposed product and for each color and texture specified.
- 5. Material or product certificates.
- 6. Product test reports.
- 7. Compatibility and Adhesion Test Reports: For joint sealants from sealant manufacturer indicating the following:
 - a. Materials forming joint substrates and joint-sealant backings have been tested for compatibility and adhesion with joint sealants.
 - b. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.
- 8. Field quality-control reports and special inspection reports.
- 9. Evaluation reports
- 10. Maintenance data.

F. Quality Assurance

- 1. Installer Qualifications: An installer who is certified in writing by EIFS manufacturer as qualified to install manufacturer's system using trained workers.
- 2. Source Limitations: Obtain EIFS from single source from single EIFS manufacturer and from sources approved by EIFS manufacturer as compatible with system components.

3. Fire-Test-Response Characteristics: Provide EIFS and system components with the following fire-test-response characteristics as determined by testing identical EIFS and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
 - a. Fire-Resistance Characteristics: Per ASTM E 119.
 - b. Full-Scale Multistory Fire Test: Per UBC Standard 26-4.
 - c. Full-Scale Diversified Fire Test: Per ASTM E 108 modified for testing vertical walls.
 - d. Intermediate-Scale Multistory Fire Test: Per FPA 285 **OR** UBC Standard 26-9, **as directed**.
 - e. Radiant Heat Exposure: No ignition of EIFS when tested according to NFPA 268.
 - f. Potential Heat: Acceptable level when tested according to NFPA 259.
 - g. Surface-Burning Characteristics: Provide insulation board, adhesives, base coats, and finish coats with flame-spread index of 25 or less and smoke-developed index of 450 or less, per ASTM E 84 **OR** UBC Standard 8-1, **as directed**.
4. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

1. Deliver materials in original, unopened packages with manufacturers' labels intact and clearly identifying products.
2. Store materials inside and under cover; keep them dry and protected from weather, direct sunlight, surface contamination, aging, corrosion, damaging temperatures, construction traffic, and other causes.
 - a. Stack insulation board flat and off the ground.
 - b. Protect plastic insulation against ignition at all times. Do not deliver plastic insulating materials to Project site before installation time.
 - c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Project Conditions

1. Weather Limitations: Maintain ambient temperatures above 40 deg F (4.4 deg C) for a minimum of 24 hours before, during, and after adhesives or coatings are applied. Do not apply EIFS adhesives or coatings during rainfall. Proceed with installation only when existing and forecasted weather conditions and ambient outdoor air, humidity, and substrate temperatures permit EIFS to be applied, dried, and cured according to manufacturers' written instructions and warranty requirements.

1.2 PRODUCTS

A. Materials

1. Compatibility: Provide water-resistive coating, adhesive, fasteners, board insulation, reinforcing meshes, base- and finish-coat systems, sealants, and accessories that are compatible with one another and with substrates and approved for use by EIFS manufacturer for Project.
2. Exterior Cement Board: Not less than 5/16-inch- (8-mm-) **OR** 7/16-inch- (11-mm-), **as directed** thick, fiber cement board complying with ASTM C 1186, Type A, for exterior applications.
 - a. Fasteners: Wafer-head or flat-head steel drill screws complying with ASTM C 954, with an organic-polymer coating or other corrosion-protective coating having a salt-spray resistance of more than 500 hours per ASTM B 117.
 - 1) Size and Length: As recommended by sheathing manufacturer for type and thickness of sheathing board to be attached.
3. Water-Resistive Coatings: EIFS manufacturer's standard formulation and accessories for use as water/weather-resistive barriers, compatible with substrate, and complying with physical and performance criteria of ICC-ES AC209 **OR** ICC-ES AC212, **as directed**.

- a. Sheathing Joint Tape **OR** Compound and Tape, **as directed**: Type recommended by EIFS manufacturer for sealing joints between and penetrations through sheathing.
 - b. VOC Content of Coatings Used as Insulation Adhesive: 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Primer/Sealer: EIFS manufacturer's standard substrate conditioner with VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), designed to seal substrates from moisture penetration and to improve the bond between substrate of type indicated and adhesive used for application of insulation.
5. Flexible-Membrane Flashing: Cold-applied, fully self-adhering, self-healing, rubberized-asphalt and polyethylene-film composite sheet or tape and primer; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer.
6. Drainage Mat: Three-dimensional, nonwoven, entangled filament, nylon or plastic **OR** Woven or fused, self-furring, PVC mesh lath, **as directed**, mat designed to drain incidental moisture by gravity; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate.
7. Spacers: Closed-cell polyethylene **OR** Woven or fused, self-furring, PVC mesh lath, **as directed** furring strips; EIFS manufacturer's standard or product recommended in writing by EIFS manufacturer with manufacturer's standard corrosion-resistant mechanical fasteners suitable for intended substrate.
8. Insulation Adhesive: EIFS manufacturer's standard formulation designed for indicated use; compatible with substrate; with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24); and complying with one of the following:
 - a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, and polymer-based adhesive specified for base coat.
 - b. Factory-blended dry formulation of portland cement, dry polymer admixture, and fillers specified for base coat.
 - c. Factory-mixed noncementitious formulation designed for adhesive attachment of insulation to substrates of type indicated, as recommended by EIFS manufacturer.
9. Molded, Rigid Cellular Polystyrene Board Insulation: Comply with ASTM C 578, Type I; EIFS manufacturer's requirements; and EIMA's "EIMA Guideline Specification for Expanded Polystyrene (EPS) Insulation Board" for most stringent requirements for material performance and qualities of insulation, including dimensions and permissible variations, and the following:
 - a. Aging: Before cutting and shipping, age insulation in block form by air drying for not less than six weeks or by another method approved by EIMA that produces equivalent results.
 - b. Flame-Spread and Smoke-Developed Indexes: 25 and 450 or less, respectively, per ASTM E 84.
 - c. Dimensions: Provide insulation boards not more than 24 by 48 inches (610 by 1219 mm) and in thickness indicated but not more than 4 inches (102 mm) thick or less than thickness allowed by ASTM C 1397.
 - d. Channeled Board Insulation: EIFS manufacturer's standard factory-fabricated profile with linear, vertical drainage channels, slots, or waves on the back side of board.
 - e. Board Insulation Closure Blocks: EIFS manufacturer's standard density, size, and configuration.
 - f. Foam Shapes: Provide with profiles and dimensions indicated on Drawings.
10. Reinforcing Mesh: Balanced, alkali-resistant, open-weave, glass-fiber mesh treated for compatibility with other EIFS materials, made from continuous multiend strands with retained mesh tensile strength of not less than 120 lbf/in. (21 dN/cm) per ASTM E 2098 **OR** EIMA 105.01, **as directed**; complying with ASTM D 578 and the following:
 - a. Standard-Impact Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
 - b. Intermediate-Impact Reinforcing Mesh: Not less than 10 oz./sq. yd. (339 g/sq. m) **OR** 12.0 oz./sq. yd. (407 g/sq. m), **as directed**.
 - c. High-Impact Reinforcing Mesh: Not less than 15 oz./sq. yd. (509 g/sq. m).
 - d. Heavy-Duty Reinforcing Mesh: Not less than 20 oz./sq. yd. (678 g/sq. m).

- e. Strip Reinforcing Mesh: Not less than 3.75 oz./sq. yd. (127 g/sq. m).
- f. Detail Reinforcing Mesh: Not less than 4.0 oz./sq. yd. (136 g/sq. m).
- g. Corner Reinforcing Mesh: Not less than 7.2 oz./sq. yd. (244 g/sq. m).
- 11. Base-Coat Materials: EIFS manufacturer's standard mixture complying with one of the following requirements:
 - a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
 - b. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
 - c. Factory-blended dry formulation of portland cement, dry polymer admixture, and inert fillers to which only water is added at Project site.
 - d. Factory-mixed noncementitious formulation of polymer-emulsion adhesive and inert fillers that is ready to use without adding other materials.
- 12. Waterproof Adhesive/Base-Coat Materials: EIFS manufacturer's standard waterproof formulation with VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), complying with one of the following:
 - a. Job-mixed formulation of portland cement complying with ASTM C 150, Type I, white or natural color; and manufacturer's standard polymer-emulsion adhesive designed for use with portland cement.
 - b. Job-combined formulation of manufacturer's standard polymer-emulsion adhesive and manufacturer's standard dry mix containing portland cement.
- 13. Primer: EIFS manufacturer's standard factory-mixed, elastomeric-polymer primer for preparing base-coat surface for application of finish coat.
- 14. Finish-Coat Materials: EIFS manufacturer's standard acrylic-based coating **OR** standard acrylic-based coating with enhanced mildew resistance **OR** siliconized acrylic-based coating, **as directed**, complying with the following:
 - a. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, sound stone particles, and fillers.
 - b. Factory-mixed formulation of polymer-emulsion binder, colorfast mineral pigments, and fillers used with stone particles for embedding in finish coat to produce an applied-aggregate finish.
 - 1) Aggregate: Marble chips of size and as selected by the Owner from manufacturer's full range.
 - c. Sealer: Manufacturer's waterproof, clear acrylic-based sealer for protecting finish coat.
 - d. Colors: As selected by the Owner from manufacturer's full range.
- 15. Water: Potable.
- 16. Mechanical Fasteners: EIFS manufacturer's standard corrosion-resistant fasteners consisting of thermal cap, standard washer and shaft attachments, and fastener indicated below; selected for properties of pullout, tensile, and shear strength required to resist design loads of application indicated; capable of pulling fastener head below surface of insulation board; and of the following description:
 - a. For attachment to steel studs from 0.033 to 0.112 inch (0.84 to 2.84 mm) in thickness, provide steel drill screws complying with ASTM C 954.
 - b. For attachment to light-gage steel framing members not less than 0.0179 inch (0.45 mm) in thickness, provide steel drill screws complying with ASTM C 1002.
 - c. For attachment to wood framing members and plywood sheathing, provide steel drill screws complying with ASTM C 1002, Type W.
 - d. For attachment to masonry and concrete substrates, provide sheathing dowel in form of a plastic wing-tipped fastener with thermal cap, sized to fit insulation thickness indicated and to penetrate substrate to depth required to secure anchorage.
 - e. For attachment, provide manufacturer's standard fasteners suitable for substrate.
- 17. Trim Accessories: Type as designated or required to suit conditions indicated and to comply with EIFS manufacturer's written instructions; manufactured from UV-stabilized PVC; and complying with ASTM D 1784, manufacturer's standard Cell Class for use intended, and ASTM C 1063.

- a. Casing Bead: Prefabricated, one-piece type for attachment behind insulation, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
- b. Drip Screed/Track: Prefabricated, one-piece type for attachment behind insulation with face leg extended to form a drip, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg.
- c. Weep Screed/Track: Prefabricated, one-piece type for attachment behind insulation with perforated face leg extended to form a drip and weep holes in track bottom, of depth required to suit thickness of coating and insulation, with face leg perforated for bonding to coating and back leg; designed to drain incidental moisture that gets into wall construction to the exterior at terminations of EIFS with drainage.
- d. Expansion Joint: Prefabricated, one-piece V profile; designed to relieve stress of movement.
- e. Window Sill Flashing: Prefabricated type for both flashing and sloping sill over framing beneath windows; with end and back dams; designed to direct water to exterior.
- f. Parapet Cap Flashing: Type for both flashing and covering parapet top with design complying with ASTM C 1397.

B. Elastomeric Sealants

1. Elastomeric Sealant Products: Provide EIFS manufacturer's listed and recommended chemically curing, elastomeric sealant that is compatible with joint fillers, joint substrates, and other related materials, and complies with requirements for products and testing indicated in ASTM C 1481 and with requirements in Division 07 Section "Joint Sealants" for products corresponding to description indicated below:
 - a. Multicomponent, nonsag urethane sealant.
 - b. Single-component, nonsag, neutral-curing silicone sealant.
 - c. Provide sealants, for use inside the weatherproofing system, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Preformed Foam Sealant Products: Provide sealant compatible with adjacent materials and complying with requirements in Division 07 Section "Joint Sealants".
3. Sealant Color: As selected by the Owner from manufacturer's full range.

C. Mixing

1. General: Comply with EIFS manufacturer's requirements for combining and mixing materials. Do not introduce admixtures, water, or other materials except as recommended by EIFS manufacturer. Mix materials in clean containers. Use materials within time period specified by EIFS manufacturer or discard.

1.3 EXECUTION

A. Preparation

1. Protect contiguous work from moisture deterioration and soiling caused by application of EIFS. Provide temporary covering and other protection needed to prevent spattering of exterior finish coats on other work.
2. Protect EIFS, substrates, and wall construction behind them from inclement weather during installation. Prevent penetration of moisture behind drainage plane of EIFS and deterioration of substrates.
3. Prepare and clean substrates to comply with EIFS manufacturer's written instructions to obtain optimum bond between substrate and adhesive for insulation.

B. Exterior Cement-Board Installation

1. Exterior Cement Board: Install on metal framing to comply with cement-board manufacturer's written instructions and evaluation report acceptable to authorities having jurisdiction. Install

board with steel drill screws spaced no more than 8 inches (203 mm) o.c. along framing with perimeter fasteners at least 3/8 inch (9.6 mm) but less than 5/8 inch (15.9 mm) from edges of boards.

C. EIFS Installation, General

1. Comply with EIFS manufacturer's written instructions for installation of EIFS as applicable to each type of substrate indicated.

D. Substrate Protection Application

1. Primer/Sealer: Apply over gypsum sheathing substrates to protect substrates from degradation and where required by EIFS manufacturer for improving adhesion of insulation to substrate.
2. Water-Resistive Coatings: Apply over substrates to protect substrates from degradation and to provide water-/weather-resistive barrier.
 - a. Tape and seal joints, exposed edges, terminations, and inside and outside corners of sheathing unless otherwise indicated by EIFS manufacturer's written instructions.
3. Waterproof Adhesive/Base Coat: Apply over sloped surfaces **OR** window sills **OR** parapets **OR** where indicated on Drawings, **as directed**, to protect substrates from degradation.
4. Flexible-Membrane Flashing: Install over weather-resistive barrier, applied and lapped to shed water; seal at openings, penetrations, terminations, and where indicated by EIFS manufacturer's written instructions to protect wall assembly from degradation. Prime substrates, if required, and install flashing to comply with EIFS manufacturer's written instructions and details.

E. Trim Installation

1. Trim: Apply trim accessories at perimeter of EIFS, at expansion joints, at window sills, and elsewhere as indicated, according to EIFS manufacturer's written instructions. Coordinate with installation of insulation.
 - a. Weep Screed/Track: Use at bottom termination edges, at window and door heads, and at floor line expansion joints of water-drainage EIFS unless otherwise indicated.
 - b. Window Sill Flashing: Use at windows unless otherwise indicated.
 - c. Expansion Joint: Use where indicated on Drawings.
 - d. Casing Bead: Use at other locations.
 - e. Parapet Cap Flashing: Use where indicated on Drawings.

F. Drainage Mat Installation

1. Drainage Mat: Apply wrinkle free, continuously, with edges butted **OR** overlapped, **as directed**, and adhesively secured **OR** mechanically secured with fasteners, **as directed**, over water-/weather-resistive barrier according to manufacturer's written instructions.

G. Insulation Installation

1. Board Insulation: Adhesively **OR** Mechanically **OR** Adhesively and mechanically, **as directed**, attach insulation to substrate in compliance with ASTM C 1397, EIFS manufacturer's written instructions, and the following:
 - a. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of sheathing with adhesive once insulation is adhered to sheathing unless EIFS manufacturer's written instructions specify using primer/sealer with ribbon-and-dab method. Apply adhesive to a thickness of not less than 1/4 inch (6.4 mm) for factory mixed and not less than 3/8 inch (9.6 mm) for field mixed, measured from surface of insulation before placement.
 - b. Apply adhesive to insulation by notched-trowel method in a manner that results in coating the entire surface of drainage mat with adhesive once insulation is adhered to drainage mat.
 - c. Apply adhesive to ridges on back of insulation by notched-trowel method in a manner that results in full adhesive contact over the entire surface of ridges, leaving channels free of adhesive once insulation is adhered to substrate.

- d. Press and slide insulation into place. Apply pressure over the entire surface of insulation to accomplish uniform contact, high initial grab, and overall level surface.
- e. Allow adhered insulation to remain undisturbed for period recommended by EIFS manufacturer, but not less than 24 hours, before installing mechanical fasteners, beginning rasping and sanding insulation, or applying base coat and reinforcing mesh.
- f. Mechanically attach insulation to substrate by method complying with EIFS manufacturer's written instructions. Install top surface of fastener heads flush with plane of insulation. Install fasteners into or through substrates with the following minimum penetration:
 - 1) Steel Framing: 5/16 inch (8 mm).
 - 2) Wood Framing: 1 inch (25 mm).
 - 3) Concrete and Masonry: 1 inch (25 mm).
- g. Apply insulation over drainage mat and dry substrates in courses with long edges of boards oriented horizontally.
- h. Begin first course of insulation from a level base line and work upward.
- i. Begin first course of insulation from screed/track and work upward. Work from perimeter casing beads toward interior of panels if possible.
- j. Stagger vertical joints of insulation boards in successive courses to produce running bond pattern. Locate joints so no piece of insulation is less than 12 inches (300 mm) wide or 6 inches (150 mm) high. Offset joints not less than 6 inches (150 mm) from corners of window and door openings and not less than 4 inches (100 mm) from aesthetic reveals.
 - 1) Adhesive Attachment: Offset joints of insulation not less than 6 inches (150 mm) from horizontal and 4 inches (100 mm) from vertical joints in sheathing.
 - 2) Mechanical Attachment: Offset joints of insulation from horizontal joints in sheathing.
- k. Place insulation with adhesive strips and channels, slots, or waves aligned in the vertical position for drainage. Align drainage channels, slots, or waves with channels, slots, or waves in insulation boards above and below.
- l. Interlock ends at internal and external corners.
- m. Abut insulation tightly at joints within and between each course to produce flush, continuously even surfaces without gaps or raised edges between boards. If gaps greater than 1/16 inch (1.6 mm) occur, fill with insulation cut to fit gaps exactly; insert insulation without using adhesive or other material.
- n. Cut insulation to fit openings, corners, and projections precisely and to produce edges and shapes complying with details indicated.
- o. Rasp or sand flush entire surface of insulation to remove irregularities projecting more than 1/32 inch (0.8 mm) **OR** 1/16 inch (1.6 mm), **as directed**, from surface of insulation and to remove yellowed areas due to sun exposure; do not create depressions deeper than 1/16 inch (1.6 mm).
- p. Cut aesthetic reveals in outside face of insulation with high-speed router and bit configured to produce grooves, rabbets, and other features that comply with profiles and locations indicated. Do not reduce insulation thickness at aesthetic reveals to less than 3/4 inch (19 mm).
- q. Install foam shapes and attach to sheathing **OR** structure, **as directed**.
- r. Interrupt insulation for expansion joints where indicated.
- s. Install insulation closure blocks using ribbon-and-dab method to create air zones where indicated.
- t. Form joints for sealant application by leaving gaps between adjoining insulation edges and between insulation edges and dissimilar adjoining surfaces. Make gaps wide enough to produce joint widths indicated after encapsulating joint substrates with base coat and reinforcing mesh.
- u. Form joints for sealant application with back-to-back casing beads for joints within EIFS and with perimeter casing beads at dissimilar adjoining surfaces. Make gaps between casing beads and between perimeter casing beads and adjoining surfaces of width indicated.

- v. After installing insulation and before applying field-applied reinforcing mesh, fully wrap board edges. Cover edges of board and extend encapsulating mesh not less than 2-1/2 inches (64 mm) over front and back face unless otherwise indicated on Drawings.
 - w. Treat exposed edges of insulation as follows:
 - 1) Except for edges forming substrates of sealant joints, encapsulate with base coat, reinforcing mesh, and finish coat.
 - 2) Encapsulate edges forming substrates of sealant joints within EIFS or between EIFS and other work with base coat and reinforcing mesh.
 - 3) At edges trimmed by accessories, extend base coat, reinforcing mesh, and finish coat over face leg of accessories.
 - x. Coordinate installation of flashing and insulation to produce wall assembly that does not allow water to penetrate behind flashing and water-/weather-resistive barrier.
 - 2. Expansion Joints: Install at locations indicated, where required by EIFS manufacturer, and as follows:
 - a. At expansion joints in substrates behind EIFS.
 - b. Where EIFS adjoin dissimilar substrates, materials, and construction, including other EIFS.
 - c. At floor lines in multilevel wood-framed construction.
 - d. Where wall height or building shape changes.
 - e. Where EIFS manufacturer requires joints in long continuous elevations.
- H. Base-Coat Installation
- 1. Base Coat: Apply to exposed surfaces of insulation and foam shapes in minimum thickness recommended in writing by EIFS manufacturer, but not less than 1/16-inch (1.6-mm) dry-coat thickness.
 - 2. Reinforcing Mesh: Embed type indicated below in wet base coat to produce wrinkle-free installation with mesh continuous at corners and overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions. Do not lap reinforcing mesh within 8 inches (204 mm) of corners. Completely embed mesh, applying additional base-coat material if necessary, so reinforcing-mesh color and pattern are not visible.
 - a. Standard-impact reinforcing mesh unless otherwise indicated.
 - b. Intermediate-impact reinforcing mesh where indicated.
 - c. High-impact reinforcing mesh where indicated.
 - d. Heavy-duty reinforcing mesh where indicated.
 - 3. Double-Layer Reinforcing Mesh Application: Where indicated, apply second base coat and second layer of standard-impact **OR** intermediate-impact, **as directed**, reinforcing mesh, overlapped not less than 2-1/2 inches (64 mm) or otherwise treated at joints to comply with ASTM C 1397 and EIFS manufacturer's written instructions in same manner as first application. Do not apply until first base coat has cured.
 - 4. Additional Reinforcing Mesh: Apply strip reinforcing mesh around openings extending 4 inches (100 mm) beyond perimeter. Apply additional 9-by-12-inch (230-by-300-mm) strip reinforcing mesh diagonally at corners of openings (re-entrant corners). Apply 8-inch- (200-mm-) wide strip reinforcing mesh at both inside and outside corners unless base layer of mesh is lapped not less than 4 inches (100 mm) on each side of corners.
 - a. At aesthetic reveals, apply strip reinforcing mesh not less than 8 inches (200 mm) wide.
 - b. Embed strip reinforcing mesh in base coat before applying first layer of reinforcing mesh.
 - 5. Foam Shapes: Fully embed reinforcing mesh in base coat.
 - 6. Double Base-Coat Application: Where indicated, apply second base coat in same manner and thickness as first application except without reinforcing mesh. Do not apply until first base coat has cured.
- I. Finish-Coat Installation
- 1. Primer: Apply over dry base coat according to EIFS manufacturer's written instructions.

2. Finish Coat: Apply over dry primed base coat, maintaining a wet edge at all times for uniform appearance, in thickness required by EIFS manufacturer to produce a uniform finish of color and texture matching approved sample and free of cold joints, shadow lines, and texture variations.
 - a. Texture: As selected by the Owner from manufacturer's full range.
 - b. Embed aggregate in finish coat according to EIFS manufacturer's written instructions to produce a uniform applied-aggregate finish of color and texture matching approved sample.
3. Sealer Coat: Apply over dry finish coat, in number of coats and thickness required by EIFS manufacturer.

J. Installation Of Joint Sealants

1. Prepare joints and apply sealants, of type and at locations indicated, to comply with applicable requirements in Division 07 Section "Joint Sealants" and in ASTM C 1481.
 - a. Apply joint sealants after base coat has cured but before applying finish coat.
 - b. Clean surfaces to receive sealants to comply with indicated requirements and EIFS manufacturer's written instructions.
 - c. Apply primer recommended in writing by sealant manufacturer for surfaces to be sealed.
 - d. Install sealant backing to control depth and configuration of sealant joint and to prevent sealant from adhering to back of joint.
 - e. Apply masking tape to protect areas adjacent to sealant joints. Remove tape immediately after tooling joints, without disturbing joint seal.
 - f. Recess sealant sufficiently from surface of EIFS so an additional sealant application, including cylindrical sealant backing, can be installed without protruding beyond EIFS surface.

K. Field Quality Control

1. Special Inspections: Engage a qualified special inspector to perform the following special inspections:
 - a. According to ICC-ES AC24 **OR** ICC-ES AC235, **as directed**.
2. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
3. EIFS Tests and Inspections: For the following:
 - a. According to ICC-ES AC24 **OR** ICC-ES AC235, **as directed**.
4. Remove and replace EIFS where test results indicate that EIFS do not comply with specified requirements.
5. Prepare test and inspection reports.

L. Cleaning And Protection

1. Remove temporary covering and protection of other work. Promptly remove coating materials from window and door frames and other surfaces outside areas indicated to receive EIFS coatings.

END OF SECTION 07 24 13 00

SECTION 07 31 00 00 - CSF SHINGLES AND SHAKES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 31 00 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

NOTE TO SPECIFIER

Edit below for type of Shingle selected for this Project.

1. [Glass fiber reinforced shingles] [Mineral fiber cement shingles] [Wood shingles].
2. Underlayment, eave, valley, and ridge protection.
3. Associated flashings and accessories.

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA Steep Roofing Manual.

NOTE TO SPECIFIER

Use paragraph below for FIBERGLASS and MINERAL FIBER CEMENT Shingles. NOT USED for Wood Shingles.

1.3 ENVIRONMENTAL REQUIREMENTS

- A. Roof shingles supplied must be listed on the DOE's ENERGY STAR Roof Products Qualified Products List.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, model numbers, and availability at time of Project Manual preparation for Project.

NOTE TO SPECIFIER

Use MANUFACTURERS for FIBERGLASS and MINERAL FIBER CEMENT Shingles. NOT USED for Wood Shingles.

2.1 MANUFACTURERS

NOTE TO SPECIFIER

OPTION 1: Use Manufacturers below for FIBERGLASS Shingles.

- A. Subject to compliance with Project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. CertainTeed Corporation, Valley Forge, PA (800) 233-8990.
 2. GAF Materials Corporation, Wayne, NJ (800) 766-3411.
 3. Owens/Corning Fiberglass, Toledo, OH (800) 438-7465.

NOTE TO SPECIFIER

OPTION 2: Use Manufacturers below for MINERAL FIBER CEMENT Shingles.

- B. Subject to compliance with Project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Supradur Manufacturing Corporation, Rye, NY (800) 223-1948.
 2. Eternit Incorporated, Reading, PA (800) 233-3155
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

NOTE TO SPECIFIER

OPTION 1: Use MATERIALS below for FIBERGLASS Shingles.

2.2 MATERIALS

- A. Shingles:
1. CertainTeed: Landmark.
 2. GAF: Timberline.
 3. Owens/Corning: Oakridge.
- B. Description: ASTM D 3018 Class A with Type I - Self Sealing; UL Rating of A and Wind Resistance Label, glass fiber mat base, mineral granule surface dimensional type shingle; nominal 12 inch x 36 inch, 5 inch exposure; self sealing type; laminated overlay type.

NOTE TO SPECIFIER

Edit below for color name and number for each manufacturer.

- C. Color:
1. CertainTeed: [_____].
 2. GAF: [_____].
 3. Owens/Corning: [_____].

NOTE TO SPECIFIER

OPTION 2: Use MATERIALS below for MINERAL FIBER CEMENT Shingles.

2.3 MATERIALS

- A. Shingles:
1. Supradur: Supra-Slate II.
 2. Eternit: Continental Slates.
- B. Description: Mineral fiber cement, UL Class A, rectangular, approximate size 10 inches x 16 inches, approximate exposure 6 to 7 inches with special shapes for valley, ridge, rake, eave, and other conditions.

NOTE TO SPECIFIER

Edit below for color name and number for each manufacturer.

- C. Color:
1. Supradur: [_____].
 2. Eternit: [_____].

NOTE TO SPECIFIER

OPTION 3: Use MATERIALS below for WOOD Shingles.

2.4 MATERIALS

- A. Shingles: RCHSHSB sized and graded, No. 1 Blue Label, 18 inches long, 0.45 inch thick at butt, sawn and kiln dried, fire-retardant, pressure-treated, bearing UL Class C label.
- B. Hips and Ridge Caps: Prefabricated lapped single ply units to match shingles.

2.5 ACCESSORIES

- A. Sheet Metal Flashing: Specified in Section 076200.
- B. Underlayment: ASTM D 226, No. 30 unperforated asphalt saturated felts.
- C. Nails: Hot-dipped zinc-coated steel, type recommended for use with shingle type, length sufficient to penetrate roof deck.
- D. Plastic Cement: ASTM D 2822, asphalt type with mineral fiber components.
- E. Lap Cement: Fibrated cutback asphalt type.
- F. Bituminous Paint: Acid and alkali resistant type; black color.

- G. Eave, Ice Dam, Valley and Ridge Protection: Sheet barrier of rubberized asphalt bonded to sheet polyethylene, 40 mil total thickness, with strippable treated release paper.
- H. Ridge Vent: Metal, specified in Section 076200.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install shingles in accordance with manufacturer's published instructions, NRCA Steep Roofing Manual, and to meet requirements of Underwriter's Laboratories class ratings indicated.
- B. Coordinate roofing with installation of roof mounted components or work projecting through roof.
- C. Install shingles square with building lines and parallel with roof slope.
- D. Installation to provide weathertight service.
- E. Underlayment:
 - 1. Place one ply of underlayment perpendicular to slope of roof, over area not protected by eave membrane, with ends and edges weatherlapped a minimum of 4 inches. Nail protective underlayment in place.
 - 2. Weather lap underlayment over eave membrane and seal items projecting through or mounted on roof with plastic cement.
- F. Flashings:
 - 1. Weather lap joints and seal weathertight with plastic cement. Nail in place. Conceal fastenings.
 - 2. Flash and seal work projecting through or mounted on roofing, including ridge or slope vents, with plastic cement.

NOTE TO SPECIFIER

OPTION 1: Use FIBERGLASS SHINGLES below for Fiberglass Shingles.

- G. Glass Fiber Shingles:
 - 1. Install shingles in straight coursing pattern over entire roof area starting with first course at bottom of slope as recommended by manufacturer.
 - 2. Project first course of shingles 3/4 inch beyond roof decking.
 - 3. Cap hips and nonvented section of ridge with individual shingles, maintaining recommended weather exposure.
 - 4. Place two daubs of plastic cement, one inch in diameter, under each shingle corner exposed to weather on roof slopes less than 4 in 12.

NOTE TO SPECIFIER

OPTION 2: Use MINERAL FIBER CEMENT SHINGLES below for Mineral Fiber Cement Shingles.

- H. Mineral Fiber Cement Shingles:
 - 1. Attach shingles with nails flush with shingle pre-drilled fastener hole. Do not overdrive or underdrive nails.
 - 2. Cap hips and ridges with individual shingles, maintaining 5 inch weather exposure. Place to avoid exposed nails.

3. After installation, place one inch diameter installation of plastic cement under each individual shingle exposed to weather, to prevent lifting.

NOTE TO SPECIFIER

OPTION 3: Use WOOD SHINGLES below for Wood Shingles.

- I. Wood Shingles:
 1. Install shingles in accordance with RCSHSB requirements to produce straight coursing pattern with 5 1/2 inch weather exposure to produce double thickness over roof area.
 2. Provide double course at eaves.
 3. Project first course 1-1/2 inches beyond face of gables and fascias.

- J. Eave and Ice Dam Protection:
 1. Place eave and ice dam edge flashing tight with fascia boards. Weather lap joints and seal with plastic cement. Secure flange with nails.
 2. Bond rubberized-asphalt protection sheet to roof sheathing by removing release paper; seal seams with compatible sealant. Position lap seal over firm bearing.
 3. Extend protection membrane up roof slope a minimum 4 feet beyond interior face of exterior walls.

- K. Ridge and Valley Protection:
 1. Place one layer of roll roofing centered over valleys. Nail in place.
 2. Apply lap cement along each edge of first layer and embed layer of roll roofing centered over first layer. Place with mineral surface side up.
 3. Install shingles on ridge vents in accordance with Section 076200.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/31/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 31 13 00 - R&A ASPHALT SHINGLE ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where asphalt shingle roofing is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standard, asphalt shingles are acceptable with restrictions for steep slope applications at facilities with a "Critical" or "Non-Critical" building designation. Discuss the use of asphalt shingle roofing with the USPS Project Manager prior to specifying. An approved deviation letter may be required prior to specifying an asphalt shingle roofing system.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of asphalt shingle roofing, flashings, and related accessories.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 079201 – Sealants for Roof Replacement
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 - b. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - c. ASTM D 4869 - Standard Specification for Asphalt-Saturated Organic Felt Underlayment Used in Steep Slope Roofing
 - d. ASTM D 3462 - Standard Specification for Asphalt Shingles Made from Glass Felt and Surfaced with Mineral Granules
 - e. ASTM E 108 - Standard Test Methods for Fire Tests of Roof Coverings
 - f. ASTM D 3161 - Standard Test Method for Wind-Resistance of Asphalt Shingles (Fan-Induced Method)
 - g. ASTM F 1667 - Standard Specification for Driven Fasteners: Nails, Spikes, and Staples
 - h. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - i. ASTM B 370 - Standard Specification for Copper Sheet and Strip for Building Construction
 - 2. American National Standards Institute (ANSI)

3. Asphalt Roofing Manufacturers Association (ARMA)
 - a. ARMA Residential Asphalt Roofing Manual, 5th Edition
4. National Roofing Contractors Association (NRCA)
 - a. NRCA Roofing and Waterproofing Manual, 5th Edition
5. Underwriters Laboratories, Inc. (UL)
 - a. UL 790 - Exterior Exposure, Standard Test Methods for Fire Tests of Roof Coverings
 - b. UL 997 - Wind Resistance of Prepared Roof Covering Materials

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install asphalt shingles at temperatures below 40°F (5°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation.
 - 3. Use caution when handling bundles of or individual asphalt shingles. Do not throw or bend shingles. Inspect shingles for cracks prior to installation. Remove damaged shingles from the site.
 - 4. When possible, avoid walking on installed asphalt shingles.
 - 5. Do not install self-adhering membrane when the temperature of the outside air, self-adhering membrane, or roof deck are below 40°F (5°C).
 - 6. Refer to the asphalt shingle roofing manufacturer and NRCA requirements and recommendations for additional cold weather application requirements and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a "Limited Lifetime Warranty" is specified, do not edit paragraph 1.9A.*
- 2. *If a "Limited Lifetime Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
- 3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.8 CONTRACTOR GUARANTEE

- A. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 ASPHALT SHINGLE ROOF SYSTEM SUMMARY

- A. Acceptable asphalt shingle roofing manufacturers and systems include those identified in Articles 2.2 and 2.3, and meeting the requirements listed within those Articles.
- B. Selected products, when used within the specified roof assembly, must meet the requirements for the specified warranty.

2.2 UNDERLAYMENTS

- A. For use at eaves, rakes, ridges, penetrations, valleys, skylights, dormers, behind apron and step flashings, locations indicated on the drawings and other locations required by the asphalt shingle manufacturer: Self-adhering underlayment; butyl-rubber based, approved for use by the asphalt shingle manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved by the selected asphalt shingle manufacturer for use as a self-adhering underlayment for asphalt shingle roofing. Acceptable products include:
 - a. StormGuard Leak Barrier, manufactured by GAF Corporation.
 - b. WinterGuard, manufactured by CertainTeed Corporation.
 - c. Weatherlock Flex Ice and Water Barrier, manufactured by Owens Corning Corporation.
 - d. Other self-adhering underlayments approved by the selected asphalt shingle manufacturer, and meeting the requirements listed in paragraphs 2.2.A and 2.2.A.1.
- B. For use in the field of the roof: Synthetic, polymer-based roofing underlayment, meeting the following criteria:
 - 1. Meeting or exceeding the physical requirements of ASTM D 226 and ASTM D 4869.
 - 2. A recommended exposure limit of 120 days, minimum.
 - 3. Approved by the selected asphalt shingle manufacturer for use as an underlayment for asphalt shingle roofing. Acceptable products include:
 - a. Deck Armor Synthetic Underlayment, manufactured by GAF Corporation.
 - b. Diamond Deck High Performance Synthetic Underlayment, manufactured by CertainTeed Corporation.
 - c. Deck Defense High Performance Underlayment, manufactured by Owens Corning Corporation.
 - d. Other synthetic underlayments approved by the selected asphalt shingle manufacturer, and meeting requirements listed in paragraphs 2.2.B, 2.2.B.1 and 2.2.B.2.

NOTE TO SPECIFIER

Four options are available for asphalt shingles:

- 1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a DOE Energy Star qualified asphalt shingle is required. DELETE paragraph 2.3B.*
- 2. *If the project is located in ASHRAE Climate Zones 5, 6 or 7, a DOE Energy Star qualified asphalt shingle is not required. DELETE paragraph 2.3A.*

Determine the required outcome from the list above. Choose one option only. Re-letter/number Articles, paragraphs and sub-paragraphs after editing.

2.3 ASPHALT SHINGLES

- A. For use within ASHRAE Climate Zones 1 through 4:

1. Type: ASTM D 3462; Glass-fiber reinforced, architectural laminated shingle. Acceptable asphalt shingle manufacturers and shingles:
 - a. Timberline Cool Series, manufactured by GAF Corporation, Wayne, NJ, (973) 628-3000.
 - b. Landmark Solaris, manufactured by CertainTeed Corporation, Valley Forge, PA, (800) 233-8990.
 - c. Duration Premium Cool, manufactured by Owens Corning, Toledo, OH, (800) 438-7465.
 - d. Other asphalt shingle systems, meeting the requirements of this Article, and approved by the Owner.
 2. Fire Resistance: ASTM E 108 or ANSI/UL 790, Class A.
 3. Wind Uplift Rating: ASTM D 3161, Class F, or UL 997. The installed asphalt shingle system shall have a minimum wind rating of 130 miles per hour.
 4. Energy Rating: DOE Energy Star qualified, with an Initial Solar Reflectance of 0.25 or greater, and meeting or exceeding the requirements listed in paragraphs 2.3.A.2 and 2.3.A.3.
 5. Color: As determined by Owner.
 6. Starter course shingles: Use starter course shingles manufactured by the asphalt shingle manufacturer or specified shingles trimmed following the manufacturer's requirements.
 7. Ridge, hip and other specialty shingles: Use shingles manufactured by the asphalt shingle manufacturer or specified shingles trimmed following the manufacturer's requirements.
- B. For use within ASHRAE Climate Zones 5 through 7:
1. Type: ASTM D 3462; Glass-fiber reinforced, architectural laminated shingle. Acceptable asphalt shingle manufacturers and shingles:
 - a. Timberline American Harvest, manufactured by GAF Corporation, Wayne, NJ, (973) 628-3000.
 - b. Landmark Pro, manufactured by CertainTeed Corporation, Valley Forge, PA, (800) 233-8990.
 - c. TruDefinition Duration, manufactured by Owens Corning, Toledo, OH, (800) 438-7465.
 - d. Other asphalt shingle systems, meeting the requirements of this Article, and approved by the Owner.
 2. Fire Resistance: ASTM E 108 or ANSI/UL 790, Class A.
 3. Wind Uplift Rating: ASTM D 3161, Class F, or UL 997. The installed asphalt shingle system shall have a minimum wind rating of 130 miles per hour.
 4. Color: As determined by Owner.
 5. Starter course shingles: Use starter course shingles manufactured by the asphalt shingle manufacturer or specified shingles trimmed following the manufacturer's requirements.
 6. Ridge, hip and other specialty shingles: Use shingles manufactured by the asphalt shingle manufacturer or specified shingles trimmed following the manufacturer's requirements.

2.4 ASPHALT SHINGLE ROOF FASTENERS

- A. For fastening underlayment:
1. Roofing nails with smooth, flat, minimum 3/8-inch head and 1" minimum metal cap; hot-dipped galvanized steel or equivalent corrosion-resistance, No. 11 or No. 12 gauge with barbed shanks and conventional sharp point; ASTM F 1667, Type 1, Style 20. Length as necessary to penetrate through the underside of deck (at plywood decks) or minimum 3/4-inch into substrate (at wood plank decks).
- B. For fastening asphalt shingles:

1. Roofing nails with smooth, flat, minimum 3/8-inch head; hot-dipped galvanized steel or equivalent corrosion-resistance, No. 11 or No. 12 gauge with barbed shanks and conventional sharp point; ASTM F 1667, Type 1, Style 20. Length as necessary to penetrate through the underside of deck (at plywood decks) or minimum 3/4-inch into substrate (at wood plank decks).

2.5 ROOFING CEMENT

- A. Type: ASTM D 4586 Asphalt Roofing Cement, Type II (asbestos free); product manufactured by, or approved by the roofing membrane manufacturer.

NOTE TO SPECIFIER

Article 2.6 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.6 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.6 SHEET METAL AND FLASHING ACCESSORIES

- A. Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner; use the following metal components where indicated:
 1. Drip edges, perimeter fascia and fascia extensions: Fabricate drip edges and fascias with a minimum 4-inch flange. Fabricate face of drip edges and fascias to dimensions and configurations indicated on drawings. Fabricate fascia extensions to the dimensions and configurations indicated on the drawings.
 - a. Continuous cleats associated with drip edges, perimeter fascias and fascia extensions: Galvanized steel; 22-gauge, minimum.
 2. Counterflashings and step flashings: Fabricate to the dimensions and configurations indicated on the drawings.
 3. Gutter fascia extensions: Fabricate to the dimensions and configurations indicated on the drawings.
 4. Apron and backer/cricket flashings: Field verify dimensions of chimneys, curbs and other rooftop penetrations where apron and backer/cricket flashings will be necessary. Fabricate to dimensions required to properly flash these penetrations.
 5. Step flashing: Fabricate step flashing with a minimum 4-inch horizontal flange and minimum 4-inch vertical leg. Fabricate step flashing in minimum 7-inch widths to allow for minimum 2-inch headlap over downslope step flashing piece.
- B. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- C. Gutter liners:
 1. Stainless steel, 22-gauge. Fabricate gutter liners to the dimensions and configurations shown on the drawings, and in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition". Solder all seams watertight.
- D. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.

2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- E. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- F. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- G. Plumbing vent and tubular penetration flashings: Metal flashing with flanged sleeve with hood, prefabricated flashing with elastomeric collar, or other product type manufactured by, or approved by the asphalt shingle roofing manufacturer.
 1. For sheet metal plumbing vent and tubular penetration flashings with flange and sleeve and hood:
 - a. Stainless steel, 24-gauge.
 - b. Clamp: Stainless steel plumber's clamp, size as necessary to tightly secure elastomeric collar or hood.

2.7 MISCELLANEOUS MATERIALS

- A. Ridge Vents: Vents providing 16 square inches of net free area per lineal foot of vent, minimum. Acceptable ridge vents:
 1. Cobra Ridge Vent, manufactured by GAF Corporation.
 2. VentSure 4-Foot Strip Heat and Moisture Ridge Vent with Weather PROtector Moisture Barrier, manufactured by Owens Corning Corporation.
 3. ShingleVent II, manufactured by Air Vent, Inc., Dallas, TX, (800) 247-8368.
- B. Other ventilation accessories, including soffit vents and other rooftop vents:
 1. Provide accessories manufactured by, or approved by, the asphalt shingle roofing manufacturer.
- C. For use at sheet metal flashing strip-ins, and where indicated on drawings:
 1. Pressure-sensitive EPDM flashing material; non-reinforced, nominal 60-mil thickness, black color. Type acceptable to asphalt shingle roofing manufacturer for specific flashing conditions encountered. Minimum 5-inch width.
 2. Primer: Type compatible with pressure-sensitive EPDM flashing and acceptable to the asphalt shingle roofing manufacturer.
- D. Butyl tape: for use behind counterflashing flanges and other locations indicated where indicated on the drawings. Width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.8 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

3.2 UNDELAYMENT INSTALLATION

- A. Install self-adhering underlayment eaves, rakes, ridges, penetrations, valleys, skylights, dormers, behind apron and step flashings, locations indicated on the drawings and other locations required by the asphalt shingle manufacturer.
1. Except as modified by these specifications and drawings, follow the written installation requirements of the self-adhering underlayment manufacturer.
 2. Lay self-adhering underlayment flat, wrinkle free. Install the underlayment at locations indicated. At eaves, install underlayment parallel to the eave edge. At rake edges, install the underlayment beneath the flange of the rake edge metal. Refer to the project drawings.
 3. Extend self-adhering underlayment 24-inches beyond interior wall of the building envelope, minimum.
 4. Side laps shall be overlapped 4-inches, minimum. Ends laps shall be overlapped 8-inches, minimum.
 5. Using a roller, roll underlayment to ensure proper adhesion to structural deck.
 6. If overnight exposure is anticipated, tack self-adhering membrane in place.
- B. Install synthetic underlayment at all locations not covered by self-adhering membrane. Follow written installation requirements of the underlayment manufacturer.
1. Except as modified by these specifications and drawings, follow the written installation requirements of the synthetic underlayment manufacturer.
 2. Unroll the underlayment parallel with the eave edge. Lay underlayment flat, wrinkle free. Do not over stretch during installation.
 3. Secure the underlayment with the specified nails affixed with metal caps. At underlayment perimeters, secure 6-inches on center, minimum, and 1-inch from sheet edges. Stagger capped nails in the field of the underlayment sheet as shown in the project drawings. Ensure capped nails are driven flat; remove improperly driven nails and re-secure.
 4. Side laps shall be overlapped 4-inches, minimum. Ends laps shall be overlapped 8-inches, minimum.

3.3 ASPHALT SHINGLE ROOFING INSTALLATION

- A. Asphalt shingle roof system general installation instructions:
1. Except as may be modified by these specifications and drawings, install the specified asphalt shingle roofing system, including self-adhering membranes and underlayments, in accordance with the requirements and recommendations of the asphalt shingle roofing manufacturer, using the manufacturer's current printed instructions, and the recommendations outlined in the NRCA "Roofing and Waterproofing Manual, 5th Edition", and ARMA "Residential Asphalt Roofing Manual, 5th Edition".
 2. Use chalk lines as visible guides to ensure the proper exposure, coverage, and horizontal and vertical alignment of the shingles.
 3. Apply shingles across and diagonally up the roof, using the "6 Inch Pattern", as defined in the NRCA "Roofing and Waterproofing Manual, 5th Edition".
 4. If metric shingles are used, dimensions referred to in this specification must be proportionally modified to accommodate metric dimensions.
 5. Install **six** nails per full length shingle. Do not nail into or above the factory-applied adhesive strips. Refer to asphalt shingle roofing manufacturer printed instructions for recommended location of nails. Remove any underdriven nails, and repair and damage

- caused by defective fastening with roofing cement. If severe damage occurs during nail removal, replace the full shingle.
6. Provide a 5-inch shingle exposure.
- B. Starter course shingle installation:
1. At eaves, install one row of starter strip shingles.
 - a. Fasten the starter strip shingles in accordance with the requirements of the asphalt shingle roofing manufacturer. Overhang the eave consistently by 1/4-inch to 3/4-inch.
- C. First and succeeding courses:
1. During installation, check installation of shingle courses to ensure proper alignment of cutouts, and correct horizontal and vertical orientation of course.
 2. Bond the tabs of the first shingle course to the starter strip, using a quarter-sized dab of roofing cement placed on the starter strip 12-inches o.c. Press the first course firmly into the roofing cement.
 3. On steep slope roofs exceeding 12-inches per foot in slope, in areas defined as "high wind areas", or when required by the asphalt shingle roofing manufacturer, bond shingle tabs by "hand tabbing", placing a quarter-sized dab of roofing cement 12-inches o.c. and pressing the overlying shingle firmly into the roofing cement.
- D. Valley and hip flashing:
1. Valley flashings:
 - a. Install valleys following the "Woven Valley Method", as defined in the NRCA "Roofing and Waterproofing Manual, 5th Edition".
 2. Hip flashings:
 - a. Install shingles manufactured by the asphalt shingle manufacturer or specified shingles trimmed following the manufacturer's requirements, following the printed instructions of the asphalt shingle roofing manufacturer.

NOTE TO SPECIFIER

Article 3.4 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.4 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.4 SHEET METAL FLASHING INSTALLATION

- A. Drip edges, perimeter fascia and fascia extensions:
1. Continuous cleats: Provide continuous cleats where indicated on drawings. Secure the horizontal flange and vertical face of the continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 2. Drip edges and fascias: Place the drip edge, fascia or fascia extension. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
 3. Fascia extensions: Hook fascia extensions to the underlying cleat, if present. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- B. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.

2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- C. Gutter liners:
1. Install gutter liners at built-in and interior gutter locations indicated on the drawings. Install liners following the requirements and recommendations of SMACNA.
- D. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- E. Counterflashings: Install counterflashings at locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
 3. Provide a continuous bead of sealant along the top edge of surface-mounted counterflashings to shed water and provide a watertight seal.
- F. Slip counterflashings: Install slip counterflashings at locations where existing sheet metal counterflashings cannot be lifted or removed, and at other locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
- G. Apron, backer and cricket flashings:
1. Install apron and backer/cricket flashings at roof curbs, chimneys, wall terminations, locations indicated on drawings, and at locations recommended by the asphalt shingle roofing manufacturer.
 - a. At penetrations greater than 24-inches, roof slopes greater than 6:12 (27 degrees), when a large volume of snow or ice could accumulate behind a roof penetration or when the average January temperature is 30°F (-1°C) or lower, install cricket flashings in lieu of backer flashings behind roof penetrations.
 - b. Where cricket widths exceed 18-inches, provide wood framing and plywood support beneath sheet metal cricket flashing.

- c. Secure apron and backer/cricket flashings to the underlying substrate with fasteners appropriate to the substrate.
- H. Step flashings:
 - 1. Install step flashings at roof curbs, chimneys, wall terminations, locations indicated on drawings, and at locations recommended by the asphalt shingle roofing manufacturer.
 - a. At the locations indicated above, install step flashing at the end of each shingle course. Install step flashing with a minimum headlap of 2-inches, and a 4-inch extension onto the underlying shingle.
 - b. Secure step flashings to the underlying substrate with fasteners appropriate to the substrate.
- I. Tubular penetration flashing: Flash round pipe penetrations with a manufacturer recommended pipe flashing boot and specified watertight hood.
 - 1. Flash tubular penetration where indicated on drawings. Follow asphalt shingle manufacturer recommendations and requirements.
 - 2. Hood and drawband: Where a flanged sleeve sheet metal flashing is used, install a stainless steel hood over the flanged sleeve; solder all seams watertight. Secure a stainless steel drawband around the top of each hood to secure the hood to the penetration. Seal the top of the drawband and hood.

3.5 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install ventilation accessories, including ridge vents, soffit vents and other rooftop vents at locations recommended by the asphalt shingle roofing manufacturer following the printed instructions of the manufacturer.
- B. Sheet metal flashing strip-ins:
 - 1. Install specified strip-in where indicated on drawings.
- C. Butyl tape:
 - 1. Install specified butyl tape behind counterflashings where indicated on drawings.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 31 13 00

Task	Specification	Specification Description
07 31 29 17	01 22 16 00	No Specification Required

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 31 33 00 - COMPOSITE RUBBER SHINGLES**1.1 GENERAL****A. Description Of Work:**

1. This specification covers the furnishing and installation of materials for composite rubber shingles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
2. Furnish and install this Majestic Slate Tile Roof System in strict accordance with specifications and drawings approved by EcoStar.
3. Metal flashing work is not covered in this specification since EcoStar does **NOT** warrant metal flashing. EcoStar advises that metal flashing and securement of metal should be to industry standards (SMACNA) to prevent the metal from pulling free or buckling. EcoStar also suggests that all flashing metal be copper, stainless steel or an equally long-term material.
4. EcoStar Attic Guard Ridge Ventilation product must be used on those projects that will be using a ridge ventilation system. If a ridge ventilation system is not to be used on the project, another form of ventilation may be used, but will not be covered by any EcoStar warranties. EcoStar advises that a ridge style venting system be utilized to insure the best possible air movement and to provide the best aesthetic appearance to the roofing system.

B. Definitions

1. Roofing Terminology: Refer to ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definitions of terms related to roofing work in this Section.

C. Submittals

1. Submit an "EcoStar Gold Star Project Survey" to EcoStar Technical Department for approval **PRIOR** to the job start to enable the Technical Department to approve and assign a job number to the project.
2. The "EcoStar Gold Star Project Survey Form" must be filled out completely and accurately to include any prior deviations approved from this specification, including a roof drawing showing all dimensions, all penetrations, and roof slope.
3. When an EcoStar Gold Star Warranty is desired, EcoStar must be contacted **PRIOR** to project bid and installation. Information may be required for wind design and slope requirements.
4. Product Data: For each type of product indicated.
5. Samples: For the following products, of sizes indicated.
 - a. Composite Rubber Shingle: Full size, of each color, size, texture, and shape.
 - b. Ridge Vent System: 12 inches (300 mm) long.
 - c. Fasteners: Three fasteners of each type, length, and finish.
 - d. Underlayment: 12 inches (300 mm) square.

D. Quality Assurance

1. To qualify for an EcoStar Gold Star Warranty, an authorized EcoStar Gold Star Applicator must install system.
2. There shall be no deviation made from this specification without written approval from EcoStar prior to the start of the roofing project.
3. For an EcoStar Gold Star Warranty, upon completion of the installation, an inspection must be conducted by a Technical Representative of EcoStar to ascertain that the roofing system has been installed according to EcoStar's most current published specifications and details. This inspection is not intended to be a Final Inspection for the benefit of the Owner, but for the benefit of EcoStar to determine whether a warranty shall be issued.
4. Class C Testing Requirements:
 - a. Fire Resistance - UL 790 Test Standard
 - b. Class 4 Impact Resistance - UL 2218 Test Standard

- c. 110 mph wind load - PA100-95 Test Standard
- d. Wind uplift - 105 lbs / sq ft - UL 1897 Test Standard
- 5. Class A Testing Requirements:
 - a. Fire Resistance - UL 790 Test Standard
 - b. Class 4 Impact Resistance - UL 2218 Test Standard

E. Product Delivery, Storage And Handling

- 1. Deliver materials in original unopened packages.
- 2. Packages shall be labeled with manufacturer's name, brand name, installation instructions and identification of various items.
- 3. All tile materials must be stored between 45° F. and 80° F. If exposed to lower temperatures, restore to 45° F minimum temperature before using.
- 4. Store all materials in a dry protected area. Damaged materials must **NOT** be used. Installed materials found to be damaged shall be replaced at Gold Star Authorized Applicator's expense.

F. Job Conditions (Cautions And Warnings)

- 1. Contact EcoStar Technical Department for procedures when installing a Majestic Slate Tile Roof System during temperatures less than 45° F.
- 2. Do not install the Majestic Slate Tile Roof System directly over existing asphalt shingles or existing tile roof systems. All existing roof materials **MUST** be removed prior to installation of the Majestic Slate Tile System.
- 3. Roofing surface must be free of ice, water, or snow prior to and during the roofing project.

G. Warranty

- 1. Roofing materials manufacturer will provide the warranty for those materials supplied by the manufacturer when the project is completed by a manufacturer's authorized applicator and all required materials have been utilized within the roof system.
- 2. Only when a manufacturer's technical representative has inspected and approved the completed installation will a warranty be issued.
- 3. The warranty is available for all types of buildings and structures.
- 4. The warranty period is expressed on the warranty certificate, which reflects the inclusive dates of coverage.
- 5. The warranty does **NOT** cover the aesthetic appearance of the Majestic Slate - Tiles. Care should be taken by the authorized applicator to ensure that proper blending of the tiles occurs. When improper blending occurs the aesthetic appearance of the roof can be effected negatively. Blending should occur from a minimum of seven bundles from each pallet. It is highly suggested that all material be on site to blend from.
- 6. Only products supplied by EcoStar, a Division of Carlisle SynTec Incorporated, are included in the warranty unless otherwise specified and approved in writing by EcoStar, a Division of Carlisle SynTec Incorporated.

1.2 PRODUCTS

A. Manufacturer

- 1. All Components of the Majestic Slate - Tile Roof System are to be products manufactured or supplied by EcoStar, a Division of Carlisle SynTec Incorporated, or approved equivalent.

B. Class C Tile Roofing System

- 1. Slate Tiles/Shingles: Tiles made of Starloy™, 100% recycled rubber and plastic compound, 12" wide by 18" long with a nominal thickness of 1/4". Weight shall be determined by the following acceptable tile exposures:

7"	241 - 258 lbs per square
6-1/2"	259 - 278 lbs per square
6"	280 - 300 lbs per square

- a. Color: As selected from manufacturer's standard colors, unless directed otherwise.
 - 2. Underlayment
 - a. AquaGuard - a roofing underlayment recognized for use as an alternative to Type 30 roofing underlayment, consisting of spunbonded polypropylene coated with a layer of U.V. stabilized polypropylene on both sides, meeting requirements of ASTM D2626, referred to as 30 lb and without perforations.
 - b. Glacier Guard ice and water underlayment - Granular Surface (55 mil), Smooth Surface (40 mil), or Smooth Surface High Temperature (40 mil), a composite membrane consisting of fiberglass reinforced rubberized asphalt laminated to an impermeable polyethylene film layer (Smooth Surface and Smooth Surface High Temperature) or coated with a granular surface providing maximum skid resistance (Granular Surface).
- C. Class A Tile Roofing System
 - 1. Slate Tiles/Shingles: Tiles made of Starloy™, 100% recycled rubber and plastic compound, 12" wide by 18" long with a nominal thickness of 1/4". Weight shall be determined by the following acceptable tile exposures:

7"	258 - 276 lbs per square
6-1/2"	278 - 294 lbs per square
6"	300 - 321 lbs per square

 - a. Color: As selected from manufacturer's standard colors, unless directed otherwise.
 - 2. Underlayment
 - a. VersaShield - One layer of Elk VersaShield meeting or exceeding the requirements of ASTM D226.
 - b. Glacier Guard ice & water underlayment - Granular Surface (55 mil), Smooth Surface (40 mil), or Smooth Surface High Temperature (40 mil), a composite membrane consisting of fiberglass reinforced rubberized asphalt laminated to an impermeable polyethylene film layer (Smooth Surface and Smooth Surface High Temperature) or coated with a granular surface providing maximum skid resistance (Granular Surface).
- D. Fasteners
 - 1. AquaGuard/VersaShield
 - a. Roofing nails with one inch (1") diameter round or square head, plastic or metal, and 3/4" long shank. Metal parts of fastener are to be corrosion resistant.
 - 2. Tile Fasteners
 - a. EcoStar Roofing Nail with a 3/8" diameter head and a minimum of 1-1/2" long shank made from stainless steel. Nails can be supplied either as a hand drive style or in coils for use in pneumatic tools.

1.3 EXECUTION

- A. Substrate Criteria
 - 1. The Building owner or Owner's Representative is responsible for providing and determining that the substrate is suitable to receive the Majestic Slate Tile Roof System and the authorized EcoStar Gold Star Applicator should not proceed until all defects have been corrected.
 - 2. The Majestic Slate Roof System may only be applied over:
 - a. Minimum 1/2" plywood or OSB decking
 - b. Minimum 1" tongue and groove wood decking
 - c. Approved metal deck systems - for specifics contact roofing materials manufacturer.
 - 3. Minimum slope of substrate for installation of Majestic Slate Roof System shall be a minimum of 3/12 for 6" exposure installation and a minimum of 6/12 for 7" exposure installation. Contact the EcoStar Technical Department for approval of applications on lower slopes or exceptions to this requirement.
- B. Substrate Preparation

1. The Building Owner or Owner's Representative is responsible for ensuring that all wet or damaged substrate has been removed in a re-roofing application.
2. Existing roof material **MUST** be removed and a clean substrate free of foreign material be provided prior to the installation of the Majestic Slate Tile Roof System. Majestic Slate Tiles may **NOT** be installed directly over any existing roof material or system.

C. Installation

1. Flashing and Sheet Metal:
 - a. Install sheet metal and flashing metal in all valleys and where required on projections furnish in accordance with Division 07 Section "Sheet Metal Flashing And Trim".
 - b. Where required, install metal starter strip at all eaves and roof edges. Furnish metal in accordance with Division 07 Section "Sheet Metal Flashing And Trim".
 - c. The roofing materials manufacturer suggests that all metal work be made from copper, stainless steel or an equally long-term material.
2. Underlayment:
 - a. AquaGuard:
 - 1) Apply 41.5" wide sheet over complete deck, lapping the area covered with Glacier Guard ice and water underlayment. Lap end joints 6" and side joints 4" and double through valleys.
 - 2) Do not leave exposed to weather more than 90 days after beginning of installation without written approval of owner.
 - 3) Do not leave any fastener heads exposed. Nail only in areas to be covered by lapping of underlayment.
 - b. VersaShield:
 - 1) Apply 42" wide sheet over complete deck, covering the entire roof deck **INCLUDING** those areas with Glacier Guard Ice & Water underlayment. Lap end joints 4" and side joints 6".
 - 2) Lap the VersaShield 6" from both sides over all hips, valleys, and ridges.
 - 3) Where the roof meets a vertical surface, carry the VersaShield 3" to 4" up the surface.
 - 4) Do not leave exposed to weather more than **60** days after beginning of installation without written approval of owner.
 - 5) Do not leave any fastener heads exposed. Nail only in areas to be covered by lapping of underlayment.
 - c. Glacier Guard Ice and water underlayment:
 - 1) Lap end joints 6" and side joints 3.5"
 - 2) Apply continuous 36" wide sheet in valley centered over valley.
 - 3) Apply rows of 36" wide sheets along all eaves and rakes. Lap end joints 6" and side joints 3.5".
 - 4) Apply rows of 36" wide sheets along and around all dormers and roof projections. Lap end joints 6" and side joints 3.5".
 - 5) When applicable install as far as it can be installed on any head walls or vertical walls a minimum of 12".
 - 6) Do not leave Glacier Guard Granular Surface exposed to weather more than 14 days after beginning of installation. Do not leave Glacier Guard Smooth Surface exposed to weather more than 30 days after beginning of installation. Do not leave Glacier Guard Smooth Surface High Temp exposed to the weather more than 60 days after the beginning of installation.
3. Tile/Shingle Installation
 - a. After installing underlayment and before installing the tiles, clean the surface of debris and dirt.
 - b. Beginning at the eave, install a layer of tiles gapped a minimum of 3/8" between tiles and any projections, with two roofing fasteners per tile (in location shown on tiles). This layer of tiles will become the starter row. Install another layer of tiles in the same manner as the first with the exception of the second layer having a 1/2 tile offset to the first layer.

- c. Continue installing tiles per the chosen exposure.
- d. Care must be taken to place tiles so color variations are evenly distributed over the entire roof area. Tiles between bundles and pallets **MUST** be shuffled to insure even distribution of color variations. "Patchy" or "Blotching" in appearance is not acceptable and the applicator will be required to correct. It is recommended that work not begin until all roofing materials have been delivered to the job site.
- e. It is the responsibility of the applicator to ensure that all tiles are bent back in a downward curve prior to installation. **Do not install tiles with an upward curve.**
- f. Either an open or closed valley design may be used.
 - 1) With an open valley design leave a minimum of 2" on each side of the center of the valley exposed and uncovered by the roof tiles. A V-Style or W-Style Valley metal may be used.
 - 2) With a closed valley design cut the tiles in a straight line to fit no closer than 3/8" against tile of adjoining roof slope.
- g. Minimum Fastening - No less than 2 approved fasteners per tile, with a minimum length of 1-1/2", shall be used.
- h. CAUTION: When using a pneumatic nailer, care shall be taken to ensure that nails are not over driven causing the tiles to curl upward. If tiles have been installed with over-driven nails causing the ends of the tile to curve upward, tiles will never lay flat. Over-driven tiles must be removed and re-nailed properly.
- i. Install EcoStar Attic Guard ridge vent system per the manufacturer's application instructions, and then place the Majestic Slate - Universal Hip/Ridge Tile over the ridge vent. A minimum 2.5" stainless steel, hand-driven EcoStar fastener should be used on a ventilated hip/ridge to fasten the hip/ridge tile to the deck. A minimum 2" stainless steel, hand-driven EcoStar fastener should be used on an unventilated hip/ridge to fasten the hip/ridge tile to the deck. Place fasteners in the location marked on the tile. Majestic Slate - Universal Hip/Ridge Tile must be installed with 6" exposure.
- j. Tiles may not be installed if the tiles have been stored in temperatures lower than 45° F. If tiles have been stored in temperatures below 45° F., tiles must be brought back to an ambient material temperature of 45° F. As the temperature rises, tiles will expand beyond the designed installation pattern if the product is installed while cold or frozen.
- k. Do not install tiles directly adjacent to each other. A minimum gap of 3/8" must be maintained between installed tiles.
- l. After the initial row of tiles has been installed, it is recommended that a chalk line be placed parallel to the roof edge and running perpendicular to the first row of tiles. This chalk line will ensure that the tiles stay true and plumb to the roof edge throughout installation.
- m. Care must be taken to minimize foot traffic over completed areas of the roof. Tiles will show mud and dirt and cause appearance problems. The removal of dirt and debris is the responsibility of the applicator.
- n. Tiles can be slippery when wet, caution should be exhibited with early morning dew and after rain. The tile manufacturer suggests the use of toe boards and OSHA approved harnesses and safety equipment at all time.
- o. Upon completion of the roof system installation, inspect and remove all debris from roof, sweep clean and wash with a mild, non-bleaching detergent.

SECTION 07 41 13 00 - CSF METAL ROOF PANELS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Standing Seam Metal Roofing is part of the Work.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 41 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Standing seam metal roofing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SYSTEM DESCRIPTION

- A. This section covers the metal roof system required for the "Platform" and "Carrier Loading" and includes the panels, panel clips, flashing, panel splices, ridge material, fascias, gutter and downspouts, and all necessary fasteners for the above. Not included are the structural roof supports. Metal roof system must meet ENERGY STAR solar reflectance requirements.

1.3 REFERENCES

- A. American Society for Testing and Materials (ASTM).
 - 1. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot Dip Process.
 - 2. ASTM A 792 - Specification for Steel Sheet, 55% Aluminum-Zinc Alloy Coated by the Hot Dip Process.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings: Erection/shop drawings for each product specified showing all erection procedures and accessories required. Field measure and verify dimensions prior to fabrication of metal roofing.
2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.6 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof panels and base flashings resulting from defects in materials and workmanship.
 2. Manufacturer shall warrant to correct defects in paint finish for 20 years following Substantial Completion.

NOTE TO SPECIFIER

20 year Warranty and other Warranty requirements indicated as a requirement in USPS "CSF Small and CSF Medium Design Criteria." Verify 20 year requirement with USPS Contracting Officer.

3. Warranty Period: [20] [____] years.
4. Include materials and workmanship for the following items within Warranty:
 - a. Metal panels.
 - b. Flashings, including metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Roofing Specification Section to Warranty.
6. Wind Coverage
 - a. Warranty shall cover wind gusts up to 72 miles per hour.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Amerimax 1.AEP/SPAN Dallas, TX (800) 527-2503.
 - 2. Amerimax Building Products, Plano TX, (800) 258-8295.
 - 3. ATAS International, Incorporated, Allentown, PA (610) 395-8445.
 - 4. Tremco Inc., Beachwood OH (800) 852-6013.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Base Metal:
 - 1. Material: Steel.
 - 2. Manufacturing Standard: ASTM A-653.
 - 3. Yield Strength: Minimum 40 ksi.
 - 4. Thickness: Minimum 24 gauge.
 - 5. Protective Coating: ASTM A792,. Galvalume.
 - 6. Protective Coating Components by Weight: 45 percent zinc and 55 percent aluminum alloy.
 - 7. Protective Coating Thickness: 1.9 mils.
- B. Configuration:
 - 1. Pattern: Standing Seam.
 - 2. Seam Spacing: Nominal 14-1/2 inches.
 - 3. Seam Height: Nominal 1-9/16 inches.
 - 4. Panel Width: Nominal 14-1/2 inches.
 - 5. Panel Length: Longest practical.
- C. Exterior Finish:
 - 1. Primer: Baked on epoxy, minimum 0.2 mil thick.
 - 2. Finish Material: Kynar 500.
 - 3. Finish Color: From manufacturer's standard colors meeting ENERGY STAR requirements for initial and maintained solar reflectance.
- D. Fasteners: Non-corrosive, concealed, as recommended by metal roof panel manufacturer.
- E. Sealant: As recommended by metal roof panel manufacturer.
- F. Trim and Flashing:
 - 1. Gable, eave and parapet wall flashing details matching metal roof panels as recommended by panel manufacturer, and as per approved shop drawing.
 - 2. Provide high eave flashing and flashing parallel to the roof panels to accommodate the thermal expansion and contraction of the roof without damage to the roof panels or flashing.
 - 3. Provide flexible membranes, as recommended by the panel manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install in conformance with manufacturer's published instructions.
- B. Remove any strippable protective coating on the panels and flashings prior to installation and in any case do not allow the strippable coating to remain on the panels in extreme heat, cold, or in direct sunlight or other UV source.
- C. Caulk, seal and fasten so as to provide as complete weathertight installation.
- D. Install starter and edge flashings prior to panels.
- E. Install panels with true and level horizontal lines and plumb verticals.
- F. Do not allow panels or trim to come into contact with dissimilar metals.
- G. Do not expose edges of roof panels.
 - 1. Provide caps, fascia, and trim as indicated and as per approved shop drawings.
- H. Space clips on panels at 18 inches on center.
- I. When horizontal joints are necessary, use splice plates or lap pans at least 4 inches for 3:12 slopes or greater. Increase laps for slopes less than 3:12.
- J. Touch up minor scratches and abrasions. Replace defective material with good material.

3.3 CLEAN UP

- A. Leave work areas clean, free from grease, finger marks and stains.
- B. Remove scrap and debris from surrounding areas and grounds.

3.4 FIELD QUALITY CONTROL

- A. Inspect manufactured wall panel installation, alignment, attachment, joint seals, flashing, trim, fascia, and accessories.
- B. Correct deficiencies in Work which inspections indicate are not in compliance with Contract Documents.

SECTION 07 46 00 00 - CSF SIDING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Wood Siding or Vinyl Siding is part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 46 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Exterior wood siding.
 2. Exterior vinyl siding.
 3. Exterior cement siding.
 4. Vinyl soffit
 5. Aluminum soffit
 6. Related trim, accessories, and fastenings.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data:
 - a. Provide data indicating materials, component profiles, fastening methods, jointing details, sizes, surface texture, finishes, and accessories.

PART 2 - PRODUCTS

2.1 WOOD SIDING

- A. Western red or clear cedar plain bevel siding, WCLB grade 'Clear VG Heart' for stain finish; grade 'B' for paint finish; 1/2" x 6", 4" exposed; maximum variation from level: 1/4" in 10 ft.; Georgia Pacific Corp. or equal.

1. Nails- Use high quality hot dipped galvanized nails at each stud. Nail should penetrate 1-1/2" beyond siding. Avoid over-driving nails.

NOTE TO SPECIFIER

CSF Small use trim even at masonry walls.

2.2 TRIM

- A. Wood trim: Flat grooved board wood siding shall be Clear Cedar boards. Locate cut boards over bearing surfaces.
- B. Vinyl trim: Size as indicated on drawings.

2.3 FLASHING

- A. - metal for wood siding, as per manufacturer for vinyl.

2.4 VINYL SIDING

A. Manufacturers

1. Alcoa Building Products, Sidney, OH, (800) 962-6973.
2. Alside, Inc, Akron, OH, (800) 922-6009.
3. CertainTeed Corp., Vinyl Building Products Group, Valley Forge, PA, (800) 233-8990.
4. Georgia-Pacific Corp, Atlanta, GA, (800) 284-5347.
5. Wolverine Technologies, Inc, Valley Forge, PA, (800) 838-8100.
6. Substitutions: Permitted.

B. Formed Vinyl Siding - Solid vinyl siding and accessories fabricated by extrusion from a polyvinyl chloride compound complying with ASTM D 3679, and as follows:

1. Exposure: 8-inch exposure
2. Exposure: 8-inch exposure in double 4-inch style
3. Exposure: 8-inch exposure in triple 2-2/3 inch style
4. Exposure: 9-inch exposure in double 4-1/2 inch style
5. Exposure: 9-inch exposure in triple 3-inch style
6. Exposure: 10-inch exposure in double 5-inch style
7. Exposure: 12-inch exposure in double 6-inch style
8. Texture: Plain
9. Texture: Woodgrain
10. Texture: Profiled.

C. Colors, Textures, and Patterns - Where manufacturer's standard products are indicated, provide siding with the following requirements:

1. Match Architect's samples
2. Match colors, textures, and patterns indicated by reference to manufacturer's standard designations for these characteristics.
3. Provide selections made by Architect from manufacturer's full range of standard colors, textures, and patterns for vinyl siding indicated.

D. Comply with siding manufacturer's installation instructions and recommendations. Center nails in elongated nailing slots without binding siding to allow for thermal movement. Install trim and accessories in accordance with manufacturer's recommendations. Overlap butt joints to shed water away from direction of prevailing wind. Isolate dissimilar metals.

2.5 CEMENT SIDING

- A. Manufacturers
 - 1. James Hardie Building Products, Inc, Mission Viejo, CA, Commercial: (866) 274-3464
 - 2. CertainTeed Corporation, Valley Forge, PA • 800.233.8990
- B. Non-asbestos fiber-cement plank siding and trim complying with National Evaluation Report No. NER 405 (BOCA, ICBO, SBCCI).
- C. Size, Exposure, Colors, Textures, and Patterns - Where manufacturer's standard products are indicated, provide siding with the following requirements:
 - 1. Match Architect's samples
 - 2. Match colors, textures, and patterns indicated by reference to manufacturer's standard designations for these characteristics.
 - 3. Provide selections made by Architect from manufacturer's full range of standard colors, textures, and patterns for vinyl siding indicated.
- D. Comply with siding manufacturer's installation instructions and recommendations.

2.6 SOFFIT

- A. Vinyl Soffit: Solid vinyl soffit and accessories complying with ASTM D 4477.
 - 1. Pattern: 6-inch exposure
 - 2. Pattern: 6-inch exposure in triple 2-inch beaded edge style
 - 3. Pattern: 8-inch exposure in double 4-inch style
 - 4. Pattern: 10-inch exposure in double 5-inch style
 - 5. Pattern: 12-inch exposure in double 6-inch style
 - 6. Pattern: 12-inch exposure in triple 4-inch style
 - 7. Ventilation: Provide perforated soffit.
- B. Aluminum Soffit: Aluminum soffit complying with AAMA 1402, fabricated from aluminum sheet in alloy recommended by siding manufacturer, and as follows:
 - 1. Pattern: 6-inch exposure
 - 2. Pattern: 10-inch exposure in double 5-inch style
 - 3. Pattern: 12-inch exposure in double 6-inch style
 - 4. Pattern: 16-inch exposure in triple 5-1/3 inch style
 - 5. Pattern: 16-inch exposure in quadruple 4-inch style
 - 6. Ventilation: Provide perforated soffit
 - 7. Thickness: 0.024 inch nominal.
 - 8. Finish: Manufacturer's standard

2.7 ACCESSORIES

- A. Siding Accessories: Provide starter strips, edge trim, window head flashing, corner cap, and other items as recommended by manufacturer for building configuration; match type of siding.
- B. Decorative Accessories: Provide the following types of decorative accessories as indicated:
 - 1. Door and window casings.
 - 2. Louvers.
 - 3. Fasciae.
 - 4. Moldings and trim.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Wood

1. Install siding horizontally with edges and ends over firm bearing.
2. Nail sheet siding 16 inches (400 mm) oc. Butt joints tight. Fasten siding in place, level and plumb. Arrange for orderly nailing pattern. Blind nail except on cover trim.
3. Position cut ends over bearing surfaces. Sand cut edges smooth and clean.
4. Miter external and internal corners. Install corner strips, closures, and trim.
5. Install flashings at internal and external corners, sills and heads of wall openings.

B. Vinyl Siding

1. Install vinyl siding, soffit and accessories, according to ASTM D 4756

C. Aluminum

1. Install aluminum siding, soffit and accessories according to AAMA 1402

D. CEMENT SIDING

- A. Install materials in strict accordance with manufacturer's installation instructions.
- B. Starting: Install a minimum 1/4 inch (6 mm) thick lath starter strip at the bottom course of the wall. Apply planks horizontally with minimum 1-1/4 inches (32 mm) wide laps at the top. The bottom edge of the first plank overlaps the starter strip.
- C. Allow minimum vertical clearance between the edge of siding and any other material in strict accordance with the manufacturer's installation instructions.
- D. Align vertical joints of the planks over framing members.
- E. Maintain clearance between siding and adjacent finished grade.
- F. Locate splices at least one stud cavity away from window and door openings.
- G. Use off-stud metal joiner in strict accordance with manufacturer's installation instructions.
- H. Wind Resistance: Where a specified level of wind resistance is required install lap siding to framing members and secured with fasteners described in Table No. 2 in National Evaluation Service Report No. NER-405.

3.2 INSTALLATION TOLERANCES

- A. Maximum Variation From Level: 1/4 inch per 10 feet (6 mm/3 m).
- B. Maximum Offset From Joint Alignment: 1/16 inch (1.5 mm).

SECTION 07 46 16 00 - METAL WALL PANELS**1.1 GENERAL****A. Description Of Work:**

1. This specification covers the furnishing and installation of materials for metal wall panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Exposed-fastener, lap-seam metal wall panels.
 - b. Concealed-fastener, lap-seam metal wall panels.
 - c. Metal liner panels.
 - d. Metal soffit panels.

C. Definition

1. Metal Wall Panel Assembly: Metal wall panels, attachment system components, miscellaneous metal framing, thermal insulation, and accessories necessary for a complete weathertight wall system.

D. Performance Requirements

1. General Performance: Metal wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
2. Delegated Design: Design metal wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at the following test-pressure difference:
 - a. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa).
4. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - a. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind.
5. Water Penetration under Dynamic Pressure: No evidence of water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. (300 Pa) (which is equivalent to a 50-mph (80-km/h) wind) and not more than 12 lbf/sq. ft. (575 Pa).
 - a. Water Leakage: As defined according to AAMA 501.1.
OR
Water Leakage: Uncontrolled water infiltrating the system or appearing on system's normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
6. Structural Performance: Provide metal wall panel assemblies capable of withstanding the effects the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 1592:
 - a. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - 1) Uniform pressure of 20 lbf/sq. ft. (957 Pa) **OR** 30 lbf/sq. ft. (1436 Pa), **as directed**, acting inward or outward.
OR
Uniform pressure as indicated on Drawings.

- b. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 **OR** 1/240, **as directed**, of the span.
- 7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Submittals

- 1. Product Data: For each type of product indicated.
- 2. Shop Drawings: Show fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory-, shop- and field-assembled work.
- 3. Samples: For each type of exposed finish required.
- 4. Delegated-Design Submittal: For metal wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 5. Coordination Drawings: Exterior elevations drawn to scale and coordinating penetrations and wall-mounted items.
- 6. Product Test Reports.
- 7. Field quality-control reports.
- 8. Maintenance Data.
- 9. Warranties: Sample of special warranties.

F. Quality Assurance

- 1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- 2. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
- 3. Fire-Resistance Ratings: Where indicated, provide metal wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- 4. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

- 1. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
- 2. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
- 3. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
- 4. Retain strippable protective covering on metal wall panel for period of metal wall panel installation.
- 5. Protect foam-plastic insulation as follows:
 - a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 - b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
 - c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
 - a. Warranty Period: Two years from date of Final Completion.
2. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - a. Finish Warranty Period:
 - 1) 20 years from date of Final Completion for fluoropolymer finish.
 - 2) 10 years from date of Final Completion for siliconized polyester.

1.2 PRODUCTS

A. Panel Materials

1. Metallic-Coated Steel Sheet: Restricted flatness steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
 - b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
 - c. Surface: Smooth, flat **OR** Embossed, **as directed**, finish.
 - d. Exposed Coil-Coated Finish:
 - 1) 2-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2) 3-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 3) 4-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 4) Mica Fluoropolymer: AAMA 621. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 5) Metallic Fluoropolymer: AAMA 621. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 6) FEVE Fluoropolymer: AAMA 621. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 - 8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.97 mm) for topcoat.
 - e. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

2. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Surface: Smooth, flat **OR** Embossed, **as directed**, finish.
 - b. Exposed Coil-Coated Finish:
 - 1) 2-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2) 3-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 3) 4-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 4) Mica Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 5) Metallic Fluoropolymer: AAMA 620. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 6) FEVE Fluoropolymer: AAMA 620. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 - 8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.97 mm) for topcoat.
 - c. Exposed Anodized Finish:
 - 1) Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm **OR** AA-M12C22A31, Class II, 0.010 mm, **as directed**, or thicker.
 - 2) Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm **OR** AA-M12C22A32/A34, Class II, 0.010 mm, **as directed**, or thicker.
 - d. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
3. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Exposed Finish: Apply the following finish, as specified or indicated on Drawings.
 - 1) Natural finish.
 - 2) Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):
 - a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 - 3) Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
 - a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per

- manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
- 4) Pre-patinated: ASTM B 882. Copper sheets artificially aged by chemical reaction to convert surface to inorganic crystalline structure with color range and durability of naturally-formed patina.
4. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 **OR** 316, **as directed**, fully annealed.
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1) Run grain of directional finishes with long dimension of each piece.
 - 2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3) Directional Satin Finish: No. 4.
 - c. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
 5. Panel Sealants:
 - a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 - b. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
 - c. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.
- B. Field-Installed Thermal Insulation
1. Unfaced, Polyisocyanurate Board Insulation: ASTM C 591, Type II, compressive strength of 35 psi (241 kPa), with maximum flame-spread index of 75 and smoke-developed index of 450.
 2. Faced, Polyisocyanurate Board Insulation: ASTM C 1289, Type I (foil facing), Class 1 or 2 **OR** Type II (asphalt felt or glass-fiber mat facing), Class 2 or 3, Grade 3, **as directed**, with maximum flame-spread index of 75 and smoke-developed index of 450, based on tests performed on unfaced core.
 3. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.60-lb/cu. ft. (26-kg/cu. m), with maximum flame-spread index of 75 and smoke-developed index of 450.
 4. Molded-Polystyrene Board Insulation: ASTM C 578, Type I, 0.9 lb/cu. ft. (15 kg/cu. m) **OR** Type II, 1.35 lb/cu. ft. (22 kg/cu. m), **as directed**, with maximum flame-spread index of 75 and smoke-developed index of 450.
 5. Unfaced, Glass-Fiber Board Insulation: ASTM C 612, Type IA or Types IA and IB; with maximum flame-spread index of 25 and smoke-developed index of 50, and with a nominal density of 3 lb/cu. ft. (48 kg/cu. m).
 6. Mineral-Fiber-Blanket Insulation: ASTM C 665, type indicated below; consisting of fibers manufactured from glass **OR** slag or rock wool, **as directed**.
 - a. Type I (blankets without membrane covering), passing ASTM E 136 for combustion characteristics.
 - b. Type II (blankets with nonreflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
 - c. Type III (blankets with reflective membrane covering), Category 1 (membrane is a vapor retarder), Class A (membrane-faced surface with a flame-spread index of 25 or less).
 7. Metal Building Insulation: ASTM C 991, Type I; or NAIMA 202 **OR** ASTM C 991, Type II, **as directed**, glass-fiber-blanket insulation; 0.5-lb/cu. ft. (8-kg/cu. m) density; 2-inch- (50-mm-) wide, continuous, vapor-tight edge tabs; and with a flame-spread index of 25 or less.
 - a. Vapor-Retarder Facing: ASTM C 1136, with permeance not greater than 0.02 perm (1.15 ng/Pa x s x sq. m) when tested according to ASTM E 96, Desiccant Method:
 - 1) Composition: Polypropylene faced, scrim reinforced, and kraft-paper backing **OR** Foil faced, scrim reinforced, and kraft-paper backing with vapor-retarder coating **OR** Polypropylene faced, scrim reinforced, and foil backing **OR** Vinyl faced, scrim reinforced, and foil backing **OR** Vinyl faced, scrim reinforced, and polyester backing, **as directed**.

- b. Insulation Retainer Strips: 0.019-inch- (0.48-mm-) thick, formed galvanized steel or PVC retainer clips colored to match insulation facing.

C. Miscellaneous Metal Framing

1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized **OR** ASTM A 653/A 653M, G60 (Z180) hot-dip galvanized, **as directed**, or coating with equivalent corrosion resistance unless otherwise indicated.
2. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch (1.63-mm) nominal thickness.
3. Zee Clips: 0.079-inch (2.01-mm) nominal thickness.
4. Base or Sill Angles **OR** Channels, **as directed**: 0.079-inch (2.01-mm) nominal thickness.
5. Hat-Shaped, Rigid Furring Channels:
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.025 inch (0.64 mm) **OR** 0.040 inch (1.02 mm), **as directed**.
 - b. Depth: As indicated **OR** 7/8 inch (22 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
6. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.064 inch (1.63 mm), **as directed**.
 - b. Depth: As indicated **OR** 3/4 inch (19 mm), **as directed**.
 - c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with 0.040-inch (1.02-mm) nominal thickness.
 - d. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.57-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.
7. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (32 mm), wall attachment flange of 7/8 inch (22 mm), and depth required to fit insulation thickness indicated.
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.025 inch (0.64 mm), **as directed**.
8. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

D. Miscellaneous Materials

1. Panel Fasteners: Self-tapping screws, bolts, nuts, self-locking rivets and bolts, end-welded studs, and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

E. Exposed-Fastener, Lap-Seam Metal Wall Panels

1. General: Provide factory-formed metal wall panels designed to be field assembled by lapping side edges of adjacent panels and mechanically attaching panels to supports using exposed fasteners in side laps. Include accessories required for weathertight installation.
2. Corrugated-Profile, Exposed-Fastener Metal Wall Panels: Formed with alternating curved ribs spaced at 2.67 inches (68 mm) o.c. across width of panel.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.

- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Panel Coverage: 21.3 inches (541 mm) **OR** 29.3 inches (744 mm) **OR** 34.6 inches (881 mm) **OR** 37.3 inches (947 mm) **OR** 42.6 inches (1084 mm) **OR** 45.3 inches (1151 mm), **as directed**.
- e. Panel Height: 0.5 inch (13 mm) **OR** 0.875 inch (22 mm), **as directed**.
3. Tapered-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between major ribs.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Major-Rib Spacing: 6 inches (152 mm) **OR** 8 inches (203 mm) **OR** 9 inches (229 mm) **OR** 12 inches (305 mm), **as directed**, o.c.
 - e. Panel Coverage: 24 inches (610 mm) **OR** 36 inches (914 mm), **as directed**.
 - f. Panel Height: 0.625 inch (16 mm) **OR** 0.75 inch (19 mm) **OR** 1.0 inch (25 mm) **OR** 1.25 inches (32 mm) **OR** 1.5 inches (38 mm), **as directed**.
4. Reverse-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with recessed, trapezoidal major valleys and intermediate stiffening valleys symmetrically spaced **OR** flat pan, **as directed**, between major valleys.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.

- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Major-Rib Spacing: 12 inches (305 mm) o.c.
- d. Panel Coverage: 36 inches (914 mm).
- e. Panel Height: 1.25 inches (32 mm).
5. Vee-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, V-shaped ribs and recesses that are approximately same size, evenly spaced across panel width, and with rib/recess sides angled at approximately 45 degrees.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm) **OR** 0.064-inch (1.63-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm) **OR** 0.064-inch (1.63-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Rib Spacing: 5.3 inches (135 mm) **OR** 7.2 inches (183 mm) **OR** 12 inches (305 mm), **as directed**, o.c.
 - e. Panel Coverage: 30 inches (762 mm) **OR** 32 inches (813 mm) **OR** 36 inches (914 mm) **OR** 40 inches (1016 mm), **as directed**.
 - f. Panel Height: 1.375 inches (35 mm) **OR** 1.5 inches (38 mm) **OR** 1.75 inches (44 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm), **as directed**.
6. Box-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled 60 degrees or more.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.

- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- b. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Rib Spacing: 2.67 inches (68 mm) **OR** 4.0 inches (102 mm) **OR** 5.3 inches (135 mm) **OR** 6.0 inches (152 mm), **as directed**, o.c.
- e. Panel Coverage: 24 inches (610 mm) **OR** 28 inches (711 mm) **OR** 30 inches (762 mm) **OR** 32 inches (813 mm) **OR** 36 inches (914 mm), **as directed**.
- f. Panel Height: 0.625 inch (16 mm) **OR** 1.0 inch (25 mm) **OR** 1.5 inches (38 mm) **OR** 2.0 inches (51 mm), **as directed**.
7. Deep-Box-Rib-Profile, Exposed-Fastener Metal Wall Panels: Formed with raised, box-shaped ribs, evenly spaced across panel width, and with rib/recess sides angled more than 60 degrees.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm) **OR** 0.064-inch (1.63-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm) **OR** 0.064-inch (1.63-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Rib Spacing: 12 inches (305 mm) o.c.
 - e. Panel Coverage: 24 inches (610 mm).
 - f. Panel Height: 3.0 inches (76 mm) **OR** 4.0 inches (102 mm), **as directed**.

- F. Concealed-Fastener, Lap-Seam Metal Wall Panels
1. General: Provide factory-formed metal wall panels designed to be field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
 2. Flush-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with flush joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Panel Coverage: 12 inches (305 mm), **as directed**.
 - e. Panel Height: 1.0 inch (25 mm) **OR** 1.5 inches (38 mm), **as directed**.
 3. Reveal-Joint, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with narrow reveal joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.

- fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Panel Coverage: 12 inches (305 mm).
- e. Panel Height: 1.0 inch (25 mm) **OR** 1.5 inches (38 mm), **as directed**.
4. Wide-Reveal-Joint, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and stepped profile between panel edges resulting in wide reveal joint between panels.
- a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Panel Coverage: 12 inches (305 mm).
- e. Panel Height: 1.5 inches (38 mm).
5. V-Groove-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges.
- a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed**, nominal thickness.
- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Panel Coverage: 6 inches (152 mm) **OR** 8 inches (203 mm) **OR** 12 inches (305 mm), **as directed**.
- d. Panel Height: 0.625 inch (16 mm) **OR** 1.25 inches (32 mm), **as directed**.
6. Tapered-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, trapezoidal major ribs and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between major ribs.

- a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Panel Coverage: 12 inches (305 mm) **OR** 14 inches (356 mm), **as directed**.
 - d. Panel Height: 1.0 inch (25 mm) **OR** 1.5 inches (38 mm), **as directed**.
7. Curved-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, curved-side major ribs and flat pan between major ribs; with reveal joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Panel Coverage: 12 inches (305 mm).
 - e. Panel Height: 0.875 inch (22 mm) **OR** 1.5 inches (38 mm), **as directed**.
8. Creased-Profile, Concealed-Fastener Metal Wall Panels: Formed with vertical panel edges and center-creased pan between panel edges; with flush joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.

- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Panel Coverage: 12 inches (305 mm).
- e. Panel Height: 1.5 inches (38 mm).
9. Creased-Rib-Profile, Concealed-Fastener Metal Wall Panels: Formed with raised, center-creased, trapezoidal major ribs; with reveal joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Panel Coverage: 12 inches (305 mm).
 - e. Panel Height: 0.875 inch (22 mm) **OR** 1.5 inches (38 mm), **as directed**.
- G. Metal Liner Panels
 1. General: Provide factory-formed metal liner panels designed for interior side of metal wall panel assemblies and field assembled by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for a complete installation.
 2. Flush-Profile Metal Liner Panels: Solid **OR** Perforated, **as directed**, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with flush joint between panels.
 - a. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.

- 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- b. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- c. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Panel Coverage: 12 inches (305 mm) **OR** 16 inches (406 mm) **OR** 24 inches (610 mm) **OR** 36 inches (914 mm), **as directed**.
- e. Panel Height: 1.5 inches (38 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm), **as directed**.
- f. Acoustical Performance: Where sound-absorption requirement is indicated, fabricate interior liner panels with 1/8-inch- (3-mm-) diameter holes uniformly spaced approximately 1000 holes/sq. ft. (10 750 holes/sq. m).
 - 1) NRC of not less than 0.65 **OR** 0.85 **OR** 1.00, **as directed**, when tested according to ASTM C 423.

H. Metal Soffit Panels

1. General: Provide factory-formed metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners and factory-applied sealant in side laps. Include accessories required for weathertight installation.
2. Metal Soffit Panels: Match profile and material of metal wall panels.
 - a. Finish: Match finish and color of metal wall panels **OR** As indicated on Drawings, **as directed**.
 - b. Sealant: Factory applied within interlocking joint.
3. Flush-Profile Metal Soffit Panels: Solid **OR** Perforated, **as directed**, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with flush joint between panels.
 - a. Material: Same material, finish, and color as metal wall panels.
 - b. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.

- 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
- 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- d. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
- e. Material: Copper sheet, 16-oz./sq. ft. weight (0.55-mm thickness) **OR** 20-oz./sq. ft. weight (0.68-mm thickness), **as directed**.
 - 1) Exterior Finish: Brushed satin (lacquered) **OR** Mirror polished, **as directed**.
- f. Panel Coverage: 8 inches (203 mm) **OR** 12 inches (305 mm) **OR** 16 inches (406 mm) **OR** 20 inches (508 mm), **as directed**.
- g. Panel Height: 0.875 inch (22 mm) **OR** 1.0 inch (25 mm) **OR** 1.5 inches (38 mm) **OR** 3.0 inches (76 mm), **as directed**.
- h. Sealant: Factory applied within interlocking joint.
4. Reveal-Joint-Profile Metal Soffit Panels: Solid **OR** Perforated, **as directed**, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with recessed reveal joint between panels.
 - a. Material: Same material, finish, and color as metal wall panels.
 - b. Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - e. Panel Coverage: 8 inches (203 mm) **OR** 12 inches (305 mm) **OR** 16 inches (406 mm) **OR** 20 inches (508 mm), **as directed**.

- f. Panel Height: 0.75 inch (19 mm) **OR** 1.0 inch (25 mm) **OR** 1.5 inches (38 mm), **as directed**.
- 5. V-Groove-Profile Metal Soffit Panels: Solid **OR** Perforated, **as directed**, panels formed with vertical panel edges and intermediate stiffening ribs symmetrically spaced **OR** flat pan, **as directed**, between panel edges; with V-groove joint between panels.
 - a. Material: Same material, finish, and color as metal wall panels.
 - b. Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - c. Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) nominal thickness.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - d. Material: Aluminum sheet, 0.024 inch (0.65 mm) **OR** 0.032 inch (0.81 mm), **as directed**, thick.
 - 1) Exterior Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**
 - 2) Color: Match finish and color of metal wall panels **OR** As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - e. Panel Coverage: 6 inches (152 mm) **OR** 12 inches (305 mm) **OR** 14 inches (356 mm), **as directed**.
 - f. Panel Height: 0.375 inch (10 mm) **OR** 0.44 inch (11 mm) **OR** 0.50 inch (13 mm) **OR** 0.625 inch (16 mm), **as directed**.

I. Accessories

- 1. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels, unless otherwise indicated.
 - a. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal wall panels.
 - b. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 - c. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
- 2. Flashing and Trim: Formed from 0.018-inch (0.46-mm) minimum thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

J. Fabrication

1. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
2. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
3. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
4. Fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, and that will minimize noise from movements within panel assembly.
5. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 - a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - c. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
 - e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
 - f. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - 1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

K. General Finish Requirements

1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
3. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION

A. Preparation

1. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754 and metal wall panel manufacturer's written recommendations.
 - a. Soffit Framing: Wire-tie or clip furring channels to supports, as required to comply with requirements for assemblies indicated.

B. Thermal Insulation Installation

1. Board Insulation: Extend insulation in thickness indicated to cover entire wall. Comply with installation requirements in Division 07 Section "Thermal Insulation".

- a. Erect insulation horizontally and hold in place with Z-shaped furring members spaced 24 inches (610 mm) o.c. Attach furring members to substrate with screws spaced 24 inches (610 mm) o.c.
 - b. Retain insulation in place by metal clips and straps or integral pockets within panels, spaced at intervals according to insulation manufacturer's instructions. Maintain cavity width between insulation and metal liner panel of dimension indicated.
2. Blanket Insulation: Install insulation concurrently with metal wall panel installation, in thickness indicated to cover entire wall, according to manufacturer's written instructions and as follows:
 - a. Set vapor-retarder-faced insulation with vapor-retarder facing building exterior **OR** building interior **OR** as indicated on Drawings, **as directed**. Do not obstruct ventilation spaces, except for firestopping.
 - b. Tape joints and ruptures in vapor retarder, and seal each continuous area of insulation to surrounding construction to ensure airtight installation.
 - c. Install insulation straight and true in one-piece lengths. Comply with the following installation method:
 - 1) Over-Framing Installation: Extend insulation over and perpendicular to top flange of framing members.
 - d. Retainer Strips: Install retainer strips at each longitudinal insulation joint, straight and taut, nesting with framing to hold insulation in place.

C. Metal Wall Panel Installation

1. General: Install metal wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - a. Commence metal wall panel installation and install minimum of 300 sq. ft. (27.8 sq. m.) in presence of factory-authorized representative.
 - b. Shim or otherwise plumb substrates receiving metal wall panels.
 - c. Flash and seal metal wall panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 - d. Install screw fasteners in predrilled holes.
 - e. Locate and space fastenings in uniform vertical and horizontal alignment.
 - f. Install flashing and trim as metal wall panel work proceeds.
 - g. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - h. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 - i. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - j. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
2. Fasteners:
 - a. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized steel fasteners for surfaces exposed to the interior.
 - b. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
 - c. Copper Wall Panels: Use copper, stainless-steel or hardware-bronze fasteners.
 - d. Stainless-Steel Wall Panels: Use stainless-steel fasteners.
3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.
4. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.

- a. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 - b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".
 5. Lap-Seam Metal Wall Panels: Fasten metal wall panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
 - a. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
 - b. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal wall panels.
 - c. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 - d. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
 - e. Provide sealant tape at lapped joints of metal wall panels and between panels and protruding equipment, vents, and accessories.
 - f. Apply a continuous ribbon of sealant tape to weather-side surface of fastenings on end laps; on side laps of nesting-type panels; on side laps of corrugated nesting-type, ribbed, or fluted panels; and elsewhere as needed to make panels weathertight.
 - g. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with butyl-rubber sealant and fastened together by interlocking clamping plates.
 6. Zee Clips: Provide Zee clips of size indicated or, if not indicated, as required to act as standoff from subgirts for thickness of insulation indicated. Attach to subgirts with fasteners.
 7. Metal Liner Panels: Install panels on exterior side of girts with girts exposed to the interior **OR** interior side of girts with flush appearance on the inside **OR** girts as indicated on Drawings, **as directed**.
 8. Fire-Rated Metal Wall Panel Assemblies: Install metal liner panels on exterior side of girts, fastening through faces of panels, with girts exposed to the interior. Install subgirts horizontally, fastened to legs of metal liner panels. Install substrate board as indicated in Division 06 Section "Sheathing", in number of layers required for fire rating, over subgirts, attached with board fasteners. Install second set of subgirts horizontally, fastened through substrate board into first set of subgirts. Install exterior metal wall panels, fastened to second set of subgirts.
 - a. Comply with UL **OR** FMG, **as directed**, requirements for fire-rated construction.
- D. Metal Soffit Panel Installation
1. In addition to complying with requirements of "Metal Wall Panel Installation, General" Article, install metal soffit panels to comply with the requirements of this article.
 2. Metal Soffit Panels: Provide metal soffit panels full width of soffits. Install panels perpendicular to support framing.
 - a. Flash and seal panels with weather closures where metal soffit panels meet walls and at perimeter of all openings.
- E. Accessory Installation
1. General: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.
 - a. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form

hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.

- b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (605 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

F. Field Quality Control

1. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports, **as directed by the Owner**.
2. Water Penetration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 1105 at minimum differential pressure of 20 percent of inward-acting, wind-load design pressure as defined by SEI/ASCE 7, but not less than 6.24 lbf/sq. ft. (300 Pa).
3. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by the Owner.
4. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect and test completed metal wall panel installation, including accessories.
5. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
6. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

G. Cleaning And Protection

1. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
2. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
3. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 46 16 00

SECTION 07 46 16 00a - METAL PLATE WALL PANELS

1.1 GENERAL

A. Description Of Work:

1. This specification covers the furnishing and installation of materials for metal plate wall panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes metal plate wall panels.

C. Definition

1. Metal Plate Wall Panel Assembly: Metal plate wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weathertight wall system.

D. Performance Requirements

1. General Performance: Metal plate wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
2. Delegated Design: Design metal plate wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at the following test-pressure difference:
 - a. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa) which is equivalent to a 25-mph (40-km/h) wind.
4. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - a. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind.
5. Water Penetration under Dynamic Pressure: No evidence of water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. (300 Pa) {which is equivalent to a 50-mph (80-km/h) wind} and not more than 12 lbf/sq. ft. (575 Pa).
 - a. Water Leakage: As defined according to AAMA 501.1.
OR
 Water Leakage: Uncontrolled water infiltrating the system or appearing on system's normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
6. Structural Performance: Provide metal plate wall panel assemblies capable of withstanding the effects of the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
 - a. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - 1) Uniform pressure of 20 lbf/sq. ft. (957 Pa) **OR** 30 lbf/sq. ft. (1436 Pa), **as directed**, acting inward or outward.
OR
 Uniform pressure as indicated on Drawings.
 - b. Deflection Limits: Metal plate wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 **OR** 1/240, **as directed**, of the span.

7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

E. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: Show fabrication and installation layouts of metal plate wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish among factory-, shop-, and field-assembled work.
3. Samples: For each type of exposed finish required.
4. Delegated-Design Submittal: For metal plate wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
5. Coordination Drawings: Exterior elevations, drawn to scale and coordinating penetrations and wall-mounted items.
6. Product Test Reports.
7. Field quality-control reports.
8. Maintenance Data.
9. Warranties: Sample of special warranties.

F. Quality Assurance

1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
2. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.
3. Fire-Resistance Ratings: Where indicated, provide metal plate wall panels identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
4. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

1. Deliver components, metal plate wall panels, and other manufactured items so as not to be damaged or deformed. Package panels for protection during transportation and handling.
2. Unload, store, and erect metal plate wall panels in a manner to prevent bending, warping, twisting, and surface damage.
3. Stack metal plate wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store panels to ensure dryness, with positive slope for drainage of water. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.
4. Retain strippable protective covering on metal plate wall panel for period of installation.
5. Protect foam-plastic insulation as follows:
 - a. Do not expose to sunlight, except to extent necessary for period of installation and concealment.
 - b. Protect against ignition at all times. Do not deliver foam-plastic insulation materials to Project site before installation time.
 - c. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

H. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal plate wall panel assemblies that fail in materials or workmanship within specified warranty period.
 - a. Warranty Period: Two years from date of Final Completion.

2. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal plate wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - a. Finish Warranty Period:
 - 1) 20 years from date of Final Completion for fluoropolymer finish.
 - 2) 10 years from date of Final Completion for siliconized polyester.

1.2 PRODUCTS

A. Panel Materials

1. Aluminum Plate: ASTM B 209 (ASTM B 209M). Alloy and temper as recommended by manufacturer for application.
2. Copper Plate: ASTM B 152/B 152M, solid copper alloy.
3. Panel Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal plate wall panels and remain weathertight; and as recommended in writing by panel manufacturer.

B. Miscellaneous Metal Framing

1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized **OR** ASTM A 653/A 653M, G60 (Z180) hot-dip galvanized, **as directed**, or coating with equivalent corrosion resistance unless otherwise indicated.
2. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch (1.63-mm) nominal thickness.
3. Zee Clips: 0.079-inch (2.01-mm) nominal thickness.
4. Base or Sill Angles **OR** Channels, **as directed**: 0.079-inch (2.01-mm) nominal thickness.
5. Hat-Shaped, Rigid Furring Channels:
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.025 inch (0.64 mm) **OR** 0.040 inch (1.02 mm), **as directed**.
 - b. Depth: As indicated **OR** 7/8 inch (22 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
6. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.064 inch (1.63 mm), **as directed**.
 - b. Depth: As indicated **OR** 3/4 inch (19 mm), **as directed**.
 - c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with nominal thickness of 0.040 inch (1.02 mm).
 - d. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.57-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.
7. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.

C. Miscellaneous Materials

1. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper recommended by manufacturer for type of use and finish indicated.
2. Panel Fasteners: Self-tapping screws; bolts and nuts; self-locking rivets and bolts; end-welded studs; and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.

D. Metal Plate Wall Panels

1. Metal Plate Wall Panels: Provide factory-formed, metal plate wall panels fabricated from single sheets of metal formed into profile for installation method indicated. Include attachment system components, panel stiffeners, and accessories required for weathertight system.

- a. Material: Tension-leveled, smooth aluminum sheet, ASTM B 209 (ASTM B 209M), 0.120 inch (3.05 mm) **OR** 0.125 inch (3.18 mm) **OR** 0.1875 inch (4.76 mm) **OR** 0.190 inch (4.82 mm), **as directed**, thick.
 - b. Panel Depth: 2 inches (51 mm) **OR** As indicated on Drawings, **as directed**.
 - c. Exterior Finish: Two-coat fluoropolymer **OR** Three-coat fluoropolymer **OR** Four-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Clear anodized **OR** Color anodized, **as directed**.
 - 1) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 2. Attachment System Components: Formed from extruded aluminum.
 - a. Provide internal drainage system that allows individual panels to be installed and removed without disturbing adjacent panels.
 - b. Include manufacturer's standard subgirts, perimeter extrusions, tracks, and drainage channels, panel stiffeners, panel clips and anchor channels, **as applicable**.
 - c. Alignment Pins: Stainless steel.
- E. Accessories
1. Metal Plate Wall Panel Accessories: Provide components required for a complete metal plate wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of panels unless otherwise indicated.
 2. Flashing and Trim: Same material, finish, and color as adjacent metal plate wall panels, minimum 0.030 inch (0.76 mm) thick unless otherwise indicated.
- F. Fabrication
1. General: Fabricate and finish metal plate wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
 2. Fabricate metal plate wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
 3. Metal Plate Wall Panels: Fabricate panels with panel stiffeners as required to comply with deflection limits. Weld and grind panel corners smooth. Fabricate panels to the following dimensional tolerances:
 - a. Length and Width: Plus or minus 0.032 inch (0.81 mm) up to 48 inches (1219 mm); 0.064 inch (1.63 mm) more than 48 inches (1219 mm).
 - b. Diagonal: Plus or minus 0.1875 inch (4.76 mm).
 - c. Panel Bow: Not more than 0.2 percent of panel width or length up to 0.1875 inch (4.76 mm) maximum.
 - d. Thickness: Plus or minus 0.008 inch (0.2 mm).
 - e. Squareness: 0.1875-inch (4.76-mm) difference between diagonal measurements.
 - f. Camber: 0.032 inch (0.81 mm).
 4. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.
 - a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - c. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.

- e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
- f. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal plate wall panel manufacturer.
 - 1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal plate wall panel manufacturer for application, but not less than thickness of metal being secured.

G. General Finish Requirements

- 1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- 2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- 3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

H. Aluminum Finishes

- 1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 2. Three-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 3. Four-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 4. Mica Fluoropolymer: AAMA 2605. 2-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 5. Metallic Fluoropolymer: AAMA 2605. 3-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 6. FEVE Fluoropolymer: AAMA 2605. 2-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- 7. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm **OR** AA-M12C22A31, Class II, 0.010 mm, **as directed**, or thicker.
- 8. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm **OR** AA-M12C22A32/A34, Class II, 0.010 mm, **as directed**, or thicker.
- 9. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

I. Copper-Alloy Finishes

- 1. Exposed Finish: Mill.
- 2. Exposed Finish: Finish designations prefixed by CDA comply with the system established by the Copper Development Association for designating copper-alloy finish systems.
 - a. Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):

- 1) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in 2 coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
- b. Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
 - 1) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in 2 coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).

1.3 EXECUTION

A. Preparation

1. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous metal plate wall panel support members and anchorage according to ASTM C 754 and panel manufacturer's written instructions.

B. Metal Plate Wall Panel Installation

1. General: Install metal plate wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - a. Commence metal plate wall panel installation and install minimum of 300 sq. ft. (27.8 sq. m) in presence of factory-authorized representative.
 - b. Shim or otherwise plumb substrates receiving metal plate wall panels.
 - c. Flash and seal metal plate wall panels with weather closures at perimeter of all openings. Do not begin installation until weather barrier and flashings that will be concealed by panels are installed.
 - d. Install flashing and trim as metal plate wall panel work proceeds.
 - e. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 - f. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
2. Fasteners:
 - a. Aluminum Plate Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior and aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
 - b. Copper Plate Wall Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal plate wall panel manufacturer.
4. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall plate panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by panel manufacturer.
 - a. Seal metal plate wall panel end laps with double beads of sealant, full width of panel. Seal side joints where recommended by panel manufacturer.
 - b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".
5. Attachment System, General: Install attachment system required to support metal plate wall panels and to provide a complete weathertight wall system, including subgirts, perimeter extrusions, tracks, drainage channels, panel clips, and anchor channels.
 - a. Include attachment to supports, panel-to-panel joinery, panel-to-dissimilar-material joinery, and panel-system joint seals.
6. Flange-Attachment Installation: Attach metal plate wall panels, formed with extended perimeter flanges, to supports at locations, spacings, and with fasteners recommended by manufacturer.

- a. Seal horizontal and vertical joints between adjacent panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".
 - b. Seal horizontal and vertical joints between adjacent panels with manufacturer's standard gaskets.
7. Clip Installation: Attach panel clips to supports at locations, spacings, and with fasteners recommended by manufacturer. Attach flanges of metal plate wall panels to panel clips with fasteners **OR** by welding, **as directed**, as recommended by manufacturer.
 - a. Seal horizontal and vertical joints between adjacent metal plate wall panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".
 - b. Seal horizontal and vertical joints between adjacent metal plate wall panels with manufacturer's standard gaskets.
8. Subgirt-and-Spline Installation: Provide manufacturer's standard subgirts and splines that provide support and complete secondary drainage system, draining to the exterior at horizontal joints. Install support system at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by interlocking perimeter extrusions attached to panels with subgirts and splines. Fully engage integral subgirt-and-spline gaskets and leave horizontal and vertical joints with open reveal. Terminate edge of panels flush with perimeter extrusions.
 - a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.
 - b. Do not apply sealants to joints unless otherwise indicated on Drawings.
9. Track-Support Installation: Provide manufacturer's standard horizontal tracks and vertical tracks **OR** drain channels, **as directed**, that provide support and complete secondary drainage system, draining to the exterior at horizontal joints through drain tube. Install support system at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels to tracks by interlocking panel edges with manufacturer's standard "T" clips.
 - a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.
 - b. Seal horizontal and vertical joints between adjacent metal plate wall panels with sealant backing and sealant. Install sealant backing and sealant according to requirements specified in Division 07 Section "Joint Sealants".
10. Rail-Support Installation: Provide manufacturer's standard interlocking rails that provide support and complete secondary drainage system, draining to the exterior at horizontal joints. Install rails at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by overlapping and interlocking support rails with perimeter rails attached to panels. Apply sealant, foam sealant, and tape sealant at locations recommended by manufacturer. Leave horizontal and vertical joints with open reveal.
 - a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.
 - b. Install backer plates before installing support rails.
 - c. Do not apply sealants to joints unless otherwise indicated on Drawings.
11. Rainscreen-Principle Installation: Provide manufacturer's standard pressure-equalized, rainscreen-principle system with vertical channel that provides support and complete secondary drainage system, draining at base of wall. Notch vertical channel to receive support pins. Install vertical channels supported by channel brackets or adjuster angles and at locations, spacings, and with fasteners recommended by manufacturer. Attach metal plate wall panels by engaging horizontal support pins into notches in vertical channels and into flanges of panels. Leave horizontal and vertical joints with open reveal.
 - a. Install metal plate wall panels to allow individual panels to be installed and removed without disturbing adjacent panels.
 - b. Do not apply sealants to joints unless otherwise indicated on Drawings.

C. Accessory Installation

1. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - a. Install components required for a complete metal plate wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

D. Erection Tolerances

1. Installation Tolerances: Shim and align metal plate wall panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m), nonaccumulative, on level, plumb, and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

E. Field Quality Control

1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
2. Water Penetration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 1105 at minimum differential pressure of 20 percent of inward-acting, wind-load design pressure as defined by SEI/ASCE 7, but not less than 6.24 lbf/sq. ft. (300 Pa).
3. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal plate wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by the Owner.
4. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust completed metal plate wall panel installation, including accessories.
5. Metal plate wall panels will be considered defective if they do not pass tests and inspections.
6. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
7. Prepare test and inspection reports.

F. Cleaning

1. Remove temporary protective coverings and strippable films, if any, as metal plate wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal plate wall panel installation, clean finished surfaces as recommended by panel manufacturer. Maintain in a clean condition during construction.
2. After metal plate wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
3. Replace metal plate wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

SECTION 07 46 63 00 - INSULATED-CORE METAL WALL PANELS

1.1 GENERAL

A. Description Of Work:

1. This specification covers the furnishing and installation of materials for insulated-core metal wall panels. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Foamed-insulation-core metal wall panels.
 - b. Laminated-insulation-core metal wall panels.
 - c. Honeycomb-core metal wall panels.

C. Definitions

1. Metal Wall Panel Assembly: Insulated-core metal wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weathertight wall system.

D. Performance Requirements

1. General Performance: Metal wall panel assemblies shall comply with performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction.
2. Delegated Design: Design metal wall panel assembly, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
3. Air Infiltration: Air leakage through assembly of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) of wall area when tested according to ASTM E 283 at the following test-pressure difference:
 - a. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa) which is equivalent to a 25-mph (40-km/h) wind.
4. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E 331 at the following test-pressure difference:
 - a. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind.
5. Water Penetration under Dynamic Pressure: No evidence of water leakage when tested according to AAMA 501.1 under dynamic pressure equal to 20 percent of inward-acting, wind-load design pressure of not less than 6.24 lbf/sq. ft. (299 Pa) and not more than 12 lbf/sq. ft. (575 Pa).
 - a. Water Leakage: As defined according to AAMA 501.1.
OR
Water Leakage: Uncontrolled water infiltrating the system or appearing on system's normally exposed interior surfaces from sources other than condensation. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.
6. Structural Performance: Metal wall panel assemblies shall withstand the effects the following loads and stresses within limits and under conditions indicated, based on testing according to ASTM E 330:
 - a. Wind Loads: Determine loads based on the following minimum design wind pressures:
 - 1) Uniform pressure of 20 lbf/sq. ft. (958 Pa) **OR** 30 lbf/sq. ft. (1436 Pa), **as directed**, acting inward or outward.
OR
Uniform pressure as indicated on Drawings.

- b. Deflection Limits: Metal wall panel assemblies shall withstand wind loads with horizontal deflections no greater than 1/180 **OR** 1/240, **as directed**, of the span.
- 7. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.
- 8. Thermal Performance: Provide insulated metal wall panel assemblies with thermal-resistance value (R-value) indicated when tested according to ASTM C 518.

E. Submittals

- 1. Product Data: For each type of product indicated.
- 2. Shop Drawings: Show fabrication and installation layouts of metal wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish between factory-, shop-, and field-assembled work.
- 3. Samples: For each type of exposed finish required.
- 4. Delegated-Design Submittal: For metal wall panel assembly indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
- 5. Coordination Drawings: Exterior elevations, drawn to scale, and coordinating penetrations and wall-mounted items.
- 6. Product Test Reports.
- 7. Field quality-control reports.
- 8. Maintenance Data.
- 9. Warranties: Sample of special warranties.

F. Quality Assurance

- 1. Installer Qualifications: An employer of workers trained and approved by manufacturer.
- 2. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics as determined by testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.
 - a. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
 - b. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which wall panel is a part, complies with NFPA 285 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies.
 - c. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
 - d. Potential Heat: Acceptable level when tested according to NFPA 259.
 - e. Surface-Burning Characteristics: Provide wall panels with flame-spread index of 25 or less and smoke-developed index of 450 or less, per ASTM E 84.
- 3. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

- 1. Deliver components, sheets, metal wall panels, and other manufactured items so as not to be damaged or deformed. Package metal wall panels for protection during transportation and handling.
- 2. Unload, store, and erect metal wall panels in a manner to prevent bending, warping, twisting, and surface damage.
- 3. Stack metal wall panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal wall panels to ensure dryness, with positive slope for

- drainage of water. Do not store metal wall panels in contact with other materials that might cause staining, denting, or other surface damage.
4. Retain strippable protective covering on metal wall panels for period of metal wall panel installation.

H. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal wall panel assemblies that fail in materials or workmanship within specified warranty period.
 - a. Warranty Period: Two years from date of Final Completion.
2. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
 - a. Finish Warranty Period:
 - 1) 20 years from date of Final Completion for fluoropolymer finish.
 - 2) 10 years from date of Final Completion for siliconized polyester.

1.2 PRODUCTS

A. Panel Materials

1. Metallic-Coated Steel Sheet: Restricted flatness steel sheet metallic coated by the hot-dip process and prepainted by the coil-coating process to comply with ASTM A 755/A 755M.
 - a. Zinc-Coated (Galvanized) Steel Sheet: ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality.
 - b. Aluminum-Zinc Alloy-Coated Steel Sheet: ASTM A 792/A 792M, Class AZ50 coating designation, Grade 40 (Class AZM150 coating designation, Grade 275); structural quality.
 - c. Surface: Smooth, flat **OR** Embossed, **as directed**, finish.
 - d. Exposed Coil-Coated Finish:
 - 1) Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2) Three-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 3) Four-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 4) Mica Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 5) Metallic Fluoropolymer: AAMA 621. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 6) FEVE Fluoropolymer: AAMA 621. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

- 7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
- 8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.097 mm) for topcoat.
- e. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
2. Aluminum Sheet: Coil-coated sheet, ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
 - a. Surface: Smooth, flat **OR** Embossed, **as directed**, finish.
 - b. Exposed Coil-Coated Finishes:
 - 1) Two-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2) Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 3) Four-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat and clear coats. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 4) Mica Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish with suspended mica flakes containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 5) Metallic Fluoropolymer: AAMA 620. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 6) FEVE Fluoropolymer: AAMA 620. Two-coat fluoropolymer finish containing 100 percent fluorinated ethylene vinyl ether resin in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 7) Siliconized-Polyester: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 0.8 mil (0.02 mm) for topcoat.
 - 8) Plastisol: Epoxy primer and vinyl plastisol topcoat; with a dry film thickness of not less than 0.2 mil (0.005 mm) for primer and 3.8 mil (0.097 mm) for topcoat.
 - c. Exposed Anodized Finish:
 - 1) Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm **OR** AA-M12C22A31, Class II, 0.010 mm, **as directed**, or thicker.
 - 2) Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm **OR** AA-M12C22A32/A34, Class II, 0.010 mm, **as directed**, or thicker.
 - d. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).
3. Copper Sheet: ASTM B 370, cold-rolled copper sheet, H00 temper.
 - a. Exposed Finish: Apply the following finish, as specified or indicated on Drawings.
 - 1) Natural finish.

- 2) Brushed Satin: CDA M32-06x (Mechanical Finish: directionally textured, medium satin; Coating: clear organic, air drying, as specified below):
 - a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 - 3) Mirror Polished: CDA M22-06x (Mechanical Finish: buffed, specular; Coating: clear organic, air drying, as specified below):
 - a) Clear, Organic Coating: Clear, air-drying, acrylic lacquer specially developed for coating copper-alloy products, applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 1 mil (0.025 mm).
 - 4) Pre-patinated: ASTM B 882. Copper sheets artificially aged by chemical reaction to convert surface to inorganic crystalline structure with color range and durability of naturally-formed patina.
 4. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304 **OR** 316, **as directed**, fully annealed.
 - a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 - b. Polished Finish: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - 1) Run grain of directional finishes with long dimension of each piece.
 - 2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
 - 3) Directional Satin Finish: No. 4.
 - c. Bright, Cold-Rolled, Unpolished Finish: No. 2B.
 5. Panel Sealants:
 - a. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
 - b. Joint Sealant: ASTM C 920; elastomeric polyurethane, polysulfide, or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal wall panels and remain weathertight; and as recommended in writing by metal wall panel manufacturer.
 - c. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.
- B. Insulation For Panel Cores
1. Polyisocyanurate Insulation: Closed cell, modified polyisocyanurate foam using a non-CFC blowing agent, foamed-in-place **OR** board, **as directed**, type, with maximum flame-spread index of 25 and smoke-developed index of 450.
 - a. Closed-Cell Content: 90 percent when tested according to ASTM D 2856.
 2. Extruded-Polystyrene Board Insulation: ASTM C 578, Type IV, 1.60-lb/cu. ft. (26-kg/cu. m) minimum density, unless otherwise indicated; with maximum flame-spread index of 25 and smoke-developed index of 450.
 3. Molded-Polystyrene Board Insulation: ASTM C 578, Type I, 0.9 lb/cu. ft. (14 kg/cu. m) **OR** Type II, 1.35 lb/cu. ft. (22 kg/cu. m), Class 2 or 3, Grade 3, **as directed**, with maximum flame-spread index of 25 and smoke-developed index of 450.
- C. Miscellaneous Metal Framing
1. Miscellaneous Metal Framing, General: ASTM C 645, cold-formed metallic-coated steel sheet, ASTM A 653/A 653M, G40 (Z120) hot-dip galvanized **OR** ASTM A 653/A 653M, G60 (Z180) hot-dip galvanized, **as directed**, or coating with equivalent corrosion resistance unless otherwise indicated.
 2. Subgirts: Manufacturer's standard C- or Z-shaped sections, 0.064-inch (1.63-mm) nominal thickness.
 3. Zee Clips: 0.079-inch (2.01-mm) nominal thickness.
 4. Base or Sill Angles **OR** Channels, **as directed**: 0.079-inch (2.01-mm) nominal thickness.
 5. Hat-Shaped, Rigid Furring Channels:

- a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.025 inch (0.64 mm) **OR** 0.040 inch (1.02 mm), **as directed**.
 - b. Depth: As indicated **OR** 7/8 inch (21 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
 6. Cold-Rolled Furring Channels: Minimum 1/2-inch- (13-mm-) wide flange.
 - a. Nominal Thickness: As indicated **OR** As required to meet performance requirements **OR** 0.064 inch (1.63 mm), **as directed**.
 - b. Depth: As indicated **OR** 3/4 inch (19 mm), **as directed**.
 - c. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with 0.040-inch (1.02-mm) nominal thickness.
 7. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.52-mm-) diameter wire, or double strand of 0.048-inch- (1.22-mm-) diameter wire.
 8. Fasteners for Miscellaneous Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten miscellaneous metal framing members to substrates.
- D. Miscellaneous Materials
 1. Panel Fasteners: Self-tapping screws; bolts and nuts; self-locking rivets and bolts; end-welded studs; and other suitable fasteners designed to withstand design loads. Provide exposed fasteners with heads matching color of metal wall panels by means of plastic caps or factory-applied coating. Provide EPDM, PVC, or neoprene sealing washers.
 2. Backer Board: Hardboard complying with AHA A135.4, Class 1 tempered, 1/8 inch (3 mm) **OR** 1/4 inch (6 mm), **as directed**, thick unless otherwise indicated.
- E. Foamed-Insulation-Core Metal Wall Panels
 1. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed in place during fabrication, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
 - a. Panel Performance:
 - 1) Flatwise Tensile Strength: 30 psi (207 kPa) when tested according to ASTM C 297.
 - 2) Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for 7 days at 140 deg F (60 deg C) and 100 percent relative humidity according to ASTM D 2126.
 - 3) Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at 200 deg F (93 deg C) according to ASTM D 2126.
 - 4) Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at minus 20 deg F (29 deg C) according to ASTM D 2126.
 - 5) Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for 2 million cycles.
 - 6) Autoclave: No delamination when exposed to 2-psi (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
 - b. Polyisocyanurate Insulation-Core Performance:
 - 1) Density: 2.0 to 2.6 lb/cu. ft. (32 to 42 kg/cu. m) when tested according to ASTM D 1622.
 - 2) Compressive Strength: Minimum 20 psi (138 kPa) when tested according to ASTM D 1621.
 - 3) Shear Strength: 26 psi (179 kPa) when tested according to ASTM C 273.
 2. Exposed-Fastener, Foamed-Insulation-Core Metal Wall Panels: Formed with raised, trapezoidal major rib at panel edge and two intermediate stiffening ribs symmetrically spaced between major rib and panel edge; designed for lapping side edges of adjacent panels and mechanically attaching to supports using exposed fasteners in side laps.
 - a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.

- 1) Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed**, nominal thickness.
 - 3) Backer Board: On back side of exterior facing.
 - 4) Exterior Facing Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - 5) Interior Facing Finish: Manufacturer's standard white polyester.
 - b. Snap-On Batten: Same material, finish, and color as exterior facings of wall panels.
 - c. Panel Coverage: 36 inches (914 mm) **OR** 40 inches (1016 mm), **as directed**, nominal.
 - d. Panel Thickness: 1.0 inch (25 mm) **OR** 1.5 inches (38 mm) **OR** 2.0 inches (51 mm) **OR** 2.5 inches (64 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm) **OR** 5.0 inches (127 mm), **as directed**.
 - e. Thermal-Resistance Value (R-Value): as directed by the Owner.
3. Concealed-Fastener, Foamed-Insulation-Core Metal Wall Panels: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.
- a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.022-inch (0.56-mm) **OR** 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm), **as directed**, nominal thickness.
 - 3) Material: Stainless-steel sheet, 0.031 inch (0.79 mm) **OR** 0.038 inch (0.97 mm), **as directed**, thick with No. 4 **OR** 2B, **as directed**, finish.
 - 4) Backer Board: On back side of exterior facing.
 - 5) Exterior Facing Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - 6) Interior Facing Finish: Manufacturer's standard siliconized polyester.
 - 7) Exterior Surface: Smooth, flat **OR** Striated **OR** Shallow ribs **OR** Shallow V grooves, **as directed**.
 - b. Panel Coverage: 24 inches (610 mm) **OR** 30 inches (762 mm) **OR** 36 inches (914 mm) **OR** 39.37 inches (1000 mm) **OR** 42 inches (1067 mm), **as directed**, nominal.
 - c. Panel Thickness: 2.0 inches (51 mm) **OR** 2.5 inches (64 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm) **OR** 5.0 inches (127 mm) **OR** 6.0 inches (152 mm), **as directed**.
 - d. Thermal-Resistance Value (R-Value): as directed by the Owner.
- F. Laminated-Insulation-Core Metal Wall Panels
1. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and core material laminated or otherwise securely bonded to facing sheets during fabrication without use of contact adhesives, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
 - a. Panel Performance:
 - 1) Flatwise Tensile Strength: 27 psi (186 kPa) when tested according to ASTM C 297.
 - 2) Humid Aging: Volume increase not greater than 6.0 percent and no delamination or metal corrosion when tested for 7 days at 140 deg F (60 deg C) and 100 percent relative humidity according to ASTM D 2126.
 - 3) Heat Aging: Volume increase not greater than 2.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at 200 deg F (93 deg C) according to ASTM D 2126.

- 4) Cold Aging: Volume decrease not more than 1.0 percent and no delamination, surface blistering, or permanent bowing when tested for 7 days at minus 20 deg F (29 deg C) according to ASTM D 2126.
- 5) Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for 2 million cycles.
- 6) Autoclave: No delamination when exposed to 2-psi (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
- b. Polyisocyanurate Insulation-Core Performance:
 - 1) Density: 1.8 to 2.3 lb/cu. ft. (29 to 37 kg/cu. m) when tested according to ASTM D 1622.
 - 2) Compressive Strength: Minimum 20 psi (138 kPa) when tested according to ASTM D 1621.
 - 3) Shear Strength: 24 psi (164 kPa) when tested according to ASTM C 273.
2. Wrapped-Edge, Laminated-Insulation-Core Metal Wall Panels: Formed with flush exterior panel facing wrapped over panel edges; designed for independent installation by mechanically attaching panels to supports using staggered, concealed side clips engaging panel edges **OR** through extended panel edges to supports using concealed fasteners, **as directed**; with sealant **OR** gasketed, **as directed**, joints.
 - a. Exterior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm) **OR** 0.052-inch (1.32-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm) **OR** 0.063 inch (1.60 mm) **OR** 0.080 inch (2.03 mm), **as directed**, thick.
 - 4) Surface: Smooth, flat **OR** Embossed, **as directed**.
 - 5) Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Interior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm), **as directed**, thick.
 - 4) Finish: Manufacturer's standard primer or white polyester.
 - c. Core Material: Polyisocyanurate **OR** Extruded-polystyrene **OR** Expanded-polystyrene, **as directed**, board insulation.
 - 1) Backer Board: 0.125-inch- (3-mm-) **OR** 0.250-inch- (6-mm-), **as directed**, thick hardboard behind exterior facing for increased impact resistance.
 - d. Clips: Manufacturer's standard one piece, formed from zinc-coated (galvanized) steel **OR** aluminum-zinc alloy-coated steel **OR** stainless steel, **as directed**.
 - e. Gaskets: Extruded, dry seal silicone.
 - f. Sealant: Manufacturer's standard silicone.
 - g. Panel Thickness: 1.0 inch (25 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm) **OR** 5.0 inches (127 mm) **OR** 6.0 inches (152 mm), **as directed**.
 - h. Thermal-Resistance Value (R-Value): as directed by the Owner.

3. Shiplap-Edge, Laminated-Insulation-Core Metal Wall Panels: Formed with flush exterior panel facing and with shiplap edges; designed for sequential installation by mechanically attaching panels to supports using concealed clips and fasteners; with factory-applied sealant **OR** gaskets, **as directed**, in side laps.
 - a. Exterior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm) **OR** 0.063 inch (1.60 mm), **as directed**, thick.
 - 4) Surface: Smooth, flat **OR** Embossed, **as directed**.
 - 5) Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - b. Interior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 4) Finish: Manufacturer's standard primer or white polyester.
 - c. Core Material: Polyisocyanurate **OR** Extruded-polystyrene **OR** Expanded-polystyrene, **as directed**, board insulation.
 - 1) Backer Board: 0.125-inch- (3-mm-) **OR** 0.250-inch- (6-mm-), **as directed**, thick hardboard behind exterior facing for increased impact resistance.
 - d. Clips: Manufacturer's standard one piece, formed from zinc-coated (galvanized) steel **OR** aluminum-zinc alloy-coated steel **OR** stainless steel, **as directed**.
 - e. Gaskets: Extruded, dry seal silicone.
 - f. Sealant: Manufacturer's standard silicone.
 - g. Panel Thickness: 1.0 inch (25 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm) **OR** 5.0 inches (127 mm) **OR** 6.0 inches (152 mm), **as directed**.
 - h. Thermal-Resistance Value (R-Value): as directed by the Owner.
4. Framed-Edge, Laminated-Insulation-Core Metal Wall Panels: Formed with flush exterior panel facing and integral, extruded edge members; designed for independent installation by mechanically attaching panels to supports through edge framing using concealed fasteners; with gasketed joints.
 - a. Exterior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71 mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm) **OR** 0.063 inch (1.60 mm) **OR** 0.080 inch (2.03 mm), **as directed**, thick.
 - 4) Surface: Smooth, flat **OR** Embossed, **as directed**.
 - 5) Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.

- b. Interior Facing:
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm), **as directed**, thick.
 - 4) Finish: Manufacturer's standard primer or white polyester.
- c. Core Material: Polyisocyanurate **OR** Extruded-polystyrene **OR** Expanded-polystyrene, **as directed**, board insulation.
 - 1) Backer Board: 0.125-inch- (3.18-mm-) **OR** 0.250-inch- (6-mm-), **as directed**, thick hardboard behind exterior facing for increased impact resistance.
- d. Edge Members: Extruded aluminum, not less than 0.063-inch (1.60-mm) wall thickness.
- e. Gaskets: Extruded, dry seal silicone.
- f. Panel Thickness: 1.0 inch (25 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm) **OR** 5.0 inches (127 mm) **OR** 6.0 inches (152 mm), **as directed**.
- g. Thermal-Resistance Value (R-Value): as directed by the Owner.

G. Honeycomb-Core Metal Wall Panels

- 1. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and honeycomb-core material laminated or otherwise securely bonded to facing sheets during fabrication without use of contact adhesives or pinch rollers, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.
 - a. Panel Performance:
 - 1) Fatigue: No evidence of delamination, core cracking, or permanent bowing when tested to a 20-lbf/sq. ft. (958-kPa) positive and negative wind load and with deflection of L/180 for 2 million cycles.
 - 2) Autoclave: No delamination when exposed to 2-psi (13.8-kPa) pressure at a temperature of 212 deg F (100 deg C) for 2-1/2 hours.
- 2. Wrapped-Edge, Honeycomb-Core Metal Wall Panels: Formed with flush exterior panel facing wrapped over panel edges; designed for independent installation by mechanically attaching panels to supports using staggered, concealed side clips engaging panel edges **OR** through extended panel edges to supports using concealed fasteners, **as directed**; with sealant **OR** gasketed, **as directed**, joints.
 - a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm) **OR** 0.063 inch (1.60 mm), **as directed**, thick.
 - 4) Exterior Facing Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - 5) Interior Facing Finish: Manufacturer's standard primer or polyester.
 - b. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum 1/2-inch (13-mm) cell size.
 - c. Aluminum Honeycomb Core: Manufacturer's standard 0.003-inch- (0.08-mm-) thick, commercial grade aluminum with maximum 3/4-inch (19-mm) cell size.

- d. Clips: Manufacturer's standard one piece, formed from zinc-coated (galvanized) steel **OR** aluminum-zinc alloy-coated steel **OR** stainless steel, **as directed**.
- e. Gaskets: Extruded, dry seal silicone.
- f. Sealant: Manufacturer's standard silicone.
- g. Panel Thickness: 0.25 inch (6 mm) **OR** 1.0 inch (25 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm) **OR** 4.0 inches (102 mm), **as directed**.
- 3. Shiplap-Edge, Honeycomb-Core Metal Wall Panels: Formed with flush exterior panel facing and with shiplap edges; designed for sequential installation by mechanically attaching panels to supports using concealed clips and fasteners; with factory-applied sealant **OR** gaskets, **as directed**, in side laps.
 - a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 2) Material: Aluminum-zinc alloy-coated steel sheet, 0.028-inch (0.71-mm) **OR** 0.034-inch (0.86-mm) **OR** 0.040-inch (1.02-mm), **as directed**, nominal thickness.
 - 3) Material: Aluminum sheet, 0.032 inch (0.81 mm) **OR** 0.040 inch (1.02 mm) **OR** 0.050 inch (1.27 mm) **OR** 0.063 inch (1.60 mm), **as directed**, thick.
 - 4) Exterior Facing Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - 5) Interior Facing Finish: Manufacturer's standard primer or polyester.
 - b. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin-impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum 1/2-inch (13-mm) cell size.
 - c. Aluminum Honeycomb Core: Manufacturer's standard 0.003-inch- (0.08-mm-) thick, commercial grade aluminum with maximum 3/4-inch (19-mm) cell size.
 - d. Clips: Manufacturer's standard one piece, formed from zinc-coated (galvanized) steel **OR** aluminum-zinc alloy-coated steel **OR** stainless steel, **as directed**.
 - e. Gaskets: Extruded, dry seal silicone.
 - f. Sealant: Manufacturer's standard silicone.
 - g. Panel Thickness: 1.0 inch (25 mm) **OR** 1.25 inches (32 mm) **OR** 2.0 inches (51 mm), **as directed**.
- 4. Framed-Edge, Honeycomb-Core Metal Wall Panels: Formed with flush exterior panel facing and integral, extruded edge members; designed for independent installation by mechanically attaching panels to supports through edge framing using concealed fasteners; with gasketed joints.
 - a. Facings: Fabricate panel with exterior and interior facings of same material and thickness.
 - 1) Material: Zinc-coated (galvanized) steel sheet, 0.028-inch (0.71-mm) nominal thickness.
 - 2) Material: Aluminum sheet, 0.040 inch (1.02 mm) **OR** 0.063 inch (1.60 mm), **as directed**, thick.
 - 3) Exterior Facing Finish: 2-coat fluoropolymer **OR** 3-coat fluoropolymer **OR** 4-coat fluoropolymer **OR** Mica fluoropolymer **OR** Metallic fluoropolymer **OR** FEVE fluoropolymer **OR** Siliconized polyester **OR** Plastisol **OR** Clear anodized **OR** Color anodized, **as directed**.
 - a) Color: As indicated by manufacturer's designations **OR** Match samples **OR** As selected from manufacturer's full range, **as directed**.
 - 4) Interior Facing Finish: Manufacturer's standard primer or polyester.
 - b. Kraft-Paper Honeycomb Core: Manufacturer's standard phenolic-resin-impregnated paper, with not less than 15 percent resin content by weight and chemically treated for fire resistance; with maximum 1/2-inch (13-mm) cell size.
 - c. Aluminum Honeycomb Core: Manufacturer's standard 0.003-inch- (0.08-mm-) thick, commercial grade aluminum with maximum 3/4-inch (19-mm) cell size.

- d. Edge Members: Extruded aluminum, not less than 0.063-inch (1.6-mm) wall thickness.
- e. Gaskets: Extruded, dry seal silicone.
- f. Panel Thickness: 1.0 inch (25 mm) **OR** 2.0 inches (51 mm) **OR** 3.0 inches (76 mm), **as directed**.

H. Accessories

1. Wall Panel Accessories: Provide components required for a complete metal wall panel assembly including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal wall panels unless otherwise indicated.
 - a. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal wall panels.
 - b. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
 - c. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal wall panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.
2. Flashing and Trim: Formed from 0.018-inch- (0.46-mm-) minimum thickness, zinc-coated (galvanized) steel sheet or aluminum-zinc alloy-coated steel sheet prepainted with coil coating. Provide flashing and trim as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal wall panels.

I. Fabrication

1. General: Fabricate and finish metal wall panels and accessories at the factory to greatest extent possible, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.
2. Fabricate metal wall panels in a manner that eliminates condensation on interior side of panel and with joints between panels designed to form weathertight seals.
3. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.
4. Fabricate metal wall panel joints with factory-installed captive gaskets or separator strips that provide a tight seal and prevent metal-to-metal contact, in a manner that will minimize noise from movements within panel assembly.
5. Honeycomb-Core Metal Wall Panels: Fabricate panels using manufacturer's standard thermosetting structural adhesive in a lamination process that bonds panel under minimum 10-psi (69-kPa) pressure. Use of contact adhesives with pinch-roll process is not acceptable.
 - a. Panel Bow Tolerance: Not more than 0.5 percent of panel width or length.
6. Sheet Metal Accessories: Fabricate flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to the design, dimensions, metal, and other characteristics of item indicated.
 - a. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
 - b. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
 - c. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
 - d. Sealed Joints: Form nonexpansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA standards.
 - e. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.

- f. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended by metal wall panel manufacturer.
 - 1) Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

J. General Finish Requirements

- 1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
- 2. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
- 3. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

1.3 EXECUTION

A. Preparation

- 1. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous wall panel support members and anchorages according to ASTM C 754 and metal wall panel manufacturer's written recommendations.

B. Metal Wall Panel Installation, General

- 1. General: Install metal wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels perpendicular to girts and subgirts unless otherwise indicated. Anchor metal wall panels and other components of the Work securely in place, with provisions for thermal and structural movement.
 - a. Commence metal wall panel installation and install minimum of 300 sq. ft. (27.9 sq. m.) in presence of factory-authorized representative.
 - b. Shim or otherwise plumb substrates receiving metal wall panels.
 - c. Flash and seal metal wall panels with weather closures at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until weather barrier and flashings that will be concealed by metal wall panels are installed.
 - d. Install screw fasteners in predrilled holes.
 - e. Locate and space fastenings in uniform vertical and horizontal alignment.
 - f. Install flashing and trim as metal wall panel work proceeds.
 - g. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
 - h. Apply elastomeric sealant continuously between metal base channel (sill angle) and concrete, and elsewhere as indicated or, if not indicated, as necessary for waterproofing.
 - i. Align bottom of metal wall panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
 - j. Provide weathertight escutcheons for pipe and conduit penetrating exterior walls.
- 2. Fasteners:
 - a. Steel Wall Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized steel fasteners for surfaces exposed to the interior.
 - b. Aluminum Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized steel fasteners for surfaces exposed to the interior.
 - c. Copper Wall Panels: Use copper, stainless-steel, or hardware-bronze fasteners.
 - d. Stainless-Steel Wall Panels: Use stainless-steel fasteners.
- 3. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal wall panel manufacturer.

4. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated or, if not indicated, types recommended by metal wall panel manufacturer.
 - a. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
 - b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".

C. Insulated-Core Metal Wall Panel Installation

1. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated-core metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.
 - a. Fasten insulated-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
 - b. Lap ribbed or fluted sheets one full rib corrugation. Apply panels and associated items for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
 - c. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
 - d. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
 - e. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
 - f. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.
 - g. Apply snap-on battens to exposed-fastener, insulated-core metal wall panel seams to conceal fasteners.
2. Foamed-Insulation-Core Metal Wall Panels: Fasten metal wall panels to supports with concealed clips at each joint at location and spacing and with fasteners recommended by manufacturer. Fully engage tongue and groove of adjacent panels.
 - a. Install clips to supports with self-tapping fasteners.
3. Laminated-Insulation-Core Metal Wall Panels:
 - a. Wrapped-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging wrapped panel edges. Install clips to supports with self-tapping fasteners. Seal joints with backer rod and sealant **OR** manufacturer's standard gaskets, **as directed**.
 - b. Wrapped-Edge Panels: Mechanically attach wall panels through extended edge of panels to supports using self-tapping fasteners. Seal joints with backer rod and sealant **OR** manufacturer's standard gaskets, **as directed**.
 - c. Shiplap-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging tongue-and-groove panel edges. Install clips to supports with self-tapping fasteners.
 - 1) Horizontal Joints: Maintain reveal joint of consistent width **OR** Seal joints with backer rod and sealant **OR** Seal joints with manufacturer's standard gaskets, **as directed**.
 - 2) Vertical Joints: Maintain reveal joint of consistent width **OR** Seal joints with backer rod and sealant **OR** Seal joints with manufacturer's standard gaskets, **as directed**.
 - d. Framed-Edge Panels: Mechanically attach wall panels through integral, extruded edge members to supports using self-tapping fasteners. Seal joints with manufacturer's standard gaskets.
4. Honeycomb-Core Metal Wall Panels:
 - a. Wrapped-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging wrapped panel edges. Install clips to supports with self-tapping fasteners. Seal joints with backer rod and sealant **OR** manufacturer's standard gaskets, **as directed**.

- b. Wrapped-Edge Panels: Mechanically attach wall panels through extended edge of panels to supports using self-tapping fasteners. Seal joints with backer rod and sealant **OR** manufacturer's standard gaskets, **as directed**.
 - c. Shiplap-Edge Panels: Mechanically attach wall panels to supports using staggered, concealed side clips engaging tongue-and-groove panel edges. Install clips to supports with self-tapping fasteners.
 - 1) Horizontal Joints: Maintain reveal joint of consistent width **OR** Seal joints with backer rod and sealant **OR** Seal joints with manufacturer's standard gaskets, **as directed**.
 - 2) Vertical Joints: Maintain reveal joint of consistent width **OR** Seal joints with backer rod and sealant **OR** Seal joints with manufacturer's standard gaskets, **as directed**.
 - d. Framed-Edge Panels: Mechanically attach wall panels through integral, extruded edge members to supports using self-tapping fasteners. Seal joints with manufacturer's standard gaskets.
- D. Accessory Installation
 - 1. General: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
 - a. Install components required for a complete metal wall panel assembly including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items.
 - 2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
 - a. Install exposed flashing and trim that is without excessive oil canning, buckling, and tool marks and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to result in waterproof and weather-resistant performance.
 - b. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (605 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).
- E. Field Quality Control
 - 1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
 - 2. Water Penetration: Test areas of installed system indicated on Drawings for compliance with system performance requirements according to ASTM E 1105 at minimum differential pressure of 20 percent of inward-acting, wind-load design pressure as defined by SEI/ASCE 7, but not less than 6.24 lbf/sq. ft. (299 Pa).
 - 3. Water-Spray Test: After completing the installation of 75-foot- (23-m-) by-2-story minimum area of metal wall panel assembly, test assembly for water penetration according to AAMA 501.2 in a 2-bay area directed by the Owner.
 - 4. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect and test completed metal wall panel installation, including accessories.
 - 5. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.
 - 6. Additional tests and inspections, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
- F. Cleaning And Protection
 - 1. Remove temporary protective coverings and strippable films, if any, as metal wall panels are installed unless otherwise indicated in manufacturer's written installation instructions. On

- completion of metal wall panel installation, clean finished surfaces as recommended by metal wall panel manufacturer. Maintain in a clean condition during construction.
2. After metal wall panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.
 3. Replace metal wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

SECTION 07 51 13 00 - CSF BUILT-UP ASPHALT ROOFING**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane is selected as the roofing system.

Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up asphalt roofing membrane, including flashings, and related accessories.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in Article 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - b. ASTM D 2178 - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing
 - c. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - d. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - e. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - f. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - g. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - h. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibered, Asbestos Fibered, and Fibered without Asbestos
 - i. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - j. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the asphalt roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.

3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Asphalt Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP ASPHALT ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified asphalt saturated felts identified in paragraph 2.3A set in hot, fluid applications of asphalt. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Asphalt-saturated Type VI ply felt meeting ASTM D 2178; manufactured by the roofing membrane manufacturer.
- B. Base flashings:

1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D 1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 2.7 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.

2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
1. Size and configuration as necessary to accommodate and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
1. Meeting the requirements of ASTM D 6083.
 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on structural deck types present on the project.

- B. Ensure that the insulation and cover board substrate is installed as specified in Section 072100 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves, snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drip.
- F. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- G. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- H. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- I. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- J. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
 - 1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.

2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and strippings. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of strippings. If necessary, allow strippings time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.
- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079200.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbonded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:
1. Embed aggregate uniformly into a top pour coat of hot and fluid asphalt applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

NOTE TO SPECIFIER

EDIT items in Article 3.11 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
1. Refer to manufacturer requirements and recommendations for installation.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
1. Refer to manufacturer requirements and recommendations for installation.

- H. Roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications, issued: 10/1/2013
 Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 51 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 51 13 00 - R&A BUILT-UP ASPHALT ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up asphalt roofing membrane, including flashings, and related accessories.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076202 – Sheet Metal for Built-Up Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.*

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - b. ASTM D 2178 - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing
 - c. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - d. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - e. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - f. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - g. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - h. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibred, Asbestos Fibred, and Fibred without Asbestos
 - i. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - j. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. **Applicator Qualifications:** A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. **Single Source Responsibility:** Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.

- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the asphalt roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Asphalt Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP ASPHALT ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified asphalt saturated felts identified in paragraph 2.3A set in hot, fluid applications of asphalt. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

NOTE: In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Asphalt-saturated Type VI ply felt meeting ASTM D 2178; manufactured by the roofing membrane manufacturer.
- B. Base flashings:
 - 1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
 - 2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D 1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
 - 1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the

project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:

1. Meeting the requirements of ASTM D 6083.
 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate existing rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves, snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle

to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.

- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drippage.
- F. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- G. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- H. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- I. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- J. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level.

Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
 - 1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.
 - 2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
 - 3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and strippings. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of strippings. If necessary, allow strippings time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies

extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079200.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbanded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:
 1. Embed aggregate uniformly into a top pour coat of hot and fluid asphalt applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in

accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.

- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 - 1. Refer to manufacturer requirements and recommendations for installation.
 - 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
 - 1. Remove and discard existing roof hatch.
 - 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 51 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 51 13 00 - MPF BUILT-UP ASPHALT ROOFING**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane is selected as the roofing system.

Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, hot asphalt-applied four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up asphalt roofing membrane, including flashings, and related accessories.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in Article 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - b. ASTM D 2178 - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing
 - c. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - d. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - e. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - f. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - g. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - h. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibered, Asbestos Fibered, and Fibered without Asbestos
 - i. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - j. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the asphalt roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.

3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Asphalt Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP ASPHALT ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified asphalt saturated felts identified in paragraph 2.3A set in hot, fluid applications of asphalt. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Asphalt-saturated Type VI ply felt meeting ASTM D 2178; manufactured by the roofing membrane manufacturer.
- B. Base flashings:

1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D 1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 2.7 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.

2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
1. Size and configuration as necessary to accommodate and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
1. Meeting the requirements of ASTM D 6083.
 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on structural deck types present on the project.

- B. Ensure that the insulation and cover board substrate is installed as specified in Section 072100 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 - 1. Long-sleeved shirt, buttoned at the cuffs.
 - 2. Long pants without cuffs.
 - 3. Gloves, snug fitting at the cuffs.
 - 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drip.
- F. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- G. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- H. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- I. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- J. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
 - 1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.

2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and strippings. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of strippings. If necessary, allow strippings time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.
- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079200.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbonded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:
1. Embed aggregate uniformly into a top pour coat of hot and fluid asphalt applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

NOTE TO SPECIFIER

EDIT items in Article 3.11 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
1. Refer to manufacturer requirements and recommendations for installation.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
1. Refer to manufacturer requirements and recommendations for installation.

- H. Roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS MPF Specifications, issued: 10/1/2013
 Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 51 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 51 16 00 - R&A BUILT-UP COAL TAR PITCH ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, coal tar pitch four-ply roofing membrane is selected as the roofing system in a roof replacement application.

Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, coal tar pitch four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up coal tar pitch roofing membrane, including flashings, and related accessories.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076202 – Sheet Metal for Built-Up Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.*

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 450 - Standard Specification for Coal-Tar Pitch Used in Roofing, Damp proofing, and Waterproofing
 - b. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - c. ASTM D 227 - Standard Specification for Coal-Tar-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - f. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - g. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - h. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Damp proofing, and Waterproofing
 - i. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibered, Asbestos Fibered, and Fibered without Asbestos
 - j. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - k. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and

warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.

- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the coal tar pitch roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

**NOTE TO SPECIFIER**

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Coal Tar Pitch Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP COAL TAR PITCH ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified coal tar pitch saturated felts identified in paragraph 2.3A set in hot, fluid applications of coal tar pitch. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design*

professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Coal-tar pitch: ASTM D 450, Type I.
- B. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Felt/sheet meeting ASTM D 227; manufactured by the roofing membrane manufacturer.
- B. Base flashings:
 - 1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
 - 2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. Reinforcing sheet (for curb, wall, and re-entry corner reinforcement): Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S. Product type acceptable to the roofing membrane manufacturer.
- E. For use at temporary overnight tie-ins, at as felt/envelope and bleeder material: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
 - 1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:

1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 1. Meeting the requirements of ASTM D 6083.
 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 1. Size and configuration as necessary to accommodate existing rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves snug fitting at the cuffs.
 4. Heavy shoes with high tops.

- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drippage.
- F. Curb, wall, and re-entry corner reinforcement: Apply one ply of polyester reinforcing sheet over the installed 4-ply membrane in an application of hot coal tar pitch before application of aggregate at these locations. Apply the sheet full-width out from the base of the flashing around rooftop openings and overlap the corners. At wall re-entry corners, install the sheet full-width 8-feet down each side overlapping the corner (or full-length down each side if wall is less than 8 feet in

length).

- G. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- H. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- I. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- J. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- K. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
 - 1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.
 - 2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
 - 3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and stripping. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of stripping. If necessary, allow stripping time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.
- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of roofing cement.
 - 3. Install stripping in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079201.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbanded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:

1. Embed aggregate uniformly into a top pour coat of hot and fluid coal-tar pitch applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
 1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations,

- treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer.
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 51 16 00 - CSF BUILT-UP COAL TAR PITCH ROOFING**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, coal tar pitch four-ply roofing membrane is selected as the roofing system.

Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, coal tar pitch four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up coal tar pitch roofing membrane, including flashings, and related accessories.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 450 - Standard Specification for Coal-Tar Pitch Used in Roofing, Damp proofing, and Waterproofing
 - b. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - c. ASTM D 227 - Standard Specification for Coal-Tar-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - f. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - g. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - h. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Damp proofing, and Waterproofing
 - i. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibered, Asbestos Fibered, and Fibered without Asbestos
 - j. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - k. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. **Applicator Qualifications:** A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. **Single Source Responsibility:** Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. **Examine the technical specifications and drawings.** Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the coal tar pitch roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.

3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Coal Tar Pitch Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP COAL TAR PITCH ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified coal tar pitch saturated felts identified in paragraph 2.3A set in hot, fluid applications of coal tar pitch. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

NOTE: In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Coal-tar pitch: ASTM D 450, Type I.
- B. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Felt/sheet meeting ASTM D 227; manufactured by the roofing membrane manufacturer.

- B. Base flashings:
 - 1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
 - 2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. Reinforcing sheet (for curb, wall, and re-entry corner reinforcement): Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S. Product type acceptable to the roofing membrane manufacturer.
- E. For use at temporary overnight tie-ins, at as felt/envelope and bleeder material: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 2.7 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.

- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent

fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drippage.
- F. Curb, wall, and re-entry corner reinforcement: Apply one ply of polyester reinforcing sheet over the installed 4-ply membrane in an application of hot coal tar pitch before application of aggregate at these locations. Apply the sheet full-width out from the base of the flashing around rooftop openings and overlap the corners. At wall re-entry corners, install the sheet full-width 8-feet down each side overlapping the corner (or full-length down each side if wall is less than 8 feet in length).
- G. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- H. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- I. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- J. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- K. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.

- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.
 2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
 3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and stripping. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of stripping. If necessary, allow stripping time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.
- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install stripping in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079201.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbanded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:
1. Embed aggregate uniformly into a top pour coat of hot and fluid coal-tar pitch applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

NOTE TO SPECIFIER

EDIT items in Article 3.11 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.

2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
1. Refer to manufacturer requirements and recommendations for installation.
- G. Replacement roof hatch installation:
1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 51 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 51 16 00 - MPF BUILT-UP COAL TAR PITCH ROOFING**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an aggregate-surfaced, coal tar pitch four-ply roofing membrane is selected as the roofing system.

Per the United States Postal Service Roofing Design Standards, an aggregate-surfaced, coal tar pitch four-ply roofing membrane system is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an aggregate-surfaced built-up coal tar pitch roofing membrane, including flashings, and related accessories.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 450 - Standard Specification for Coal-Tar Pitch Used in Roofing, Damp proofing, and Waterproofing
 - b. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - c. ASTM D 227 - Standard Specification for Coal-Tar-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - f. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - g. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
 - h. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Damp proofing, and Waterproofing
 - i. ASTM D 2824 - Standard Specification for Aluminum-Pigmented Asphalt Roof Coatings, Non-fibered, Asbestos Fibered, and Fibered without Asbestos
 - j. ASTM D 1863 - Standard Specification for Mineral Aggregate Used on Built-Up Roofs
 - k. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. **Applicator Qualifications:** A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. **Single Source Responsibility:** Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. **Examine the technical specifications and drawings.** Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. When the outside temperature is forecast to fall below 32°F (°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 2. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 3. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 4. Refer to the coal tar pitch roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.

3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Built-Up Coal Tar Pitch Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 BUILT-UP COAL TAR PITCH ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of a built-up, four-ply roof system consisting of the specified coal tar pitch saturated felts identified in paragraph 2.3A set in hot, fluid applications of coal tar pitch. Aggregate surfacing shall be applied to the completed roof membrane.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 BITUMEN

- A. Coal-tar pitch: ASTM D 450, Type I.
- B. Asphalt: ASTM D 312, Type III.

2.3 ROOFING FELTS, SHEETS, AND FABRICS

- A. Roofing membrane plies: Felt/sheet meeting ASTM D 227; manufactured by the roofing membrane manufacturer.

- B. Base flashings:
 - 1. Inner ply: Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S.
 - 2. Outer ply: Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type I, Grade G.
 - a. Color: White or light gray; as determined by Owner.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.
- D. Reinforcing sheet (for curb, wall, and re-entry corner reinforcement): Modified bitumen flashing sheet, polyester reinforced, minimum nominal 85 mil thickness; ASTM D 6164, Type I, Grade S. Product type acceptable to the roofing membrane manufacturer.
- E. For use at temporary overnight tie-ins, at as felt/envelope and bleeder material: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.

2.4 ADHESIVES, CEMENTS, PRIMERS AND COATINGS

- A. Roofing and flashing cement: ASTM D 4586, Type I, (summer grade or winter grade as applicable to season).
- B. Modified bitumen cement (For use at granule surfaced flashing sheets and other locations required by the roofing membrane manufacturer): Product compatible with modified bitumen roofing surfacing flashing sheet and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.
- D. Aluminum coating (for flashings): Fibrated aluminum coating; ASTM D 2824, Type III. Product type approved by the roofing membrane manufacturer.

2.5 AGGREGATE

- A. Gravel, ASTM D1863, Size No. 67; clean and dry.
- B. Slag, ASTM D 1863, Size No. 67; clean and dry.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 2.7 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.

- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified.
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent

fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Felt direction: Install roofing membrane felts perpendicular to the roof slope.
- D. Broom or press each ply into place, full width.
- E. Provide non-perforated asphalt organic felt envelopes at perimeter edges, and metal pitch dams at roof openings, and at other locations required by the roofing membrane manufacturer to prevent coal-tar pitch drippage.
- F. Curb, wall, and re-entry corner reinforcement: Apply one ply of polyester reinforcing sheet over the installed 4-ply membrane in an application of hot coal tar pitch before application of aggregate at these locations. Apply the sheet full-width out from the base of the flashing around rooftop openings and overlap the corners. At wall re-entry corners, install the sheet full-width 8-feet down each side overlapping the corner (or full-length down each side if wall is less than 8 feet in length).
- G. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- H. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- I. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- J. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- K. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.

- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations, with the following exceptions/clarifications:
1. Flashing Securement:
 - a. If the flashing substrate is wood or wood nailers are present, secure the flashing top edge with roofing nails and 1-inch metal cap fasteners spaced 6-inches on center, maximum.
 - b. At all other substrates, secure the top edge of flashing with an aluminum anchor bar, secured 12-inches o.c., max., or as recommended by the roofing membrane manufacturer; whichever is less. Refer to Section 076202 for aluminum anchor bar requirements.
 2. Flashing stripping: Use woven glass fabric and roofing cement to seal vertical laps and the flashing top edge of the flashing (including anchor bars, if applicable).
 3. Flashing and stripping coating: Apply the specified aluminum coating over base flashings and stripping. Apply the coating in accordance with the requirements and recommendations of the roofing membrane manufacturer. Ensure that the surface coating is uniform in color and appearance. Do not apply coating during cold weather, or immediately after the application of stripping. If necessary, allow stripping time to "flash off", as recommended by the coating manufacturer.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to hot-air weld seams.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the roofing plies.
- D. Install a lead sheet flashing over the roofing plies in the sump; refer to Section 076202. Prime both sides of the lead sheet prior to installation.
- E. Install two plies of woven glass fabric, each ply set in roofing cement, over the lead flashing sheet.
- F. Ensure that the roofing membrane felts, lead flashing sheet, and woven glass fabric flashing plies extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.
- G. Apply the specified aluminum coating over the roof sump flashings. Apply the coating in accordance with the requirements and recommendations of the coating manufacturer. Ensure that the surface coating is uniform in color and appearance.
- H. Install a roof sump gravel stop as indicated in Section 076202.

3.7 METAL FLASHINGS AND ACCESSORIES

- A. Refer to Section 076202.

3.8 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with roof sump area gravel stops, tubular penetrations, pitch pans and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install stripping in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.9 SEALANTS

- A. Refer to Section 079201.

3.10 AGGREGATE SURFACING

- A. Roofing membrane inspection/repair: Repair all fishmouths, wrinkles, ridges, disbanded or dry membrane laps, or any other defects in the new roof membrane in accordance with the recommendations of the roofing membrane manufacturer prior to the aggregate surfacing application.
- B. Aggregate application:
 1. Embed aggregate uniformly into a top pour coat of hot and fluid coal-tar pitch applied at a rate not less than 70 pounds per square. Apply gravel at the rate of 400 pounds per square. Apply slag at the rate of 300 pounds per square. Ensure that a minimum of half of the aggregate layer is fully adhered in the top pour coat.

NOTE TO SPECIFIER

EDIT items in Article 3.11 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.11 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.

2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
1. Refer to manufacturer requirements and recommendations for installation.
- G. Replacement roof hatch installation:
1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS MPF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 51 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 00 00 - MPF MODIFIED BITUMINOUS MEMBRANE ROOFING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made.

NOTE TO SPECIFIER

Use this section where Modified Bituminous Membrane Roofing is selected as the roofing system.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 52 00 00

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing system.
2. Vapor/Air retarder.[Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and glass mat gypsum board.
4. Modified bituminous SBS (Styrene-Butadiene-Styrene) roofing felts, and cap sheet.
5. Flashing membranes.
6. Accessories.
7. Edge Metal
8. Warranty

B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

C. Related Sections:

1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
2. Section 076200 - Sheet Metal Flashing and Trim: Counter flashings, edge trim, and other sheet metal.
3. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
4. Section 077233 - Roof Hatches: Hatch with integral curb.

1.3 SYSTEM DESCRIPTION

A. DOE Energy Star Modified Bituminous Roofing System: Consisting of Glass Mat Gypsum Roof Board on layered insulation on metal deck with two-ply of hot-mopped felts and cap sheet applied

with Manufacturer's clear or light-colored adhesive. Cap sheet to have factory applied white reflective coating.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:

- a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
- b. Felt materials, base flashing, materials, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
- c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied or mopped insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]

2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.

3. Assurance/Control Submittals:

- a. Certificates: Manufacturer certificate that components and products as a system meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:

- 1) Preparatory inspection.
- 2) Initial inspection.
- 3) Follow-up inspections.
- 4) Final inspection.
- 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.

- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
- 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 105 or 120 or greater pounds per square foot of uplift resistance.

**NOTE TO SPECIFIER**

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

D. Pre-installation Meeting:

1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
2. Require attendance of parties directly affecting work of this Section.
3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

4. Agenda:
 - a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.

- i. Review environmental procedures.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not apply roofing felts during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 - 2. Do not apply roofing felts to wet, damp or frozen deck surface or when precipitation is occurring.
 - 3. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Warranty:
 - 1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof felts and base flashings resulting from defects in materials and workmanship.
 - 2. Warranty Period: [20] [____] years.
 - 3. Warranty shall not exclude "ponding" water.
 - 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Bituminous flashings, including edge metal, metal flashings and accessories supplied by roofing system manufacturer.
 - c. Insulation.
 - d. Asphalt bitumen.
 - e. Fasteners and adhesives.
 - f. Vapor / Air Barrier
 - 5. Include the following additional items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.

- c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
- d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Modified Bituminous Membrane Roofing Specification Section to Warranty.
- 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering roofing systems which may be incorporated into the Work include the following:
 - 1. Barrett Company, Wilmington, DE (800) 647-0100.
 - 2. Certaineed Roofing Products, Valley Forge, PA, (800) 233-8990.
 - 3. Firestone Building Products Company, Carmel, IN (800) 428-4442.
 - 4. GAF Materials Corporation, Wayne, NJ (800) 766-3411.
 - 5. Johns Manville Corporation, Denver, CO (800) 654-3103.
 - 6. MBTechnology, Fresno, CA (800) 621-9281.
 - 7. W.P. Hickman Systems, Incorporated, Solon, OH (440) 248-7760.
 - 8. Tremco Inc., Beachwood OH, (800) 852-6013.
 - 9. Soprema, Inc., Wadsworth, OH, (800) 356- 3521.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 ROOFING FELTS

- A. Ply Felt: ASTM D2178, Manufacturer's recommended asphalt coated fiberglass mat.
- B. Cap Sheet: granule surfaced, fire resistant SBS/SEBS modified bitumen membrane reinforced composite polyester/glass core with a factory applied, white, reflective acrylic coating.
 - 1. Solar reflectance per Cool Roof Rating Council (CRRC):
 - a. Initial reflectance: 0.65, minimum.
 - b. Three years after installation: 0.50, minimum.

2.3 FLASHING MEMBRANE

- A. Base and Wall Flashings: Polyester mat saturated in asphalt and coated on both sides with SBS rubber modified asphalt, with ceramic granule finish surface.

2.4 BITUMINOUS MATERIALS

- A. Modified Asphalt Bitumen: SBS or SEBS Modified Asphalts as recommended by Roofing Manufacturer.

- B. Plastic Cement: ASTM D4586, Type I and II Cutback Asphalt Type, asbestos-free.
 - 1. Non-setting type at horizontal use and between dissimilar materials.
 - 2. Hard setting type at vertical uses.
- C. Asphalt Primer: ASTM D41, asphaltic primer suitable for use with roofing, for application to concrete or masonry surfaces.
- D. Modified Bitumen Flashing Cement: Manufacturer's standard one-part or two-part SBS modified bitumen cement.

2.5 ROOF INSULATION

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 - 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 - 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 - 3. Compressive Strength: 20 PSI Minimum
 - 4. Maximum Board Thickness is 2"
 - 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Cricket and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Cricket and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.6 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

- B. Roofing Fasteners: Galvanized or non-ferrous type, size and configuration as required to suit application.
- C. Mechanical Fasteners for Insulation: Coated fasteners, screw type with plates as specified, appropriate for purpose intended and approved by Factory Mutual and system manufacturer; length required for thickness of insulation materials and penetration of deck substrate.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation or mopped system.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- D. Fibrous Cant and Tapered Edge Strips: High density, asphalt impregnated wood fiber or perlite, location as indicated on Drawings.
- E. Walkway and Isolation Pads: Manufacturer's standard for selected roofing system.

NOTE TO SPECIFIER

Counterflashing over termination bars is strongly recommended by membrane manufacturers.

- F. Termination Bar: Manufacturer's standard 1 inch (25 mm) wide extruded or rolled aluminum bar, pre-punched at 6 inches (15 cm) on center.
- G. Molded Pipe Flashing: Factory molded neoprene base flashing for pipe roof penetrations. Subject to compliance with requirements, provide the following:

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof felts, protect surfaces.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.

- 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.

- F. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.

G. Adhered Installation:

- 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
- 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
- 3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacture's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

- H. Apply no more insulation than can be waterproofed with roofing membrane in same day.

- I. Adhere a single layer of insulation to manufactured metal curbs with modified bitumen flashing cement.

3.4 ROOFING FELTS APPLICATION

- A. Equiviscous Temperature at Point of Application: No more than 25 degrees F from bitumen rating (EVT) indicated on bitumen container label.
- B. Roofing felts shall not be installed over glass mat gypsum board which is wet or has entrapped moisture from shipping which may cause calcination

NOTE TO SPECIFIER

Specific lap dimensions are not included in this Section at request of felts manufacturers since roll sizes vary among manufacturers, particularly in their process of converting to metric system.

- C. Apply roofing felts in accordance with manufacturer's published instructions for specified system.
- D. Apply felts firmly and uniformly, smooth, free from voids, air pockets, wrinkles, fishmouths, lap joints, or tears into hot asphalt applied just before felt at manufacturer's published nominal uniform rate over entire surface. Do not permit foot traffic on freshly mopped felts.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs, two plies in hot asphalt with asphalt glaze coat, at end of day's operation to seal insulation and edge of roof felts from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and felts from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Apply two plies of felt in 23 lbs/sq of hot asphalt with asphalt glaze coat over cutoffs and as recommended by roofing system manufacturer. Plug steel deck flutes under cutoff felts to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof specified system.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Extend membrane felts up cant strips. Apply modified bituminous sheet base flashing in hot asphalt and mechanically fasten top edge in accordance with manufacturer's published instructions.
- B. Roof Penetrations:
- C. Mop in and seal flanges of items penetrating through membrane with modified bituminous flashing.

NOTE TO SPECIFIER

Counterflashing over termination bars is strongly recommended by membrane manufacturers.

- D. Fasten termination bars at 6 inches on center maximum.

NOTE TO SPECIFIER

"Minimum 1 inch gap" is specified between pads since recommended spacing between pads differs among manufacturers.

- E. Walkway Pads: Mop in and seal modified bitumen walkway pads at each rooftop mechanical unit and roof hatch as indicated on Drawings. Provide minimum 1 inch (25 mm) gap between perpendicular pads to allow for positive drainage.
- F. Isolation Pads: Set pads in roofing cement. Install isolation pads at pipe supports as indicated on Drawings.

3.7 ROOF SURFACING

- A. Cap Sheet: Install lapped granulated cap sheet starting at low point of roofing system. Offset laps from laps of preceding ply sheets and align cap sheet without stretching. Lap in direction to shed water. Extend cap sheet over and terminate beyond cants. Minimize exposed adhesive.
- B. Avoid walking on plies until mastic has set

3.8 CONSTRUCTION

A. Interface with Other Work:

1. Overlayered insulation board applied as a second layer with joints offset from bottom layer.
2. Crickets and Saddles: 1/4 inch per foot.
3. Insulation Installed to Counterslope Roof Structure: 1/2 inch per foot, or twice slope of roof.
4. Polyisocyanurate Foam Insulation Fasteners: Metal plate fasteners as approved by roofing system manufacturer.
5. Cant Height: 3 inches (8 cm).
6. Pipe Boots, by Portals Plus, Inc., Bensenville, IL, (800) 774-5240.
7. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
8. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and cant strips, nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
9. Verify deck surfaces are dry and free of water, snow, and ice.
10. Install insulation in strict accordance with Manufacturer's recommended procedures with FM Approved fasteners and plates for specified wind uplift resistance requirements.
11. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
12. Phased installation of roofing felts will not be permitted.
13. Molded Pipe Flashing: Install where configuration of penetration will permit, including but not limited to electrical conduit and plumbing vents.
14. Roof Curbs: Install manufactured roof curbs, specified in Section 077213, where molded pipe flashing cannot be installed due to configuration of penetration.
15. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
16. Phased installation of roofing felts (glaze coating of ply felts) is not permitted.
