17. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
18. Attend and conduct Pre-installation Meeting.
19. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
20. Prepare and submit inspection reports for each inspection made.
21. Attend and conduct Pre-installation Meeting.
22. Perform full-time inspections for roof insulation and roofing system.
23. Prepare and submit inspection reports for each inspection made.
24. Attend and conduct Pre-installation Meeting.
25. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
26. Prepare and submit inspection reports for each inspection made.
27. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
28. Provide one complete set of installation details and manuals that will remain at the installed location.

3.9 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

B. Field Services: Third-Party Roofing Inspector.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

C. Field Services: Full-time Third-Party Roofing Inspector.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

NOTE TO SPECIFIER

End Manufacturer's warranty

E. Maintenance Instruction

1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove bituminous markings from finished surfaces. In areas where finished surfaces are soiled by asphalt or other source of soiling caused by work of this Section, consult manufacturer of surfaces for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS Mail Processing Facility Specification issued: 10/1/2013

Last revised: 3/31/2011

END OF SECTION

SECTION 07 52 00 00 - CSF MODIFIED BITUMINOUS MEMBRANE ROOFING**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing system.
2. Vapor/Air retarder.[Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and glass mat gypsum board.
4. Modified bituminous SBS (Styrene-Butadiene-Styrene) roofing felts, and cap sheet.
5. Flashing membranes.
6. Accessories.
7. Edge Metal

8. Warranty

- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
 - 2. Section 076200 - Sheet Metal Flashing and Trim: Counter flashings, edge trim, and other sheet metal.
 - 3. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
 - 4. Section 077233 - Roof Hatches: Hatch with integral curb.

1.2 REFERENCES

- C. Federal Specification (FS):
 - 1. FS HH-I-1972/2 - Insulation Board, Thermal, Polyurethane or Polyisocyanurate Faced with Asphalt/Organic Felt or Glass Reinforced Fiber Felt on Both Sides of the Foam.

1.3 SYSTEM DESCRIPTION

- A. DOE Energy Star Modified Bituminous Roofing System: Consisting of Glass Mat Gypsum Roof Board on layered insulation on metal deck with two-ply of hot-mopped felts and cap sheet applied with Manufacturer's clear or light-colored adhesive. Cap sheet to have factory applied white reflective coating.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals
 - 1. Product Data:

- a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
- b. Felt materials, base flashing, materials, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
- c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied or mopped insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.
3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer certificate that components and products as a system meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
 - b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty

- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 105 or 120 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

- 1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
- 2. Hail Resistance: [MH] [SH].

- D. Pre-installation Meeting:
1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
 2. Require attendance of parties directly affecting work of this Section.
 3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

4. Agenda:
 - a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.
 - i. Review environmental procedures.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.

- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

A. Environmental Requirements:

1. Do not apply roofing felts during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
2. Do not apply roofing felts to wet, damp or frozen deck surface or when precipitation is occurring.
3. Do not expose materials vulnerable to water or sun damage in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

B. Warranty:

1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof felts and base flashings resulting from defects in materials and workmanship.
2. Warranty Period: [20] [____] years.
3. Warranty shall not exclude "ponding" water.
4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Bituminous flashings, including edge metal, metal flashings and accessories supplied by roofing system manufacturer.
 - c. Insulation.
 - d. Asphalt bitumen.
 - e. Fasteners and adhesives.
 - f. Vapor / Air Barrier
5. Include the following additional items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Modified Bituminous Membrane Roofing Specification Section to Warranty.
6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering roofing systems which may be incorporated into the Work include the following:
 1. Barrett Company, Wilmington, DE (800) 647-0100.
 2. Certaineed Roofing Products, Valley Forge, PA, (800) 233-8990.
 3. Firestone Building Products Company, Carmel, IN (800) 428-4442.
 4. GAF Materials Corporation, Wayne, NJ (800) 766-3411.
 5. Johns Manville Corporation, Denver, CO (800) 654-3103.
 6. MBTechnology, Fresno, CA (800) 621-9281.
 7. W.P. Hickman Systems, Incorporated, Solon, OH (440) 248-7760.
 8. Tremco Inc., Beachwood OH, (800) 852-6013.
 9. Soprema, Inc., Wadsworth, OH, (800) 356- 3521.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 ROOFING FELTS

- A. Ply Felt: ASTM D2178, Manufacturer's recommended asphalt coated fiberglass mat.
- B. Cap Sheet: granule surfaced, fire resistant SBS/SEBS modified bitumen membrane reinforced composite polyester/glass core with a factory applied, white, reflective acrylic coating.
 1. Solar reflectance per Cool Roof Rating Council (CRRC):
 - a. Initial reflectance: 0.65, minimum.
 - b. Three years after installation: 0.50, minimum.

2.3 FLASHING MEMBRANE

- A. Base and Wall Flashings: Polyester mat saturated in asphalt and coated on both sides with SBS rubber modified asphalt, with ceramic granule finish surface.

2.4 BITUMINOUS MATERIALS

- A. Modified Asphalt Bitumen: SBS or SEBS Modified Asphalts as recommended by Roofing Manufacturer.
- B. Plastic Cement: ASTM D4586, Type I and II Cutback Asphalt Type, asbestos-free.
 1. Non-setting type at horizontal use and between dissimilar materials.
 2. Hard setting type at vertical uses.
- C. Asphalt Primer: ASTM D41, asphaltic primer suitable for use with roofing, for application to concrete or masonry surfaces.
- D. Modified Bitumen Flashing Cement: Manufacturer's standard one-part or two-part SBS modified bitumen cement.

2.5 ROOF INSULATION

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 - 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 - 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 - 3. Compressive Strength: 20 PSI Minimum
 - 4. Maximum Board Thickness is 2"
 - 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.6 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.
- B. Roofing Fasteners: Galvanized or non-ferrous type, size and configuration as required to suit application.
- C. Mechanical Fasteners for Insulation: Coated fasteners, screw type with plates as specified, appropriate for purpose intended and approved by Factory Mutual and system manufacturer; length required for thickness of insulation materials and penetration of deck substrate.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation or mopped system.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- D. Fibrous Cant and Tapered Edge Strips: High density, asphalt impregnated wood fiber or perlite, location as indicated on Drawings.
- E. Walkway and Isolation Pads: Manufacturer's standard for selected roofing system.

NOTE TO SPECIFIER

Counterflashing over termination bars is strongly recommended by membrane manufacturers.

- F. Termination Bar: Manufacturer's standard 1 inch (25 mm) wide extruded or rolled aluminum bar, pre-punched at 6 inches (15 cm) on center.
- G. Molded Pipe Flashing: Factory molded neoprene base flashing for pipe roof penetrations. Subject to compliance with requirements, provide the following:

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof felts, protect surfaces.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.

1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.

F. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.

G. Adhered Installation:

1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacture's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

H. Apply no more insulation than can be waterproofed with roofing membrane in same day.

I. Adhere a single layer of insulation to manufactured metal curbs with modified bitumen flashing cement.

3.4 ROOFING FELTS APPLICATION

A. Equiviscous Temperature at Point of Application: No more than 25 degrees F from bitumen rating (EVT) indicated on bitumen container label.

B. Roofing felts shall not be installed over glass mat gypsum board which is wet or has entrapped moisture from shipping which may cause calcination

NOTE TO SPECIFIER

Specific lap dimensions are not included in this Section at request of felts manufacturers since roll sizes vary among manufacturers, particularly in their process of converting to metric system.

C. Apply roofing felts in accordance with manufacturer's published instructions for specified system.

D. Apply felts firmly and uniformly, smooth, free from voids, air pockets, wrinkles, fishmouths, lap joints, or tears into hot asphalt applied just before felt at manufacturer's published nominal uniform rate over entire surface. Do not permit foot traffic on freshly mopped felts.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

A. Install water cut-offs, two plies in hot asphalt with asphalt glaze coat, at end of day's operation to seal insulation and edge of roof felts from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and felts from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.

B. Apply two plies of felt in 23 lbs/sq of hot asphalt with asphalt glaze coat over cutoffs and as recommended by roofing system manufacturer. Plug steel deck flutes under cutoff felts to prevent moisture from getting under insulation.

- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof specified system.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Extend membrane felts up cant strips. Apply modified bituminous sheet base flashing in hot asphalt and mechanically fasten top edge in accordance with manufacturer's published instructions.
- B. Roof Penetrations:
- C. Mop in and seal flanges of items penetrating through membrane with modified bituminous flashing.

NOTE TO SPECIFIER

Counterflashing over termination bars is strongly recommended by membrane manufacturers.

- D. Fasten termination bars at 6 inches on center maximum.

NOTE TO SPECIFIER

"Minimum 1 inch gap" is specified between pads since recommended spacing between pads differs among manufacturers.

- E. Walkway Pads: Mop in and seal modified bitumen walkway pads at each rooftop mechanical unit and roof hatch as indicated on Drawings. Provide minimum 1 inch (25 mm) gap between perpendicular pads to allow for positive drainage.
- F. Isolation Pads: Set pads in roofing cement. Install isolation pads at pipe supports as indicated on Drawings.

3.7 ROOF SURFACING

- A. Cap Sheet: Install lapped granulated cap sheet starting at low point of roofing system. Offset laps from laps of preceding ply sheets and align cap sheet without stretching. Lap in direction to shed water. Extend cap sheet over and terminate beyond cants. Minimize exposed adhesive.
- B. Avoid walking on plies until mastic has set

3.8 CONSTRUCTION

- A. Interface with Other Work:
 1. Overlayered insulation board applied as a second layer with joints offset from bottom layer.
 2. Crickets and Saddles: 1/4 inch per foot.
 3. Insulation Installed to Counterslope Roof Structure: 1/2 inch per foot, or twice slope of roof.
 4. Polyisocyanurate Foam Insulation Fasteners: Metal plate fasteners as approved by roofing system manufacturer.
 5. Cant Height: 3 inches (8 cm).
 6. Pipe Boots, by Portals Plus, Inc., Bensenville, IL, (800) 774-5240.

7. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
8. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and cant strips, nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
9. Verify deck surfaces are dry and free of water, snow, and ice.
10. Install insulation in strict accordance with Manufacturer's recommended procedures with FM Approved fasteners and plates for specified wind uplift resistance requirements.
11. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
12. Phased installation of roofing felts will not be permitted.
13. Molded Pipe Flashing: Install where configuration of penetration will permit, including but not limited to electrical conduit and plumbing vents.
14. Roof Curbs: Install manufactured roof curbs, specified in Section 077213, where molded pipe flashing cannot be installed due to configuration of penetration.
15. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
16. Phased installation of roofing felts (glaze coating of ply felts) is not permitted.
17. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
18. Attend and conduct Pre-installation Meeting.
19. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
20. Prepare and submit inspection reports for each inspection made.
21. Attend and conduct Pre-installation Meeting.
22. Perform full-time inspections for roof insulation and roofing system.
23. Prepare and submit inspection reports for each inspection made.
24. Attend and conduct Pre-installation Meeting.
25. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
26. Prepare and submit inspection reports for each inspection made.
27. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
28. Provide one complete set of installation details and manuals that will remain at the installed location.

3.9 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

B. Field Services: Third-Party Roofing Inspector.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

C. Field Services: Full-time Third-Party Roofing Inspector.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

NOTE TO SPECIFIER

End Manufacturer's warranty

E. Maintenance Instruction

1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove bituminous markings from finished surfaces. In areas where finished surfaces are soiled by asphalt or other source of soiling caused by work of this Section, consult manufacturer of surfaces for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS CSF Specification issued: 10/1/2013

Last revised: 4/19/2011

END OF SECTION 07 52 00 00

SECTION 07 52 13 00 - R&A APP MODIFIED BITUMEN ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied APP (Atactic Polupropylene) modified bitumen roofing membrane is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standards, a cold-applied APP (Atactic Polupropylene) modified bitumen roofing system is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of APP (Atactic Polupropylene) modified bitumen roofing membrane, including flashings, DOE Energy Star compliant reflective surfacing, and related accessories.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076203 – Sheet Metal for Modified Bitumen Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is*

specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3B:

1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.*
2. *If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3B.*

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for application of a reflective white coating over the installed modified bitumen roof system as specified within Articles 2.4 and 3.4 of this Section.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6222 - Standard Specification for Atactic Polypropylene (APP) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - b. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - c. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - d. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
 - e. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 2. Factory Mutual Global (FM)
 3. Underwriters Laboratories (UL)
 4. National Roofing Contractors Association (NRCA)
 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install APP modified bitumen roofing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the APP modified bitumen roofing manufacturer and NRCA requirements and

recommendations for additional cold weather application recommendations and restrictions.

- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE an alternate price for from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record APP Modified Bitumen Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an APP surfacing ply over an APP base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B. The

completed system shall have a combined minimum thickness of 300 mils.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply:
 - 1. Modified bitumen base sheet, glass fiber reinforced, minimum nominal 140 mil thickness; ASTM D 6222, Type I.
- B. Surfacing ply:
 - 1. Modified bitumen granule-surfaced surfacing sheet, fire-resistant, triple reinforced (polyester and glass fiber), minimum nominal 160 mil thickness; ASTM D 6222, Type I.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base flashing ply:
 - 1. Modified bitumen base sheet, glass fiber reinforced, minimum nominal 140 mil thickness; ASTM D 6222, Type I.
- B. Surfacing flashing ply:
 - 1. Modified bitumen granule-surfaced surfacing sheet, fire-resistant, triple reinforced (polyester and glass fiber), minimum nominal 160 mil thickness; ASTM D 6222, Type I.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Two options are available for Article 2.4:

- 1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.*
- 2. *If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.*

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following product is acceptable to achieve this requirement:
 - 1. Use of the specified surfacing plies meeting the requirements identified in Article 2.1, 2.2 and 2.3, and a field-applied acrylic elastomeric coating applied to the finished APP modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 - 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 - 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Cold adhesive: Product approved by the roofing membrane manufacturer.
- B. Flashing cement and roofing cement: Product compatible with APP Modified bitumen roofing and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING FELTS

- A. For use at temporary overnight tie-ins: Modified bitumen base sheet, glass fiber reinforced, minimum nominal 140 mil thickness; ASTM D 6222, Type I.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.

- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
 - 1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The

Pate Company, Lombard, IL, or approved equal.

1. Size and configuration as necessary to accommodate existing rooftop unit.
2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end

of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.

- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- J. Fire watch: Per local codes, provide a fire watch after completion of daily work.

3.3 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.

NOTE TO SPECIFIER

Hot-air welding of flashing base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work.

NOTE TO SPECIFIER

Two options are available for Article 3.4:

1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.*
2. *If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.4.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.4 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue,

treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).

- a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
- b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
- c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
- d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
- e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.5. If liquid-applied flashing is not required for this project, DELETE Article 3.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.5 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 3. Apply the base coat of liquid applied flashing to the substrate.
 4. Install required reinforcing mesh into the base coat.
 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing membrane base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.7 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of modified bitumen flashing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.8 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:

1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 52 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 15 00 - R&A MB SURFACING PLY OVER BUR ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied or hot-asphalt applied SBS (Styrene-Butadiene-Styrene) modified bitumen surfacing ply over a hot asphalt-applied three-ply built-up roofing membrane is selected as the roofing system in a roof replacement application. For cold-applied SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membranes, use Section 075216 – SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE. For hot asphalt-applied SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membranes, use Section 075217 – SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT.

Per the United States Postal Service Roofing Design Standards, a cold-applied or hot-asphalt applied SBS (Styrene-Butadiene-Styrene) modified bitumen surfacing ply over a hot asphalt-applied three-ply built-up roofing membrane is an acceptable roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of an SBS (Styrene-Butadiene-Styrene) surfacing ply over a three-ply built-up roofing membrane, including flashings, DOE Energy Star compliant reflective surfacing, and related accessories.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076203 – Sheet Metal for Modified Bitumen Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.
2. If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3B:

1. If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; **DELETE** Article 1.3B from the list below.
2. If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3B.

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. *Re-letter/number items after editing, if necessary.*

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for application of a reflective white coating over the installed modified bitumen roof system as specified within Articles 2.4 and 3.6 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. If an SBS modified bitumen ply conforming to ASTM D 6164 is chosen as the surfacing ply for the system, **DELETE** "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.
2. If an SBS modified bitumen ply conforming to ASTM D 6162 is chosen as the surfacing ply for the system, **DELETE** "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 2178 - Standard Specification for Asphalt Glass Felt Used in Roofing and Waterproofing
 - b. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - c. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - d. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - e. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing

- f. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
- g. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
- h. ASTM D 4586 - Standard Specification for Asphalt Roof Cement, Asbestos-Free
- i. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover

insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 4. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 5. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.

4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record MB Surfacing Ply over BUR Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over a three-ply asphalt built-up roof membrane, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 ASPHALT BUILT-UP ROOFING MEMBRANE AND SBS MB SURFACING PLY

- A. Three-ply built up roof membrane:
1. Roofing membrane plies: Asphalt-saturated Type VI ply felt meeting ASTM D 2178; manufactured by the roofing membrane manufacturer.

NOTE TO SPECIFIER

Two options are listed below:

1. Article 2.2B: A surfacing ply utilizing a polyester-reinforced surfacing ply (ASTM D 6164, Type II).
2. Article 2.2C: A surfacing ply utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the surfacing ply desired from the list above. Choose one surfacing ply only. EDIT the list below, leaving one surfacing ply, based on the two options listed above. DELETE the sub-paragraph containing references to the surfacing ply that is not chosen. Re-letter/number paragraphs and sub-paragraphs after editing.

- B. Surfacing ply ("A" System):
 - 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Surfacing ply ("B" System):
 - 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Two options are listed below within Article 2.3:

- 1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).
- 2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type II) and surfacing ply (ASTM D 6162, Type II).

Per discussions between the designer and USPS Project Manager, determine the flashing system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. Re-letter/number paragraphs and sub-paragraphs after editing.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
 - 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 - 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 - 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 - 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

- 1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a

reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.

2. *If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.*
3. *If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.*
4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.*

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

NOTE TO SPECIFIER

If surfacing ply is applied using cold adhesive, do not edit Article 2.4. If surfacing ply is to be applied using hot asphalt, DELETE paragraph 2.4B. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Asphalt: ASTM D 312, Type III.
- B. Cold adhesive: Product approved by the roofing membrane manufacturer.
- C. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.
- D. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING FELTS

- A. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.

- E. Pre-fabricated plumbing vent pipe extensions:
 - 1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 1. Long-sleeved shirt, buttoned at the cuffs.
 2. Long pants without cuffs.
 3. Gloves, snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified (if Applicable).
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer,

using the manufacturer's current printed instructions.

- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of base and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.
- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.6:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.
2. If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.6.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.6A.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.6A.

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.6 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
 1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.

- d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
- e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.7. If liquid-applied flashing is not required for this project, DELETE Article 3.7. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.7 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 - 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 - 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - 3. Apply the base coat of liquid applied flashing to the substrate.
 - 4. Install required reinforcing mesh into the base coat.
 - 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 - 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.8 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.9 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of modified bitumen flashing cement.

3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.10 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
 1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).

2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

*Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to **black text**. Review the footer information with the USPS Project Manager for accuracy.*

END OF SECTION 07 52 15 00

SECTION 07 52 16 00 - CSF SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075217 – SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT.

Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in cold adhesive is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in cold adhesive, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is*

CSF SBS MODIFIED BITUMEN ROOFING IN COLD

specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3.B:

1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.*
2. *If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3.B.*

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for a completed roof system with a DOE Energy Star compliant reflective surfacing over the installed modified bitumen roof system as specified within Articles 2.4 and 3.4 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. *If an "A" System is chosen, DELETE "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.*
2. *If a "B" System is chosen, DELETE "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing

- f. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen in Cold Adhesive Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).
2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply ("A" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a

reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 - 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 - 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 - 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Cold adhesive: Product approved by the roofing membrane manufacturer.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING SHEETS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins: Specified modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

NOTE TO SPECIFIER

EDIT items in Article 2.9 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.

- b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1.B below. For roof areas consisting of an underlying wood deck, include Section 072222 within paragraph 3.1.B below. For roof areas consisting of an underlying steel deck, include Section 072223 within paragraph 3.1.B below.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.3 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.4:

1. *If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a*

- reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.*
2. *If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.4.*
 3. *If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.4A.*
 4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.4A.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.4 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
 1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
 - e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.5. If liquid-applied flashing is not required for this project, DELETE Article 3.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.5 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 - 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 - 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - 3. Apply the base coat of liquid applied flashing to the substrate.
 - 4. Install required reinforcing mesh into the base coat.
 - 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 - 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.7 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of roofing cement.
 - 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 3.8 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.8 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- G. Replacement roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

*Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to **black** text. Review the footer information with the USPS Project Manager for accuracy.*

END OF SECTION 07 52 16 00

SECTION 07 52 16 00 - MPF SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075217 – SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT.

Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in cold adhesive is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in cold adhesive, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076200 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is*

MPF SBS MODIFIED BITUMEN ROOFING IN COLD

specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3.B:

1. *If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.*
2. *If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3.B.*

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for a completed roof system with a DOE Energy Star compliant reflective surfacing over the installed modified bitumen roof system as specified within Articles 2.4 and 3.4 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. *If an "A" System is chosen, DELETE "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.*
2. *If a "B" System is chosen, DELETE "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing

- f. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen in Cold Adhesive Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).
2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply ("A" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a

reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 - 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 - 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 - 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Cold adhesive: Product approved by the roofing membrane manufacturer.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING SHEETS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins: Specified modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

NOTE TO SPECIFIER

EDIT items in Article 2.9 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 - 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 - 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 - 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.

- b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1.B below. For roof areas consisting of an underlying wood deck, include Section 072222 within paragraph 3.1.B below. For roof areas consisting of an underlying steel deck, include Section 072223 within paragraph 3.1.B below.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.3 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.4:

1. *If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a*

- reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE “(ALTERNATE WORK)” from the Article title.*
2. *If an “A System” is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.4.*
 3. *If a “B System” is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE “(ALTERNATE WORK)” from the Article title. DELETE paragraph 3.4A.*
 4. *If a “B System” is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.4A.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.4 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
 1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
 - e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.5. If liquid-applied flashing is not required for this project, DELETE Article 3.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.5 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 - 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 - 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - 3. Apply the base coat of liquid applied flashing to the substrate.
 - 4. Install required reinforcing mesh into the base coat.
 - 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 - 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.7 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of roofing cement.
 - 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 3.8 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.8 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- G. Replacement roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS MPF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

*Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to **black** text. Review the footer information with the USPS Project Manager for accuracy.*

END OF SECTION 07 52 16 00

SECTION 07 52 16 00 - R&A SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system in a roof replacement application. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075217 – SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT.

Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in cold adhesive is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in cold adhesive, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076203 – Sheet Metal for Modified Bitumen Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.
2. If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3B:

1. If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.
2. If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3B.

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for application of a reflective white coating over the installed modified bitumen roof system as specified within Articles 2.4 and 3.4 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. If an "A" System is chosen, DELETE "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.
2. If a "B" System is chosen, DELETE "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - d. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing

- e. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
- f. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen in Cold Adhesive Specification Section to Warranty.

R&A SBS MODIFIED BITUMEN ROOFING IN COLD

- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply

(ASTM D 6164, Type II).

2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply ("A" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

**NOTE TO SPECIFIER**

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; **DELETE** "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; **DELETE** "(ALTERNATE)" from the Article title. **DELETE** sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. **DELETE** sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, **DELETE** Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.

- B. Reinforcing fabric:
 - 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Cold adhesive: Product approved by the roofing membrane manufacturer.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Article 2.7:

- 1. *For "A" Systems, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).*
- 2. *For "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type II) and surfacing ply (ASTM D 6162, Type II).*

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one ply sheet only. EDIT the list below, leaving one ply sheet for use as a temporary overnight tie-in sheet, based on the specified systems listed above. Do not edit paragraph 2.7C. Re-letter/number paragraphs and sub-paragraphs after editing.

2.8 ROOFING SHEETS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins ("A" System): Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. For use at temporary overnight tie-ins ("B" System): Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type II, Grade S.
- C. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.

2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:
1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
1. Meeting the requirements of ASTM D 6083.
 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate existing rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.

4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base ply and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level.

Remove any roof replacement related debris from the ground.

- J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.3 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.4:

1. *If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.*
2. *If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.4.*
3. *If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.4A.*
4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.4A.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.4 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:

1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
 - e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.5. If liquid-applied flashing is not required for this project, DELETE Article 3.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.5 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 3. Apply the base coat of liquid applied flashing to the substrate.
 4. Install required reinforcing mesh into the base coat.
 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.

6. At horizontal surfaces, broadcast granules over the completed flashing.

3.6 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.7 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.8 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.

3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
 1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- K. Installation of equipment support curbs:
 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013
 Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 52 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 17 00 - CSF SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075216 – SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE. Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in hot asphalt is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in hot asphalt, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076203 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*

CSF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

2. If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3.B:

1. If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.
2. If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3.B.

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for a completed roof system with a DOE Energy Star compliant reflective surfacing over the installed modified bitumen roof system as specified within Articles 2.4 and 3.6 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. If an "A" is chosen, DELETE "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.
2. If a "B" System is chosen, DELETE "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - d. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - e. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing

- f. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
- g. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 4. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 5. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen Roofing in Hot Asphalt Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a

reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

NOTE: In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).
2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply ("A" System):

CSF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per

the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.*

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Asphalt: ASTM D 312, Type III.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.

- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING FELTS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

NOTE TO SPECIFIER

EDIT items in Article 2.9 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.

- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1.B below. For roof areas consisting of an underlying wood deck, include Section 072222 within paragraph 3.1.B below. For roof areas consisting of an underlying steel deck, include Section 072223 within paragraph 3.1.B below.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 - 1. Long-sleeved shirt, buttoned at the cuffs.
 - 2. Long pants without cuffs.

3. Gloves, snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified (if Applicable).
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams.

- Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
 - F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
 - G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
 - H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
 - I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
 - J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.
- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.6:

1. *If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.*
2. *If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.6.*
3. *If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a*

CSF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.6A.

4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.6A.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.6 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
 - e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.7. If liquid-applied flashing is not required for this project, DELETE Article 3.7. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.7 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 3. Apply the base coat of liquid applied flashing to the substrate.
 4. Install required reinforcing mesh into the base coat.
 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.8 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.9 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 2. Set flange in a full bed of roofing cement.
 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 3.10 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.10 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of

CSF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

one fastener every 12-inches o.c.

- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- G. Roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 52 17 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 17 00 - MPF SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT**

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075216 – SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE. Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in hot asphalt is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in hot asphalt, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 072100 – Thermal Insulation
- D. Section 076203 – Sheet Metal Flashings and Trim
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*

MPF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

2. If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3.B:

1. If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; DELETE Article 1.3B from the list below.
2. If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3.B.

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number items after editing, if necessary.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for a completed roof system with a DOE Energy Star compliant reflective surfacing over the installed modified bitumen roof system as specified within Articles 2.4 and 3.6 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. If an "A" is chosen, DELETE "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.
2. If a "B" System is chosen, DELETE "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - d. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - e. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing

- f. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing
- g. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 4. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 5. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen Roofing in Hot Asphalt Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 - 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a

reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

NOTE: In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply (ASTM D 6164, Type II).
2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

- A. Base ply ("A" System):

MPF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

- A. Base ply ("A" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.
- B. Surfacing ply ("A" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.
- C. Base ply ("B" System):
 1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.
- D. Surfacing ply ("B" System):
 1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per

the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.*

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:
 1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Asphalt: ASTM D 312, Type III.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.

- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING FELTS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

NOTE TO SPECIFIER

EDIT items in Article 2.9 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.

- F. Roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. Edit required Section references based on existing structural deck types present on the project. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1.B below. For roof areas consisting of an underlying wood deck, include Section 072222 within paragraph 3.1.B below. For roof areas consisting of an underlying steel deck, include Section 072223 within paragraph 3.1.B below.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221, 072222 and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 - 1. Long-sleeved shirt, buttoned at the cuffs.
 - 2. Long pants without cuffs.

3. Gloves, snug fitting at the cuffs.
 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified (if Applicable).
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams.

- Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
 - F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
 - G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
 - H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
 - I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
 - J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.
- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.6:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.
2. If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.6.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a

MPF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.6A.

4. *If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.6A.*

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.6 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
 1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.
 - e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.7. If liquid-applied flashing is not required for this project, DELETE Article 3.7. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.7 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 - 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 - 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - 3. Apply the base coat of liquid applied flashing to the substrate.
 - 4. Install required reinforcing mesh into the base coat.
 - 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 - 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.8 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.9 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of roofing cement.
 - 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

NOTE TO SPECIFIER

EDIT items in Article 3.10 to reflect actual project conditions and requirements. Re-letter/number paragraphs and sub-paragraphs after editing.

3.10 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install mechanical ventilator units in position and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of

MPF SBS MODIFIED BITUMEN ROOFING IN HOT
ASPHALT**

one fastener every 12-inches o.c.

- B. Connect all electrical, plumbing, gas line and ventilation connections required for mechanical units. Retain a qualified, licensed electrical subcontractor to connect electrical equipment. Retain a qualified, licensed mechanical subcontractor to connect gas lines and ventilation connections.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- G. Roof hatch installation:
 - 1. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 2. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS MPF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 52 17 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 52 17 00 - R&A SBS MODIFIED BITUMEN ROOFING IN HOT ASPHALT

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where a cold-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membrane is selected as the roofing system in a roof replacement application. For hot-applied SBS (Styrene-Butadiene-Styrene) Modified Bitumen Roofing Membranes, use Section 075216 – SBS MODIFIED BITUMEN ROOFING IN COLD ADHESIVE.

Per the United States Postal Service Roofing Design Standards, an SBS modified bitumen roofing system applied in hot asphalt is a recommended roofing system over facilities with a Critical or Non-Critical building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of SBS (Styrene-Butadiene-Styrene) modified bitumen roofing membrane and flashings in hot asphalt, DOE Energy Star compliant reflective surfacing, related accessories, and warranty and guarantee requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076203 – Sheet Metal for Modified Bitumen Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*

2. If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.

Re-letter/number items after editing.

NOTE TO SPECIFIER

Two options are available for paragraph 1.3B:

1. If the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal Cost; **DELETE** Article 1.3B from the list below.
2. If the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit paragraph 1.3B.

Per discussions between the designer and USPS Project Manager, determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. *Re-letter/number items after editing, if necessary.*

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.
- B. Provide an alternate price for application of a reflective white coating over the installed modified bitumen roof system as specified within Articles 2.4 and 3.6 of this Section.

NOTE TO SPECIFIER

EDIT Article 1.4 – REFERENCES below, based on the system specified:

1. If an "A" is chosen, **DELETE** "ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements" from the reference list.
2. If a "B" System is chosen, **DELETE** "ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements" from the reference list.

Re-letter/number paragraphs and sub-paragraphs after editing.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6162 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using a Combination of Polyester and Glass Fiber Reinforcements
 - b. ASTM D 6164 - Standard Specification for Styrene Butadiene Styrene (SBS) Modified Bituminous Sheet Materials Using Polyester Reinforcements
 - c. ASTM D 312 - Standard Specification for Asphalt Used in Roofing
 - d. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing
 - e. ASTM D 41 - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - f. ASTM D 1668 - Standard Specification for Glass Fabrics (Woven and Treated) for Roofing and Waterproofing

- g. ASTM D 1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
- 2. Factory Mutual Global (FM)
- 3. Underwriters Laboratories (UL)
- 4. National Roofing Contractors Association (NRCA)
- 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp. Store roll materials standing on end.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store

materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install SBS modified bitumen roofing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. When applying hot asphalt, reduce mop lead distance to 2-feet or less.
 - 4. If a minimum asphalt temperature of 420°F (216°C) cannot be maintained at the point of application, discontinue work.
 - 5. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
- 2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
- 3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - 1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 - 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record SBS Modified Bitumen Roofing in Hot Asphalt Specification Section to Warranty.

- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 MODIFIED BITUMEN ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of an SBS surfacing ply over an SBS base ply, meeting or exceeding the requirements listed in paragraphs 2.2A and 2.2B.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.
- D. Acceptable roofing membrane manufacturers include those manufacturing both a modified bitumen base ply and surfacing ply meeting the requirements listed in Articles 2.2 and 2.3. Roofing membrane manufacturers offering a surfacing ply meeting the requirements listed in Articles 2.2 and 2.3, but not offering a base ply meeting the requirement are acceptable with the following restrictions:
1. The submitted system shall include a base ply meeting the requirements of ASTM D 6164, Type II, Grade S.
 2. A letter, signed by authorized representatives of the modified bitumen surfacing ply and base ply manufacturers, indicating the completed system meets the requirements listed in Article 2.1., shall be submitted to the Owner for review.
 3. The completed system shall be capable of meeting the warranty and guarantee requirements outlined in Article 1.9. The total system warranty described shall be the responsibility of a single roofing supplier/manufacturer.

NOTE TO SPECIFIER

Two options are listed below within Articles 2.2 and 2.3:

1. An "A" System, utilizing a polyester-reinforced base ply (ASTM D 6164, Type II) and surfacing ply

(ASTM D 6164, Type II).

2. A "B" System, utilizing a dual-reinforced base sheet, with both glass fiber and polyester reinforcement (ASTM D 6162, Type III) and surfacing ply (ASTM D 6162, Type III).

Per discussions between the designer and USPS Project Manager, determine the system desired from the list above. Choose one system only. Edit the list below, leaving one base and surfacing ply for the MB roofing membrane and flashing system, based on the systems listed above. *Re-letter/number paragraphs and sub-paragraphs after editing.*

2.2 MODIFIED BITUMEN ROOFING MEMBRANE

A. Base ply ("A" System):

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.

B. Surfacing ply ("A" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

C. Base ply ("B" System):

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.

D. Surfacing ply ("B" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

2.3 MODIFIED BITUMEN ROOFING FLASHING

A. Base ply ("A" System):

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 115 mil thickness; ASTM D 6164, Type II, Grade S.

B. Surfacing ply ("A" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 130 mil thickness; ASTM D 6164, Type II, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

C. Base ply ("B" System):

1. Modified bitumen base sheet, polyester reinforced, minimum nominal 130 mil thickness; ASTM D 6162, Type III, Grade S.

D. Surfacing ply ("B" System):

1. Modified bitumen granule-surfaced surfacing sheet, polyester reinforced, fire-rated, minimum nominal 160 mil thickness; ASTM D 6162, Type III, Grade G.
 - a. Color: White, or as determined by Owner.
 - b. Initial Solar Reflectance: 0.26 or greater.

NOTE TO SPECIFIER

Four options are available for Article 2.4:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title.
2. If an "A System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 2.4.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per the USPS Roofing Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE)" from the Article title. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE sub-paragraphs 2.4.A.1 and 2.4.A.2, and the word "other" from sub-paragraph 2.4.A.3.

Determine the required outcome from the list above. Choose one option only. EDIT the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

2.4 DOE ENERGY STAR INITIAL SOLAR REFLECTANCE REQUIREMENT (ALTERNATE)

- A. Provide a completed roofing system approved by the roofing membrane manufacturer, and meeting the Initial Solar Reflectance requirement of 0.65, minimum, as required by DOE Energy Star. The following products are acceptable to achieve this requirement:
 1. Surfacing plies, used in lieu of those identified within paragraphs 2.2.B and 2.3.B:
 - a. Firestone "SBS Premium UltraWhite" surfacing ply, manufactured by Firestone Building Products, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 - b. JM "Dynalastic 250 FR CR" surfacing ply, manufactured by Johns Manville, as the specified roofing membrane and flashing surfacing ply identified in paragraphs 2.2.B and 2.3.B.
 2. Acrylic elastomeric coating, applied over surfacing plies identified within paragraphs 2.2.B and 2.3.B:
 - a. Use of surfacing plies meeting the requirements identified in Articles 2.2 and 2.3 of this Section, and a field-applied acrylic elastomeric coating applied to the finished SBS modified bitumen roofing membrane and flashing surfacing ply. The coating shall be approved for the use specified by the roofing membrane and coating manufacturers.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 2.5. If liquid-applied flashing is not required for this project, DELETE Article 2.5. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

2.5 LIQUID-APPLIED FLASHING

- A. Base and top coats:
 1. Single or dual component, moisture-cured. Product approved by the roofing membrane manufacturer for use in the specified configuration.
- B. Reinforcing fabric:

1. Polyester-reinforced fabric. Product approved by the roofing membrane manufacturer for use in the specified configuration.

2.6 ADHESIVES, CEMENTS AND PRIMERS

- A. Asphalt: ASTM D 312, Type III.
- B. Flashing cement and roofing cement: Product compatible with SBS Modified bitumen roofing and approved by the roofing membrane manufacturer.
- C. Asphalt primer: ASTM D 41.

2.7 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.8 ROOFING FELTS FOR TEMPORARY TIE-INS

- A. For use at temporary overnight tie-ins: Asphalt-saturated organic felt, No. 15, non-perforated, ASTM D 226, Type 1.
- B. For use at roof sump flashings and elsewhere as may be indicated: Asphalt treated woven glass fabric, ASTM D 1668, Type I.

2.9 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.
 2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
 1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
 1. For use where necessary to achieve the 8-inch minimum flashing height:

- a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Self-adhering membrane (for use over parapet walls beneath coping caps, and at other locations indicated on the drawings): Product approved for use beneath sheet metal by the membrane manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- G. Replacement roof hatch:
 - 1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- H. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 - 2. Product approved by the roofing manufacturer for this application.
- I. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 6083.
 - 2. White color.
- J. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
 - 1. Size and configuration as necessary to accommodate existing rooftop unit.
 - 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 - 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 - 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within the paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221

and 072223 are suitable to receive roofing membrane materials.

3.2 BITUMEN KETTLE OPERATION

- A. Operator Preparation – Kettle operation requires an individual who is trained in the use of such equipment and use of the kettle requires a designate operator who will remain at the kettle during its use. Under no circumstance shall the kettle be unmanned. Never allow any untrained person to operate the kettle. Kettle temperature shall be recorded a minimum of twice per day.
- B. Kettle operator must be dressed accordingly; including, but not limited to, the following items:
 - 1. Long-sleeved shirt, buttoned at the cuffs.
 - 2. Long pants without cuffs.
 - 3. Gloves, snug fitting at the cuffs.
 - 4. Heavy shoes with high tops.
- C. Site Preparation – The kettle should be located close enough to the building to allow for proper setup of thin-wall tubing. Care must be taken to protect building, by use of tarpaulins. However, be aware of the possible hazards from locating too close, such as splashing of asphalt or the spread of fire.
- D. Avoid locating kettle near openings and air intakes on the building to lessen the effect of fumes on the people inside.
- E. Select a clear, level area with firm ground. Locate kettle away from all flammable materials and away from all electrical lines. Chock wheels front and back when kettle is in operation. Make sure the kettle is level and stable from rocking. Place non-flammable material underneath kettle to protect the ground from spillage. Set up a warning line system around the entire kettle working area. Keep unauthorized people away from the area. If LP fuel is being used, secure the cylinder(s) so that it cannot tip over. Locate cylinder(s) at least ten feet from the burners. Keep all fuel upwind from the kettle and away from open flames. Place asphalt to be used for the day in a location convenient for loading the kettle.
- F. Ground protection (plywood and EPDM membrane) is required at kettle site. Comply with all Local Fire Codes or requirements set forth by Local Fire Marshall.

3.3 BITUMEN FUME CONTROL

- A. The Contractor shall include the cost of providing a fume recovery system such as Fumeguard Asphalt & Pitch Fume Control System as manufactured by the Garlock Equipment Company or approved equal in all projects where coal tar pitch and/or asphalt is specified (if Applicable).
- B. Fumes from paint, adhesives, or any other sources are prohibited from entering the building interior. Contractor must provide proper ventilation and take necessary precautions to prevent fume permeation including covering intake vents, providing and installing carbon filters, arranging for HVAC equipment shut down, or any other necessary means to prevent fumes from entering the building.

3.4 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.

- B. Chalk lining: Beginning at the low points or drains, chalk line the cover board surface to serve as guides for the proper mopping and laying of the roofing membrane plies.
- C. Broom or press each ply into place, full width.

NOTE TO SPECIFIER

Hot-air welding of roofing membrane base and surfacing ply seams, using a flameless welding machine, is required. Use of torches during roof replacement application is not allowed.

- D. Hot-air welded seams: A flameless welding machine must be used for field membrane seams. Hot-air weld base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed roofing shall be sealed to a watertight condition prior to leaving the site daily.
- F. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- G. Where wheeled or excessive traffic over new or existing roofing work is unavoidable, provide and use 3/4-inch plywood, set over a minimum of two-inch thick rigid board insulation to protect roofing components in place.
- H. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- I. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- J. Fire watch: Per local codes, provide a fire watch after completion of daily work

3.5 BASE FLASHINGS

- A. Curb height: Unless otherwise indicated or not possible due to existing conditions encountered, provide an 8-inch minimum flashing height above the finished roofing surface. Refer to Section 061053 for wood blocking requirements related to raising of rooftop curbs.
- B. Ensure that all flashing substrates are suitable to receive new base flashing materials.
- C. Install base flashings at vertical walls and curbs in accordance with the roofing membrane manufacturer's requirements and recommendations.
- D. Hot-air welded seams: Using a heat gun, hot-air weld flashing base ply and surfacing ply seams. Do not use torches to weld seams.
- E. Secure the top edge of flashing as shown on the drawings, and In accordance with roofing membrane manufacturer recommendations and requirements. Seal the completed flashing top edge with a 3-course stripping of woven glass fabric and flashing cement.
- F. Fire watch: Per local codes, provide a fire watch after completion of daily work

NOTE TO SPECIFIER

Four options are available for Article 3.6:

1. If an "A System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title.
2. If an "A System" is chosen, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. Do not edit Article 3.6.
3. If a "B System" is specified, and the project is located in ASHRAE Climate Zones 1, 2, 3 or 4, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star is required per USPS Design Standards. This option will be included in the Base Proposal; DELETE "(ALTERNATE WORK)" from the Article title. DELETE paragraph 3.6A.
4. If a "B System" is specified, and the project is located in an ASHRAE Climate Zones 5, 6 or 7, a reflective roofing surface meeting the reflectivity requirements of DOE Energy Star shall be added as an alternate. DELETE paragraph 3.6A.

Determine the required outcome from the list above. Choose one option only. Edit the item below, based on the options listed above. Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

3.6 REFLECTIVE SURFACING INSTALLATION (ALTERNATE WORK)

- A. Installation of surfacing plies with a factory-applied reflective coatings:
 1. Apply the surfacing sheet, following the requirements and recommendations of the roofing membrane manufacturer.
 2. Exercise reasonable care to keep reflective sheets clean, and clear of debris.
 3. At roofing membrane and flashing surfacing ply seams and laps:
 - a. Clean the seam and lap area of dirt and debris. Power wash the seams and laps, if necessary to remove excessive residue.
 - b. At seams, broadcast reflective granules over seam area; or prime seams and laps, and apply two coats minimum of the specified acrylic elastomeric coating over the seam and lap areas.
 4. At locations determined by the Owner to contain excessive staining:
 - a. Clean the identified area(s) of dirt and debris. Power wash the area, if necessary to remove excessive residue.
 - b. Prime the area, if required by the coating manufacturer. Apply two coats, minimum, of the specified acrylic elastomeric coating over the area.
- B. Installation of field-applied acrylic elastomeric roof coating:
 1. Prepare substrate in a manner that is acceptable to the roofing membrane and coating manufacturers. Substrate preparation includes, but is not limited to: removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - a. After substrate preparation work is complete, inspect all surface preparation work. Correct any identified defects prior to application of coating.
 - b. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - c. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - d. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.

- e. Apply the coating following the requirements and recommendations of the roofing membrane and coating manufacturer. Install a minimum of two coats of acrylic elastomeric coating over the roof surface.

NOTE TO SPECIFIER

If liquid-applied flashing is required for this project, do not edit Article 3.7. If liquid-applied flashing is not required for this project, DELETE Article 3.7. If necessary, re-letter/number paragraphs and sub-paragraphs after editing.

3.7 LIQUID-APPLIED FLASHING

- A. At locations to receive liquid applied flashings, as indicated on the project drawings:
 - 1. Follow the written instructions for application of liquid-applied flashing provided by the roofing membrane manufacturer.
 - 2. Prepare the flashing substrate in a manner that is acceptable to the roofing membrane manufacturer. Substrate preparation includes, but is not limited to, removal of dirt and debris, repair of defects in the roof membrane and flashing, treatment of surface residue, treatment of areas of excessive ponding, and priming (if required by the roof coating manufacturer).
 - 3. Apply the base coat of liquid applied flashing to the substrate.
 - 4. Install required reinforcing mesh into the base coat.
 - 5. Apply the top coat of liquid applied flashing over the reinforcing mesh and base coat. Extend the top coat over and beyond the reinforcing mesh.
 - 6. At horizontal surfaces, broadcast granules over the completed flashing.

3.8 ROOF SUMP FLASHINGS

- A. Prior to installation of the base ply, install a three-course stripping of woven glass fabric and roofing cement over the cover board/insulation substrate.
- B. Ensure that the roofing membrane plies extend into the roof sump.
- C. Install a three-course stripping of woven glass fabric and roofing cement over the base ply.
- D. Install a lead sheet flashing over the base ply in the sump; refer to Section 076203. Prime both sides of the lead sheet prior to installation.
- E. Install modified bitumen flashing ply over the lead flashing sheet.
- F. Ensure that the roofing base and surfacing plies, lead flashing sheet, and modified bitumen flashing ply extend under the clamping ring and into the drain bowl. Tightly secure the clamping ring.

3.9 SHEET METAL FLANGE STRIPPINGS

- A. At sheet metal flanges associated with tubular penetration, pitch pan and perimeter edge sheet metal fascia flashings:
 - 1. Prime the top and bottom of the sheet metal flange. Allow the primer time to dry.
 - 2. Set flange in a full bed of roofing cement.
 - 3. Install strippings in accordance with the drawings and the requirements and recommendations of the modified bitumen roofing membrane manufacturer.

3.10 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 - 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 - 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 - 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 - 1. Refer to manufacturer requirements and recommendations for installation.
 - 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Install self-adhering underlayment beneath coping caps, and at other locations indicated on the drawings.
 - 1. Refer to manufacturer requirements and recommendations for installation.
- H. Replacement roof hatch installation:
 - 1. Remove and discard existing roof hatch.
 - 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 - 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- J. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.

- K. Installation of equipment support curbs:
1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 52 17 00

SECTION 07 53 16 00 - CSF CHLOROSULFONATE- POLYETHYLENE (CSPE) ROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing membrane.
2. Vapor/Air retarder. [Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
4. Fully adhered membrane roofing system.
5. Flashing membrane.
6. Accessories.
7. Edge metal.
8. [Warranty]

B. Related Documents:

1. The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section.
2. Memorandum of Understanding (MOU) between the United States Environmental Protection Agency's ENERGY STAR® Roof Products Program and Roofing Material Manufacturers.
3. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

C. Related Sections:

1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
2. Section 076200 - Sheet Metal Flashing and Trim: Counter flashings, edge metal and other sheet metal.
3. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
4. Section 077233 - Roof Hatches: Hatch with integral curb.

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully adhered CSPE Membrane Roofing System: ASTM D5019 on Glass Mat Gypsum Roof Board on overlayed insulation secured to [metal or concrete] deck.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayed insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.

3. Assurance/Control Submittals:

- a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the raining provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or by licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 120 or 150 pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] [____].
2. Hail Resistance: [MH] [SH].

- D. Pre-installation Meeting:
 1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
 2. Require attendance of parties directly affecting work of this Section.
 3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

CSF CHLOROSULFONATE- POLYETHYLENE (CSPE)

- *****
- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.
- *****

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.
- *****

NOTE TO SPECIFIER

End of WARRANTY OPTION

4. Agenda:
- a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 2. Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.

3. Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
 2. Warranty shall not exclude "ponding" water.
 3. Warranty Period: [20] [____] years.
 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor Retarder
 5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 CSPE ROOFING MEMBRANE

- A. CSPE Roofing Membrane: ASTM D5019, Type 1, Grade 2, 45-mil- (1.1-mm-) thick, reinforced, flexible uncured sheet from chlorosulfonated polyethylene.

CSF CHLOROSULFONATE- POLYETHYLENE (CSPE)

- B. Solar reflectance must meet ENERGY STAR requirements for low-slope roofs and membrane must be listed on the DOE ENERGY STAR Roof Products Qualified Product List.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
1. Burkeline Roofing Systems, San Jose, CA (800) 669-7010.
 2. Conklin Company Inc., Shakopee, MN (800) 394-6076.
 3. Tremco Inc., Beachwood, OH (800) 852-6013.
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the DOE's ENERGY STAR Roof Products Qualified Product List.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
- B. Sheet Flashing: 45-mil-(1.1-mm-) thick, reinforced and 55-mil- (1.4-mm-) thick, reinforced CSPE as recommended by roofing system manufacturer for intended use.
- C. Bonding Adhesive: Manufacturer's clear or light-colored adhesive for bonding roofing membrane and sheet flashings to substrates and projections.
- D. Miscellaneous Accessories: Provide pourable sealers, performed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 - 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 - 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 - 3. Compressive Strength: 20 PSI Minimum
 - 4. Maximum Board Thickness is 2"
 - 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

EXTRUDED Polystyrene (XPS)

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength: Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- C. Cover Board: 1/4" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 120 or 150 pounds per square foot of uplift resistance.

2.5 ROOF INSULATION ASSEMBLIES

NOTE TO SPECIFIER

Use roof insulation systems as required by specific building location and Energy Calculations for specific building type and project requirements. Provide the minimum number of layers of rigid insulation recommended by the Manufacturer, not to be less than two layers. Modify the following options to comply with requirements.

- A. Two layers of polyisocyanurate shall be used with staggered joints. Both layers may be loose laid and fastened with the same insulation fastener and plate.
- B. Total thickness of insulation shall be calculated as indicated on drawings.

2.6 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.
- *****

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.
- *****

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above
- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 - 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 - 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

CSF CHLOROSULFONATE- POLYETHYLENE (CSPE)

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- F. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- G. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- H. Adhered Installation:
 - 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 - 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 - 3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacturer's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

- I. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.
- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 - 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 - 2. Field fabrication of flashing shall be used only where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

CSF CHLOROSULFONATE- POLYETHYLENE (CSPE)

A. Interface with Other Work:

1. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

B. Field Services: Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

C. Field Services: Full-time Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform full-time inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

E. Maintenance Instruction

1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
2. Provide one complete set of installation details and manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS CSF Specifications issued: 10/1/2013

Last revised: 4/19/2011

END OF SECTION 07 53 16 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 53 23 00 - CSF ETHYLENE-PROPYLENE-DIENE-MONOMER ROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing membrane.
2. Vapor/Air retarder. [Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
4. Fully adhered EPDM Elastomeric membrane roofing system.
5. Flashing membrane.
6. Accessories.
7. Edge metal.
8. [Warranty]

B. Related Documents:

1. The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section.
2. Memorandum of Understanding (MOU) between the United States Environmental Protection Agency's ENERGY STAR® Roof Products Program and Roofing Material Manufacturers.
3. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

C. Related Sections:

1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
2. Section 076200 - Sheet Metal Flashing and Trim: Counter flashings, edge metal and other sheet metal.
3. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
4. Section 077233 - Roof Hatches: Hatch with integral curb.

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully Adhered EPDM Elastomeric Membrane Roofing System on Factory Primed Glass Mat Gypsum Roof Board on overlayered insulation secured to [metal or concrete] deck.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayered insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.
3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
 - b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

**NOTE TO SPECIFIER**

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who received training. Refer to 017704 1.3, 1.4 and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in EPDM membrane roof application with minimum of 5 years documented experience and is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 105 or 120 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

D. Pre-installation Meeting:

1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
2. Require attendance of parties directly affecting work of this Section.
3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

**NOTE TO SPECIFIER***End of WARRANTY OPTION*

4. Agenda:
 - a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 2. Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.
 3. Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER*Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.*

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

B. Special Warranty:

1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
2. Warranty shall not exclude "ponding" water.
3. Warranty Period: [20] [____] years.
4. Include materials and workmanship for the following items within Warranty:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor / Air Retarder
5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 EPDM ROOFING MEMBRANE

- A. EPDM Roofing Membrane: ASTM D4637, Type 1, Non-Reinforced minimum thickness of 0.059 inch (59 mil) (1.5 mm).
- B. Product must meet ENERGY STAR requirements for low-slope roofs and must be listed on the DOE ENERGY STAR Roof Products Qualified Product List.
- C. Membrane is to be fungi resistant with no growth and no discoloration after 21 days exposure in accordance with ASTM G21.

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
 1. Carlisle SynTec Inc., Carlisle, PA (800) 479-6832.
 2. Johns Manville Roofing Systems, Denver, CO (800) 592-6958.
 3. Mule-Hide Products Co., Beloit, WI (800) 786-1492.
 4. Tremco Inc., Beachwood, OH (800) 852-6013.

5. Versico, Carlisle, PA (800)992-7663
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the DOE's ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted with Contracting Officer Approval.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
 1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
- B. Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, partially cured or cured according to application.
- C. Bonding Adhesive: Manufacturer's standard bonding adhesive.
- D. Seaming Material: [Single-component butyl splicing adhesive and splice cleaner] [Manufacturer's standard synthetic-rubber polymer primer and 3-inch- (75-mm-) wide minimum, butyl splice tape with release film].
- E. Lap Sealant: Manufacturer's standard single-component sealant.
- F. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.
- G. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 3. Compressive Strength: 20 PSI Minimum
 4. Maximum Board Thickness is 2"
 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.

2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

EXTRUDED Polystyrene (XPS)

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 2. Compressive Strength: Minimum 25 psi.
 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- C. Cover Board: 1/4" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.5 ROOF INSULATION ASSEMBLIES

NOTE TO SPECIFIER

Use roof insulation systems as required by specific building location and Energy Calculations for specific building type and project requirements. Provide the minimum number of layers of rigid insulation recommended by the Manufacturer, not to be less than two layers. Modify the following options to comply with requirements.

- A. Two layers of polyisocyanurate shall be used with staggered joints. Both layers may be loose laid and fastened with the same insulation fastener and plate.
- B. Total thickness of insulation shall be calculated using as indicated on drawings.

2.6 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above
- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 - 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 - 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved

assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- F. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- G. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- H. Adhered Installation:
 - 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 - 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 - 3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacturer's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- I. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.
- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.
- C. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
 - 1. Store flashing adhesive in heated storage units (minimum temperature 40 degrees F) prior to installation.
 - 2. Follow roofing membrane manufacturer's recommendation for cold weather application of adhered field sheets, corner & perimeter area, and flashings.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 - 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 - 2. Field fabrication of flashing shall be used where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
 - 2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
 - 3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

B. Field Services: Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

C. Field Services: Full-time Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform full-time inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

4. MAINTENANCE INSTRUCTION

- a. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
- b. Provide one complete set of installation details and manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/19/2011

END OF SECTION 07 53 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 53 24 00 - R&A FULLY-ADHERED EPDM ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where fully-adhered EPDM (Ethylene Propylene Diene Monomer) roofing membrane is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standard, fully-adhered 90-mil EPDM roofing is acceptable for use with restrictions at facilities with a "Critical" or "Non-Critical" building designation. Fully-adhered 60-mil EPDM roofing is acceptable for use at facilities with a "Non-Critical" building designation, but is not acceptable at facilities with a "Critical" building designation. An approved deviation letter is required prior to specifying EPDM as a roof replacement membrane.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of fully-adhered Ethylene Propylene Diene Monomer (EPDM) roofing membrane and flashings, related accessories, and warranty and guarantee requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076205 – Sheet Metal for EPDM Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is*

specified, remove Article 1.3.

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 4637 - Standard Specification for EPDM Sheet Used In Single-Ply Roof Membrane
 - 2. Factory Mutual Global (FM)
 - 3. Underwriters Laboratories (UL)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install EPDM roofing at temperatures below 35°F (2°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. During cold weather applications, limit EPDM roll widths to 10-feet maximum. After unrolling the EPDM membrane, allow the membrane additional time to relax.
 - 4. Be aware of potential condensation formation on the EPDM roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 - 5. Refer to the EPDM roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
- 2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
- 3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Fully-Adhered EPDM Roofing for Roof Replacement Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 EPDM ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of products meeting or exceeding the requirements listed in Article 2.2.

NOTE TO SPECIFIER

***NOTE:** In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.*

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

2.2 ROOFING MEMBRANE

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the EPDM roofing membrane mil thickness required for the project. EDIT paragraph 2.2A below to reflect the specified thickness.

- A. EPDM roofing membrane; fire resistant, cured, non-reinforced, minimum 90-mil thickness, black color; in compliance with ASTM D 4637. Meeting or exceeding the standards established by the following test methods:
- B. EPDM flashing membrane:
 - 1. Cured: fire-resistant, non-reinforced, minimum 60-mil or 90-mil thickness, black color; in compliance with ASTM D 4637. Meeting or exceeding the standards listed in paragraph 2.2A.
 - 2. Uncured: Non-reinforced, minimum 60-mil thickness, black color. Type approved by roofing manufacturer for specific flashing conditions encountered.

2.3 EPDM MEMBRANE SPLICE SYSTEM

- A. Cleaner/primer: Product approved by roofing membrane manufacturer.
- B. In-seam splice tape: Splice tape; minimum 6-inch width, product approved by the roofing membrane manufacturer.
- C. Reinforced perimeter fastening strip: Product approved by the roofing membrane manufacturer.

2.4 PERIMETER EPDM MEMBRANE STRIPPINGS

- A. For use at locations where perimeter edge fascia metal stripping is required:
 - 1. Bottom stripping: EPDM pressure-sensitive flashing product, minimum 5-inch width. Top stripping: EPDM pressure-sensitive flashing product, minimum 9-inch width.

2.5 RELATED EPDM PRODUCTS

- A. Adhesives, cements, sealants, water cut-off mastics, prefabricated accessories, and other related items: Unless otherwise indicated, products manufactured by, or approved by the roofing membrane manufacturer.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
 - 1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.

2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Replacement roof hatch:
1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
1. Meeting the requirements of ASTM D 6083.
 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate existing rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Do not use asphalt, coal tar pitch, or roofing cement in conjunction with EPDM materials. Petroleum-based products, grease, oil and solvents should not be allowed to come in contact with the EPDM roof membrane system.
- C. All membrane splicing and bonding surfaces must be clean and dry.
- D. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed field seams shall be sealed to a watertight condition prior to leaving the site daily.
- E. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- F. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- G. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- H. Do not use any open flame to dry the roof membrane or to heat the flashing materials.

3.3 FLASHINGS AND STRIPPINGS

- A. Complete all flashings on a daily basis as the roof system work progresses.
- B. Lap splice flashing:
 - 1. Install specified in-seam splice tape at field-spliced seams. Install in-seam splice system in accordance with roofing membrane manufacturer requirements.
- C. Wall and curb flashings: Install flashings as indicated on drawings and in accordance with the requirements and recommendations of the roofing membrane manufacturer.
 - 1. Follow manufacturer-generated details for flashing requirements at inside (90-degree) and outside (270-degree) corners of curbs and walls.
- D. Tubular penetration flashings:

1. Finished tubular penetration flashings shall be a minimum of 8-inches above the finished roof membrane elevation.
 2. Install pressure-sensitive flashing at all tubular penetrations.
 - a. Install flashings as indicated on the drawings.
- E. Pitch pan flashings:
1. Install pressure-sensitive strippings at all pitch pan penetrations. Refer to Section 076205 for pitch pan fabrication requirements.
 - a. Install flashings as indicated on the drawings.
- F. Sheet metal flange strippings:
1. Install pressure-sensitive flashing at perimeter edge metal flanges. Refer to Section 076205 for perimeter edge metal fabrication requirements.
 - a. Install strippings as indicated on the drawings.
- G. Follow the additional requirements and recommendations of the roofing membrane manufacturer regarding flashing product installation.

3.4 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Replacement roof hatch installation:
1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.

- H. Extendable safety post installation:
 - 1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 - 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 - 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 - 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 - 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 53 24 00

SECTION 07 54 19 00 - MPF POLYVINYL-CHLORIDE MEMBRANE ROOFING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification.

NOTE TO SPECIFIER

Use this section for where Fully Adhered PVC membrane Roofing is selected as the roofing system. EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 54 19 00

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Preparation of roof deck to receive roofing membrane.
 2. Vapor/Air retarder.[Specifier to make determination of use and location within the system based on facility conditions and general environment]
 3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
 4. Fully Adhered PVC membrane roofing system.
 5. Flashing membrane.
 6. Accessories.
 7. Edge metal.
 8. [Warranty]
- B. Related Documents:
 1. The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section.
 2. Memorandum of Understanding (MOU) between the United States Environmental Protection Agency's ENERGY STAR® Roof Products Program and Roofing Material Manufacturers.
 3. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
 2. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
 3. Section 077233 -Roof Hatches: Hatch with integral curb.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):

2. FMG - Approval Guide, Building Materials
3. FMG - Loss Prevention Data 1-28, Wind Loads to Roof Systems and Roof Deck Securement.
4. FMG - Loss Prevention Data 1-29, Above Deck Roof Components (June 1996).
5. FMG - Standard 4450, Class 1 Insulated Steel Deck Roofs.
6. FMG - Standard 4470, Class 1 Roof Covers.

C. Underwriters Laboratory (UL):

1. Class A rated roofing system
2. Recycled Content Certification
 - a. Manufacturer's membrane product recycled content to be validated by UL Environmental (ULE)

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully Adhered PVC Membrane Roofing System on Factory Primed Glass Mat Gypsum Roof Board on overlayed insulation secured to [metal or concrete] deck.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayed insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.

3. Assurance/Control Submittals:

- a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in PVC membrane roof application with minimum of 5 years documented experience and that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product, and that is eligible to receive a manufacturer's warranty.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 105 or 120 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

- D. Pre-installation Meeting:
 1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
 2. Require attendance of parties directly affecting work of this Section.
 3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- 4. Agenda:
 - a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 - 2. Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.

3. Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Submittals: Procedures for closeout submittals.
- B. Special Warranty:
1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
 2. Warranty shall not exclude "ponding" water.
 3. Warranty Period: [20] [____] years.
 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor / Air Retarder
 5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 ROOFING MEMBRANE

- A. Must have recycled content.

- B. Fabric or fiber reinforced Polyvinyl Chloride Roofing Membrane shall comply with ASTM D4434, Type II or Type III. KEE Membrane Shall comply with ASTM D6754.
- C. Minimum thickness of 0.059 inch (59 mil) (1.5 mm)
- D. Product must meet ENERGY STAR requirements for low-slope roofs and must be listed on the ENERGY STAR Roof Products Program Qualified Product List.
- E. Solar reflectance per Energy Star or Cool Roof Council (CRRRC)
 - 1. Initial Reflectance: 0.65 minimum
 - 2. Three years after installation: 0.50 minimum

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
 - 1. Carlisle., Carlisle, PA (800) 479-6832
 - 2. Duro-Last Roofing Inc, Saginaw MI (800) 248-0280.
 - 3. Johns Manville Roofing Systems, Denver, CO (800) 592-6958.
 - 4. Seaman Corporation (Fibertite), Wooster, OH (800) 927-8578.
 - 5. Sika Sarnafil Division, Sika Corp, Canton, MA (800) 451-2504.
 - 6. Tremco Inc., Beachwood, OH (800) 852-6013.
 - 7. Versico, Carlisle, PA (800)992-7663
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted with Contracting Officer Approval.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
 - 1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
- B. Sheet Flashing
 - 1. Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet membrane.
 - 2. Manufacturer's standard PVC clad metal - A PVC-coated, heat-weldable sheet metal capable of being formed into a variety of shapes and profiles. PVC Clad Metal shall be a 25 gauge, G90 galvanized metal sheet with a 20 mil (0.5 mm) unsupported PVC membrane laminated on one side.
- C. Perimeter Edge and Metal Flashings
 - 1. To be supplied by the roof system manufacturer in accordance with the rated assembly
 - a. Minimum 25 gauge galvanized steel with Kynar finish – color selected by Contracting Officer OR
 - b. Roof System manufacturer's rated and approved clad metal

- D. Bonding Adhesive: Manufacturer's standard clear or light-colored [solvent] [water]-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 3. Compressive Strength: 20 PSI Minimum
 4. Maximum Board Thickness is 2"
 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

EXTRUDED Polystyrene (XPS)

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.

- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength: Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- C. Cover Board: ¼" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.5 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above

- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 - 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 - 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.

1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 1. Maximum insulation board dimension is 4' x 8'
 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Adhered Installation:
 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacture's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.

- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.
- C. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
 - 1. Store flashing adhesive in heated storage units (minimum temperature 40 degrees F) prior to installation.
 - 2. Follow roofing membrane manufacturer's recommendation for cold weather application of adhered field sheets, corner & perimeter area, and flashings.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 - 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 - 2. Field fabrication of flashing shall be used where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate Work with installation of associated metal counterflashings as Work of this Section proceeds.

2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

- A. Section 014000 -Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- B. Field Services: Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- C. Field Services: Full-time Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform full-time inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

- D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

- E. Maintenance Instruction

1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.

- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS Mail Processing Facility Specifications issued: 10/1/2013
Last revised: 3/31/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 54 19 00 - CSF POLYVINYL-CHLORIDE MEMBRANE ROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing membrane.
2. Vapor/Air retarder.[Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
4. Fully Adhered PVC membrane roofing system.
5. Flashing membrane.
6. Accessories.
7. Edge metal.
8. [Warranty]

B. Related Documents:

1. The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section.
2. Memorandum of Understanding (MOU) between the United States Environmental Protection Agency's ENERGY STAR® Roof Products Program and Roofing Material Manufacturers.
3. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

C. Related Sections:

1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
2. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
3. Section 077233 -Roof Hatches: Hatch with integral curb.

 2. Recycled Content Certification
 - a. Manufacturer's membrane product recycled content to be validated by UL Environmental (ULE)

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully Adhered PVC Membrane Roofing System on Factory Primed Glass Mat Gypsum Roof Board on overlayed insulation secured to [metal or concrete] deck.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals
1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayed insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
 2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.
 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.

- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements:
- 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 -Quality Requirements:
- 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. **Applicator Qualifications:** Company specializing in PVC membrane roof application with minimum of 5 years documented experience and that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product, and that is eligible to receive a manufacturer's warranty.
- B. **Single Source Responsibility:** Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. **FMG Listing:** Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 105 or 120 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

D. Pre-installation Meeting:

1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
2. Require attendance of parties directly affecting work of this Section.
3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

4. Agenda:
- Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - Review required submittals, both completed and yet to be completed.
 - Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
- Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 - Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.
 - Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Submittals: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
 - 2. Warranty shall not exclude "ponding" water.
 - 3. Warranty Period: [20] [____] years.
 - 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor / Air Retarder
 - 5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
 - 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 ROOFING MEMBRANE

- A. Must have recycled content.
- B. Fabric or fiber reinforced Polyvinyl Chloride Roofing Membrane shall comply with ASTM D4434, Type II or Type III. KEE Membrane Shall comply with ASTM D6754.
- C. Minimum thickness of 0.059 inch (59 mil) (1.5 mm)
- D. Product must meet ENERGY STAR requirements for low-slope roofs and must be listed on the ENERGY STAR Roof Products Program Qualified Product List.
- E. Solar reflectance per Energy Star or Cool Roof Council (CRRC)

1. Initial Reflectance: 0.65 minimum
2. Three years after installation: 0.50 minimum

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
 1. Carlisle, Carlisle, PA (800) 479-6832
 2. Duro-Last Roofing Inc, Saginaw MI (800) 248-0280.
 3. Johns Manville Roofing Systems, Denver, CO (800) 592-6958.
 4. Seaman Corporation (Fibertite), Wooster, OH (800) 927-8578.
 5. Sika Sarnafil Division, Sika Corp, Canton, MA (800) 451-2504.
 6. Tremco Inc., Beachwood, OH (800) 852-6013.
 7. Versico, Carlisle, PA (800)992-7663
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted with Contracting Officer Approval.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
 1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
- B. Sheet Flashing
 1. Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as PVC sheet membrane.
 2. Manufacturer's standard PVC clad metal - A PVC-coated, heat-weldable sheet metal capable of being formed into a variety of shapes and profiles. PVC Clad Metal shall be a 25 gauge, G90 galvanized metal sheet with a 20 mil (0.5 mm) unsupported PVC membrane laminated on one side.
- C. Perimeter Edge and Metal Flashings
 1. To be supplied by the roof system manufacturer in accordance with the rated assembly
 - a. Minimum 25 gauge galvanized steel with Kynar finish – color selected by Contracting Officer OR
 - b. Roof System manufacturer's rated and approved clad metal
- D. Bonding Adhesive: Manufacturer's standard clear or light-colored [solvent] [water]-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 - 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 - 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 - 3. Compressive Strength: 20 PSI Minimum
 - 4. Maximum Board Thickness is 2"
 - 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 - 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 - 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

EXTRUDED Polystyrene (XPS)

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength: Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.

- C. Cover Board: ¼" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.5 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

NOTE TO SPECIFIER

End of INSULATION ATTACHMENT OPTIONS

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above
- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present, that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:

1. Maximum insulation board dimension is 4' x 8'
2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
4. Factory primed glass mat gypsum board and overlayered insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.

D. Apply no more insulation than can be waterproofed with roofing membrane in same day.

E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Adhered Installation:
 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 3. Factory primed glass mat gypsum board and overlayered insulation shall be adhered in accordance with the manufacture's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.
- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.
- C. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
 1. Store flashing adhesive in heated storage units (minimum temperature 40 degrees F) prior to installation.

2. Follow roofing membrane manufacturer's recommendation for cold weather application of adhered field sheets, corner & perimeter area, and flashings.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 2. Field fabrication of flashing shall be used where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

- A. Interface with Other Work:
 1. Coordinate Work with installation of associated metal counterflashings as Work of this Section proceeds.
 2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
 3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

- A. Section 014000 -Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

B. Field Services: Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

C. Field Services: Full-time Third-Party Roofing Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform full-time inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.

1. Attend and conduct Pre-installation Meeting.
2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

E. Maintenance Instruction

1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.
2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/19/2011

END OF SECTION 07 54 19 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 54 20 00 - R&A FULLY-ADHERED PVC ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where fully-adhered PVC (Polyvinyl Chloride) roofing membrane is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standard, fully-adhered 80-mil PVC roofing is recommended for facilities with a "Critical" building designation, and is acceptable for use at facilities with a "Non-Critical" building designation. Fully-adhered 60-mil PVC roofing is recommended for use at facilities with a "Non-Critical" building designation, but is not acceptable at facilities with a "Critical" building designation.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

Section Number

Section Title

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of fully-adhered polyvinyl chloride (PVC) roofing membrane and flashings, related accessories, and warranty and guarantee requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete, cementitious wood fiber, and/or lightweight insulating concrete structural deck, include Section 072221 – Insulation and Cover Board over Underlayment within 1.2 RELATED SECTIONS below. For roof areas consisting of an underlying steel and/or wood deck, include Section 072223 – Roof Insulation and Cover Board over Steel and Wood Deck within the 1.2 RELATED SECTIONS below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections. Re-letter paragraphs and sub-paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 061053 – Miscellaneous Rough Carpentry for Roof Replacement
- E. Section 072221 – Roof Insulation and Cover Board over Underlayment
- F. Section 072223 – Roof Insulation and Cover Board over Steel and Wood Roof Decks
- G. Section 076207 – Sheet Metal for PVC Roofing
- H. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.*

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in Item 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 4434 - Standard Specification for Polyvinyl Chloride (PVC) Sheet Roofing
 - 2. Factory Mutual Global (FM)
 - 3. Underwriters Laboratories (UL)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. American Society of Civil Engineers (ASCE)
 - a. ASCE 7 Minimum Design Loads of Buildings and Other Structures

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.

- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install PVC roofing at temperatures below 40°F (5°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. After unrolling the PVC membrane, allow the membrane additional time to relax.
 - 4. Be aware of potential condensation formation on the PVC roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 - 5. Refer to the PVC roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
- 2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
- 3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:

1. The warranty shall include a wind rider for the design wind speed at the specific project location.
 2. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 3. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 4. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 5. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Fully-Adhered PVC Roofing for Roof Replacement Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 PVC ROOFING SYSTEM SUMMARY

- A. The complete roofing membrane system assembly shall consist of products meeting or exceeding the requirements listed in Items 2.2.

NOTE TO SPECIFIER

NOTE: In high wind areas, such as those with a calculated wind uplift pressure of greater than 45 psf in the roof field, enhancements to the roof system may be required and must be considered by the design professional/specifier. Consult with the roofing membrane manufacturer and qualified testing agencies such as FM and Miami-Dade County for further information and guidance related to possible roof system enhancements in high wind areas.

- B. The complete roofing system assembly shall resist uplift pressures calculated according to ASCE 7-05 for the field, perimeters and corners. The specified approval rating must incorporate a safety factor of 2 over the maximum calculated uplift pressure in foot-pound units.
- C. The complete roofing system assembly shall achieve an FM or UL Class A fire rating.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the PVC roofing membrane mil thickness required for the project. EDIT paragraph 2.2A below to reflect the specified thickness.

2.2 ROOFING AND FLASHING MEMBRANE

- A. PVC roofing and flashing membrane; fire resistant, fiberglass-reinforced, minimum 80-mil thickness, white color; in full compliance with all requirements of ASTM D 4434, Type II or Type

III, white color. The selected membrane shall meet the following additional criteria:

1. The selected membrane shall meet the DOE requirements for Initial Solar Reflectance.
- B. PVC flashing detail membrane and sheets (For use at roof penetrations):
1. PVC membrane, minimum 60-mil or 80-mil thickness, white color.

2.3 PVC MEMBRANE PERIMETER REINFORCEMENT AND FLASHING

- A. For use where required at roof perimeters and vertical (wall and curb) transitions:
1. Perimeter and vertical wall securement systems, including anchor bars, fastening plates, and related fasteners, as required by roofing membrane manufacturer.
- B. For use as perimeter edge metal strip-in flashing:
1. Flashing strip material; as required by roofing membrane manufacturer.

2.4 PVC MEMBRANE SEAM INTERSECTION AND CORNER REINFORCEMENT

- A. For use at seam intersections and other locations required by the roofing manufacturer:
1. At field seam and "T-Joint" intersections: PVC membrane patch, approved by the roofing membrane manufacturer for use at locations encountered, fiberglass reinforced; 48-mil thickness, white color.
- B. For use at inside and outside corner reinforcement:
1. Preformed or sheet flashing reinforcement products manufactured by roofing membrane manufacturer.

2.5 RELATED PVC PRODUCTS

- A. Adhesives, primers, cements, sealants, water cut-off mastics, prefabricated accessories, and other related items: Unless otherwise indicated, products manufactured by, or approved by the roofing membrane manufacturer.
- B. Prefabricated flashing boots: Product type manufactured by, and approved by the roofing membrane manufacturer for the roof penetration encountered.

2.6 FASTENERS

- A. Roofing membrane and flashing fasteners: Unless otherwise indicated, types as required by the roofing membrane manufacturer.

2.7 MISCELLANEOUS MATERIALS

- A. Walkway pads: Product approved by the roofing manufacturer.
- B. Splashblocks: Concrete; size as necessary to accommodate existing condition.
- C. Pitch pan fill materials:
1. Non-shrink grout (for bottom fill): Quick-set, fast-drying grout; product acceptable to roofing manufacturer.

2. Pourable sealer (for top fill): Two-part pourable elastomeric sealer, product acceptable to roofing manufacturer.
- D. Conduit and pipe supports:
1. For pipes with a diameter up to 6-inches:
 - a. Adjustable prefabricated support such as Pipe Pier 150 manufactured by Pipe Pier Support Systems, Hamel, MN, or approved equal.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
 2. For pipes with a diameter greater than 6-inches:
 - a. Product approved by the roofing manufacturer for this application.
 - b. Product capable of accommodating the weight of the supported pipe at intervals recommended by the pipe support manufacturer.
- E. Pre-fabricated plumbing vent pipe extensions:
1. For use where necessary to achieve the 8-inch minimum flashing height:
 - a. Pre-fabricated plumbing vent extensions, such as Tubos Pre-Fabricated Pipe Extension, by Tubos, Inc., Clearwater, FL.
 - b. Product approved by the roofing manufacturer for this application.
 - c. Size and configuration of extension as necessary to match existing pipe diameter, providing the 8-inch minimum flashing height, and allowing for flashing as show on the drawings.
- F. Replacement roof hatch:
1. Roof hatch, such as "Type E" or "Type S", manufactured by The Bilco Company, New Haven, CT, or approved equal.
 - a. Size and configuration as necessary to match existing roof hatch.
 - b. Product approved by the roofing manufacturer for this application.
- G. Extendable ladder-mounted safety post, such as "LadderUP Safety Post", manufactured by The Bilco Company, New Haven, CT, or approved equal.
1. Size and configuration as necessary to accommodate existing ladder and new roof hatch.
 2. Product approved by the roofing manufacturer for this application.
- H. Acrylic elastomeric coating (for use at roof penetrations and other locations indicated on the project drawings). Product approved for use by the membrane manufacturer for this application, and meeting the following criteria:
1. Meeting the requirements of ASTM D 6083.
 2. White color.
- I. Rooftop unit support curbs: Product such as "Pate Equipment Supports" manufactured by The Pate Company, Lombard, IL, or approved equal.
1. Size and configuration as necessary to accommodate existing rooftop unit.
 2. Fabricated from 18 ga. galvanized steel, minimum, with welded seams; and a nominal 2-inch thick nailer affixed atop the curb support.
 3. Fabricated to allow for a minimum flashing height of 8-inches, minimum.
 4. Product approved by the roofing manufacturer for this application.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data. For roof areas consisting of an underlying concrete, gypsum concrete or cementitious wood fiber structural deck, include Section 072221 within paragraph 3.1B below. For roof areas consisting of an underlying steel or wood deck, include Section 072223 within paragraph 3.1B below. For projects containing structural deck types applicable to both Sections 072221 and 072223, include both Sections.

- B. Ensure that the insulation and cover board substrate is installed as specified in Sections 072221 and 072223 are suitable to receive roofing membrane materials.

3.2 ROOFING MEMBRANE INSTALLATION

- A. Except as may be modified by these specifications and drawings, install roofing membrane in accordance with the requirements and recommendations of the roofing membrane manufacturer, using the manufacturer's current printed instructions.
- B. Do not use asphalt, coal tar pitch, plastic roof cement in conjunction with PVC materials.
- C. All membrane splicing and bonding surfaces must be clean and dry.
- D. Install only as much roofing as can be completed in a work day, including flashing and detail work. All installed field seams shall be sealed to a watertight condition prior to leaving the site daily.
- E. Sequence roofing work to eliminate the use of installed roofing as a walkway, or as a storage platform for materials.
- F. Overnight tie-in: Care should be exercised to ensure that water does not flow beneath any completed sections of the roof by temporarily sealing the loose edge of the membrane at the end of each work day and when the weather is threatening. The roofing membrane manufacturer's requirements should be followed closely.
- G. Remove debris from the roof daily prior to leaving the site. Inspect the site at ground level. Remove any roof replacement related debris from the ground.
- H. Do not use any open flame to dry the roof membrane or to heat the flashing materials.

3.3 FLASHINGS AND STRIPPINGS

- A. Complete all flashings on a daily basis as the roof system work progresses.
- B. Lap splice flashing:
 - 1. Hot air-weld field seams in accordance with roofing membrane manufacturer requirements.
- C. Wall and curb flashings: Install flashings as indicated on drawings and in accordance with the requirements and recommendations of the roofing membrane manufacturer.
 - 1. Follow manufacturer-generated details for flashing requirements at inside (90-degree) and outside (270-degree) corners of curbs and walls.
- D. Tubular penetration flashings:
 - 1. Finished tubular penetration flashings shall be a minimum of 8-inches above the finished roof membrane elevation.

2. Install field-fabricated flashing at all tubular penetrations.
 - a. Install flashings as indicated on the drawings.
- E. Pitch pan flashings:
 1. Install flashing at all pitch pan penetrations. Refer to Section 075207 for pitch pan fabrication requirements.
 - a. Install flashings as indicated on the drawings.
- F. Sheet metal flange strippings:
 1. Install flashing at perimeter edge metal flanges. Refer to Section 075207 for perimeter edge metal fabrication requirements.
 - a. Install strippings as indicated on the drawings.
- G. Follow the additional requirements and recommendations of the roofing membrane manufacturer regarding flashing product installation.

3.4 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Return mechanical ventilator units to their original positions and secure to the existing curbs with EPDM-gasketed screws. Provide a minimum of one fastener on each side of the curb and a minimum of one fastener every 12-inches o.c.
- B. Reconnect all electrical, plumbing, gas line and ventilation connections required to return mechanical units to their original operating condition. Retain a qualified, licensed electrical subcontractor to reconnect electrical equipment. Retain a qualified, licensed mechanical subcontractor to reconnect gas lines and ventilation connections. Coordinate required disconnections and reconnections with the Owner.
- C. Walkway pads: Install walkway pads at locations indicated on drawings. Install the pads in accordance with the requirements and recommendations of the roofing manufacturer. Extend the pads a minimum of 4-inches in all directions beyond wood blocking.
- D. Install splashblocks set on walkpads at locations indicated on the drawings.
- E. Rooftop conduit and pipe supports:
 1. Install adjustable prefabricated pipe supports at rooftop conduit and pipes.
 2. Space pipe supports at intervals recommended by the support manufacturer, as determined by the diameter and weight of the conduit or pipe.
 3. Separate the support from the roof surface by installing the support over roof walkway pads, installed as specified.
- F. Pre-fabricated plumbing vent pipe extensions:
 1. Refer to manufacturer requirements and recommendations for installation.
 2. Prior to flashing installation, seal intersection of pipe extension and existing plumbing vent.
- G. Replacement roof hatch installation:
 1. Remove and discard existing roof hatch.
 2. Provide wood nailers beneath roof hatch flanges, if necessary, to match insulation thickness.
 3. Install new roof hatch following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- H. Extendable safety post installation:

1. Install new safety post following the written instructions, recommendations, and requirements of the roof hatch manufacturer.
- I. Application of elastomeric coating to rooftop penetrations:
 1. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, repair of damaged or loose sheet metal components, repair of holes, cleaning of roof penetrations, treatment of surface rust, treatment of residual asphalt, and priming (if required by the roof coating manufacturer).
 2. Coat the indicated penetrations following the recommendations and requirements of the coating manufacturer.
- J. Installation of equipment support curbs:
 1. Install support curbs where indicated on the project drawings. Flash curbs into the roof system as indicated on the project drawings.
 2. Refer to manufacturer requirements and recommendations for installation.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 54 20 00

SECTION 07 54 23 00 - MPF THERMOPLASTIC-POLYOLEFIN ROOFING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification.

NOTE TO SPECIFIER

Use this section for where Fully Adhered TPO membrane Roofing is selected as the roofing system. EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 54 23 00

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing membrane.
2. Vapor/Air retarder. [Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
4. Fully Adhered TPO membrane roofing system.
5. Flashing membrane.
6. Accessories.
7. Edge metal.
8. [Warranty]

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully Adhered TPO Membrane Roofing System on Factory Primed Glass Mat Gypsum Roof Board on overlayed insulation secured to (metal or concrete) deck.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayed insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.
3. Assurance/Control Submittals:

- a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.
- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
 - 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.
4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in TPO membrane roof application with minimum of 5 years documented experience and that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product, and that is eligible to receive a manufacturer's warranty.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 120 or 150 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

- D. Pre-installation Meeting:
 1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
 2. Require attendance of parties directly affecting work of this Section.
 3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- 4. Agenda:
 - a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
 - b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
 - c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
 - d. Review required submittals, both completed and yet to be completed.
 - e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
 - g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
 - h. Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 - 2. Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.

3. Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

NOTE TO SPECIFIER

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
 2. Warranty shall not exclude "ponding" water.
 3. Warranty Period: [20] [____] years.
 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor / Air Retarder
 5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS

2.1 ROOFING MEMBRANE

- A. Must have recycled content
- B. Fabric-Reinforced Thermoplastic Polyolefin Sheet: Uniform, flexible sheet formed from a thermoplastic polyolefin, internally fabric or scrim reinforced: ASTM D6878.

- C. Minimum Thickness: [59 mils (1.5 mm)] <Insert thickness if thicker is required >, minimum.
- D. Product must meet ENERGY STAR requirements for low-slope roofs and must be listed on the ENERGY STAR Roof Products Program Qualified Product List.
- E. Solar reflectance, per Cool Roof Rating Council (CRRC):
 - 1. Initial reflectance: 0.65 minimum.
 - 2. Three years after installation: 0.50 minimum.
- F. Physical Properties:
 - 1. Breaking Strength: 225 lbf (1kN); ASTM D 751, grab method.
 - 2. Elongation at Break: 15 percent; ASTM D 751.
 - 3. Tearing Strength: 55 lbf (245 N) minimum; ATSM D 751, Procedure B.
 - 4. Brittleness Point: Minus 22 deg F (30 deg C).
 - 5. Ozone Resistance: No cracks after sample, wrapped around a 3-inch- (75-mm-) diameter mandrel, is exposed for 166 hours to a temperature of 104 deg F (40 deg C) and an ozone level of 100 pphm (100 mPa); ASTM D 1149.
 - 6. Resistance to Heat Aging: 90 percent minimum retention of breaking strength, elongation at break, and tearing strength after 166 hours at 240 deg F (116 deg C); ASTM D 5573.
 - 7. Water Absorption: Less than 4 percent mass change after 166 hours' immersion at 158 deg F (70 deg C); ASTM D 471.
 - 8. Linear Dimension Change: Plus or minus 2 percent; ASTM D 1204

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
 - 1. Carlisle Syntec Inc., Carlisle, PA (800) 479-6832.
 - 2. Firestone Building Products, Indianapolis, IN (800) 428-4442
 - 3. GAF Materials Corp., Wayne, NJ (800) 766-3411
 - 4. Johns Manville Roofing Systems, Denver, CO (800) 592-6958.
 - 5. Sika Sarnafil Division, Sika Corp, Canton, MA (800) 451-2504.
 - 6. Tremco Inc., Beachwood, OH (800) 852-6013.
 - 7. Versico, Carlisle, PA (800)992-7663
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted with Contracting Officer Approval.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
 - 1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
- B. Sheet Flashing
 - 1. Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as TPO sheet membrane.

2. Manufacturer's standard TPO clad metal - A TPO-coated, heat-weldable sheet metal capable of being formed into a variety of shapes and profiles. TPO Clad Metal shall be a 25 gauge, G90 galvanized metal sheet with a 20 mil (0.5 mm) unsupported TPO membrane laminated on one side.
- C. Perimeter Edge and Metal Flashings
1. To be supplied by the roof system manufacturer in accordance with the rated assembly
 - a. Minimum 25 gauge galvanized steel with Kynar finish – color selected by Contracting Officer OR
 - b. Roof System manufacturer's rated and approved clad metal
- D. Bonding Adhesive: Manufacturer's standard clear or light-colored [solvent] [water]-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 3. Compressive Strength: 20 PSI Minimum
 4. Maximum Board Thickness is 2"
 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

**EXTRUDED Polystyrene (XPS)**

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength: Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- C. Cover Board: 1/4" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.5 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

**NOTE TO SPECIFIER***End of INSULATION ATTACHMENT OPTIONS*

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above
- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 - 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 - 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

**NOTE TO SPECIFIER**

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlaid insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- F. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- G. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- H. Adhered Installation:
 - 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 - 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 - 3. Factory primed glass mat gypsum board and overlaid insulation shall be adhered in accordance with the manufacturer's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- I. Apply no more insulation than can be waterproofed with roofing membrane in same day.

- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.
- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.
- C. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
 - 1. Store flashing adhesive in heated storage units (minimum temperature 40 degrees F) prior to installation.
 - 2. Follow roofing membrane manufacturer's recommendation for cold weather application of adhered field sheets, corner & perimeter area, and flashings.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 - 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 - 2. Field fabrication of flashing shall be used where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

- A. Interface with Other Work:
1. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
 2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
 3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- B. Field Services: Third-Party Roofing Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- C. Field Services: Full-time Third-Party Roofing Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform full-time inspections for roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

- D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform preparatory, initial, follow-up and final inspections for installation of roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

- E. Maintenance Instruction
1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.

2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

USPS Mail Processing Facility Specifications issued: 10/1/2013
Last revised: 3/31/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 54 23 00 - CSF THERMOPLASTIC-POLYOLEFIN ROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

This roofing section includes three (3) options regarding inspections and /or warranty; two (2) options regarding insulation type; and two (2) options regarding insulation system attachment.

The Contracting Officer (CO) must provide direction to the Specifier on which one of the warranty options will be selected for this project. After receiving direction from the CO, the Specifier must edit the warranty sections to ensure that this option is consistently applied throughout.

The warranty options are:

WARRANTY OPTION 1, Part-Time Third-Party Inspections: these are to be provided at construction milestones as listed below. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Part-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 2, Full-time Third-Party inspections: an inspector is to be continuously present during the entire period of roofing installation. A manufacturer's warranty is optional. The Contracting Officer may choose to mandate Full-Time Third Party Inspections AND mandate manufacturer's warranty.

WARRANTY OPTION 3, Manufacturer's Warranty: this option requires a warranty from the manufacturer. Inspections are to be provided by the manufacturer at the milestones listed below or as necessary to meet manufacturer's requirements.

There are two (2) options regarding primary roof insulation type. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to Polyisocyanurate insulation due to the fact that a thermal barrier is not required under the insulation in order to maintain the systems fire rating (Use of XPS over a metal deck would require a thermal barrier under the insulation assembly if selected). Concrete roof decks can utilize Extruded Polystyrene Insulation attached directly to the prepared roof deck without the need for a thermal barrier. The Specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation type options are:

INSULATION Type OPTION 1, Polyisocyanurate.

INSULATION Type OPTION 2, Extruded Polystyrene.

There are two (2) options regarding insulation attachment. The Specifier must provide direction on which one of the options will be selected for this project. The Specifier must edit the section to ensure that this option is consistently applied throughout the section. Note that facilities with a metal roof deck are most conducive to mechanical attachment of the insulation assembly. Facilities with concrete roof decks are most conducive to adhered attachment of the insulation assembly. The specifier shall determine the insulation type based on existing construction; building code review; and cost analysis. The insulation attachment options are:

INSULATION Attachment OPTION 1, Mechanically attached.

INSULATION Attachment OPTION 2, Adhered.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Preparation of roof deck to receive roofing membrane.
2. Vapor/Air retarder. [Specifier to make determination of use and location within the system based on facility conditions and general environment]
3. [Mechanically fastened] [Adhesively Applied] Roof insulation and Glass mat gypsum board.
4. Fully Adhered TPO membrane roofing system.
5. Flashing membrane.
6. Accessories.
7. Edge metal.
8. [Warranty]

B. Related Documents:

1. The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section.
2. Memorandum of Understanding (MOU) between the United States Environmental Protection Agency's ENERGY STAR® Roof Products Program and Roofing Material Manufacturers.
3. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

C. Related Sections:

1. Section 061000 - Rough Carpentry: Wood blocking, curbs, and nailers.
2. Section 077213 - Manufactured Curbs: Curbs for roof penetrations.
3. Section 077233 - Roof Hatches: Hatch with integral curb.

6. FMG - Standard 4470, Class 1 Roof Covers.

C. Underwriters Laboratory (UL):

1. Class A rated roofing system
2. Recycled Content Certification
 - a. Manufacturer's membrane product recycled content to be validated by UL Environmental (ULE)

1.3 SYSTEM DESCRIPTION

- A. ENERGY STAR® Compliant Fully Adhered TPO Membrane Roofing System on Factory Primed Glass Mat Gypsum Roof Board on overlayed insulation secured to (metal or concrete) deck.

1.4 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals

1. Product Data:
 - a. FM RoofNav Assembly Number certifying proposed roof system has been tested and approved by FMG for the specified FM[1-90] [1-105] [1-120] rating.
 - b. Membrane materials, base flashing, vapor retarder, [fastener & plate,] adhesive materials, edge metal and insulation.
 - c. [Insulation fastener layouts complying with FMG Loss Prevention Data Sheet 1-29 patterns for specified wind uplift resistance. Indicate number of insulation fasteners required and spacing of fasteners for field, perimeter, and corners for each pattern.] [Adhesively applied insulation coverage rates and layout must comply with the proposed FM RoofNav assembly number and adhesive application rates relative to that assembly. Indicate insulation adhesive application rates required and the coverage/ribbon spacing of adhesive for field, perimeter, and corners for each pattern. Insulation adhesion rates and coverage/ribbon spacing submissions must also be inclusive of the roof system manufacturer's instructions, including cold weather installation instructions and are required for approval prior to job start.]
 - d. Adhered membrane adhesive and application rates for adhering membrane roof to the overlayed insulation system with coverboard. Membrane adhesive shall be installed in compliance with roof membrane system manufacturer's FM RoofNav assembly approval number and all of the manufacturer's instructions including cold weather installation instructions of the proposed shall be required for approval prior to job start.
2. Shop Drawings: Indicate setting plan for insulation including fastener pattern, layout of roofing seams, direction of laps and base flashing details.
3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer is to certify that components and products meet or exceed specified standards and complies with referenced quality assurance standards in section 1.5 including the FM RoofNav assembly number.

- b. Qualification Documentation: Manufacturer certification indicating roofing applicator qualifications complying with requirements specified in Paragraph entitled "Applicator Qualifications" of this Section.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- c. Field Quality Control Reports: Submit the following reports directly to Contracting Officer from the Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
- 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.
 - 5) Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- d. Field Quality Control Reports: Submit daily reports directly to Contracting Officer from the Full-time Third-Party Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
- e. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization, and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

NOTE TO SPECIFIER

Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty. Delete the paragraphs below if the Contracting Officer chooses to have Part-Time or Full Time Third Party inspections and No Warranty.

- f. Sample of specified Warranty
- g. Manufacturer's certification letter acknowledging receipt of specifications, intent to issue warranty, and intent to perform field audits as outlined in 1.4.3.d.
- h. Manufacturer's Field Reports: Submit the following reports directly to Contracting Officer from Manufacturer's Roofing Quality Control Inspector, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements:
- 1) Preparatory inspection.
 - 2) Initial inspection.
 - 3) Follow-up inspections.
 - 4) Final inspection.

NOTE TO SPECIFIER

End of WARRANTY OPTION

- i. Written certification or product data sheet attesting that proposed roofing membrane meets the EPA ENERGY STAR® Roof Products Program specification for energy efficiency and that the manufacturer is listed as a Partner.

4. Maintenance Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who received training. Refer to 017704 1.3, 1.4, and 1.5 for more specific training requirements.

1.5 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in TPO membrane roof application with minimum of 5 years documented experience and that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product, and that is eligible to receive a manufacturer's warranty.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by membrane manufacturer for specified roofing system and shall be in compliance with all applicable regulatory requirements.
- C. FMG Listing: Provide roofing membrane, base flashings, and component materials that comply with requirements in FMG 4450 and FMG 4470 as part of a membrane roofing system and that are listed in the most recent FMG "RoofNav" on-line directory or FMG's "Approval Guide" for Class 1 or noncombustible construction, as applicable. Identify materials with FMG markings.

NOTE TO SPECIFIER

90 pounds per square foot wind uplift minimum. Design roofing and insulation system to comply with regional requirements and special regulations of local authority having jurisdiction. Verify with USPS Contracting Officer. Contact Roofing System Manufacturer for information about 120 or 150 or greater pounds per square foot of uplift resistance.

NOTE TO SPECIFIER

Edit "Class" in the following paragraph for project's fire resistance and wind uplift resistance requirements. Verify availability of roofing systems that meet these classifications. "Class 1A" signifies meeting ASTM E 108, Class A fire performance for FMG-approved Class 1 roof covers. For areas having three or more hailstorms annually, FMG recommends roofing systems rated SH (severe hail) instead of MH (moderate hail).

1. Fire/Windstorm Classification: Class 1A- [90] [105] [120] <Insert number>.
2. Hail Resistance: [MH] [SH].

- D. Pre-installation Meeting:
 1. Convene a Pre-installation Meeting at Project Site one week prior to commencing work of this Section.
 2. Require attendance of parties directly affecting work of this Section.
 3. Review preparation and installation procedures and coordinating and scheduling required with related work.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- a. Require the Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraph below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- b. Require the Full-time Third-Party Roofing Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

Include the paragraph below if Contracting Officer mandates a Manufacturer's warranty.

- c. Require Manufacturer's Roofing Quality Control Inspector to conduct Pre-installation Meeting along with Contractor Quality Control Representative and Contracting Officer.

NOTE TO SPECIFIER

End of WARRANTY OPTION

4. Agenda:

- a. Tour, inspect and discuss condition of substrate, roof drains, roof drain final locations, curbs, penetrations and other preparatory work performed by other trades.
- b. Review structural loading limitations of deck and inspect deck for loss of flatness and for required mechanical fastening.
- c. Review roofing system requirements (Drawings, Specifications and other Contract Documents).
- d. Review required submittals, both completed and yet to be completed.
- e. Review and finalize construction schedule related to roofing work and verify availability of materials, installer's personnel, equipment and facilities needed to make progress and avoid delays.
- f. Review requirements for inspections, testing, certifying, and material usage accounting procedures.
- g. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing.
- h. Review safety precautions relating to roofing installation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver materials in manufacturer's original unopened containers or wrappings, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Protect foam insulation from direct sunlight exposure.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Do not apply roofing membrane during inclement weather. When air temperature is expected to fall below 40 degrees F, follow submitted roof system manufacturer's specified Cold Weather Application Procedures.
 2. Do not apply roofing membrane to wet, damp or frozen deck surface or when precipitation is occurring.
 3. Do not expose materials vulnerable to water or the sun in quantities greater than can be weatherproofed during same day.

**NOTE TO SPECIFIER**

Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates a Manufacturer's warranty.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Submit written warranty, without monetary limitation, signed by roofing system manufacturer agreeing to promptly repair leaks in roof membrane and base flashings resulting from defects in materials and workmanship.
 - 2. Warranty shall not exclude "ponding" water.
 - 3. Warranty Period: [20] [____] years.
 - 4. Include materials and workmanship for all manufacturer's supplied roofing components including but not limited to:
 - a. Membranes.
 - b. Flashings, including edge metal, metal flashings and accessories supplied by roofing membrane manufacturer.
 - c. Insulation.
 - d. Fasteners.
 - e. Adhesives.
 - f. Vapor / Air Retarder
 - 5. Include the following items within Warranty:
 - a. Roofing inspection by Manufacturer's Roofing Quality Control Inspector between 22 and 24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs on warranted items during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions. USPS must immediately notify roofing membrane manufacturer of such repairs.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Project Membrane Roofing Specification Section to Warranty.
 - 6. Wind Coverage
 - a. Warranty shall cover wind gusts up to [____] miles per hour.

End of WARRANTY OPTION

Verify manufacturer information and availability at time of Project Manual preparation for Project.

PART 2 - PRODUCTS**2.1 ROOFING MEMBRANE**

- A. Must have recycled content
- B. Fabric-Reinforced Thermoplastic Polyolefin Sheet: Uniform, flexible sheet formed from a thermoplastic polyolefin, internally fabric or scrim reinforced: ASTM D6878.
- C. Minimum Thickness: [59 mils (1.5 mm)] <Insert thickness if thicker is required >, minimum.

- D. Product must meet ENERGY STAR requirements for low-slope roofs and must be listed on the ENERGY STAR Roof Products Program Qualified Product List.
- E. Solar reflectance, per Cool Roof Rating Council (CRRC):
 - 1. Initial reflectance: 0.65 minimum.
 - 2. Three years after installation: 0.50 minimum.
- F. Physical Properties:
 - 1. Breaking Strength: 225 lbf (1kN); ASTM D 751, grab method.
 - 2. Elongation at Break: 15 percent; ASTM D 751.
 - 3. Tearing Strength: 55 lbf (245 N) minimum; ATSM D 751, Procedure B.
 - 4. Brittleness Point: Minus 22 deg F (30 deg C).
 - 5. Ozone Resistance: No cracks after sample, wrapped around a 3-inch- (75-mm-) diameter mandrel, is exposed for 166 hours to a temperature of 104 deg F (40 deg C) and an ozone level of 100 pphm (100 mPa); ASTM D 1149.
 - 6. Resistance to Heat Aging: 90 percent minimum retention of breaking strength, elongation at break, and tearing strength after 166 hours at 240 deg F (116 deg C); ASTM D 5573.
 - 7. Water Absorption: Less than 4 percent mass change after 166 hours' immersion at 158 deg F (70 deg C); ASTM D 471.
 - 8. Linear Dimension Change: Plus or minus 2 percent; ASTM D 1204

2.2 ROOFING SYSTEM MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the Work include the following:
 - 1. Carlisle Syntec Inc., Carlisle, PA (800) 479-6832.
 - 2. Firestone Building Products, Indianapolis, IN (800) 428-4442
 - 3. GAF Materials Corp., Wayne, NJ (800) 766-3411
 - 4. Johns Manville Roofing Systems, Denver, CO (800) 592-6958.
 - 5. Sika Sarnafil Division, Sika Corp, Canton, MA (800) 451-2504.
 - 6. Tremco Inc., Beachwood, OH (800) 852-6013.
 - 7. Versico, Carlisle, PA (800)992-7663
- B. Manufacturer of roofing membrane must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and membrane supplied must be listed on the ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted with Contracting Officer Approval.

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.3 AUXILIARY MATERIALS

- A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
 - 1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.
- B. Sheet Flashing
 - 1. Manufacturer's standard sheet flashing of same material, type, reinforcement, thickness, and color as TPO sheet membrane.

2. Manufacturer's standard TPO clad metal - A TPO-coated, heat-weldable sheet metal capable of being formed into a variety of shapes and profiles. TPO Clad Metal shall be a 25 gauge, G90 galvanized metal sheet with a 20 mil (0.5 mm) unsupported TPO membrane laminated on one side.
- C. Perimeter Edge and Metal Flashings
1. To be supplied by the roof system manufacturer in accordance with the rated assembly
 - a. Minimum 25 gauge galvanized steel with Kynar finish – color selected by Contracting Officer OR
 - b. Roof System manufacturer's rated and approved clad metal
- D. Bonding Adhesive: Manufacturer's standard clear or light-colored [solvent] [water]-based bonding adhesive for membrane, and solvent-based bonding adhesive for base flashings.

2.4 ROOF INSULATION

NOTE TO SPECIFIER

INSULATION TYPE OPTION 1, Polyisocyanurate foam insulation assemblies: Include the paragraphs below if the Specifier chooses Polyisocyanurate insulation.

Polyisocyanurate Foam Insulation

- A. Flat Roof Board Insulation: Polyisocyanurate Foam Insulation which meets or exceeds FS HH-I-1972/2, both faces covered with glass fiber felt; comply with FMG Standard 4450 Approval. (ASTM C1289, Type II – Class 1 – Grade 2)
 1. Thermal Resistance: in service R-5.6 per inch of thickness in cooling conditions
 2. Thermal Resistance: in service R-5.0 per inch of thickness in heating conditions
 3. Compressive Strength: 20 PSI Minimum
 4. Maximum Board Thickness is 2"
 5. Minimum Board Thickness is 1.5" on the base layer
- B. Tapered Polyisocyanurate Foam Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- C. Roof Curb Insulation: Polyisocyanurate foam; thickness to match wood nailer.
- D. Tapered Insulation: Provide crickets, saddles, and tapered insulation of same material as second layer of insulation; taper to the following slopes:
 1. Crickets and Saddles: 1/4 inch per foot or twice the slope of the roof, whichever is greater.
 2. Insulation Installed to Counterslope Roof Structure: 1/2 inch to the foot, or twice slope of roof, whichever is greater.
- E. Cover Board: 1/2" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

NOTE TO SPECIFIER

INSULATION TYPE OPTION 2, Extruded Polystyrene insulation assemblies: Include the paragraphs below if the Specifier chooses Extruded Polystyrene insulation.

**EXTRUDED Polystyrene (XPS)**

- A. Flat Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength (ASTM D1621): Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- B. Tapered Roof Board Insulation: Extruded polystyrene board to ASTM C578, Type IV, rigid, closed cell type, with integral high density skin.
 - 1. Thermal Resistance (ASTM C518): typical 5 year aged value of R-5 per 1 inch of thickness.
 - 2. Compressive Strength: Minimum 25 psi.
 - 3. Water Absorption (ASTM D2842): 0.7% by volume maximum.
 - 4. Flame Spread/Smoke Developed Values (ASTM E84): 5/165.
- C. Cover Board: 1/4" Factory Primed Glass Mat Gypsum Roof Board: ASTM C-1177. Zero flame spread and zero smoke developed per ASTM E84. Minimum 500 pounds per square inch compressive strength.

2.5 ACCESSORIES

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Roofing Insulation Fasteners: Fasteners shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Mechanical Fasteners for Insulation: Coated fasteners with plates appropriate for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer. Thickness of insulation and roofing membrane manufacturer's deck penetration requirements shall determine the length of the fastener.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- A. Roofing Insulation Adhesive: Insulation Adhesive shall be as tested and approved by FMG as part of the roofing system assembly.
 - 1. Insulation Adhesive: [The specifier shall research the requirements with respect to Volatile Organic Compounds and temperature limitations of project to complete this specification section. The completed section will dictate Standard VOC content insulation adhesive, Low VOC content insulation adhesive, OR No VOC content insulation adhesive.]
 - 2. Specified adhesive shall be for purpose intended and approved by Factory Mutual and supplied by roofing membrane manufacturer.

**NOTE TO SPECIFIER***End of INSULATION ATTACHMENT OPTIONS*

- B. Walkway Pads: Walkway materials shall be provided by the roofing membrane manufacturer
- C. Isolation Pads: Provide a piece of walkway pad as above
- D. Termination: Use roofing membrane manufacturer's recommended termination details and associated products to comply with Warranty requirements
- E. Pipe Flashings: Prefabricated pipe flashings shall be supplied by the roofing membrane manufacturer
- F. Vapor / Air Retarder [Use and location to be determined by Specifier – Product to be recommended and supplied by roof system manufacturer]

PART 3 - EXECUTION**3.1 EXAMINATION**

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

NOTE TO SPECIFIER

Edit paragraph below based on Contracting Officer's selection of roofing inspections and/or manufacturer's warranty.

- B. Verification of Conditions: Verify, with [Third-Party Roofing Inspector] [Full-time Third-Party Roofing Inspector] [Manufacturer's Quality Control Inspector] present that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify deck is clean and smooth, free of depressions, waves, or projections, properly sloped to drains, valleys, and eaves. Verify flutes of steel deck are evenly spaced at intersections.
 - 2. Verify roof openings, curbs, pipes, sleeves, ducts, or vents through roof are solidly set, and nailing strips, and reglets are in place. Verify deck is supported and tightly secured.
 - 3. Verify deck surfaces are dry and free of water, snow, and ice.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Provide covers and other means of protection as necessary to protect building surfaces against damage during roofing work.
- B. Where work shall continue over finished roof membrane, protect surfaces according to roofing membrane manufacturer's recommendations.

3.3 ROOF INSULATION INSTALLATION

**NOTE TO SPECIFIER**

INSULATION ATTACHMENT OPTION 1, Mechanically attached insulation assemblies: Include the paragraphs below if the Specifier chooses mechanically attached insulation.

- A. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- B. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- C. Mechanically Attached Installation:
 - 1. Maximum insulation board dimension is 4' x 8'
 - 2. Place long edge of boards parallel to deck flutes, forming joint over solid bearing. Lay first layer insulation units with long edge joints continuous and end joints staggered.
 - 3. Lay second and subsequent layers of insulation with both long side and end joints offset 6 inches (15 cm) from joints below.
 - 4. Factory primed glass mat gypsum board and overlayered insulation may be loose laid and fastened with the same insulation fastener and plate in accordance with manufacturer's approved assembly. Fastener and plate must be approved by the roof system manufacturer and installed at the required density to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- D. Apply no more insulation than can be waterproofed with roofing membrane in same day.
- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

NOTE TO SPECIFIER

INSULATION ATTACHMENT OPTION 2, Adhered insulation assemblies: Include the paragraphs below if the Specifier chooses adhered insulation.

- F. Lay insulation boards to moderate contact without forcing joints. Cut insulation to fit neatly to perimeter blocking and around protrusions through roof.
 - 1. Gaps between insulation boards, nailers and penetrations of 1/4 inch (0.64 cm) or greater are not acceptable.
- G. Place roof crickets and tapered thickness insulation to the required slope pattern in accordance with manufacturer's published instructions.
- H. Adhered Installation:
 - 1. 4-foot x 4-foot maximum board size for insulation boards adhered to a substrate including successive layers.
 - 2. Lay second and subsequent layers of insulation so that the insulation board's joints are staggered vertically and offset from the underlying layers.
 - 3. Factory primed glass mat gypsum board and overlayered insulation shall be adhered in accordance with the manufacture's recommendations and submitted FM assembly number to achieve the specified FMG [1A]-[90][105][120] system, in accordance with requirements of FMG Loss Prevention Data Sheet 1-29 for specified wind uplift requirements.
- I. Apply no more insulation than can be waterproofed with roofing membrane in same day.

- E. Mechanically attach a single layer of insulation to manufactured metal curbs.

3.4 ROOFING MEMBRANE APPLICATION

- A. Apply roofing membrane in accordance with membrane manufacturer's published instructions for specified system.
- B. All quality control recommendations of the roofing system manufacturer shall be strictly followed.
- C. Cold Weather Application Procedures: When air temperature is expected to fall below 40 degrees F, follow Cold Weather Application Procedures as follows:
 - 1. Store flashing adhesive in heated storage units (minimum temperature 40 degrees F) prior to installation.
 - 2. Follow roofing membrane manufacturer's recommendation for cold weather application of adhered field sheets, corner & perimeter area, and flashings.

3.5 WATER CUTOFFS AND WEATHER PROTECTION

- A. Install water cut-offs according to roofing membrane manufacturer's recommendations at end of day's operation to seal insulation and edge of roof membrane from moisture entry. If rain or foul weather appears imminent during roofing application, cease operations and protect deck, insulation, flashings, penetrations and membrane from moisture intrusion and damage with water cutoffs. Insulation and roofing materials not so protected before rain are considered damaged materials and will be rejected.
- B. Water cut-offs over steel deck must include steel deck flute plugs to prevent moisture from getting under insulation.
- C. Remove water cut-offs and other temporary weather protections prior to continuing roofing work. Remove materials that have been subject to moisture damage and return deck to clean, dry condition before proceeding with roofing operations. Remove damaged materials from job site.
- D. Water cut-offs and weather protection shall not be considered part of final roof system specified.

3.6 FLASHING MEMBRANE AND ACCESSORIES

- A. Field membrane shall be terminated with fasteners and plates. Flashing membrane, mechanically attached or adhered, shall be extended past the termination of the field membrane and hot air welded on the horizontal plane.
- B. Roof Penetrations:
 - 1. Prefabricated pipe flashings shall be installed where the configuration of penetration will permit, including but not limited to electrical conduit, and plumbing vents.
 - 2. Field fabrication of flashing shall be used where the configuration of the penetration prohibits the use of prefabricated flashing.
- C. Fasten membrane and flashing terminations per roofing membrane manufacturer's recommendations.
- D. Walkway Pads: Weld walkways to roofing membrane per manufacturer's recommendation.

3.7 ROOF SURFACING

- A. No field-applied surfacing shall be utilized with this roofing system.

3.8 CONSTRUCTION

- A. Interface with Other Work:
1. Coordinate Work with installation of associated metal counterflashings specified under other Sections as Work of this Section proceeds.
 2. Complete installation of base flashing at roof curbs prior to setting roof top equipment.
 3. Coordinate Work with Plumbing for roof drain(s) installation.

3.9 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.

NOTE TO SPECIFIER

WARRANTY OPTION 1, Part-Time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 1, Part-Time Third-Party inspections.

- B. Field Services: Third-Party Roofing Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform preparatory, initial, follow-up and final inspections for roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

WARRANTY OPTION 2, Full-time Third-Party Inspections: Include the paragraphs below if Contracting Officer mandates WARRANTY OPTION 2, Full-time Third-Party inspections.

- C. Field Services: Full-time Third-Party Roofing Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform full-time inspections for roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

OPTION 3, Manufacturer's warranty: Include the paragraphs below if Contracting Officer mandates OPTION 3, Manufacturer's warranty or if the Contracting Officer mandates Option 1 of Option 2 and also chooses the optional manufacturer's warranty.

- D. Manufacturer's Field Services: Manufacturer's Roofing Quality Control Inspector.
1. Attend and conduct Pre-installation Meeting.
 2. Perform preparatory, initial, follow-up and final inspections for installation of roof insulation and roofing system.
 3. Prepare and submit inspection reports for each inspection made.

NOTE TO SPECIFIER

End Manufacturer's warranty

- E. Maintenance Instruction
1. Provide on-site instruction to review the components of the system and detail any common troubleshooting or maintenance that is required to ensure normal performance of the roofing system.

2. Provide one complete set of installation details and component manuals that will remain at the installed location.

3.10 CLEANING

- A. Section 017300 - Execution: Requirements for cleaning.
- B. Remove dirt, debris, and markings from finished surfaces. In areas where finished surfaces are soiled, consult roofing membrane manufacturer for cleaning advice and comply with their instruction.
- C. Replace defaced or disfigured finishes caused by Work of this Section.

3.11 PROTECTION

- A. Where construction traffic must continue over finished roof installation, protect surfaces in manner recommended by roofing system manufacturer to protect Manufacturer's Warranty.

END OF SECTION 07 54 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 56 00 00 - R&A ACRYLIC ELASTOMERIC ROOF COATING FOR SHEET METAL ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where an acrylic elastomeric roof coating is specified over an existing sheet metal roof system.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of acrylic elastomeric roof coatings over existing sheet metal roofing, including pre-installation substrate preparation procedures and sheet metal roofing repair requirements.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 079201 – Sealants for Roof Replacement
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 10-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 10-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.*

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 10-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)
 - a. ASTM D 6083 – Standard Specification for Liquid Applied Acrylic Coating Used in Roofing
 2. National Roofing Contractors Association (NRCA)

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Follow the coating manufacturer recommendations for acceptable application temperature of coating materials.

2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation.
3. Do not apply coating materials when precipitation is forecast within 24-hours after anticipated completion of coating work.
4. Coatings, sealants, and primers should be maintained at a temperature between 50°F (10°C) and 80°F (27°C) at all times. Do not use coatings, sealants, or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
5. Refer to the coating manufacturer and NRCA requirements and recommendations for additional cold weather application requirements and restrictions.

- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, DELETE "an alternate price for" from paragraph 1.9A.*
3. *If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - a. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Acrylic Elastomeric Roof Coating for Sheet Metal Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
 1. Contractor name, address, phone number and project contact name.
 2. The project completion date, and date of guarantee expiration.
 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 ACRYLIC ELASTOMERIC ROOF COATING SYSTEM SUMMARY

- A. Acceptable coating manufacturers: Manufacturers offering coatings and products meeting the requirements listed in Article 2.2.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If a 10-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, or if an alternate price for a 10-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 2.1B.*
2. *If no warranty is specified, DELETE paragraph 2.1B.*

- B. Selected products, when used within the specified roof assembly, must be capable of meeting the warranty requirements listed in Article 1.9.

2.2 ACRYLIC ELASTOMERIC ROOF COATING

- A. Spray-applied base coat:
1. Acrylic elastomeric base coat; ASTM D 6083, color recommended by manufacturer for this application.
- B. Spray-applied finish coat:
1. Acrylic elastomeric finish coat; ASTM D 6083, color determined by Owner.

2.3 FASTENER, SEAM, FLASHING AND MISCELLANEOUS TREATMENT MATERIALS

- A. For encapsulation of fastener heads and gutter straps located on the sheet metal panels:
1. Acrylic elastomeric sealant approved for use in this application by the coating manufacturer.
 - a. Color: Light gray.
- B. For treatment of horizontal and vertical seams, ridge caps, rake edges, parapet walls, curb flashings, and other roof penetrations:
1. Acrylic elastomeric sealant approved for use in this application by the coating manufacturer.
 - a. Color: Light gray.
 2. Reinforcing fabric approved for use in this application by the coating manufacturer.
 - a. 6-inch and 12-inch widths.
- C. For treatment of exterior and interior gutters:
1. Acrylic elastomeric sealant approved for use in this application by the coating manufacturer.
 - a. Color: Light gray.
 2. Reinforcing fabric approved for use in this application by the coating manufacturer.
 - a. 6-inch and 12-inch widths.
- D. For treatment of residual asphalt:

R&A ACRYLIC ELASTOMERIC ROOF COATING FOR SHEET

1. Acrylic elastomeric coating approved for use in this application by the coating manufacturer.
 - a. Color: White or light gray.
- E. For treatment of remaining areas of rust (after power washing):
 1. Acrylic primer/rust inhibitor approved for use in this application by the coating manufacturer.
- F. For priming of existing prefinished sheet metal roof panels, if required by the coating manufacturer:
 1. Acrylic primer approved for use in this application by the coating manufacturer.

2.4 MISCELLANEOUS SHEET METAL REPAIR MATERIALS

- A. For use at damaged roof panels, or panels containing holes greater than 6-inches in diameter:
 1. Sheet metal roof panels to match existing size and configuration of existing panels.
- B. For use at roof panel holes less than 6-inches in diameter:
 1. Sheet metal: 24-gauge galvanized steel; size as necessary to extend 3-inches minimum on all sides of hole.
 2. For securing steel plate to steel deck: Fasteners approved by the coating manufacturer.
- C. Sheet metal cricket/saddle material:
 1. Sheet metal: 20-gauge galvanized steel; size and configuration as necessary to result in adequate slope and size to move water around obstruction.
 2. For securing crickets to curbs, walls and sheet metal roof panels: Fasteners approved by the coating manufacturer.
 3. For sealing sheet metal flanges (if required by roof coating manufacturer): Sealant acceptable to coating manufacturer.
- D. Replacement fasteners:
 1. For use where existing fasteners are missing, loose or damaged, or where fasteners must be used to re-secure loose sheet metal panels: Fastener type equal to existing roof system fasteners, compatible with existing sheet metal panel system, and acceptable to the coating manufacturer. Use oversized fasteners where existing fasteners are damaged or missing.
- E. Replacement pipe boots:
 1. For use where existing pipe boots are damaged or missing: Pre-fabricated, neoprene-type pipe boot, size as necessary to accommodate existing tubular penetration diameter.

2.5 RELATED COATING PRODUCTS

- A. Primers, manufacturer-required surface treatments, sealants, prefabricated accessories, and other related items: Unless otherwise indicated, products manufactured by, or approved by the coating manufacturer.

2.6 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

3.1 PREPARATION OF SUBSTRATE

- A. Prepare substrate in a manner that is acceptable to the coating manufacturer. Substrate preparation includes, but is not limited to: treatment of excessive gaps, installation of sheet metal crickets behind rooftop units and other obstructions, repair of damaged or loose sheet metal panels, repair of holes in sheet metal panels, cleaning of panels, treatment of surface rust, treatment of areas of excessive ponding, treatment of residual asphalt, and priming of panels (if required by the roof coating manufacturer).
1. Treatment of gaps: At gap locations identified by the roof coating manufacturer as excessive, secure panels with approved fasteners. Fill gaps with closed-cell foam strips, if necessary.
 2. Installation of sheet metal crickets: Install sheet metal crickets behind all units and other rooftop obstructions where none presently exist, and a potential exists for ponding water to accumulate.
 - a. Install approved sealant behind the flanges of the sheet metal cricket prior to securement to the substrate and rooftop unit/obstruction. Secure with approved fasteners.
 3. Repair of damaged/loose sheet metal panels, and panels with holes:
 - a. Replace damaged panels, and panels containing holes greater than 6-inches in diameter with new panels to match existing size, gauge and configuration. Secure panels in a manner equal to existing securement panel with approved fasteners.
 - b. Re-secure loose panel sections with approved fasteners.
 - c. Install sheet metal plates over holes less than 6-inches in diameter. Ensure that the panel extends 3-inches, minimum, on all sides of the existing hole. Secure the plate to the panel with approved fasteners.
 4. Power washing: Power wash areas identified to receive roof coatings. Refer to manufacturer for equipment requirements and other recommendations regarding power washing.
 5. Removal of rust, asphaltic residue, and loose/deteriorated paint:
 - a. Using mechanical methods such as wire brushing, remove excessive rust, asphaltic residue and loose/deteriorated paint from the sheet metal panels.
 - b. Treat areas where these materials cannot be removed with materials and in a manner prescribed by the coating manufacturer.
 6. Priming: Prime panels if required by the coating manufacturer.

3.2 TREATMENT OF SEAMS, FASTENERS AND FLASHINGS

- A. Treatment of seams:
1. Horizontal seams:
 - a. Install specified seam flashing material at horizontal seam. Follow manufacturer-specific requirements for application and required material thickness for the seam type encountered.
 2. Vertical seams:
 - a. Install flashing material at vertical seams. Install reinforcing fabric into flashing material. Coat reinforcing fabric with an additional application of flashing material.
 3. Ridge, rake, wall, curb, and other rooftop penetration flashings:
 - a. Fill excessive gaps in ridge and rake edges.

- b. Install flashing material at flashings. Install reinforcing fabric into flashing material. Coat reinforcing fabric with an additional application of flashing material.
 - B. Treatment of fasteners and gutter straps:
 - 1. Inspect all existing system fasteners. Re-secure loose fasteners. Where existing fasteners are damaged, stripped, missing, or cannot be re-secured, install a new, approved fastener.
 - 2. Encapsulate all fastener heads with flashing material.
 - 3. Gutter straps: Encapsulate with flashing material.
 - C. Treatment of rooftop units, skylights, pitch pans, tubular penetrations, wall terminations, and other roof penetrations:
 - 1. Inspect rooftop penetrations for damage. Repair penetrations using specified materials.
 - 2. Install flashing material horizontal-to-vertical transitions. Install reinforcing fabric into flashing material. Coat reinforcing fabric with an additional application of flashing material.
 - D. Treatment of ridge caps and rake edges:

3.3 ACRYLIC ELASTOMERIC ROOF COATING APPLICATION

- A. General:
 - 1. Inspect all surface preparation and flashing work. Correct any identified defects prior to application of coating.
 - 2. Inspect the areas adjacent to the work area for cars and other property that could be damaged by coating overspray. Prior to work start, remove or protect cars and other property that may be damaged by work activities.
 - 3. Prior to work start, close any rooftop air intakes within and adjacent to the work area.
 - 4. Follow manufacturer guidelines for rate of application and application procedures of the base and finish coats, as outlined in the written literature provided by the coating manufacturer.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 56 00 00

SECTION 07 61 00 00 - CSF SHEET METAL ROOFING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 61 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. This section covers the metal roof system required for the "Platform" and "Carrier Loading" and includes the panels, panel clips, flashing, panel splices, ridge material, fascias, gutter and downspouts, and all necessary fasteners for the above. Not included are the structural roof supports.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data:
 - a. Product data including manufacturer's product specifications, standard details, certified product test results, installation instructions, and general recommendations, as applicable to materials and finishes for each component and for total panel system.
 - 2. Shop Drawings:
 - a. Submit erection/shop drawings for each product specified showing all erection procedures and accessories required. Field measure and verify dimensions prior to fabrication of metal roofing.
 - 3. Samples:
 - a. Samples for initial selection purposes in form of manufacturer's color charts or chips showing full range of colors, textures, and patterns available for roof and wall panels with factory-applied finishes.
 - b. Samples for verification purposes of roof panels. Provide sample panels 12 inches long by actual panel width, in the profile, style, color, and texture indicated. Include clips, battens, fasteners, closures, and other panel accessories.
 - 4. Assurance/Control Submittals:

- a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
- b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Special Warranty: Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver panels and other components so they will not be damaged or deformed. Package roof panels for protection against transportation damage.
- C. Handling: Exercise care in unloading, storing, and erecting roof covering panels to prevent bending, warping, twisting, and surface damage.
- D. Stack materials on platforms or pallets, covered with tarpaulins or other suitable weathertight ventilated covering. Store metal roof panels so that they will not accumulate water. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.

1.5 ENVIRONMENTAL REQUIREMENTS

- A. Roof panels shall meet ENERGY STAR requirements for low-slope roofs and be listed on the DOE's ENERGY STAR Roof Products Qualified Product List.

1.6 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Manufacturer shall warrant to correct defects in paint finish for 20 years following Substantial Completion.
 - 2. Installer shall warrant to correct defects in material and workmanship for two years following Substantial Completion.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Nucor Building Systems, Waterloo, IN (219) 837-7891.
 - 2. Overly Manufacturing Company, Greensburg, PA (724) 834-7300.
 - 3. Centria, Moon Township, PA (800) 759-7474.
 - 4. Metal Sales Manufacturing Corporation, Sellersburg, IN (800) 999-7777.
 - 5. Star Building Systems, Oklahoma City, OK (800) 654-3921.
 - 6. Tremco Inc., Beachwood, OH (800) 852-6013.
- B. Manufacturer of sheet metal roofing must be a Partner in the EPA ENERGY STAR® Roof Products Program for energy efficiency and sheet metal roofing and coatings supplied must be listed on the DOE's ENERGY STAR Roof Products Qualified Product List.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Panel:
 - 1. The panels shall be manufactured from 24 gauge, 0.5 oz./sq ft Galvalume steel strip having a minimum yield of 50,000 psi.
 - 2. The panel ends shall be factory punched and notched at splice and ridge locations.
 - 3. The panel side laps shall have factory-applied mastic.
 - 4. Panels shall have a UL Class 90 Uplift Rating.
- B. Panel Splice:
 - 1. The panel splice shall have a 16 gauge steel back-up plate and an 11 gauge aluminum cinch strap so that when assembled the mastic used in the splice will be under constant compression.
 - 2. The back-up plate and cinch strap shall be factory punched to ensure proper fit.
- C. Floating Panel Clip:
 - 1. The floating panel clips shall be self-centering and allow for up to 2-7/16 inch expansion and/or contraction from the installed position. The clip design shall ensure that movement does not occur between the panel and the clip.
 - 2. The floating panel clip shall have factory-applied mastic to ensure a weathertight installation.
 - 3. Each clip shall be attached to the supporting joist and purlin with 2 fasteners, the size and type as recommended by the panel manufacturer.
- D. Trim and Flashing:
 - 1. Gable, eave and parapet wall flashing details will be detailed, designed, and supplied by the panel manufacturer.
 - 2. High eave flashing and flashing parallel to the roof panels must accommodate the thermal expansion and contraction of the roof without damage to the roof panels or flashing.
 - 3. All exposed soffit, fascia, trim and flashing material shall be manufactured from galvanized steel strip and shall have a full strength fluopolymer (containing a minimum of 70 percent Kynar 500 resin) system of 1.0 + .1 mil total dry film thickness. On the reverse side, a white wash coat of 0.3 to 0.4 mil dry film thickness is applied.
 - 4. Flexible membranes, where required, shall be supplied by the panel manufacturer.
- E. Bird Nesting:

1. Projections of structural framing creating bird nesting areas shall be framed out with sheet metal closures, with all fluted deck flutes sealed off with rubber closure inserts.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Examine alignment of the steel structure and related supports prior to installation and do not proceed until any defects are corrected.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Examine the alignment of the steel structure before installing any roof panels, and do not proceed with installation if the steel structure is not aligned to the tolerances necessary.
- B. Erection of the metal roofing panels must be started correctly and the sheets held true to line. Horizontal lines are to be straight and level and vertical lines plumb.

3.3 DISSIMILAR MATERIALS

- A. Where aluminum materials come in contact with dissimilar metals, an insulating paint or tape shall be applied between the aluminum and the dissimilar metal.

3.4 CLEANING AND PROTECTION

- A. Damaged Units: Replace panels and other components of the work that have been damaged or have deteriorated beyond successful repair by means of finish touch-up or similar minor repair procedures.
- B. Cleaning: Remove temporary protective coverings and strippable films (if any) as soon as each panel is installed. Upon completion of panel installation, clean finished surfaces as recommended by panel manufacturer, and maintain in a clean condition during construction.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 07 61 13 00 - CSF STANDING SEAM SHEET METAL ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where standing seam sheet metal roofing is selected as the roofing system. Per the United States Postal Service Roofing Design Standard, standing seam sheet metal roofing systems are acceptable with restrictions for steep slope applications at facilities with a "Critical" or "Non-Critical" building designation. Discuss the use of standing seam sheet metal roofing with the USPS Project Manager prior to specifying. An approved deviation letter may be required prior to specifying a standing seam sheet metal roofing system.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of standing seam sheet metal roofing, flashings, and related accessories.

NOTE TO SPECIFIER

Review available field data:

1. *For projects that do not include roof areas with underlying steel decks, DELETE paragraph 1.2D from the list below.*
2. *For projects that do not include roof areas with underlying wood decks, DELETE paragraph 1.2E from the list below.*
3. *For projects that include roof areas with both underlying steel and wood decks, do not edit the list below.*

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 079201 – Sealants for Roofing
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Architectural Manufacturers Association
 - a. AAMA 621 – Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc-Aluminum Coated Steel Substrates
 - 2. American Society for Testing and Materials (ASTM)
 - a. ASTM A 792/A 792M – Standard Specification for Sheet Steel, 55% Aluminum-Zinc Alloy Coated by the Hot-Dip Process
 - b. ASTM D 1970 – Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 - c. ASTM B 209 – Aluminum and Aluminum Alloy Sheet and Plate
 - d. ASTM F 1667 – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples
 - 3. National Roofing Contractors Association (NRCA)
 - a. NRCA Roofing and Waterproofing Manual, 5th Edition
 - 4. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
 - 5. Underwriters Laboratories, Inc. (UL)
 - a. UL 2218 - Impact Resistance of Prepared Roof Covering Materials
 - b. UL 580 - Tests for Uplift Resistance of Roof Assemblies

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.
- F. Refer to manufacturer minimum slope requirements for the standing seam sheet metal system selected for use. Do not install standing seam sheet metal roof systems on slopes less than 2-inches per foot.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install standing seam sheet metal roofing at temperatures below 32°F (0°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation.
 - 3. Do not install self-adhering membrane when the temperature of the outside air, self-adhering membrane, or roof deck are below 40°F (5°C).
 - 4. Refer to the sheet metal roofing panel manufacturer and NRCA requirements and recommendations for additional cold weather application requirements and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - a. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.

- c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Standing Seam Sheet Metal Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
- 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 STANDING SEAM SHEET METAL ROOFING SYSTEM SUMMARY

- A. Acceptable sheet metal roofing panel manufacturers: Manufacturers offering panels meeting the requirements listed in Item 2.2.
- B. Selected products, when used within the specified roof assembly, must be capable of meeting the warranty requirements listed in Article 1.9.

NOTE TO SPECIFIER

Review available field data:

- 1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 2.2 below.*
- 2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 2.2 below.*

Re-number Articles, if necessary, after editing.

2.2 UNDERLAYMENT

- A. Self-adhering membrane: Product approved for use in high-temperature conditions by the underlayment manufacturer and sheet metal panel manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- B. For use over self-adhering membrane:
 - 1. Red rosin paper; 36-inch width, minimum; 3 pounds per 100 square feet, minimum.

2.3 SHEET METAL ROOF PANELS

**NOTE TO SPECIFIER**

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), *DELETE* "and/or structural" from paragraph 2.3A, and *DELETE* sub-paragraph 2.3.A.2 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), *DELETE* "architectural and/or" from paragraph 2.3A, but do not edit sub-paragraph 2.3.A.2 below.

- A. Product type: Factory-formed, prefinished galvanized steel, minimum 22-gauge architectural and/or structural sheet metal roof panels; conforming to ASTM A 792/A 792M. Fabricated to allow for a minimum 1-3/4 inch high standing seams 18-inches o.c. maximum, or as recommended by the sheet metal roofing panel manufacturer for this application. Factory-fabricated "ready to use" for field assembly.
 1. Panels shall be capable of spanning the structural purlins spacing.
- B. Panel finish: Kynar 500 coated, with a factory-applied top side film thickness of .70 to .90 mil over a .25 to .30 mil prime coat to provide a total dry film thickness of .95 to 1.25 mil, to meet AAMA 621. Underside of panel shall be coated with a primer with a dry film thickness of .25 mil. Finish shall conform to all tests for adhesions, flexibility and longevity as specified by Kynar 500 supplier. Standard color as determined by the Owner.
- C. Impact Resistance: Conforming to the requirements of UL 2218.
- D. Wind uplift: Conforming to the requirements of UL 580, and capable of obtaining a UL Class 90 rating for wind uplift.

2.4 CLIPS

- A. System clips: Concealed; size, type, and configuration as necessary to match roof system type. Product manufactured by or approved by the sheet metal panel manufacturer.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit paragraph 2.5.A below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), *DELETE* paragraph 2.5.A below.

Re-number/letter paragraphs and sub-paragraphs, if necessary, after editing.

2.5 FASTENERS

- A. For fastening red rosin paper:
 1. Staples; size as necessary to hold red rosin paper in place prior to installation of standing seam sheet metal roof system.
- B. For fastening of sheet metal clips:
 1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer.
- C. For fastening of other sheet metal accessories:

1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer. Provide neoprene washers where shown on drawings.

2.6 SHEET METAL AND FLASHING ACCESSORIES

- A. Rake edges, perimeter fascia, fascia extensions, hip and ridge flashings, expansion joints and counterflashing: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
 1. Fabricate to the dimensions and configurations indicated on the drawings.
- B. Continuous cleats: Galvanized steel; G 90, hot-dipped zinc-coated sheet steel, 22-gauge, minimum.
- C. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- D. Scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- E. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- F. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- G. Apron, wall and cricket flashing (related to rooftop curbs, chimneys and other square penetrations: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
 1. Fabricate to the dimensions and configurations indicated on the drawings.
- H. Plumbing vent and tubular penetration flashings: Metal flashing with flanged sleeve with hood, prefabricated flashing with elastomeric collar, or other product type manufactured by, or approved by the sheet metal panel manufacturer.
 1. For sheet metal plumbing vent and tubular penetration flashings with flange and sleeve and hood:
 - a. Clamp: Stainless steel plumbers clamp, size as necessary to tightly secure hood.

2.7 MISCELLANEOUS MATERIALS

- A. Ventilation accessories, including ridge vents, soffit vents and other rooftop vents:
 - 1. Provide accessories manufactured by, or approved by, the sheet metal roofing manufacturer, if required.
- B. For use at sheet metal flashing strip-ins, and where indicated on drawings:
 - 1. Pressure-sensitive EPDM flashing material; non-reinforced, nominal 60-mil thickness, black color. Type acceptable to asphalt shingle roofing manufacturer for specific flashing conditions encountered. Minimum 5-inch width.
 - 2. Primer: Type compatible with pressure-sensitive EPDM flashing and acceptable to the sheet metal panel manufacturer.
- C. Butyl tape: for use behind counterflashing flanges and other locations indicated where indicated on the drawings. Width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

NOTE TO SPECIFIER

Review available field data:

- 1. *At project locations where excessive, accumulating snow is possible, the designer/specifier must consider the use of a snow retention system. If such a system is determined to be necessary for the project location, do not edit Article 2.8.*
- 2. *If a snow retention system is not determined to be necessary for the project location, or cannot be installed due to the potential of increased structural load on the building structure, DELETE Article 2.8.*

NOTE: *A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.*

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

2.8 SNOW RETENTION SYSTEM

- A. Provide a snow retention system:
 - 1. The snow retention system shall be approved for use by the sheet metal panel manufacturer.
 - 2. Snow retention system standing seam clamps: Product such as "S-5! Clamps", manufactured by S-5! Attachment Solutions – Metal Roof Innovations, Ltd., Colorado Springs, CO. Clamp size and configuration as necessary to accommodate standing seam size and profile. Product shall be approved by Owner prior to use.
 - 3. Snow retention system: Snow retention system appropriate for the anticipated snow accumulation at the project location. Products such as "Sno-Rail/Sno-Fence" and "Sno-Clip", manufactured by Alpine SnowGuards, Morisville, VT.

2.9 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 3.2 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 3.2 below.

Re-number Articles, if necessary, after editing.

3.2 UNDELAYMENT INSTALLATION

- A. Install self-adhering membrane: Follow installation requirements of the underlayment manufacturer.
- B. Install one ply of red rosin sheathing paper. Secure to the deck as necessary to hold in place.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit sub-paragraph 3.3.A.1 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), delete "including underlayments," from sub-paragraph 3.3.A.1.

3.3 STANDING SEAM SHEET METAL ROOFING INSTALLATION

- A. Roof system general installation instructions:
 1. Except as may be modified by these specifications and drawings, install the specified sheet metal roof panel system, including underlayments, in accordance with the requirements and recommendations of the manufacturer, using the manufacturer's current printed instructions, the recommendations outlined in the NRCA "Roofing and Waterproofing Manual, 5th Edition", and the recommendations outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
 2. Panels shall be installed plumb and true in a proper alignment and in relation to the existing structural framing. If necessary, use chalk lines as visible guides to ensure the proper alignment of the panels.
 3. Install sheet metal panel clips as required to secure the standing seam sheet metal panel system to the underlying substrate, and to allow movement of the roof system. Follow the requirements and recommendations of the sheet metal panel manufacturer. Install a minimum of two fasteners per clip.

3.4 SHEET METAL FLASHING INSTALLATION

- A. Rake edges perimeter fascias and fascia extensions:
 1. Continuous cleats: Provide continuous cleats where indicated on drawings. Secure the horizontal flange and vertical face of the continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 2. Drip edges, fascia and fascia extensions: Place the drip edge, fascia or fascia extension. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Hip and ridge flashings:

1. Fabricate and install hip and ridge caps as indicated on the drawings. Follow the recommendations and requirements of the sheet metal panel manufacturer.
- C. Expansion joints:
1. Fabricate and install expansion joint flashings as indicated on the drawings.
- D. Counterflashings: Install counterflashings at locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
 3. Provide a continuous bead of sealant along the top edge of surface-mounted counterflashings to shed water and provide a watertight seal.
- E. Slip counterflashings: Install slip counterflashings at locations where existing sheet metal counterflashings cannot be lifted or removed, and at other locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Apron, side, and cricket flashings:
1. Install apron and backer/cricket flashings at roof curbs, chimneys, wall terminations, locations indicated on drawings, and at locations recommended by the sheet metal panel manufacturer.

- a. At penetrations greater than 24-inches, roof slopes greater than 6:12 (27 degrees), when a large volume of snow or ice could accumulate behind a roof penetration or when the average January temperature is 30°F (-1°C) or lower, install cricket flashings in lieu of backer flashings behind roof penetrations.
 - b. Where cricket widths exceed 18-inches, provide wood framing and plywood support beneath sheet metal cricket flashing.
 - c. Secure apron and backer/cricket flashings to the underlying substrate with fasteners appropriate to the substrate.
- I. Tubular penetration flashing: Flash round pipe penetrations with a manufacturer recommended pipe flashing boot and specified watertight hood.
- 1. Flash tubular penetration where indicated on drawings. Follow asphalt shingle manufacturer recommendations and requirements.
 - 2. Hood and drawband: Where a flanged sleeve sheet metal flashing is used, install a stainless steel hood over the flanged sleeve; solder all seams watertight. Secure a stainless steel drawband around the top of each hood to secure the hood to the penetration. Seal the top of the drawband and hood.

3.5 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install ventilation accessories, including ridge vents, soffit vents and other rooftop vents at locations indicated on the drawings, or recommended by the sheet metal panel manufacturer following the printed instructions of the manufacturer.
- B. Sheet metal flashing strip-ins:
 - 1. Install specified strip-in where indicated on drawings.
- C. Butyl tape:
 - 1. Install specified butyl tape behind counterflashings where indicated on drawings.

NOTE TO SPECIFIER

Review available field data:

- 1. *If a snow retention system is to be included on the project, do not edit Article 3.6.*
- 2. *If a snow retention system is not included on the project, DELETE Article 3.6.*

NOTE: *A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.*

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

3.6 SNOW RETENTION SYSTEM INSTALLATION

- A. Install the snow retention system following the recommendations and requirements of the standing seam sheet metal panel and snow retention system manufacturers.

USPS CSF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 61 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 61 13 00 - MPF STANDING SEAM SHEET METAL ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where standing seam sheet metal roofing is selected as the roofing system. Per the United States Postal Service Roofing Design Standard, standing seam sheet metal roofing systems are acceptable with restrictions for steep slope applications at facilities with a "Critical" or "Non-Critical" building designation. Discuss the use of standing seam sheet metal roofing with the USPS Project Manager prior to specifying. An approved deviation letter may be required prior to specifying a standing seam sheet metal roofing system.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of standing seam sheet metal roofing, flashings, and related accessories.

NOTE TO SPECIFIER

Review available field data:

1. *For projects that do not include roof areas with underlying steel decks, DELETE paragraph 1.2D from the list below.*
2. *For projects that do not include roof areas with underlying wood decks, DELETE paragraph 1.2E from the list below.*
3. *For projects that include roof areas with both underlying steel and wood decks, do not edit the list below.*

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 079201 – Sealants for Roofing
- D. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Architectural Manufacturers Association
 - a. AAMA 621 – Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc-Aluminum Coated Steel Substrates
 - 2. American Society for Testing and Materials (ASTM)
 - a. ASTM A 792/A 792M – Standard Specification for Sheet Steel, 55% Aluminum-Zinc Alloy Coated by the Hot-Dip Process
 - b. ASTM D 1970 – Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 - c. ASTM B 209 – Aluminum and Aluminum Alloy Sheet and Plate
 - d. ASTM F 1667 – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples
 - 3. National Roofing Contractors Association (NRCA)
 - a. NRCA Roofing and Waterproofing Manual, 5th Edition
 - 4. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
 - 5. Underwriters Laboratories, Inc. (UL)
 - a. UL 2218 - Impact Resistance of Prepared Roof Covering Materials
 - b. UL 580 - Tests for Uplift Resistance of Roof Assemblies

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.
- F. Refer to manufacturer minimum slope requirements for the standing seam sheet metal system selected for use. Do not install standing seam sheet metal roof systems on slopes less than 2-inches per foot.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install standing seam sheet metal roofing at temperatures below 32°F (0°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation.
 - 3. Do not install self-adhering membrane when the temperature of the outside air, self-adhering membrane, or roof deck are below 40°F (5°C).
 - 4. Refer to the sheet metal roofing panel manufacturer and NRCA requirements and recommendations for additional cold weather application requirements and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
 - a. Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - b. Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.

- c. Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - d. Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Standing Seam Sheet Metal Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
- 1. Contractor name, address, phone number and project contact name.
 - 2. The project completion date, and date of guarantee expiration.
 - 3. The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - 4. The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 STANDING SEAM SHEET METAL ROOFING SYSTEM SUMMARY

- A. Acceptable sheet metal roofing panel manufacturers: Manufacturers offering panels meeting the requirements listed in Item 2.2.
- B. Selected products, when used within the specified roof assembly, must be capable of meeting the warranty requirements listed in Article 1.9.

NOTE TO SPECIFIER

Review available field data:

- 1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 2.2 below.*
- 2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 2.2 below.*

Re-number Articles, if necessary, after editing.

2.2 UNDERLAYMENT

- A. Self-adhering membrane: Product approved for use in high-temperature conditions by the underlayment manufacturer and sheet metal panel manufacturer, and meeting the following criteria:
 - 1. Meeting the requirements of ASTM D 1970.
 - 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 - 3. A 40-mil minimum membrane thickness.
- B. For use over self-adhering membrane:
 - 1. Red rosin paper; 36-inch width, minimum; 3 pounds per 100 square feet, minimum.

2.3 SHEET METAL ROOF PANELS

**NOTE TO SPECIFIER**

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), *DELETE* "and/or structural" from paragraph 2.3A, and *DELETE* sub-paragraph 2.3.A.2 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), *DELETE* "architectural and/or" from paragraph 2.3A, but do not edit sub-paragraph 2.3.A.2 below.

- A. Product type: Factory-formed, prefinished galvanized steel, minimum 22-gauge architectural and/or structural sheet metal roof panels; conforming to ASTM A 792/A 792M. Fabricated to allow for a minimum 1-3/4 inch high standing seams 18-inches o.c. maximum, or as recommended by the sheet metal roofing panel manufacturer for this application. Factory-fabricated "ready to use" for field assembly.
 1. Panels shall be capable of spanning the structural purlins spacing.
- B. Panel finish: Kynar 500 coated, with a factory-applied top side film thickness of .70 to .90 mil over a .25 to .30 mil prime coat to provide a total dry film thickness of .95 to 1.25 mil, to meet AAMA 621. Underside of panel shall be coated with a primer with a dry film thickness of .25 mil. Finish shall conform to all tests for adhesions, flexibility and longevity as specified by Kynar 500 supplier. Standard color as determined by the Owner.
- C. Impact Resistance: Conforming to the requirements of UL 2218.
- D. Wind uplift: Conforming to the requirements of UL 580, and capable of obtaining a UL Class 90 rating for wind uplift.

2.4 CLIPS

- A. System clips: Concealed; size, type, and configuration as necessary to match roof system type. Product manufactured by or approved by the sheet metal panel manufacturer.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit paragraph 2.5.A below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), *DELETE* paragraph 2.5.A below.

Re-number/letter paragraphs and sub-paragraphs, if necessary, after editing.

2.5 FASTENERS

- A. For fastening red rosin paper:
 1. Staples; size as necessary to hold red rosin paper in place prior to installation of standing seam sheet metal roof system.
- B. For fastening of sheet metal clips:
 1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer.
- C. For fastening of other sheet metal accessories:

1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer. Provide neoprene washers where shown on drawings.

2.6 SHEET METAL AND FLASHING ACCESSORIES

- A. Rake edges, perimeter fascia, fascia extensions, hip and ridge flashings, expansion joints and counterflashes: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
 1. Fabricate to the dimensions and configurations indicated on the drawings.
- B. Continuous cleats: Galvanized steel; G 90, hot-dipped zinc-coated sheet steel, 22-gauge, minimum.
- C. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- D. Scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- E. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- F. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- G. Apron, wall and cricket flashing (related to rooftop curbs, chimneys and other square penetrations: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
 1. Fabricate to the dimensions and configurations indicated on the drawings.
- H. Plumbing vent and tubular penetration flashings: Metal flashing with flanged sleeve with hood, prefabricated flashing with elastomeric collar, or other product type manufactured by, or approved by the sheet metal panel manufacturer.
 1. For sheet metal plumbing vent and tubular penetration flashings with flange and sleeve and hood:
 - a. Clamp: Stainless steel plumbers clamp, size as necessary to tightly secure hood.

2.7 MISCELLANEOUS MATERIALS

- A. Ventilation accessories, including ridge vents, soffit vents and other rooftop vents:
 - 1. Provide accessories manufactured by, or approved by, the sheet metal roofing manufacturer, if required.
- B. For use at sheet metal flashing strip-ins, and where indicated on drawings:
 - 1. Pressure-sensitive EPDM flashing material; non-reinforced, nominal 60-mil thickness, black color. Type acceptable to asphalt shingle roofing manufacturer for specific flashing conditions encountered. Minimum 5-inch width.
 - 2. Primer: Type compatible with pressure-sensitive EPDM flashing and acceptable to the sheet metal panel manufacturer.
- C. Butyl tape: for use behind counterflashing flanges and other locations indicated where indicated on the drawings. Width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

NOTE TO SPECIFIER

Review available field data:

- 1. *At project locations where excessive, accumulating snow is possible, the designer/specifier must consider the use of a snow retention system. If such a system is determined to be necessary for the project location, do not edit Article 2.8.*
- 2. *If a snow retention system is not determined to be necessary for the project location, or cannot be installed due to the potential of increased structural load on the building structure, DELETE Article 2.8.*

NOTE: *A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.*

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

2.8 SNOW RETENTION SYSTEM

- A. Provide a snow retention system:
 - 1. The snow retention system shall be approved for use by the sheet metal panel manufacturer.
 - 2. Snow retention system standing seam clamps: Product such as "S-5! Clamps", manufactured by S-5! Attachment Solutions – Metal Roof Innovations, Ltd., Colorado Springs, CO. Clamp size and configuration as necessary to accommodate standing seam size and profile. Product shall be approved by Owner prior to use.
 - 3. Snow retention system: Snow retention system appropriate for the anticipated snow accumulation at the project location. Products such as "Sno-Rail/Sno-Fence" and "Sno-Clip", manufactured by Alpine SnowGuards, Morisville, VT.

2.9 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 3.2 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 3.2 below.

Re-number Articles, if necessary, after editing.

3.2 UNDELAYMENT INSTALLATION

- A. Install self-adhering membrane: Follow installation requirements of the underlayment manufacturer.
- B. Install one ply of red rosin sheathing paper. Secure to the deck as necessary to hold in place.

NOTE TO SPECIFIER

Review available field data:

1. If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit sub-paragraph 3.3.A.1 below.
2. If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), delete "including underlayments," from sub-paragraph 3.3.A.1.

3.3 STANDING SEAM SHEET METAL ROOFING INSTALLATION

- A. Roof system general installation instructions:
 1. Except as may be modified by these specifications and drawings, install the specified sheet metal roof panel system, including underlayments, in accordance with the requirements and recommendations of the manufacturer, using the manufacturer's current printed instructions, the recommendations outlined in the NRCA "Roofing and Waterproofing Manual, 5th Edition", and the recommendations outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
 2. Panels shall be installed plumb and true in a proper alignment and in relation to the existing structural framing. If necessary, use chalk lines as visible guides to ensure the proper alignment of the panels.
 3. Install sheet metal panel clips as required to secure the standing seam sheet metal panel system to the underlying substrate, and to allow movement of the roof system. Follow the requirements and recommendations of the sheet metal panel manufacturer. Install a minimum of two fasteners per clip.

3.4 SHEET METAL FLASHING INSTALLATION

- A. Rake edges perimeter fascias and fascia extensions:
 1. Continuous cleats: Provide continuous cleats where indicated on drawings. Secure the horizontal flange and vertical face of the continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 2. Drip edges, fascia and fascia extensions: Place the drip edge, fascia or fascia extension. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Hip and ridge flashings:

1. Fabricate and install hip and ridge caps as indicated on the drawings. Follow the recommendations and requirements of the sheet metal panel manufacturer.
- C. Expansion joints:
1. Fabricate and install expansion joint flashings as indicated on the drawings.
- D. Counterflashings: Install counterflashings at locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
 3. Provide a continuous bead of sealant along the top edge of surface-mounted counterflashings to shed water and provide a watertight seal.
- E. Slip counterflashings: Install slip counterflashings at locations where existing sheet metal counterflashings cannot be lifted or removed, and at other locations indicated on the drawings as follows:
1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Apron, side, and cricket flashings:
1. Install apron and backer/cricket flashings at roof curbs, chimneys, wall terminations, locations indicated on drawings, and at locations recommended by the sheet metal panel manufacturer.

- a. At penetrations greater than 24-inches, roof slopes greater than 6:12 (27 degrees), when a large volume of snow or ice could accumulate behind a roof penetration or when the average January temperature is 30°F (-1°C) or lower, install cricket flashings in lieu of backer flashings behind roof penetrations.
 - b. Where cricket widths exceed 18-inches, provide wood framing and plywood support beneath sheet metal cricket flashing.
 - c. Secure apron and backer/cricket flashings to the underlying substrate with fasteners appropriate to the substrate.
- I. Tubular penetration flashing: Flash round pipe penetrations with a manufacturer recommended pipe flashing boot and specified watertight hood.
- 1. Flash tubular penetration where indicated on drawings. Follow asphalt shingle manufacturer recommendations and requirements.
 - 2. Hood and drawband: Where a flanged sleeve sheet metal flashing is used, install a stainless steel hood over the flanged sleeve; solder all seams watertight. Secure a stainless steel drawband around the top of each hood to secure the hood to the penetration. Seal the top of the drawband and hood.

3.5 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install ventilation accessories, including ridge vents, soffit vents and other rooftop vents at locations indicated on the drawings, or recommended by the sheet metal panel manufacturer following the printed instructions of the manufacturer.
- B. Sheet metal flashing strip-ins:
 - 1. Install specified strip-in where indicated on drawings.
- C. Butyl tape:
 - 1. Install specified butyl tape behind counterflashings where indicated on drawings.

NOTE TO SPECIFIER

Review available field data:

- 1. *If a snow retention system is to be included on the project, do not edit Article 3.6.*
- 2. *If a snow retention system is not included on the project, DELETE Article 3.6.*

NOTE: *A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.*

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

3.6 SNOW RETENTION SYSTEM INSTALLATION

- A. Install the snow retention system following the recommendations and requirements of the standing seam sheet metal panel and snow retention system manufacturers.

USPS MPF Specifications, issued: 10/1/2013
Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 61 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 61 13 00 - R&A STANDING SEAM SHEET METAL ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this section where standing seam sheet metal roofing is selected as the roofing system in a roof replacement application. Per the United States Postal Service Roofing Design Standard, standing seam sheet metal roofing systems are acceptable with restrictions for steep slope applications at facilities with a "Critical" or "Non-Critical" building designation. Discuss the use of standing seam sheet metal roofing with the USPS Project Manager prior to specifying. An approved deviation letter may be required prior to specifying a standing seam sheet metal roofing system.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of standing seam sheet metal roofing, flashings, and related accessories.

NOTE TO SPECIFIER

Review available field data:

1. *For projects that do not include roof areas with underlying steel decks, DELETE paragraph 1.2D from the list below.*
2. *For projects that do not include roof areas with underlying wood decks, DELETE paragraph 1.2E from the list below.*
3. *For projects that include roof areas with both underlying steel and wood decks, do not edit the list below.*

Re-letter/number paragraphs and sub-paragraphs after editing, if necessary.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 053123 – Steel Roof Deck Repair and Replacement
- E. Section 061516 – Wood Roof Deck Repair and Replacement
- F. Section 079201 – Sealants for Roof Replacement
- G. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

1. *If an alternate price for a 20-year "Total System Warranty" is specified, Leave Article 1.3 unchanged.*
2. *If a 20-year "Total System Warranty" will be included in the base proposal, or if no warranty is specified, remove Article 1.3.*

Re-letter/number items after editing.

1.3 ALTERNATES

- A. Provide an alternate price for the 20-Year Total System Warranty described in paragraph 1.9A.

1.4 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
1. American Architectural Manufacturers Association
 - a. AAMA 621 – Voluntary Specifications for High Performance Organic Coatings on Coil Coated Architectural Hot Dipped Galvanized (HDG) & Zinc-Aluminum Coated Steel Substrates
 2. American Society for Testing and Materials (ASTM)
 - a. ASTM A 792/A 792M – Standard Specification for Sheet Steel, 55% Aluminum-Zinc Alloy Coated by the Hot-Dip Process
 - b. ASTM D 1970 – Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
 - c. ASTM B 209 – Aluminum and Aluminum Alloy Sheet and Plate
 - d. ASTM F 1667 – Standard Specification for Driven Fasteners: Nails, Spikes, and Staples
 3. National Roofing Contractors Association (NRCA)
 - a. NRCA Roofing and Waterproofing Manual, 5th Edition
 4. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
 5. Underwriters Laboratories, Inc. (UL)
 - a. UL 2218 - Impact Resistance of Prepared Roof Covering Materials
 - b. UL 580 - Tests for Uplift Resistance of Roof Assemblies

1.5 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.6 QUALITY ASSURANCE PROCEDURES

- A. **Applicator Qualifications:** A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. **Single Source Responsibility:** Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. **Examine the technical specifications and drawings.** Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional

compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.

- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.
- F. Refer to manufacturer minimum slope requirements for the standing seam sheet metal system selected for use. Do not install standing seam sheet metal roof systems on slopes less than 2-inches per foot.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install standing seam sheet metal roofing at temperatures below 32°F (0°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation.
 - 3. Do not install self-adhering membrane when the temperature of the outside air, self-adhering membrane, or roof deck are below 40°F (5°C).
 - 4. Refer to the sheet metal roofing panel manufacturer and NRCA requirements and recommendations for additional cold weather application requirements and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- 1. *If an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 1.9A.*
- 2. *If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal,*

3. *DELETE "an alternate price for" from paragraph 1.9A. If no warranty is specified, EDIT the title of Article 1.9 (DELETE the words "MANUFACTURER WARRANTY AND"), and DELETE paragraph 1.9A. The two-year contractor guarantee shall remain in place.*

Re-letter/number paragraphs and sub-paragraphs after editing.

1.9 MANUFACTURER WARRANTY AND CONTRACTOR GUARANTEE

- A. Provide an alternate price for a manufacturer 20-Year Total System, Non-Pro-Rated Warranty (including insulation, roofing membrane, and flashings) covering materials and labor. The warranty shall include the following additional items:
- Roofing inspection by a technical representative of the roofing membrane manufacturer 22-24 months after date of Final Acceptance.
 - Roofing manufacturer will provide unlimited repairs during warranty period with no cost limitation.
 - Temporary emergency repairs may be made by United States Postal Service without voiding any warranty provisions.
 - Attach copy of Record Document Roof Plan Drawings, Roof Detail Drawings, and Record Standing Seam Sheet Metal Roofing Specification Section to Warranty.
- B. The Contractor shall provide a two-year contractor guarantee. At a minimum, the contractor guarantee shall include the following:
- Contractor name, address, phone number and project contact name.
 - The project completion date, and date of guarantee expiration.
 - The contractor guarantee shall include, in writing, all project work, workmanship, and/or all materials installed by the contractor or subcontractors to be of a quality that will comply with all project specific requirements of the Construction Documents and other documents governing the Work and workmanship through the guarantee period.
 - The contractor shall investigate roof leaks during the guarantee period within a reasonable time period, but in no instance greater than 24-hours after notification of a leak. The contractor shall repair leaks determined to be the cause of the Work at no cost to the Owner.

PART 2 – PRODUCTS

2.1 STANDING SEAM SHEET METAL ROOFING SYSTEM SUMMARY

- A. Acceptable sheet metal roofing panel manufacturers: Manufacturers offering panels meeting the requirements listed in Item 2.2.

NOTE TO SPECIFIER

Per discussions between the designer and USPS Project Manager, determine the warranty requirements for the project. Choose from the following warranty options and actions:

- If a 20-year "Total System, Non-Pro-Rated Warranty" will be included in the base proposal, or if an alternate price for a 20-year "Total System, Non-Pro-Rated Warranty" is specified, do not edit paragraph 2.1B.*
- If no warranty is specified, DELETE paragraph 2.1B.*

- B. Selected products, when used within the specified roof assembly, must be capable of meeting the warranty requirements listed in Article 1.9.

NOTE TO SPECIFIER

Review available field data:

1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 2.2 below.*
2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 2.2 below.*

Re-number Articles, if necessary, after editing.

2.2 UNDERLAYMENT

- A. Self-adhering membrane: Product approved for use in high-temperature conditions by the underlayment manufacturer and sheet metal panel manufacturer, and meeting the following criteria:
 1. Meeting the requirements of ASTM D 1970.
 2. Approved for use as an underlayment for standing seam sheet metal roofing.
 3. A 40-mil minimum membrane thickness.
- B. For use over self-adhering membrane:
 1. Red rosin paper; 36-inch width, minimum; 3 pounds per 100 square feet, minimum.

2.3 SHEET METAL ROOF PANELS

NOTE TO SPECIFIER

Review available field data:

1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), DELETE "and/or structural" from paragraph 2.3A, and DELETE sub-paragraph 2.3.A.2 below.*
2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE "architectural and/or" from paragraph 2.3A, but do not edit sub-paragraph 2.3.A.2 below.*

- A. Product type: Factory-formed, prefinished galvanized steel, minimum 22-gauge architectural and/or structural sheet metal roof panels; conforming to ASTM A 792/A 792M. Fabricated to allow for a minimum 1-3/4 inch high standing seams 18-inches o.c. maximum, or as recommended by the sheet metal roofing panel manufacturer for this application. Factory-fabricated "ready to use" for field assembly.
 1. Panels shall match configuration and profile of existing panel system.
 2. Panels shall be capable of spanning the existing structural purlins encountered.
- B. Panel finish: Kynar 500 coated, with a factory-applied top side film thickness of .70 to .90 mil over a .25 to .30 mil prime coat to provide a total dry film thickness of .95 to 1.25 mil, to meet AAMA 621. Underside of panel shall be coated with a primer with a dry film thickness of .25 mil. Finish shall conform to all tests for adhesions, flexibility and longevity as specified by Kynar 500 supplier. Standard color as determined by the Owner.
- C. Impact Resistance: Conforming to the requirements of UL 2218.
- D. Wind uplift: Conforming to the requirements of UL 580, and capable of obtaining a UL Class 90 rating for wind uplift.

2.4 CLIPS

- A. System clips: Concealed; size, type, and configuration as necessary to match roof system type. Product manufactured by or approved by the sheet metal panel manufacturer.

NOTE TO SPECIFIER

Review available field data:

1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit paragraph 2.5A below.*
2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE paragraph 2.5A below.*

Re-number/letter paragraphs and sub-paragraphs, if necessary, after editing.

2.5 FASTENERS

- A. For fastening red rosin paper:
1. Staples; size as necessary to hold red rosin paper in place prior to installation of standing seam sheet metal roof system.
- B. For fastening of sheet metal clips:
1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer.
- C. For fastening of other sheet metal accessories:
1. Fastener type compatible with the substrate encountered, and approved for use in this application by the sheet metal panel manufacturer. Provide neoprene washers where shown on drawings.

2.6 SHEET METAL AND FLASHING ACCESSORIES

- A. Rake edges, perimeter fascia, fascia extensions, hip and ridge flashings, expansion joints and counterflashing: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
1. Fabricate to the dimensions and configurations indicated on the drawings.
- B. Continuous cleats: Galvanized steel; G 90, hot-dipped zinc-coated sheet steel, 22-gauge, minimum.
- C. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- D. Scuppers:
1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- E. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating;

standard prefinished color as selected by the Owner.

- F. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- G. Apron, wall and cricket flashing (related to rooftop curbs, chimneys and other square penetrations: Prefinished galvanized steel: Kynar 500 coating, 24-gauge; color as selected by Owner.
 - 1. Fabricate to the dimensions and configurations indicated on the drawings.
- H. Plumbing vent and tubular penetration flashings: Metal flashing with flanged sleeve with hood, prefabricated flashing with elastomeric collar, or other product type manufactured by, or approved by the sheet metal panel manufacturer.
 - 1. For sheet metal plumbing vent and tubular penetration flashings with flange and sleeve and hood:
 - a. Clamp: Stainless steel plumbers clamp, size as necessary to tightly secure hood.

2.7 MISCELLANEOUS MATERIALS

- A. Ventilation accessories, including ridge vents, soffit vents and other rooftop vents:
 - 1. Provide accessories manufactured by, or approved by, the sheet metal roofing manufacturer, if required.
- B. For use at sheet metal flashing strip-ins, and where indicated on drawings:
 - 1. Pressure-sensitive EPDM flashing material; non-reinforced, nominal 60-mil thickness, black color. Type acceptable to asphalt shingle roofing manufacturer for specific flashing conditions encountered. Minimum 5-inch width.
 - 2. Primer: Type compatible with pressure-sensitive EPDM flashing and acceptable to the sheet metal panel manufacturer.
- C. Butyl tape: for use behind counterflashing flanges and other locations indicated where indicated on the drawings. Width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

NOTE TO SPECIFIER

Review available field data:

- 1. *At project locations where excessive, accumulating snow is possible, the designer/specifier must consider the use of a snow retention system. If such a system is determined to be necessary for the project location, do not edit Article 2.8.*
- 2. *If a snow retention system is not determined to be necessary for the project location, or cannot be installed due to the potential of increased structural load on the building structure, DELETE Article 2.8.*

NOTE: *A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.*

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

2.8 SNOW RETENTION SYSTEM

- A. Provide a snow retention system:
 - 1. The snow retention system shall be approved for use by the sheet metal panel manufacturer.
 - 2. Snow retention system standing seam clamps: Product such as “S-5! Clamps”, manufactured by S-5! Attachment Solutions – Metal Roof Innovations, Ltd., Colorado Springs, CO. Clamp size and configuration as necessary to accommodate standing seam size and profile. Product shall be approved by Owner prior to use.
 - 3. Snow retention system: Snow retention system appropriate for the anticipated snow accumulation at the project location. Products such as “Sno-Rail/Sno-Fence” and “Sno-Clip”, manufactured by Alpine SnowGuards, Morristown, VT.

2.9 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

3.1 GENERAL

- A. Refer to Section 024100 for general work and substrate preparation requirements.

NOTE TO SPECIFIER

Review available field data:

- 1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit Article 3.2 below.*
- 2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), DELETE Article 3.2 below.*

Re-number Articles, if necessary, after editing.

3.2 UNDELAYMENT INSTALLATION

- A. Install self-adhering membrane: Follow installation requirements of the underlayment manufacturer.
- B. Install one ply of red rosin sheathing paper. Secure to the deck as necessary to hold in place.

NOTE TO SPECIFIER

Review available field data:

- 1. *If an architectural standing seam sheet metal system is specified (a continuous underlying substrate, such as a plywood deck, is present), do not edit sub-paragraph 3.3.A.1 below.*
- 2. *If a structural standing seam sheet metal system is specified (the system will be installed directly over structural steel purlins), delete “including underlayments,” from sub-paragraph 3.3.A.1.*

3.3 STANDING SEAM SHEET METAL ROOFING INSTALLATION

- A. Roof system general installation instructions:
 - 1. Except as may be modified by these specifications and drawings, install the specified sheet metal roof panel system, including underlayments, in accordance with the requirements and recommendations of the manufacturer, using the manufacturer's

- current printed instructions, the recommendations outlined in the NRCA "Roofing and Waterproofing Manual, 5th Edition", and the recommendations outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
2. Panels shall be installed plumb and true in a proper alignment and in relation to the existing structural framing. If necessary, use chalk lines as visible guides to ensure the proper alignment of the panels.
 3. Install sheet metal panel clips as required to secure the standing seam sheet metal panel system to the underlying substrate, and to allow movement of the roof system. Follow the requirements and recommendations of the sheet metal panel manufacturer. Install a minimum of two fasteners per clip.

3.4 SHEET METAL FLASHING INSTALLATION

- A. Rake edges perimeter fascias and fascia extensions:
 1. Continuous cleats: Provide continuous cleats where indicated on drawings. Secure the horizontal flange and vertical face of the continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 2. Drip edges, fascia and fascia extensions: Place the drip edge, fascia or fascia extension. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Hip and ridge flashings:
 1. Fabricate and install hip and ridge caps as indicated on the drawings. Follow the recommendations and requirements of the sheet metal panel manufacturer.
- C. Expansion joints:
 1. Fabricate and install expansion joint flashings as indicated on the drawings.
- D. Counterflashings: Install counterflashings at locations indicated on the drawings as follows:
 1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
 3. Provide a continuous bead of sealant along the top edge of surface-mounted counterflashings to shed water and provide a watertight seal.
- E. Slip counterflashings: Install slip counterflashings at locations where existing sheet metal counterflashings cannot be lifted or removed, and at other locations indicated on the drawings as follows:
 1. Install continuous butyl tape behind vertical face of counterflashing.
 2. Secure counterflashings with fasteners spaced as indicated on drawings.
- F. Gutters and downspouts:
 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.

- a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
 - 1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 - 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 - 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Apron, side, and cricket flashings:
 - 1. Install apron and backer/cricket flashings at roof curbs, chimneys, wall terminations, locations indicated on drawings, and at locations recommended by the sheet metal panel manufacturer.
 - a. At penetrations greater than 24-inches, roof slopes greater than 6:12 (27 degrees), when a large volume of snow or ice could accumulate behind a roof penetration or when the average January temperature is 30°F (-1°C) or lower, install cricket flashings in lieu of backer flashings behind roof penetrations.
 - b. Where cricket widths exceed 18-inches, provide wood framing and plywood support beneath sheet metal cricket flashing.
 - c. Secure apron and backer/cricket flashings to the underlying substrate with fasteners appropriate to the substrate.
- I. Tubular penetration flashing: Flash round pipe penetrations with a manufacturer recommended pipe flashing boot and specified watertight hood.
 - 1. Flash tubular penetration where indicated on drawings. Follow asphalt shingle manufacturer recommendations and requirements.
 - 2. Hood and drawband: Where a flanged sleeve sheet metal flashing is used, install a stainless steel hood over the flanged sleeve; solder all seams watertight. Secure a stainless steel drawband around the top of each hood to secure the hood to the penetration. Seal the top of the drawband and hood.

3.5 MISCELLANEOUS INSTALLATIONS/TREATMENTS

- A. Install ventilation accessories, including ridge vents, soffit vents and other rooftop vents at locations indicated on the drawings, or recommended by the sheet metal panel manufacturer following the printed instructions of the manufacturer.
- B. Sheet metal flashing strip-ins:
 - 1. Install specified strip-in where indicated on drawings.
- C. Butyl tape:
 - 1. Install specified butyl tape behind counterflashings where indicated on drawings.

NOTE TO SPECIFIER

Review available field data:

1. If a snow retention system is to be included on the project, do not edit Article 3.6.
2. If a snow retention system is not included on the project, DELETE Article 3.6.

NOTE: A structural analysis should be performed prior to specifying a snow retention system to ensure a structure's capability to support potential additional load from accumulated snow.

Re-number/letter Articles, paragraphs and sub-paragraphs, if necessary, after editing.

3.6 SNOW RETENTION SYSTEM INSTALLATION

- A. Install the snow retention system following the recommendations and requirements of the standing seam sheet metal panel and snow retention system manufacturers.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 61 13 00

SECTION 07 62 00 00 - CSF SHEET METAL FLASHING AND TRIM

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 62 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Flashings and counterflashings, gutters and downspouts, and fabricated sheet metal items.
 2. Sheet metal accessories.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
- B. Federal Specifications (FS):
 1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - a. Shop Drawings: Indicate material profile, jointing pattern, jointing details, fastening methods, flashings, terminations, and installation details.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Fabricator: Company specializing in manufacturing Products specified with minimum 5 years documented experience.

2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Stack material to prevent twisting, bending, and abrasion, and to provide ventilation. Slope metal sheets to ensure drainage.
- C. Prevent contact with materials which may cause discoloration or staining.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Aluminum Sheet: ASTM B209, 3003 alloy, H14 temper; 0.025 inch minimum thickness; Class I clear anodized finish. Actual thickness as indicated on contract drawings or as needed to comply with code requirements and to prevent oil canning.
- B. Pre-Finished Aluminum Sheet: ASTM B209, 3003 alloy, H14 temper; 0.025 inch minimum thickness; finish shop pre-coated with PVDF (polyvinylidene fluoride)] coating; color as indicated on Drawings.

2.2 ACCESSORIES

- A. Fasteners: Aluminum.
- B. Protective Backing Paint: FS TT-C-494, Bituminous.
- C. Sealant: Specified in Section 079200.

2.3 FABRICATION

- A. Form sections true to shape, accurate in size, square, and free from distortion or defects.
- B. Fabricate cleats of same material as sheet, interlocking with sheet.
- C. Form pieces in longest possible lengths.
- D. Hem exposed edges on underside 1/2; miter and seam corners.
- E. Form material with flat lock seams, except where otherwise indicated. At moving joints, use sealed lapped, bayonet-type or interlocking hooked seams.
- F. Tin edges of copper sheet to be soldered. Solder shop formed metal joints. After soldering, remove flux. Wipe and wash solder joints clean. Weather seal joints.
- G. Fabricate gutters to profile and size indicated on Drawings.
- H. Fabricate downspouts to profile and size indicated on Drawings.

- I. Fabricate accessories in profile and size to suit gutters and downspouts.
 - 1. Anchorage Devices: Type recommended by fabricator.
 - 2. Gutter Supports: Brackets.
 - 3. Downspout Supports: Straps.

- J. Seal metal joints.

2.4 FACTORY FINISHING

- A. PVDF (polyvinylidene fluoride) coating: Multiple coat, thermally cured, fluoropolymer system conforming to AAMA 605.2.
- B. Primer Coat: Finish concealed side of metal sheets with primer compatible with finish system, as recommended by finish system manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify roof openings, curbs, pipes, sleeves, ducts, and vents through roof are solidly set, reglets in place, and nailing strips located.
 - 2. Verify roofing termination and base flashings are in place, sealed, and secure.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Install starter and edge strips, and cleats before starting installation.
- B. Install surface mounted reglets true to lines and levels. Seal top of reglets with sealant.
- C. Paint concealed metal surfaces with protective backing paint to a minimum dry film thickness of 15 mil .

3.3 INSTALLATION

- A. Secure flashings in place using concealed fasteners.
- B. Apply plastic cement compound between metal flashings and felt flashings.

- C. Fit flashings tight in place. Make corners square, surfaces true and straight in planes, and lines accurate to profiles.
- D. Seal metal joints watertight.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/19/2011

END OF SECTION

SECTION 07 62 02 00 - CSF SHEET METAL FOR BUILT-UP ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where an asphalt built-up roofing membrane (Section 075113) and/or a coal tar pitch roofing membrane (Section 075116) are specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to built-up roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075113 – Built-Up Asphalt Roofing
- D. Section 075116 – Built-Up Coal Tar Pitch Roofing
- E. Section 079200 – Sealants for Roofing
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)

- a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
- b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
- 2. American National Standard Institute (ANSI)
- 3. Factory Mutual Global (FM)
- 4. National Roofing Contractors Association (NRCA)
- 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition
- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the built-up roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 - 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 - 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 - 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. Plumbing vent and roof sump flashing:
 - 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 - 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
- K. Tubular penetrations, pitch pans and hoods/covers:
 - 1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 - 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan,

- and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. High-temperature tubular penetrations:
1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- M. Miscellaneous sheet metal accessories:
1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.
 2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.
- B. Parapet edge cap metal flashing system:
1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.

- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.

- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.

- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 - 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 - 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 - 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 - 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.

- G. Scupper liners, closure plates, conductor boxes and downspouts:
 - 1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 - 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 - 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.

- H. Plumbing vents, tubular penetrations and pitch pan flashings:

1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 02 00

SECTION 07 62 02 00 - R&A SHEET METAL FOR BUILT-UP ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where an asphalt built-up roofing membrane (Section 075113) and/or a coal tar pitch roofing membrane (Section 075216) are specified.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to built-up roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 075113 – Built-Up Asphalt Roofing
- E. Section 075116 – Built-Up Coal Tar Pitch Roofing
- F. Section 079200 – Sealants for Roof Replacement
- G. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition
 - 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:

1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Refer to the built-up roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.

- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. Plumbing vent and roof sump flashing:
 - 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 - 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
- K. Tubular penetrations, pitch pans and hoods/covers:
 - 1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 - 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 - 3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. High-temperature tubular penetrations:
 - 1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- M. Miscellaneous sheet metal accessories:
 - 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.

2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered

rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.

- B. Parapet edge cap metal flashing system:
1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers, and fascia extensions:
1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings

- to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in

accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 02 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 62 02 00 - MPF SHEET METAL FOR BUILT-UP ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where an asphalt built-up roofing membrane (Section 075113) and/or a coal tar pitch roofing membrane (Section 075116) are specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to built-up roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075113 – Built-Up Asphalt Roofing
- D. Section 075116 – Built-Up Coal Tar Pitch Roofing
- E. Section 079200 – Sealants for Roofing
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 1. American Society for Testing and Materials (ASTM)

- a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
- b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
- 2. American National Standard Institute (ANSI)
- 3. Factory Mutual Global (FM)
- 4. National Roofing Contractors Association (NRCA)
- 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition
- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Refer to the built-up roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 - 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. Plumbing vent and roof sump flashing:
 - 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 - 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
- K. Tubular penetrations, pitch pans and hoods/covers:
 - 1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 - 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan,

- and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. High-temperature tubular penetrations:
1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- M. Miscellaneous sheet metal accessories:
1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.
 2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.
- B. Parapet edge cap metal flashing system:
1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.

- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 - 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 - 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 - 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 - 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
 - 1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 - 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 - 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 - 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:

1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS MPF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 02 00

SECTION 07 62 03 00 - MPF SHEET METAL FOR MODIFIED BITUMEN ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a modified bitumen surfacing ply over a built-up roofing membrane (Section 075215) and/or a modified bitumen, cold adhesive-applied (Section 075216) or hot asphalt-applied (Section 075217) roofing membrane are specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to modified bitumen roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075216 – SBS Modified Bitumen Roofing in Cold Adhesive
- D. Section 075217 – SBS Modified Bitumen Roofing in Hot Asphalt
- E. Section 079200 – Sealants for Roofing
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:

1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing

6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover

insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 - 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.

2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. Plumbing vent and roof sump flashing:
 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
- K. Tubular penetrations, pitch pans and hoods/covers:

1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. High-temperature tubular penetrations:
1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- M. Miscellaneous sheet metal accessories:
1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.
 2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
 - 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 - 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 - 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.
- B. Parapet edge cap metal flashing system:
 - 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 - 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.

5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.

5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

MPF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 03 00

SECTION 07 62 03 00 - CSF SHEET METAL FOR MODIFIED BITUMEN ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a modified bitumen surfacing ply over a built-up roofing membrane (Section 075215) and/or a modified bitumen, cold adhesive-applied (Section 075216) or hot asphalt-applied (Section 075217) roofing membrane are specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to modified bitumen roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075216 – SBS Modified Bitumen Roofing in Cold Adhesive
- D. Section 075217 – SBS Modified Bitumen Roofing in Hot Asphalt
- E. Section 079200 – Sealants for Roofing
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:

1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
2. American National Standard Institute (ANSI)
3. Factory Mutual Global (FM)
4. National Roofing Contractors Association (NRCA)
5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover

insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.

- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 - 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 - 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 - 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.

2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. Plumbing vent and roof sump flashing:
 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
- K. Tubular penetrations, pitch pans and hoods/covers:

1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. High-temperature tubular penetrations:
1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- M. Miscellaneous sheet metal accessories:
1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.
 2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
 - 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 - 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 - 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.
- B. Parapet edge cap metal flashing system:
 - 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 - 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.

5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.

5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

CSF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 03 00

SECTION 07 62 03 00 - R&A SHEET METAL FOR MODIFIED BITUMEN ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a modified bitumen surfacing ply over a built-up roofing membrane (Section 075215) and/or a modified bitumen, cold adhesive-applied (Section 075216) or hot asphalt-applied (Section 075217) roofing membrane are specified.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to modified bitumen roofing.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075215 – MB Surfacing Ply over Built-Up Roofing in Hot Asphalt
- D. Section 075216 – SBS Modified Bitumen Roofing in Cold Adhesive
- E. Section 075217 – SBS Modified Bitumen Roofing in Hot Asphalt
- F. Section 079201 – Sealants for Roof Replacement
- G. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - b. ASTM D 41/D 41M - Standard Specification for Asphalt Primer Used in Roofing, Dampproofing, and Waterproofing
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA)
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
 - 6. Single Ply Roofing Industry (SPRI)

- a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.

- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives or primers associated with sheet metal flashing at temperatures below 50°F (10°C).
 2. When the outside temperature is forecast to fall below 50°F (10°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives and primers should be maintained at a temperature of 50°F (10°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Refer to the SBS modified bitumen roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break,

- providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 - F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
 - G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
 - H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
 - I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
 - J. Plumbing vent and roof sump flashing:
 - 1. Plumbing vent flashing: One-piece flange and sleeve formed of minimum 4-pound lead, with a "ribbed" configuration at the base of the sleeve to allow for movement and/or expansion of the vent stack; lead sleeve diameter to closely match the diameter of the existing stack.
 - 2. Roof sump flashing: 30-inches by 30-inches, minimum 4-pound lead roof drain flashing sheet.
 - K. Tubular penetrations, pitch pans and hoods/covers:
 - 1. Tubular penetration flashings: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve; sleeve to extend minimum 6-inches above the finished roof surface.
 - 2. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 - 3. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
 - L. High-temperature tubular penetrations:
 - 1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
 - M. Miscellaneous sheet metal accessories:

1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c. Do not fabricate with a caulk slot.
2. For securement of sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 ADHESIVES, CEMENTS AND PRIMERS

- A. Flashing cement and roofing cement: Product compatible with flashing sheet used and approved by the roofing membrane manufacturer for the situation encountered.
- B. Asphalt primer: ASTM D 41/ D 41M.

2.3 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.4 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL FLASHING INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.

- b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings. Prior to securement, prime both sides of horizontal flange and set in a full bed of roofing cement.
- B. Parapet edge cap metal flashing system:
 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers, and fascia extensions:
 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.

3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Prime both sides of gutter flange and set in a full bed of roofing cement. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations, high-temperature penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Prior to flashing application, ensure both sides of tubular penetration sleeve and pitch pan flanges have been primed, and the flange has been set in a full bed of roofing cement.
 4. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants

from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.

- I. Anchor bar: Fasten the upper edges of modified bitumen flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications issued: 10/1/2013
Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 03 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 62 05 00 - R&A SHEET METAL FOR EPDM ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered EPDM roofing membrane (Section 075324) is specified.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Ethylene Propylene Diene Monomer (EPDM) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 075323 – Fully-Adhered EPDM Roofing
- E. Section 079201 – Sealants for Roof Replacement
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition
 - 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 35°F (2°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.

3. Be aware of potential condensation formation on the EPDM roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 4. Refer to the EPDM roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 - 1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 - 1. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 - 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 - 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 - 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 - 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.

- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
 - 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 - 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 - 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
 - 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 - 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and

secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.

- C. Curb caps, area divider and expansion joint covers, and fascia extensions:
1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:

1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of EPDM flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 05 00

SECTION 07 62 05 00 - MPF SHEET METAL FOR EPDM ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered EPDM roofing membrane (Section 075324) is specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Ethylene Propylene Diene Monomer (EPDM) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075323 – Fully-Adhered EPDM Roofing
- D. Section 079200 – Sealants for Roofing
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition

- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the

outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.

- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 35°F (2°C).
 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Be aware of potential condensation formation on the EPDM roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 4. Refer to the EPDM roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 1. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.

3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.

- b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.

2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of EPDM flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS MPF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 05 00

SECTION 07 62 05 00 - CSF SHEET METAL FOR EPDM ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered EPDM roofing membrane (Section 075324) is specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Ethylene Propylene Diene Monomer (EPDM) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075323 – Fully-Adhered EPDM Roofing
- D. Section 079200 – Sealants for Roofing
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 7th Edition

- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the

outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.

- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 35°F (2°C).
 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Be aware of potential condensation formation on the EPDM roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 4. Refer to the EPDM roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 1. High-temperature tubular penetration flashings and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 1. Pitch pans: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.

3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.

- b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.

2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inches max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of EPDM flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 05 00

SECTION 07 62 07 00 - R&A SHEET METAL FOR PVC ROOFING

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered PVC roofing membrane (Section 075420) is specified.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. *Insert one 10pt. line after the Section Number. Section Number is in CAPS.*
2. *Insert two 10pt. lines after the Section Title. Section Title is in CAPS.*
3. *Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.*
4. *Insert one 10pt. line after Article paragraphs. Articles are in CAPS.*
5. *Insert two 10pt. lines at the end of an Article.*
6. *Complete Section with END OF SETION.*
7. *No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.*

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Polyvinyl Chloride (PVC) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 075420 – Fully-Adhered PVC Roofing
- E. Section 079201 – Sealants for Roof Replacement
- F. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition
 - 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 40°F (5°C).
 - 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 - 3. Be aware of potential condensation formation on the PVC roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun

- prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
4. Refer to the PVC roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
 1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
 1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 - 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 - 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 - 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 - 1. High-temperature tubular penetration flashing and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 - 1. Pitch pans: PVC-coated sheet metal, 24-gauge, minimum. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 - 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 - 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 - 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.
 - 3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.

- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.
 - b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and

secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.

- C. Curb caps, area divider and expansion joint covers, and fascia extensions:
1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.
 2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inch max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:

1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of PVC flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 07 00

**SECTION 07 62 07 00 - CSF SHEET METAL FOR PVC ROOFING****NOTE TO SPECIFIER**

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered PVC roofing membrane (Section 075420) is specified.

PART 1 - GENERAL**1.1 SUMMARY**

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Polyvinyl Chloride (PVC) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075419 – Fully-Adhered PVC Roofing
- D. Section 079200 – Sealants for Roofing
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition

- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the

manufacturer.

- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 40°F (5°C).
 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Be aware of potential condensation formation on the PVC roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 4. Refer to the PVC roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 1. High-temperature tubular penetration flashing and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 1. Pitch pans: PVC-coated sheet metal, 24-gauge, minimum. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.

3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.

- b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.

2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inch max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of PVC flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS CSF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 62 07 00

SECTION 07 62 07 00 - MPF SHEET METAL FOR PVC ROOFING

NOTE TO SPECIFIER

Editing is needed for each individual project; modify as needed for project specific requirements. Included "NOTE TO SPECIFIER" instructions provide guidance concerning required editing, and options have been included requiring action on the part of the specifier/designer. Select the option appropriate for the project and delete option(s) not selected.

NOTE TO SPECIFIER

EDIT Section footer as necessary to reflect the project name and location, USPS Project number, and required date of the technical specification document. Coordinate this project specific information with the USPS Project Manager. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Use this Section In technical specifications where a fully-adhered PVC roofing membrane (Section 075420) is specified.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to sheet metal fabrication and installation related to fully-adhered Polyvinyl Chloride (PVC) roofing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 075419 – Fully-Adhered PVC Roofing
- D. Section 079200 – Sealants for Roofing
- E. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM A 653/653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process
 - 2. American National Standard Institute (ANSI)
 - 3. Factory Mutual Global (FM)
 - 4. National Roofing Contractors Association (NRCA)
 - 5. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA).
 - a. SMACNA Architectural Sheet Metal Manual, 6th Edition

- 6. Single Ply Roofing Industry (SPRI)
 - a. ANSI/SPRI/FM 4435/ES-1 – Wind Design for Edge Systems Used with Low Slope Roofing Systems

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the

manufacturer.

- B. Cold weather precautions:
1. NOTE: Do not install sealants, adhesives, primers and pressure-sensitive flashings associated with sheet metal flashing at temperatures below 40°F (5°C).
 2. When the outside temperature is forecast to fall below 40°F (5°C), store unused materials in a heated location. Remove these materials only when ready for installation. Sealants, adhesives, primers and pressure-sensitive flashings should be maintained at a temperature of 40°F (5°C), minimum, at all times. Do not use sealants, adhesives or primers that develop a gelled or lumpy texture to them. Return these materials to a heated location.
 3. Be aware of potential condensation formation on the PVC roof surface during application/flash-off of adhesives and primer. Remove condensation using a heat gun prior to adhesion to the insulation or cover board substrate. Do not use an open flame to remove condensation from the roof membrane or flashing materials.
 4. Refer to the PVC roofing manufacturer and NRCA requirements and recommendations for additional cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

NOTE TO SPECIFIER

Article 2.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 2.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

2.1 SHEET METAL ACCESSORIES

- A. Perimeter edge metal flashing system: Perimeter edge sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Fascia piece/gravel stop associated with perimeter edge metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- B. Perimeter parapet cap metal flashing system: Parapet cap sheet metal flashing system consisting of a continuous inner clip and outer fascia piece, designed in accordance with the requirements of ANSI/SPRI/FM 4435/ES-1.
1. Inner clip/retention system and continuous cleats associated with perimeter edge metal flashing systems: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
 2. Parapet cap associated with perimeter parapet cap metal flashing systems: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- C. Interior parapet caps, area divider caps, expansion joint covers, and fascia extensions: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.

1. Continuous cleats and expansion joint backer pieces associated with prefinished galvanized steel caps and fascia extension installation: Galvanized steel, minimum 22-gauge, ASTM A 653/653M; G-90, maximum section length of 10-feet.
- D. Curb caps: Galvanized steel, 18-gauge, ASTM A 653/653M; G-90. Fabricate to match dimensions of curbed cap, and as indicated on the drawings. Fabricate top with a cross-break, providing four-way slope to the outer edges of the cap adequate to remove the potential for standing water at the top of cap.
- E. Reglet-mounted, surface-mounted and slip counterflashings: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating, maximum section lengths of 10-feet; standard prefinished color as selected by the Owner.
- F. Gutters: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating. Fabricate gutters to match dimensions indicated on the drawings; fabricate in 10-foot sections, with a 4-inch flange with a 1/2-inch hug at the inner edge of the gutter flange.
 1. Gutter spacers: Painted galvanized steel, 1-inch wide by 1/8-inch thick; seal and secure to gutter as shown on drawings. Paint color to match gutter.
- G. Through-fascia, through-wall and overflow scuppers:
 1. Scupper liners: Stainless steel, 22-gauge. Fabricate scupper flashings in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-26, 1-28, 1-29 and 1-30. Provide a 4-inch flange with a 1/2-inch hug at the inner edge of the scupper flange. Solder all seams watertight.
 2. Conductor boxes and scupper closure plates: Stainless steel, 22-gauge. Solder all seams watertight. Fabricate these components in accordance with the drawings, and the requirements outlined in the "SMACNA Architectural Sheet Metal Manual, 7th Edition".
- H. Conductor box fascia covers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by the Owner.
- I. Downspouts, associated with gutters and scuppers: Prefinished galvanized steel, 24-gauge, with Kynar 500 coating; standard prefinished color as selected by Owner. Fabricate downspouts with a "Pittsburgh Lock" seam, and in accordance with the drawings and "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figures 1-32B and 1-32F; size the hangers to match downspouts.
- J. High-temperature tubular penetrations:
 1. High-temperature tubular penetration flashing and insulation stops: Stainless steel, 24-gauge. Fabricate a one-piece flanged sleeve with a flange extending 6-inches minimum out from the sleeve onto the roof surface.
- K. Pitch pans, tubular penetration hoods, and pitch pan covers:
 1. Pitch pans: PVC-coated sheet metal, 24-gauge, minimum. Fabricate to dimensions shown on drawings, with a minimum 4-inch depth, and flange extending 6-inches minimum out from the pitch pan, and other dimensions to be kept to the minimum size necessary to provide a 2-inch clearance all sides from the penetration.
 2. Tubular penetration hoods and pitch pan covers: Stainless steel, 24-gauge. Fabricate to dimensions shown on drawings.
- L. Miscellaneous sheet metal accessories:
 1. For terminating flashing: Anchor bar: 1-inch x 1/8-inch extruded aluminum with slotted holes spaced 6 inches o.c.
 2. For securement of tubular penetration flashings and sheet metal hoods at tubular penetrations: Stainless steel adjustable clamp.

3. For use behind counterflashing flanges where indicated on the drawings: Butyl tape, width and thickness as necessary to create a seal between the existing substrate and secured counterflashing.

2.2 FASTENERS

- A. For securing sheet metal flashings: Fasteners indicated on the drawings, or appropriate and approved by the Owner for the substrate encountered, and compatible with the sheet metal type to be secured. Where fastener heads are exposed, provide neoprene gaskets/washers.
- B. For copper: Copper or bronze fasteners.
- C. For stainless steel: Stainless steel fasteners.
- D. For securing aluminum anchor bar: Fasteners appropriate for, and approved by the Owner and roofing manufacturer for the substrate encountered.

2.3 SEALANT

- A. Refer to Section 079201.

PART 3 - EXECUTION

NOTE TO SPECIFIER

Article 3.1 may be edited to reflect sheet metal flashing requirements for a specific project. EDIT Article 3.1 as necessary. Re-letter/number paragraphs and sub-paragraphs after editing.

3.1 SHEET METAL INSTALLATION

- A. Perimeter edge metal flashing system:
 1. Install perimeter edge metal in a manner that meets the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the configurations and dimensions indicated on the drawings.
 2. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer.
 3. For shop-fabricated perimeter edge metal systems:
 - a. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - b. Place the outer fascia/gravel stop piece. Hook the fascia to the underlying continuous cleat. Secure the flange with nails 3-inches o.c. in two staggered rows as indicated on the drawings.
- B. Parapet edge cap metal flashing system:
 1. For pre-fabricated parapet cap metal systems: Install in accordance with the metal system manufacturer to meet the requirements of ANSI/SPRI/FM 4435/ES-1. Provide a system matching the dimensions indicated on the drawings.
 2. For shop-fabricated parapet cap metal systems:
 - a. Fabricate inner clips/continuous cleats with a kick-up, creating a minimum 1/2-inch per foot slope toward the roof.

- b. Secure the horizontal flange and vertical face of the inner clip/continuous cleat with ring shank coated nails 12-inches o.c., max. Decrease fastener spacing to 6-inches o.c., max. within 10-feet of a building corner.
 - c. Place the cap sections. At the outer face, hook the fascia to the underlying continuous cleat. At the inner face, secure the flange with #12 fasteners, fitted with neoprene gaskets/washers 18-inches o.c., max., and within 2-inches of each end.
 - d. Join adjacent parapet cap sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - e. Where parapet caps terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- C. Curb caps, area divider and expansion joint covers:
 - 1. Install caps, covers, and related continuous cleats and backer pieces, as detailed, at locations indicated on the drawings.
 - 2. Fabricate with seam type indicated on drawings to dimensions indicated on drawings. Provide a 3/4-inch hemmed drip edge.
 - 3. Fastening: Secure faces of curb caps, area divider covers, and expansion joint covers with specified fasteners appropriate for the substrate encountered, fitted with neoprene gaskets/washers, spaced 18-inches o.c. max., and within 2-inches of each end.
 - 4. Join adjacent area divider and expansion joint cover sections using a standing seam, with a 1" height. Where upturned standing seam ends meet, apply continuous sealant to the joint. Cut outer edges of upturned seams at a 45-degree angle. Fold ear over end, and crimp in place.
 - 5. Where area divider and expansion joint covers terminate at walls, turn self-adhering membrane 1-inch, minimum, up wall. Turn coping cap piece 2-inches, minimum, up wall. Seal and secure as indicated on the drawings. Install regletted counterflashing over exposed end piece.
- D. Fascia extensions:
 - 1. Secure fascia extensions with ring shank coated nails 12-inches o.c., max., or fasteners appropriate for, and approved by the Owner for, the substrate condition encountered, 12-inches o.c. max.
- E. Reglet-mounted and slip counterflashings: Provide counterflashings, as detailed, at locations indicated on the drawings:
 - 1. At locations indicated on the drawings, install butyl tape to the backside of counterflashing flanges at the flange interface with the substrate.
 - 2. Cut reglets into masonry walls to accommodate reglet-mounted counterflashing.
 - 3. Fabricate counterflashing to dimensions indicated on drawings. Fabricate the counterflashing with a 3/4-inch hemmed drip edge, and on surface mounted counterflashing, a 1/2-inch 45-degree angle sealant slot. Fabricate slip counterflashings to dimensions necessary to accommodate existing conditions, and as shown on drawings. Provide a minimum 4-inch face if conditions allow.
 - 4. Secure counterflashings with specified fasteners appropriate for substrate condition encountered, fitted with neoprene gaskets/washers. Space fasteners 12-inches o.c. max., and within 2-inches of each end.
- F. Gutters and downspouts:
 - 1. Install the specified gutter spacers 24-inches o.c. Seal and secure the spacers to the gutter assembly as indicated on the drawings.

2. Overlap individual gutter sections 1-1/2 inches. Seal overlap, and pop-rivet sections together with two rows of pop rivets. Space pop rivets 1/2-inch min., and 3/4-inch max. in each row. Completed gutter sections shall not exceed 50-feet in length.
 3. Secure the flange with nails 3-inches o.c. in two staggered rows.
 4. Gutter expansion joints: Provide gutter expansion joints at locations recommended by SMACNA; fabricated following the recommendations of SMACNA.
 5. Downspouts: Install downspouts at locations indicated on drawings. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
- G. Scupper liners, closure plates, conductor boxes and downspouts:
1. Scupper liners: Install scupper liners at through-fascia, through-wall, and overflow scupper locations indicated on the drawings. Install scupper liners following the requirements and recommendations of SMACNA.
 2. Cover plates: At the exterior face of the scupper, install cover plates. Install scupper cover plates as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 3. Conductor boxes: Where indicated on the drawings, install conductor boxes as indicated on the drawings, and following the requirements and recommendations of SMACNA.
 4. Downspouts: Install downspouts at conductor boxes. Secure downspouts in accordance with the "SMACNA Architectural Sheet Metal Manual, 7th Edition", Figure 1-35A, using fasteners appropriate for the substrate encountered.
 - a. Terminate the base of downspouts to match existing condition, unless indicated otherwise on the drawings.
 5. Install conductor box fascia covers as indicated on the drawings. Fully clip fascia covers to stainless steel conductor boxes, or secure to substrate with fasteners appropriate for the substrate encountered.
- H. Plumbing vents, tubular penetrations and pitch pan flashings:
1. Flash tubular penetrations and pitch pans as indicated on drawings. Do not use pitch pans at tubular penetrations without the approval of the Owner.
 2. Install tubular penetration hoods and pitch pan covers as indicated on the drawings.
 3. Where soldering is required at stainless steel flanged sleeves, hoods, and pitch pans: Solder all seams and laps watertight. Prior to soldering of stainless steel, clean work area using solvents and wire brush; removing dirt, oil, grease, and other contaminants from the work area. Tin the work area by applying acid (flux). Perform soldering work. After completion of work, remove excess acid (flux) from the work area.
- I. Anchor bar: Fasten the upper edges of PVC flashings with an anchor bar installed in accordance with the requirements of the roofing membrane manufacturer.

USPS MPF Specifications, issued: 10/1/2013

Last revised: 9/16/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

SECTION 07 72 13 00 - CSF MANUFACTURED CURBS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 72 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Prefabricated structural metal roof curbs.
 - 2. Prefabricated non-structural metal roof curbs.
- B. Related Sections:
 - 1. Section 051200 - Structural Steel Framing: Roof opening frames and headers.
 - 2. Section 052100 - Steel Joist Framing: Joists supporting roof curbs.

NOTE TO SPECIFIER

Edit below for Roofing Type used for Project.

- 3. [Section 075113 - Built-Up Asphalt Roofing: Board insulation for roof curbs.]
- 4. [Section 075323 - Ethylene Propylene Diene Monomer (EPDM) Roofing: Board insulation for roof curbs.]
- 5. [Section 075200 - Modified Bituminous Membrane Roofing: Board insulation for roof curbs.]
- 6. Section 238100 - Decentralized Unitary HVAC Equipment.

1.2 REFERENCES

- A. American Welding Society (AWS):
 - 1. AWS D1.1 - Structural Welding Code.
- B. American Society of Testing and Materials (ASTM):
 - 1. ASTM A653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvanealed) by the Hot-Dip Process.
 - 2. ASTM A463 - Specification for Steel Sheet, Cold Rolled, Aluminum Coated Type 1 and Type 2.
 - 3. ASTM A792 - Specification for Steel Sheet, Fifty-Five Percent Aluminum-Zinc Alloy-Coated by the Hot-Dip Process.
- C. Steel Structures Painting Council (SSPC):

1. SSPC-Paint 20 Type II - Zinc Rich Primers - Organic.

1.3 DEFINITIONS

- A. Structural Roof Curbs: Manufactured roof curbs bearing on structural steel; designed for equipment dead load and roof dead and live loads.
- B. Non-Structural Roof Curbs: Manufactured roof curbs bearing on top of metal deck; not used for support of equipment or roof.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Curb profile characteristics, dimensions, structural properties, and finishes.
 2. Shop Drawings: Indicate configurations, dimensions, locations, construction, and installation details.
 3. Assurance/Control Submittals:
 - a. Design Data: Calculations indicating curb structural design complying with design criteria specified in this Section and indicated on Drawings.
 - b. Certificates: Submit manufacturer's certificate that Products meet or exceed specified requirements.
 - c. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
 3. Welder: Qualify field welding operators in accordance with AWS Standard Qualification Procedures. Provide certification that field welders have satisfactorily passed AWS qualification tests within previous 12 months.
- B. Furnish and install prefabricated metal roof curbs designed by a professional engineer licensed in State where project is located. Meet or exceed Live Loads and Dead Loads as specified in this Section and as indicated on Drawings. Coordinate curb dimensions with shop drawings of equipment to be supported.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Ship curbs to Project Site palletized and banded.
- C. Clearly identify each curb. Stack curbs at site to prevent twisting, bending or permanent deformation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Custom Curb, Incorporated, Chattanooga, TN (800) 251-3001.
 2. Kentuckiana Curb Company, Louisville, KY (800) 382-2872.
 3. Roof Products, Incorporated, Chattanooga, TN (800) 262-6669.
 4. The Pate Company, Broadview, IL (800) 243-3018.
 5. Thycurb Corporation, Addison, IL (800) 666-2872.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Sheet Steel: One of the following at Contractor's option:
1. Galvanized Steel Sheet: ASTM A446 and ASTM A525, Grade A, G90 hot-dip zinc coating.
 2. Aluminum-Coated Steel Sheet: ASTM A463, Type 2, T2 100 aluminum coating.
 3. Aluminum Zinc Alloy-Coated Steel Sheet (GAVALUME): ASTM A792, AZ55 aluminum zinc alloy coating.

NOTE TO SPECIFIER

Edit below for Roofing Type used for Project.

- B. Board Insulation: Specified in Section [075113] [075323] [075200].
- C. Wood Nailers: CCA Pressure Treated Lumber Type C, "Standard" grade lumber of any species.
- D. Zinc-Rich Primer: SSPC-Paint 20 Type II.

2.3 STRUCTURAL ROOF CURBS

- A. Coated steel sheet curb sections, corners fully mitered and welded; 2 inch by 2 inch (nominal dimension) pressure treated continuous wood nailers mechanically fastened at 12 inches on center to exterior face of curb. Shop prime welded connections with zinc-rich paint complying with SSPC-Paint 20.
- B. Profile:
1. Bottom Flange Width: 2 inches.

NOTE TO SPECIFIER

Edit Roof Curb height below based on roof insulation thickness used for specific Project.

2. Web Height: Comply with local code requirements for minimum curb height, but in no case shall top of curb be less than 8 inches above the surface of the roof.
 3. Top Flange Width: 1 1/2 inches.
 4. Insulation: 1 1/2 inches thick, 3 lb high density fiberglass.
- C. Sheet Metal Gage:
1. Heating, Ventilating and Air Conditioning Units: 14 gage.
 2. Other Structural Roof Curbs: 18 gage.
- D. Reinforce curb sections as required for design loads indicated on Drawings.

- E. Construct curbs to match slope of roof structure (verify roof slope with Drawings); provide level top surface for mounting of equipment.
- F. Welding: AWS D1.1.

2.4 NON-STRUCTURAL ROOF CURBS

- A. Coated steel sheet curb sections, corners fully mitered and welded; 2 inch by 2 inch (nominal dimension) pressure treated continuous wood nailers mechanically fastened at 12 inches on center to exterior face of curb. Shop prime welded connections with zinc-rich paint complying with SSPC-Paint 20.
- B. Profile:
 - 1. Bottom Flange Width: 2 inches.

NOTE TO SPECIFIER

Edit Roof Curb height below based on roof insulation thickness used for specific Project.

- 2. Web Height: Comply with local code requirements for minimum curb height, but in no case shall curb height be less than [12] [____] inches as measured from top of roof insulation to top of curb.
- 3. Top Flange Width: 1-1/2 inches.
- 4. Insulation: 1 1/2 inches thick, 3 lb high density fiberglass.

- C. Sheet Metal Gage: 18 gage.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install curbs in accordance with manufacturer's instructions and as indicated on Drawings.
- B. Structural Roof Curbs:
 - 1. Set units in place and secure base to roof structure by welding to top chord of structural member.
 - 2. Secure metal deck to perimeter of curb as indicated on Drawings.

- C. Non-Structural Roof Curbs: Set units in place and secure base to steel roof deck by self-tapping screw fasteners spaced at a maximum of 12 inches on center, staggered.

3.3 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate project requirements for custom adapting and connecting to roof curbs with manufacturers and suppliers of curb mounted items and equipment.
 - 2. Coordinate installation with roof membrane installation requirements specified under other Sections.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect structural curb placement and attachment to building steel structural members.
- C. Inspect non-structural curb placement and attachment to steel roof deck.
- D. Verify curb heights, and that top of curb is level.

SECTION 07 72 33 00 - CSF ROOF HATCHES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.07 72 33 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Prefabricated steel roof hatch, with integral support curbs, operable hardware, and counterflashings.
 - 2. Ladder Safety Post.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 055000 - Metal Fabrications: Requirements for shop fabricated roof hatch ladders and other ferrous metal items.
 - 2. Section 099100 - Painting: Exterior finish painting of roof hatch.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Data on unit construction, sizes, configuration, jointing methods, and attachment method.

1.3 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver to Project site in manufacturer's unopened container.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering specified items which may be incorporated in the Work include the following:
1. Babcock-Davis Hatchways, Incorporated, Arlington, MA. (781) 643-5344.
 2. The Bilco Company, West Haven, CT. (203) 934-6363.
 3. Milcor, Holland, OH. (800) 861-6452.
 4. Precision Stair Corporation, Morristown, TN. (800) 225-7814.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MANUFACTURED UNITS

- A. Model Numbers:
1. Babcock-Davis: 6-102.
 2. Bilco: NB.
 3. Milcor: M-1.
 4. Precision Stair: PLH-G.
- B. Description:
1. Size: 2 feet 6 inches x 4 feet 6 inches.
 2. Curb: 14 gage galvanized G90 steel, fully welded corners; 1 inch rigid insulation; integral cap flashing to receive roof flashing system; extended flange for mounting.
 3. Cover: 14 gage galvanized G90 steel with one inch glass fiber insulation retained by 22 gage steel inner liner. Continuous gasket to provide weatherproof seal.
 4. Hardware:
 - a. Compression spring operator and shock absorber.
 - b. Steel manual pull handle for interior and exterior operation.
 - c. Steel hold-open arm with vinyl covered grip handle for easy release. Cadmium plated finish.
 - d. Heavy duty pintle type hinges.
 - e. The hatch should have a key type deadbolt locking device, slide bolt locking device or have the capability to install a padlock to secure the hatch cover to the hatchway.
 5. Fasteners: Corrosive-resistant fasteners recommended by roof hatch manufacturer, which are to be interior mounted.

NOTE TO SPECIFIER

The hatch assembly should be mounted with anchors that can not be removed from the exterior.

2.3 FABRICATION

- A. Fabricate free of visual distortions and defects. Weld corners and joints.
- B. Fabricate units weathertight with integral capflashing, providing for removal of condensation.
- C. Prime paint; one coat.
- D. Weld hasp, latch and hinges to prevent removal from exterior.

2.4 ROOF HATCH LADDER

- A. Metal Ladder: Specified in Section 055000.
- B. Ladder Safety Post: LadderUP, Model LU-1, by The Bilco Company.
 - 1. Telescoping high strength steel tubular section; locks automatically when fully extended.
 - 2. Stainless steel spring balancing mechanism; controls upward and downward movement.
 - 3. Black enamel finish.
 - 4. Provide fasteners for securing posts to ladder rungs.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Roof Hatch:
 - 1. Install in accordance with manufacturer's published instructions.
 - 2. Provide weathertight installation.
 - 3. Apply bituminous paint on metal surfaces of units in contact with cementitious materials and dissimilar metals.
 - 4. Field paint exterior exposed areas of hatch with 2 coats as specified in Section 099100.
- B. Ladder Safety Post: Secure safety post to top two ladder rungs, on climbing side, in accordance with manufacturer's published instructions.

3.2 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate location and required clear dimensions of roof deck opening.
 - 2. Coordinate with installation roof insulation, roof membrane, and related flashings.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field Inspection.
- B. Independent Roofing Inspector and Roofing manufacturer Roofing Quality Control Inspector will inspect interface of roofing installation and roof hatch installation as a part of the roofing quality control inspections.

3.4 ADJUSTING

- A. Adjust hatch hinge and hold-open arm for smooth operation.
- B. Adjust ladder safety post for smooth non-binding operation.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/19/2011

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 72 56 00 - HEAT TRACING FOR FIRE-SUPPRESSION PIPING**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for heat tracing for fire suppression piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes heat tracing with the following electric heating cables:
 - a. Plastic insulated, series resistance.
 - b. Self-regulating, parallel resistance.

C. Submittals

1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
 - a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
 - a. Wiring Diagrams: Power, signal, and control wiring.
3. Field quality-control test reports.
4. Operation and Maintenance Data.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 **OR** 15, **as directed**, years from date of Final Completion.

1.2 PRODUCTS**A. Plastic-Insulated, Series-Resistance Heating Cables**

1. Comply with IEEE 515.1.
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, **as directed**.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables

1. Heating Element: Pair of parallel No. 16 **OR** 18, **as directed**, AWG, tinned **OR** nickel-coated, **as directed**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.

2. Electrical Insulating Jacket: Flame-retardant polyolefin.
3. Cable Cover: Tinned-copper **OR** Stainless-steel, **as directed**, braid, and polyolefin outer jacket with UV inhibitor, **as directed**.
4. Maximum Operating Temperature (Power On): 150 deg F (65 deg C).
5. Maximum Exposure Temperature (Power Off): 185 deg F (85 deg C).
6. Maximum Operating Temperature: 300 deg F (150 deg C).

C. Controls

1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
4. Corrosion-resistant, waterproof control enclosure.

D. Accessories

1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
2. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
 - b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Installation

1. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
2. Install electric heating cables after piping has been tested and before insulation is installed.
3. Install electric heating cables according to IEEE 515.1.
4. Install insulation over piping with electric cables according to Division 21 Section "Fire-suppression Systems Insulation".
5. Install warning tape on piping insulation where piping is equipped with electric heating cables.
6. Set field-adjustable switches and circuit-breaker trip ranges.
7. Protect installed heating cables, including nonheating leads, from damage.

B. Connections

1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control

1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - a. Test cables for electrical continuity and insulation integrity before energizing.
 - b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.

3. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 07 72 56 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 72 56 00a - HEAT TRACING FOR PLUMBING PIPING**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for heat tracing for plumbing piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes plumbing piping heat tracing for freeze prevention, domestic hot-water-temperature maintenance, and snow and ice melting on roofs and in gutters and downspouts with the following electric heating cables:
 - a. Plastic insulated, series resistance.
 - b. Self-regulating, parallel resistance.
 - c. Constant wattage.

C. Submittals

1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
 - a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
 - a. Wiring Diagrams: Power, signal, and control wiring.
3. Field quality-control test reports.
4. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 **OR** 15, **as directed**, years from date of Final Completion.

1.2 PRODUCTS**A. Plastic-Insulated, Series-Resistance Heating Cables**

1. Comply with IEEE 515.1.
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, **as directed**.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables

1. Heating Element: Pair of parallel No. 16 **OR** 18, **as directed**, AWG, tinned **OR** nickel-coated, **as directed**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.
 2. Electrical Insulating Jacket: Flame-retardant polyolefin.
 3. Cable Cover: Tinned-copper **OR** Stainless-steel, **as directed**, braid, and polyolefin outer jacket with UV inhibitor, **as directed**.
 4. Maximum Operating Temperature (Power On): 150 deg F (65 deg C).
 5. Maximum Exposure Temperature (Power Off): 185 deg F (85 deg C).
 6. Maximum Operating Temperature: 300 deg F (150 deg C).
- C. Constant-Wattage Heating Cables
1. Heating Element: Pair of parallel No. 12 AWG, tinned **OR** nickel-coated, **as directed**, stranded copper bus wires with single-stranded resistor wire connected between bus wires. Terminate with waterproof, factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight.
 2. Electrical Insulating Jacket: Flame-retardant fluoropolymer.
 3. Cable Cover: Tinned-copper **OR** Stainless-steel, **as directed**, braid, and polyolefin outer jacket with UV inhibitor, **as directed**.
 4. Maximum Operating Temperature (Power On): 392 deg F (200 deg C).
- D. Controls
1. Pipe-Mounting Thermostats for Freeze Protection:
 - a. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
 - b. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
 - c. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
 - d. Corrosion-resistant, waterproof control enclosure.
 2. Precipitation and Temperature Sensor for Snow Melting on Roofs and in Gutters:
 - a. Microprocessor-based **OR** Automatic, **as directed**, control with manual on, automatic, and standby/reset switch.
 - b. Precipitation and temperature sensors shall sense the surface conditions of roof and gutters and shall be programmed to energize the cable as follows:
 - 1) Temperature Span: 34 to 44 deg F (1 to 7 deg C).
 - 2) Adjustable Delay Off Span: 30 to 90 minutes.
 - 3) Energize Cables: Following two-minute delay if ambient temperature is below set point and precipitation is detected.
 - 4) De-Energize Cables: On detection of a dry surface plus time delay.
 - c. Corrosion-proof and waterproof enclosure suitable for outdoor mounting, for controls and precipitation and temperature sensors.
 - d. Minimum 30-A contactor to energize cable or close other contactors.
 - e. Precipitation sensor shall be freestanding.
 - f. Provide relay with contacts to indicate operational status, on or off, for interface with central HVAC control system workstation.
 3. Programmable Timer for Domestic Hot-Water-Temperature Maintenance:
 - a. Microprocessor based.
 - b. Minimum of four separate schedules.
 - c. Minimum 24-hour battery carryover.
 - d. On-off-auto switch.
 - e. 365-day calendar with 20 programmable holidays.
 - f. Relays with contacts to indicate operational status, on or off, and for interface with central HVAC control system workstation.

E. Accessories

1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
2. Warning Labels: Refer to Division 22 Section "Identification For Plumbing Piping And Equipment".
3. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
 - b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Applications

1. Install the following types of electric heating cable for the applications described:
 - a. Snow and Ice Melting on Roofs and in Gutters and Downspouts: Plastic-insulated, series-resistance **OR** Self-regulating, parallel-resistance **OR** Constant-wattage, **as directed**, heating cable.
 - b. Temperature Maintenance for Domestic Hot Water: Self-regulating, parallel-resistance heating cable.

B. Installation

1. Install electric heating cable across expansion, construction, and control joints according to manufacturer's written recommendations using cable protection conduit and slack cable to allow movement without damage to cable.
2. Electric Heating Cable Installation for Snow and Ice Melting on Roofs and in Gutters and Downspouts: Install on roof and in gutters and downspouts with clips furnished by manufacturer that are compatible with roof, gutters, and downspouts.
3. Electric Heating Cable Installation for Freeze Protection for Piping:
 - a. Install electric heating cables after piping has been tested and before insulation is installed.
 - b. Install electric heating cables according to IEEE 515.1.
 - c. Install insulation over piping with electric cables according to Division 22 Section "Plumbing Insulation".
 - d. Install warning tape on piping insulation where piping is equipped with electric heating cables.
4. Electric Heating Cable Installation for Temperature Maintenance for Domestic Hot Water:
 - a. Install electric heating cables after piping has been tested and before insulation is installed.
 - b. Install insulation over piping with electric heating cables according to Division 22 Section "Plumbing Insulation".
 - c. Install warning tape on piping insulation where piping is equipped with electric heating cables.
5. Set field-adjustable switches and circuit-breaker trip ranges.
6. Protect installed heating cables, including nonheating leads, from damage.

C. Connections

1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

D. Field Quality Control

1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.

- a. Test cables for electrical continuity and insulation integrity before energizing.
 - b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
3. Remove and replace malfunctioning units and retest as specified above.

END OF SECTION 07 72 56 00a

SECTION 07 72 56 00b - HEAT TRACING FOR HVAC PIPING**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for heat tracing for HVAC piping. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes heat tracing with the following electric heating cables:
 - a. Plastic insulated, series resistance.
 - b. Self-regulating, parallel resistance.

C. Submittals

1. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
 - a. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
2. Shop Drawings: For electric heating cable. Include plans, sections, details, and attachments to other work.
 - a. Wiring Diagrams: Power, signal, and control wiring.
3. Field quality-control test reports.
4. Operation and Maintenance Data: For electric heating cables to include in operation and maintenance manuals.
5. Warranty: Special warranty specified in this Section.

D. Quality Assurance

1. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

E. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace electric heating cable that fails in materials or workmanship within 10 **OR** 15, **as directed**, years from date of Final Completion.

1.2 PRODUCTS**A. Plastic-Insulated, Series-Resistance Heating Cables**

1. Comply with IEEE 515.1.
2. Heating Element: Single- or dual-stranded resistor wire. Terminate with waterproof, factory-assembled nonheating leads with connectors at both ends.
3. Electrical Insulating Jacket: Minimum 4.0-mil (0.10-mm) Kapton with silicone jacket or Tefzel.
4. Cable Cover: Aluminum braid and silicone or Hylar outer jacket, **as directed**.
5. Maximum Operating Temperature: 300 deg F (150 deg C).

B. Self-Regulating, Parallel-Resistance Heating Cables

1. Heating Element: Pair of parallel No. 16 **OR** 18 **as directed**, AWG, tinned **OR** nickel-coated **as directed**, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof,

factory-assembled nonheating leads with connectors at one end, and seal the opposite end watertight. Cable shall be capable of crossing over itself once without overheating.

2. Electrical Insulating Jacket: Flame-retardant polyolefin.
3. Cable Cover: Tinned-copper **OR** Stainless-steel **as directed**, braid, and polyolefin outer jacket with UV inhibitor **as directed**.
4. Maximum Operating Temperature (Power On): 150 deg F (65 deg C).
5. Maximum Exposure Temperature (Power Off): 185 deg F (85 deg C).
6. Maximum Operating Temperature: 300 deg F (150 deg C).

C. Controls

1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F (minus 1 to plus 10 deg C).
2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
4. Corrosion-resistant, waterproof control enclosure.

D. Accessories

1. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
2. Warning Labels: Refer to Division 23 Section "Identification For Hvac Piping And Equipment".
3. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils (0.08 mm) thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - a. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches (150 mm): 3/4 inch (19 mm) minimum.
 - b. Width for Markers on Pipes with OD, Including Insulation, 6 Inches (150 mm) or Larger: 1-1/2 inches (38 mm) minimum.

1.3 EXECUTION

A. Installation

1. Install electric heating cable across expansion joints according to manufacturer's written recommendations using slack cable to allow movement without damage to cable.
2. Install electric heating cables after piping has been tested and before insulation is installed.
3. Install electric heating cables according to IEEE 515.1.
4. Install insulation over piping with electric cables according to Division 23 Section "Hvac Insulation".
5. Install warning tape on piping insulation where piping is equipped with electric heating cables.
6. Set field-adjustable switches and circuit-breaker trip ranges.
7. Protect installed heating cables, including nonheating leads, from damage.

B. Connections

1. Ground equipment according to Division 26 Section "Grounding And Bonding For Electrical Systems".
2. Connect wiring according to Division 26 Section "Low-voltage Electrical Power Conductors And Cables".

C. Field Quality Control

1. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - a. Test cables for electrical continuity and insulation integrity before energizing.

- b. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
2. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
3. Remove and replace malfunctioning units and retest as specified above.

SECTION 07 84 00 00 - CSF FIRESTOPPING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where penetrations of Fire-Rated Walls are part of Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 84 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Firestopping in fire-rated wall assemblies.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM E 119 - Test Methods for Fire Tests of Building Construction and Materials.
 - 2. ASTM E 814 - Test Methods for Fire Tests of Through Penetration Fire Stops.
- B. Underwriters' Laboratories, Inc. (UL):
 - 1. UL 1479 - Fire Tests of Through-Penetration Firestops.

1.3 DEFINITIONS

- A. Firestopping: Sealing material or assembly placed in spaces between building materials to stop movement of smoke, heat, gasses, or fire through wall openings.

1.4 SYSTEM DESCRIPTION

- A. Firestopping Materials: ASTM E 119, ASTM E 814, UL 1479 to achieve a fire rating as indicated on Drawings.

1.5 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures of submittals.
 - 1. Product Data: Product characteristics, performance, and limitation criteria.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Firestopping installer documentation of experience indicating compliance with specified qualification requirements.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum 5 years documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver Products in manufacturer's original unopened containers or packages with labels intact, identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions, where applicable.
- B. Store and handle materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.8 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not install materials when temperature of substrate material and ambient air is below 60 degrees F.
 - 2. Maintain minimum temperature before, during, and for 3 days after installation of materials.
 - 3. Keep away from heat, open flame, sparks, or other sources of ignition until curing is complete. Use only with adequate ventilation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering firestopping materials which may be incorporated in the work include the following:
 - 1. Nelson Firestop Products, Tulsa, OK (800) 331-7325.
 - 2. Hilti Firestop Systems, Tulsa, OK (800) 879-8000.
 - 3. The Rectorseal Corporation, Houston, TX (800) 231-3345.
 - 4. Specified Technologies, Incorporated (STI), Somerville, NJ (800) 992-1180.
 - 5. 3M Fire Protection Products, St. Paul, MN (800) 328-1687.
 - 6. Tremco Firestop System, Beechwood, OH (800) 321-7906.
- B. Other products such as USG Firestop System by U.S. Gypsum Co. are acceptable if complying with requirements.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Intumescent Latex Sealant: Single-component, intumescent, latex formulation.
 - 1. LBS, by Nelson Firestop Products.
 - 2. Metacaulk 950 or 1000, by RectorSeal.
 - 3. SpecSeal SSS100, by STI.
 - 4. CP 25WB+, by 3M.
 - 5. TREMstop WBM, by Tremco.
- B. Intumescent Solvent-Release-Curing Sealant: Single component, intumescent, synthetic-polymer based, non-sag grade.
 - 1. CP 25N/S, by 3M.
 - 2. TREMstop WBM, by Tremco.
- C. Intumescent Wrap/Strip: Single-component, elastomeric sheet with aluminum foil on one face.
 - 1. WRS, by Nelson Firestop Products.
 - 2. Metacaulk Wrap Strip, by RectorSeal.
 - 3. SpecSeal SSWRED Wrapstrip, by STI.
 - 4. FS-195+ Wrap/Strip, by 3M.
 - 5. TREMstop WS, by Tremco.
- D. Intumescent Putty: Single-component, non-hardening, dielectric, intumescent putty.
 - 1. FSP, by Nelson Firestop Products.
 - 2. Metacaulk Fire Rated Putty, by RectorSeal.
 - 3. SpecSeal Putty, by STI.
 - 4. Moldable Putty+, by 3M.
- E. Silicone Sealant: Single-component, moisture-curing, silicone-based elastomeric, non-sag grade.
 - 1. CLK N/S, by Nelson Firestop Products.
 - 2. FS 601, by Hilti.
 - 3. Metacaulk 835+, by RectorSeal.
 - 4. SpecSeal PEN 300, by STI.
 - 5. 2000+ Silicone, by 3M.
 - 6. FYRE SIL, by Tremco.
- F. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, nonshrinking foam.
 - 1. FS Fireblocks, by Hilti.
 - 2. SpecSeal PEN 200, by STI.
 - 3. 2001 Silicone RTV Foam, by 3M.
- G. Intumescent Collar: Factory-fabricated, intumescent collar.
 - 1. PCS, by Nelson Firestop Products.
 - 2. CP 642, by Hilti.
 - 3. Metacaulk Pipe Collar, by RectorSeal.
 - 4. SpecSeal SSC Collars, by STI.
 - 5. Plastic Pipe Device, by 3M.
 - 6. TREMstop D, by Tremco.
- H. Intumescent Composite Sheet or Pillows and Mortar: Intumescent sheet used to firestop large openings.
 - 1. CPS, by Nelson Firestop Products.
 - 2. SpecSeal SSB Pillows and SpecSeal SSM Firestop Compound, by STI.
 - 3. CS-195+ Composite Sheet, by 3M.
 - 4. TREMstop PS, by Tremco.

- I. Packing Material: Manufacturer's standard mastic, putty, ceramic fiber blanket, or mineral wool to be used as fill or backing material for firestopping.
 - 1. FSB or Mineral Wool, by Nelson Firestop Products.
 - 2. Mineral Wool, by Hilti.
 - 3. Fire Safing or Backer Rod, by RectorSeal.
 - 4. Mineral Wool Safing, by STI.
 - 5. FireMaster Mastic, FireMaster Putty, or FireMaster Bulk, by 3M.
 - 6. Cerablanket, by Tremco.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter which may affect bond of firestopping material.
- B. Remove incompatible materials which may affect bond.
- C. Place hangers or damming materials in penetration to hold firestopping materials where required.

3.3 INSTALLATION

- A. Follow manufacturer charts for appropriate material to achieve required fire rating in various locations.
- B. Install firestopping at penetrations of fire rated wall materials by sleeves, piping, ductwork, conduit, and other items in accordance with manufacturer's published instructions.

3.4 CLEANING AND PROTECTION

- A. Clean excessive fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturer's of firestopping Products and of products in which opening and joints occur.
- B. Protect firestopping during and after curing period from contact with contaminating substances or from damage resulting from construction operations.

- C. If damage occurs, cut out and remove damaged or deteriorated firestopping and install new materials.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Inspection procedures.
- B. Contracting Officer will inspect each firestopping installation. Do not cover firestopping installations that will be concealed by other construction until Contracting Officer inspection.

3.6 SCHEDULES

A. Provide firestopping complying with UL assemblies specified below.

Penetration	Assembly	Nelson	Hilti	RectorSeal	STI	3M	Tremco
Metal Pipe	CMU Wall 8" Thick or Less	CAJ1224 or CAJ1203	CAJ1150 or CAJ1158	CAJ1114 or CAJ1115	CAJ1079 or CAJ1217	CAJ1001 or CAJ1009	CAJ1179 or CAJ1187
	Gypsum Board Partition	WL1083 or WL1030	WL1052 or WL1054	WL1026 or WL1034	WL1049 or WL1079	WL1003 or WL1009	WL1020 or WL1051
Non-Metallic Pipe	CMU Wall 8" Thick or Less	CAJ2086	CAJ2095 or CAJ2109	CAJ2021 or WJ2025	CAJ2064 or CAJ2045	CAJ2005	CAJ2082 or FA2024
	Gypsum Board Partition	WL2071	WL2078	WL2015 or WL2104	WL2093 or WL2029	WL2002 or WL2005	WL2083 or WL2082
Cable Tray	CMU Wall 8" Thick or Less	CAJ8049 or CAJ4033	CAJ4017	CAJ8043	CAJ4020 or CAJ4029	CAJ4003 or CBJ4020	CAJ4007 or WJA4005
	Gypsum Board Partition	WL4003	WL4006	N/A	WL4005 or WL4008	WL4004	WL3043 or WL3044
Insulated Metal Pipe	CMU Wall 8" thick or Less	CAJ5008 or CAJ5059	CAJ5045	WJ5016 or CAJ5070	CAJ5021 or CAJ5029	CAJ5001 or CAJ5002	CAJ5052 or CBT5005
	Gypsum Board Partition	WL5036	WL5022 or WL5029	WL5057	WL5014 or WL5051	WL5001	WL5034
Construction Gaps	CMU Wall to Metal Deck	N/A	HW-D-0008	TRC/PV120 -14	U900Z020	U900Z028	U900Z013 or U900Z014

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 07 84 00 00 - MPF FIRESTOPPING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Firestopping in fire-rated wall assemblies.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM E 119 - Test Methods for Fire Tests of Building Construction and Materials.
 - 2. ASTM E 814 - Test Methods for Fire Tests of Through Penetration Fire Stops.
- B. Underwriters' Laboratories, Inc. (UL):
 - 1. UL 1479 - Fire Tests of Through-Penetration Firestops.

1.3 DEFINITIONS

- A. Firestopping: Sealing material or assembly placed in spaces between building materials to stop movement of smoke, heat, gasses, or fire through wall openings.

1.4 SYSTEM DESCRIPTION

- A. Firestopping Materials: ASTM E 119, ASTM E 814, UL 1479 to achieve a fire rating as indicated on Drawings.

1.5 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures of submittals.
 - 1. Product Data: Product characteristics, performance, and limitation criteria.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

- b. Qualification Documentation: Firestopping installer documentation of experience indicating compliance with specified qualification requirements.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum 5 years documented experience.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver Products in manufacturer's original unopened containers or packages with labels intact, identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions, where applicable.
- B. Store and handle materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.8 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 - 1. Do not install materials when temperature of substrate material and ambient air is below 60 degrees F.
 - 2. Maintain minimum temperature before, during, and for 3 days after installation of materials.
 - 3. Keep away from heat, open flame, sparks, or other sources of ignition until curing is complete. Use only with adequate ventilation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering firestopping materials which may be incorporated in the work include the following:
 - 1. Nelson Firestop Products, Tulsa, OK (800) 331-7325.
 - 2. Hilti Firestop Systems, Tulsa, OK (800) 879-8000.
 - 3. The Rectorseal Corporation, Houston, TX (800) 231-3345.
 - 4. Specified Technologies, Incorporated (STI), Somerville, NJ (800) 992-1180.
 - 5. 3M Fire Protection Products, St. Paul, MN (800) 328-1687.
 - 6. Tremco Firestop System, Beechwood, OH (800) 321-7906.
- B. Other products such as USG Firestop System by U.S. Gypsum Co. are acceptable if complying with requirements.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Intumescent Latex Sealant: Single-component, intumescent, latex formulation.
 - 1. LBS, by Nelson Firestop Products.
 - 2. Metacaulk 950 or 1000, by RectorSeal.

3. SpecSeal SSS100, by STI.
 4. CP 25WB+, by 3M.
 5. TREMstop WBM, by Tremco.
- B. Intumescent Solvent-Release-Curing Sealant: Single component, intumescent, synthetic-polymer based, non-sag grade.
1. CP 25N/S, by 3M.
 2. TREMstop WBM, by Tremco.
- C. Intumescent Wrap/Strip: Single-component, elastomeric sheet with aluminum foil on one face.
1. WRS, by Nelson Firestop Products.
 2. Metacaulk Wrap Strip, by RectorSeal.
 3. SpecSeal SSWRED Wrapstrip, by STI.
 4. FS-195+ Wrap/Strip, by 3M.
 5. TREMstop WS, by Tremco.
- D. Intumescent Putty: Single-component, non-hardening, dielectric, intumescent putty.
1. FSP, by Nelson Firestop Products.
 2. Metacaulk Fire Rated Putty, by RectorSeal.
 3. SpecSeal Putty, by STI.
 4. Moldable Putty+, by 3M.
- E. Silicone Sealant: Single-component, moisture-curing, silicone-based elastomeric, non-sag grade.
1. CLK N/S, by Nelson Firestop Products.
 2. FS 601, by Hilti.
 3. Metacaulk 835+, by RectorSeal.
 4. SpecSeal PEN 300, by STI.
 5. 2000+ Silicone, by 3M.
 6. FYRE SIL, by Tremco.
- F. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, nonshrinking foam.
1. FS Fireblocks, by Hilti.
 2. SpecSeal PEN 200, by STI.
 3. 2001 Silicone RTV Foam, by 3M.
- G. Intumescent Collar: Factory-fabricated, intumescent collar.
1. PCS, by Nelson Firestop Products.
 2. CP 642, by Hilti.
 3. Metacaulk Pipe Collar, by RectorSeal.
 4. SpecSeal SSC Collars, by STI.
 5. Plastic Pipe Device, by 3M.
 6. TREMstop D, by Tremco.
- H. Intumescent Composite Sheet or Pillows and Mortar: Intumescent sheet used to firestop large openings.
1. CPS, by Nelson Firestop Products.
 2. SpecSeal SSB Pillows and SpecSeal SSM Firestop Compound, by STI.
 3. CS-195+ Composite Sheet, by 3M.
 4. TREMstop PS, by Tremco.
- I. Packing Material: Manufacturer's standard mastic, putty, ceramic fiber blanket, or mineral wool to be used as fill or backing material for firestopping.
1. FSB or Mineral Wool, by Nelson Firestop Products.
 2. Mineral Wool, by Hilti.
 3. Fire Safing or Backer Rod, by RectorSeal.
 4. Mineral Wool Safing, by STI.

5. FireMaster Mastic, FireMaster Putty, or FireMaster Bulk, by 3M.
6. Cerablanket, by Tremco.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to United States Postal Service.

3.2 PREPARATION

- A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter which may affect bond of firestopping material.
- B. Remove incompatible materials which may affect bond.
- C. Place hangers or damming materials in penetration to hold firestopping materials where required.

3.3 INSTALLATION

- A. Follow manufacturer charts for appropriate material to achieve required fire rating in various locations.
- B. Install firestopping at penetrations of fire rated wall materials by sleeves, piping, ductwork, conduit, and other items in accordance with manufacturer's published instructions.

3.4 CLEANING AND PROTECTION

- A. Clean excessive fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturer's of firestopping Products and of products in which opening and joints occur.
- B. Protect firestopping during and after curing period from contact with contaminating substances or from damage resulting from construction operations.
- C. If damage occurs, cut out and remove damaged or deteriorated firestopping and install new materials.

3.5 FIELD QUALITY CONTROL

-
- A. Section 014000 - Quality Requirements: Inspection procedures.
 - B. Contracting Officer will inspect each firestopping installation. Do not cover firestopping installations that will be concealed by other construction until Contracting Officer inspection.

3.6 SCHEDULES

A. Provide firestopping complying with UL assemblies specified below.

Penetration	Assembly	Nelson	Hilti	RectorSeal	STI	3M	Tremco
Metal Pipe	CMU Wall 8" Thick or Less	CAJ1224 or CAJ1203	CAJ1150 or CAJ1158	CAJ1114 or CAJ1115	CAJ1079 or CAJ1217	CAJ1001 or CAJ1009	CAJ1179 or CAJ1187
	Gypsum Board Partition	WL1083 or WL1030	WL1052 or WL1054	WL1026 or WL1034	WL1049 or WL1079	WL1003 or WL1009	WL1020 or WL1051
Non-Metallic Pipe	CMU Wall 8" Thick or Less	CAJ2086	CAJ2095 or CAJ2109	CAJ2021 or WJ2025	CAJ2064 or CAJ2045	CAJ2005	CAJ2082 or FA2024
	Gypsum Board Partition	WL2071	WL2078	WL2015 or WL2104	WL2093 or WL2029	WL2002 or WL2005	WL2083 or WL2082
Cable Tray	CMU Wall 8" Thick or Less	CAJ8049 or CAJ4033	CAJ4017	CAJ8043	CAJ4020 or CAJ4029	CAJ4003 or CBJ4020	CAJ4007 or WJA4005
	Gypsum Board Partition	WL4003	WL4006	N/A	WL4005 or WL4008	WL4004	WL3043 or WL3044
Insulated Metal Pipe	CMU Wall 8" thick or Less	CAJ5008 or CAJ5059	CAJ5045	WJ5016 or CAJ5070	CAJ5021 or CAJ5029	CAJ5001 or CAJ5002	CAJ5052 or CBT5005
	Gypsum Board Partition	WL5036	WL5022 or WL5029	WL5057	WL5014 or WL5051	WL5001	WL5034
Construction Gaps	CMU Wall to Metal Deck	N/A	HW-D-0008	TRC/PV120 -14	U900Z020	U900Z028	U900Z013 or U900Z014
	Gypsum Board Partition to Metal Deck	N/A	HW-D-0003 or HW-D-0004	HWD0014 or TRC/PV120 -14	HWD1001	U400V	WHPV60.0 1 or U900Z014

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 07 84 00 00

SECTION 07 92 00 00 - CSF JOINT SEALANTS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.07 92 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Preparing sealant substrate surfaces.
 - 2. Sealant and backing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 321313 - Concrete Paving: Sealants used in conjunction with paving.
 - 2. Section 033000 - Cast-In-Place Concrete: Sealants used in conjunction with concrete.
 - 3. Section 042100 - Clay Unit Masonry: Sealants used in conjunction with clay masonry.
 - 4. Section 042200 - Concrete Unit Masonry: Sealants used in conjunction with concrete masonry.
 - 5. Section 078400 - Firestopping: Firestopping sealant at fire-rated assemblies.
 - 6. Section 076200 - Sheet Metal Flashing and Trim: Sealants used in conjunction with metal flashings.
 - 7. Section 088000 - Glazing: Sealants used in conjunction with glazing methods.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM C717 - Standard Terminology of Building Seals and Sealants.
 - 2. ASTM C834 - Specification for Latex Sealants.
 - 3. ASTM C920 - Specification for Elastomeric Joint Sealants.
 - 4. ASTM D1056 - Flexible Cellular Material- Sponge or Expanded Rubber.
- B. Federal Specifications (FS):
 - 1. FS SS-S-200 - Sealing Compounds, Two Component, Elastomeric, Polymer Type, Jet-Fuel Resistant, Cold Applied.

2. FS TT-S-1657 - Sealing Compound, Single Component Butyl Rubber Based Solvent Release Type (for Buildings and other Types of Construction).

1.3 SUBMITTALS

- A. Section 013300 – Submittal Procedures: Procedures for submittals.
 1. Product Data: Product chemical characteristics, performance criteria, substrate preparation, limitations, and color availability.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Warranty: Submit manufacturer warranty with forms completed in United States Postal Service name and registered with manufacturer.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver Products in manufacturer's original unopened containers or packages with labels intact, identifying product and manufacturer, date of manufacture, lot number, shelf life, curing time, and mixing instructions, where applicable.
- C. Store and handle materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, or other causes.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements: Install sealant during manufacturer's recommended temperature ranges and weather conditions for application and cure. Consult manufacturer when sealant cannot be applied during recommended conditions.

1.7 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Warranty:
 1. Submit written warranty signed by sealant manufacturer agreeing to replace sealants and accessories which fail because of loss of cohesion or adhesion or which do not cure.
 2. Warranty Period: 5 years or longer per the manufacturers' standard warranties.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated into the work include the following:
1. Bostik, Inc, Huntingdon Valley, PA, (800) 523-2678, (125) 674-5600.
 2. Dow Corning, Midland, MI (517) 496-4000.
 3. GE Silicones, Waterford, NY (518) 233-3330.
 4. Mameco International, Cleveland, OH, (800) 321-6412, (216) 752-4400.
 5. W.R. Meadows, Inc, Elgin, IL (800) 342-5976, (847) 683-4500.
 6. Nomaco, Inc., Zebulon, NC, (919) 269-6500.
 7. Pecora Corporation, Harleysville, PA, (800) 523-6688, (215) 723-6051.
 8. Sika Corporation, Lyndhurst, NJ, (800) 933-7452, (201) 933-8800.
 9. Sonneborn Building Products Div. ChemRex, Inc., Shakopee, MN (800) 243-6739, (612) 496-6000.
 10. Tremco, Beachwood, OH, (800) 852-3821, (216) 292-5000.
 11. USG Corp., Chicago, IL (800) 874-4968, (312) 606-4000.

2.2 BUILDING SEALANTS (See Sealant Schedule at the end of this Section for specific use of sealants.)

A. Urethanes:

1. Type 1: Two-Part Urethane: Self-Leveling, ASTM C920, Type M, Grade P, Class 25.
 - a. Chem-Calk CC-550, by Bostik.
 - b. Vulkem 245, by Mameco.
 - c. Vulkem 255, Wide-Joint, by Mameco.
 - d. NR-200 Urexpan, by Pecora Corporation.
2. Type 2: Two-Part Urethane: Non-Sag, ASTM C920, Type M, Grade NS, Class 25.
 - a. Chem-Calk 500, by Bostik.
 - b. Vulkem 227, by Mameco.
 - c. Sonolastic NP 2, by Sonneborn Building Products, ChemRex Inc.
3. Type 3: One-Part Urethane: Self-Leveling, ASTM C920, Type S, Grade P, Class 25.
 - a. Vulkem 45, by Mameco.
 - b. Urexpan NR-201, by Pecora Corporation.
 - c. Sonolastic SL1, by Sonneborn Building Products, ChemRex Inc.
 - d. Sikaflex 1C-SL by Sika.
4. Type 4: One-Part Urethane: Non-Sag, ASTM C920, Type S, Grade NS, Class 25.
 - a. Chem-Calk 900, by Bostik.
 - b. Vulkem 116, by Mameco.
 - c. Sonolastic NP I, by Sonneborn Building Products, ChemRex Inc.

B. Silicones:

1. Type 1: One-Part Silicones: ASTM C920, Type S, Grade NS, Class 50.
 - a. 795 Silicone Building Sealant, by Dow Corning.
 - b. 864 Architectural Silicone Sealant, by Pecora Corporation.
2. Type 2: One-Part Silicones: ASTM C920, Type S, Grade NS, Class 25.
 - a. 999-A Silicone Building & Glazing Sealant, Dow Corning.
 - b. Construction 1200 Sealant, General Electric Company.
3. Type 3: One-Part Silicones: ASTM C920, Type S, Grade NS, Class 25. Vertical Surfaces Only.
 - a. Construction 1200 Sealant, General Electric Company.
 - b. 999-A, Dow Corning.
 - c. 860 Glaziers and Contractors Silicone Sealant, by Pecora Corporation. (colors only)
4. Type 4: One-Part Silicones: ASTM C920, Type S, Grade NS, Class 25 or 50.
 - a. 786 Mildew Resistant Silicone Sealant, Dow Corning.
 - b. SCS 1700 Sanitary Sealant, General Electric.
 - c. 898 Silicone Sanitary Sealant, Pecora Corporation.

C. Acrylics, Latex:

1. Type 1: One-Part Acrylic Latex, Non-Sag, ASTM-C-834-76.
 - a. Chem-Calk 600, by Bostik.

- b. LC-130, by MACCO Adhesives, The Glidden Company.
 - c. Easa-ply ALS, by W. R. Meadows, Inc.
 - d. AC-20+Silicone Acrylic Latex, by Pecora Corporation.
 - e. Sonolac, Sonneborn Building Products, ChemRex Inc.
- D. Acoustical Sealants:
 - 1. Type 1: AC-20 FTR Acoustical and Insulation Sealant, by Pecora Corporation.
 - 2. Type 2: 60+ Unicrylic, by Pecora Corporation.
 - 3. Type 3: Sheetrock Acoustical Sealant, by United States Gypsum.
- E. Butyls:
 - 1. Type 1: One-Part Butyl, Non-Sag, FS TT-S-1657.
 - a. Chem-Calk 300, by Bostik.
 - b. BC-158 Butyl Rubber, by Pecora Corporation. (ASTM C1085)
- F. Preformed Compressible & Non-Compressible Fillers:
 - 1. Type 1: Backer Rod - Closed cell polyethylene foam:
 - a. HBR Backer Rod, by Nomaco.
 - b. #92 Greenrod, by Nomaco.
 - c. Sonofoam Closed-Cell Backer Rod, Sonneborn Building Products, ChemRex Inc.
 - 2. Type 2: Backer Rod - Open cell polyurethane foam:
 - a. Denver Foam, by Backer Rod Mfg Inc.
 - b. Foam Pack II, by Nomaco.
 - 3. Type 3: Neoprene compression seals:
 - a. WE, WF, and WG Series, by Watson Bowman & Acme Corp.
 - b. Will-Seal 150 Precompressed Expanding Foam Sealants, by Will-Seal, a Division of Illbruck.
 - 4. Type 4: Butyl Rod: Kirkhill Rubber Co. (714)529-4901.
- G. Bond Breaker Tape: Polyethylene tape of plastic as recommended by sealant manufacturer, to be applied to sealant-contact surfaces where bond to substrate of joint filler must be avoided for proper performance of sealant

2.3 PAVING SEALANTS

- A. Type 1: Two-Part Urethane: Self-Leveling, ASTM C920, Type M, Grade P, Class 25.
 - 1. Vulkem 202, by Mameco. (Jet Fuel Resistant) (FS SS-S-200D, Type H only)
 - 2. NR-300 Urexpan, by Pecora Corporation. (FS SS-S-200E)
- B. Type 2: One-Part Urethane: Self-Leveling, ASTM C920, Type S, Grade P, Class 25.
 - 1. Sonomeric 1 Sealant, by Sonneborn Building Products, ChemRex Inc. (FS SS-S-200E)
 - 2. Vulkem 45, by Mameco.

2.4 COLORS

- A. Generally use sealant colors matching color of material joint is located in.
- B. Where a joint occurs between two materials of differing colors and Contractor cannot determine which material to match, contact Contracting Officer for selection.

2.5 ACCESSORIES

- A. Joint Cleaner: Provide type of joint cleaning compound recommended by sealant manufacturer for joint surfaces to be cleaned.
- B. Primer: As recommended by sealant manufacturer.
- C. Masking tape and similar accessories to protect surfaces from damage.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that joint widths are in conformance with sealant manufacturer allowable limits.
 - 2. Verify that contaminants capable of interfering with adhesion have been cleaned from joint and joint properly prepared.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Prepare and size joints in accordance with manufacturer's instructions. Clean substrates of dirt, laitance, dust, or mortar using solvent, abrasion, or sandblasting as recommended by manufacturer. Remove loose materials and foreign matter which might impair adhesion of sealant.
- B. Verify that joint backing and release tapes are compatible with sealant. Verify sealant is suitable for substrate. Verify that sealant is paintable if painted finish is indicated.
- C. Protect materials surrounding work of this Section from damage or disfiguration.

3.3 INSTALLATION

- A. Install sealant in accordance with manufacturer's published instructions.
- B. Prime or seal joint surfaces where recommended by sealant manufacturer. Do not allow primer or sealer to spill or migrate onto adjoining surfaces.
- C. Install backer rod and bond breaker tape where required by manufacturer.
- D. Install preformed compressible and non-compressible fillers in accordance with manufacturer's published instructions.

- E. Install sealants to depths recommended by sealant manufacturer in uniform, continuous ribbons free of air pockets, foreign embedded matter, ridges, and sags, "wetting" joint bond surfaces equally on both sides.
- F. Tool joints concave unless shown otherwise. Where horizontal joints are between a horizontal surface and a vertical surface, fill joint to form slight cove so that joint will not trap moisture and foreign matter. Dry tool joints. Do not use soap, water, or solvent to tool joints.
- G. Epoxy Floor Joint Sealant: Install sealant at floor construction and control joints in accordance with manufacturer's published instructions and initially under manufacturer's supervision.

3.4 CURING

- A. Cure sealants in compliance with manufacturer's published instructions.

3.5 CLEANING

- A. Remove excess and spillage of sealants promptly as the work progresses, using materials and methods as recommended by sealant and substrate manufacturers. Clean adjoining surfaces to eliminate evidence of spillage without damage to adjoining surfaces or finishes.

3.6 SEALANT SCHEDULE

- A. Exterior Joints:
 - 1. Perimeters of exterior openings where frames and other penetrations meet exterior facade of building: precast concrete, brick, CMU, polymer reinforced concrete.
 - a. Sealant Urethane Type 2
 - b. Sealant Silicone Type 1 (for prefinished materials only)
 - 2. Expansion and control joints in exterior surfaces of cast-in-place concrete walls, precast architectural wall panels.
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
 - c. Preformed Compressible & Non-Compressible Filler Type 1
 - 3. Expansion and control joints in exterior surfaces of unit masonry walls and polymer reinforced concrete, including at metal panels.
 - a. Sealant Urethane Type 2
 - 4. Coping joints, coping-to-facade joints, cornice and wash, or horizontal surface joints not subject to foot or vehicular traffic.
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
 - c. Sealant Silicone Type 1 (for prefinished materials only)
 - 5. Exterior joints in horizontal wearing and non-wearing surfaces.
 - a. Sealant No. Urethane Type 1
 - b. Sealant No. Urethane Type 3
 - c. Preformed Compressible & Non-Compressible Filler Type 1
 - 6. Paving joints and curbs.
 - a. Sealant Urethane Type 4
 - b. Paving Sealant Type 2
 - 7. Setting bed for threshold and saddles.
 - a. Sealant Acoustical Type 1
 - 8. Painted metal lap or flashing joints.
 - a. Sealant Silicone Type 1

B. Interior Joints:

1. Seal interior perimeters of exterior openings.
2. Expansion and control joints on interior of exterior cast-in-place concrete walls.
3. Expansion and control joints on interior of exterior precast, architectural wall panels.
4. Expansion and control joints on interior of exterior masonry walls.
5. Perimeters of interior hollow metal and aluminum frames.
6. Interior masonry vertical control joints and intersecting masonry walls; CMU-to-CMU, CMU-to-concrete.
7. Joints at intersection of exterior masonry walls and interior gypsum board partitions.
8. For all of the above interior joints:
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
 - c. Sealant Silicone Type 1 (for prefinished materials only)
9. Exposed interior control joints in drywall and concealed joints.
 - a. Sealant Acrylic, Latex, Type 1
 - b. Sealant Acoustical Type 1
 - c. Sealant Acoustical Type 3
 - d. Sealant Butyl Type 1
10. Joints of underside of precast beams or planks.
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
11. Joints at tops of non-load bearing masonry walls at underside of cast-in-place concrete.
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
12. Perimeter of bath fixtures: sinks, tubs, urinals, waterclosets, basins, vanities, etc.
 - a. Sealant Silicone Type 4
13. Interior expansion and control joints in floor surfaces exposed to foot traffic.
 - a. Sealant Urethane Type 2
 - b. Sealant Urethane Type 4
 - c. Preformed Compressible & Non-Compressible Filler Type 1
14. Interior saw-cut contraction joints in exposed concrete floors exposed to forklift traffic.
 - a. Paving Sealant Type 1
15. Interior non-moving joints, including control, contraction, or construction joints, in interior floor slabs exposed to heavy duty traffic.
 - a. Paving Sealant Type 1
16. Painted metal lap joints.
 - a. Sealant Silicone Type 1

C. Glazing:

1. Structural Glazing.
 - a. Sealant Silicone Type 2
 - b. Sealant Silicone Type 3
2. General Purpose Glazing.
 - a. Sealant Silicone Type 3
3. End Damming.
 - a. Sealant Butyl Type 1

USPS CSF Specifications issued: 10/1/2013

Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

**SECTION 07 92 00 00 - MPF JOINT SEALANTS**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 - GENERAL**1.1 SUMMARY**

- A. Sealing of exterior building joints.
- B. Sealing of interior partition joints.
- C. Sealing of ceramic tile joints.
- D. Sealing of joints in exterior paving.

1.2 SUBMITTALS

- A. Product Data: Required
- B. Samples: Required

1.3 QUALITY ASSURANCE

- A. Quality Standards:
 - 1. SWRI (Sealant, Waterproofing and Restoration Institute) requirements for materials and installation.

PART 2 – PRODUCTS**2.1 MANUFACTURERS**

- A. Exterior building joints: Polyurethane Sealant - single component, chemical curing, non-sagging type, 25 percent elongation capability, manufactured by Pecora, Sika, Tremco or Sonneborn.
- B. Interior partition joints: Silicone Sealant - single component, 50 percent elongation capability, manufactured by GE or Dow.
- C. Ceramic tile joints: Silicone Sealant - single component, solvent curing, fungus resistant, 25 percent elongation capability, manufactured by GE or Dow.
- D. Exterior horizontal traffic joints: Polyurethane Sealant - self-leveling, manufactured by Pecora, Sika, Tremco or Sonneborn.

2.2 ACCESSORIES/MIXES

- A. Joint Backing: Round open cell polyethylene urethane foam or butyl rod.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013

END OF SECTION 07 92 00 00

SECTION 07 92 01 00 - R&A SEALANTS FOR ROOF REPLACEMENT

NOTE TO SPECIFIER

This Section is intended for use with R & A projects undertaken using Fixed Price Construction Contracts or IQC Construction Work Orders. Editing is required based on field design data collected for each individual project. "NOTE TO SPECIFIER" instructions provide guidance concerning editing and options requiring a decision on the part of the Designer. Based on discussions with the USPS Project Manager, select the most appropriate decision or option for the project, and delete the options not selected. Add additional Sections referenced within this Section. Items in blue require action by the specifier/designer.

NOTE TO SPECIFIER

Section Formatting:

Consistent formatting of Sections gives the complete document a professional look. This Section uses a 10pt. Arial font, and is formatted as follows:

1. Insert one 10pt. line after the Section Number. Section Number is in CAPS.
2. Insert two 10pt. lines after the Section Title. Section Title is in CAPS.
3. Insert one 10pt. line after a PART. PARTS are in CAPS. If a Section is not used, include NOT USED following the PART title as shown below.
4. Insert one 10pt. line after Article paragraphs. Articles are in CAPS.
5. Insert two 10pt. lines at the end of an Article.
6. Complete Section with END OF SETION.
7. No lines should be placed between paragraphs and sub-paragraphs, or between sub-paragraphs and other sub-paragraphs.

Example:

SECTION NUMBER

SECTION TITLE

PART 1 - GENERAL

1.1 ARTICLE

- A. Paragraph
 1. Sub-Paragraph
 - a. Sub-Paragraph
 - 1) Sub Paragraph

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

Edit Section footer as necessary to reflect the project name and location, USPS Project number, and issue date of the technical specification document. Coordinate date with the USPS Project Manager.

PART 1 - GENERAL

1.1 SUMMARY

- A. This Section includes requirements related to the installation of sealants associated with sheet metal flashing work.

NOTE TO SPECIFIER

EDIT Article 1.2 RELATED SECTIONS below. DELETE Section references for roofing system Sections not applicable to this project. Re-letter paragraphs after editing.

1.2 RELATED SECTIONS

- A. Section 013300 – Submittal Procedures
- B. Section 016000 – Product Requirements
- C. Section 024100 – Roof Removal and Substrate Preparation
- D. Section 076202 – Sheet Metal for Built-Up Roofing
- E. Section 076203 – Sheet Metal for Modified Bitumen Roofing
- F. Section 076205 – Sheet Metal for EPDM Roofing
- G. Section 076207 – Sheet Metal for PVC Roofing
- H. Section 076209 – Sheet Metal for KEE Roofing
- I. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.

1.3 REFERENCES

- A. Reference standards of the following sources are applicable to products and procedures specified in Part 2 - Products and Part 3 – Execution of this Section:
 - 1. American Society for Testing and Materials (ASTM)
 - a. ASTM C 920 – Standard Specification for Elastomeric Joint Sealants

1.4 SUBMITTALS

- A. Prior to the start of work, submit the following to the Owner for approval:
 - 1. Product submittals required within Section 013300.
- B. Refer to Section 013300 for procedural requirements related to the submittal process.

1.5 QUALITY ASSURANCE PROCEDURES

- A. Applicator Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive a manufacturer's warranty. Company shall have a minimum of 5 years documented experience certified by roofing system manufacturer.
- B. Single Source Responsibility: Roofing system materials and components shall be supplied and warranted by roofing system manufacturer for specified roofing system and shall be in compliance with specified regulatory requirements.
- C. Examine the technical specifications and drawings. Verify all dimensions, detail conditions, roof plan notes and existing site conditions that may affect the work. Verification of existing dimensions and site conditions is the responsibility of the Contractor. No additional compensation will be considered for failure to verify existing dimensions, detail conditions, roof plan note callouts, and existing site conditions.
- D. Upon examination, if conflicts between the technical specifications and drawings, and those of federal, state or local regulatory agencies, the product manufacturer, industry roofing standards, or Owner-mandated requirements are discovered, notify the Owner immediately for resolution.
- E. During work, if conditions are discovered which do not allow for continuation of the work per the technical specifications and drawings, notify the Owner immediately for resolution.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Refer to Section 016000 for transport, handling, storage and product requirements.
- B. Deliver materials in manufacturer's original containers, dry, undamaged, seals and labels intact.
- C. Store materials in weather protected environment, clear of ground and moisture. Cover insulation, roofing materials, and other moisture-sensitive products with a canvas tarp.
- D. Protect adjacent materials and surfaces against damage from roofing work. Do not store materials on previously completed roofing.

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Do not perform work during inclement weather. Refer to product manufacturer for outdoor temperature requirements for installation of materials. Do not install materials at times when the outdoor temperature does not fall within the minimum/maximum temperature requirements of the manufacturer.
- B. Cold weather precautions:
 - 1. Refer to the sealant manufacturer for cold weather application recommendations and restrictions.
- C. Material Safety Data Sheets (MSDS) of all specified products shall remain on site for the duration of this project.

PART 2 – PRODUCTS

2.1 SEALANT

- A. Sealant: Moisture-cured, non-sag, one-part polyurethane sealant, in compliance with ASTM

C 920, Type S, Grade NS. Color to match sheet metal or as directed by Owner.

1. Closed-cell backing materials, bond breakers, and primers as recommended by the sealant manufacturer for the joint conditions encountered.
- B. High temperature sealant: For use at high-temperature penetrations and other locations where high temperatures are anticipated: Product type approved by Owner for temperature and substrate condition encountered.
- C. Sealant primer: Type recommended and approved by sealant manufacturer for substrate encountered.
- D. Joint filler, backer rod and bond breaker tape:
1. Product(s) recommended and approved by sealant manufacturer for substrate encountered.
 2. Size and configuration as necessary for condition encountered.

PART 3 - EXECUTION

3.1 SEALANT INSTALLATION

- A. Cleaning: Clean surfaces immediately before installation of sealants to provide surfaces suitable for the installation of sealant.
- B. Joint filler, backer rod, and bond breaker tape: Install joint filler and backer rods to result in minimum sealant depth of 1/4-inch and maximum of 1/2 the joint width. If joint is of insufficient depth to receive joint filler or backer rod, install bond breaker tape to the bottom of the joint to prevent three-sided adhesion.
- C. Primer: Apply primer if required by the sealant manufacturer for the type of sealant and conditions encountered. Apply primer in accordance with the sealant manufacturer's requirements and recommendations.
- D. Sealant installation: Install sealant where required in accordance with the requirements and recommendations of the sealant manufacturer. Tool the joint immediately after installation.

USPS CSF Specifications issued: 10/1/2013

Last revised: 3/6/2013

NOTE TO SPECIFIER

Upon completion of Section editing, review Section formatting. Ensure Article, paragraph and sub-paragraph lettering and numbering is consistent. Ensure all "Note to Specifier" comments are removed. Change all blue text to black text. Review the footer information with the USPS Project Manager for accuracy.

END OF SECTION 07 92 01 00

SECTION 08 11 00 00 - CSF METAL DOORS AND FRAMES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 11 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Steel doors and frames.
 - 2. Steel door louvers.
 - 3. Steel frames for wood doors.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 081400 - Wood Doors: Doors installed in steel frames.
 - 2. Section 087100 - Door Hardware: Hardware coordination.
 - 3. Section 099100 - Painting: Field painting and finishing of doors and frames.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A 152 - Methods for Fire Tests of Door Assemblies.
 - 2. ASTM A 653/A 653M - Standard Specification for Steel Sheets, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 1996.

NOTE TO SPECIFIER

Use METHODS OF FIRE TESTS paragraph below when FIRE RATED door assemblies are a part of the Work.

- 3. ASTM E 152 - Methods of Fire Tests of Door Assemblies.

- B. Door Hardware Institute (DHI):
 - 1. DHI - The Installation of Commercial Steel Doors and Steel Frames, Insulated Steel Doors in Wood Frames and Builder's Hardware.

2. DHI A115 Series - Specifications for Steel Doors and Frame Preparation for Hardware.

C. Steel Door Institute (SDI):

1. SDI-100 - Recommended Specifications Standard Steel Doors and Frames.
2. SDI-105 - Recommended Erection Instructions for Steel Frames.

D. National Fire Protection Association (NFPA):

1. NFPA 80 - Fire Doors and Windows.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Indicate door materials, gauges, configurations, and location of cut-outs hardware reinforcement, and finish.
 - a. Shop Drawings: Indicate door elevations, internal reinforcement, closure method, and cut-outs for louvers.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing Products specified in this Section with minimum 5 years documented experience.
2. Installer: Company specializing in performing work of this Section with minimum 5 years documented experience.

NOTE TO SPECIFIER

Use paragraph below when FIRE RATED door assemblies are a part of the Work.

B. Regulatory Requirements:

1. Fire Rated Door Construction:
 - a. Conform to ASTM E 152, labeled and listed by Underwriters Laboratories (UL).
 - b. Rate of rise of 450 degrees F across door thickness maximum in 30 minutes of fire exposure.

NOTE TO SPECIFIER

Use paragraph below when FIRE RATED door assemblies are a part of the Work.

- C. Installed Door Assembly: Conform to NFPA 80 for fire rated minute label as indicated on Drawings.

1.5 DELIVERY, STORAGE AND PROTECTION

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Protect doors and frames with resilient packaging.
- C. Break seal on-site to permit ventilation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering items which may be incorporated in the Work include the following:
 1. Amweld Building Products, Incorporated, Garrettsville, OH (330) 527-4385, (800) 248-6116.
 2. Ceco Door Products, Brentwood, TN (615) 661-5030.
 3. Curries Company, Mason City, IA (515) 423-1334.
 4. Republic Builders Products, McKenzie, TN (800) 733-3667.
 5. Steelcraft, Cincinnati, OH (513) 745-6400.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Exterior Doors: SDI-100, Level II - Heavy-Duty - 1-3/4 inch, Model 1 - Full Flush Design, 18 gage cold-rolled steel; galvanized in accordance with ASTM A 653.
- B. Interior Doors: SDI-100, Level II - Heavy-Duty - 1-3/4 inch, Model 1 - Full Flush Design, 18 gage cold-rolled steel.
- C. Exterior Frames: 16 gage, cold-rolled steel, mitered and welded; galvanized in accordance with ASTM A 653.
- D. Interior Frames: 16 gage, cold-rolled steel, mitered and welded, 2 inch profile, for installation in a metal or wood stud security partition.
- E. Interior Frames: 16 gage, cold-rolled steel, mitered and welded, 2 inch profile, for installation in a metal or wood stud and gypsum board partition.

2.3 CORE CONSTRUCTION

- A. Provide one of the following core construction:
 1. Interior Doors: Kraft Honeycomb, Phenolic treated.
 2. Exterior Doors:
 - a. Polyurethane: Core foamed-in-place or laminated. 20 psi strength, 1.8 pcf density; 1/2 inch maximum voids in any direction. Strength of bond between core and steel face sheet shall exceed strength of core so delamination will not occur during operating conditions.
 - b. Polystyrene: Rigid core of polystyrene foam board, 1500 psf compressive strength, 18 psi shear strength. Strength of bond between core and steel face sheet shall exceed strength of core so that delamination will not occur under operating conditions.
 - c. Vertical Steel Stiffeners: 22 gage vertical steel stiffeners, spaced 6 inches apart and spot welded to face sheets at 6 inches on center. Insulate spaces between stiffeners with loose fill insulation full height of door.

2.4 ACCESSORIES

- A. Rubber Silencers: Resilient rubber.

NOTE TO SPECIFIER

Louvers are not permitted in exterior doors, or in doors which provide direct access to the work room floor from a public area, without burglar bars or wire mesh installed on the protected side.

- B. Louvers:
 - 1. Material and Finish: Roll formed 20 gauge steel with wipe coat of zinc.
 - 2. Blade: Inverted Y blade, sight proof.
- C. Top Filler Cap on exterior doors: Install cap, weld, grind, fill and finish smooth.

2.5 PROTECTIVE COATINGS

- A. Bituminous Coating: Fibered asphalt emulsion.
- B. Primer: Exposed surfaces shall be cleaned, treated with Bonderite chemical and given one baked-on shop coat of grey rust inhibiting primer.

2.6 FABRICATION

- A. Fabricate units rigid, neat, and free from warp or buckle. Fabricate KD or welded as specified. Weld exposed joints continuously; grind, dress, and make smooth, flush and invisible.
- B. Reinforce units to receive surface applied finish hardware.
- C. Prepare frame for silencers. Provide three single rubber silencers for single doors and two single silencers on frame head at double doors without mullions.
- D. Primer: Air dried.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install frames in accordance with SDI-105.
- B. Install doors in accordance with DHI.

- C. Install doors in accordance with manufacturer's published instructions, of size, and at locations indicated.
- D. Coordinate with adjacent wall construction for anchor placement.
- E. Field paint doors and frames as specified in Section 099100.
- F. The frame is to be mounted to the studding in such a manner to prevent a spreading of the frame from the studs of less than 1/2 inch.

3.3 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate frame installation with size, location, and installation.
 - 2. Coordinate with door opening construction, door frame, and door hardware installation.
- B. Site Tolerances:
 - 1. Maximum Diagonal Distortion: 1/16 inch measured with straight edge, corner to corner.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect metal door and frame installation, alignment, attachment to structure, and operation.

3.5 ADJUSTING AND CLEANING

- A. Adjust hardware for smooth and balanced door movement.
- B. Section 017300 - Execution: Cleaning installed Work.

SECTION 08 11 00 00 - MPF METAL DOORS AND FRAMES**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Hollow metal doors and frames.
- B. Vision panels.

1.2 SUBMITTALS

- A. Product Data: Required
- B. Shop Drawings: Required

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. UL 10B, NFPA 80 and ASTM E-152: Fire rated door and frame construction:
 - 2. Handbook RE-4: Standards for Facility Accessibility by the Physically Handicapped.
- B. Quality Standards:
 - 1. Hollow metal work: ANSI/SDI-100 Grade II Model 3 Standard Steel Doors and Frames.

PART 2 -PRODUCTS

2.1 Steel Doors and Frames: 1 ¾" inch thick full flush design, seamless construction.

- A. Exterior Doors:
 - 1. 18 gauge ASTM A526 with ASTM A525, G60 galvanized steel, insulated.
- B. Interior Doors:
 - 1. 18 gauge ASTM A366 or ASTM A568 cold-rolled steel, primed.
- C. Exterior Frames: 16 gauge thick material, core thickness, G60 galvanized.
- D. Interior Frames: 16 gauge thick material, core thickness, primed.
- E. Fire rated doors and frames: Fire rating and construction as required.

2.2 FABRICATION

- A. Steel Doors and Frames
 - 1. Shop Assembly:

- a. Fabricate frames as welded unit.
- 2. Shop/Factory Finishing:
 - a. Steel sheet: Galvanized to G60 coating class at exterior doors. Baked primer at interior doors.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

PART 1 – GENERAL

1.1 SUMMARY

- A. Flush solid core wood doors in hollow metal door frames.

1.2 SUBMITTALS

- A. Product Data: Required
- B. Shop Drawings: Required
- C. Samples: Required

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements:
 - 1. Fire rated door and frame construction: UL10B, NFPA 80 and ASTM E-152.
 - 2. Handicapped: Handbook RE-4.
- B. Quality Standards:
 - 1. Flush wood doors: Comply with AWI 1300 "Quality Standards," Custom Grade.

PART 2 - PRODUCTS

2.1 MANUFACTURER:

- A. Algoma
- B. Eggers
- C. Mohawk
- D. Weyerhaeuser

2.2 SOLID CORE WOOD DOORS - FLUSH, 1-3/4 INCHES THICK.

- A. Core Construction:
 - 1. Non-fire rated: SLC Solid stave lumber.
 - 2. Fire-rated: Type FD 1-1/2 solid stave lumber.
- B. Face Veneer:
 - 1. AWI Premium grade birch for transparent finish.

2.3 FABRICATION

- A. Shop fabricated and finished.
- B. Factory cut doors for finish hardware.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Shop Drawings: Illustrate door opening criteria, elevations, sizes, types, swings, special blocking for hardware, and factory machining criteria. Indicate cutouts for door louvers.
 - 2. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Special Warranty: Submit written special warranty forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Perform Work in accordance with AWI 1300 for Custom Grade.
- B. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.
- C. Regulatory Requirements:
 - 1. Fire Door Construction: Conform to ASTM E 152.
 - 2. Installed Fire Rated Door Assembly: Conform to NFPA 80.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Package, deliver, and store doors in accordance with AWI Section 013300.

1.6 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 - 1. Include coverage for delamination of veneer, warping beyond specified installation tolerances, defective materials, and telegraphing core construction.
 - 2. Warranty Period: Full life of installation.

NOTE TO SPECIFIER

****REQUIRED PART (PRODUCTS) FOLLOWS. DO NOT REVISE THIS PART, EXCEPT AS NOTED BELOW, WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Algoma Hardwoods, Inc., Algoma, WI, (800) 678-8910.
 - 2. Eggers Industries, Neena, WI, (920) 722-6444.
 - 3. Mohawk Flush Doors, Inc., Northumberland, PA (717) 473-3557.
 - 4. Marshfield DoorSystems, Incorporated, Marshfield, WI (800) 869-3667.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Solid Core Wood Doors (Interior Use): AWI 1300.
 - 1. Thickness: Indicated on Drawings.
 - 2. Veneer: AWI 1300-S-9 SLC-5 ME.
 - 3. Face Veneer: AWI Custom quality rotary cut birch for paint finish.
 - 4. Core Construction:
 - a. Non Fire-Rated: SLC solid stave lumber.
 - b. Fire-Rated: Type FD 1-1/2 solid stave lumber.
 - 5. Grade: AWI Custom.
- B. Solid Core Wicket Doors (Interior Use): AWI 1300.
 - 1. Thickness: Indicated on Drawings.
 - 2. Face Veneer: AWI Custom quality rotary cut birch for paint finish.
 - 3. Core Construction: SCL Structural Composite Lumber
 - 4. Grade: AWI Custom.
- C. Louvers: Roll formed steel, inverted V blade, sight proof, primed for paint finish, size as indicated on Drawings.
- D. Provide fire-rated labeled doors where indicated on Drawings.

2.3 FABRICATION

- A. Fabricate non fire-rated doors in accordance with AWI 1300.
- B. Fabricate fire-rated doors to AWI 1300 and to Underwriters Laboratories Incorporated requirements. Attach fire rating label to doors.
- C. Furnish and install lock blocks at lock edge, and top of door closer for hardware reinforcement.
- D. Vertical Exposed Edge of Stiles:
 - 1. Wicket Door: Paint same as door facing.
 - 2. Other Wood Doors: Of same species as veneer facing.
- E. Bond edge banding to cores.
- F. Factory machine door for door hardware in accordance with hardware requirements and dimensions. Do not machine for surface hardware.

- G. Factory fit doors for frame opening dimensions identified on approved shop drawings.
- H. Doors may be provided pre-hung set in frames and ready for installation in rough openings. Metal door frames specified in Section 081100.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install non fire-rated doors in accordance with AWI Quality Standards requirements.
- B. Install fire-rated doors in accordance with AWI Quality Standard and NFPA 80 requirements.
- C. Machine cut for hardware. Install door hardware specified in Section 087100.
- D. Install door louvers plumb and level.
- E. Field paint doors and door louvers as specified in Section 099100, color as indicated on Drawings.

3.3 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate frame installation with size, location, and installation.
 - 2. Coordinate with door opening construction, door frame, and door hardware installation.
- B. Site Tolerances:
 - 1. Conform to AWI requirements for fit and clearance tolerances.
 - 2. Conform to AWI 1300 requirements for maximum diagonal warp.

3.4 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
- B. Inspect door and frame installation, alignment, attachment to structure, hardware installation, and operation.

3.5 ADJUSTING AND CLEANING

- A. Adjust hardware for smooth and balanced door movement.

3.6 PROTECTION

- A. Section 017300 - Execution: Protecting installed work.
- B. Protect finished Work from damage.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

SECTION 08 14 16 00 - FLUSH WOOD DOORS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of material for flush wood doors. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Solid-core doors and transom panels with wood-veneer, medium-density-overlay, hardboard or MDF, and plastic-laminate faces.
 - b. Hollow-core doors with wood-veneer, hardboard or MDF, and plastic-laminate faces.
 - c. Shop priming and Factory finishing flush wood doors.
 - d. Factory fitting flush wood doors to frames and factory machining for hardware.

C. Submittals

1. Product Data: For each type of door indicated. Include factory-finishing specifications.
2. LEED Submittals:
 - a. Certificates for Credit MR 7: Chain-of-custody certificates certifying that flush wood doors comply with forest certification requirements. Include evidence that manufacturer is certified for chain of custody by an FSC-accredited certification body.
 - 1) Include statement indicating costs for each certified wood product.
 - b. Product Data for Credit EQ 4.4: For adhesives and composite wood products, documentation indicating that product contains no urea formaldehyde.
3. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
 - a. Indicate dimensions and locations of mortises and holes for hardware.
 - b. Indicate dimensions and locations of cutouts.
 - c. Indicate requirements for veneer matching.
 - d. Indicate doors to be factory finished and finish requirements.
 - e. Indicate fire-protection ratings for fire-rated doors.
4. Samples: For plastic-laminate door faces and factory-finished doors.

D. Quality Assurance

1. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.
2. Quality Standard: In addition to requirements specified, comply with AWI's "Architectural Woodwork Quality Standards Illustrated" **OR** WDMA I.S.1-A, "Architectural Wood Flush Doors" **OR** WI's "Manual of Millwork", **as directed**.
3. Forest Certification: Provide doors made with cores **OR** veneers **OR** not less than 70 percent of wood products **OR** all wood products, **as directed**, obtained from forests certified by an FSC-accredited certification body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."
4. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure **OR** as close to neutral pressure as possible, **as directed**, according to NFPA 252 **OR** UBC Standard 7-2 **OR** UL 10B **OR** UL 10C, **as directed**.
 - a. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

- b. Temperature-Rise Limit: Where indicated **OR** At vertical exit enclosures and exit passageways, **as directed**, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
- 5. Preinstallation Conference: Conduct conference at Project site.
- E. Delivery, Storage, And Handling
 - 1. Comply with requirements of referenced standard and manufacturer's written instructions.
 - 2. Package doors individually in plastic bags or cardboard cartons **OR** cardboard cartons and wrap bundles of doors in plastic sheeting, **as directed**.
 - 3. Mark each door on bottom **OR** top and bottom, **as directed**, rail with opening number used on Shop Drawings.
- F. Warranty
 - 1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
 - a. Warranty Period for Solid-Core Exterior Doors: Two **OR** Five, **as directed**, years from date of Final Completion.
 - b. Warranty Period for Solid-Core Interior Doors: Life of installation.
 - c. Warranty Period for Hollow-Core Interior Doors: One **OR** Two, **as directed**, year(s) from date of Final Completion.

1.2 PRODUCTS

- A. Door Construction, General
 - 1. Low-Emitting Materials: Provide doors made with adhesives and composite wood products that do not contain urea formaldehyde.
 - 2. WDMA I.S.1-A Performance Grade:
 - a. Heavy Duty unless otherwise indicated.
 - b. Extra Heavy Duty: Classrooms, public toilets, janitor's closets, assembly spaces, exits, patient rooms, and where indicated.
 - c. Standard Duty: Closets (not including janitor's closets), private toilets, and where indicated.
 - 3. Particleboard-Core Doors:
 - a. Particleboard:
 - 1) ANSI A208.1, Grade LD-1 **OR** Grade LD-2, **as directed**, made with binder containing no urea-formaldehyde resin, **as directed**.
 - OR**
 - Straw-based particleboard complying with ANSI A208.1, Grade LD-2 or M-2, except for density.
 - b. Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.
 - c. Provide doors with glued-wood-stave **OR** structural-composite-lumber, **as directed**, cores instead of particleboard cores for doors indicated to receive exit devices.
 - 4. Structural-Composite-Lumber-Core Doors:
 - a. Structural Composite Lumber: WDMA I.S.10.
 - 1) Screw Withdrawal, Face: 700 lbf (3100 N).
 - 2) Screw Withdrawal, Edge: 400 lbf (1780 N).
 - 5. Fire-Protection-Rated Doors: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
 - a. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.

- 2014
USPS Master Specifications Updated 5-1-2014

- f. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions, **as directed**.
 - g. Room Match:
 - 1) Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by 10 feet (3 m) **OR** 20 feet (6 m), **as directed**, or more.
OR
Provide door faces of compatible color and grain within each separate room or area of building.
 - h. Transom Match: Continuous match **OR** End match **OR** As indicated, **as directed**.
 - i. Blueprint Match: Where indicated, provide doors with faces produced from same flitches as adjacent wood paneling and arranged to provide blueprint match with wood paneling. Comply with requirements in Division 06 Section(s) "Interior Architectural Woodwork" **OR** "Wood Paneling", **as directed**.
 - j. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Same species as faces or a compatible species **OR** Same species as faces **OR** Applied wood-veneer edges of same species as faces and covering edges of faces **OR** Applied wood edges of same species as faces and covering edges of crossbands, **as directed**.
 - k. Core: Particleboard **OR** Glued wood stave **OR** Nonglued wood stave **OR** Structural composite lumber, **as directed**.
 - l. Construction:
 - 1) Five **OR** Five or seven, **as directed**, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, **as directed**.
OR
Seven plies, either bonded or nonbonded construction.
3. Interior Hollow-Core Doors:
- a. Grade: Premium, with Grade AA faces **OR** Premium, with Grade A faces **OR** Custom (Grade A faces) **OR** Economy (Grade B faces), **as directed**.
 - b. Species: Anigre **OR** Select white ash **OR** Figured select white ash **OR** Select white birch **OR** Cherry **OR** Select red gum **OR** Figured select red gum **OR** Select white maple **OR** Red oak **OR** Persimmon **OR** Sapele **OR** Sycamore **OR** Walnut **OR** White oak **OR** Ucuuba (Virola Duckei) **OR** Cupiuba (Goupia glabra), **as directed**.
 - c. Cut: Rotary cut **OR** Plain sliced (flat sliced) **OR** Quarter sliced **OR** Rift cut, **as directed**.
 - d. Match between Veneer Leaves: Book **OR** Slip **OR** Pleasing, **as directed**, match.
 - e. Assembly of Veneer Leaves on Door Faces: Center-balance **OR** Balance **OR** Running, **as directed**, match.
 - f. Pair and Set Match: Provide for doors hung in same opening or separated only by mullions, **as directed**.
 - g. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Same species as faces or a compatible species **OR** Same species as faces **OR** Applied wood-veneer edges of same species as faces and covering edges of faces **OR** Applied wood edges of same species as faces and covering edges of crossbands, **as directed**.
 - h. Construction: Seven plies.
- C. Doors For Opaque Finish
- 1. Exterior Solid-Core Doors:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. Faces: Medium-density overlay **OR** Any closed-grain hardwood of mill option, **as directed**.
 - 1) Apply medium-density overlay to standard-thickness, closed-grain, hardwood face veneers **OR** directly to high-density hardboard crossbands, **as directed**.
 - c. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Any closed-grain hardwood.
 - d. Core: Particleboard **OR** Glued wood stave **OR** Structural composite lumber, **as directed**.

- e. Construction: Five **OR** Five or seven, **as directed**, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, **as directed**.
- f. Adhesives: Type I per WDMA TM-6.
- 2. Interior Solid-Core Doors:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. Faces: Medium-density overlay **OR** Any closed-grain hardwood of mill option **OR** Hardboard or MDF, **as directed**.
 - 1) Apply medium-density overlay to standard-thickness, closed-grain, hardwood face veneers **OR** directly to high-density hardboard crossbands, **as directed**.
 - 2) Hardboard Faces: AHA A135.4, Class 1 (tempered) or Class 2 (standard).
 - 3) MDF Faces: ANSI A208.2, Grade 150 or 160.
 - c. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Any closed-grain hardwood.
 - d. Core: Particleboard **OR** Glued wood stave **OR** Nonglued wood stave **OR** Structural composite lumber, **as directed**.
 - e. Construction:
 - 1) Three **OR** Five **OR** Five or seven, **as directed**, plies. Stiles and rails are bonded to core, then entire unit abrasive planed before veneering. Faces are bonded to core using a hot press, **as directed**.
OR
Three **OR** Seven, **as directed**, plies, either bonded or nonbonded construction.
- 3. Interior Hollow-Core Doors:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. Faces: Medium-density overlay **OR** Any closed-grain hardwood of mill option **OR** Hardboard or MDF, **as directed**.
 - 1) Hardboard Faces: AHA A135.4, Class 1 (tempered) or Class 2 (standard).
 - 2) MDF Faces: ANSI A208.2, Grade 150 or 160.
 - c. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Any closed-grain hardwood.
 - d. Construction: Three **OR** Seven, **as directed**, plies.
- D. Plastic-Laminate-Faced Doors
 - 1. Interior Solid-Core Doors:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, Grade HGS **OR** Grade HSH, **as directed**.
 - c. Colors, Patterns, and Finishes: As indicated **OR** As selected from laminate manufacturer's full range of products, **as directed**.
 - d. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Hardwood edges for staining to match faces **OR** Hardwood edges for painting **OR** Plastic laminate that matches faces, applied before faces **OR** Impact-resistant polymer edging, applied after faces, **as directed**.
 - 1) Polymer Edging Color: Beige **OR** Brown **OR** Same color as faces, **as directed**.
 - e. Core: Particleboard **OR** Glued wood stave **OR** Structural composite lumber, **as directed**.
 - f. Construction:
 - 1) Three plies. Stiles and rails are bonded to core, then entire unit abrasive planed before faces are applied. Faces are bonded to core using a hot press, **as directed**.
OR
Five plies. Stiles and rails are bonded to core, then entire unit abrasive planed before faces and crossbands are applied. Faces are bonded to core using a hot press, **as directed**.
 - 2. Interior Hollow-Core Doors:
 - a. Grade: Premium **OR** Custom **OR** Economy, **as directed**.
 - b. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, Grade HGS **OR** Grade HSH, **as directed**.
 - c. Colors, Patterns, and Finishes: As indicated **OR** As selected from laminate manufacturer's full range of products, **as directed**.

- d. Exposed Vertical **OR** Vertical and Top, **as directed**, Edges: Hardwood edges for staining to match faces **OR** Hardwood edges for painting **OR** Plastic laminate that matches faces, applied before faces **OR** Impact-resistant polymer edging, applied after faces, **as directed**.
 - 1) Polymer Edging Color: Beige **OR** Brown **OR** Same color as faces, **as directed**.
- e. Construction: Plastic-laminate faces glued directly to core.

E. Louvers And Light Frames

- 1. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.
 - a. Wood Species: Same species as door faces **OR** Species compatible with door faces **OR** Any closed-grain hardwood, **as directed**.
- 2. Metal Louvers:
 - a. Blade Type: Vision-proof, inverted V **OR** Vision-proof, inverted Y **OR** Darkroom-type, double inverted V, **as directed**.
 - b. Metal and Finish:
 - 1) Hot-dip galvanized steel, 0.040 inch (1.0 mm) thick, factory primed for paint finish **OR** with baked-enamel- or powder-coated finish, **as directed**.
OR
Extruded aluminum with Class II, clear anodic finish, AA-M12C22A31.
OR
Extruded aluminum with light bronze **OR** medium bronze **OR** dark bronze **OR** black, **as directed**, Class II, color anodic finish, AA-M12C22A32/A34.
- 3. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire-protection rating of 1-1/2 hours and less.
 - a. Metal and Finish: Hot-dip galvanized steel, 0.040 inch (1.0 mm) thick, factory primed for paint finish **OR** with baked-enamel- or powder-coated finish, **as directed**.
- 4. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads as follows unless otherwise indicated.
 - a. Wood Species: Same species as door faces **OR** Species compatible with door faces **OR** Any closed-grain hardwood, **as directed**.
 - b. Profile: Flush rectangular beads **OR** Recessed tapered beads **OR** Recessed tapered beads with exposed banding **OR** Lipped tapered beads **OR** Manufacturer's standard shape, **as directed**.
 - c. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.
- 5. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.
- 6. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of 0.048-inch- (1.2-mm-) thick, cold-rolled steel sheet; factory primed for paint finish **OR** with baked-enamel- or powder-coated finish, **as directed**; and approved for use in doors of fire-protection rating indicated.

F. Fabrication

- 1. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
 - a. Comply with requirements in NFPA 80 for fire-rated doors.
- 2. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
 - a. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
 - b. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.

3. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.
 - a. Fabricate door and transom panels with full-width, solid-lumber, rabbeted, **as directed**, meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.
 4. Openings: Cut and trim openings through doors in factory.
 - a. Light Openings: Trim openings with moldings of material and profile indicated.
 - b. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Division 08 Section "Glazing".
 - c. Louvers: Factory install louvers in prepared openings.
 5. Exterior Doors: Factory treat exterior doors with water repellent after fabrication has been completed but before shop priming **OR** factory finishing, **as directed**.
 - a. Flash top of outswinging doors (with manufacturer's standard metal flashing).
- G. Shop Priming
1. Doors for Opaque Finish: Shop prime doors with one coat of wood primer specified in Division 09 Section(s) "Exterior Painting" OR "Interior Painting", **as directed**. Seal all four edges, edges of cutouts, and mortises with primer.
 2. Doors for Transparent Finish: Shop prime doors with stain (if required), other required pretreatments, and first coat of finish as specified in Division 09 Section(s) "Exterior Painting" OR "Interior Painting" OR "Staining And Transparent Finishing", **as directed**. Seal all four edges, edges of cutouts, and mortises with first coat of finish.
- H. Factory Finishing
1. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
 - a. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on bottom **OR** top and bottom, **as directed**, edges, edges of cutouts, and mortises.
 2. Finish doors at factory.
OR
Finish doors at factory that are indicated to receive transparent finish. Field finish doors indicated to receive opaque finish.
OR
Finish doors at factory where indicated in schedules or on Drawings as factory finished.
 3. Transparent Finish:
 - a. Grade: Premium **OR** Custom, **as directed**.
 - b. Finish:
 - 1) AWI conversion varnish **OR** catalyzed polyurethane, **as directed**, system.
OR
WDMA TR-4 conversion varnish **OR** TR-6 catalyzed polyurethane, **as directed**.
OR
WI System 4 clear conversion varnish **OR** 5 catalyzed polyurethane **OR** 8 UV-curable coating, **as directed**.
 - c. Staining: Match sample **OR** As selected from manufacturer's full range **OR** None required, **as directed**.
 - d. Effect: Open-grain finish **OR** Filled finish **OR** Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores, **as directed**.
 - e. Sheen: Satin **OR** Semigloss, **as directed**.
 4. Opaque Finish:
 - a. Grade: Premium **OR** Custom, **as directed**.
 - b. Finish:
 - 1) AWI conversion varnish **OR** catalyzed polyurethane, **as directed**, system.
OR
WDMA OP-4 conversion varnish **OR** OP-6 catalyzed polyurethane, **as directed**.

OR

WI System 4 conversion varnish **OR** 5 catalyzed polyurethane **OR** 8 UV-curable coating, **as directed**.

- c. Color: Match sample **OR** As selected from manufacturer's full range, **as directed**.
- d. Sheen: Satin **OR** Semigloss **OR** Gloss, **as directed**.

1.3 EXECUTION

A. Installation

1. Hardware: For installation, see Division 08 Section "Door Hardware".
2. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
 - a. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.
3. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
 - a. Clearances: Provide 1/8 inch (3.2 mm) at heads, jambs, and between pairs of doors. Provide 1/8 inch (3.2 mm) from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch (6.4 mm) from bottom of door to top of threshold unless otherwise indicated.
 - 1) Comply with NFPA 80 for fire-rated doors.
 - b. Bevel non-fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock and hinge edges.
 - c. Bevel fire-rated doors 1/8 inch in 2 inches (3-1/2 degrees) at lock edge; trim stiles and rails only to extent permitted by labeling agency.
4. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.
5. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

B. Adjusting

1. Operation: Rehang or replace doors that do not swing or operate freely.
2. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

SECTION 08 16 13 00 - FIBERGLASS REINFORCED PLASTIC (FRP) DOORS AND FRAMES

1.1 GENERAL

A. Description of Work

1. This specification covers the furnishing and installation of materials for fiberglass reinforced plastic (FRP) doors and frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Fire Rated Fiberglass reinforced Plastic (FRP) Doors certified by Intertek Testing Services for Warnock- Hersey in 45, 60 and 90-minute ratings, meeting all specifications of UL 10(c) fire door test standards. Category A and B.
 - 1) Category A doors are labeled for compliance with UBC 7-2-1997 (Positive Pressure) and do not require the application of an additional edge sealing system.
 - 2) Category B doors are labeled to require the installation of a listed edge sealing system to meet the requirements of UBC 7-2-1997 (Positive Pressure). This seal must be installed per the manufacturers instructions and may be factory or field applied.
 - 3) Category B constructed doors, if requested and with certain restrictions, may be provided with an UL 10 (b) label (Negative Pressure) and at a later date can be upgraded to a UL 10 (c) category B label (Positive Pressure) with the application of a listed seal system.
 - b. Fire Rated Fiberglass Resin Transfer Molded Door Frames certified by Intertek Testing Services for Warnock- Hersey in 45, 60 and 90-minute ratings, meeting all specifications of UL 10(c) fire door test standards, Category C.
 - c. Fire Rated Fiberglass reinforced Plastic (FRP) Doors and Fiberglass Resin Transfer Molded Door Frames certified by Intertek Testing Services for Warnock- Hersey in 20, 45, 60 and 90-minute ratings, meeting all specifications of UL 10(b) fire door test standards.

C. Quality Assurance

1. Manufacturer Qualifications: A company specialized in the manufacture of fiberglass reinforced plastic (FRP) doors and frames as specified herein with a minimum of 25 years documented experience and with a record of successful in-service performance for the applications as required for this project.
2. Installer Qualifications: An experienced installer who has completed fire rated fiberglass door and frame installations similar in material, design, and extent to those indicated and whose work has resulted in construction with a record of successful in-service performance.
3. Source Limitations: Obtain fiberglass reinforced plastic doors and frames through one source fabricated from a single manufacturer, including fire rated fiberglass frames.
4. Source Limitations: Hardware and accessories for all FRP doors as specified in Division 08 Section "Door Hardware" should be provided and installed by the fiberglass door and frame manufacturer.
5. Source Limitations: Glass for windows in doors shall be furnished and installed by door and frame manufacturer in accordance with related section, Division 08 Section "Glazing".

D. Submittals

1. Product technical data including:
 - a. Acknowledgment that products submitted meet requirements of standards referenced
 - b. Manufacturer shall provide certificate of compliance with current local and federal regulations as it applies to the manufacturing process.
 - c. Manufacturer's installation instructions.

- d. Schedule of doors and frames indicating the specific reference numbers as used on drawings, door type, frame type, size, handing and applicable hardware.
- e. Details of core and edge construction. Include factory-construction specifications.
- f. Certification of manufacturer's qualifications.
- 2. Submittal drawings for customer approval shall be submitted prior to manufacture and will include the following information and formatting.
 - a. Summary door schedule indicating the specific reference numbers as used on owner's drawings, with columns noting door type, frame type, size, handing, accessories and hardware.
 - b. A drawing depicting front and rear door elevations showing hardware with bill of material for each door.
 - c. Drawing showing dimensional location of each hardware item and size of each door.
 - d. Individual part drawing and specifications for each hardware item and FRP part or product.
 - e. Construction and mounting detail for each frame type.
- 3. Samples:
 - a. Provide one 21 x 18 inch completely assembled (hinged) door and frame corner section, with faces and edges representing typical color and finish. One edge should be exposed for view of interior door and frame composition.
- 4. Operation and Maintenance Manuals:
 - a. Include recommended methods and frequency for maintaining optimum condition of fiberglass doors and frames under anticipated traffic and use conditions.
 - b. Include one set of final as built drawings with the same requirements as mentioned above.
 - c. Include certificate of warranty for door and frame listing specific door registration numbers.
 - d. Include hardware data sheets and hardware manufacturer's warranties.

E. Delivery, Storage, And Handling

- 1. Each door and frame should be delivered individually crated for protection from damage in cardboard containers, clearly marked with project information, door location, specific reference number as shown on drawings, and shipping information. Each crate should contain all fasteners necessary for installation as well as complete installation instructions.
- 2. Doors should be stored in the original container out of inclement weather for protection against the elements.
- 3. Handle doors pursuant to the manufacturer's recommendations as posted on outside of crate.

F. Warranty

- 1. Warranty all fiberglass doors and frames for a period of 25 years against failure due to corrosion. Additionally, warranty all fiberglass doors and frames on materials and workmanship for a period of 10 years, including warp, separation or delamination, and expansion of the core.

1.2 PRODUCTS

A. Acceptable Manufacturers: Subject to compliance with the Contract Documents, the following manufacturers are acceptable:

- 1. Chem-Pruf Door Co., Ltd., P.O. Box 4560, Brownsville, Texas 78523 Phone: 1-800-444-6924, Fax: 956-544-7943, Website: www.chem-pruf.com
- 2. Substitutions may be considered, provided manufacturer can comply with the specifications as written herein. Requests for substitution must be submitted in writing no less than 10 days prior to bid date.

B. FRP Doors

- 1. Fire rated Fiberglass reinforced Plastic (FRP) Doors certified by Intertek Testing Services for Warnock-Hersey in 20, 45, 60 and 90 minute ratings meeting all specifications of UL 10(c) and UL 10(b) fire door test standards.

2. Doors shall be made of fiberglass reinforced plastic (FRP) using chemically proven fire retardant resins resistant to contaminants typically found in the environment for which these specifications are written. Doors shall be 1-3/4 inch thick and of flush construction, having no seams or cracks. All doors up to 4'-0 x 8'-0 shall have equal diagonal measurements with a maximum tolerance of +/-1/32 inch.
3. Door Plates shall be molded in one continuous piece, starting with a 25-mil gelcoat of the color specified, integrally molded with at least two layers of 1.5 ounce per square foot fiberglass. This will yield a plate ratio of 30/70 glass to resin.
4. Stiles and Rails Core shall be banded with firestop per factory drawings.
5. Core material shall be fire resistant mineral core placed within band structure allowing no voids within.
6. Finish of door and frame shall be identical in color and texture. At time of manufacture, 25 mil of resin rich gelcoat must be integrally molded into both the door and frame. Secondary painting to achieve color is not acceptable.
7. Window openings shall be provided for at time of manufacture and shall be completely sealed so that the interior of the door is not exposed to the environment. Window kits shall be fire rated per U.L. for rating of opening and function.

C. Frames

1. Frames shall be fiberglass and manufactured using the resin transfer method in closed rigid molds to assure uniformity in color and size. Beginning with a minimum 25-mil gel coat and a minimum of two layers continuous strand fiberglass mat saturated with fire retardant resin, the frame will be of one-piece construction with molded stop. All frame profiles shall have a core of firestop and mineral core. Frames must be fiberglass. Frames of dissimilar materials, such as metal or stainless steel will not be accepted.
2. Finish of frame shall be identical in color and texture to the door. 25-mil resin rich gel coat will be integrally molded into the frame at time of manufacture. Secondary painting to achieve color is not acceptable.
3. Jamb/Header connection shall be coped by CNC for tight fit.
4. Internal Reinforcement shall be continuous within the structure to allow for mounting of specified hardware.
5. Mortises for hardware shall be accurately machined by CNC to hold dimensions in all three axis.
6. Hinge pockets shall be accurately machined by CNC to facilitate heavy-duty hinges at all hinge locations, using spacers when standard weight hinges are used.

D. Hardware

1. See Division 08 Section "Door Hardware".
2. Due to the special nature of the material in this section, all related hardware as specified must be furnished and installed by the door and frame manufacturer.

1.3 EXECUTION

A. Installation Conditions

1. Verification of Conditions
 - a. Openings are correctly prepared to receive doors and frames.
 - b. Openings are correct size and depth in accordance with shop drawings or submittals.
2. Installer's Examination
 - a. Have the installer examine conditions under which construction activities of this section are to be performed and submit a written report if conditions are unacceptable.
 - b. Transmit two copies of the installer's report to the architect within 24 hours of receipt.
 - c. Beginning construction activities of this section before unacceptable conditions have been corrected is prohibited.

B. Installation

1. Install door-opening assemblies in accordance with shop drawings and manufacturer's printed installation instructions, using installation methods and materials specified in installation instructions.
 2. Field alteration of doors or frames to accommodate field conditions is strictly prohibited.
 3. Site tolerances: Maintain plumb and level tolerance specified in manufacturers printed installation instructions.
 4. Fire labeled doors and frames must be installed in strict accordance with manufacturer's instructions and the latest revision of NFPA 80.
 5. UL 10 (c) Category B doors require field-applied seal per manufacture's instructions.
- C. Adjusting
1. Adjust doors in accordance with door manufacturer's maintenance instructions to swing open and shut without binding and to remain in place at any angle without being moved by gravitational influence.
 2. Adjust door hardware to operate correctly in accordance with hardware manufacturer's maintenance instructions.
- D. Cleaning
1. Clean surfaces of door opening assemblies and exposed door hardware in accordance with respective manufacturer's maintenance instructions.
- E. Protection Of Installed Products
1. Protect door opening assemblies and door hardware from damage by subsequent construction activities until final inspection.

END OF SECTION 08 16 13 00

SECTION 08 16 13 00a - INSULATED FIBERGLASS DOORS AND FRAMES

1.1 GENERAL

A. Description of Work

1. This specification covers the furnishing and installation of materials for insulated fiberglass doors and frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of door.
2. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details; location and extent of hardware blocking; mortises, holes, and cutouts; requirements for veneer matching; factory finishing; fire ratings; and other pertinent data.
3. Samples: For each face material and finish.

C. Quality Assurance

1. Fire-Rated Doors: Doors that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated.

D. Delivery, Storage, And Handling

1. Each door and frame should be delivered individually crated for protection from damage in cardboard containers, clearly marked with project information, door location, specific reference number as shown on drawings, and shipping information. Each crate should contain all fasteners necessary for installation as well as complete installation instructions.
2. Doors should be stored in the original container out of inclement weather for protection against the elements.
3. Handle doors pursuant to the manufacturer's recommendations as posted on outside of crate.

1.2 PRODUCTS

A. Doors

1. Insulated door panel shall be 44mm (1 3/4") thick, IM (Impression Molded) fiberglass skinned door panel. Doors shall be flush or embossed to simulate a panel door, **as directed**.
2. The door skins shall be capable of being painted or stained to simulate the appearance of an oak panel door.

B. Frames

1. Fiberglass frame profiles shall be made from 65% to 85% glass fibers, made by spinning melted silica sand, and 15% to 35% resin, based on a petroleum derived alkide.
2. The frame shall be insulated with expanded polystyrene. Frame corners shall be assembled with polyester corner blocks and sealed with silicone caulk.
3. Fiberglass and aluminum lineals coated with water borne acrylic/urethane shall be available at Owner's option.

C. Brick Mould: Extruded aluminum brick moulds with or without integral nailing fins are available.

D. Sill: Extruded mill finish aluminum clad finger jointed pine with a self draining vinyl crown under the door slab.

E. Weather-Stripping: Kerf mounted low friction elastomeric wrapped open cell urethane. Adjustable self draining multi-finned sweep at sill.

- F. Jamb Extensions: Wood jamb extensions shall be available as directed, in depths required.
- G. Hardware Preparation: Doors shall be prepared to receive hardware at the factory as follows, **unless directed otherwise**:
 - 1. Backset: 70mm (2 3/4"), face bore 54mm (2 1/8"), edge bore 25mm (1").
 - 2. For 30" doors or 32" doors with glass, backset: 59mm (2 3/8"), face bore 54mm (2 1/8"), edge bore 25mm (1").
 - 3. Striker plate area shall be reinforced to resist forced entry.
- H. Glass: The insulating glass shall conform to CAN/CSGB-12.8-M90. High Performance glazing option shall include; insulating spacers, triple glazing, spectrally selective daylighting glass, tinted glass, reflective glass, Heat Mirror™, pyrolitic (hard coat) low emissive glass and sputtered (soft coat) low emissive glass, as well as standard safety glass options.
- I. Glazing: Glass shall be held in place by removable wood or PVC stops with integral coextruded fins and integral drainage, **as directed**.

1.3 EXECUTION

- A. Installation
 - 1. Install door-opening assemblies in accordance with shop drawings and manufacturer's printed installation instructions, using installation methods and materials specified in installation instructions.
 - 2. Field alteration of doors or frames to accommodate field conditions is strictly prohibited.
 - 3. Site tolerances: Maintain plumb and level tolerance specified in manufacturers printed installation instructions.
 - 4. Fire labeled doors and frames must be installed in strict accordance with manufacturer's instructions and the latest revision of NFPA 80.
- B. Adjusting
 - 1. Adjust doors in accordance with door manufacturer's maintenance instructions to swing open and shut without binding and to remain in place at any angle without being moved by gravitational influence.
 - 2. Adjust door hardware to operate correctly in accordance with hardware manufacturer's maintenance instructions.
- C. Cleaning
 - 1. Clean surfaces of door opening assemblies and exposed door hardware in accordance with respective manufacturer's maintenance instructions.
- D. Protection Of Installed Products
 - 1. Protect door opening assemblies and door hardware from damage by subsequent construction activities until final inspection.

END OF SECTION 08 16 13 00a

SECTION 08 16 13 00b - FIBERGLASS REINFORCED POLYESTER (FRP) FLUSH DOORS

1.1 GENERAL

A. Description of Work

1. This specification covers the furnishing and installation of materials for fiberglass reinforced polyester (FRP) flush doors and aluminum frames. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Performance Requirements

1. General: Provide door assemblies that have been designed and fabricated to comply with specified performance requirements, as demonstrated by testing manufacturer's corresponding standard systems.
2. Air Infiltration: For a single door 3'-0" x 7'-0", test specimen shall be tested in accordance with ASTM E 283 at pressure differential of 6.24 psf. Door shall not exceed 0.90 cfm per linear foot of perimeter crack.
3. Water Resistance: For a single door 3'-0" x 7'-0", test specimen shall be tested in accordance with ASTM E 331 at pressure differential of 7.50 psf. Door shall not have water leakage.
4. Hurricane Test Standards, Single Door with Single-Point Latching:
 - a. Uniform Static Load, ASTM E 330: Plus or minus 75 pounds per square foot.
 - b. Forced Entry Test, 300 Pound Load Applied, SFBC 3603.2 (b)(5): Passed.
 - c. Cyclic Load Test, SFBC PA 203: Plus or minus 53 pounds per square foot.
 - d. Large Missile Impact Test, SFBC PA 201: Passed.
5. Swinging Door Cycle Test, Doors and Frames, ANSI A250.4: Minimum of 20,000,000 cycles.
6. Swinging Security Door Assembly, Doors and Frames, ASTM F 476: Grade 40.
7. Salt Spray, Exterior Doors and Frames, ASTM B 117: Minimum of 500 hours.
8. Sound Transmission, Exterior Doors, STC, ASTM E 90: Minimum of 25.
9. Thermal Transmission, Exterior Doors, U-Value, AAMA 1503-98: Maximum of 0.29 BTU/hr x sf x degrees F. Minimum of 55 CRF value.
10. Surface Burning Characteristics, FRP Doors and Panels, ASTM E 84:
 - a. Flame Spread: Maximum of 200, Class C.
 - b. Smoke Developed: Maximum of 450, Class C.
11. Surface Burning Characteristics, Class A Option On Interior Faces of FRP Exterior Panels and Both Faces of FRP Interior Panels, ASTM E 84:
 - a. Flame Spread: Maximum of 25.
 - b. Smoke Developed: Maximum of 450.
12. Impact Strength, FRP Doors and Panels, Nominal Value, ASTM D 256: 15.0 foot-pounds per inch of notch.
13. Tensile Strength, FRP Doors and Panels, Nominal Value, ASTM D 638: 14,000 psi.
14. Flexural Strength, FRP Doors and Panels, Nominal Value, ASTM D 790: 21,000 psi.
15. Water Absorption, FRP Doors and Panels, Nominal Value, ASTM D 570: 0.20 percent after 24 hours.
16. Indentation Hardness, FRP Doors and Panels, Nominal Value, ASTM D 2583: 55.
17. Abrasion Resistance, Face Sheet, Taber Abrasion Test, 25 Cycles at 1,000 Gram Weight with CS-17 Wheel: Maximum of 0.029 average weight loss percentage.
18. Stain Resistance, ASTM D 1308: Face sheet unaffected after exposure to red cabbage, tea, and tomato acid. Stain removed easily with mild abrasive or FRP cleaner when exposed to Sharpie ink pen and white spray paint.
19. Chemical Resistance, ASTM D 543. Excellent rating.
 - a. Acetic acid, 5 percent solution.
 - b. Chlorine bleach, 10 percent solution.
 - c. Sodium hypochlorite, 4 to 6 percent solution.
 - d. Citric acid, 10 percent solution.
 - e. Sodium carbonate, 20 percent solution.

- f. Turpentine.
- 20. Compressive Strength, Foam Core, Nominal Value, ASTM D 1621: 84.2 psi.
- 21. Compressive Modulus, Foam Core, Nominal Value, ASTM D 1621: 448 psi.
- 22. Tensile Adhesion, Foam Core, Nominal Value, ASTM D 1623: 48 psi.
- 23. Thermal and Humid Aging, Nominal Value, 158 Degrees F and 100 Percent Humidity for 14 Days, ASTM D 2126: Minus 4.89 percent volume change.

C. Submittals

- 1. Product Data: Submit manufacturer's product data, including description of materials, components, fabrication, finishes, and installation.
- 2. Shop Drawings: Submit manufacturer's shop drawings, including elevations, sections, and details, indicating dimensions, tolerances, materials, fabrication, doors, panels, framing, hardware schedule, and finish.
- 3. Samples:
 - a. Door: Submit manufacturer's sample of door showing face sheets, core, framing, and finish.
 - b. Color: Submit manufacturer's samples of standard colors of doors and frames.
- 4. Test Reports: Submit certified test reports from qualified independent testing agency indicating doors comply with specified performance requirements.
- 5. Manufacturer's Project References: Submit list of successfully completed projects including project name and location, name of architect, and type and quantity of doors manufactured.
- 6. Maintenance Manual: Submit manufacturer's maintenance and cleaning instructions for doors, including maintenance and operating instructions for hardware.
- 7. Warranty: Submit manufacturer's standard warranty.

D. Quality Assurance

- 1. Manufacturer's Qualifications:
 - a. Continuously engaged in manufacturing of doors of similar type to that specified, with a minimum of 25 years successful experience.
 - b. Door and frame components from same manufacturer.
 - c. Evidence of a compliant documented quality management system.

E. Delivery, Storage, And Handling

- 1. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying opening door mark and manufacturer.
- 2. Storage: Store materials in clean, dry area indoors in accordance with manufacturer's instructions.
- 3. Handling: Protect materials and finish from damage during handling and installation.

F. Warranty

- 1. Warrant doors, frames, and factory hardware against failure in materials and workmanship, including excessive deflection, faulty operation, defects in hardware installation, and deterioration of finish or construction in excess of normal weathering.
- 2. Warranty Period: Ten years starting on date of shipment.

1.2 PRODUCTS

A. Manufacturer: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

- 1. Special-Lite, Inc., PO Box 6, Decatur, Michigan 49045. Toll Free (800) 821-6531. Phone (269) 423-7068. Fax (800) 423-7610. Web Site www.special-lite.com. E-Mail info@special-lite.com.

B. FRP Flush Doors

- 1. Model: SL-17 Flush Doors with SpecLite3 fiberglass reinforced polyester (FRP) face sheets.
- 2. Door Opening Size: As indicated on the Drawings **OR as directed**.

3. Construction:
 - a. Door Thickness: 1-3/4 inches.
 - b. Stiles and Rails: Aluminum Alloy 6063-T5, minimum of 2-5/16-inch depth.
 - c. Corners: Mitered.
 - d. Provide joinery of 3/8-inch diameter full-width tie rods through extruded splines top and bottom as standard tubular shaped stiles and rails reinforced to accept hardware as specified.
 - e. Securing Internal Door Extrusions: 3/16-inch angle blocks and locking hex nuts for joinery. Welds, glue, or other methods are not acceptable.
 - f. Furnish extruded stiles and rails with integral reglets to accept face sheets. Lock face sheets into place to permit flush appearance.
 - g. Rail caps or other face sheet capture methods are not acceptable.
 - h. Extrude top and bottom rail legs for interlocking continuous weather bar.
 - i. Meeting Stiles: Pile brush weatherseals. Extrude meeting stile to include integral pocket to accept pile brush weatherseals.
 - j. Bottom of Door: Install bottom weather bar with nylon brush weatherstripping into extruded interlocking edge of bottom rail.
 4. Face Sheet:
 - a. Material: SpecLite3 FRP, 0.120-inch thickness, finish color throughout. Abuse-resistant engineered surface.
 - b. Texture: Pebble.
 - c. Color: **As directed.**
 5. Core:
 - a. Material: Poured-in-place polyurethane foam.
 - b. Density: Minimum of 5 pounds per cubic foot.
 - c. R-Value: Minimum of 9.
 6. Cutouts:
 - a. Manufacture doors with cutouts for required vision lites, louvers, and panels.
 - b. Factory install vision lites, louvers, and panels.
 7. Hardware:
 - a. Premachine doors in accordance with templates from specified hardware manufacturers and hardware schedule.
 - b. Factory install hardware.
- C. Materials
1. Aluminum Members:
 - a. Extrusions: ASTM B 221.
 - b. Sheet and Plate: ASTM B 209.
 - c. Alloy and Temper: As required by manufacturer for strength, corrosion resistance, application of required finish, and control of color.
 2. Components: Door and frame components from same manufacturer.
 3. Fasteners:
 - a. Material: Aluminum, 18-8 stainless steel, or other noncorrosive metal.
 - b. Compatibility: Compatible with items to be fastened.
 - c. Exposed Fasteners: Screws with finish matching items to be fastened.
- D. Fabrication
1. Sizes and Profiles: Required sizes for door and frame units, and profile requirements shall be as indicated on the Drawings.
 2. Coordination of Fabrication: Field measure before fabrication and show recorded measurements on shop drawings.
 3. Assembly:
 - a. Complete cutting, fitting, forming, drilling, and grinding of metal before assembly.
 - b. Remove burrs from cut edges.
 4. Welding: Welding of doors or frames is not acceptable.
 5. Fit:

- a. Maintain continuity of line and accurate relation of planes and angles.
- b. Secure attachments and support at mechanical joints with hairline fit at contacting members.

E. Architectural Panels

1. FRP Panels:
 - a. Model: SL-37 Architectural Panels with SpecLite3 FRP face sheets.
 - b. Size: As indicated on the Drawings **OR as directed**.
 - c. Thickness: 1/4 inch **OR** 1 inch **OR** As indicated on the Drawings **OR as directed**.
2. Face Sheets:
 - a. Material: SpecLite3 FRP, 0.120-inch thickness, finish color throughout. Abuse-resistant engineered surface.
 - b. Texture: Pebble.
 - c. Color: **As directed**.
3. Insulated SpecLite3 FRP Panels:
 - a. Insulated Panels: Two 0.120-inch minimum thickness sheets.
 - b. Core: Foamed polyurethane core of a minimum of 5 pounds per cubic foot density.
 - c. Form components to function as single unit.
 - d. U-Value: Minimum of 0.23 for 1-inch panels.
4. Class A Flame Spread and Smoke Developed Rating, **as directed**:
 - a. Class A flame spread and smoke developed rating on interior faces of exterior panels and both faces of interior panels.
 - b. Flame Spread, ASTM E 84: Maximum of 25.
 - c. Smoke Developed, ASTM E 84: Maximum of 450.

F. Aluminum Door Framing Systems

1. Tubular Framing:
 - a. Size and Type: As indicated on the Drawings.
 - b. Materials: Aluminum Alloy 6063-T5, 1/8-inch minimum wall thickness.
 - c. Applied Door Stops: 0.625-inch high, with screws and weatherstripping. Door stop shall incorporate pressure gasketing for weathering seal. Counterpunch fastener holes in door stop to preserve full metal thickness under fastener head.
 - d. Frame Members: Box type with 4 enclosed sides. Open-back framing is not acceptable.
 - e. Caulking: Caulk joints before assembling frame members.
 - f. Joints:
 - 1) Secure joints with fasteners.
 - 2) Provide hairline butt joint appearance.
 - g. Field Fabrication: Field fabrication of framing using stick material is not acceptable.
 - h. Applied Stops: For side, transom, and borrowed lites and panels. Applied stops shall incorporate pressure gasketing for weathering seal. Reinforce with solid bar stock fill for frame hardware attachments.
 - i. Hardware:
 - 1) Premachine and reinforce frame members for hardware in accordance with manufacturer's standards and hardware schedule.
 - 2) Factory install hardware.
 - j. Anchors:
 - 1) Anchors appropriate for wall conditions to anchor framing to wall materials.
 - 2) Door Jamb and Header Mounting Holes: Maximum of 24-inch centers.
 - 3) Secure head and sill members of transom, side lites, and similar conditions.
 - k. Side Lites:
 - 1) Factory preassemble side lites to greatest extent possible.
 - 2) Mark frame assemblies according to location.
2. Insert Framing System:
 - a. Model: SL-1030 Series, SL-1031 **OR** SL-1032 **OR** SL-1034, **as directed**.
 - b. Insert frame as indicated on the Drawings, using integral stop fitted with weatherstripping.

- c. Corner joints of miter design, secure with furnished aluminum clips, and screw into place.
 - d. Hardware:
 - 1) Premachine and reinforce insert frame members for hardware in accordance with manufacturer's standards and hardware schedule.
 - 2) Factory install hardware.
 - e. Anchors:
 - 1) Anchors of suitable type to fasten insert framing to existing frame materials.
 - 2) Minimum of 5 anchors on jambs up to 7'-4" height, 3 anchors on headers, and 1 additional anchor for each additional foot of frame.
 - 3. Frame Capping:
 - a. Model: SL-70.
 - b. Capping: With insert frame as indicated on the Drawings, **OR as directed**.
 - c. Finish: Match framing.
- G. Hardware
- 1. Premachine doors in accordance with templates from specified hardware manufacturers and hardware schedule.
 - 2. Factory install hardware.
 - 3. Hardware Schedule: As specified in Division 08 Section "Door Hardware" **OR** As indicated on the Drawings, **OR as directed**.
 - a. Hinges shall be continuous type.
 - 4. Finish: As specified in Division 08 Section "Door Hardware" **OR** As indicated on the Drawings, **OR as directed**.
- H. Vision Lites
- 1. Factory Glazing: 1/4-inch glass **OR** 1-inch glass insulating units, **as directed**.
 - 2. Lites in Exterior Doors: Allow for thermal expansion.
 - 3. Rectangular Lites:
 - a. Size: 12 inches by 12 inches **OR** Half lite **OR** Full lite **OR** Narrow lite **OR** Double lite **OR** As indicated on the Drawings **OR as directed**.
 - b. Factory glazed with screw-applied aluminum stops anodized to match perimeter door rails.
 - 4. Security Grate: SL-SG349.
 - a. Frame Perimeter: 1-inch by 1-inch by 1/8-inch steel angle.
 - b. Expanded Metal: 1/4-inch diameter, round hole perforated, 14-gauge steel sheet.
 - c. Finish: Factory painted to match door finish.
 - 5. Vandal Screen: SL-SG350.
 - a. Frame Perimeter: Aluminum. Finish to match vision lite.
 - b. Expanded Metal: 1/4-inch diameter, round hole perforated, 16-gauge stainless steel sheet. Powder coat black finish.
- I. Louvers
- 1. Type: Aluminum, inverted Y-type, fixed blade, 12 inches minimum from bottom of door.
 - 2. Size: As indicated on the Drawings **OR** as directed.
 - 3. Installation: Factory installed into standard vision lite kit. Exterior side of louver shall be free of fasteners.
 - 4. Insect screen.
- J. Aluminum Finishes
- 1. Anodized Finish: Class I finish, 0.7 mils thick.
 - a. Clear 215 R1, AA-M10C12C22A41, Class I, 0.7 mils thick.
 - b. Champagne, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - c. Light Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - d. Medium Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - e. Dark Bronze, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - f. Black, AA-M10C12C22A44, Class I, 0.7 mils thick.
 - 2. Painted: as directed by the Owner.

1.3 EXECUTION

A. Preparation

1. Ensure openings to receive frames are plumb, level, square, and in tolerance.

B. Installation

1. Install doors in accordance with manufacturer's instructions.
2. Install doors plumb, level, square, true to line, and without warp or rack.
3. Anchor frames securely in place.
4. Separate aluminum from other metal surfaces with bituminous coatings or other means approved by the Owner.
5. Set thresholds in bed of mastic and backseal.
6. Install exterior doors to be weathertight in closed position.
7. Repair minor damages to finish in accordance with manufacturer's instructions and as approved by the Owner.
8. Remove and replace damaged components that cannot be successfully repaired as determined by the Owner.

C. Field Quality Control

1. Manufacturer's Field Services: Manufacturer's representative shall provide technical assistance and guidance for installation of doors.

D. Adjusting

1. Adjust doors, hinges, and locksets for smooth operation without binding.

E. Cleaning

1. Clean doors promptly after installation in accordance with manufacturer's instructions.
2. Do not use harsh cleaning materials or methods that would damage finish.

F. Protection

1. Protect installed doors to ensure that, except for normal weathering, doors will be without damage or deterioration at time of Final Completion.

SECTION 08 30 00 00 - MPF SPECIALTY DOORS AND FRAMES**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 – GENERAL

1.1 SUMMARY

- A. Overhead coiling doors.
- B. Rapid roll-up doors.
- C. Traffic/impact doors.

1.2 SUBMITTALS

- A. Shop Drawings: Required.
- B. Product Data: Required.
- C. Samples: Required
- D. Certificates of Quality Assurance: Required

1.3 QUALITY ASSURANCE

- A. Compliance with local governing codes.
- B. Compliance with ASCE-7 for wind loading requirements.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Overhead Coiling Doors
 - 1. Source: Overhead Door, Cornell, Cookson, Atlas.
 - 2. Curtain: Constructed of interlocking flat slat of a min. 18 gauge thick front steel sheet and a min. 24 gauge rear steel sheet, approximately 3" high.

3. Guides: Metal side guides, finish to match curtain.
4. Hood: minimum 24 gauge steel sheet, finish to match curtain.
5. Reversing Safety Edge.
6. Counter Balance Assembly: Heat treated helical torsion springs secured within Steel-pipe barrel with a maximum deflection not to exceed .03 inches per foot of width.
7. Operating Mechanism: Motor operated min. ½ HP, single phase, 120V. Provide disconnect to permit manual chain hoist operation in the event of power failure or motor burn-out. Provide electrical interlock to prevent motor burn-out in case lock remains engaged.
8. Automatic Operation: Wall-mounted single key activated switch or induction loop.
9. Locking: Security lockout capability.
10. Insulation: Provide minimum R-11 insulating value for exterior doors.
11. Finish: Shop primed and field painted.

B. Rapid Roll-up Doors

1. Source
 - a.) Rytec.
 - b.) Marathon
 - c.) Albany
 - d.) Dynaco
 - e.) Rite-Hite
2. Features:
 - a.) Interior Doors
 - i.) Rytec: Model Preda Door 5500, with Impact Release system allowing immediate reset without tools, or equal.
 - ii.) Material: Minimum 71 oz., 2-ply monofilament curtain, color blue. Material to be laterally stiff and vertically flexible for enhanced wind/pressure resistance. Curtain sections connect by two integral extruded panel connecting ribs. Door curtain to have modular design to allow for easy curtain section replacement.
 - iii.) Usage: Door and all components to be designed for heavy-duty cycles and operation.
 - iv.) Bottom Bar: Rigid extruded aluminum with breakaway feature allowing release in either direction upon impact and immediate reset without the use of tools. Wireless with control-reliable 2-way communication, frequency-hopping technology and minimum 3-year battery life. Dual cut-off switches shut off motor when bottom bar is impacted.
 - v.) Motor: Variable-speed, AC drive, 42-50 inches per second opening and 21 inches per second closing. Adjustable, independent opening and closing speeds.
 - vi.) Controls: Programmable self-diagnostic controller with two-line, 32-character external display for status messaging and diagnostics.
 - vii.) Activation Devices: Induction loop and manual push button with time-delay closing.
 - viii.) Safety: Full width pneumatic safety reversing edge and (2) two thru-beam photo eyes.
 - ix.) Travel Limits: Absolute rotary encoder to regulate door travel limits. Limits adjusted, without tools at control panel, not motor. Control software to incorporate a self-adjusting limit feature where the software monitors the door position and adjusts the limits, as required, to maintain a proper seal.
 - x.) Vision Panel: Full width of door, minimum 31" high, replaceable.
 - xi.) Side Frames: Fully bolt-together, anodized aluminum construction.
 - xii.) Weatherseal: Dual, full-height weatherseals to seal against both sides of door panel long with full-width, header seal and full-width seal on bottom bar.
 - xiv.) Warranty: 2-year warranty on door with an extended 5-year warranty on door curtain.
 - b.) Exterior Doors
 - i.) Rytec: Model Fast-Seal FS 1000, or equal.
 - ii.) Material: Minimum 86 oz., 3-ply monofilament curtain, color blue. Material to be laterally stiff and vertically flexible for enhanced wind/pressure resistance.
 - iii.) Usage: Door and all components to be designed for heavy-duty cycles and operation.
 - iv.) Bottom Bar: Rigid extruded aluminum with breakaway feature allowing release in either direction upon impact and immediate reset without the use of tools. Wireless with

- control-reliable 2-way communication, frequency-hopping technology and minimum 3-year battery life. Dual cut-off switches shut off motor when bottom bar is impacted.
- v.) Counterbalance: Custom-Sized, dual counter-weight with life-time warranty on counter-weight system.
- vi.) Curtain Tension: Must be separate from counterbalance system and maintain constant tension on door curtain.
- vii.) Motor: Variable-speed, AC drive, 50 inches per second opening and closing and 21 inches per second closing. Adjustable, independent opening and closing speeds.
- viii.) Controls: Programmable self-diagnostic controller with two-line, 32-character external display for status messaging and diagnostics.
- ix.) Activation Devices: Motion sensors, one on each side with time-delay closing.
- x.) Safety: Full width pneumatic safety reversing edge and (2) two thru-beam photo eyes.
- xi.) Travel Limits: Absolute rotary encoder to regulate door travel limits. Limits adjusted, without tools at control panel, not motor. Control software to incorporate a self-adjusting limit feature where the software monitors the door position and adjusts the limits, as required, to maintain a proper seal.
- xii.) Windbars: Front and/or rear windbars according to manufacturers recommendation.
- xiii.) Vision Panel: Minimum 3 replaceable panels – 17"x17" each.
- xiv.) Side Frames: 11-gauge reinforced side frames with front and rear wind bar guides, 14-gauge hinges access covers.
- xv.) Weatherseals: Dual, full-height weatherseals to seal against both sides of door panel long with full-width, header seal and full-width seal on bottom bar.
- xvi.) Warranty: 1-year warranty on door with an extended 5-year warranty on door curtain.

C. Traffic/Impact Doors

1. This product must be manufactured by a USPS selected vendor and is subject to a USPS price and requirements purchasing agreement. The following vendor contact must be used:
Chase Industries, Inc., Cincinnati, OH
Ordering POC: Arlene Macht (800) 543-4455 ext. 2979, or website "www.chasedoors.com/usps", user name "usps", password is "doors".
2. Section 016000 – Product Requirements: Product options and substitutions. Substitutions: not permitted.
3. Model: Chase Industries: Duralite Series 200
4. Door Construction and Options: Per Manufacturer's USPS Approved Construction.

PART 3 - EXECUTION

3.1. INSTALLATION

- A. Upon completion of installation, provide field inspection and testing.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 08 30 00 00

SECTION 08 31 13 00 - CSF ACCESS DOORS AND FRAMES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 31 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Fire-resistive rated access door and frame units.
 2. Non fire-resistive rated access door and frame units.
 3. Wall and ceiling locations.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Sizes, types, finishes, hardware, scheduled locations, and details of adjoining work.
 2. Shop Drawings: Indicate exact position of all access door units.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Project Record Documents: Accurately record the following:
 - a. Actual locations of all access units.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering Products which may be incorporated in the Work include the following:
1. J.L. Industries, Bloomington, MN (612) 835-6850. (800) 554-6077.
 2. Karp, Maspeth, NY (800) 888-4212.
 3. Larsen's Manufacturing Company, Minneapolis, MN (800) 527-7367.
 4. Milcor, Holland, OH (800) 861-6452.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 ACCESS DOORS

- A. Non Fire-Rated: 20 gauge recessed steel panel doors to accept field finish of drywall.
- B. Fire-Rated Models: 14 gauge recessed steel panel doors to accept field finish of drywall.

2.3 FABRICATION

- A. Fabricate frames and flanges of 16 gauge (0.058 inch) steel.
- B. Fabricate door panels of 20 gauge (0.359 inch) single thickness steel sheet for non fire rated doors and 14 gauge (0.070 inch) single thickness steel sheet for fire rated doors.
- C. Weld, fill, and grind joints to ensure flush and square unit.
- D. Hardware:
1. Hinge: 175 degree stainless steel piano hinge concealed constant force closure spring type.[]
 2. Lock: Screw driver slot for quarter turn cam lock unit.

2.4 FINISHES

- A. Base Metal Protection: Prime coat units with alkyd primer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that rough openings for door and frame are correctly sized and located.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install units in accordance with manufacturer's published instructions where indicated on Drawings and required for access.
- B. Install frames plumb and level in opening. Secure rigidly in place.
- C. Position unit to provide convenient access to concealed work requiring access.

3.3 CONSTRUCTION

- A. Interface with Other Work: Coordinate with mechanical, electrical, and other Work requiring access units.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 08 33 23 00 - CSF OVERHEAD COILING DOORS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Folding Grilles (Section 083500) are now standard for closing service counters in new CSF Small Facilities, CSF Medium Facilities and Retail Standard Designs (RSD) for interior tenant improvements. Sectional Overhead Doors (Section 083613) are standard for truck doors on enclosed platforms in new CSF Small Facilities and CSF Medium Facilities. This section may not be used to specify overhead coiling doors as truck doors for enclosed platforms. This section may only be used to replace existing overhead coiling grilles in existing retail areas. A design deviation request must be submitted and approved before overhead coiling doors are installed in new CSF Small, CSF Medium or RSD facilities.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 33 23 00**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Overhead coiling security door. (manually and electrically operated)
 - 2. Hardware.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 087100 - Door Hardware: Keyed cylinders for door locks.

1.2 REFERENCES

- A. Underwriter's Laboratories (UL):
 - 1. UL #325 - Standard for Door, Drapery, Gate, Louver and Window Operators and Systems.
- B. Door and Access Systems Manufacturing Association (DASMA):
 - 1. DASMA #202-1999 Metal Coiling Slat Door Terminology.
 - 2. DASMA #203-2001 Standards for Non-Fire Rated Rolling Doors.

1.3 DEFINITIONS

- A. Operation cycle: One complete cycle of a door begins with the door in the closed position. The door is then moved to the open position and back to the closed position.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural performance to include providing overhead coiling door capable of withstanding the effects of gravity.
- B. Operating cycle requirements: Design overhead coiling door components and operator to operate for not less than 20,000 cycles.

1.5 SUBMITTALS

- A. Reference section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Submit all manufacturers product data.
 - 2. Shop drawings: Include special conditions not detailed in manufacturers product data and interface with adjacent conditions.
 - 3. Assurance/Control Submittals:
 - a. Test Reports: Submit the following reports directly to Contracting Officer from Testing Laboratory, with copy to Contractor. Prepare reports in conformance with Section 014000 - Quality Requirements.
 - b. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - c. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - d. Manufacturer's Installation Instructions.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Project Record Documents including Operating and Maintenance Manual.
 - 2. Certificate stating properly installed materials that comply with this specification.

1.6 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience and approved by manufacturer

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.8 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. AlumaTek, Inc., Greenville, RI (800) 949-9950.
 2. Cornell Ironworks, Mountaintop, PA (800) 233-8366.
 3. Cookson Corporation, Phoenix, AZ (800) 294-4358.
 4. Dynaflair Corporation, Tampa, FL (813) 248-8100 (800) 624-3667.
 5. Dynamic Closures Corporation, Massena, NY (800) 663-4599.
 6. Metro Door, Hauppauge, NY, (800) 669-3667.
 7. Overhead Door Corporation, Farmer's Branch, TX (800) 972-1730.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 COILING DOORS

- A. Model:
 1. AlumaTek: Solid Slat Clear Anodized Aluminum Model SA, Manual or Motor Operated.
 2. Cornell: Rolling Service Door (Motor Operated) Model PFI-5F.
 3. Cookson: Service Door (Motor Operated) Model JRA Manual.
 4. Dynaflair: Overhead Coiling Shutter, Manual or Motor Operated.
 5. Dynamic: Vortex, Manual or Motor Operated.
 6. Metro: Rolling Door CFMA, Motor Operated, Model CFPA, Manual.
 7. Overhead: Service Door Series 610, Manual or Motor Operated.
- B. Curtain: Constructed of interlocking flat slats of a min. #16 B&S gauge (0.050 inch) (1.25 mm) thick aluminum. Each slat face to be approximately 1 ½ inch high and ½ inch deep. Endlock shall prevent slats from shifting side to side.
- C. Guides: Side guides are to be of extruded aluminum with high density polypile inserts. Finish to match curtain.
- D. Bottom Bar: Heavy duty extruded aluminum with key locking cylinders to exterior. Finish to match curtain. On manual lift type provide a vinyl astragal attached to bottom of bottom bar to prevent tile damage. On motor operated door type provide reversing electric sensing edge. Vinyl astragal or sensing edge shall be solid gray or solid black color. Sensing edge shall be a maximum 2 inches high by 2 inches wide.
- E. Hood: Not used in concealed ceiling installations. Otherwise, in exposed installation, aluminum finish to match curtain.
- F. Counter Balance Assembly:
 1. Barrel: Steel pipe capable of supporting curtain and counterbalance weight with maximum deflection of 0.03 inches per foot of width.
 2. Spring Assembly: Oil tempered, heat treated helical torsion spring assembly designed to balance door so maximum effort to operate will not exceed 25 lbs. Provide charge wheel for applying and adjusting spring torque. Design cycle life to be 10,000 cycles.

3. Viscous speed governor to be installed to prevent free fall of curtain.
- G. Brackets: Fabricate reinforced steel end plates not less than 3/16 inch thick to support curtain and counterbalance assembly and form end closure plates. Provide bearing in rotating shaft bracket. Clear anodized finish.
- H. Structural Supports: Provide all required structural steel tube support columns, angles, anchorage, etc. Anchor to floor and roof structure as required. Coordinate with Contractor.
- I. Operation:
 1. Single Counter: Manual hand chain lift or hand crank lift with overhead counterbalance device requiring 25 pounds nominal force to operate.
 2. Two or More Counter Configuration: Motor operated. Provide floor level disconnect chain/cable to permit manual chain hoist operation in the event of power failure or motor burn-out. Provide electrical interlock to prevent motor burn-out in case lock remains engaged. Provide reversing electric sensing edge, with a self-retracting cable on an automatic take-up reel.
- J. Switches: Provide flush-mounted single key activated switch operated by constant pressure contact for each overhead door as listed in UL#325, 30.1.1. Control switch must be located so that the overhead coiling door will be within sight of the person operating the switch. Preferred installation location is just inside Wicket Door on workroom side. If this location is not available, architect to approve alternate location. If installed in public lobby, cover must be installed with non-removable screws. Attach warning label at control switch in accordance with UL #325, 53.3.
- K. Finish: Clear anodized.
- L. Locking Device: Locking mechanism at center bottom of bar with lock bars engaging door guides at both jambs. Door is to be shipped with temporary construction cores. Cylinders and keying shall match previous or adjacent doors.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that opening sizes, tolerances, and conditions are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install door unit assembly in accordance with published manufacturer's instructions.

- B. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress.
- C. Securely and rigidly brace components suspended from structure.
- D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.
- E. Sensing edge bottom is to be above the ceiling edge.

3.3 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maintain dimensional tolerances and alignment with adjacent work.
 - 2. Maximum Variation From Plumb: 1/16 inch.
 - 3. Maximum Variation From Level: 1/16 inch.

3.4 ADJUSTING

- A. Following completion of installation, including related work by others; lubricate, test, and adjust doors for ease of operation, free of warp, distortion or twist.

3.5 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Clean surfaces soiled by work as recommended by manufacturer.
- C. Remove labels and visible markings.

3.6 DEMONSTRATION

- A. Demonstrate proper operation to Owner's Representative.
- B. Instruct Owner's Representative in proper maintenance procedures.

USPS CSF Specification to be issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 33 36 00 - SIDE COILING GRILLES

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of material for side coiling grilles. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Performance Requirements

1. Operation-Cycle Requirements: Provide side coiling grille components and operators capable of operating for not less than 10,000 **OR** 20,000, **as directed**, cycles and for 10 cycles per day.

C. Submittals

1. Product Data: For each type and size of side coiling grille and accessory.
2. Shop Drawings: Include plans, elevations, sections, details, and attachment to other work.
3. Samples: For each exposed finish.

D. Quality Assurance

1. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.
2. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100.

1.2 PRODUCTS

A. Grille Curtain Materials And Construction

1. Grille Curtain: Network of 1/4-inch- (6-mm-) **OR** 5/16-inch- (8-mm-), **as directed**, minimum diameter horizontal rods, or rods covered with tube spacers. Interconnect rods by vertical links approximately 5/8 inch (16 mm) wide and rotating on rods.
 - a. Space rods at approximately 1-1/2 inches (38 mm) o.c.
 - b. Space links approximately 3 inches (76 mm) apart in a straight in-line **OR** staggered, **as directed**, pattern.
 - c. Steel Grille Curtain: Hot-dip zinc-coated (galvanized), complying with ASTM A 123/A 123M, or electrogalvanized complying with ASTM 653/A 653M, and phosphatized before fabrication.
 - d. Stainless-Steel Grille Curtain: ASTM A 666, Type 300 series.
 - e. Aluminum Grille Curtain: ASTM B 221 (ASTM B 221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
2. Top Track: Extruded aluminum channel mechanically attached to a support angle with provisions for take-up bolts to compensate for a maximum deflection of 1/2-inch.
3. Bottom Track: Manufacturer's standard, finished to match grille.
4. Coil Box: Entirely enclose coiled grille, operating mechanism, supporting disk and the drum around which the grille will coil.
5. Power Operated Grille: Safety interlock switch to disengage power supply when grille is locked.
6. Manual Grille Operator: Crank or Push-Pull.
7. Electric Grille Operator: Manufacturer's standard type, size, and capacity for grille and operation-cycle requirements specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking grille, and accessories. Comply with NFPA 70.
 - a. Disconnect Device: Hand-operated for automatically engaging chain and sprocket operator and releasing brake for emergency manual operation while disconnecting motor,

without affecting timing of limit switch. Mount to be accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

- b. Grille-Operator Type: Wall- or bracket-mounted unit with electric motor, gear-reduction drive, and chain and sprocket secondary drive.
- 8. Electric Motors: High-starting torque, reversible, continuous-duty, polyphase, Class A insulated, electric motors complying with NEMA MG 1; with overload protection; sized to start, accelerate, and operate grille in either direction from any position, at not less than 2/3 fps (0.2 m/s) and not more than 1 fps (0.3 m/s), without exceeding nameplate ratings or service factor. Coordinate wiring requirements and electrical characteristics of motors with building electrical system.
 - a. Open dripproof-type motor, and controller with NEMA ICS 6, Type 1 enclosure.
 - b. Totally enclosed, nonventilated or fan-cooled motor, fitted with plugged drain, and controller with NEMA ICS 6, Type 4 enclosure where indicated.
- 9. Remote-Control Station: Momentary-contact **OR** Sustained-pressure, **as directed**, three-button control station; fully guarded, weatherproof (if for exterior location), key operated.
- 10. Obstruction Detection Device: External automatic safety sensor capable of protecting full width of grille opening. Activation of sensor immediately stops and reverses grille travel.
- 11. Provide electric operators with ADA-compliant audible alarm and visual indicator lights.

B. Finishes

- 1. Aluminum Anodic Finish: Mill finish **OR** Class II, clear anodic coating complying with AAMA 611, **as directed**.
- 2. Galvanized Steel Finish: Manufacturer's standard primer **OR** Powder-coat finish, **as directed**.
 - a. Color and Gloss: As selected from manufacturer's full range.
 - b. Painting is specified in Division 09 Section(s) "Interior Painting" **OR** "Staining And Transparent Finishing".
- 3. Stainless-Steel Finish: Bright, cold-rolled, unpolished finish: No. 2B finish **OR** Bright, directional polish: No. 4 finish, **as directed**.

1.3 EXECUTION

A. Installation

- 1. General: Install side coiling grilles and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports.
- 2. Lubricate bearings and sliding parts; adjust grilles to operate easily, free of warp, twist, or distortion.

SECTION 08 35 00 00 - CSF FOLDING DOORS AND GRILLES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Folding security closures.
 - 2. Hardware.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Provide Products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
- D. Related Sections:

1.2 SUBMITTALS

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 - 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.
- B. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Construction, component connections, and details for each door type.
 - 2. Shop Drawings: Indicate dimensions, anchorage methods, hardware locations, and installation details for each door type.

1.3 QUALITY ASSURANCE

- A. Qualifications:

1. Installer: Factory authorized company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.5 WARRANTY

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Manufacturer warranty to cover all material and labor required to repair or replace side folding closures and components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Prior to including "Mobilflex," the design A/E is to confirm with the project contracting officer that the project's total contracted value will meet the limits set for NAFTA – Canada in Clause B. 402.

2.1 MANUFACTURERS

- A. This Product must be manufactured by a USPS Pre-Approved Vendors and is subject to a USPS price and requirements purchasing agreement. The following vendor contacts must be used:
 1. Dynaflair Corporation, Tampa, FL POC: Gerald Pasternak, (813) 248-8100 (800) 624-3667.
 2. Dynamic Closures Corporation, Massena, NY. POC: Christine Warner, (800) 663-4599.
 3. Mobilflex Inc., Niagra Falls, NY POC: Claire Touzin (800) 216-3539
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not permitted.

2.2 FOLDING CLOSURES

- A. Solid curtain for enclosure of retail lobby or Full Service Counters: Constructed of continuous solid panels of a minimum 16 gage (0.050 inch) (1.25 mm) thick aluminum. The maximum panel width is 8 inches. Panels to match curtain finish. The closest space between the bottom of the curtain and the floor directly below the track is not to exceed 1/2 inch (1.2 cm).
 1. Dynaflair: Elegance with solid insert.
 2. Dynamic: Opaque.
 3. Mobilflex: Global.
- B. Track: Curtain shall be supported by trolley assemblies capable of carrying 120 pounds per linear foot. Curves and track shall be heavy extruded aluminum with a minimum of 14 inch (36 cm) radius for each 90 degree curve, and a minimum of 10 inch (25 cm) radius for curves greater than 90 degrees.
- C. Locking:

1. Lead member, trailing member and bi-part member (if any) to be provided with manufacturer's high security cylinder on the exterior side with metal security ring.
 2. Lead member to engage a full height striker channel with a single hook latch.
 3. Lead bi-part member to engage a full height striker channel member secured with a single hook latch and bottom drop bolt.
 4. Lead member/channel connection and bi-part member connection to include a horizontal solid metal pin 1/2 inch (13 mm) in diameter. Pins to be 18" AFF and seat a minimum of 1 inch (2.6 cm) into the strike channel or lead member so they are not visible.
 5. Trailing end member to be free floating top and bottom post secured outside the storage pocket with top and bottom drop bolts operated on the exterior side.
 6. Intermediate member(s) to be located at all curves and on straight sections at intervals not to exceed 8 feet (2.44 m).
 7. Solid Curtains at Full Service Counters: Intermediate members to be equipped with drop bolt at the bottom, operated by manufacturer's high-security mortise cylinder on the exterior side with a metal security ring.
 8. All applications other than those listed in Item 7 above: Intermediate members to be equipped with a concealed locking device, drop bolt at the bottom, and control lever on interior side.
 9. Drop bolt to be manufactured with grade 1045 cold roll steel, with the bottom 6 inches (15 cm) of the bolt flame hardened and tempered to 55 Rockwell hardness. Drop bolt to extend not less than 1 inch (2.6 cm) into a dust proof receiver.
 10. Keying of cylinders:
 - a. Furnish cylinders keyed alike during construction.
 - b. Final keying will use specified cylinders, see section 087100.
- D. Stacking: Allow 2.1 inches (5 cm) of stacking per linear foot of closure width, plus 3 inches (8 cm) for each post section.
- E. Finish: Clear anodized frame with matching clear anodized, anodized silver acrylic panels or powder coat paint over steel panels.
- F. Installation Details/Instructions: The Vendor shall produce a package of drawings/details and/or instructions which will be provided by the vendor with each folding closure at the time of delivery. This package shall be of sufficient detail to explain the proper installation and adjustment of folding closures.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that opening sizes, tolerances, and conditions are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Installation company must specialize in performing the Work of this Section with documented experience and be approved by the folding closure manufacturer.
- B. Install closure unit assembly in accordance with published manufacturer's instructions.
- C. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress. Brace and fasten components suspended from structure to be secure and rigid.
- D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

3.3 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maintain dimensional tolerances and alignment with adjacent work.
 - 2. Maximum Variation From Plumb: 1/16 inch (1.6 mm).
 - 3. Maximum Variation From Level: 1/16 inch (1.6 mm).

3.4 ADJUSTING

- A. Adjust closure, hardware, and operating assemblies for smooth and quiet operation.

3.5 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Clean closure and components.
- C. Remove labels and visible markings.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 08 35 00 00

SECTION 08 35 00 00 - MPF FOLDING DOORS AND GRILLES**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

This section includes aluminum or steel grills for lunchrooms.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Folding security closures.
 - 2. Hardware.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Provide Products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
- D. Related Sections:

1.2 SUBMITTALS

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 - 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.
- B. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Construction, component connections, and details for each door type.
 - 2. Shop Drawings: Indicate dimensions, anchorage methods, hardware locations, and installation details for each door type.

1.3 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Installer: Factory authorized company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.4 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.5 WARRANTY

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Manufacturer warranty to cover all material and labor required to repair or replace side folding closures and components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. This Product must be manufactured by a USPS Pre-Approved Vendors and is subject to a USPS price and requirements purchasing agreement. The following vendor contacts must be used:
1. Dynaflair Corporation, Tampa, FL POC: Gerald Pasternak, (813) 248-8100 (800) 624-3667.
 2. Dynamic Closures Corporation, Massena, NY. POC: Christine Warner, (800) 663-4599.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not permitted.

NOTE TO SPECIFIER

Side folding closures may be used in three separate locations within retail areas. Opaque folding closures are used to close the service lobby in RSD and MSBD facilities that do not have a full Postal Store and to enclose the Full Service Counters in RSD, SSBD and MSBD facilities that do have a full Postal Store. Perforated folding closures are used to enclose Postal Stores in RSD, SSBD and MSBD facilities.

2.2 FOLDING CLOSURES

- A. Perforated curtain for enclosure of retail Postal Store: Constructed of a minimum 16 gage (0.050 inch) (1.25 mm) aluminum or minimum 18-gage (0.040 inch) (1.00 mm) steel with 3/16" perforations and minimum 40% visibility. Maximum panel width is 8 inches. The closest space between the bottom of the curtain and the floor directly below the track is not to exceed 1/2 inch (1.2 cm).
1. Dynaflair: Elegance with perforated insert.
 2. Dynamic: Paravent.
- B. Solid curtain for enclosure of retail lobby or Full Service Counters: Constructed of continuous solid panels of a minimum 16 gage (0.050 inch) (1.25 mm) thick aluminum. The maximum panel width is 8 inches. Panels to match curtain finish. The closest space between the bottom of the curtain and the floor directly below the track is not to exceed 1/2 inch (1.2 cm).
1. Dynaflair: Elegance with solid insert.
 2. Dynamic: Opaque.

- C. Track: Curtain shall be supported by trolley assemblies capable of carrying 120 pounds per linear foot. Curves and track shall be heavy extruded aluminum with a minimum of 14 inch (36 cm) radius for each 90 degree curve, and a minimum of 10 inch (25 cm) radius for curves greater than 90 degrees.
- D. Locking:
 - 1. Lead member, trailing member and bi-part member (if any) to be provided with manufacturer's high security cylinder on the exterior side with metal security ring.
 - 2. Lead member to engage a full height striker channel with a single hook latch.
 - 3. Lead bi-part member to engage a full height striker channel member secured with a single hook latch and bottom drop bolt.
 - 4. Lead member/channel connection and bi-part member connection to include a horizontal solid metal pin 1/2 inch (13 mm) in diameter. Pins to be 18" AFF and seat a minimum of 1 inch (2.6 cm) into the strike channel or lead member so they are not visible.
 - 5. Trailing end member to be free floating top and bottom post secured outside the storage pocket with top and bottom drop bolts operated on the exterior side.
 - 6. Intermediate member(s) to be located at all curves and on straight sections at intervals not to exceed 8 feet (2.44 m).
 - 7. Solid Curtains at Full Service Counters: Intermediate members to be equipped with drop bolt at the bottom, operated by manufacturer's high-security mortise cylinder on the exterior side with a metal security ring.
 - 8. All applications other than those listed in Item 7 above: Intermediate members to be equipped with a concealed locking device, drop bolt at the bottom, and control lever on interior side.
 - 9. Drop bolt to be manufactured with grade 1045 cold roll steel, with the bottom 6 inches (15 cm) of the bolt flame hardened and tempered to 55 Rockwell hardness. Drop bolt to extend not less than 1 inch (2.6 cm) into a dust proof receiver.
 - 10. Keying of cylinders:
 - a. Furnish cylinders keyed alike during construction.
 - b. Final keying will use specified cylinders, see section 087100.
- E. Stacking: Allow 2.1 inches (5 cm) of stacking per linear foot of closure width, plus 3 inches (8 cm) for each post section.
- F. Finish: Clear anodized frame with matching clear anodized, anodized silver acrylic panels or powder coat paint over steel panels.
- G. Installation Details/Instructions: The Vendor shall produce a package of drawings/details and/or instructions which will be provided by the vendor with each folding closure at the time of delivery. This package shall be of sufficient detail to explain the proper installation and adjustment of folding closures.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that opening sizes, tolerances, and conditions are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Installation company must specialize in performing the Work of this Section with documented experience and be approved by the folding closure manufacturer.
- B. Install closure unit assembly in accordance with published manufacturer's instructions.
- C. Use anchorage devices to securely fasten assembly to wall construction and building framing without distortion or stress. Brace and fasten components suspended from structure to be secure and rigid.
- D. Fit and align assembly including hardware; level and plumb, to provide smooth operation.

3.3 CONSTRUCTION

- A. Site Tolerances:
 - 1. Maintain dimensional tolerances and alignment with adjacent work.
 - 2. Maximum Variation From Plumb: 1/16 inch (1.6 mm).
 - 3. Maximum Variation From Level: 1/16 inch (1.6 mm).

3.4 ADJUSTING

- A. Adjust closure, hardware, and operating assemblies for smooth and quiet operation.

3.5 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Clean closure and components.
- C. Remove labels and visible markings.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/29/2010

END OF SECTION 08 35 00 00

SECTION 08 36 13 00 - CSF SECTIONAL DOORS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 36 13 00

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

NOTE TO SPECIFIER

Adjust list below to suit project. Add other types of doors to list below.

1. Doors with insulated steel-framed steel panels.
2. Tracks configured for the following lift types:
 - a. Standard.

- B. Related Documents: The Contract Documents, as defined in Section 011000, Summary of Work apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 087100, Door Hardware: for lock cylinders and keying.
2. Section 099100, Painting: for field-applied paint finish.
3. Section 111300, Loading Dock Equipment: for interlock switch connection.
4. Section 111304, Dock Lift (Scissors Type), for interlock switch connection.
5. Section 260519, Low-Voltage Electrical Power Conductors and Cables: for electrical service and connections for powered operators, and accessories.

1.2 REFERENCES

- A. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvanealed) By the Hot-Dip Process.
- B. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 DEFINITIONS

- A. Operation Cycle: One complete cycle of a door begins with the door in the closed position. The door is then moved to the open position and back to the closed position.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide sectional overhead doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:

NOTE TO SPECIFIER

Insert pressure applicable to project location.

1. Wind Load: Uniform pressure (velocity pressure) of [20][____] lb./sq. ft. (960 Pa), acting inward and outward.
- B. Operation-Cycle Requirements: Design sectional overhead door components and operator to operate for not less than 100,000 cycles.

1.5 SUBMITTALS

- A. Product Data: For each type and size of sectional overhead door and accessory. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide roughing-in diagrams, operating instructions, and maintenance information. Include the following:
1. Setting drawings, templates, and installation instructions for built-in or embedded anchor devices.
 2. Summary of forces and loads on walls and jambs.
 3. Motors: Show nameplate data and ratings; characteristics; mounting arrangements; size and location of winding termination lugs, conduit entry, and grounding lug; and coatings.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's data sheets.
1. Wiring Diagrams: Detail wiring for power, signal, and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by door manufacturer and those provided by others.
- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for units with factory-applied finishes.
- D. Samples for Verification: Of each type of exposed finish required, prepared on Samples of size indicated below and of same thickness and material indicated for Work. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
1. Frame: 6-inch length.
 2. Panel: 6 inches square.
- E. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- F. Manufacturers' Certificates: Signed by manufacturers certifying that they comply with requirements specified in "Quality Assurance" Article. On request, submit evidence of manufacturing experience.

1.6 QUALITY ASSURANCE

- A. **Installer Qualifications:** Engage an experienced installer who is an authorized representative of the sectional overhead door manufacturer for both installation and maintenance of units required for this Project.
- B. **Manufacturer Qualifications:** Engage a firm experienced in manufacturing sectional overhead doors similar to those indicated for this Project and with a record of successful in-service performance.
- C. **Source Limitations:** Obtain sectional overhead doors through one source from a single manufacturer.
 - 1. Obtain operators and controls from the sectional overhead door manufacturer.
- D. **Product Options:** Drawings indicate size, profiles, and dimensional requirements of sectional overhead doors and accessories and are based on the specific system indicated. Other manufacturers' systems with equal performance and dimensional characteristics may be considered. Refer to Division 1 Section "Substitutions."
- E. **Listing and Labeling:** Provide electrically operated fixtures specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Clopay Building Products Co., Cincinnati, OH (800) 526-4301.
 - 2. Haas Door Co., Wauseon, OH (800) 877-0795.
 - 3. McKee Door, Inc.; Aurora, IL (800) 222-7426.
 - 4. Overhead Door Corporation, Farmer's Branch, TX (800) 972-1730.
 - 5. Raynor Garage Doors, Dixon, IL (800) 472-9667.
 - 6. Wayne-Dalton Corp, Mt. Hope, OH, (800) 764-1457.
 - 7. Windsor Door; Little Rock, AR (800) 946-3767.

2.2 STEEL SECTIONS

- A. Construct door sections from galvanized, structural-quality carbon-steel sheets complying with ASTM A 653 (ASTM A 653M), commercial quality, with a minimum yield strength of 33,000 psi (225 MPa) and a minimum G60 (Z180) zinc coating.
 - 1. Steel Sheet Thickness: 20 gauge for exterior and 26 gauge for interior sheets.
 - 2. Exterior Section Face: Flat.
- B. Fabricate door panels from a single sheet to provide sections not more than 24 inches high and nominally 2 inches deep. Roll horizontal meeting edges to a continuous, interlocking, keyed, rabbeted, shiplap, or tongue-in-groove weathertight seal, with a reinforcing flange return.
- C. Reinforce bottom section with a continuous channel or angle complying with bottom section profile and allowing installation of astragal.
- D. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Provide galvanized steel bars, struts, trusses or strip steel, formed to depth and bolted or welded in place.

- E. Provide reinforcement for hardware attachment.
- F. Insulation: Manufacturer's standard rigid cellular polystyrene or polyurethane-foam-type thermal insulation, foamed in place to completely fill inner core of section, pressure bonded to face sheets to prevent delamination under wind load and with maximum flame-spread and smoke-developed indices of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely, with no exposed insulation material evident.
 - 1. Steel Sheet Inside Face: Manufacturer's standard thickness.
- G. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints, and free of warp, twist, and deformation.
- H. Finish galvanized steel door sections as follows:
 - 1. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 2. Surface Preparation: Clean galvanized surfaces with nonpetroleum solvent so surfaces are free of oil and surface contaminants.
 - 3. Pretreat zinc-coated steel, after cleaning, with a conversion coating of type suited to organic coating applied over it.
 - 4. Apply manufacturer's standard primer and finish coats to interior and exterior door faces after forming, according to coating manufacturer's written instructions for application, thermosetting, and minimum dry film thickness.
 - a. Color: White

2.3 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Provide manufacturer's standard, galvanized steel track system, sized for door size and weight, designed for lift type indicated and clearances shown, and complying with ASTM A 653 (ASTM A 653M), for minimum G60 (Z180) zinc coating. Provide complete track assembly including brackets, bracing, and reinforcement for rigid support of ball-bearing roller guides for required door type and size. Slot vertical sections of track at 2 inches (50 mm) o.c. for door-drop safety device. Slope tracks at proper angle from vertical or otherwise design to ensure tight closure at jambs when door unit is closed. Weld or bolt to track supports.
- B. Weatherseals: Provide replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and at top of overhead door.
 - 1. Provide motor-operated doors with combination bottom weatherseal and sensor edge.
 - 2. In addition, provide continuous flexible seals at door jambs for a weathertight installation.
- C. Windows: Provide windows of type and size indicated and in arrangement shown. Set glazing in vinyl, rubber, or neoprene glazing channel for metal-framed doors and elastic glazing compound for wood doors, as required. Provide removable stops of same material as door section frames.
 - 1. Size: Manufacturer's standard panel for type of glazing indicated.
 - 2. Clear Polycarbonate Plastic: 6-mm clear, transparent, fire-retardant polycarbonate sheet manufactured by extrusion process, UV resistant.

2.4 HARDWARE

- A. General: Provide heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.
- B. Hinges: Provide heavy-duty galvanized steel hinges, of not less than 0.0747-inch-thick uncoated steel, at each end stile and at each intermediate stile, per manufacturer's written recommendations for door

size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges, where required, for doors exceeding 16 feet in width, unless otherwise recommended by door manufacturer.

- C. Rollers: Provide heavy-duty rollers, with steel ball bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch-diameter roller tires for 3-inch track, 2-inch-diameter roller tires for 2-inch track, and as follows:
 - 1. Case-hardened steel tires.
- D. Push/Pull Handles: For push-up-operated or emergency-operated doors, provide galvanized steel lifting handles on each side of door.
- E. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks.
 - 1. Locking Bars: Both jamb sides, operable from inside only.
- F. Chain Lock Keeper: Suitable for padlock.

2.5 COUNTERBALANCING MECHANISM

- A. Torsion Spring: Operation by torsion-spring counterbalance mechanism consisting of adjustable-tension torsion springs, fabricated from oil-tempered-steel wire mounted on a cross-header tube or steel shaft. Connect to door with galvanized aircraft-type lift cables with cable safety factor of at least 5 to 1. Provide springs calibrated for 100,000 cycles minimum.
- B. Cable Drums: Provide cast-aluminum or gray-iron casting cable drums grooved to receive cable. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of shaft. Provide 1 additional midpoint bracket for shafts up to 16 feet long and 2 additional brackets at one-third points to support shafts more than 16 feet long, unless closer spacing is recommended by door manufacturer.
- C. Cable Safety Device: Include a spring-loaded, steel or bronze cam mounted to bottom door roller assembly on each side, designed to automatically stop door if either cable breaks.
- D. Bracket: Provide anchor support bracket, as required to connect stationary end of spring to the wall, to level shaft and prevent sag.
- E. Provide a spring bumper at each horizontal track to cushion door at end of opening operation.

2.6 MANUAL DOOR OPERATORS

- A. Push-up Operation: Provide lift handles and pull rope for raising and lowering doors, operating with not more than 25-lbf lift or pull.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine wall and overhead areas, including opening framing and blocking, with Installer present, for compliance with requirements for installation tolerances, clearances, and other conditions affecting performance of Work of this Section.
 - 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install door, track, and operating equipment complete with necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.
- B. Fasten vertical track assembly to framing at not less than 24 inches o.c. Hang horizontal track from structural overhead framing with angle or channel hangers welded and bolt fastened in place. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.

3.3 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.

3.4 DEMONSTRATION

- A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
 - 3. Review data in the maintenance manuals. Refer to Division 1 Section "Contract Closeout."
 - 4. Schedule training with Owner with at least 7 days' advance notice.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 08 36 13 00 - MPF SECTIONAL DOORS

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 36 13 00

This section pertains to overhead doors for use in Vehicle Maintenance Facilities only

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

NOTE TO SPECIFIER

Adjust list below to suit project. Add other types of doors to list below.

1. Doors with insulated steel-framed steel panels.
2. Tracks configured for the following lift types:
 - a. Standard.

- B. Related Documents: The Contract Documents, as defined in Section 011000, Summary of Work apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 087100, Door Hardware: for lock cylinders and keying.
2. Section 099100, Painting: for field-applied paint finish.
3. Section 111300, Loading Dock Equipment: for interlock switch connection.
4. Section 111304, Dock Lift (Scissors Type), for interlock switch connection.
5. Section 260519, Low-Voltage Electrical Power Conductors and Cables: for electrical service and connections for powered operators, and accessories.

1.2 REFERENCES

- A. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvanealed) By the Hot-Dip Process.
- B. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 DEFINITIONS

- A. Operation Cycle: One complete cycle of a door begins with the door in the closed position. The door is then moved to the open position and back to the closed position.

1.4 PERFORMANCE REQUIREMENTS

- A. Structural Performance: Provide sectional overhead doors capable of withstanding the effects of gravity loads and the following loads and stresses without evidencing permanent deformation of door components:

NOTE TO SPECIFIER

Insert pressure applicable to project location.

1. Wind Load: Uniform pressure (velocity pressure) of [20][____] lb./sq. ft. (960 Pa), acting inward and outward.

- B. Operation-Cycle Requirements: Design sectional overhead door components and operator to operate for not less than 100,000 cycles.

1.5 SUBMITTALS

- A. Product Data: For each type and size of sectional overhead door and accessory. Include details of construction relative to materials, dimensions of individual components, profiles, and finishes. Provide roughing-in diagrams, operating instructions, and maintenance information. Include the following:
1. Setting drawings, templates, and installation instructions for built-in or embedded anchor devices.
 2. Summary of forces and loads on walls and jambs.
 3. Motors: Show nameplate data and ratings; characteristics; mounting arrangements; size and location of winding termination lugs, conduit entry, and grounding lug; and coatings.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's data sheets.
1. Wiring Diagrams: Detail wiring for power, signal, and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by door manufacturer and those provided by others.
- C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors available for units with factory-applied finishes.
- D. Samples for Verification: Of each type of exposed finish required, prepared on Samples of size indicated below and of same thickness and material indicated for Work. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
1. Frame: 6-inch length.
 2. Panel: 6 inches square.
- E. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
- F. Manufacturers' Certificates: Signed by manufacturers certifying that they comply with requirements specified in "Quality Assurance" Article. On request, submit evidence of manufacturing experience.

1.6 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the sectional overhead door manufacturer for both installation and maintenance of units required for this Project.
- B. Manufacturer Qualifications: Engage a firm experienced in manufacturing sectional overhead doors similar to those indicated for this Project and with a record of successful in-service performance.

- C. Source Limitations: Obtain sectional overhead doors through one source from a single manufacturer.
 - 1. Obtain operators and controls from the sectional overhead door manufacturer.
- D. Product Options: Drawings indicate size, profiles, and dimensional requirements of sectional overhead doors and accessories and are based on the specific system indicated. Other manufacturers' systems with equal performance and dimensional characteristics may be considered. Refer to Division 1 Section "Substitutions."
- E. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 - 1. Clopay Building Products Co., Cincinnati, OH (800) 526-4301.
 - 2. Haas Door Co., Wauseon, OH (800) 877-0795.
 - 3. McKee Door, Inc.; Aurora, IL (800) 222-7426.
 - 4. Overhead Door Corporation, Farmer's Branch, TX (800) 972-1730.
 - 5. Raynor Garage Doors, Dixon, IL (800) 472-9667.
 - 6. Wayne-Dalton Corp, Mt. Hope, OH, (800) 764-1457.
 - 7. Windsor Door; Little Rock, AR (800) 946-3767.

2.2 STEEL SECTIONS

- A. Construct door sections from galvanized, structural-quality carbon-steel sheets complying with ASTM A 653 (ASTM A 653M), commercial quality, with a minimum yield strength of 33,000 psi (225 MPa) and a minimum G60 (Z180) zinc coating.
 - 1. Steel Sheet Thickness: 20 gauge for exterior and 26 gauge for interior sheets.
 - 2. Exterior Section Face: Flat.
- B. Fabricate door panels from a single sheet to provide sections not more than 24 inches high and nominally 2 inches deep. Roll horizontal meeting edges to a continuous, interlocking, keyed, rabbeted, shiplap, or tongue-in-groove weathertight seal, with a reinforcing flange return.
- C. Reinforce bottom section with a continuous channel or angle complying with bottom section profile and allowing installation of astragal.
- D. Reinforce sections with continuous horizontal and diagonal reinforcement, as required to stiffen door and for wind loading. Provide galvanized steel bars, struts, trusses or strip steel, formed to depth and bolted or welded in place.
- E. Provide reinforcement for hardware attachment.
- F. Insulation: Manufacturer's standard rigid cellular polystyrene or polyurethane-foam-type thermal insulation, foamed in place to completely fill inner core of section, pressure bonded to face sheets to prevent delamination under wind load and with maximum flame-spread and smoke-developed indices of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely, with no exposed insulation material evident.
 - 1. Steel Sheet Inside Face: Manufacturer's standard thickness.

- G. Fabricate sections so finished door assembly is rigid and aligned, with tight hairline joints, and free of warp, twist, and deformation.
- H. Finish galvanized steel door sections as follows:
 - 1. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 2. Surface Preparation: Clean galvanized surfaces with nonpetroleum solvent so surfaces are free of oil and surface contaminants.
 - 3. Pretreat zinc-coated steel, after cleaning, with a conversion coating of type suited to organic coating applied over it.
 - 4. Apply manufacturer's standard primer and finish coats to interior and exterior door faces after forming, according to coating manufacturer's written instructions for application, thermosetting, and minimum dry film thickness.
 - a. Color: White

2.3 TRACKS, SUPPORTS, AND ACCESSORIES

- A. Tracks: Provide manufacturer's standard, galvanized steel track system, sized for door size and weight, designed for lift type indicated and clearances shown, and complying with ASTM A 653 (ASTM A 653M), for minimum G60 (Z180) zinc coating. Provide complete track assembly including brackets, bracing, and reinforcement for rigid support of ball-bearing roller guides for required door type and size. Slot vertical sections of track at 2 inches (50 mm) o.c. for door-drop safety device. Slope tracks at proper angle from vertical or otherwise design to ensure tight closure at jambs when door unit is closed. Weld or bolt to track supports.
- B. Weatherseals: Provide replaceable, adjustable, continuous, compressible weather-stripping gaskets of flexible vinyl, rubber, or neoprene fitted to bottom and at top of overhead door.
 - 1. Provide motor-operated doors with combination bottom weatherseal and sensor edge.
 - 2. In addition, provide continuous flexible seals at door jambs for a weathertight installation.
- C. Windows: Provide windows of type and size indicated and in arrangement shown. Set glazing in vinyl, rubber, or neoprene glazing channel for metal-framed doors and elastic glazing compound for wood doors, as required. Provide removable stops of same material as door section frames.
 - 1. Size: Manufacturer's standard panel for type of glazing indicated.
 - 2. Clear Polycarbonate Plastic: 6-mm clear, transparent, fire-retardant polycarbonate sheet manufactured by extrusion process, UV resistant.

2.4 HARDWARE

- A. General: Provide heavy-duty, corrosion-resistant hardware, with hot-dip galvanized, stainless-steel, or other corrosion-resistant fasteners, to suit door type.
- B. Hinges: Provide heavy-duty galvanized steel hinges, of not less than 0.0747-inch-thick uncoated steel, at each end stile and at each intermediate stile, per manufacturer's written recommendations for door size. Attach hinges to door sections through stiles and rails with bolts and lock nuts or lock washers and nuts. Use rivets or self-tapping fasteners where access to nuts is not possible. Provide double-end hinges, where required, for doors exceeding 16 feet in width, unless otherwise recommended by door manufacturer.
- C. Rollers: Provide heavy-duty rollers, with steel ball bearings in case-hardened steel races, mounted with varying projections to suit slope of track. Extend roller shaft through both hinges where double hinges are required. Provide 3-inch-diameter roller tires for 3-inch track, 2-inch-diameter roller tires for 2-inch track, and as follows:

1. Case-hardened steel tires.
- D. Push/Pull Handles: For push-up-operated or emergency-operated doors, provide galvanized steel lifting handles on each side of door.
- E. Fabricate locking device assembly with lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bar to engage through slots in tracks.
 1. Locking Bars: Both jamb sides, operable from inside only.
- F. Chain Lock Keeper: Suitable for padlock.

2.5 COUNTERBALANCING MECHANISM

- A. Torsion Spring: Operation by torsion-spring counterbalance mechanism consisting of adjustable-tension torsion springs, fabricated from oil-tempered-steel wire mounted on a cross-header tube or steel shaft. Connect to door with galvanized aircraft-type lift cables with cable safety factor of at least 5 to 1. Provide springs calibrated for 100,000 cycles minimum.
- B. Cable Drums: Provide cast-aluminum or gray-iron casting cable drums grooved to receive cable. Mount counterbalance mechanism with manufacturer's standard ball-bearing brackets at each end of shaft. Provide 1 additional midpoint bracket for shafts up to 16 feet long and 2 additional brackets at one-third points to support shafts more than 16 feet long, unless closer spacing is recommended by door manufacturer.
- C. Cable Safety Device: Include a spring-loaded, steel or bronze cam mounted to bottom door roller assembly on each side, designed to automatically stop door if either cable breaks.
- D. Bracket: Provide anchor support bracket, as required to connect stationary end of spring to the wall, to level shaft and prevent sag.
- E. Provide a spring bumper at each horizontal track to cushion door at end of opening operation.

2.6 MANUAL DOOR OPERATORS

- A. Push-up Operation: Provide lift handles and pull rope for raising and lowering doors, operating with not more than 25-lbf lift or pull.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine wall and overhead areas, including opening framing and blocking, with Installer present, for compliance with requirements for installation tolerances, clearances, and other conditions affecting performance of Work of this Section.
 1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install door, track, and operating equipment complete with necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.
- B. Fasten vertical track assembly to framing at not less than 24 inches o.c. Hang horizontal track from structural overhead framing with angle or channel hangers welded and bolt fastened in place. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.

3.3 ADJUSTING

- A. Lubricate bearings and sliding parts; adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.

3.4 DEMONSTRATION

- A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below:
 - 1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
 - 2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
 - 3. Review data in the maintenance manuals. Refer to Division 1 Section "Contract Closeout."
 - 4. Schedule training with Owner with at least 7 days' advance notice.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/29/2010

END OF SECTION

SECTION 08 36 14 00 - MPF SECTIONAL KNOCKOUT DOORS**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities only. Use of Sectional Knockout Doors in Customer Service type facilities requires prior submittal to and approval by USPS Design and Construction Facilities Headquarters of a design standards deviation request.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

This section is for the TKO Cruiserweight door.

THIS IS A SELECTED VENDOR ITEM. CONSTRUCTION SUPPLIERS MUST CONTACT THE SELECTED VENDOR AS DIRECTED FOR APPROVED PRICING AND PURCHASING PROCEDURES

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information must be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 – GENERAL

1.1 SUMMARY

- A. Section includes:
 - 1. Manually operated sectional overhead doors with insulated composite panels.
 - 2. Tracks configured for the following lift types:
 - a. Standard lift.
 - b. High lift.
 - c. Vertical lift.
- B. Related Documents: The Contract Documents, as defined in Section 011000, Summary of Work apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 087100, Door Hardware: for lock cylinders and keying.
 - 2. Section 099100, Painting: for field-applied paint finish.
 - 3. Section 260500, Common Work Results for Electrical.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position.
 - 2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Product Data: For each type and size of sectional overhead door and accessory. Provide roughing-in diagrams, operating instructions, and maintenance information. Include the following:
 - 1. Setting drawings, templates, and installation instructions for built-in or embedded anchor devices.
- B. Shop Drawings: For special components and installations not dimensioned or detailed in manufacturer's data sheets.
 - 1. Wiring Diagrams: Detail wiring for signal systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by door manufacturer and those provided by others.
- C. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
 - 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the sectional overhead door manufacturer for both installation and maintenance of units required for this Project.
- B. Source Limitations: Obtain sectional overhead doors through one source from a single manufacturer.
 - 1. Obtain operators and controls from the sectional overhead door manufacturer.
- C. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in NFPA #70, Article 100.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. This Product must be manufactured by a USPS Selected Vendor and is subject to a USPS price and requirements purchasing agreement. The following vendor contact must be used:
 - 1. New and replacement doors: TKO Doors, Sussex, WI, Primary Contact: Vickie Borkowski, (262) 246-1332, Vicky.borkowski@4frontes.com
 - 2. Replacement parts: TKO Doors, Sussex, WI, Terri Thimm, (262) 246-1316, terri.thimm@4frontes.com
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not permitted.

2.2 SECTIONAL KNOCKOUT DOORS

- A. Model:
 - 1. TKO Doors: TKO CruiserWeight.
- B. REQUIRED FEATURES
 - 1. 24" high (max.) with 1/8" thick pre-finished white polymer interior panel and 1/8" thick fiberglass exterior panel factory primed and painted after forming with white Sherwin Williams "Superpaint" series A85 or equivalent according to coating manufacturer's standards written instructions for application and minimum dry film thickness.
 - 2. 1-3/4" thick (min.) foam core insulation.

3. High molecular weight polyethylene (UHMW) track that will allow an outward release when impacted.
4. Replaceable weather seals (top and bottom)
5. Spring-loaded plungers on knockout panels.
6. Counterbalance system rated for 25,000 cycle (min.)
7. Single slide lock

8. Weatherstripping, i.e. lintel brush seal, foamed hypalon bottom seal and loop weather seal attached to the door panels
9. Two (2) push/pull handles
10. One 22" wide x 6" high vision panel
11. Two (2) bumpers at each upper track

NOTE TO SPECIFIER

Track is available in straight-vertical, high-lift and tilt-track styles. Select style appropriate for the project.

12. Track shall be [straight-vertical] [high-lift] [tilt-track] style.

NOTE TO SPECIFIER

Select optional features below if applicable to project or required by contracting officer.

13. Cable break safety device.
14. Manual Chain hoist.
15. High wind Load Door Package.

PART 3 – EXECUTION

3.1 EXAMINATION

- A. Examine wall and overhead areas, including opening framing and blocking, with Installer present, for compliance with requirements for installation tolerances, clearances, and other conditions affecting performance of Work of this Section.
 - a. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

- A. General: Install door, track, and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports according to Shop Drawings, manufacturer's written instructions, and as specified.
- B. Hang horizontal track from structural overhead framing with angle or channel hangers bolt fastened in place. Provide sway bracing, diagonal bracing, and reinforcement as required for rigid installation of track and door-operating equipment.

3.3 ADJUSTING

- A. Adjust doors to operate easily, free from warp, twist, or distortion and fitting weathertight for entire perimeter.

3.4 DEMONSTRATION

- A. Startup Services: Engage a factory-authorized service representative to perform startup services and to train Owner's maintenance personnel as specified below:
 1. Test and adjust controls and safety features. Replace damaged and malfunctioning controls and equipment.

2. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.
3. Review data in the maintenance manuals.
4. Schedule training with Owner with at least 7 days advance notice.

3.5 WARRANTIES

- A. Manufacturer to provide two-year performance warranty on high-impact polymer panel, five-year impact warranty on track and one-year warranty on entire door system covering defects in material or workmanship.

Last revised: 6/23/2010

END OF SECTION 08 36 14 00

SECTION 08 38 00 00 - CSF TRAFFIC DOORS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

THIS IS A DIRECT VENDOR ITEM. CONSTRUCTION SUPPLIERS MUST CONTACT THE DIRECT VENDOR AS DIRECTED FOR APPROVED PRICING AND PURCHASING PROCEDURES. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicate information may be inserted at that location. Drawing Coordination Items at end of Section.08 38 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Double action impact resistant traffic doors, security type.
 - 2. Door hardware.
 - 3. Security features.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Provide products complete with accessories, trim, finish, safety guards, and other pertinent devices and details needed for a complete installation and intended use.
- D. Related Sections:
 - 1. Section 055000 - Metal Fabrications: Steel door frames for traffic doors.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position.
 - 2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Indicate door materials, thickness, configuration, and hardware.

2. Shop Drawings:
 - a. Indicate dimensions, details of construction, and installation.
 - b. Indicate relationship to adjoining related Work where cutting, fitting, reinforcement, and anchorage is required for complete installation.
- B. Section 017704 – Closeout Procedures and Training: Procedures for closeout submittals.
 1. Operating and Maintenance Data: Operating and maintenance instruction and parts lists.
 2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver product in manufacturer's original unopened packages with labels legible and intact.
- C. Labels shall identify manufacturer, brand name, model size, finish, and location of installation.
- D. Store double action doors and accessories in unopened packages in protected dry area to prevent damage from environmental and construction operations.
- E. Handle double action doors with care to prevent damage.

1.6 WARRANTY

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Manufacturer warranty to cover all material and labor required to repair or replace doors and door components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. This Product must be manufactured by a USPS Direct Vendor and is subject to a USPS price and requirements purchasing agreement. The following vendor contact must be used:
 1. Chase Industries, Inc., Cincinnati, OH. Ordering POC: Arlene Macht, (800) 543-4455, or website "www.chasedoors.com/usps", user name "usps", password is "doors".
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.

2.2 TRAFFIC DOORS

- A. Model:
 - 1. Chase Industries: Durulite Series 200 Security Doors
- B. Color: Selected by Contracting Officer from manufacturer's standard colors.
- C. Door Body:
 - 1. Per manufacturer's USPS approved construction.
 - 2. Panel skin rate of burning, ASTM D635: "HB" (horizontal burning), no combustion.
 - 3. Panel skin flame spread index, ASTM E84: 275 maximum.
- D. Hardware: The upper pivot shall consist of a V-cam capable of carrying a door weighing 200 pounds. Lift shall be 1-3/8 inches with gravity self-closing action. Door shall be adjustable back and forth and/or up and down.
- E. Gaskets: All gasket materials shall be factory applied and shall include wings to prevent accumulation of dirt. Gaskets shall be on leading edge, back and bottom of each door panel.
- F. Top and Hinge Seal Covers: Top seal shall be made of block reinforced nylon, with black anodized aluminum metal. Stainless steel screws shall be used for fastening to frame. Top and bottom hinge seal covers shall be field installed.
- G. Viewing Area:
 - 1. Per manufacturer's USPS approved construction.
- H. Fasteners: All fasteners and washers, including jamb fasteners shall be made of stainless steel.
- I. Black Spring Polyethylene Bumper/Kick Plate.
 - 1. At Carrier Vestibule: 38 inch high bumpers on both sides of doors with no kickplate.
 - 2. At Mail Vestibule: 38 inch high bumpers on both sides of doors with no kickplate.
- J. Steel Door Frames: Specified in Section 055000.
- K. Directional Signs. USPS standard design:
 - 1. Pictograph for enter. Apply to entry side of panels.
 - 2. Pictograph and "NO EXIT". Apply opposite to entry side of panels for doors providing entry to building.
 - 3. Pictograph and "NO ENTRY". Apply opposite to entry side of panels for doors providing exit from building.

2.3 SECURITY FEATURES

- A. In addition to the items specified above, the following features shall be included in the door units:
 - 1. Lower hinge guard.
 - 2. Cane bolts, minimum 5/8-inch round steel, 12 inches long from tip to elbow (upper) and 36 inches long from tip to elbow (lower).
 - 3. 2 inch chain hole with grommet.
 - 4. Dirt free retainer sleeves for each lower cane bolt, with a depth of at least 3 inches.
 - 5. Double glazed polycarbonate security windows with three (3) 1" x 1/4" vertical steel bars. The vertical bars extend from the top of the door to within 33" of the bottom of the door panel, with a maximum horizontal spacing of 7".

2.4 DOOR STOPS

- A. Overhead door stops, header mount with tabs and contact pads.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that openings are prepared with headers level, jambs plumb, floor level, without projections, and are correctly dimensioned to receive double action doors.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install door unit assembly to manufacturer's published instructions and final shop drawings.
- B. Fit and align door assembly level and plumb.
- C. Use anchorage devices to securely fasten door assembly to door frame construction without distortion or imposed stresses.

3.3 ADJUSTING

- A. Adjust door assembly to provide smooth operation from closed to full open position.

3.4 CLEANING

- A. Section 017300 - Execution: Cleaning installed Work.
- B. Remove protective material from pre-finished surfaces.
- C. Remove labels and visible markings.
- D. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Wipe surfaces clean.

Drawing Coordination Items at end of Section.08 38 00 00

This section describes BMEU Direct Impact Doors used as exterior doors on the BMEU platform.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Double action impact resistant traffic doors, security type.
 - 2. Door hardware.
 - 3. Security features.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Provide products complete with accessories, trim, finish, safety guards, and other pertinent devices and details needed for a complete installation and intended use.
- D. Related Sections:
 - 1. Section 055000 - Metal Fabrications: Steel door frames for traffic doors.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position.
 - 2. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Indicate door materials, thickness, configuration, and hardware.
 - 2. Shop Drawings:
 - a. Indicate dimensions, details of construction, and installation.
 - b. Indicate relationship to adjoining related Work where cutting, fitting, reinforcement, and anchorage is required for complete installation.
- B. Section 017704 – Closeout Procedures and Training: Procedures for closeout submittals.
 - 1. Operating and Maintenance Data: Operating and maintenance instruction and parts lists.

2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver product in manufacturer's original unopened packages with labels legible and intact.
- C. Labels shall identify manufacturer, brand name, model size, finish, and location of installation.
- D. Store double action doors and accessories in unopened packages in protected dry area to prevent damage from environmental and construction operations.
- E. Handle double action doors with care to prevent damage.

1.6 WARRANTY

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Manufacturer warranty to cover all material and labor required to repair or replace doors and door components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. This Product must be manufactured by a USPS Direct Vendor and is subject to a USPS price and requirements purchasing agreement. The following vendor contact must be used:
 1. Chase Industries, Inc., Cincinnati, OH. Ordering POC: Arlene Macht, (800) 543-4455, or website "www.chasedoors.com/usps", user name "usps", password is "doors".
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Not Permitted.

2.2 TRAFFIC DOORS

- A. Model:
 1. Chase Industries: Durulite Series 200 Security Doors
- B. Color: Selected by Contracting Officer from manufacturer's standard colors.

- C. Door Body:
 - 1. Per manufacturer's USPS approved construction.
 - 2. Panel skin rate of burning, ASTM D635: "HB" (horizontal burning), no combustion.
 - 3. Panel skin flame spread index, ASTM E84: 275 maximum.
- D. Hardware: The upper pivot shall consist of a V-cam capable of carrying a door weighing 200 pounds. Lift shall be 1-3/8 inches with gravity self-closing action. Door shall be adjustable back and forth and/or up and down.
- E. Gaskets: All gasket materials shall be factory applied and shall include wings to prevent accumulation of dirt. Gaskets shall be on leading edge, back and bottom of each door panel.
- F. Top and Hinge Seal Covers: Top seal shall be made of block reinforced nylon, with black anodized aluminum metal. Stainless steel screws shall be used for fastening to frame. Top and bottom hinge seal covers shall be field installed.
- G. Viewing Area:
 - 1. Per manufacturer's USPS approved construction.
- H. Fasteners: All fasteners and washers, including jamb fasteners shall be made of stainless steel.
- I. Black Spring Polyethylene Bumper/Kick Plate.
 - 1. At Carrier Vestibule: 38 inch high bumpers on both sides of doors with no kick plate.
 - 2. At Mail Vestibule: 38 inch high bumpers on both sides of doors with no kickplate.
- J. Steel Door Frames: Specified in Section 055000.
- K. Directional Signs. USPS standard design:
 - 1. Pictograph for enter. Apply to entry side of panels.
 - 2. Pictograph and "NO EXIT". Apply opposite to entry side of panels for doors providing entry to building.
 - 3. Pictograph and "NO ENTRY". Apply opposite to entry side of panels for doors providing exit from building.

2.3 SECURITY FEATURES

- A. In addition to the items specified above, the following features shall be included in the door units:
 - 1. Lower hinge guard.
 - 2. Cane bolts, minimum 5/8-inch round steel, 12 inches long from tip to elbow (upper) and 36 inches long from tip to elbow (lower).
 - 3. 2 inch chain hole with grommet.
 - 4. Dirt free retainer sleeves for each lower cane bolt, with a depth of at least 3 inches.
 - 5. Double glazed polycarbonate security windows with three (3) 1" x 1/4" vertical steel bars. The vertical bars extend from the top of the door to within 33" of the bottom of the door panel, with a maximum horizontal spacing of 7".

2.4 DOOR STOPS

- A. Overhead door stops, header mount with tabs and contact pads.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that openings are prepared with headers level, jambs plumb, floor level, without projections, and are correctly dimensioned to receive double action doors.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install door unit assembly to manufacturer's published instructions and final shop drawings.
- B. Fit and align door assembly level and plumb.
- C. Use anchorage devices to securely fasten door assembly to door frame construction without distortion or imposed stresses.

3.3 ADJUSTING

- A. Adjust door assembly to provide smooth operation from closed to full open position.

3.4 CLEANING

- A. Section 017300 - Execution: Cleaning installed Work.
- B. Remove protective material from pre-finished surfaces.
- C. Remove labels and visible markings.
- D. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Wipe surfaces clean.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 6/29/2010

END OF SECTION

SECTION 08 41 13 00 - CSF ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 41 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Aluminum entrance doors.
 - 2. Aluminum storefronts
 - 3. Aluminum windows (fixed and operable)
 - 4. Vision glass and glass infill panels.
 - 5. Door hardware for entrance doors.
 - 6. Perimeter sealant.
- B. Related Documents: The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 084229 - Automatic Entrances.
 - 2. Section 087100 - Door Hardware: Hardware for same, and coordination.
 - 3. Section 088000 - Glazing: Requirements for glazing.

1.2 REFERENCES

- A. Aluminum Association (AA):
 - 1. AA-M12 C22 A41.
- B. American Architectural Manufacturers Association (AAMA):
 - 1. AAMA 605.2.
 - 2. AAMA 701.2.
 - 3. AAMA - Curtain Wall Manual #10
- C. American Society for Testing and Materials (ASTM):

1. ASTM B209.
2. ASTM B221.
3. ASTM A36/A36M.
4. ASTM A386.

1.3 SYSTEM DESCRIPTION

- A. Aluminum entrances and storefront system includes tubular aluminum sections, shop fabricated, factory finished, glass and infill, related flashings, anchorage and attachment devices. System is to be glazed from the interior or exterior.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Product Data:
 - a. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill, door hardware, and internal drainage details.
 2. Shop Drawings:
 - a. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work and expansion and contraction joint location and details.
 3. Samples:
 - a. Aluminum Extrusions: Submit one sample 12 inches (300 mm) long in size illustrating finished aluminum surface.
 - b. Glazing: Submit one sample 12 x 12 inches (300 x 300 mm) in size illustrating finished aluminum glass units, and glazing materials.
 4. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
1. Special Warranty: Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.5 QUALITY ASSURANCE

- A. Qualifications:
1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Handle Products of this section in accordance with AAMA - Curtain Wall Manual #10.

- C. Protect finished aluminum surfaces with strippable coating. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

A. Jobsite Requirements:

1. Install sealants and glazing only when temperature is 40 degrees F. or greater.

NOTE TO SPECIFIER

"REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

1.8 ENVIRONMENTAL REQUIREMENTS

A. Energy Efficiency:

1. Exterior framing system: Provide frame with thermal break for exterior framing systems; provide weather-stripping for doors in exterior frame.

1.9 WARRANTY

A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

B. Special Warranty:

1. The manufacturer/installer shall warrant the product and installation to be free from defective material and workmanship for a period of two years after date of substantial completion, and shall replace or repair any defective component or system, in whole or part, as necessary to restore the product to its original intended state and integrity.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

1. Kawneer Company, Incorporated, Atlanta, GA (770) 449-5555.
2. Other acceptable manufacturers offering equivalent products.
 - a. Amarlite Architectural Aluminum and Glass Co., Tamarac, FL (800) 691-5750.
 - b. EFCO Corporation; Monett, MO. (800) 221-4169.
 - c. Tubelite, Inc., Reed City, MI. (800) 846-2227.
 - d. U.S. Aluminum Corporation, Waxahachie, TX. (800) 627-6440.
 - e. Vistawall Architectural Products, Terrell, TX. (800) 869-4567.

3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Extruded Aluminum: ASTM B221.
- B. Sheet Aluminum: ASTM B209.
- C. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections.
- D. Fasteners: Stainless steel.

2.3 COMPONENTS

NOTE TO SPECIFIER

Option 1 & 2: Use for Medium Standard and Small Standard Buildings.

- A. Framing System: Trifab 451T, by Kawneer, 2 x 4-1/2 inch (50mm x 113mm) nominal dimension, minimum wall thickness of 0.080 inches, extruded aluminum flush glazed framing system with thermal break.
 - 1. Operable window to include:
 - a. Limiters, allowing 4 inch (10 cm) maximum opening at leading edge of window.
 - b. Insect screen installed with security fasteners.
 - c. Locking devices installed with security fasteners. Awning type and hopper type windows require two locking devices, one on each side of the window.
- B. Column Covers: 0.040 inch aluminum, by Kawneer Company, Inc. Finish to match that of storefront system.
- C. Receptor Channel: Model No. 450-038 and 65-025, by Kawneer Company, Inc. Finish to match that of storefront system.

2.4 ENTRANCE DOORS

- A. Doors: Series 350 swing door, medium stile, by Kawneer Company, Inc. Door sizes indicated on Drawings.
 - 1. Vertical Stile: 3-1/2 inch (88mm), single piece.
 - 2. Top Rail: 3-1/2 inch (88mm), single piece.
 - 3. Bottom Rail: 10 inch (250mm), single piece.
 - 4. Glazing: 1/4 inch (6mm) thick units per Section 088000, with standard bevel glass stops.

2.5 GLASS AND GLAZING MATERIALS

- A. Glazing Materials: As specified in Section 088000.

2.6 SEALANT MATERIALS

- A. Sealant and Backing Materials:
 - 1. Perimeter Sealant: Type as specified in Section 079200.
 - 2. Sealant Used Within System (Not Used for Glazing): Type as specified in Section 079200.

2.7 HARDWARE

- A. Verify hardware components specified in Section 087100.
- B. Closers: See Section 087100.
- C. Hinges: Door manufacturer's standard three pairs of butt hinges with non-removable pins. Finish: #14 Clear Anodized.
- D. Locking Devices: See Section 087100.
- E. Pulls: Type CO-9 pull, by Kawneer Company, Inc. Finish: [#14 Clear Anodized][_____].
- F. Exit Devices: See Section 087100.
- G. Weatherstripping, for Exterior Doors only:
 - 1. Head and Jamb: Replaceable wool, polypropylene, or nylon wool pile with aluminum strip backing, recessed in frame; AAMA 701.2.
 - 2. Sill: Semi-rigid polymeric material on aluminum anodized to match door; EPDM sweep strip; 38-560 by Kawneer or similar by other named manufacturers.
- H. Threshold: See Section 087100.

2.8 FINISHES

- A. Exposed Aluminum Surfaces: Architectural Class I anodic coating, AA-M12 C22 A41, #14 Clear, unless otherwise indicated on Drawings.
- B. Maintain same color range on doors, frames and other components. Do not mix light and dark shades.
- C. Concealed Steel Items: Galvanized in accordance with ASTM A386 to 2.0 oz/sq. ft.
- D. Apply two coats of bituminous paint to concealed aluminum and steel surfaces in contact with cementitious or dissimilar materials.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.

- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install wall system in accordance with manufacturer's instructions.
- B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.
- C. Provide alignment attachments and shims to permanently fasten system to building structure.
- D. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.
- E. Provide thermal isolation where components penetrate or disrupt building insulation.
- F. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.
- G. Coordinate attachment and seal of perimeter air and vapor barrier materials.
- H. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.
- I. Set thresholds in bed of mastic and secure.
- J. Install hardware using templates provided. Refer to Section 087100 for installation requirements.
- K. Install glass in accordance with Section 088000.
- L. Install perimeter sealant, backing materials, and installation criteria in accordance with Section 079200.
- M. Install automatic door operators and actuators in accordance with Section 084229.

3.3 ADJUSTING

- A. Section 017300 - Execution: Adjusting installed work.
- B. Adjust operating hardware [and sash] for smooth operation.

3.4 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Remove protective material from pre-finished aluminum surfaces.
- C. Wash down exposed surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.
- D. Remove excess sealant by method acceptable to sealant manufacturer.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 41 13 00 - MPF ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Lobby entrances.
- B. Exterior windows.
- C. Interior doors.
- D. Door hardware (except cylinders).
- E. Perimeter sealant
- F. Security revolving doors are specified in Section 111415 - Turnstiles.

1.2 SUBMITTALS

- A. Product Data: Required
- B. Shop Drawings: Required
- C. Samples: Required

1.3 QUALITY ASSURANCE

- A. Performance Requirements:
 - 1. Air leakage: 0.06 cfm/min/sq ft (0.0003 cu m/s/sq m) of wall area, measured at a reference differential pressure across assembly of 1.57psf (75 Pa).
 - 2. Water leakage: None, when measured in accordance with ASTM E 331 with a Pressure difference of 2.86 lbf/sq ft (136.85 N/sq m.).

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Source: Kawneer, Tubelite, Vistawall.
- B. Frame: 1 3/4" x 4 1/2" profile with thermal break and applied glazing stops.
- C. Doors: Narrow Stile.
- D. Glass and glazing Materials

E. Sealant and Backing Materials

2.2 FABRICATION

A. Reinforced Mullions: Profile as required with internal steel reinforcement.

1. Extruded Aluminum: ASTM B221
2. Sheet Aluminum: ASTM B209
3. Steel Sections: ASTM A36/A36M; shaped to suit mullion sections
4. Fasteners: Stainless Steel

B. Shop/Factory Finishing:

1. Exterior and Interior Installations: Kynar 500 or Hylan Fluoropolymer.

PART 3 – EXECUTION

3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013

Last revised: 3/31/2010

END OF SECTION 08 41 13 00

SECTION 08 42 29 00 - CSF AUTOMATIC ENTRANCES**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where automatic entrance doors are part of the Work.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

The standard plans show swinging entrance doors. They will need to be revised if sliding doors are used. The standard plans show sliding entrance doors. They will need to be revised if swinging doors are used.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Automatic sliding entrance doors with automatic actuators.

NOTE TO SPECIFIER

For standard automatic sliding doors, retain paragraph above and delete paragraph below. For optional automatic swinging doors delete paragraph above and retain paragraph below.

2. Entrance doors with full energy automatic operators and automatic actuators.
3. Entrance doors with low energy automatic operators and push plate actuators.

- #### B. Related Documents:
- The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 084113, Aluminum-Framed Entrances and Storefronts
2. Section 087100, Door Hardware
3. Section 088000, Glazing
4. Division 16, Electrical: 115 volt AC, minimum 15 amp (for two operators), single-phase wiring in conduit between operator enclosure and building power supply and low voltage wiring between enclosure and actuators. Wiring is to be concealed. Surface wiring is not permitted.

- #### D. Automatic doors shall be installed by a factory representative and will include all accessories, trim, finish, safety guards, hardware and other pertinent devices and details needed for a complete installation and intended use.

1.2 REFERENCES

A. American National Standard Institute (ANSI):

1. ANSI/BHMA A156.10, American National Standard for Power Operated Pedestrian Doors.
2. ANSI/BHMA A156.19, American National Standard for Power Assist and Low Energy Power Operated Doors.

NOTE TO SPECIFIER

For optional automatic swinging doors, retain paragraph above and delete paragraph below. For standard automatic sliding doors delete paragraph above and retain paragraph below.

3. ANSI/BHMA A156.10, American National Standard for Power Operated Pedestrian Doors..
4. ANSI A156.3, National Standard for Exit devices.
5. ANSI A156.13 - National Standard for Mortise Locks & Latches.

B. Underwriter's Laboratories (UL):

1. UL #325, Standard for Door, Drapery, Gate, Louver and Window Operators and Systems.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer's catalog data, detail sheets, installation data and specifications.
 - a. Shop Drawings: Prepared specifically for this project, showing profiles, door dimensions, location of components, joining method and anchorage details, adjacent construction interface, operators, actuators and wiring diagrams.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Automatic doors will be manufactured and installed by the Factory Authorized Contractor.

B. Pre-Installation Meetings:

1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
2. Require attendance of parties directly affecting Work of this Section.
3. Review conditions of operations, procedures and coordination with related Work.

1.5 DELIVERY, STORAGE, AND HANDLING

- ### A. Comply with Section 016000 - Product Requirements: Manufacturer will pack and transport Product(s) to the job site. Receive, handle, store, and protect Products.

1.6 WARRANTY

- ### A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

- B. Manufacturer warranty to cover all material and labor required to repair or replace automatic doors and door components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

1.7 MAINTENANCE

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Operating Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who receive training. Refer to 017704 1.3, 1.4 and 1.5 for more specific training requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Door glazing must be included in the basic door package but is available from supplier.
- B. A two-year warranty on parts and labor is required.
- C. The following manufacturers are basis for design:
 - 1. Stanley Access Technologies LLC, Stanley Security Solutions Company, 735 Thiebes, Labadie, MO 63055,
- D. Alternate equivalent products by the following manufacturers may be used:
 - 1. Besam Assa Abloy, 1900 Airport Road, Monroe, N.C. 28110.
 - 2. Horton Entry Solutions, www.hortondoors.com
- E. Comply with Section 016000 - Product Requirements: Product substitutions: Follow same product solutions.

2.2 AUTOMATIC SLIDING DOORS

- A. MODEL:
 - 1. Stanley: Dura-Glide 2000 Bi-Parting.
- B. MODEL:
 - 1. Stanley: Dura-Glide 2000 Single-Sliding.
 - 2. Stanley: Dura-Glide 2000 By-Pass Sliding.
- C. MATERIALS
 - 1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Headers, stiles, rails, and frames: 6063-T6
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - c. Sheet and Plate: ASTM B 209
 - 2. Sealants and Joint Fillers: Performed under Division 7 Section "Joint Sealants".
- D. AUTOMATIC ENTRANCE DOOR ASSEMBLIES

1. Provide manufacturer's standard automatic entrance door assemblies including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for a complete installation.
2. Sliding Automatic Entrance Doors:
 - a. Bi-Parting sliding doors:
 - 1) Configuration: Two sliding leaves and two full sidelites.
 - 2) Traffic Pattern: Two-way.
 - 3) Emergency Breakaway Capability: Sliding leaves only.
 - 4) Mounting: Between jambs
3. Sliding Automatic Entrance Doors:
 - a. Single Slide sliding doors:
 - 1) Configuration: One sliding leaf and one full sidelite.
 - 2) Traffic Pattern: Two-way or Directional (as required).
 - 3) Emergency Breakaway Capability: Sliding leaves only.
 - 4) Mounting: Between jambs
 - b. By-Pass sliding doors:
 - 1) Configuration: Two sliding leaves and one full center lite.
 - 2) Traffic Pattern: Two-way or Directional (as required).
 - 3) Emergency Breakaway Capability: Sliding leaves only.
 - 4) Mounting: Between jambs

E. COMPONENTS

1. Framing Members: Manufacturer's standard extruded aluminum reinforced as required to support imposed loads.
 - a. Nominal Size: 1 3/4 inch by 4 1/2 inch (45 by 115mm)
2. Stile and Rail Doors and Sidelites: Manufacturer's standard 1 3/4 inch (45 mm) thick glazed doors with extruded-aluminum tubular stile and rail members. Incorporate concealed tie-rods that span full length of top and bottom rails or mechanically fasten corners with reinforcing brackets that are welded.
 - a. Glazing Stops and Gaskets: Snap-on, extruded-security aluminum stops and preformed gaskets.
 - b. Stile Design: Narrow stile; 2 inch (51 mm) nominal width.
 - c. Bottom Rail Design: 10 inch (255 mm) nominal height.
 - d. Muntin Bars: Horizontal tubular rail member for each door; 2 inch (51 mm) nominal width.
3. Glazing: 1/4 inch (6mm) clear tempered glass.
4. Headers: Fabricated from extruded aluminum and extending full width of automatic entrance door units to conceal door operators, carrier assemblies, and roller tracks. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
 - a. Mounting: Concealed, with one side of header flush with framing.
 - b. Capacity: Capable of supporting doors up to 220 lb (100 kg) per leaf over spans up to 14 feet (4.3 m) without intermediate supports.
5. Carrier Assemblies and Overhead Roller Tracks: Manufacturer's standard carrier assembly that allows vertical adjustment of at least 1/8 inch; consisting of urethane with precision steel lubricated ball-bearing wheels, operating on a continuous roller track. Support doors from carrier assembly by 2 inch diameter anti-riser wheels with factory adjusted cantilever and pivot assembly. Minimum two ball-bearing roller wheels and two anti-rise rollers for each active leaf.
 - a. Minimum Load Wheel Diameter: 2 1/2 inch (64 mm).

6. Thresholds: Manufacturer's standard thresholds as indicated below:
 - a. Continuous standard tapered extrusion double bevel.
 - b. All thresholds to conform to details and requirements for code compliance.
7. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
8. Signage: Provide signage in accordance with ANSI/BHMA A156.10.

F. DOOR OPERATORS

1. Provide door operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, operation under normal traffic load for type of occupancy indicated.
2. Electromechanical Operators: Self-contained overhead unit powered by a minimum of 1/4 horsepower, permanent-magnet DC motor with gear reduction drive, microprocessor controller; and encoder.
 - a. Operation: Power opening and power closing.
 - b. Features:
 - 1) Adjustable opening and closing speeds.
 - 2) Adjustable back-check and latching.
 - 3) Adjustable braking.
 - 4) Adjustable hold-open time between 0 and 30 seconds.
 - 5) Obstruction recycle.
 - 6) On/Off switch to control electric power to operator.
 - 7) Energy conservation switch that reduces door-opening width.
 - 8) Variable rate open/closed speed control.
 - 9) Closed loop speed control with active braking and acceleration.
 - 10) Variable obstruction recycle time delay.
 - 11) Self adjusting stop position.
 - 12) Self adjusting closing compression force.
 - 13) Optional Switch to open/Switch to close operation.
 - c. Mounting: Concealed.
 - d. Drive System: Synchronous belt type.
 - e. Actuators: Stanley SU-100 Motion Sensors and StanGuard presence sensor.
 - f. Door Operators: Completely electro-mechanical. Comply with ANSI A156.10 and UL 325.
3. Electrical service to door operators shall be provided under Division 16 Electrical. Minimum service to be 120 VAC, 10 amps

G. ELECTRICAL CONTROLS

1. Electrical Control System: Electrical control system shall include a microprocessor controller and position encoder. The encoder shall monitor revolutions of the operator shaft and send signals to microprocessor controller to define door position and speed. Systems utilizing external magnets and magnetic switches are not acceptable. A single controller shall be capable of controlling up to 2 operators per entrance system.
2. Life Cycle Data Counter: The microprocessor control shall incorporate a non-re-settable counter to track door operation cycles.
3. Controller Protection: The microprocessor controller shall incorporate the following features to ensure trouble free operation:
 - a. Automatic Reset Upon Power Up
 - b. Fuse Protection

- c. Electronic Surge Protection
 - d. Internal Power Supply Protection.
 - e. Software "Watchdog" protection in the case of software malfunction.
4. Soft Start/Stop: A "soft-start" "soft-stop" motor driving circuit shall be provided for smooth normal opening and recycling.
 5. Safety Search Circuitry: Provide system to recycle the sliding panels when an obstruction is encountered during the closing cycle. If an obstruction is detected, the system shall search for that object on the next closing cycle by reducing door closing speed prior to the previously encountered obstruction location, and will continue to close in check speed until doors are fully closed, at which time the doors will reset to normal speed. If obstruction is encountered again, the door will come to a full stop. The doors shall remain stopped until obstruction is removed and operate signal is given, resetting the door to normal operation.
 6. Programmable Controller: Microprocessor controller shall be programmable and shall be designed for connection to a local configuration tool. Local configuration tool shall be software driven and shall be utilized via Palm® handheld interface. The following parameters may be adjusted via the configuration tool.
 - a. Operating speeds and forces as required to meet ANSI/BHMA A156.10.
 - b. Adjustable and variable features as specified in 2.05, B., 2.
 - c. Reduced opening position.
 - d. Firmware update.
 - e. Trouble Shooting
 - 1) I/O Status.
 - 2) Electrical component monitoring including parameter summary.
 - f. Entrance profile copy/paste.

Software for local configuration tool shall be available as a free download from the sliding automatic entrance manufacturer's internet site.

H. ACTIVATION AND SAFETY DEVICES

1. Motion Sensors: Motion sensors shall be mounted on each side of door header to detect pedestrians in the activating zone, and to provide a signal to open doors in accordance with ANSI/BHMA A156.10. Units shall be programmable for bi-directional or uni-directional operation and shall incorporate K-band microwave frequency to detect all motion in both directions.
2. Presence Sensors: Presence sensors shall be provided to sense people or objects in the threshold safety zone in accordance with ANSI/BHMA A156.10. Units shall be self-contained, fully adjustable, and shall function accordingly with motion sensors provided. The sensor shall be enabled simultaneously with the door-opening signal and shall emit an elliptical shaped infrared presence zone, centered on the doorway threshold line. Presence sensors shall be capable of selectively retuning to adjust for objects which may enter the safety zone; tuning out, or disregarding, the presence of small nuisance objects and not tuning out large objects regardless of the time the object is present in the safety zone. The door shall close only after all sensors detect a clear surveillance field.
3. Photoelectric Beams: In addition to the threshold sensor include a minimum of two (2) doorway holding beams. Photoelectric beams shall be pulsed infrared type, including sender receiver assemblies for recessed mounting.

I. HARDWARE

1. Provide units in sizes and types recommended by automatic entrance door and hardware manufacturers for entrances and uses indicated.

2. Emergency Breakaway Feature: Provide release hardware that allows panel(s) to swing out in direction of egress to full 90 degrees from any position in sliding mode. Maximum force to open panel shall be 50 lbf (222 N) according to ANSI/BHMA A156.10. Interrupt powered operation of panel operator while in breakaway mode.
 - a. Emergency breakaway feature shall include at least one adjustable detent device mounted in the top of each breakaway panel to control panel breakaway force.
3. Deadlocks: Manufacturer's standard deadbolt operated by exterior cylinder and interior thumb turn; with minimum 1 inch (25 mm) long throw bolt; ANSI/BHMA A156.5, Grade 1.
 - a. Cylinders: As specified in Division 8 Section "Door Hardware".
 - b. Hook Latch: Laminated-steel hook, mortise type, BHMA A156.5, Grade 1.
 - c. Two-Point Locking: Provide locking system that incorporates a device in the stile of active door leaves that automatically extends a flush bolt into overhead carrier assembly.
4. Control Switch: Provide manufacturer's standard header mounted rocker switches to allow for full control of the automatic entrance door. Controls to include, but are not limited to:
 - a. Power On/Off
 - b. Reduced Opening
 - c. Open/Closed/Automatic
5. Sliding Weather Stripping: Manufacturer's standard replaceable components complying with AAMA 701; made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
6. Weather Sweeps: Manufacturer's standard adjustable nylon brush sweep mounted to underside of door bottom.

J. FABRICATION

1. Factory fabricates automatic entrance door assembly components to designs, sizes, and thickness indicated and to comply with indicated standards.
 - a. Form aluminum shapes before finishing.
 - b. Use concealed fasteners to greatest extent possible.
 - 1) Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - 2) Reinforce members as required to receive fastener threads.
2. Framing: Provide automatic entrance doors as prefabricated assemblies.
 - a. Fabricate tubular and channel frame assemblies with manufacturer's standard mechanical or welded joints. Provide sub-frames and reinforcement as required for a complete system to support required loads.
 - b. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 - c. Form profiles that are sharp, straight, and free of defects or deformations.
 - d. Prepare components to receive concealed fasteners and anchor and connection devices.
 - e. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.
3. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
4. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.
5. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated.

6. Hardware: Factory install hardware to the greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site.

K. DOOR AND HARDWARE PACKAGE

- 2 ea. Stanley Dura-Glide 2000 Bi-Parting sliding door package (Package Height = 96")
 - Finish: [clear anodized][dark bronze anodized]
 - Glass: 1/4" clear tempered safety glass
 - StanGuard Overhead Safety System
 - Emergency break-away on active leafs
 - Fixed sidelites
 - Narrow stile doors
 - 2" Muntin
 - 10" Bottom rails
 - Alarm contacts
- 4 ea. Stanley SU-100 motion sensor
- 4 ea. Doorway holding beam
- 2 ea. 6" Double beveled thresholds

For exterior door:

- 1 ea. Adams Rite 2-point MS lock [clear anodized][dark bronze anodized] finish
- 1 ea. Best 1E76 C181 RP3 cylinder w/construction core, [626 satin chromium plated][_____]
finish

L. DOORS AND HARDWARE PACKAGE

1. For exterior doors:

- 2 ea. Stanley Dura-Glide 2000 Single-sliding door package
 - Finish: [clear anodized][dark bronze anodized]
 - Glass: 1/4" clear tempered safety glass
 - StanGuard Overhead Safety System
 - Emergency break-away on active leafs
 - Fixed sidelites
 - Narrow stile doors
 - 2" Muntin
 - 10" Bottom rails
 - Alarm contacts
- 4 ea. Stanley SU-100 motion sensor
- 4 ea. Doorway holding beam
- 2 ea. 6" Double beveled thresholds
- 2 ea. Adams Rite 2-point MS lock [clear anodized][dark bronze anodized] finish

For interior storefront doors:

- 1 ea. Stanley Dura-Glide 2000 By-Pass Sliding door package
 - Finish: [clear anodized][dark bronze anodized]
 - Glass: 1/4" clear tempered safety glass
 - StanGuard Overhead Safety System
 - Emergency break-away on active leafs
 - Fixed center lite
 - Narrow stile doors
 - 2" Muntin
 - 10" Bottom rails
 - Alarm contacts
- 4 ea. Stanley SU-100 motion sensor
- 4 ea. Doorway holding beam
- 1 ea. 6" Double beveled thresholds
- 2 ea. Adams Rite 2-point MS lock [clear anodized][dark bronze anodized] finish

NOTE TO SPECIFIER

For standard automatic sliding doors, retain paragraph above and delete paragraph below. For optional automatic swinging doors delete paragraph above and retain paragraph below.

2.3 AUTOMATIC SWINGING DOORS

A. Model:

1. Stanley: Magic Force Swing, set for full energy operation.
2. Stanley: Magic Force Swing, set for low energy operation.

B. MATERIALS

1. Automatic Swinging Doors: Includes all required hardware and accessories except glazing.
 - a. Type: Single swinging with heavy duty extruded aluminum frame.
 - 1) Hinge: Center pivot.
 - 2) Vertical Stile: 3-1/2 inch (88mm), single piece.
 - 3) Top Rail: 3-1/2 inch (88mm), single piece.
 - 4) Bottom Rail: 10 inch (250mm), single piece.
 - b. Finish: [Clear anodized aluminum][Dark bronze anodized aluminum][Factory applied Kynar paint, color to match storefront system. There is a longer than standard lead time for painted finish.].
 - c. Control box with operator arm, as supplied in the standard Stanley package:
 - 1) Surface mounted above door.
 - 2) Finish to match door.
 - 3) On-off key switch.
 - d. Glazing: 1/4" clear tempered glasstype 3 or 7 as shown on drawings and provided in Section 088000, with standard bevel glass stops.
 - e. Weatherstripping: Interior and Exterior Doors
 - 1) Head and Jamb: As supplied in the standard Stanley package.
 - 2) Sill: As supplied in the standard Stanley package.
 - f. Finger Guard: As supplied in the standard Stanley package.
 - g. Signs: Decals applied to doors as supplied in the standard Stanley package, complying with ANSI A156.19 and applicable codes.
2. Door Actuators.
 - a. Actuators: Stanley SU-100 Motion Sensors and Sentrex presence sensor.
 - b. Actuators: Stanley push plate switches on exterior and interior.
 - 1) Material: Stainless steel.
 - 2) Marking: "PRESS TO OPEN" with HC logo.
 - 3) Actuators shall be hard-wired to door operators, per manufacturer's recommendations. Radio controlled actuators are not acceptable.
3. Door Operators: Completely electro-mechanical. Comply with ANSI A156.10 and UL 325.
4. Door Operators: Completely electro-mechanical. Comply with ANSI A156.19 and UL 325.
 - a. Power Open Operation: The operator shall open and stop the door in the open position by electrically reducing the motor voltage and stalling against a field adjustable 80 to 135 degree positive stop.
 - b. Full Energy / Low Energy Selectable: The microprocessor control shall be easily field adjustable to comply with ANSI A156.10 - Full Energy Code requirements or ANSI A156.19 - Low Energy Code requirements. Field adjustments for door-opening speed, door-opening force, door-closing speed, and door-closing force shall be provided without the requirement for additional components.
 - c. Non-Handed Operation: The operator shall have the ability to be converted from right hand to left hand operation with simple field modifications.

- d. Field Adjustable Compression Spring Closing Operation: The operator shall close the door by adjustable spring energy. Employing the motor, as a dynamic brake shall aide-closing speed.
- e. Independent Adjustable Closing and Latching Speed Control: The operator shall employ a rheostat module to allow for easy, independent field adjustment of closing and latching speeds using the motor as a dynamic brake.
- f. Manual Use: The operator shall function as a manual door closer in the direction of swing with or without electrical power.
- g. Emergency Release: The operator shall have a built-in emergency release with controlled spring return to the closed position without manual resetting. While the door is in the emergency release mode, a disconnect switch shall prevent powered operation.
- h. Electrical Controls: Field adjustments for door-opening speed, door-opening force, door-closing speed, door-closing force shall be provided without the requirement for additional components. Provide remotely located "On-Off-Hold Open" key-switch.
- i. Power supply required: 115 volts AC, minimum 15 amps. Control circuits for actuators: Low voltage, NEC Class II.
- j. Operator Enclosure: Overhead enclosure concealing all operating parts except arms and manual control switches.

C. DOORS AND HARDWARE

1. Automatic swinging entrance doors:

- 4 ea. Stanley Magic Force Swing full energy door with concealed header
- 4 ea. Stanley SU-100 motion sensor
- 4 ea. Stanley Sentrex presence sensor
- 8 ea. Guide rails, [clear anodized][dark anodized][] finish
- 4 ea. 4-foot beveled aluminum threshold

For exterior ingress door:

- 1 ea. Adams Rite MS1850S-210 lock [clear anodized][dark bronze anodized] finish
- 2 ea. Best 1E76 C181 RP3 cylinder w/construction core, [626 satin chromium plated][] finish

For exterior egress door:

- 1 ea. PR2403CD EO Exit Device, [628 satin aluminum, clear anodized][] finish
- 1 ea. Best 1E74 C4 RP3 w/construction core, [clear anodized][dark bronze anodized][] finish
- 1 ea. PRTS2403CD Switch

2. Refer to the attached Stanley package for USPS CSF Small Plan 40, 50 and 65a Facilities with automatic swinging entrance doors, which includes the following:

- 3 ea. Stanley Magic Force Swing low energy door with concealed header
- 6 ea. Stanley push plate actuator
- 3 ea. 4-foot beveled aluminum threshold
- 3 ea. PR2403CD 2003C Exit Device, [628 satin aluminum, clear anodized][] finish
- 3 ea. Best 1E72 RP2 cylinder w/construction core, [626 satin chromium plated][] finish
- 3 ea. Best 1E74 C4 RP3 w/construction core for dogging, [clear anodized][dark bronze anodized][] finish

3. Stanley package for USPS CSF Small Plan 80a and 100a Facilities with automatic swinging entrance doors, which includes the following:

- 4 ea. Stanley Magic Force Swing low energy door with concealed header
- 6 ea. Stanley push plate actuator
- 3 ea. 4-foot beveled aluminum threshold

For interior storefront ingress:

- 1 ea. Kawneer CP-2 Push bar, [clear anodized][bronze anodized][] finish
- 1 ea. Adams Rite MS1850S-210 lock with hook deadbolts [clear anodized][dark bronze anodized] finish

2 ea. Best 1E76 C181 RP3 cylinder w/construction core, [626 satin chromium plated][_____] finish

For interior storefront egress:

1 ea. PR2401CD 2001 Exit Device, [628 satin aluminum, clear anodized][_____] finish

1 ea. Best 1E74 C4 RP3 w/construction core, [clear anodized][dark bronze anodized][_____] finish

For exterior doors:

2 ea. PR2403CD 2003C Exit Device, [628 satin aluminum, clear anodized][_____] finish

2 ea. Best 1E72 RP2 cylinder w/construction core, [626 satin chromium plated][_____] finish

2 ea. Best 1E74 C4 RP3 w/construction core, [clear anodized][dark bronze anodized][_____] finish

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that door openings and doors are properly installed and ready for installation of automatic door equipment.
 - 2. Verify that electrical service is available, properly located and of proper type.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

A. Installation by manufacturer in compliance with ANSI A156.10.

B. Installation by manufacturer in compliance with ANSI A156.10.

NOTE TO SPECIFIER

For standard automatic sliding doors, retain paragraph above and delete paragraph below. For optional automatic swinging doors delete paragraph above and retain paragraph below.

C. Installation by manufacturer in compliance with ANSI A156.10.

- 1. Coordinate the mounting height of the required signs on the doors with USPS "station ID", "Hours of Operation" or other door mounted vinyls.

D. Verify that electrical connections are made correctly.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.

3.4 ADJUST AND CLEAN

- A. Adjust doors and operators for proper operation, without binding, scraping or excessive noise.
- B. Adjust operators in compliance with ANSI A156.10.

NOTE TO SPECIFIER

For standard automatic sliding doors, retain paragraph above and delete paragraph below. For optional automatic swinging doors delete paragraph above and retain paragraph below.

- C. Adjust operators for full energy operation, in compliance with ANSI A156.10.
- D. Adjust operators for low energy operation, in compliance with ANSI A156.19.

3.5 PROTECTION

- A. Protect finishes until substantial completion.
- B. OPERATING INSTRUCTION
 - 1. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation.
 - 2. Provide one complete set of equipment operating, installation, and programming manuals that will remain at the installed location.

USPS CSF Specifications issued: 10/1/2013
Last revised: 9/17/2013

END OF SECTION 08 42 29 00

SECTION 08 42 29 00 - MPF AUTOMATIC ENTRANCES**

NOTE TO SPECIFIER

Use this Outline Specification Section for BMEUs at Mail Processing Facilities (MPF) where automatic entrance doors are part of the Work.

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - *****

*****GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Automatic sliding entrance doors with automatic actuators.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 084113, Aluminum-Framed Entrances and Storefronts
 - 2. Section 087100, Door Hardware
 - 3. Section 088000, Glazing
 - 4. Division 16, Electrical: 115 volt AC, minimum 15 amp (for two operators), single-phase wiring in conduit between operator enclosure and building power supply and low voltage wiring between enclosure and actuators. Wiring is to be concealed. Surface wiring is not permitted.
- D. Automatic doors shall be installed by a factory authorized representative and will include all accessories, trim, finish, safety guards, hardware and other pertinent devices and details needed for a complete installation and intended use.

1.2 REFERENCES

- A. American National Standard Institute (ANSI):
 - 1. ANSI/BHMA A156.10, American National Standard for Power Operated Pedestrian Doors.
 - 2. ANSI A156.3, National Standard for Exit devices.
 - 3. ANSI A156.13 - National Standard for Mortise Locks & Latches.
- B. Underwriter's Laboratories (UL):
 - 1. UL #325, Standard for Door, Drapery, Gate, Louver and Window Operators and Systems.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Manufacturer's catalog data, detail sheets, installation data and specifications.
 - a. Shop Drawings: Prepared specifically for this project, showing profiles, door dimensions, location of components, joining method and anchorage details, adjacent construction interface, operators, actuators and wiring diagrams.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Operating and Maintenance Data: Operating and maintenance instructions, parts lists and wiring diagrams.
2. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Automatic doors will be manufactured and installed by the Factory Authorized Contractor.
- B. Pre-Installation Meetings:
 1. Convene a pre-installation meeting one week prior to commencing Work of this Section.
 2. Require attendance of parties directly affecting Work of this Section.
 3. Review conditions of operations, procedures and coordination with related Work.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Comply with Section 016000 - Product Requirements: Manufacturer will pack and transport Product(s) to the job site. Receive, handle, store, and protect Products.

1.6 WARRANTY

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Manufacturer warranty to cover all material and labor required to repair or replace automatic doors and door components for a period of two years from time of acceptance by USPS, within a guaranteed maximum repair response time of ten (10) calendar days.

1.7 MAINTENANCE

- A. Comply with Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Operating Instruction: Document training by furnishing a sign-in sheet with a description of the training provided, instructors name and organization and those who receive training. Refer to 017704 1.3, 1.4 and 1.5 for more specific training requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Door glazing **must be** included in the basic door package but is available from supplier.
- B. A two-year warranty on parts and labor is included.
- C. Manufacturer:
 - a. Stanley Access Technologies LLC, Stanley Security Solutions Company, 735 Thiebes, Labadie, MO 63055, Attn.
- D. Alternate equivalent products by the following manufacturers may be used:

1. Besam Assa Abloy, 1900 Airport Road, Monroe, N.C. 28110.
2. Horton Entry Solutions, www.hortonddoors.com

- E. Comply with Section 016000 - Product Requirements: Product substitutions: Follow same product solutions.

2.2 AUTOMATIC SLIDING DOORS

A. Model:

1. Stanley: Dura-Glide 2000 Bi-Parting.

B. MATERIALS

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
 - a. Headers, stiles, rails, and frames: 6063-T6
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
 - c. Sheet and Plate: ASTM B 209
2. Sealants and Joint Fillers: Performed under Division 7 Section "Joint Sealants".

C. AUTOMATIC ENTRANCE DOOR ASSEMBLIES

1. Provide manufacturer's standard automatic entrance door assemblies including doors, sidelites, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for a complete installation.
2. Sliding Automatic Entrance Doors:
 - a. Bi-Parting sliding doors:
 - 1) Configuration: Two sliding leaves and two full sidelites.
 - 2) Traffic Pattern: Two-way.
 - 3) Emergency Breakaway Capability: Sliding leaves only.
 - 4) Mounting: Between jambs

D. COMPONENTS

1. Framing Members: Manufacturer's standard extruded aluminum reinforced as required to support imposed loads.
 - a. Nominal Size: 1 3/4 inch by 4 1/2 inch (45 by 115mm)
2. Stile and Rail Doors and Sidelites: Manufacturer's standard 1 3/4 inch (45 mm) thick glazed doors with extruded-aluminum tubular stile and rail members. Incorporate concealed tie-rods that span full length of top and bottom rails or mechanically fasten corners with reinforcing brackets that are welded.
 - a. Glazing Stops and Gaskets: Snap-on, extruded-security aluminum stops and preformed gaskets.
 - b. Stile Design: Narrow stile; 2 inch (51 mm) nominal width.
 - c. Bottom Rail Design: 10 inch (255 mm) nominal height.
 - d. Muntin Bars: Horizontal tubular rail member for each door; 2 inch (51 mm) nominal width.
3. Glazing: 1/4 inch (6mm) clear tempered glass.
4. Thresholds: Manufacturer's standard thresholds as indicated below:
 - a. Continuous standard tapered extrusion double bevel.
 - b. All thresholds to conform to details and requirements for code compliance.
5. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
6. Signage: Provide signage in accordance with ANSI/BHMA A156.10.

E. DOOR OPERATORS

1. Provide door operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, operation under normal traffic load for type of occupancy indicated.
2. Electrical service to door operators shall be provided under Division 16 Electrical. Minimum service to be 120 VAC, 10 amps.

F. ELECTRICAL CONTROLS

1. Electrical Control System: Electrical control system shall include a microprocessor controller and position encoder. The encoder shall monitor revolutions of the operator shaft and send signals to microprocessor controller to define door position and speed. Systems utilizing external magnets and magnetic switches are not acceptable. A single controller shall be capable of controlling up to 2 operators per entrance system.

G. ACTIVATION AND SAFETY DEVICES

1. Motion Sensors: Motion sensors shall be mounted on each side of door header to detect pedestrians in the activating zone, and to provide a signal to open doors in accordance with ANSI/BHMA A156.10. Units shall be programmable for bi-directional or uni-directional operation and shall incorporate K-band microwave frequency to detect all motion in both directions.
2. Presence Sensors: Presence sensors shall be provided to sense people or objects in the threshold safety zone in accordance with ANSI/BHMA A156.10. Units shall be self-contained, fully adjustable, and shall function accordingly with motion sensors provided. The sensor shall be enabled simultaneously with the door-opening signal and shall emit an elliptical shaped infrared presence zone, centered on the doorway threshold line. Presence sensors shall be capable of selectively retuning to adjust for objects which may enter the safety zone; tuning out, or disregarding, the presence of small nuisance objects and not tuning out large objects regardless of the time the object is present in the safety zone. The door shall close only after all sensors detect a clear surveillance field.
3. Photoelectric Beams: In addition to the threshold sensor include a minimum of two (2) doorway holding beams. Photoelectric beams shall be pulsed infrared type, including sender receiver assemblies for recessed mounting.

H. HARDWARE

1. Provide units in sizes and types recommended by automatic entrance door and hardware manufacturers for entrances and uses indicated.

I. FABRICATION

1. Factory fabricates automatic entrance door assembly components to designs, sizes, and thickness indicated and to comply with indicated standards.
 - a. Form aluminum shapes before finishing.
 - b. Use concealed fasteners to greatest extent possible.
 - 1) Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - 2) Reinforce members as required to receive fastener threads.
2. Framing: Provide automatic entrance doors as prefabricated assemblies.
 - a. Fabricate tubular and channel frame assemblies with manufacturer's standard mechanical or welded joints. Provide sub-frames and reinforcement as required for a complete system to support required loads.
 - b. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
 - c. Form profiles that are sharp, straight, and free of defects or deformations.
 - d. Prepare components to receive concealed fasteners and anchor and connection devices.

3. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.
4. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.
5. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated.
6. Hardware: Factory install hardware to the greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site.

J. DOORS AND HARDWARE PACKAGE

- 2 ea. Stanley Dura-Glide 2000 Bi-Parting sliding door package

Finish: [clear anodized][dark bronze anodized]

Glass: 1/4" clear tempered safety glass

StanGuard Overhead Safety System

Emergency break-away on active leafs

Fixed sidelites

Narrow stile doors

2" Muntin

10" Bottom rails

Alarm contacts

- 4 ea. Stanley SU-100 motion sensor

- 2 ea. Doorway holding beam

- 2 ea. 6" Double beveled thresholds

For exterior door:

- 1 ea. Adams Rite 2-point MS lock [clear anodized][dark bronze anodized] finish

- 1 ea. Best 1E76 C181 RP3 cylinder w/construction core, [626 satin chromium plated][_____] finish

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that door openings and doors are properly installed and ready for installation of automatic door equipment.
 2. Verify that electrical service is available, properly located and of proper type.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Installation by manufacturer in compliance with ANSI A156.10.
 1. Coordinate the mounting height of the required signs on the doors with USPS "station ID", "Hours of Operation" or other door mounted vinyls.

- B. Verify that electrical connections are made correctly.

3.3 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.

3.4 ADJUST AND CLEAN

- A. Adjust doors and operators for proper operation, without binding, scraping or excessive noise.
- B. Adjust operators in compliance with ANSI A156.10.

3.5 PROTECTION

- A. Protect finishes until substantial completion.

- B. OPERATING INSTRUCTION

1. Provide on-site instruction to review the operation of the system and detail any common troubleshooting or maintenance that is required to ensure normal operation.
2. Provide one complete set of equipment operating, installation, and programming manuals that will remain at the installed location.

USPS Mail Processing Facility Specifications issued: 10/1/2013

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 45 00 00 - CSF TRANSLUCENT WALL AND ROOF ASSEMBLIES

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 45 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Translucent fiberglass sandwich panel skylight/canopy system.
 2. Translucent cellular polycarbonate skylight/canopy system.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 055000 - Metal Fabrications: Security grilles.
 2. Section 076200 - Sheet Metal Flashing and Trim.
 3. Section 088000 - Glazing: Security glazing.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C236 - Standard Test Method for Steady-State Thermal Performance of Building Assemblies by Means of a Guarded Hot Box.
 2. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Curtain Walls and Doors by Uniform Static Air Pressure Difference
 3. ASTM D635 - Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Self-Supporting Plastics in a Horizontal Position.
 4. ASTM D1002 - Standard Test Method for Apparent Shear Strength of Single-Lap-Joint Adhesively Bonded Metal Specimens by Tension Loading.
 5. ASTM D1037 - Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials.
 6. ASTM D1929 - Standard Test Method for Determining Ignition Temperature of Plastics.
 7. ASTM D2244 - Standard Test Method for Calculation of Color Differences From Instrumentally Measured Color Coordinates.

8. ASTM D2843 - Standard Test Method for Density of Smoke from the Burning or Decomposition of Plastics.
9. ASTM E72 - Standard Test Methods of Conducting Strength Tests of Panels for Building Construction.
10. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
11. ASTM E108 - Standard Test Methods for Fire Tests of Roof Coverings.
12. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors Under Specified Pressure Differences Across the Specimen.
13. ASTM C297 - Standard Test Method for Flatwise Tensile Strength of Sandwich Constructions.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Shop Drawings:
 - a. Show fabrication details, materials, dimensions, installation methods, anchors, and relationship to adjacent construction.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Special Warranty: Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Store skylight panels on the long edge, several inches above the ground, blocked and under cover to prevent warping.

1.6 WARRANTY

- A. Special Warranty:
 1. Manufacturer's complete warranty for materials and workmanship. Warranty is to cover material and installation and is not to be prorated.
 2. Change in color of the panels is not to exceed 4 units Delta per ASTM D2244.
 3. There is to be no delamination of the panel effecting appearance, performance, weatherability or structural integrity of the panels or the completed system.
 4. There is to be no fiberbloom on the panel face.
 5. Warranty Period: 5 years

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project. Both the fiberglass type panel system and the cellular polycarbonate type panel system may be included in the Project Manual.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:

NOTE TO SPECIFIER

Fiberglass type panel system manufacturers are listed below.

1. Kalwall Corporation, Manchester, NH (800) 258-9777.
2. Major Industries, Incorporated, Wausau, WI (888) 759-2678.
3. Skywall Translucent Systems, Terrell, TX (800) 259-7941.

NOTE TO SPECIFIER

Cellular polycarbonate type panel system manufacturers are listed below.

4. CPI International, Lake Forest, IL (847) 816-1060 (800) 759-6985.
5. Duo-Gard Industries, Incorporated, Canton, MI (313) 207-9700.
6. Wasco Products, Incorporated, Sanford, ME (800) 388-0293.

- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 TRANSLUCENT FACING

- A. Panel material shall be manufactured by one of the companies named above.

B. Weatherability:

1. The full thickness of the panel faces exposed to the outdoors shall not change color more than four Hunter or CIE Units DELTA E by ASTM D2244 after five years outdoor South Florida weathering at five degrees facing south, determined by the average of at least three white samples with and without a protective film or coating to insure maximum, long term color stability.
2. The exposed faces of fiberglass sandwich type panels shall have a permanent erosion barrier embedded integrally to provide maximum long term resistance to reinforcing fiber exposure.

C. Appearance:

1. The face sheets shall be uniform in color to prevent splotchy appearance.
2. Faces shall be completely free of ridges and wrinkles which prevent proper surface contact. Clusters of air bubbles/pinholes which collect moisture and dirt are not acceptable.

- D. Integral perimeter framing system assembly shall be by manufacturer.

NOTE TO SPECIFIER

Select the following two paragraphs, 2.3 and 2.4, for the fiberglass type panel system. Not used for the cellular polycarbonate type panel system.

2.3 NON COMBUSTIBLE GRID CORE

- A. The aluminum I-beams shall be 6063-T6 with provisions for mechanical interlocking of muntin-mullion and perimeter to prevent high and low intersections which do not allow full bonding surface to contact with face material. Width of I-beam shall be no less than 7/16 inch. I-beam grid shall be machined to tolerances of not greater than $\pm .002$ inch for flat panels.

2.4 ADHESIVE

- A. The laminate adhesive shall be heat and pressure resin-type engineered for structural sandwich panel use. Adhesive shall pass testing requirements specified by the International Conference of Building Officials "Acceptance Criteria for Sandwich Panel Adhesive". Minimum strength shall be:
 1. 750 PSI tensile strength by ASTM C297 after two exposures to six cycles each of the aging conditions prescribed by ASTM D1037.
 2. Shear strength after exposure to five separate aging conditions by ASTM D1002:
 - a. 50 percent relative humidity at 73 degrees F: 540 PSI.
 - b. Accelerated Aging by ASTM D1037 at room temperature: 800 PSI.
 - c. Accelerated Aging by ASTM D1037 at 182 degrees F: 250 PSI.
 - d. 500 Hour Oxygen Bomb by ASTM D572: 1,400 PSI.
 - e. 182 degrees F: 100 PSI.

2.5 PANEL CONSTRUCTION

- A. Exterior panel faces shall be [Crystal] [White] [____] in color. Interior panel faces shall be [Crystal] [White] [____] in color.
- B. Panels shall have a "U" factor of [0.53] [0.18] [____]; light transmission of [35] [50] [____] percent.
- C. Flamespread per ASTM E84: [Class One for skylight] [Class Three for canopy].
- D. Smoke density per ASTM E84 maximum: [200 for skylight] [350 for canopy].
- E. Burn Extent per ASTM D635: [1 inch or less for skylight] [2 1/2 inches or less for canopy].
- F. Self-ignition per ASTM D1929: Greater than 650 degrees F.
- G. Air infiltration per ASTM E283 at 6.24 psf: Less than 0.01 CFM/square feet.
- H. Water penetration per ASTM E331 at test pressure of 10 psf: Zero.
- I. Manufacturer responsible for maximum system deflection per applicable building code and without damage to system performance. Criteria to be calculated in engineering compliance.
- J. Proper weepage elements to be incorporated within the perimeter framework of the glazing system for drainage of any condensation or water penetration.
- K. System to accommodate movement within the system; movement between the system and perimeter framing components; dynamic loading and release of loads, and deflection of supporting members. This

should be achieved without damage to system or components, deterioration of weatherseals and fenestration properties specified.

- L. System modules shall be factory assembled to the greatest extent possible. Panels shall be shipped to the job site in rugged shipping units and shall be ready for erection.
- M. All skylights and canopies shall have conspicuous decals affixed to each skylight warning individuals against sitting or stepping on these units, or submit calculations confirming assembly will support minimum 300 pounds point load, to comply with OSHA's regulations for finished construction.
- N. The exterior panel face shall repel an impact of 60 foot pounds without fracture or tear when impacted by a 3 1/2 inch diameter 6.37 pound free falling ball.

NOTE TO SPECIFIER

Select the following item for the fiberglass type panel system. Not used for the cellular polycarbonate type panel system.

- O. Panels shall consist of fiberglass faces laminated to an aluminum I-beam grid core and shall deflect no more than 1.9 inches at 30 PSF in 10 feet per ASTM E-72, without a supporting frame.

2.6 BATTENS AND PERIMETER CLOSURE SYSTEMS

- A. Extruded 6005-T6 aluminum structural and support systems. Extruded 6063-T6 and 6063-T5 aluminum framing systems.
- B. Aluminum closures to be supplied with stainless steel screws (excluding final fasteners to the building) and shall be factory sealed to the panels. Aluminum battens and cap plates shall be field installed.
- C. Exposed aluminum color to be selected from manufacturer's standard range. Corrosion resistant finish shall be one of the following, complying with AAMA 605.2:
 - 1. Oven dried Kynar 500, 2 coats.
 - 2. Baked-on enamel coating.
 - 3. Oven dried acrylic-urethane coating.

2.7 FLEXIBLE SEALING TAPE

- A. Sealing tape shall be manufacturer's standard pre-applied to closure system at the factory under controlled conditions.

PART 3 - EXECUTION

3.1 PREPARATION

- A. Prepare openings including isolating dissimilar materials from aluminum system which may cause damage by electrolysis.

3.2 ERECTION

- A. The erector shall erect translucent skylight/canopy system in strict accordance with approved shop drawings as supplied by manufacturer. Fastening and sealing shall be in strict accordance with manufacturer's shop drawings. Remove all panel protection.

- B. After other trades have completed work on adjacent materials, carefully inspect translucent panel installation and make adjustments necessarily to insure proper installation and weather-tight conditions.
- C. All staging, lifts and hoists required for the complete skylight/canopy system installation, including staging, etc., necessary for field measuring, shall be provided as required.
- D. System is to be installed clean of dirt, debris or staining and thoroughly examined for removal of all protective materials prior to final inspection of the designated area of work.

USPS CSF Specifications issued: 10/1/2013

END OF SECTION

SECTION 08 51 13 00 - CSF ALUMINUM WINDOWS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 51 13 00

NOTE TO SPECIFIER

This section is to be used ONLY for CSF Small Plans 15 and 20 when directed by the USPS C.O. The standard CSF Small details and specifications are for aluminum storefront systems. Therefore, if directed to use aluminum windows, the standard window details must be revised.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Single hung aluminum windows.
2. Fixed aluminum windows.

B. Related Documents: The Contract Documents, as defined in Section 011000- Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 084113 – Aluminum-Framed Entrances and Storefronts.

1.3 SYSTEM DESCRIPTION

- A. Commercial Grade Aluminum windows including glass and factory glazing, trims, sills, stools, perimeter seals, accessories and anchors required for a complete installation.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data:
 - a. Product Data: Indicate construction details, material descriptions, glazing, fabrication methods, dimensions of components, profiles, hardware and finishes.
2. Shop Drawings:
 - a. Shop Drawings: Include plans, elevations and sections of aluminum windows and trim, head, sill and jamb details, hardware, accessories, required clearances, installation details including anchors, flashing and sealants.
3. Samples:
 - a. Aluminum Extrusions: Submit samples 12 inches (300 mm) long in size for each color of finished aluminum surface specified.
 - b. Hardware: Submit full size sample for each type of hardware and finish specified.
 - c. Glazing: Submit 12 x 12 inches (300 x 300 mm) in size samples illustrating finished glass units, and glazing materials.
4. Window Schedule:
 - a. Use same window designations indicated on drawings.

5. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1. Special Warranty: Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.6 PROJECT CONDITIONS

A. Field measurements:

1. Verify dimensions of openings to receive aluminum windows prior to window fabrication.

1.7 WARRANTY

A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

B. Special Warranty:

1. The manufacturer/installer shall warrant the product and installation to be free from defective material and workmanship and shall replace or repair any defective component or system, in whole or part, as necessary to restore the product to its original intended state and integrity. Failures include the following:
 - a. Failure to meet performance requirements.
 - b. Structural failures including excessive deflection, water leakage, condensation and air infiltration.
 - c. Faulty operation of movable sash and hardware.
 - d. Failure of insulating glass.
 - e. Deterioration of materials and finishes beyond normal weathering.
2. Warranty Period:
 - a. Window: [] years from date of Substantial Completion.
 - b. Glazing Units: [] years from date of Substantial Completion.
 - c. Aluminum Finish: [] years from date of Substantial Completion.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. EFCO Corporation; Monett, MO. (800) 221-4169.
 2. Graham Architectural Products Corp.; York, PA. (800) 755-6274.
 3. Kawneer North America.; Norcross, GA. (770) 449-5555.
 4. Peerless Products Inc.; Fort Scott, KS. (866) 420-4000.
 5. TRACO.; Cranberry Township, PA. (800) 837-7002.
 6. YKK AP America Inc.; Austell, GA. (678) 838-6000.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 PERFORMANCE REQUIREMENTS

- A. Product Standard: Definitions and minimum standards of performance, materials, components, accessories and fabrication to comply with AAMA/WDMA 101/I.S.2/NAFS unless more stringent requirements are indicated.
1. Attach label indicating AMMA Certification to each window.
- B. Performance Class and Grade:
1. Minimum Performance Class: C.

NOTE TO SPECIFIER

Verify Minimum Performance Grade meets design pressure requirements of local authority having jurisdiction, local wind velocity pressures and building design characteristics.

2. Minimum Performance Grade: 30.

NOTE TO SPECIFIER

Options indicated below correspond to Energy Star requirements for Northern Climate Zone, North-Central Climate Zone, South-Central Climate Zone and the Southern Climate Zone respectively.

- C. Thermal Transmittance: NFRC 100 maximum whole-window U-factor of [0.30 Btu/sq. ft. x h x deg F (1.71 W/sq.m x K)] [0.32 Btu/sq. ft. x h x deg F (1.83 W/sq. m x K)] [0.35 Btu/sq. ft. x h x deg F (2.0 W/sq.m x K)] [0.32 Btu/sq. ft. x h x deg F (1.83 W/sq. m x K)] [0.60 Btu/sq. ft. x h x deg F (3.43 W/sq.m x K)] [____].

NOTE TO SPECIFIER

Options indicated below correspond to Energy Star requirements for North-Central Climate Zone, South-Central Climate Zone and the Southern Climate Zone respectively.

- D. Solar Heat-Gain Coefficient (SHGC): NFRC 200 maximum whole-window SHGC of [0.40] [0.30] [0.27] [____].

- E. Condensation-Resistance Factor (CRF): Provide aluminum windows tested for thermal performance according to AAMA 1503, indicating a CRF of [45] [52] [__].
- F. Thermal Movements: Provide aluminum windows and anchorages that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, overstressing of components, joint and connection failures.

NOTE TO SPECIFIER

Revise Temperature Range values below if required to suit local conditions. Values indicated are acceptable for most areas of the United States.

- 1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C) material surfaces.
- G. Sound Transmission Class (STC): Rated for not less than [__] STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
- H. Outside-Inside Transmission Class (OITC): Rated for not less than [__] OITC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.

NOTE TO SPECIFIER

Paragraph below is for projects located in hurricane-prone areas. Delete if not required. Verify requirements of authorities having jurisdiction.

- I. Windborne-Debris Resistance: Capable of resisting impact from windborne debris based on testing glazed windows identical to those specified, according to ASTM E 1886 and testing information in ASTM E 1996 and requirements of authorities having jurisdiction.

2.3 ALUMINUM WINDOWS

- A. Provide single hung aluminum windows as indicated.
- B. Provide fixed aluminum windows as indicated.
- C. Frames and Sashes: Aluminum extrusions complying with AAMA/WDMA/CSA 101/I.S.2/A440. Fabricate frames and sashes with integral, concealed, thermal barriers between exterior and interior materials that eliminates metal-to-metal contact.
- D. Glass: Clear annealed glass, ASTM C1036, Type 1, Class 1, q3. Provide fully tempered where indicated on drawings or where required by applicable building code.
- E. Provide Energy Star Label on glazing indicating compliance with DOE Energy Star requirements.
- F. Insulating Glass Units: ASTM E 2190.
 - 1. Glass: ASTM C 1036, Type 1, q3.
 - 2. Tint: [__].
 - 3. Provide fully tempered units where indicated on drawings or where required by applicable building code.
 - 4. Filling: Fill space between glass lites with [air].
 - 5. Low-E Coating: Sputtered on second or third surface.
- G. Glazing System: Manufacturer's standard factory-glazing system.

- H. Hardware: Provide manufacturer's standard hardware designed to accommodate sash weight and dimensions, and fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion-resistant material.
 - 1. Hardware Finish: As indicated or if not indicated, as selected by Architect from manufacturer's full range.
 - 2. Provide custodial locks.
- G. Provide full perimeter weather stripping for operable sash.
- H. Provide non-corrosive fasteners compatible with hardware, window framing members, anchors and other window components. Do not use exposed fasteners to the greatest extent possible.

2.4 WINDOW SCREENS

- A. Provide outside window screen for each operable sash. Window screens to be integrated with window frame.
- B. Provide manufacturers standard aluminum frame with aluminum wire fabric.

2.5 FABRICATION

- A. Fabricate aluminum windows in sizes indicated. Fabricate with integral weep holes to conduct water to exterior.
- B. Factory glaze windows.
- C. Weather strip each operable sash.
- D. Complete fabrication assembly, finishing, hardware installation, glazing and other work to greatest extent possible in factory.

2.6 FINISHES

- A. Comply with NAAMM's "Metal Finishes Manual" for recommendations for applying and designating finishes.
- B. Protect mechanical finishes on exposed surfaces from damage with temporary, strippable protective covering.
- C. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA611.
- D. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA611.
 - 1. Color: [_____].
- E. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; Organic Coating: Thermosetting,

modified-acrylic or polyester enamel primer/topcoat system complying with AAMA 2603, medium gloss). Apply baked enamel complying with paint manufacturers written instructions for cleaning, conversion coating and painting.

- F. High-Performance Organic Finish (Two-Coat Fluoropolymer): AA-C12C40R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: conversion coating; Organic Coating: manufacturer's standard two-coat, thermocured system consisting of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene fluoride resin by weight). Prepare, pretreat and apply coating to exposed metal surfaces to comply with AAMA 2605 and with coating and resin manufacturers' written instructions.

1. Color: [_____].

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install aluminum windows, hardware, accessories and other components in accordance with aluminum window manufacturer's written instructions and approved shop drawings.
- B. Install windows plumb and level, free of warp or twist. Maintain dimensional tolerances, aligning with adjacent work.
- C. Provide thermal isolation where aluminum windows penetrate or disrupt building insulation.
- D. Install windows and components to drain condensation, water penetrating joints, and moisture migrating within windows to drain to exterior.
- E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.
- F. Coordinate attachment and seal of perimeter air and vapor barrier materials.
- G. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

3.3 ADJUSTING

- A. Section 017300 - Execution: Adjusting installed work.
- B. Adjust operating hardware and sash for smooth operation.

3.4 CLEANING

- A. Section 017704 - Closeout Procedures and Training: Cleaning installed work.
- B. Clean exposed surfaces immediately after installation. Avoid damaging protective coatings and finishes. Protective films and coverings to remain in place until final cleaning.
- C. Remove and replace glass that has been broken, chipped, cracked, scratched or otherwise damaged during construction period.
- D. Protect window surfaces from contact with contaminating substances from construction operations. If contact occurs, remove contaminants immediately in accordance with window manufacturer's written instructions.

SECTION 08 52 00 00 - CSF WOOD WINDOWS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where Wood Windows are part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 52 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Factory fabricated plastic clad wood windows with fixed sash.
 2. Factory glazing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 ENVIRONMENTAL REQUIREMENTS

- A. Wood windows must have the ENERGY STAR label.

1.3 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 1. Include coverage for degradation of color finish.
 2. Include coverage for delamination or separation of finish cladding from window member
 3. Warranty Period: 5 years.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Wood: Clear pine, cedar, or fir species, preservative treated to NWWDA IS-4 of type suitable for transparent for opaque interior finish.

- B. Plastic Cladding (Exterior Surface): ASTM D1784, Extruded PVC, low sheen surface, factory fit to profile of wood members, and exterior exposed surfaces.
- C. Fasteners: Stainless steel.

2.2 FABRICATION

- A. Fabricate window to size and configuration indicated on Drawings.
- B. Fabricate framing and sash members with mortise and tenon joints. Glue and steel pin joints to hairline fit, weather tight.
- C. Finger joints permitted if wood matches in color and grain texture.
- D. Form sills and stools in one piece. Slope sills for wash.
- E. Form glass stops of extruded PVC to match cladding sloped for wash.
- F. Provide weather stop flange for perimeter of unit.
- G. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet allowing installation and dynamic movement of perimeter seal.
- H. Arrange fasteners to be concealed from view.
- I. Factory glaze window units with glazing specified in Section 088000.

2.3 FINISHES

- A. Exterior Surfaces: Cladding. Color selected by Contracting Officer.
- B. Interior Surfaces: Opaque as specified in Section 099100.

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Install window frames in accordance with manufacturers instructions.
- B. Attach window frame and shims to perimeter opening to accommodate construction tolerances and other irregularities.
- C. Align window plumb and level, free of warp or twist. Maintain dimensional tolerances and alignment with adjacent work.
- D. Install sills.
- E. Provide thermal isolation where components penetrate or disrupt building insulation. Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

- F. Coordinate attachment and seal of perimeter air and vapor barrier materials.
- G. Install perimeter sealant backing materials, and installation as specified in Section 079200.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 53 13 00 - VINYL WINDOWS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of material for fixed and operable vinyl framed windows. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes fixed and operable vinyl-framed windows.

C. Definitions

1. Performance class designations according to AAMA/WDMA 101/I.S.2/NAFS:
 - a. AW: Architectural.
 - b. HC: Heavy Commercial.
 - c. C: Commercial.
 - d. LC: Light Commercial.
 - e. R: Residential.
2. Performance grade number according to AAMA/WDMA 101/I.S.2/NAFS:
 - a. Design pressure number in pounds force per square foot (pascals) used to determine the structural test pressure and water test pressure.
3. Structural Test Pressure: For uniform load structural test, is equivalent to 150 percent of the design pressure.
4. Minimum Test Size: Smallest size permitted for performance class (gateway test size). Products must be tested at minimum test size or at a size larger than minimum test size to comply with requirements for performance class.

D. Performance Requirements

1. General: Provide vinyl windows capable of complying with performance requirements indicated, based on testing manufacturer's windows that are representative of those specified, and that are of test size indicated below:
 - a. Size required by AAMA/WDMA 101/I.S.2/NAFS for gateway performance **OR** optional performance grade, **as directed**.
 - b. Size indicated on Drawings **OR** in a schedule, **as directed**.
2. Structural Performance: Provide vinyl windows capable of withstanding the effects of the following loads, based on testing units representative of those indicated for Project that pass AAMA/WDMA 101/I.S.2/NAFS, Uniform Load Structural Test:
 - a. Design Wind Loads: Determine design wind loads applicable to Project from basic wind speed indicated in miles per hour (meters per second) at 33 feet (10 m) above grade, according to ASCE 7, Section 6.5, "Method 2-Analytical Procedure," based on mean roof heights above grade indicated on Drawings.
 - 1) Basic Wind Speed: 85 mph (38 m/s) **OR** 90 mph (40 m/s), **as directed**.
 - 2) Importance Factor.
 - 3) Exposure Category: A **OR** B **OR** C **OR** D, **as directed**.
3. Windborne-Debris Resistance: Provide glazed windows capable of resisting impact from windborne debris, based on the pass/fail criteria as determined from testing glazed windows identical to those specified, according to ASTM E 1886 and testing information in ASTM E 1996 or AAMA 506 and requirements of authorities having jurisdiction.

E. Submittals

1. Product Data: For each type of vinyl window indicated.

2. Shop Drawings: Include plans, elevations, sections, details, hardware, attachments to other work, operational clearances, and installation details.
3. Samples: For each exposed finish.
4. Product Schedule: Use same designations indicated on Drawings.
5. Product test reports.
6. Maintenance data.
7. Warranty: Special warranty specified in this Section.

F. Quality Assurance

1. Installer: A qualified installer, approved by manufacturer to install manufacturer's products.
2. Fenestration Standard: Comply with AAMA/WDMA 101/I.S.2/NAFS, "North American Fenestration Standard Voluntary Performance Specification for Windows, Skylights and Glass Doors," for definitions and minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.
 - a. Provide AAMA **OR** WDMA, **as directed**, -certified vinyl windows with an attached label.
3. Glazing Publications: Comply with published recommendations of glass manufacturers and with GANA's "Glazing Manual" unless more stringent requirements are indicated.
4. Preinstallation Conference: Conduct conference at Project site.

G. Warranty

1. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace vinyl windows that fail in materials or workmanship within specified warranty period.
 - a. Failures include, but are not limited to, the following:
 - 1) Failure to meet performance requirements.
 - 2) Structural failures including excessive deflection, water leakage, air infiltration, or condensation.
 - 3) Faulty operation of movable sash and hardware.
 - 4) Deterioration of vinyl, other materials, and finishes beyond normal weathering.
 - 5) Failure of insulating glass.
 - b. Warranty Period:
 - 1) Window: Two **OR** Three **OR** 10, **as directed**, years from date of Final Completion.
 - 2) Glazing: Five **OR** 10, **as directed**, years from date of Final Completion.
 - 3) Vinyl Finish: Five years from date of Final Completion.

1.2 PRODUCTS

A. Materials

1. Vinyl Extrusions: Rigid (unplasticized) hollow PVC extrusions, formulated and extruded for exterior applications, complying with AAMA/WDMA 101/I.S.2/NAFS and the following:
 - a. PVC Resins: 100 percent virgin resin.
 - b. PVC Formulation: High impact, low heat buildup, lead free, nonchalking, and color and UV stabilized.
 - c. Extrusion Wall Thickness: Not less than 0.060 inch (1.5 mm) **OR** 0.090 inch (2.3 mm) **OR** 0.125 inch (3.2 mm), **as directed**.
 - d. Multichamber Extrusions: Profile designed with two chambers **OR** three chambers **OR** multichambers, **as directed**, between interior and exterior faces of the extrusions.
2. Vinyl Trim and Glazing Stops: Material and finish to match frame members.
3. Fasteners: Aluminum, nonmagnetic stainless steel, epoxy adhesive, or other materials warranted by manufacturer to be noncorrosive and compatible with vinyl window members, cladding, trim, hardware, anchors, and other components.
 - a. Exposed Fasteners: Unless unavoidable for applying hardware, do not use exposed fasteners. For application of hardware, use fasteners that match finish of member or hardware being fastened, as appropriate.

4. Anchors, Clips, and Accessories: Aluminum, nonmagnetic stainless steel, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.
 5. Reinforcing Members: Aluminum, or nonmagnetic stainless steel, or nickel/chrome-plated steel complying with ASTM B 456 for Type SC 3 severe service conditions, or zinc-coated steel or iron complying with ASTM B 633 for SC 3 severe service conditions; provide sufficient strength to withstand design pressure indicated.
 6. Compression-Type Weather Stripping: Provide compressible weather stripping designed for permanently resilient sealing under bumper or wiper action, and for complete concealment when vinyl window is closed.
 - a. Weather-Stripping Material: Elastomeric cellular preformed gaskets complying with ASTM C 509.
 - b. Weather-Stripping Material: Dense elastomeric gaskets complying with ASTM C 864.
 - c. Weather-Stripping Material: Manufacturer's standard system and materials complying with AAMA/WDMA 101/I.S.2/NAFS.
 7. Sliding-Type Weather Stripping: Provide woven-pile weather stripping of wool, polypropylene, or nylon pile and resin-impregnated backing fabric. Comply with AAMA 701/702.
 - a. Weather Seals: Provide weather stripping with integral barrier fin or fins of semirigid, polypropylene sheet or polypropylene-coated material. Comply with AAMA 701/702.
 8. Replaceable Weather Seals: Comply with AAMA 701/702.
- B. Window
1. Window Type: Casement **OR** Double hung **OR** Fixed **OR** Horizontal sliding **OR** Projected awning **OR** Single hung **OR** Bay **OR** Bow **OR** Specialty product **OR** As indicated on Drawings **OR** As indicated on a schedule, **as directed**.
 2. AAMA/WDMA Performance Requirements: Provide vinyl windows of performance indicated that comply with AAMA/WDMA 101/I.S.2/NAFS unless more stringent performance requirements are indicated.
 - a. Performance Class and Grade: R15 **OR** R20 **OR** R25, **as directed**.
 - b. Performance Class and Grade: LC25 **OR** LC30 **OR** LC35, **as directed**.
 - c. Performance Class and Grade: C30 **OR** C35 **OR** C40, **as directed**.
 - d. Performance Class and Grade: HC40 **OR** HC45 **OR** HC50, **as directed**.
 - e. Performance Class and Grade: AW40 **OR** AW45 **OR** AW50, **as directed**.
 - f. Performance Class and Grade: As indicated.
 - g. Performance Class (if test performance method is selected for specifying windows and designating a performance class does not conflict with basic wind speed and performance testing indicated): R **OR** LC **OR** C **OR** HC **OR** AW, **as directed**.
 3. Condensation-Resistance Factor (CRF): Provide vinyl windows tested for thermal performance according to AAMA 1503, showing a CRF of 45 **OR** 52 **OR** 65, **as directed**.
 4. Thermal Transmittance: Provide vinyl windows with a whole-window, U-factor maximum indicated at 15-mph (24-km/h) exterior wind velocity and winter condition temperatures when tested according to AAMA 1503 **OR** ASTM E 1423 **OR** NFRC 100, **as directed**.
 - a. U-Factor: 0.35 Btu/sq. ft. x h x deg F (2.0 W/sq. m x K) **OR** 0.40 Btu/sq. ft. x h x deg F (2.3 W/sq. m x K) **OR** 0.43 Btu/sq. ft. x h x deg F (2.5 W/sq. m x K) **OR** 0.60 Btu/sq. ft. x h x deg F (3.4 W/sq. m x K), **as directed**, or less.
 5. Solar Heat-Gain Coefficient (SHGC): Provide vinyl windows with a whole-window SHGC maximum of 0.40 **OR** 0.50 **OR** 0.55, **as directed**, determined according to NFRC 200 procedures.
 6. Sound Transmission Class (STC): Provide glazed windows rated for not less than 26 **OR** 30 **OR** 35, **as directed**, STC when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 413.
 7. AAMA/WDMA 101/I.S.2/NAFS, Air Infiltration Test.
 - a. Maximum Rate: 0.3 cfm/sq. ft. (5 cu. m/h x sq. m) of area at an inward test pressure of 1.57 lbf/sq. ft. (75 Pa) which is equivalent to 25-mph (40-km/h) wind speed and is typically used to test R, C, and LC performance classes.

- b. Maximum Rate: 0.3 cfm/sq. ft. (5 cu. m/h x sq. m) of area at an inward test pressure of 6.24 lbf/sq. ft. (300 Pa) which is equivalent to a 50-mph (80-km/h) wind speed and is typically used to test HC and AW performance classes.
- 8. Water Resistance: No water leakage as defined in AAMA/WDMA referenced test methods at a water test pressure equaling that indicated, when tested according to AAMA/WDMA 101/I.S.2/NAFS, Water Resistance Test.
 - a. Test Pressure: 15 percent of positive design pressure, but not less than 2.86 lbf/sq. ft. (140 Pa) or more than 15 lbf/sq. ft. (720 Pa).
 - b. Test Pressure: 20 percent of positive design pressure, but not more than 15 lbf/sq. ft. (720 Pa).
- 9. Forced-Entry Resistance: Comply with Performance Grade 10 **OR** 20 **OR** 30 **OR** 40, **as directed**, requirements when tested according to ASTM F 588.
- 10. Life-Cycle Testing: Test according to AAMA 910 and comply with AAMA/WDMA 101/I.S.2/NAFS.
- 11. Operating Force and Auxiliary (Durability) Tests: Comply with AAMA/WDMA 101/I.S.2/NAFS for operating window types indicated.

C. Glazing

- 1. Glass: Clear, insulating-glass units **OR** Clear, insulating-glass units, with low-E coating pyrolytic on second surface or sputtered on second or third surface, **OR** Clear, insulating-glass units, argon gas filled, with low-E coating pyrolytic on second surface or sputtered on second or third surface, **as directed**, complying with Division 08 Section "Glazing".
- 2. Glazing System: Manufacturer's standard factory-glazing system that produces weathertight seal **OR** Manufacturer's standard factory-glazing system that produces weathertight seal and complies with requirements for windborne-debris resistance **OR** Manufacturer's standard factory-glazing system as indicated in Division 08 Section "Glazing", **as directed**.

D. Hardware

- 1. General: Provide manufacturer's standard hardware fabricated from aluminum, stainless steel, carbon steel complying with AAMA 907, or other corrosion-resistant material compatible with vinyl; designed to smoothly operate, tightly close, and securely lock vinyl windows, and sized to accommodate sash or ventilator weight and dimensions. Do not use aluminum in frictional contact with other metals. Where exposed, provide solid bronze **OR** extruded, cast, or wrought aluminum **OR** die-cast zinc with special coating finish **OR** nonmagnetic stainless steel, **as directed**.
- 2. Counterbalancing Mechanism: Comply with AAMA 902.
 - a. Sash-Balance Type: Concealed, tape-spring **OR** spiral-tube **OR** spring-loaded, block-and-tackle, **as directed**, type, of size and capacity to hold sash stationary at any open position.
- 3. Sill Cap/Track: Extruded-aluminum track with natural anodized finish **OR** Rigid PVC or other weather-resistant plastic track with manufacturer's standard integral color, **as directed**, of thickness, dimensions, and profile indicated; designed to comply with performance requirements indicated and to drain to the exterior.
- 4. Locks and Latches: Designed to allow unobstructed movement of the sash across adjacent sash in direction indicated and operated from the inside only. Provide custodial locks, **as directed**.
- 5. Roller Assemblies: Low-friction design.
- 6. Push-Bar Operators: Provide telescoping-type, push-bar operator designed to open and close ventilators with fixed screens.
- 7. Gear-Type Rotary Operators: Comply with AAMA 901 when tested according to ASTM E 405, Method A.
 - a. Operation Function: All ventilators move simultaneously and securely close at both jams without using additional manually controlled locking devices.
- 8. Four- or Six-Bar Friction Hinges: Comply with AAMA 904.
 - a. Locking mechanism and handles for manual operation.
 - b. Friction Shoes: Provide friction shoes of nylon or other nonabrasive, nonstaining, noncorrosive, durable material.

9. Limit Devices: Provide concealed friction adjustor, adjustable stay bar **OR** concealed support arms with adjustable, limited, hold-open, **as directed**, limit devices designed to restrict sash or ventilator opening.
 - a. Safety Devices: Limit clear opening to 4 inches (100 mm) **OR** 6 inches (150 mm), **as directed**, for ventilation; with custodial key release.
 10. Pole Operators: Tubular-shaped anodized aluminum; with rubber-capped lower end and standard push-pull hook at top to match hardware design; of sufficient length to operate window without reaching more than 60 inches (1500 mm) above floor; 1 pole operator and pole hanger per room that has operable windows more than 72 inches (1800 mm) above floor.
- E. Insect Screens
1. General: Design windows and hardware to accommodate screens in a tight-fitting, removable arrangement, with a minimum of exposed fasteners and latches. Fabricate insect screens to fully integrate with window frame. Locate screens on inside **OR** outside, **as directed**, of window and provide for each operable exterior sash or ventilator.
 - a. Aluminum Tubular Frame Screens: Comply with SMA 1004, "Specifications for Aluminum Tubular Frame Screens for Windows," Residential R-20 **OR** Architectural C-24 **OR** Monumental M-32, **as directed**, class.
 2. Aluminum Insect Screen Frames: Manufacturer's standard aluminum alloy complying with SMA 1004. Fabricate frames with mitered or coped joints or corner extrusions, concealed fasteners, adjustable rollers, **as directed**, and removable PVC spline/anchor concealing edge of frame.
 - a. Aluminum Tubular Framing Sections and Cross Braces: Roll formed from aluminum sheet with minimum wall thickness as required for class indicated.
 - b. Finish: Anodized aluminum **OR** Baked-on organic coating, **as directed**, in manufacturer's standard color.
 - c. Finish: Anodized aluminum **OR** Baked-on organic coating, **as directed**, in color selected from manufacturer's full range.
 - d. Finish: Manufacturer's standard.
 3. Glass-Fiber Mesh Fabric: 18-by-14 (1.1-by-1.4-mm) or 18-by-16 (1.0-by-1.1-mm) **OR** 20-by-20 (0.85-by-0.85-mm) or 20-by-30 (0.85-by-0.42-mm), **as directed**, mesh of PVC-coated, glass-fiber threads; woven and fused to form a fabric mesh resistant to corrosion, shrinkage, stretch, impact damage, and weather deterioration, in the following color. Comply with ASTM D 3656.
 - a. Mesh Color: Charcoal gray **OR** Silver gray **OR** Aquamarine, **as directed**.
 4. Aluminum Wire Fabric: 18-by-16 (1.1-by-1.3-mm) mesh of 0.011-inch- (0.28-mm-) diameter, coated aluminum wire.
 - a. Wire-Fabric Finish: Natural bright **OR** Charcoal gray **OR** Black, **as directed**.
 5. Wickets: Provide sliding **OR** hinged, **as directed**, wickets, framed and trimmed for a tight fit and for durability during handling.
- F. Accessories
1. Dividers (False Muntins): Provide dividers in designs indicated for each sash lite, one per sash, removable from the exposed surface of interior lite of the sash **OR** two per sash, removable from the exposed surfaces of interior and exterior lites of the sash **OR** one permanently located between glazing lites in the airspace, **as directed**.
 - a. Material: Extruded, rigid PVC **OR** Aluminum, **as directed**.
 - b. Design: Rectangular **OR** Diamond, **as directed**.
 - c. Color: White **OR** Beige, **as directed**.
- G. Fabrication
1. Fabricate vinyl windows in sizes indicated. Include a complete system for assembling components and anchoring windows.
 - a. Welded Frame and Sash/Ventilator Corners: Miter-cut and fusion **OR** chemically, **as directed**, welded.
 - b. Mechanically Fastened Frame and Sash/Ventilator Corners: Double-butt coped and fastened with concealed screws, **as directed**.

2. Fabricate vinyl windows that are reglazable without dismantling sash or ventilator framing.
3. Weather Stripping: Provide full-perimeter weather stripping for each operable sash and ventilator, unless otherwise indicated.
 - a. Double-Hung Windows: Provide weather stripping only at horizontal rails of operable sash.
4. Mullions: Provide mullions and cover plates as shown, compatible with window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design loads of window units. Provide manufacturer's standard finish to match window units.
5. Subframes: Provide subframes with anchors for window units as shown, of profile and dimensions indicated but not less than 0.062-inch- (1.6-mm-) thick extruded aluminum. Miter or cope corners, and weld and dress smooth with concealed mechanical joint fasteners. Provide manufacturer's standard finish to match window units. Provide subframes capable of withstanding design loads of window units.
6. Factory-Glazed Fabrication: Except for light sizes in excess of 100 united inches (2500 mm width plus length), glaze vinyl windows in the factory where practical and possible for applications indicated. Comply with requirements in Division 08 Section "Glazing" and with AAMA/WDMA 101/I.S.2/NAFS.
7. Glazing Stops: Provide nailed or snap-on glazing stops coordinated with Division 08 Section "Glazing" and glazing system indicated. Provide glazing stops to match sash and ventilator frames.
8. Hardware: Mount hardware through double walls of vinyl extrusions or provide corrosion-resistant steel reinforcement complying with requirements for reinforcing members, or do both.
9. Bow **OR** Bay, **as directed**, Windows: Provide vinyl windows in configuration indicated. Provide window frames, fixed and operating sash, operating hardware, and other trim and components necessary for a complete, secure, and weathertight installation, including the following:
 - a. Angled mullion posts with interior and exterior trim.
 - b. Angled interior and exterior extension and trim.
 - c. Clear pine head and seat boards.
 - d. Top and bottom plywood platforms.
 - e. Exterior head and sill casings and trim.
 - f. Support brackets.
10. Complete fabrication, assembly, finishing, hardware application, and other work in the factory to greatest extent possible. Disassemble components only as necessary for shipment and installation. Allow for scribing, trimming, and fitting at Project site.

H. Vinyl Finishes

1. Integral Finish and Color: Uniform, solid, homogeneous white **OR** beige, **as directed**, interior and exterior.
2. Organic Pigmented Finish: Manufacturer's standard finish, interior and exterior, complying with AAMA 613 **OR** AAMA 615, **as directed**, and paint manufacturer's written specifications for cleaning and painting.
 - a. Color: As indicated by manufacturer's designations **OR** Match sample **OR** As selected from manufacturer's full range, **as directed**.

1.3 EXECUTION

A. Installation

1. Comply with Drawings, Shop Drawings, and manufacturer's written instructions for installing windows, hardware, accessories, and other components.
2. Install windows level, plumb, square, true to line, without distortion or impeding thermal movement, anchored securely in place to structural support, and in proper relation to wall flashing and other adjacent construction.
3. Set sill members in bed of sealant or with gaskets, as indicated, for weathertight construction.

4. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials.
- B. Adjusting, Cleaning, And Protection
1. Adjust operating sashes and ventilators, screens, hardware, and accessories for a tight fit at contact points and weather stripping for smooth operation and weathertight closure. Lubricate hardware and moving parts.
 2. Clean exposed surfaces immediately after installing windows. Avoid damaging protective coatings and finishes. Remove excess sealants, glazing materials, dirt, and other substances.
 3. Clean factory-glazed glass immediately after installing windows. Comply with manufacturer's written recommendations for final cleaning and maintenance. Remove nonpermanent labels, and clean surfaces.
 4. Remove and replace glass that has been broken, chipped, cracked, abraded, or damaged during construction period.
 5. Protect window surfaces from contact with contaminating substances resulting from construction operations. In addition, monitor window surfaces adjacent to and below exterior concrete and masonry surfaces during construction for presence of dirt, scum, alkaline deposits, stains, or other contaminants. If contaminating substances do contact window surfaces, remove contaminants immediately according to manufacturer's written recommendations.

SECTION 08 62 00 00 - CSF UNIT SKYLIGHTS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Preformed plastic skylights with integral metal frame.
 2. Integral insulated curb.
 3. Security grille/glazing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM A 627 - Specification for Homogeneous Tool-Resisting Steel Bars for Security Applications.
 2. ASTM B 209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 3. ASTM B 221 - Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
- B. Federal Specifications (FS):
 1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

1.3 SYSTEM DESCRIPTION

- A. Performance Requirements:
 1. Allow for expansion and contraction within system components caused by a cycling surface temperature range of 170 F degrees without causing detrimental effects to system or components.
 2. Withstand minimum live load of 40 psf.

**NOTE TO SPECIFIER**

Edit below for Light Transmittance, Ultraviolet Transmission and Shading Coefficient for specific Project. Provide U-value (based on 4 foot x 4 foot skylight) = 0.74 maximum for opening dimension and 0.57 maximum for plan dimension; light transmittance = 72 percent maximum; shading coefficient = 66 percent minimum.

3. Provide glazing system with minimum visible light transmittance of [____] percent, maximum ultraviolet transmission of [____] percent and shading coefficient of [____].
4. Provide minimum U-value [____].

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 1. Product Data: Structural, thermal, and daylighting performance values.
 2. Shop Drawings:
 - a. Indicate skylight configurations, dimensions, locations, fastening methods, and installation details.
 - b. Indicate construction and installation of security grille or security glazing assembly. Detail attachment to building structure. Specify fastening devices and spacing.
 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.
 - c. Manufacturer's Instructions: Indicate special procedures, and perimeter conditions requiring special attention.
- B. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
 1. Special Warranty: Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this Section.

1.5 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.7 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 1. Correct defective work, including leakage due to defective skylight materials or workmanship,
 2. Warranty Period: 5 years.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. APC Corporation, Hawthorn, NJ (800) 222-0201.
 2. Bristolite Skylights, Santa Anna, CA (800) 854-8618.
 3. Hi Pro International, Knoxville, TN (865) 637-1711 (800) 947-0997.
 4. Naturalite/EPI, Incorporated, Terrell, TX (800) 527-4018.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 COMPONENTS

- A. Plastic Unit Skylight: Factory-assembled glazing in aluminum frame; double dome.
 1. Circular domed shape.
 2. Nominal Size: Indicated on Drawings.
- B. Double Glazing: Polycarbonate plastic; factory sealed, conforming to Occupational Health and Safety Administration (OSHA) requirements for skylight glazing and construction.
 1. Outer Glazing: Gray tinted transparent.
 2. Inner Glazing: Clear transparent.
- C. Frames: ASTM B 221 Extruded aluminum, thermally broken, reinforced and welded corner joints, concealed fasteners, integral curb frame mounting flange to receive roofing flashing system, with integral condensation collection drainage gutter, glazing retainer; clear anodized finish.
- D. Support Curbs: ASTM B 209 Sheet aluminum, sandwich construction; 1 inch thick, height as indicated on Drawings; rigid plastic insulation; with integral flange for anchorage to roof deck.

NOTE TO SPECIFIER

Delete the following security grille/glazing at 24 hour facilities only. Verify with Contracting Officer.

2.3 SECURITY GRILLE/GLAZING

- A. Furnish and install a security grille or security glazing. Contractor option.
 1. Grille: Factory fabricated 1/2 inch diameter, ASTM A 627, tool-resistant, round steel bars spaced 4 inches on center, interlocked with 3/8 inch x 2 inch horizontal flats at 18 inches on center.
 2. Glazing: 5/16 inch thick safety tempered laminated sheets of glass with an interlayer of 0.075 inch vinyl or 1/4 inch polycarbonate in steel "U" shape glazing frame with mitered corners.

2.4 ACCESSORIES

- A. Anchorage Devices: Type recommended by manufacturer, concealed.

- B. Protective Back Coating: Bituminous, FS TT-C-494.
- C. Sealant: Specified in Section 079200 - Joint Sealants.

2.5 FABRICATION

- A. Fabricate free of visual distortion and defects.
- B. Fabricate to achieve leakproof, weathertight assembly.
- C. Fabricate components to allow for expansion and contraction with minimum clearance and shim spacing around perimeter of assembly.
- D. Furnish and install decals on skylight glazing, clearly visible at exterior, warning persons not to sit or step on skylight unit, in conformance with OSHA requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that opening sizes and locations are as indicated on Drawings.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Apply protective back coating on aluminum surfaces of skylight units that will be in contact with cementitious materials or dissimilar metals.

3.3 INSTALLATION

- A. Install aluminum curb assembly, fastening securely to roof decking.
- B. Place skylight units and secure to curb assembly. Install counterflashing as required.
- C. Apply sealant to achieve watertight assembly.
- D. Install security grille or security glazing assembly, within skylight roof deck opening, to steel roof structure. Rigidly attach using methods approved by U.S. Postal Inspection Service through Contracting Officer.

3.4 CONSTRUCTION

- A. Interface with Other Work: Coordinate skylight installation with roofing insulation and roofing membrane installation.

3.5 CLEANING

- A. Remove protective material from prefinished aluminum surfaces.
- B. Wash down exposed surfaces; wipe surfaces clean.
- C. Remove excess sealant.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION 08 62 00 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 63 00 00 - FIBERGLASS-SANDWICH-PANEL ASSEMBLIES**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of material for fiberglass-sandwich-panel assemblies. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the products manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes assemblies incorporating fiberglass sandwich panels and aluminum frame systems as follows:
 - a. Wall assemblies.
 - b. Roof (sloped, overhead) assemblies.
 - c. Skylight assemblies.

C. Performance Requirements

1. Provide assemblies, including anchorage, capable of withstanding, without failure, the effects of the following:
 - a. Structural loads.
 - b. Thermal movements.
 - c. Movements of supporting structure.
 - d. Dimensional tolerances of building frame and other adjacent construction.
2. Failure includes the following:
 - a. Deflection exceeding specified limits.
 - b. Water leakage.
 - c. Thermal stresses transferred to building structure.
 - d. Noise or vibration created by wind and thermal and structural movements.
 - e. Loosening or weakening of fasteners, attachments, and other components.
 - f. Delamination of fiberglass-sandwich-panel faces from panel cores.
3. Structural Loads:
 - a. Wind Loads: As indicated by structural design data on Drawings **OR as directed**.
 - b. Snow Loads: As indicated by structural design data on Drawings **OR as directed**.
 - c. Concentrated Live Loads on Overhead Assemblies: 300 lbf (1334 N) applied to assemblies at locations that will produce greatest stress or deflection.
 - d. Seismic Loads: As indicated by earthquake design data on Drawings **OR as directed**.
 - e. Load Combinations: Calculate according to requirements of applicable code indicated on Drawings **OR as directed**.
4. Deflection of Assemblies:
 - a. Vertical Assemblies: Limited to 1/60 **OR** 1/90 **OR** 1/180, **as directed**, of clear span for each assembly component.
 - b. Overhead Assemblies: Limited to 1/60 **OR** 1/90 **OR** 1/180, **as directed**, of clear span for each assembly component.
5. Roof Assemblies: Class A per ASTM E 108 or UL 790.
6. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

D. Performance Testing

1. Provide assemblies that comply with test-performance requirements indicated, as evidenced by reports of tests performed on manufacturer's standard assemblies by a qualified independent testing agency.
2. Structural-Performance Test: ASTM E 330.
 - a. Performance at Design Load: When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 - b. Performance at Maximum Test Load: When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main supporting members exceeding 0.2 percent of span.
 - c. Test Durations: As required by design wind velocity but not less than 10 seconds.
3. Air-Infiltration Test: ASTM E 283.
 - a. Minimum Static-Air-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa) **OR** 6.24 lbf/sq. ft. (300 Pa), **as directed**.
 - b. Maximum Air Leakage: 0.06 cfm/sq. ft. (0.30 L/s per sq. m), **as directed**.
4. Test for Water Penetration under Static Pressure: ASTM E 331.
 - a. Minimum Static-Air-Pressure Difference: 20 percent of positive wind-load design pressure, but not less than 10 lbf/sq. ft. (479 Pa).
 - b. Water Leakage: None.
5. Test for Water Penetration under Dynamic Pressure: AAMA 501.1.
 - a. Dynamic Pressure: 20 percent of positive wind-load design pressure, but not less than 15 lbf/sq. ft. (718 Pa).
 - b. Water Leakage: None, as defined by AAMA 501.1 **OR** No uncontrolled water penetrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation, **as directed**. Water controlled by flashing and gutters that is drained to exterior and cannot damage adjacent materials or finishes is not considered water leakage.
6. Water-Penetration, Wind-Driven-Rain Test: Wind-driven-rain test in ICBO ES AC07, "Special Roofing Systems."
 - a. Water Leakage: None.

E. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittal:
 - a. Product Data for Credit EQ 4.1: For sealants used inside of the weatherproofing system, documentation including printed statement of VOC content.
3. Shop Drawings: For assemblies. Include plans, elevations, sections, details, and attachments to other work.
 - a. Include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
4. Field quality-control test reports.
5. Product test reports.
6. Maintenance data.
7. Special warranties specified in this Section.

F. Quality Assurance

1. Installer Qualifications: Entity capable of assuming engineering responsibility, including preparation of Shop Drawings, and performing work of this Section and who is acceptable to manufacturer.
2. Manufacturer Qualifications: For fiberglass sandwich panels, a qualified manufacturer whose facilities, processes, and products are monitored by an independent, accredited quality-control agency for compliance with applicable requirements in ICBO ES AC04, "Sandwich Panels."
3. Fire-Test-Response Characteristics: Where fire-test-response characteristics are indicated for assemblies and components, provide products identical to those tested per test method indicated by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

4. Welding: Qualify procedures and personnel according to AWS D1.2, "Structural Welding Code - Aluminum."
5. NFRC Certification: Provide fiberglass sandwich panels that are certified for U-factors indicated according to NFRC 100 and listed in its "National Fenestration Council Incorporated - Certified Products Directory."
6. Preinstallation Conference: Conduct conference at Project site.

G. Warranty

1. Special Assembly Warranty: Manufacturer's standard form in which manufacturer and Installer agree to repair or replace components of assemblies that fail in materials or workmanship within specified warranty period.
 - a. Failures include, but are not limited to, the following:
 - 1) Structural failures including, but not limited to, excessive deflection.
 - 2) Deterioration of metals, metal finishes, and other materials beyond normal weathering.
 - 3) Water leakage.
 - b. Warranty Period: Two **OR** Five, **as directed**, years from date of Final Completion.
2. Special Fiberglass-Sandwich-Panel Warranty: Manufacturer's standard form in which manufacturer agrees to replace panels that exhibit defects in materials or workmanship.
 - a. Defects include, but are not limited to, the following:
 - 1) Fiberbloom.
 - 2) Delamination of coating, if any, from exterior face sheet.
 - 3) Discoloration of exterior face sheet of more than 8.0 units Delta E when measured according ASTM D 2244.
 - 4) Delamination of panel face sheets from panel cores.
 - b. Warranty Period: 10 years from date of Final Completion.
3. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
 - a. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
 - b. Warranty Period: Five **OR** 10 **OR** 20, **as directed**, years from date of Final Completion.

1.2 PRODUCTS

A. Aluminum Frame Systems

1. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
 - a. Sheet and Plate: ASTM B 209 (ASTM B 209M).
 - b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
 - c. Extruded Structural Pipe and Tubes: ASTM B 429.
2. Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
 - a. Construction: One-piece extruded-aluminum components **OR** Thermally broken; framing members are composite assemblies of two separate extruded-aluminum components permanently bonded by a material of low thermal conductance, **as directed**.
3. Exposed Flashing and Closures: Manufacturer's standard aluminum components not less than 0.040 inch (1.016 mm) **OR** 0.060 inch (1.524 mm), **as directed**, thick.
4. Frame-System Gaskets: Manufacturer's standard.
5. Frame-System Sealants: As recommended in writing by manufacturer **OR** specified in Division 07 Section "Joint Sealants", **as directed**.
 - a. Provide sealants for use inside of the weatherproofing system that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
6. Anchors, Fasteners, and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding; compatible with adjacent materials.

- a. At closures, retaining caps, or battens, use ASTM A 193/A 193M, 300 series stainless-steel screws.
 - b. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
 - c. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.
 7. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.
 8. Anchor Bolts: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), hot-dip zinc coating, ASTM A 153/A 153M, Class C **OR** mechanically deposited zinc coating, ASTM B 695, Class 50, **as directed**.
 9. Frame System Fabrication:
 - a. Fabricate components before finishing.
 - b. Fabricate components that, when assembled, have the following characteristics:
 - 1) Profiles that are sharp, straight, and free of defects or deformations.
 - 2) Accurately fitted joints with ends coped or mitered.
 - 3) Internal guttering systems or other means to drain water passing joints, condensation occurring within components, and moisture migrating within the assembly to exterior.
 - c. Fabricate sill closures with weep holes and for installation as continuous component.
 - d. Reinforce components as required to receive fastener threads.
 - e. Weld components in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- B. Fiberglass Sandwich Panels
1. Panel Construction: Assembly of uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of a grid core and complying with requirements applicable to panel materials in ICBO ES AC04, "Sandwich Panels."
 - a. Face-Sheet, Self-Ignition Temperature: 650 deg F (343 deg C) or more per ASTM D 1929.
 - b. Face-Sheet Burning Extent: 1 inch (25 mm) or less per ASTM D 635.
 - c. Face-Sheet, Smoke-Developed Index: 450 or less per ASTM E 84.
 - d. Interior Face-Sheet, Flame-Spread Index: Not more than 25 **OR** 75, **as directed**, per ASTM E 84.
 - e. Roof-Covering Class: Class A **OR** Class A, burning brand test (only), **as directed**, per ASTM E 108 or UL 790.
 2. Panel Thickness: 2-3/4 inches (70 mm) **OR** 1-1/2 to 1-9/16 inches (38 to 40 mm), **as directed**.
 3. Panel U-Factor: Not more than 0.70 (3.97) **OR** 0.53 (3.01) **OR** 0.44 (2.50) **OR** 0.40 (2.27) **OR** 0.29 (1.65) **OR** 0.28 (1.59) **OR** 0.26 (1.48) **OR** 0.24 (1.36) **OR** 0.23 (1.31) **OR** 0.22 (1.25) **OR** 0.18 (1.02) **OR** 0.15 (0.85) **OR** 0.14 (0.79) **OR** 0.10 (0.57), **as directed**, measured in Btu/sq. ft. x h x deg F (W/sq. m x K) according to NFRC 100 or ASTM C 1363 using procedures described in ASTM C 1199 and ASTM E 1423.
 4. Panel Strength Characteristics:
 - a. Maximum Panel Deflection: 3-1/2 inches (89 mm) when a 4-by-12-foot (1.2-by-3.6-m) panel is tested according to ASTM E 72 at 34 lbf/ sq. ft. (1.6 kPa), with a maximum 0.090-inch (2.3-mm) set deflection after 5 minutes.
 - b. Panel Support Strength: Capable of supporting, without failure, a 300-lbf (1334 N) concentrated load when applied to a 3-inch- (76-mm-) diameter disk according to ASTM E 661.
 5. Grid Core: Mechanically interlocked extruded-aluminum I-beams, with a minimum flange width of 7/16 inch (11.1 mm).
 - a. Extruded Aluminum: ASTM B 221 (ASTM B 221M), in alloy and temper recommended in writing by manufacturer.

- b. I-Beam Construction: One-piece extruded-aluminum components **OR** Thermally broken; two separate extruded-aluminum components permanently bonded by a material of low thermal conductance, **as directed**.
 - c. Grid Pattern: Inline rectangle, nominal 12 by 24 inches (305 by 610 mm) **OR** Staggered rectangle, nominal 12 by 24 inches (305 by 610 mm) **OR** Square, nominal 12 inches (305 mm) **OR** As indicated on Drawings, **as directed**.
 - 6. Exterior Face Sheet:
 - a. Thickness: 0.070 inches (1.778 mm) **OR** 0.060 inches (1.524 mm) **OR** 0.052 inches (1.321 mm), **as directed**.
 - b. Color: White **OR** Crystal **OR** As selected from manufacturer's full range, **as directed**.
 - c. Color Stability: Not more than 3.0 **OR** 4.0 **OR** 7.0, **as directed**, units Delta E when measured according to ASTM D 2244 after outdoor weathering in southern Florida according to procedures in ASTM D 1435 with panels mounted facing south and as follows:
 - 1) Panel Mounting Angle: Not more than 5 **OR** 45, **as directed**, degrees from horizontal.
 - 2) Exposure Period: 60 months **OR** 30 months **OR** 60 months for vertical assemblies, 30 months for components of Class A roof assemblies, **as directed**.
 - d. Erosion Protection: Manufacturer's standard **OR** Integral, embedded glass erosion barrier **OR** Surface-applied, polyvinyl fluoride film not less than 1.0 mils (0.03 mm) thick, **as directed**.
 - e. Impact Resistance: No fracture or tear at impact of 60 ft. x lbf (81 J) **OR** 70 ft. x lbf (95 J) **OR** 230 ft. x lbf (312 J), **as directed**, by a 3-1/4-inch- (83-mm-) diameter, 5-lb (2.3-kg) free-falling ball according to test procedure in UL 972.
 - 7. Interior Face Sheet:
 - a. Thickness: 0.045 inch (1.143 mm) **OR** 0.060 inch (1.524 mm), **as directed**.
 - b. Color: White **OR** Crystal **OR** As selected from manufacturer's full range, **as directed**.
 - 8. Fiberglass-Sandwich-Panel Adhesive: ASTM D 2559.
 - a. Compatible with facing and core materials.
 - b. Tensile and shear bond strength of aged adhesive ensures permanent adhesion of facings to cores, as evidenced by testing according to ASTM C 297 and ASTM D 1002 after accelerated aging procedures that comply with aging requirements for adhesives with high resistance to moisture in ICBO ES AC05, "Sandwich Panel Adhesives."
 - 9. Panel Fabrication: Factory assemble and seal panels.
 - a. Laminate face sheets to grid core under a controlled process using heat and pressure to produce straight adhesive bonding lines that cover width of core members and that have sharp edges.
 - 1) White spots indicating lack of bond at intersections of grid-core members are limited in number to 4 for every 40 sq. ft. (3.7 sq. m) of panel and limited in diameter to 3/64 inch (1.2 mm).
 - b. Fabricate with grid pattern that is symmetrical about centerlines of each panel.
 - c. Fabricate panel to allow condensation within panel to escape.
 - d. Reinforce panel corners.
- C. Accessory Materials
 - 1. Insulating Materials: Specified in Division 07 Section "Thermal Insulation".
 - 2. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil (0.762-mm) thickness per coat.
- D. Aluminum Finishes
 - 1. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - 2. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
 - 3. Aluminum Anodic Finish: Class I, clear anodic coating complying with AAMA 611 **OR** Class I, color anodic coating complying with AAMA 611, **as directed**.

- a. Color: Light bronze **OR** Medium bronze **OR** Dark bronze **OR** Black **OR** Match sample **OR** As selected from full range of industry colors and densities, **as directed**.
- 4. Aluminum High-Performance Organic Finish: Two-coat **OR** Three-coat, **as directed**, thermocured system with fluoropolymer topcoats containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2604 **OR** AAMA 2605, **as directed**.
 - a. Color: Match sample **OR** As selected from manufacturer's full range, **as directed**.

1.3 EXECUTION

A. Installation

1. General:
 - a. Comply with manufacturer's written instructions.
 - b. Do not install damaged components.
 - c. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
 - d. Rigidly secure nonmovement joints.
 - e. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
 - f. Weld aluminum components in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
 - g. Seal joints watertight, unless otherwise indicated.
2. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with bituminous paint or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.
3. Install continuous aluminum sill closure with weatherproof expansion joints and locked and sealed or welded corners. Locate weep holes at rafters.
4. Install components to drain water passing joints, condensation occurring within aluminum members and panels, and moisture migrating within assembly to exterior.
5. Install components plumb and true in alignment with established lines and elevations.
6. Install insulation materials as specified in Division 07 Section "Thermal Insulation".
7. Erection Tolerances: Install assemblies to comply with the following maximum tolerances:
 - a. Alignment: Limit offset from true alignment to 1/32 inch (0.8 mm) where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches (76 mm); otherwise, limit offset to 1/8 inch (3.2 mm).
 - b. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet (3.2 mm in 3.7 m); 1/2 inch (13 mm) over total length.

B. Field Quality Control

1. Testing Agency: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.
2. Testing Services: Testing and inspecting of representative areas to determine compliance of installed assemblies with specified requirements shall take place as follows and in successive stages as indicated on Drawings. Do not proceed with installation of the next area until test results for previously completed areas show compliance with requirements.
 - a. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas shall be tested according to ASTM E 1105.
 - 1) Test Procedures: Test under uniform and cyclic static air pressure.
 - 2) Static-Air-Pressure Difference: as directed by the Owner.
 - 3) Water Penetration: None.
 - b. Water-Spray Test: Before installation of interior finishes has begun, assemblies shall be tested according to AAMA 501.2 and shall not evidence water penetration.
3. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

4. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 71 00 00 - MPF DOOR HARDWARE**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. Evaluation of hardware to be specified for each door is to be based on the door's use and frequency. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.2 SUMMARY

- A. Finish Hardware for hollow metal and wood doors.
- B. Lock cylinders for aluminum doors.

1.3 SUBMITTALS

- A. Product Data: Required
- B. Samples: Required
- C. Door Schedule: Required

1.4 QUALITY ASSURANCE

- A. Regulatory Requirements: USPS Handbook RE-4 Standards for Handicapped Accessibility and Handbook RE-5 security.
- B. Hardware for fire-rated openings shall be in compliance with NFPA Standard No. 80, UL10B and UL305.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Door Hardware: Obtain each type of hardware from a single manufacturer.
 - 1. Locksets: By Best, Corbin Russwin, Sargent, Schlage, Yale or approved equal. All mortise locks shall be ANSI A156.13 Grade 1, with cast or forged lever handles.
 - 2. Lock cylinder: Integral type by same manufacturer of locksets.
 - 3. Hinges: Full mortise type with stainless steel pins by Hager, McKinney, Stanley, Lawrence or Soss.
 - 1). Non-removable pins (NRP) at exterior doors and public interior exposure.
 - 2). Ball bearing at fire rated doors, oversized doors and doors with closers.
 - 4. Closers: Heavy duty overhead exposed type complying with ANSI/BHMA A156.4, sized to door conditions or adjustable for door size and barrier free by LCN, Norton, Yale or approved equal.
 - 5. Exit devices: Crash bar or push bar type by Corbin Russwin, Yale, Von Duprin or approved equal.
 - 6. Kick Plates: 6" stainless steel high surface mounted with counter sunk screws.
 - 7. Miscellaneous hardware: Dead locks, bolts, push/pull units, stops, holders, bumpers, thresholds, weatherstripping, silencers, astragals, etc. to be provided as required.
 - 8. Finishes: Satin stainless steel (US32D).

E. SCHEDULES

1. Submit Hardware Schedule based on ANSI series standards and functions.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013

Last revised: 3/31/2010

END OF SECTION 08 71 00 00

SECTION 08 71 00 00 - CSF DOOR HARDWARE**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. Evaluation of the type of door and hardware to be specified for each door is to be based on the door's use and frequency. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Sets may be added as required for additional doors.

COORDINATE THE HARDWARE SET NUMBERS WITH THE DOOR NUMBERING SYSTEM ON THE FLOOR PLAN AND DOOR SCHEDULE.

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Finish Hardware items which are required for swing, sliding and folding doors, except special types of unique and non-matching hardware specified in the same section as the door and door frame.
2. Hinges.
3. Locks and latches.
4. Operating trim.
5. Accessories for pairs of doors and exit devices.
6. Closing devices.
7. Door controls.
8. Stops and holders.
9. Miscellaneous hardware.

B. Related Sections:

1. Section 083500 - Folding Doors and Grilles: Lockable closures.
2. Section 083613 - Sectional Doors.
3. Section 084113 - Aluminum-Framed Entrances and Storefronts: Hardware for same, and coordination.
4. Section 084229 - Automatic Entrances.
5. Section 016000, Product Requirements.

1.2 REFERENCES

A. American National Standards Institute (ANSI);

1. ANSI A156.3 - National Standard for Exit devices.
2. ANSI A156.4 - National Standard for Door Controls - Closers.

3. ANSI A156.6 - National Standard for Architectural Door Trim.
4. ANSI A156.13 - National Standard for Mortise Locks & Latches.

B. National Fire Protection Association (NFPA):

1. NFPA 80 - Fire Doors and Windows.
2. NFPA 101 - Code for Safety to Life from Fire in Buildings and Structures.
3. NFPA 252 - Fire Tests of Door Assemblies.

C. Underwriters Laboratories (UL):

1. UL 10B - Fire Tests of Door Assemblies.
2. UL 305 - Panic Hardware.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
- B. Product Data: Submit manufacturers' technical product data for each item of hardware. Include whatever information may be necessary to show compliance with requirements, and include instructions for installation and for maintenance of operating parts and finishes.
- C. Hardware Schedule: Submit final hardware schedule in manner indicated below. Coordinate hardware with doors, frames and related work to ensure proper size, thickness, hand, function and finish of hardware.
 1. Final Hardware Schedule Content: Based on finish hardware indicated, organize hardware schedule into "hardware sets" indicating complete designations of every item required for each door or opening. Include the following information:
 - a. Type, style, function, size and finish of each hardware item.
 - b. Name and manufacturer of each item.
 - c. Fastenings and other pertinent information.
 - d. Location of hardware set cross-referenced to indications on Drawings both on floor plans and in door and frame schedule.
 - e. Explanation of all abbreviations, symbols, codes, etc. contained in schedule.
 - f. Mounting locations for hardware.
 - g. Door and frame sizes and materials.
 - h. Keying information.
 2. Submittal Sequence: Submit schedule at earliest possible date particularly where acceptance of hardware schedule must precede fabrication of other work (e.g., hollow metal frames) which is critical in the project construction schedule. Include with schedule the product data, samples, shop drawings of other work affected by finish hardware, and other information essential to the coordinated review of hardware schedule.
- D. Samples: Prior to submittal of the final hardware schedule and prior to final ordering of finish hardware, submit one sample of each type of exposed hardware unit, as selected by the Contracting Officer, finished as required, and tagged with full description for coordination with schedule.
 1. Samples will be returned to the supplier. Units which are acceptable and remain undamaged through submittal, review and field comparison procedures may, after final check of operation, be used in the work, within limitations of keying coordination requirements.
- E. Templates: Furnish hardware templates to each fabricator of doors, frames and other work to be factory-prepared for the installation of hardware. Upon request, check shop drawings of such other work, to confirm that adequate provisions are made for proper location and installation of hardware.
- F. Written Report: Before final inspection, a detailed written report shall be made to the Contracting Officer covering application and condition of the Finish Hardware.

1.4 QUALITY ASSURANCE

- A. Perform work in accordance with the following requirements:
1. ANSI A117.1
 2. NFPA 101.
 3. NFPA 80.
 4. NFPA 252.
 5. UL 10B.
 6. UL 305.
- B. Regulatory Requirements:
1. Conform to applicable code for requirements applicable to fire rated doors and frames.
 2. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc., and acceptable to the public authority as suitable for the purpose specified and indicated.
 3. Conform to United States Postal Service "Standards for Facility Accessibility by the Physically Handicapped" Handbook RE-4 for mounting heights and locations of accessories.
- C. Manufacturer: Obtain each type of hardware (latch and lock sets, hinges, closers, etc.) from a single manufacturer, although several may be indicated as offering products complying with requirements.
- D. Supplier: A recognized architectural finish hardware supplier, with warehousing facilities, who has been furnishing hardware to similar projects for a period of not less than 2 years, and who employs an experienced architectural hardware consultant (AHC) who is available, at reasonable times during the course of the work, for consultation about project's hardware requirements.
- E. Fire-Rated Openings: Provide hardware for fire-rated openings in compliance with NFPA Standard No. 80 and local building code requirements.

NOTE TO SPECIFIER

REQUIRED Part (PART 2 PRODUCTS) is indicated below. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN & CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Within each Article in Part 2 hardware products from a few manufacturers are specified to establish a standard of quality and minimum functional requirements.
- B. All items of a particular hardware category i.e. locksets, closers, hinges shall be of the same manufacturer.
- C. Hardware Manufacturers:
- | | | |
|----|---|----------------|
| 1. | Adams Rite, City of Industry, CA | |
| 2. | Alarm Lock Systems, Amityville, NY | (800) 252-5625 |
| 3. | Baldwin Hardware Corp., Reading, PA | (888) 592-2216 |
| 4. | Bommer, Landrum, SC | (800) 334-1654 |

- D. Section 016000 - Product Requirements: Unless noted otherwise, substitution of specified products with equivalent products from the above approved manufacturers is permitted in accordance with Product Options and Substitutions in Section 016000.

2.2 HINGES

- A. Subject to compliance with requirements, provide hinges of one of the following manufacturers and as specified below:
1. Hager.
 2. McKinney.
 3. Stanley.
 4. Soss.

B. Material:

1. For interior doors, provide full mortise-type steel hinges with steel pins; non-rising for non-security exposure, flat button with matching plugs.
2. For exterior doors, provide full mortise-type stainless steel hinges with stainless steel pins; non-removable, flat button with matching plugs.
3. Ball-bearing Type: Swaged, inner leaf beveled, square corners.

NOTE TO SPECIFIER

Finish Type Key below indicates ANSI A156.18 National Standard For Materials and Finishes used for hardware finished in this schedule.

Finish Type Key:

Code	Description	Basis Material	Nearest Former US Category Equivalent
626	Satin Chromium, Plated	Brass, Bronze	A US 26D
630	Satin Stainless Steel	Stainless Steel	A US 32D
652	Satin Chromium Plated	Steel	E US 26D
689	Aluminum Painted	Any	E US 28

C. Hinges/pivots by types:

1. Type H-1: Medium weight door, average frequency, steel.
 - a. Hinge FBB179 4-1/2 x 4-1/2 652 Stanley
 - b. Hinge BB1279 4-1/2 x 4-1/2 652 Hager
 - c. Hinge TA2714 4-1/2 x 4-1/2 652 McKinney
2. Type H-2: Medium weight door, average frequency, steel, non-removable pins. Hinges on interior doors shall be satin chrome plated finish 652. Hinges on exterior doors shall be completely stainless steel finish 630.
 - a. Hinge FBB179 4-1/2 x 4-1/2 NRP Stanley
 - b. Hinge BB1279 4-1/2 x 4-1/2 NRP Hager
 - c. Hinge TA2714 4-1/2 x 4-1/2 NRP McKinney
3. Type H-3: Concealed, medium weight door, average frequency, steel.
 - a. Hinge 216 US26D Soss
4. Type H-4: Medium weight door, average frequency, steel. (Continuous Piano hinge)
 - a. Hinge STS314 1/4 626 Stanley
5. Type H-5: Medium weight door, average frequency, steel, 5-inch high, non-removable pins. Hinges on interior doors shall be satin chrome plated finish 652. Hinges on exterior doors shall be completely stainless steel finish 630.
 - a. Hinge FBB179 4-1/2 x 5 NRP Stanley
 - b. Hinge BB1279 4-1/2 x 5 NRP Hager
 - c. Hinge TA2714 4-1/2 x 5 NRP McKinney

2.3 LOCKS, LATCHES, AND BOLTS

- A. Subject to compliance with requirements, provide locks, latches and bolts of one of the following manufacturers and as specified below:
1. Best.
 2. Corbin Russwin.
 3. Sargent.
 4. Schlage.
 5. Yale.
- B. Materials:
1. Mortise Locks: ANSI A156.13, Grade 1, equipped with 6-pin tumbler. Provide 2-3/4 inch backset. Provide three keys per cylinder.
 2. Latch Sets: Provide release by turning lever, closing door, or turning emergency release key through hole in outside knob.
 3. Strikes: ANSI Strikes, 1-1/4 x 4-7/8 inches, with curved lip. Wrought box strikes, with extended lip for latch bolts, except open strike plates may be used in wood frames. Provide dustproof strikes for foot bolts.
 4. Tactile Warning: Provide lever handles with manufacturer's standard tactile warning per handicapped codes when required by local authority.

C. Keying

1. General:

- a. Incorporate a security system to ensure that keys used during construction do not open doors after United States Postal Service occupancy.
- b. Key side of locks shall be on the public side.
- c. Master and submaster key system shall conform to United States Postal Service criteria. Doors at exterior of facility, from public area to workroom, Stamped Envelope Storage and Postal Store areas shall not be on the master/submaster keying schedule. Other areas, based on need or local preference, may be excluded from master/submaster keying schedule.

2. Construction Keying:

- a. Furnish exterior door lock sets with keyed alike removable construction core cylinders for use during construction.
- b. Restrict distribution of construction keys. Maintain record of persons who have received keys and deliver copies of record to Contracting Officer upon request.
- c. Provide permanent cores to Postmaster prior to substantial completion. Postmaster shall store them securely until needed. At substantial completion and at Contracting Officer direction, remove construction cores and replace with permanent cores in presence of Postmaster. Provide keys to Postmaster and return construction cores to manufacturer.

3. Permanent Keying:

- a. Master locks and cylinders are to match the United States Postal Service existing keying system if a system exists.
- b. Master to open all doors, except entrance doors to facility, doors from public area to workroom, Stamped Envelope Room and Postal Store shall not be on any master key system.

4. Permanent Keying:

- a. Master locks and cylinders are to match the United States Postal Service existing I/C core system.
- b. Master to open all doors, except Stamped Envelope Room and Postal Store shall not be on any master key system.

D. Cylinders and Thumbturns by types:

1. Type B-1: Rim Cylinder.

- | | | | | |
|----|----------|----------|-----|----------------|
| a. | Cylinder | 1109 | 626 | Yale |
| b. | Cylinder | 20-022 | 626 | Schlage |
| c. | Cylinder | 3000-200 | 626 | Corbin Russwin |

2. Type B-2: Mortise Cylinder.

- | | | | | |
|----|----------|-------------------------|-----|----------------|
| a. | Cylinder | 2153 w/ 1161 series cam | 626 | Yale |
| b. | Cylinder | 20-013 | 626 | Schlage |
| c. | Cylinder | 1000-A03 | 626 | Corbin Russwin |

3. Type B-3: Cylinder Guard

- | | | | | |
|----|----------------|--------|-----|------------|
| a. | Cylinder Guard | MS4043 | 630 | Adams Rite |
|----|----------------|--------|-----|------------|

E. Locks and Latches by types:

1. Type L-1 Hotel Lock (similar to ANSI F15)

- | | | | |
|----|------------------------------|-----|----------------|
| a. | AUR 8832FL w/security collar | 626 | Yale |
| b. | ML2029 NSA w/security collar | 626 | Corbin Russwin |
| c. | L9485P-06 w/security collar | 626 | Schlage |

2. Type L-2 Classroom Lock (ANSI F84)

- | | | | |
|----|-----------|-----|----------------|
| a. | AU 5408LN | 626 | Yale |
| b. | CL 3555 | 626 | Corbin Russwin |
| c. | ND70PD | 626 | Schlage |

- | | | | | |
|----|-------------------------------|------------------------------|-----|----------------|
| 3. | Type L-3 | Entrance Lock (ANSI F20) | | |
| a. | AUR 8847FL w/security collar | | 626 | Yale |
| b. | ML2067 w/ security collar | | 626 | Corbin Russwin |
| c. | L9453P-06A w/ security collar | | 626 | Schlage |
| 4. | Type L-4 | Storeroom Lock (ANSI F86) | | |
| a. | AU 5405LN | | 626 | Yale |
| b. | CL3557 | | 626 | Corbin Russwin |
| c. | ND80PD | | 626 | Schlage |
| 5. | Type L-5 | Privacy Lock (ANSI F76) | | |
| a. | AU 5402LN | | 626 | Yale |
| b. | CL3520 | | 626 | Corbin Russwin |
| c. | ND40S | | 626 | Schlage |
| 6. | Type L-6 | Closet Deadbolt (ANSI E2151) | | |
| a. | 3611B | | 626 | Yale |
| b. | 470 | | 626 | Sargent |

2.4 PUSH/PULL UNITS

- A. Pulls and Pushes Manufacturers: Subject to compliance with requirements, provide from one of the following manufacturers as specified below.
1. H. B. Ives.
 2. Trimco.
 3. Rockwood.
 4. Baldwin.
 5. Adams Rite
- B. Materials: ANSI A156.6 for 0.050 inch thickness.
- C. Push and Pulls by types:
1. Type P-1: Push 4 inch x 16 inch.

a.	1001-3	630	Trimco
b.	70C	630	Rockwood
 2. Type P-2 Pull: 4 inch x 16 inch.

a.	1010-3	630	Trimco
b.	132 x 70C	630	Rockwood
 3. Type P-3 Pull: 2.75 inch x 11.5 inch.

a.	3001 fixed pull	629	Adams Rite
----	-----------------	-----	------------

2.5 EXIT DEVICES

- A. Exit Devices: Subject to compliance with requirements, provide exit devices of one of the following manufacturers and as specified below.
1. Corbin Russwin.
 2. Yale.
 3. Von Duprin.
 4. Adams Rite.
 5. Jackson Exit Device.
 6. Monarch.
 7. Sargent.
 8. Securitech Group Inc.
- B. Exit Only Door Alarms:
1. SDA103

C. Materials:

1. Provide exposed metal to match hardware.
2. Size and mount units indicated or, if not indicated, to comply with manufacturer's recommendations for exposure condition. Reinforce substrate as recommended.

D. Exit Devices by types:

1. Type E-1: Exit Device (F01) (for wood and metal doors)
 - a. 8700 w/ security interlock nose guard/strike 628 Adams Rite
2. Type E-2: Exit Device (F04) (for narrow stile rim for aluminum doors)
 - a. 8800 x cyl. dog w/ security interlock nose guard/strike 630 Adams Rite
3. Type E-3: Exit Device (F03) (for wood and metal doors)
 - a. 8700 x cyl. dog w/ security interlock nose guard/strike 628 Adams Rite
4. Type E-3: Not Used

NOTE TO SPECIFIER

SELECT APPROPRIATE PRODUCT FROM THE THREE MANUFACTURERS BASED ON THE PROJECT AND FACILITY SECURITY REQUIREMENTS.

5. Type E-4: Access Control Device

- a. Centurion PEDS Series
- b. Trilogy 3500 SERIES 628 ALARM LOCK
- c. Omnilock 2000 Series 628 OSI

(For use at facilities with less than three (3) access control devices, but with more than 100 employees and high turn-over rate.)

6. Type E-5: Time Lock Exit Device system (for entrance doors)

- a. USPSTL-FA-200 or approved equal 628 Securitech
- (includes exit device, power supply, timer, power transfer)

2.6 CLOSERS

A. Closers: Subject to compliance with requirements, provide closers of one of the following manufacturers and as specified below.

1. LCN.
2. Norton.
3. Yale.

B. Materials & Features:

1. ANSI A156.4, Grade 1.
2. ADA/ANSI A117.1
3. U.L. listed. Provide closers for fire rated openings in compliance with NFPA 80, NFPA 101, and local building codes.
4. Non-Sized; adjustable 1 to 5 pounds.
5. 180 degree door opening.
6. Heavy Duty parallel arm.
7. Standard Cover.
8. Provide exposed metal to match hardware.
9. Mounting: Mount closers as follows unless indicated otherwise:
 - a. Interior side of exterior doors.

- b. Opposite side of public side.
 - c. Workroom side of doors leading to or from the Workroom.
 - d. Room side of corridor doors.
- 10. Size and mount units indicated or, if not indicated, to comply with manufacturer's recommendations for exposure condition. Reinforce substrate as recommended.
- 11. Closers to be installed to allow door swing as shown on drawings.
- C. Closers by types:
 - 1. Type C-1:

a. 4011	689	LCN
b. P7500	689	Norton
c. 4400	689	Yale
 - 2. Type C-2: Parallel arm.

a. 4111	689	LCN
b. P7500	689	Norton
c. 4400	689	Yale

2.7 STOPS, HOLDERS AND BUMPERS

- A. Stop and Holder, Floor and Wall Stop, and Bumper Manufacturers: Subject to compliance with requirements, provide from one of the following manufacturers as specified below.
 - 1. H. B. Ives.
 - 2. Quality Hardware Manufacturing Co., Inc.
 - 3. Trimco.
 - 4. Dor-O-Matic.
 - 5. Glenn-Johnson.
- B. Materials:
 - 1. Door stop mounting: Methods to suit substrates encountered (plastic anchor, drywall anchor, expansion shield).
 - 2. Provide grey rubber exposed resilient parts.
 - 3. Do not furnish aluminum floor stops.
 - 4. Where a door stop is specified in the Hardware Schedule, provide a wall stop type (S-1). However, if circumstances prevent a wall stop installation (door too far from perpendicular wall, door swing into adjacent glass, etc.) then substitute a type (S-2) or (S-3) floor stop as indicated for use intended.
 - 5. Adjust height of floor stops to suit undercut of adjacent door.
- C. D. Stops, Holders and Bumpers by types:
 - 1. Type S-1: Wall Stop - Install with appropriate anchors for substrate encountered.

a. 1270W	630	Trimco
b. 407 1/2C	630	Ives
 - 2. Type S-2: Floor Stop - Install with appropriate anchors for substrate encountered.

a. 1201	626	Trimco
b. FS444	626	Ives
 - 3. Type S-3: Floor Stop - Install with appropriate anchors for substrate encountered.

a. W1211	630	Trimco
b. FS436	630	Ives
c. 331ES	630	Quality

2.8 THRESHOLDS

- A. Threshold Manufacturers: Subject to compliance with requirements, provide from one of the following manufacturers as specified below.
1. Pemko.
 2. National Guard.
 3. Reese.
 4. Zero.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- C. Thresholds by types:
1. Type T-2:
Saddle threshold for floor finish at doors
(either VCT tile or VCT to VCT or sealed concrete to tile.)
 - a. VCT to VCT

154	Pemko
HD5A	Reese
425E	National
 - b. VCT to Tile/Concrete

158	Pemko
S514A	Reese
653	National
 2. Type T-3 (with weather seal):

a. S483AV	Alum	Reese
b. 2005AT		Pemko
c. 896V		National

2.9 WEATHERSTRIPPING

- A. Weatherstripping Manufacturers: Subject to compliance with requirements, provide from one of the following manufacturers as specified below.
1. Pemko.
 2. Reese.
 3. Zero.
 4. National Guard.
- B. Weatherstripping by types:
1. Type W-1: Door Gaskets.
 - a. 807A

	Reese
--	-------

2.10 MISCELLANEOUS HARDWARE

- A. Miscellaneous Hardware Manufacturers: Subject to compliance with requirements, provide from the manufacturers specified below.
- B. Provide door silencers for all doors unless indicated otherwise.
- C. Miscellaneous Hardware by types:
1. Type M-1: Acoustical Perimeter Door Seal
 - a. 105NA

	Alum	National
--	------	----------
 2. Type M-2: Dead Lock, (ANSI E0191) - w/ No exposed trim on lobby side.

- | | | | |
|-----|---|------|----------|
| a. | 3300 Series | 630 | Yale |
| 3. | Type M-3: Security Viewer. Mounted/installed, centered at 5'-0" AFF. | | |
| a. | 1756 | 630 | Hager |
| 4. | Type M-4: Astragal | | |
| a. | 184A | Alum | Reese |
| 5. | Type M-5: Silencers | | |
| a. | 1229A | Gray | Trimco |
| b. | SR64 | | Ives |
| 6. | Type M-6: Flushbolts | | |
| a. | 3917 | 626 | Trimco |
| b. | 555 | 626 | Rockwood |
| 7. | Type M-7: Astragal | | |
| a. | 276C | Alum | Reese |
| 8. | Type M-8: Kick Plates | | |
| a. | K0050 8 x 34 | 630 | Trimco |
| b. | KP18 8 x 34 | 630 | Rockwood |
| 9. | Type M-9: Armor Plate; 40" H x 46" W (both sides of door) | 630 | |
| 10. | Type M-10: Emergency Exit Alarm w/ Contacts: | | |
| a. | SDA103 | | SGI |
| | 1) Provide concealed door contacts and a separate alarm unit. Alarm will have local 110 db (min). Audible alarm and a visual alarm (strobe light) operated on 24vac, utilizing 110v. AC current to continually charge the battery. Battery operated door or panic bar mounted alarms are not allowed. | | |
| | 2) Alarm to be located above the door, within 2 feet of the door. Provide door sign indicating alarm will sound when opened and labeled, "EMERGENCY EXIT ONLY - RE-ENTRY NOT AUTHORIZED". | | |
| 11. | Type M-11: Reinforcing Pivot Hinges | | |
| a. | 253 | 652 | Hager |
| 12. | Type M-12: Bumper | | |
| a. | 170-19 | 630 | Bommer |
| b. | Install on push side of door at same height as lockset, in line with lever handle of lockset and approximately 2 inches away from the handle. | | |
| 13. | Type M-13: Door Bottom Shoe | | |
| a. | CGSS-4-3.5, 1 3/4" width | 630 | Hiawatha |

2.11 FABRICATION

- A. Finish and Base Material Designations: Number indicate BHMA Code or nearest traditional U.S. commercial finish.
- B. Where base material and quality of finish are not otherwise indicated, provide at least commercially recognized quality specified in applicable Federal Specifications.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 1. Verify that doors and frames are ready to receive Work and dimensions are as instructed by the manufacturer.

2. Verify that electric power is available to power operated devices and of the correct characteristics.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Where not specified under other sections to be performed by manufacturer or suppliers, machine, fit and drill wood and metal doors.
- B. Prepare doors of various types to receive hardware, using templates and instructions provided with the hardware items for jobsite work.
- C. Mount hardware units at heights indicated in "Recommended Locations for Builders Hardware for Standard Steel Doors and Frames" by the Door and Hardware Institute, except as specifically indicated or required to comply with governing regulations, and except as may be otherwise directed by Contracting Officer.
 - 1. Conform to requirements United States Postal Service "Standards for Facility Accessibility by the Physically Handicapped" Handbook RE-4.
- D. Install each hardware item in compliance with the manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, coordinate removal, storage and reinstallation or application of surface protections with finishing work specified in the Division-9 sections. Do not install surface-mounted items until finishes have been completed on the substrate.
- E. Installer of security hardware is to be trained and familiar with product.
- F. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- G. Drill and countersink units which are not factory-prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.
- H. Set thresholds for exterior doors in full bed of butyl-rubber or polyisobutylene mastic sealant.

3.3 ADJUSTING

- A. Adjust and check each operating item of hardware and each door, to ensure proper operation or function of every unit. Replace units which cannot be adjusted to operate freely and smoothly as intended for the application made.
- B. Clean adjacent surfaces soiled by hardware installation.
- C. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make final check and adjustment of all hardware items in such space or area. Clean operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

- D. Instruct United States Postal Service Personnel in proper adjustment and maintenance of hardware and hardware finishes, during the final adjustment of hardware.
- E. Continued Maintenance Service: Approximately six months after the acceptance of hardware in each area, the Installer, accompanied by the representative of the latch and lock manufacturer, shall return to the project and re-adjust every item of hardware to restore proper function of doors and hardware. Consult with and instruct United States Postal Service personnel in recommended additions to the maintenance procedures. Replace hardware items which have deteriorated or failed due to faulty design, materials or installation of hardware units. Prepare a written report of current and predictable problems (of substantial nature) in the performance of the hardware.

3.4 HARDWARE SCHEDULE

- A. General requirements, see respective paragraphs above for details:
 - 1. Ensure that keys used during construction cannot open doors after United States Postal Service occupancy.
 - 2. Provide door silencers for all doors unless indicated otherwise.

SET 1

CSF Small 15-30: Exterior storefront
 CSF Small 25-100A Box Lobby exit
 Carrier Admin entrance (120)
 CSF Medium Box Lobby exit (301A)
 BMEU Lobby Exterior Entry (701B)
 Carrier Admin: Mail Pick-up to exterior (CA101A)
 Each set to have:

- 1 ea. (E-2) Exit Device F04
- 1 ea. (B-1) Rim Cylinder
- 1 ea. (B-2) Mortise Cylinder
- 1 ea. (B-3) Cylinder Guard
- 1 ea. (T-3) Threshold
- 1 ea. Closer

All other hardware is furnished by Storefront supplier as specified in Section 084113.

SET 1 A

CSF Small 15-30: Time Lock Lobby Exterior Entry
 CSF Medium Time Lock Lobby Exterior Entry
 BMEU Lobby Time Lock Lobby Exterior Entry
 Each set to have:

- 1 ea. (E-5) Time Lock Exit Device System
- 1 ea. (B-1) Rim Cylinder
- 1 ea. (B-3) Cylinder Guard
- 1 ea. (T-3) Threshold
- 1 ea. Closer

All other hardware is furnished by Storefront supplier as specified in Section 084113.

SET 2

CSF Small 15-30: Retail Lobby to Box Lobby/Self-Service, interior storefront

Each set to have:

1 ea.	(E-2)	Exit Device F04
1 ea.	(B-1)	Rim Cylinder
1 ea.	(B-2)	Mortise Cylinder
1 ea.	(B-3)	Cylinder Guard
1 ea.		Door Stop
1 ea.		Closer

All other hardware is furnished by Storefront supplier as specified in Section 084113.

Not Used

SET 3

Automatic Storefront Doors (201A and B) (202A and B):

Provide final cylinder cores. Coordinate with Section 084229.

All other hardware is furnished by Automatic Entrance Door supplier as specified in Section 084229.

SET 4

Workroom to Box Lobby

Admin Corridor to Lobby (100B)

Workroom to Box Lobby (301B)

Each set to have:

3 ea.	(H-2)	Hinges
1 ea.	(L-1)	Hotel Lock (Similar to F15)
1 ea.	(T-2)	Threshold
1 ea.	(M-3)	Security Viewer
1 ea.	(M-13)	Door Bottom Shoe
1 ea.		Door Stop
1 ea.		Closer

SET 5

Toilet - single occupancy (111)

Each set to have:

3 ea.	(H-1)	Hinges
1 ea.	(L-5)	Privacy Lock (F76)
1 ea.	(T-1)	Threshold
1 ea.		Door Stop
1 ea.		Closer

SET 6

Toilet - multiple occupancy

Admin to Full Service (100C)

Admin to Workroom (100D)

Carrier Vestibule Personnel to Workroom (401F)

Lunchroom (601)

Each set to have:

3 ea.	(H-1)	Hinges
1 ea.	(P-1)	Push
1 ea.	(P-2)	Pull
1 ea.	(M-8)	Kick Plate
1 ea.		Door Stop
1 ea.		Closer

SET 7

CSF Small 15-30: Mail and Carrier Vestibules to Exterior and to Workroom

Each set to have:

3 ea.	(H-5)	Hinges (5-inch)
1 ea.	(L-3)	Entrance Lock (ANSI F20)
1 ea.	(T-2)	Threshold
1 set	(W-1)	Door Gaskets
2 ea.	(M-9)	Armor Plate
1 ea.	(M-11)	Reinforcing Pivot Hinge
1 ea.	(M-12)	Bumper
1 ea.	(M-13)	Door Bottom Shoe
1 ea.		Door Stop (interior door only)
1 ea.		Closer

Not Used

SET 8

NOTE TO SPECIFIER

If the facility has less than 20 employees then use this set for the Mail Vestibule Personnel to Workroom and to Exterior door, and mark hardware set 9 as Not Used.

Mail Vestibule Personnel to Workroom and to Exterior (if <20 employees)

Carrier Vestibule Personnel to Exterior

Enclosed Platform: Carrier Vestibule Personnel to Exterior

Building and Grounds Room (single door)

BMEU to Scale room and to Workroom (701A)

BMEU Customer Service to Workroom (702)

Each set to have:

3 ea.	(H-2)	Hinges
1 ea.	(L-3)	Entrance Lock (ANSI F20)
1 ea.	(T-2)	Threshold
1 ea.	(M-13)	Door Bottom Shoe
1 ea.		Door Stop (interior doors only)
1 ea.		Closer

SET 9

NOTE TO SPECIFIER

If the facility has 20 or more employees then retain this hardware set.

Mail Vestibule Personnel to Workroom and to Exterior (if >=20 employees)

Carrier Vestibule Personnel to Exterior (411C)

Enclosed Platform: Platform to Dock Stairs (501C)

Mail Vestibule Personnel to Exterior (502C) and to Workroom (502F)

Each set to have:

- 3 ea. (H-2) Hinges
- 1 ea. (E-4) Access Control Device (PEDS), (includes 1 electric hinge)
- 1 ea. (T-2) Threshold
- 1 ea. (M-13) Door Bottom Shoe
- 1 ea. Door Stop
- 1 ea. Closer

SET 10

Mail and Carrier Vestibule Impact Doors

Mail and Carrier Vestibule Impact Doors (411A, B, D, E) (502 A, B, D, E)

All hardware furnished by Impact Door supplier as specified in Section 083800.

SET 11

SSDB 15-20: Mechanical Room to Mail Vestibule

Office Door to Retail Lobby (public)

Telephone Equipment Room to Workroom

Stamped Envelopes to Workroom

Stamped Envelope Room (206)

Each set to have:

- 3 ea. (H-2) Hinges
- 1 ea. (L-1) Hotel Lock (Similar to F15)
- 1 ea. (T-2) Threshold
- 1 ea. (M-13) Door Bottom Shoe
- 1 ea. Door Stop
- 1 ea. Closer

SET 12

Storage/Janitor's Closet to Workroom

Storage Room to Workroom

Mechanical Room to Workroom

Folding Grille Closet Access Door

Electrical Room to Workroom (113) (603A)

Equipment Room to Workroom (114) (604)

Storage Room to Admin Corridor (107)

Folding Grille Closet Access Door (205C)

Storage Room to Workroom (207) (614)

Custodial Supplies (610)

Postal Equipment Room - single door (611)

Postal Records (612)

Postal Supplies (613)

Recycling Room to Workroom (615B)

BMEU Storage to Workroom (705)

Each set to have:

3 ea. (H-1) Hinges
 1 ea. (L-4) Storeroom Lock (F86)
 1 ea. Door Stop
 1 ea. Closer

SET 13

Office to Workroom
 Work Area to Office
 Janitor's Closet to Workroom
 Postmaster's Office to Admin Corridor (101)
 Carrier Admin: Admin Area to Workroom (103A, B)
 CS Manager's Office to Admin Corridor (104)
 Conference Room to Admin Corridor (106)
 Janitor's Closet to Workroom (112) (602)
 Carrier Admin: Meeting Room (121)
 Carrier Admin: Closet (122) (123)
 Each set to have:

3 ea. (H-1) Hinges
 1 ea. (L-2) Classroom Lock (F84)
 1 ea. Door Stop
 1 ea. Closer

SET 14

Folding Closure Pocket (204B and C) (205B)
 Each set to have:

4 ea. (H-3) Hinges
 1 ea. (L-6) Closet Deadbolt

SET 15

Folding Closure (204A) (205A)
 Each set to have:

2 ea. (B-2) Rim Cylinder

All other hardware furnished by Folding Closure Door Supplier as specified in Section 083500.

Note: Provide cylinder at each end of each 8 foot long folding closure section, and any intermediate openings.

SET 16

CSF Small "A" Plans: Wicket door
 Each set to have:

Door:
 3 ea. (H-1) Hinges
 1 ea. (L-4) Storeroom Lock (F86)
 1 ea. (T-2) Threshold
 1 ea. Door Stop

1 ea. Closer

Wicket Panel:

1 ea. (H-4) Continuous Piano Hinge
 1 ea. (M-2) Deadlock (ANSI E0191)
 1 ea. (M-3) Security Viewer
 1 ea. (M-4) Astragal

Not Used

NOTE TO SPECIFIER

Retain either the set above or the set below depending on the CSF Small plan. The set above is only used on CSF Small Plans 40, 50, 65A, 80A, and 100A, where the wicket door is inside the secured Lobby (101). The set below is used on CSF Small Plans 65B, 80B, and 100B, where the wicket door is always accessible to the public.

SET 17

Wicket Door (202C) (CA101)

Each set to have:

Door:

3 ea. (H-2) Hinges
 1 ea. (L-1) Hotel Lock (Similar to F15)
 1 ea. (T-2) Threshold
 1 ea. (M-13) Door Bottom Shoe
 1 ea. Door Stop
 1 ea. Closer

Wicket Panel:

1 ea. (H-4) Continuous Piano Hinge
 1 ea. (M-2) Deadlock (ANSI E0191)
 1 ea. (M-3) Security Viewer
 1 ea. (M-4) Astragal

SET 18

Mail Platform Sectional Overhead Door (501D, E, F, G, H, I): All hardware furnished by Sectional Overhead Door supplier as specified in Section 083613.

SET 19

CIO to Workroom (CIO1A)

Each set to have:

3 ea. (H-2) Hinges
 1 ea. (L-1) Hotel Lock (Similar to F15), Note: the lock must be the specified model from Yale, substitutions are not permitted.
 1 ea. Cylinder, USPS Furnished (PSIN# 0931A0), Contractor Installed
 1 ea. (T-3) Threshold
 1 ea. (M-13) Door Bottom Shoe
 1 ea. (M-1) Acoustical perimeter seal
 1 ea. Door Stop
 1 ea. Closer

SET 20

CIO Covert Entry to Exterior (CIO1)

Each set to have:

- 3 ea. (H-2) Hinges w/ NRP
- 1 ea. (L-1) Hotel Lock (Similar to F15), Note: the lock must be the specified model from Yale, substitutions are not permitted.
- 1 ea. Cylinder, USPS Furnished (PSIN#091SP), Contractor Installed
- 1 ea. (T-3) Threshold
- 1 set (W-1) Door Gaskets
- 1 ea. (M-3) Security Viewer
- 1 ea. (M-13) Door Bottom Shoe
- 1 ea. Door Stop
- 1 ea. Closer

SET 21

Not Used

Electrical to Exterior (603B)

Recycling to Exterior (615A)

Each set to have:

- 3 ea. (H-2) Hinges
- 1 ea. (L-1) Hotel Lock (Similar to F15)
- 1 ea. (T-3) Threshold
- 1 set (W-1) Door Gaskets
- 1 ea. Closer

SET 22

Not Used

Admin to Exterior Exit (100A)

Each set to have:

- 3 ea. (H-2) Hinges
- 1 ea. (E-1) Exit Device
- 1 ea. (T-3) Threshold
- 1 ea. Closer

NOTE TO SPECIFIER*Add the following item if door is used only for emergency egress and will be alarmed.*

- 1 ea. (M-10) Alarm System

NOTE TO SPECIFIER*If the door can be used to re-enter the building then replace the E-1 exit device with the following exit device;*

- 1 ea. (E-3) Exit Device

And add the following items:

- 1 ea. (P-3) Fixed Pull
- 1 ea. (B-1) Rim Cylinder
- 1 ea. (B-3) Cylinder Guard

SET 23

Workroom to Exterior Exit (401A, B, C)

Each set to have:

3 ea. (H-2) Hinges
 1 ea. (E-1) Exit Device
 1 ea. (T-3) Threshold
 1 set (W-1) Door Gaskets
 1 ea. (M-10) Alarm System
 1 ea. Closer

SET 24

Enclosed Platform to Exterior (double-doors) (501A and B)

Building and Grounds Room (double-doors) (609)

Each set to have:

6 ea. (H-2) Hinges
 1 ea. (L-1) Hotel Lock (Similar to F15)
 1 ea. (T-3) Threshold
 1 set (W-1) Door Gaskets
 1 ea. (M-6) Flushbolts
 1 ea. (M-7) Astragal
 1 ea. (S-1) Door Stop (Doors 501A and B only)
 1 ea. Closer

SET 25

Postal Equipment to Workroom (double-doors) (611)

Each set to have:

6 ea. (H-1) Hinges
 1 ea. (L-4) Storeroom Lock (F86)
 1 ea. (M-6) Flushbolts
 1 ea. (M-7) Astragal
 2 ea. Door Stop
 1 ea. Closer

SET 26

BMEU Lobby to Mail Platform (701C)

Each set to have:

3 ea. (H-2) Hinges
 1 ea. (L-3) Entrance Lock (F20)
 1 ea. (T-3) Threshold
 1 set (W-1) Door Gaskets
 1 ea. (M-13) Door Bottom Shoe
 1 ea. Closer

SET 27

BMEU Scale Room to Staging Area in Workroom (703)

Each set to have:

3 ea.	(H-5)	Hinges (5-inch)
1 ea.	(L-4)	Storeroom Lock (F86)
1 ea.		Door Stop
1 ea.		Closer

SET 28

BMEU Scale Room to Mail Platform (double-doors) (704)

Each set to have:

6 ea.	(H-2)	Hinges
1 ea.	(L-1)	Hotel Lock
1 ea.	(T-3)	Threshold
1 set	(W-1)	Door Gaskets
1 ea.	(M-6)	Flushbolts
1 ea.	(M-7)	Astragal
2 ea.	(M-13)	Door Bottom Shoe
1 ea.		Closer

USPS CSF Specifications issued: 10/1/2013

Task	Specification	Specification Description
08 71 16 00	01 22 16 00	No Specification Required

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 80 00 00 - MPF GLAZING

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Insulating glass units for entrances, storefronts and windows.
- B. Wall vision glazing panels.
- C. Door vision glazing panels.
- D. Glazing compounds and accessories.

1.2 SUBMITTALS

- A. Product Data: Required.
- B. Samples: Required

1.3 QUALITY ASSURANCE

- A. Perform Work in accordance with FGMA Glazing Manual and ANSI Z97.1.
- B. Special Warranty for sealed glass units from seal failure, interpane dusting or misting: 10 years.
- C. Tempered glass glazing to be identified permanently by manufacturer.
- D. Handbook RE-5 for Security.

PART 2 – PRODUCTS

2.1 MANUFACTURERS/PRODUCTS

- A. Source: PPG, Viracon, Falconer Glass, Libbey-Owens-Ford or approved equal.
- B. Insulated Glass Units: Comply with glazing and low E requirements defined in the MPF Design Criteria for the following:
 - 1. Insulating glass units.
 - 2. Safety insulating glass units if required by applicable codes and regulations.
 - 3. Insulating glass units with security film.
- C. Tempered Glass: Clear or tinted, fully tempered, 1/4" thick, complying with ASTM C 1048.
- D. Wire Glass: Comply with NFPA 80 and UL listings for fire rated door and wall vision panels.

- E. One - Way Reflective Mirror Glass: Insulated glass unit to improve sound attenuation. Unit to comply with ASTM C1036.
- F. Bullet-resistant Glass complying with UL 752 "Standard for Bullet Resisting Equipment".
- G. Glazing Compounds and Accessories recommended by glazing manufacturer.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 9/7/2010

END OF SECTION 08 80 00 00

SECTION 08 80 00 00 - CSF GLAZING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items at end of Section.08 80 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Insulated glass units, low E.
 2. Insulated tempered glass units, low E.
 3. Clear tempered glass.
 4. Wire glass.
 5. One-way reflective mirror glass.
 6. Insulated glass units with security film, low E.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 084113 - Aluminum-Framed Entrances and Storefronts: Glazed doors and storefronts.
 2. Section 084229 - Automatic Entrances.

1.2 REFERENCES

- A. American National Standards Institute (ANSI):
 1. ANSI Z97.1 - Safety Performance Specifications and Methods of Test for Safety Glazing Material Used in Buildings.
- B. American Society for Testing and Materials (ASTM):
 1. ASTM C920 - Standard Specification for Elastomeric Joint Sealants.
 2. ASTM C1036 - Standard Specification for Flat Glass.
 3. ASTM C1048 - Standard Specification for Heat-Treated Flat Glass-Kind HS, Kind FT Coated and Uncoated Glass.
 4. ASTM D2000 - Standard Classification System for Rubber Products in Automotive Applications.
 5. ASTM F1233 - Standard Test Method for Security Glazing Materials and Systems.

C. Consumer Product Safety Standards for Architectural Glazing. CPSC 16 CFR, Part 1201.

D. Flat Glass Marketing Association (FGMA):

1. FGMA - Glazing Manual and Glazing Sealing Systems Manual.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

1. Product Data:

a. Glass: Structural, physical and environmental characteristics, size limitations, special handling or installation requirements.

b. Glazing compound: Provide chemical, functional, and environmental characteristics, limitations, special application requirements.

2. Samples:

a. Glazing: Submit one sample 12 x 12 inches (300 x 300 mm) in size of each type of glazing, illustrating tinting, and finish of glazing materials. Label each sample indicating kind, quality and manufacturer.

3. Assurance/Control Submittals:

a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

B. Section 017704 – Closeout Procedures and Training: Procedures for closeout submittals.

1. Submit written special warranty with forms completed in United States Postal Service name and registered with manufacturer as specified in this section.

1.4 QUALITY ASSURANCE

A. Identification: Each unit of tempered glass and burglar resistant glazing shall be permanently identified by the manufacturer. The identification shall be etched or ceramic fired on the glass and be visible when the unit is glazed.

B. Provide Energy Star Label on glazing indicating compliance with DOE Energy Star requirements.

C. Perform Work in accordance with FGMA Glazing Manual.

D. Installer Qualifications: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

A. Environmental Requirements:

1. Do not install glazing when ambient temperature is less than 40 degrees F.

2. Maintain minimum ambient temperature before, during and 24 hours after installation of glazing compounds.

1.7 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Special Warranty:
 1. Include coverage for cracking, breakage, and replacement of same.
 - a. Warranty Period: 1 year.
 2. Include coverage for sealed glass units from seal failure, interpane dusting or misting, and replacement of same.
 - a. Warranty Period: 10 years.
 3. Include coverage for delamination of laminated glass and replacement of same.
 - a. Warranty Period: 5 years.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. Pilkington Libbey-Owens-Ford, Toledo, OH (800)221-0444.
 2. PPG Industries, Pittsburgh, PA (412) 434-2858 (800) 377-5267.
 3. Viracon, Owatonna, MN (800) 533-2080.
- B. Subject to compliance with project requirements, manufacturers offering polycarbonate products which may be incorporated in the Work include the following:
 1. Sheffield Plastics, Incorporated Sheffield, MA (413) 229-8711 (800) 628-5084.
 2. GE Plastics, Pittsfield, MA (800) 451-3147.
- C. Subject to compliance with project requirements, manufacturers offering security film products which may be incorporated in the Work include the following:
 1. 3M, St. Paul, MN (800) 480-1704.
- D. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 GLASS MATERIALS

NOTE TO SPECIFIER

Verify if tempered glass is required by code.

NOTE TO SPECIFIER

*These specifications are based on using tempered glass where "safety" glass is required by code. If laminated glass is required by code then revise the tempered glass types to laminated glass.
In climates below 3000 HDD, the low-E coating shall be placed on the second surface (inner side of outer panel);
in climates above 3000 HDD, the low-E coating shall be placed on the third surface (outer side of inner panel).*

At retail service lobby, self-service area, box lobby, walk-up, and drive-up windows visible reflectance should be 15 percent maximum and visible transmittance should be 65 percent minimum.

- A. Glass Type 1 - Insulated Glass Units, Low E: Double pane units with inner pane of clear annealed glass and outer pane of tinted annealed glass. [Coating on inner side of outer panel.] [Coating on outer side of inner panel.]
 - 1. Where required by code, provide Glass Type 2 (tempered).
 - 2. Glass Thickness, Inner: 1/4 inch (6 mm).
 - 3. Glass Thickness, Outer: 1/4 inch (6 mm).
 - 4. Tint Color: [Gray] [Bronze] [Selected by Contracting Officer].
 - 5. Visible Reflectance: [Maximum 15 percent] [_____].
 - 6. Visible Transmittance: [Minimum 65 percent] [_____].
 - 7. Unit Thickness: 1 inch (25 mm) thick units. 1/4 inch (6 mm) thick, clear inner pane. 1/4 inch (6 mm) thick, tinted outer pane. 1/2 inch (12 mm) air space between panes.
- B. Glass Type 2 - Insulated Tempered Glass Units, Low E: Double pane units with inner pane of clear tempered glass and outer pane of tinted tempered glass. [Coating on inner side of outer panel.] [Coating on outer side of inner panel.]
 - 1. Glass Thickness, Inner: 1/4 inch (6 mm).
 - 2. Glass Thickness, Outer: 1/4 inch (6 mm).
 - 3. Tint Color: [Gray] [Bronze] [Selected by Contracting Officer].
 - 4. Visible Reflectance: [Maximum 15 percent] [_____].
 - 5. Visible Transmittance: [Minimum 65 percent] [_____].
 - 6. Unit Thickness: 1 inch (25 mm) thick units. 1/4 inch (6 mm) thick, clear inner pane. 1/4 inch (6 mm) thick, tinted outer pane. 1/2 inch (12 mm) air space between panes.
- C.
- D. Glass Type 3 - Clear Tempered Glass: ASTM C 1048, Kind FT (Fully Tempered), Condition A (Uncoated), Type I (Transparent Glass, Flat), Class 1 (Clear), Quality q3 (Glazing Select). Conform to ANSI Z97.1 and CPSC 16CFR Part 1201.
 - 1. Thickness: 1/4 inch (6 mm), unless indicated otherwise.

NOTE TO SPECIFIER

Confirm if the documents contain glazing within a fire barrier and if required by code. Add the requirement to provide wire glass. Identify specific locations.

- E. Glass Type 4 - Wire Glass: (Fire Safety Glass) ASTM C 1036, Type II (Wired Glass Flat), Class 1 (Clear), Form 1 (Wired, Polished Both Sides), Quality q8 (Glazing), Mesh m2 (Square) woven stainless steel wire of 1/2 inch (12 mm) grid size. Wire glass is used for door vision panels.
 - 1. Thickness: 1/4 inch (6 mm), unless indicated otherwise.
- F. Glass Type 5 - One-Way Reflective Mirror Glass : ASTM C1036, Type 1 transparent flat, Class 1 (clear), Quality q3 (Glazing Select);
 - 1. Thickness (at ceiling panel): 1/4 inch (6 mm), tempered per ANSI Z97.1.
 - 2. Unit Thickness (at Criminal Investigative Office): 1 inch (25 mm) thick units. 1/4 inch (6 mm) thick clear inner pane. 1/4 inch (6 mm) thick mirrored outer pane. 1/2 inch (12 mm) air space between panes.

NOTE TO SPECIFIER

For facilities without an Intrusion Detection System, provide type 6 glass on all exterior windows and sidelights at the security perimeter (exterior walls and security walls) that meet the criteria in the CSF Design Criteria (Chapter 2-6.1.2)

- G. Glass Type 6 - Insulated Glass Units with Security Film, Low E: Double pane units with inner pane of clear annealed glass and outer pane of tinted annealed glass. [Coating on inner side of outer panel.] [Coating on outer side of inner panel.] Security film of a minimum 0.007 inch (0.1778 mm) on the inner side of the inner panel.
1. Glass Thickness, Inner: 1/4 inch (6 mm).
 2. Glass Thickness, Outer: 1/4 inch (6 mm).
 3. Tint Color: [Gray] [Bronze] [Selected by Contracting Officer].
 4. Visible Reflectance: [Maximum 15 percent] [_____].
 5. Visible Transmittance: [Minimum 65 percent] [_____].
 6. Unit Thickness: 1 inch (25 mm) thick units. 1/4 inch (6 mm) thick, clear inner pane. 1/4 inch (6 mm) thick, tinted outer pane. 1/2 inch (12 mm) air space between panes.

NOTE TO SPECIFIER

For facilities without an Intrusion Detection System, provide type 7 glass on all interior windows, sidelights, and storefronts systems at the security perimeter that meet the criteria in the CSF Design Criteria (Chapter 2-6.1.2)

- H. Glass Type 7 - Clear Tempered Glass with Security Film: ASTM C 1048, Kind FT (Fully Tempered), Condition A (Uncoated), Type I (Transparent Glass, Flat), Class 1 (Clear), Quality q3 (Glazing Select). Conform to ANSI Z97.1 and CPSC 16CFR Part 1201. Security film of a minimum 0.007 inch (0.1778 mm) on the inner side of panel.
1. Thickness: 1/4 inch (6 mm), unless indicated otherwise.

2.3 GLAZING COMPOUNDS

- A. Polysulphide Sealant: Two component, chemical curing, non-sagging type; cured Shore A hardness of 15-25.
- B. Silicone Sealant: Single component, chemical curing; capable of water immersion without loss of properties; non-bleeding, non-staining; cured Shore A hardness of 15-25.
 1. Color: Clear.
- C. Acrylic terpolymer compounded especially for glazing; non-hardening, non-staining, and non-bleeding.

2.4 GLAZING ACCESSORIES

- A. Setting Blocks: Resilient blocks of 70 to 90 Shore A durometer hardness; compatible with glazing sealant.
- B. Spacers: Resilient blocks of 40 to 50 Shore A durometer hardness; self adhesive on one side; compatible with glazing sealant.
- C. Filler Rods: Closed cell or jacketed foam rods of polyethylene, butyl, neoprene, polyurethane, or vinyl; compatible with glazing sealant.
- D. Joint Cleaners, Primers, and Sealers: As recommended by glazing sealant manufacturer.
- E. Gaskets: ASTM D2000, SBC 415 to 3BC 620; extruded or molded neoprene or EPDM, black.

- F. Mastic: Non-solvent type adhesive as recommended by mirrored glass manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that openings for glazing are correctly sized and within tolerance.
 - 2. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement, weeps are clear, and ready to receive glazing.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Clean contact surfaces with solvent and wipe dry.
- B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.
- C. Prime surfaces scheduled to receive sealant.

3.3 GLAZING

- A. Locate setting blocks at quarter points of sill; set in sealant if heel or toe bead is required.
- B. Install spacers inside and out except where preshimmed tape or glazing gaskets are to be used.
- C. Set each piece in a series to other pieces in pattern draw, bow, or other visually perceptible characteristics.
- D. Provide glazing sealants and gaskets as required for particular glazing application. Coordinate with other Sections for material compatibility.
- E. Gaskets:
 - 1. Provide adequate anchorage, particularly for driven-in wedge gaskets.
 - 2. Miter and weld ends of channel gaskets at corners to provide continuous gaskets.
 - 3. Seal face gaskets at corners with sealant to close opening and prevent withdrawal of gaskets from corners.
- F. Do not leave voids in glazing channels except as specifically indicated or recommended by glass manufacturer. Force sealant into channel to eliminate voids. Tool exposed surfaces to slight wash away from joint. Trim and clean promptly.

- G. Do not allow sealant to close weeps of aluminum framing.
- H. Provide filler rod where sealants are used in the following locations:
 - 1. Head and jamb channels.
 - 2. Colored glass over 75 united inches in size.
 - 3. Clear glass over 125 united inches in size.

3.4 INSTALLATION - BUTT GLAZED METHOD

- A. Temporarily brace tempered glass in position for duration of glazing process. Mask edges of glass at adjoining glass edges and between glass edges and framing members.
- B. Temporarily secure a small diameter non-adhering foamed rod on back side of joint.
- C. Apply silicone sealant to open side of joint in continuous operation; thoroughly fill the joint without displacing the foam rod. Tool the sealant surface smooth to concave profile.
- D. Permit sealant to cure then remove foam backer rod. Apply sealant to opposite side, tool smooth to concave profile.
- E. Remove masking tape.

3.5 CONSTRUCTION

- A. Interface with Other Work: Coordinate glazing with installation of entrances and storefronts specified in Section 084113.

3.6 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect preparation and installation of glass.

3.7 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Remove glazing materials from finish surfaces.
- C. Remove labels after Work is complete.
- D. Clean glass and adjacent surfaces.

3.8 PROTECTION

- A. Section 017300 - Executions: Protecting installed work.
- B. After installation, mark pane with an 'X' by using removable plastic tape or paste. Do not mark reflective glass units.

SECTION 08 87 14 00 - MPF SOLAR CONTROL GLAZING FILMS

SECTION 088714 - SOLAR CONTROL GLAZING FILMS

***** NOTE

TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. THIS SECTION IS A "PERFORMANCE" SPECIFICATION. The Section describes the design requirements for the Fire Alarm System. The Fire Alarm Contractor will design the system and prepare detailed Fire Alarm Drawings to be used for the installation of the Fire Alarm System.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 87 14 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section includes film products applied to glass surfaces to impart solar control performance for solar heat and UV reduction, glare reduction, privacy, fade protection, or aesthetic characteristics.

1.2 DEFINITIONS

- A. Dual Reflective Films: Films where interior visible light reflectance is less than the exterior visible light reflectance. The lower interior reflectance provides improved visibility from the interior to the outdoors without affecting the film's solar performance.
- B. Emissivity: The ability of a surface to absorb far-infrared heat and to reflect it. The lower the emissivity, the lower the far-infrared heat absorption and the greater the far-infrared heat reflectance.
- C. Far-Infrared Heat: Heat radiated from objects at temperatures below 1300 deg F such as heat radiated from: room objects, objects heated by the sun, or a home heating system. Far-infrared heat is different from near-infrared heat that is heat radiated from objects at highly elevated temperatures such as the sun.
- D. Low Emissivity (Low-E) Films: Films with improved far-infrared heat reflection, with the ability to reduce winter heat loss through windows. The reflection of far-infrared heat also reduces the need for summer cooling by reducing the transmission of far-infrared heat from outdoor objects through windows into the interior of a home or building.
- E. Low Reflective Films: Films whose visible light reflectance values are very close to that of ordinary glass.
- F. Luminous Efficacy: Ratio of visible light transmission to shading coefficient for a glazing system.
- G. Neutral Solar Films: Films that allow visible light to pass without distortion of color and that have equal visible light transmission properties at all wavelengths in the visible range from 380 to 780 nanometers.
- H. Light to Solar Heat Gain Ratio: Ratio of visible light transmission to Solar Heat Gain Coefficient for a glazing system.
- I. Solar Heat Gain Coefficient: The fraction of incident solar radiation that actually passes through that window, including solar energy that is both directly transmitted and that which is absorbed and subsequently released inwardly by re-radiation and conduction. SHGC is expressed as a number between 0 and 1. The lower a window's solar heat gain coefficient, the less solar heat it transmits. This number is the mathematical complement of the TSER value: The sum of the TSER (Total Solar Energy Rejection, in decimal form) of a glazing system and its SHGC value is 1; therefore, 1 - TSER = SHGC

- J. Spectrally Selective Solar Films: Films that reduce solar heat gain mainly by reducing the transmission of near-infrared solar radiation with minimal reduction of visible light transmission. Films with a Light to Solar Heat Gain Ratio of above 1.00 are spectrally selective.

1.03 REFERENCES

- A. Section makes references to the following:
1. ASTM E-84, "Test Method for Surface Burning Characteristics of Building Materials".
 2. ASTM E 903, "Test Method for Solar Absorptance, Reflectance, and Transmittance of Materials Using Integrating Spheres."
 3. ASTM D 1044, "Test Method for Resistance of Transparent Plastics to Surface Abrasion."

1.04 PERFORMANCE REQUIREMENTS

- A. Thermal and Optical Performance Properties: Provide glazing films with performance properties specified (on 1/8 inch clear glass) based on manufacturer's published test data, as determined according to procedures indicated in ASHRAE Handbook of Fundamentals:

B. NOTE TO SPECIFIER

Performance values required to be determined on an individual case by case basis. Determination of existing conditions, sun exposures, energy enhancements and aesthetics will determine choice of available products and required characteristics. Any film product selected must meet the requirements of R.E. 5.

1. Solar Energy Rejected:
 2. Shading Coefficient:
 3. Solar Reflectance:
 4. Solar Absorptance:
 5. Solar Transmittance:
 6. Visible Light Transmittance:
 7. Emissivity:
 8. U-Value (winter median):
 9. Light to Solar Heat Gain Ratio:
 10. Solar Heat Gain Coefficient:
 11. Ultraviolet Transmission: Provide films with UV absorbing materials that limit the weighted UV Transmission to less than 0.1 percent when measured in accordance with ASTM E 903.
- B. Scratch Resistance: Provide films that have 5.0 percent maximum haze increase when tested to ASTM D 1044, using 100 revolutions, a CS-10F Taber abraser and 500 g weights.
- C. Ultraviolet Transmission: Provide films with UV absorbing materials that limit the weighted UV Transmission to less than 0.1 percent when measured in accordance with ASTM E 903.
- D. Surface Burning Characteristics: Provide films that have Flame Spread Index of 0 and Smoke Development Index of 30 or less when tested in accordance to ASTM E 84.

1.5 SUBMITTALS

- A. Product Data (on 1/8 inch clear glass): For each film product indicated.
- B. Samples for Color Selection: Manufacturer's standard sample sets showing the full range of colors available for each type of product indicated.
- C. Samples for Verification: 12-inch square samples of each glazing film, of each product color specified.

- D. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.
- E. Closeout Submittals: Upon completion of the Work, submit the following:
 - 1. Executed warranty.
 - 2. Maintenance (cleaning) and replacement instructions.

1.6 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Engage a firm experienced in manufacturing systems similar to those indicated for this Project and meeting the standards of the International Standards Organization (ISO), ISO 9001 Quality Assurance in Production and Installation.
- B. Installer Qualifications: Engage an experienced installer certified, licensed, or otherwise qualified by film manufacturer as having the necessary experience, staff, and training to install manufacturer's products according to specified requirements.
- C. Mockups: Apply glazing films in locations as directed to verify selections made under sample Submittals and to demonstrate aesthetic effects and qualities of materials and execution.
 - 1. Obtain approval of field samples before continuing with remainder of installation.
 - 2. Maintain field samples during remainder of installation in an undisturbed condition as a standard for judging the completed Work.
 - 3. Approved field samples may become part of the completed Work.
- D. Preinstallation Conference: Before installing glazing films, conduct conference at Project site. Conduct preinstallation conference in conjunction with installation of mockup.
 - 1. Meet with Owner, Architect, glazing film Installer and glazing film manufacturer's representative.
 - 2. Review methods and procedures related to installation, including manufacturer's written instructions.
 - 3. Examine substrate conditions for compliance with requirements.
 - 4. Review temporary protection measures required during and after installation.
 - 5. Document proceedings, including corrective measures or actions required, and furnish copy of record to each participant.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Protect glazing films according to manufacturer's written instructions and as needed to prevent damage condensation, temperature changes, direct exposure to sun, or other causes.

1.8 PROJECT CONDITIONS

- A. Environmental Limitations: Do not proceed with film installation when ambient and substrate temperature conditions are outside limits permitted by manufacturer and when glass substrates are wet from frost, condensation, or other causes.

1.9 WARRANTY

- A. Manufacturer's standard warranty agreeing to replace films that fail within [10 or 15 years] from date of original installation. [Warranty period dependant on specific product.]

PART 2 - PRODUCTS

2.1 MANUFACTURERS/PRODUCTS

- A. Provide one of the following products:

1. CPFilms Inc.; Vista® Film.
2. 3m Commercial Prestige Series Window Film.
3. Panorama Premier Plus Commercial Window Film.

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

- B. Product Description: Multi-layered product applied to interior glass surfaces, consisting of from outboard surface to inboard surface:
 1. Removable release liner.
 2. CDF adhesive.
 3. Clear or dyed ultraviolet absorbing layer of polyester film.
 4. Single or multiple layers of metallized or sputtered polyester film.
 5. Laminating adhesive.
 6. Scratch resistant coating.
- C. Color: [Blue-Gray][Light Green][Bronze][Neutral][Warm Gray].

2.2 GLAZING FILM ACCESSORIES

- A. General: Provide products complying with requirements of glazing film manufacturer for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
- B. Adhesive: Water activated, dry adhesive system that forms a molecular bond between the film and glass.
 1. Protect adhesive form contamination by applying a release liner that will be removed and discarded at installation.
- C. Cleaners, Primers, and Sealers: Types recommended by glazing film manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Examine glass and surrounding adjacent surfaces for conditions affecting installation.
 1. Report conditions that may adversely affect installation. In report, include description of any glass that is broken, chipped, cracked, abraded, or damaged in any way.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. Beginning of installation means acceptance of conditions.

3.2 PREPARATION

- A. Comply with manufacturer's written instructions for surface preparation.
- B. Immediately before beginning installation of films, clean glass surfaces of substances that could impair glazing film's bond, including mold, mildew, oil, grease, dirt and other foreign materials.
- C. Protect window frames and surrounding conditions from damage during installation.

3.3 INSTALLATION

- A. General: Comply with glazing film manufacturers' written installation instructions applicable to products and applications indicated, except where more stringent requirements apply.
 - 1. Install film continuously, but not necessarily in one continuous length. Install with no gaps or overlaps.
 - a. If seamed, install with no gaps or overlaps. Install seams vertical and plumb. No horizontal seams allowed.
 - 2. Do not remove release liner from film until just before each piece of film is cut and ready for installation.
 - 3. Install film with mounting solution and custom cut to the glass with neat, square corners and edges to within 1/8 inch of the window frame.
 - 4. Remove air bubbles, wrinkles, blisters, and other defects.
- B. After installation, view film from a distance of 10 feet against a bright uniform sky or background. Film shall appear uniform in appearance with no visible streaks, banding, thin spots or pinholes.
 - 1. If installed film does not meet these criteria, remove and replace with new film.

3.4 CLEANING

- A. Remove excess mounting solution at finished seams, perimeter edges, and adjacent surfaces.
- B. Use cleaning methods recommended by glazing film manufacturer.
- C. Replace films that cannot be cleaned.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 08 87 53 00 - FRAGMENT RETENTION FILM FOR GLASS**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of fragment retention film for glass. Products shall match existing materials and/or shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Submittals

1. Product Data: For each type of product indicated.
2. Samples: For each type of product indicated.
3. Test Reports: Certified test reports including analysis and interpretation of test results. Each report shall identify the manufacturer, the specific product name, the film thickness, the adhesive type and thickness, and the glass type and thickness. Test reports shall clearly identify the methods used and shall include the results recorded.
4. Certificates: On applications where the film will contact the glazing beads or gaskets, a certificate from the Contractor stating that the glazing compounds and gaskets are compatible with the fragment retention film and adhesive.

C. Delivery, Storage, And Handling

1. Deliver, store, and handle in accordance with the manufacturer's recommendations. Glass, including glass in windows or doors, that has the film factory applied shall be stored in a dry location free of dust, water, and other contaminants. Glass with factory applied film shall be delivered, stored, and handled so that the film is not damaged, scratched, or abraded and shall be stored in a manner which permits easy access for inspection and handling. Each roll of film shall have a tamperproof label containing full details of the roll and the batch number.

D. Warranty

1. Provide a 5 year warranty for fragment retention film material. The warranty shall provide for replacement of film if cracking, crazing, peeling, or inadequate adhesion occurs.

1.2 PRODUCTS

- A. Standard Products:** Fragment retention film shall be the standard product of a manufacturer regularly engaged in the manufacture of such products and shall essentially duplicate items that have been in satisfactory use for at least 2 years prior to bid opening.

- B. Fragment Retention Film:** Fragment retention film shall be polyester, polyethylene terephthalate, or a composite. Fragment retention film shall be optically clear and free of waves, distortions, impurities, and adhesive lines. The film may be a single layer or laminated. Lamination of the film shall only occur at the factory of the fragment retention film manufacturer. The film shall include an abrasion resistant coating on the surface that does not receive the film adhesive. Fragment retention film shall be a minimum thickness of 0.004 inch (0.10 mm), as required to meet Project requirements, and shall be clear **OR** tinted, **OR** reflective, **as directed**. The film shall be supplied with an optically clear weatherable pressure sensitive adhesive. The adhesive shall contain ultraviolet inhibitors to protect the film for its required life and shall limit ultraviolet transmission to not more than 8 percent of the radiation between 300 and 380 nanometers. The adhesive shall not be water activated.

1. Impact Performance: Test fragment retention film for impact in accordance with ANSI Z97.1 or 16 CFR 1201.

2. Tensile Strength: The fragment retention film samples tested shall exhibit a minimum tensile strength at break of 25,000 psi (172.4 MPa) when tested in accordance with ASTM D882, Method A.
3. Peel Strength: The fragment retention film shall exhibit a minimum peel strength of 5.3 pounds/inch (930 N/m) for 0.004 inch (0.10 mm) thick film when tested in accordance with ASTM D3330, Method A.
4. Surface Abrasion: The fragment retention film shall exhibit a change in haze not to exceed 3.2 percent following 100 turns, using 500-gram weights on a CS 10F abrasive wheel when tested in accordance with ASTM D1044.
5. Flame Spread and Smoke Density: The fragment retention film shall exhibit a flame spread index not exceeding 25 and a smoke density index not exceeding 100 when tested in accordance with ASTM E84.

1.3 EXECUTION

- A. Surface Preparation: The glass surface to which the fragment retention film is to be applied shall be cleaned of paint, foreign compounds, smears, and spatters. After the initial cleaning, the surface to receive the film shall be further cleaned in accordance with the film manufacturer's instructions.
- B. Application: Provide fragment retention film on window and door glass where indicated. After surface preparation, apply the fragment retention film in accordance with the manufacturer's recommendations and instructions. Apply film to the interior (room) side of the glass for both single and double glazed sheets, unless otherwise indicated. Multiple applications of film to achieve specified thicknesses will not be allowed. The film shall not be applied if there are visible dust particles in the air, if there is frost on the glazing, or if any room condition such as temperature and humidity do not meet the manufacturer's instructions. After film application, maintain room conditions as required by the manufacturer's instructions to allow for proper curing of the adhesive.
 1. Application to New Glass Before Glazing: Apply fragment retention film so that it extends edge to edge of the glass sheet. Set the film reinforced glass into the frame with glazing compounds or gaskets as specified in Division 08 Section "Glazing". When contact between the glazing compounds and/or gaskets and the film occurs, the Contractor shall ensure compatibility. The Contractor shall be responsible for delivery of the fragment retention film to the appropriate location for application. Coordinate fragment retention film application and curing with the glass supplier and window or door manufacturer prior to glazing installation.
 2. Application to Existing Glass Involving Dismantlement: Remove the existing glazing compound, gaskets, and/or stops as required to expose the existing glass pane. If necessary, remove the glass so that the film can be applied. Apply the film so that it extends edge to edge of the glass sheet. Install existing gaskets and/or stops and replace any removed glazing compounds with new glazing compounds. Scrap removed glazing compounds. Glazing compounds shall be in accordance with GANA Sealant Manual. Glazing methods shall be in accordance with GANA Glazing Manual. When contact between the glazing compounds and/or gaskets and the film occurs, the Contractor shall ensure compatibility. Replace and reinstall any damaged or broken glazing and gaskets in kind.
 3. Application to Existing Glass Without Dismantlement: Apply fragment retention film so that it extends to within 1/16-inch (1.6 mm), with a maximum of 1/8 inch (3 mm), of the edge of the visible glass area.
 4. Application to Existing Glass and Frame Without Dismantlement: Apply fragment retention film past the edge of the visible glass and extend onto the frame. Amount of film overlap, edge connection to the frame, and adhesive for adhering film to frame shall be as recommended by the film manufacturer. When contact between the glazing compounds and/or gaskets and the film occurs, the Contractor shall ensure compatibility.
 5. Splicing: Splices or seams in fragment retention film shall be permitted only when a sheet of glass has a dimension exceeding 58 inches (1.475 m) in both directions. All seams shall be

applied with a minimum overlap of 1/4 inch (6 mm) unless submitted test reports indicate impact performance is not diminished when seam is applied with a different overlap or a gap.

- C. Cleaning: Clean the fragment retention film in accordance with the manufacturer's instructions.

SECTION 08 90 00 00 - MPF LOUVERS AND VENTS

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. THIS SECTION IS A "PERFORMANCE" SPECIFICATION. The Section describes the design requirements for the Fire Alarm System. The Fire Alarm Contractor will design the system and prepare detailed Fire Alarm Drawings to be used for the installation of the Fire Alarm System.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 90 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fixed aluminum wall louvers.
 - 2. Fixed steel wall louvers.
 - 3. Insect screening.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 079200 - Joint Sealants: Perimeter sealant at louver frames.
 - 2. Section 055000 - Metal Fabrications: Security grille at louvers.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM B221 - Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.
 - 2. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blankout areas required, and frames.
 - 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Qualifications:

1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. The Arolite Company, Marietta, OH (740) 373-7676..
 2. Airoline.
 3. Construction Specialties, Incorporated, Cranford, NJ (908) 272-5200.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 ALUMINUM LOUVERS

- A. Type: 4 inch deep with blades on 45 degree slope. ASTM B221, extruded shape, prefinished with shop applied flouropolymer polyvinylidene fluoride finish. Coordinate color finish with Architect.
- B. Fabrication: Material thickness of 0.081 inch minimum, integral and lateral rain water stops positioned on blade.
- C. Frame: Channel shape, mechanically fastened corner joints, material thickness of 0.081 inch minimum.

2.3 STEEL LOUVERS

- A. Type: 6 inch deep with blades on 45 degree slope with center baffle and return bend, heavy channel frame, birdscreen with 1/2 inch square mesh for exhaust and 3/4 inch for intake.
- B. Fabrication: 16 gage thick galvanized steel or welded assembly, with factory baked enamel finish as scheduled on Drawings. Coordinate color finish with Architect.
- C. Mounting: Furnish with exterior flat flange for installation.

2.4 INSECT SCREENS

- A. 18 x 16 size aluminum mesh, set in aluminum frame.

- B. Install screen mesh in shaped frame, reinforce corner construction, shop install to louver with fasteners.

2.5 ACCESSORIES

- A. Fasteners and Anchors: Stainless steel type.
- B. Flashings: Of same material as louver frame. Extruded to required shape, single length in one piece per location.
- C. Sealants: Specified in Section 079200.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install louver assembly in accordance with manufacturer's published instructions.
- B. Install louvers level and plumb.
- C. Install flashings and align louver assembly to ensure moisture shed from flashings and diversion of moisture to exterior.
- D. Secure louvers in opening framing with concealed fasteners.
- E. Install perimeter sealant in accordance with Section 079200.
- F. Install security grille in accordance with Section 055000.

SECTION 08 90 00 00 - CSF LOUVERS AND VENTS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.08 90 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Fixed aluminum wall louvers.
 - 2. Fixed steel wall louvers.
 - 3. Insect screening.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 089200 - Joint Sealants: Perimeter sealant at louver frames.
 - 2. Section 055000 - Metal Fabrications: Security grille at louvers.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM B221 - Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Provide data describing design characteristics, maximum recommended air velocity, design free area, materials and finishes.
 - 2. Shop Drawings: Indicate louver layout plan and elevations, opening and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blankout areas required, and frames.
 - 3. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.

- b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
 1. The Arolite Company, Marietta, OH (740) 373-7676..
 2. Airoline.

SECTION 09 01 60 00 - PORTLAND CEMENT TERRAZZO FLOORING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for portland cement terrazzo flooring. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Poured-in-place portland cement terrazzo flooring and base.
 - b. Poured-in-place rustic terrazzo flooring.
 - c. Precast terrazzo units.

C. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For marble chips, aggregates, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement that indicates cost for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.
3. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work.
4. Samples: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected
5. Qualification data.
6. Material certificates.
7. Maintenance data.

D. Quality Assurance

1. Installer Qualifications: An installer who is a contractor member of NTMA.
2. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.
3. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling

1. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
2. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

F. Project Conditions

1. Environmental Limitations: Maintain temperature above 50 deg F (10 deg C) for 48 hours before and during terrazzo installation.
2. Weather Limitations: Proceed with rustic terrazzo installation only when forecasted weather conditions permit work to be performed according to NTMA's written recommendations and temperatures remain above 45 deg F (7.2 deg C).
3. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.

4. Control and collect dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.
 - a. Provide dustproof partitions and temporary enclosures to limit dust migration and to isolate areas from noise.

1.2 PRODUCTS

A. Portland Cement Terrazzo

1. Portland Cement Terrazzo Type: Sand cushion **OR** Structural **OR** Bonded **OR** Monolithic **OR** Installed over metal deck, **as directed**.
2. Materials:
 - a. Portland Cement: ASTM C 150, Type 1.
 - 1) Color for Exposed Matrix: As required by mix indicated **OR** White **OR** Gray, **as directed**.
 - b. Water: Potable.
 - c. Sand: ASTM C 33.
 - d. Marble Chips **OR** Aggregates, **as directed**: Complying with NTMA gradation standards for mix indicated and containing no deleterious or foreign matter.
 - 1) Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131 and ASTM C 535, **as directed**.
 - 2) 24-Hour Absorption Rate: Less than 0.75 percent.
 - 3) Dust Content: Less than 1.0 percent by weight.
 - e. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight, and compatible with terrazzo matrix.
 - f. Bonding Agent: Neat portland cement or epoxy or acrylic bonding agents formulated for use with topping indicated.
 - g. Underbed Reinforcement: Galvanized welded-wire reinforcement, 2 by 2 inches (51 by 51 mm) by 0.062-inch- (1.57-mm-) diameter wire, complying with ASTM A 185 and ASTM A 82, except for minimum wire size.
 - h. Isolation Membrane: Polyethylene sheeting, ASTM D 2103, Type 13300, 4 mils (0.1 mm) thick; or unperforated asphalt felt, ASTM D 226, Type I (No. 15).
3. Mixes:
 - a. Underbed (for structural portland cement terrazzo or portland cement terrazzo installed over metal deck): Structural-concrete underbed as specified in Division 03 Section "Cast-in-place Concrete".
 - b. Underbed (for sand-cushion or bonded portland cement terrazzo): Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated for component proportions and mixing.
 - c. Portland Cement Terrazzo (below for NTMA-formulated design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated for matrix and marble-chip proportions and mixing.
 - 1) Formulated Mix Color and Pattern: As selected from NTMA standard-terrazzo plates **OR** As selected from NTMA Venetian-terrazzo plates, **as directed**.
 - d. Portland Cement Terrazzo (for custom design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated for matrix and marble-chip **OR** aggregate, **as directed**, proportions and mixing.
 - 1) Custom Mix Color and Pattern: Match sample **OR** Match existing, **as directed**.

B. Rustic Terrazzo

1. Rustic Terrazzo Type: Structural **OR** Bonded **OR** Monolithic **OR** Unbonded, **as directed**.
2. Materials:
 - a. Portland Cement: ASTM C 150, Type 1.
 - 1) Color for Exposed Matrix: As required by mix indicated.
 - b. Water: Potable.

- c. Sand: ASTM C 33.
 - d. Marble Chips **OR** Aggregates, **as directed**: As required for mix indicated, sizes complying with NTMA gradation standards, 0.25 percent maximum 24-hour absorption rate, and containing no deleterious or foreign matter.
 - e. Matrix Pigments: Pure mineral or synthetic pigments, alkali resistant, durable under exposure to sunlight and weather, and compatible with matrix binder.
 - f. Air-Entraining Agent (for underbed of structural, bonded, or unbonded rustic terrazzo): Complying with NTMA's written recommendations and recommended by supplier for intended use.
 - g. Underbed Bonding Agent (for bonded rustic terrazzo): Neat portland cement.
 - h. Topping Bonding Agent (for monolithic rustic terrazzo): Neat portland cement, or epoxy or acrylic bonding agents formulated for use with topping indicated.
 - i. Isolation Membrane (for unbonded rustic terrazzo): Polyethylene sheeting, ASTM D 2103, Type 13300, 4 mils (0.1 mm) thick.
3. Mixes:
- a. Underbed (for structural or unbonded rustic terrazzo): Structural-concrete underbed as specified in Division 03 Section "Cast-in-place Concrete".
 - b. Underbed (for bonded rustic terrazzo): Comply with NTMA's "Terrazzo Specifications and Design Guide" for component proportions and mixing.
 - 1) Exterior Applications: Provide air-entraining agent.
 - c. Rustic Terrazzo (for NTMA-formulated design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated for matrix and marble-chip proportions and mixing.
 - 1) Formulated Mix Color and Pattern: As selected from NTMA rustic-terrazzo plates.
 - d. Rustic Terrazzo (for custom design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated for matrix and marble-chip **OR** aggregate, **as directed**, proportions and mixing.
 - 1) Custom Mix Color and Pattern: Match sample **OR** Match existing, **as directed**.
- C. Strip Materials
- 1. Standard Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in concrete slab or underbed.
 - a. Material: As indicated **OR** White-zinc alloy **OR** Brass, **as directed**.
 - b. Depth: As indicated **OR** 3/4 inch (19 mm) **OR** 1-1/4 inches (32 mm) **OR** 2 inches (51 mm), **as directed**.
 - c. Width: As indicated **OR** 0.05 inch (1.27 mm) **OR** 1/8 inch (3.2 mm) **OR** 1/4 inch (6.4 mm), **as directed**.
 - 2. Heavy-Top Divider Strips: One-piece, flat-type strips for grouting into sawed joints prepared in concrete slab or underbed.
 - a. Base-Section Material: As indicated **OR** White-zinc alloy **OR** Galvanized steel, **as directed**.
 - b. Top-Section Material: As indicated **OR** White-zinc alloy **OR** Brass **OR** Plastic, in color selected from manufacturer's full range, **as directed**.
 - c. Depth: As indicated **OR** 3/4 inch (19 mm) **OR** 1-1/4 inches (32 mm) **OR** 2 inches (51 mm), **as directed**.
 - d. Top-Section Width: As indicated **OR** 1/8 inch (3.2 mm) **OR** 1/4 inch (6.4 mm) **OR** 1/2 inch (12.7 mm), **as directed**.
 - 3. Heavy-Top Angle Divider Strips: One-piece, L-type angle strips with anchoring device and in depth required for topping thickness indicated.
 - a. Material: As indicated **OR** White-zinc alloy **OR** Brass **OR** Plastic, in color selected from manufacturer's full range, **as directed**.
 - b. Top-Section Width: As indicated **OR** 1/8 inch (3.2 mm) **OR** 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm), **as directed**.
 - 4. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material, thickness, and color of divider strips and in depth required for topping thickness indicated.

5. Expansion-Joint Strips (for structural portland cement terrazzo or for any type of rustic terrazzo): Brass **OR** Plastic strips in color selected from manufacturer's full range, **as directed**, with removable zip-strip top for installing sealant; in width indicated **OR** minimum 1/2 inch (12.7 mm) wide, **as directed**.
 6. Accessory Strips: Match divider strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
 - a. Base-bead strips for exposed top edge of terrazzo base.
 - b. Edge-bead strips for exposed edges of terrazzo.
 - c. Nosings for terrazzo stair treads and landings.
 7. Abrasive Strips (for terrazzo stair treads and landings): Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
 - a. Width: 1/2 inch (12.7 mm).
 - b. Depth: As required by terrazzo thickness.
 - c. Length: 4 inches (100 mm) less than stair width **OR** As indicated, **as directed**.
 - d. Color: As selected from manufacturer's full range.
- D. Miscellaneous Accessories
1. Strip Adhesive: Adhesive recommended by manufacturer for this use.
 - a. Use adhesives that have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Anchoring Devices:
 - a. Strips: Provide mechanical anchoring devices for strip materials as required for secure attachment to substrate.
 - b. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
 3. Isolation and Expansion-Joint Material: Closed-cell polyethylene foam, nonabsorbent to liquid water and gas, and nonoutgassing in unruptured state; butyl rubber; rubber; or cork; in width indicated **OR** minimum 1/2 inch (12.7 mm) wide, **as directed**.
 4. Portland Cement Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by cleaner manufacturer for use on terrazzo type indicated.
 5. Rustic Terrazzo Cleaner: Solution of muriatic acid and water for use on terrazzo type indicated.
 6. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral with pH factor between 7 and 10; does not affect color or physical properties of terrazzo; is recommended by sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
 - a. Rustic Terrazzo: Use solvent acrylic-type sealer.
- E. Precast Terrazzo
1. Precast Terrazzo Base Units: Minimum 3/4-inch- (19-mm-) thick, reinforced portland cement terrazzo units cast in maximum lengths possible, but not less than 36 inches (900 mm).
 - a. Type: As indicated **OR** Coved with minimum 3/4-inch (19-mm) radius **OR** Straight **OR** Splayed, **as directed**.
 - b. Top Edge: Straight, unfinished if top edge is concealed **OR** Beveled with polished top surface **OR** Radius edge with polished top surface, **as directed**.
 - c. Metal Toe Strip (for coved-toe bases): Zinc **OR** Brass, **as directed**.
 - d. Outside Corner Units: With finished returned edges at outside corner.
 - e. Color, Pattern, and Finish: As selected from manufacturer's full range **OR** Match sample **OR** Match adjacent poured-in-place terrazzo flooring, **as directed**.
 2. Precast Terrazzo Units for Stair Treads, Thresholds, Sills, Benches and Planters: Comply with NTMA's written recommendations for fabricating precast terrazzo units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer.
 - a. Stair Treads: Three-line **OR** Two-line **OR** One-line **OR** Abrasive nosing strip and two-line, **as directed**, abrasive inserts at nosings.

- b. Color, Pattern, and Finish: As selected from manufacturer's full range **OR** Match sample **OR** Match adjacent poured-in-place terrazzo flooring, **as directed**.
 - 3. Precast Terrazzo Finishing (for custom precast terrazzo components):
 - a. Finish exposed-to-view edges or reveals to match face finish.
 - b. Ease exposed edges to 1/8-inch (3-mm) radius.

1.3 EXECUTION

A. Preparation

1. Clean substrates to produce clean, dry, and neutral substrate for terrazzo application.
 - a. Remove substances, including oil, grease, and curing compounds, that might impair bond of terrazzo system.
 - b. Roughen concrete substrates before installing terrazzo system according to NTMA's written recommendations.
2. Protect other work from dust generated by grinding operations. Control dust to prevent air pollution and comply with environmental protection regulations.
 - a. Erect and maintain temporary enclosures and other suitable methods to limit dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

B. Installation, General

1. Comply with NTMA's written recommendations for terrazzo and accessory installation.
2. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6 mm in 3 m); noncumulative.
3. Structural Portland Cement **OR** Structural Rustic **OR** Bonded Rustic **OR** Monolithic Rustic **OR** Unbonded Rustic, **as directed**, Terrazzo: Install isolation and expansion material where terrazzo and underbed abut **OR** terrazzo abuts, **as directed**, adjacent construction and directly above substrate expansion joints.
4. Underbed (for structural portland cement terrazzo or portland cement terrazzo installed over metal deck, or for structural or unbonded rustic terrazzo): Install structural-concrete underbed according to requirements specified in Division 03 Section "Cast-in-place Concrete".
5. Underbed (for sand-cushion or bonded portland cement terrazzo or for bonded rustic terrazzo):
 - a. Comply with NTMA's "Terrazzo Specifications and Design Guide" for underbed installation.
 - b. For sand-cushion portland cement terrazzo only:
 - 1) Cover entire surface to receive terrazzo with dusting of sand.
 - 2) Install isolation membrane over sand, overlapping ends and edges a minimum of 3 inches (75 mm).
 - 3) Install welded wire reinforcement, overlapping at edges and ends at least two squares. Stop mesh a minimum of 1 inch (25 mm) short of expansion joints.
 - c. Place underbed and screed to elevation indicated below finished floor elevation.
6. Strip Materials:
 - a. Divider and Control-Joint Strips:
 - 1) Locate divider strips over each edge of steel beams and girders **OR** centered over steel beams and joists **OR** directly over control joints, breaks, and saw cuts in concrete slabs **OR** in locations indicated, **as directed**.
 - 2) Install control-joint strips back to back and directly above concrete-slab control joints **OR** in locations indicated, **as directed**.
 - 3) Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.
 - 4) Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 - b. Expansion-Joint Strips (for structural portland cement terrazzo or for any type of rustic terrazzo): Form expansion joints using divider strips and install directly above concrete-slab expansion joints.

- c. Accessory Strips: Install accessory strips as required to provide a complete installation.
 - d. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch (1.6 mm) **OR** 1/32 inch (0.8 mm), **as directed**, higher than terrazzo surface.
- 7. Repair: Cut out and replace terrazzo areas that evidence lack of bond with substrate or underbed, including areas that emit a "hollow" sound if tapped. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by the Owner.
- C. Portland Cement Terrazzo Installation
 - 1. Pour in place, cure, and finish portland cement terrazzo according to NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
 - 2. Terrazzo Topping Thickness: As indicated.
 - 3. Finishing:
 - a. Seed additional marble chips **OR** aggregates, **as directed**, in matrix to uniformly distribute granular material on surface.
 - b. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
 - c. Fine Grinding: Grind with stones 120 grit or finer until all grout is removed from surface. Repeat rough grinding, grout coat, and fine grinding if large voids exist after initial fine grinding. Produce surface with a minimum of 70 percent aggregate exposure.
- D. Rustic Terrazzo Installation
 - 1. Pour in place, cure, and finish rustic terrazzo according to NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated.
 - 2. Terrazzo Topping Thickness: As indicated.
 - 3. Finishing:
 - a. Seed additional marble chips **OR** aggregates, **as directed**, in matrix to uniformly distribute granular material on surface.
- E. Precast Terrazzo Installation
 - 1. Install precast terrazzo units using method recommended by NTMA and manufacturer unless otherwise indicated.
 - 2. Installation Tolerance: Set units with alignment level and true to dimensions, varying 1/8 inch (3.2 mm) maximum in length, height, or width; noncumulative.
 - 3. Do not install units that are chipped, cracked, discolored, or improperly finished.
 - 4. Seal joints between units with cement grout matching precast terrazzo matrix **OR** joint sealant, **as directed**.
- F. Cleaning And Protection
 - 1. Portland Cement Terrazzo and Precast Terrazzo Cleaning:
 - a. Remove grinding dust from installation and adjacent areas.
 - b. Wash surfaces with cleaner immediately after grouting precast terrazzo units and final cleaning of terrazzo flooring.
 - c. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow to dry thoroughly.
 - 2. Rustic Terrazzo Cleaning: Clean surfaces with 1:10 solution of muriatic acid in water. Legally contain and dispose of runoff from cleaning operations. Rinse surfaces with water and allow to dry thoroughly.
 - 3. Sealing:
 - a. Seal surfaces according to NTMA's written recommendations.
 - b. Apply sealer according to sealer manufacturer's written instructions.
 - 4. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Final Completion.

SECTION 09 22 13 00 - GYPSUM PLASTER

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for gypsum plaster. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Gypsum plasterwork on expanded-metal lath, unit masonry and monolithic concrete.
 - b. Solid-plaster partitions.

C. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For sealants, including printed statement of VOC content.
3. Shop Drawings: Show locations and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other work.

D. Quality Assurance

1. Fire-Resistance Ratings: Where indicated, provide gypsum plaster assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
2. Sound Transmission Characteristics: Where indicated, provide gypsum plaster assemblies identical to those of assemblies tested for STC ratings per ASTM E 90 and classified according to ASTM E 413 by a qualified testing agency.

E. Delivery, Storage, And Handling

1. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

F. Project Conditions

1. Comply with ASTM C 842 requirements or gypsum plaster manufacturer's written recommendations, whichever are more stringent.
2. Room Temperatures: Maintain temperatures at not less than 55 deg F (13 deg C) or greater than 80 deg F (27 deg C) for at least seven days before application of gypsum plaster, continuously during application, and for seven days after plaster has set or until plaster has dried.
3. Avoid conditions that result in gypsum plaster drying out too quickly.
 - a. Distribute heat evenly; prevent concentrated or uneven heat on plaster.
 - b. Maintain relative humidity levels for prevailing ambient temperature that produce normal drying conditions.
 - c. Ventilate building spaces in a manner that prevents drafts of air from contacting surfaces during plaster application and until plaster is dry.

1.2 PRODUCTS

A. Steel Framing For Solid-Plaster Partitions

1. Components, General: Comply with ASTM C 841. For steel sheet components not included in ASTM C 841, comply with ASTM C 645 requirements for metal unless otherwise indicated.
2. Channel Studs: Cold-rolled channels, 3/4 inch (19.1 mm) **OR** 1-1/2 inches (38.1 mm), **as directed**, deep.
3. Runners: L-runners with perforated or plain legs to suit lath attachment requirements, in 0.033-inch (0.84-mm) base-metal thickness where attached to overhead support and in 0.043-inch (1.1-mm) base-metal thickness where attached to floor.

B. Expanded-Metal Lath

1. Expanded-Metal Lath: ASTM C 847, cold-rolled carbon-steel sheet, ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coated.
 - a. Recycled Content: Provide steel products with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
 - b. Paper Backing: Kraft paper factory bonded to back of lath.
 - c. Diamond-Mesh Lath: Flat **OR** Self-furring, **as directed**, 2.5 lb/sq. yd. (1.4 kg/sq. m) **OR** 3.4 lb/sq. yd. (1.8 kg/sq. m), **as directed**.
 - d. Flat Rib Lath: Rib depth of not more than 1/8 inch (3.1 mm), 2.75 lb/sq. yd. (1.5 kg/sq. m) **OR** 3.4 lb/sq. yd. (1.8 kg/sq. m), **as directed**.
 - e. 3/8-Inch (9.5-mm) Rib Lath: 3.4 lb/sq. yd. (1.8 kg/sq. m) **OR** 4 lb/sq. yd. (2.2 kg/sq. m), **as directed**.

C. Accessories

1. General: Comply with ASTM C 841 and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.
2. Metal Accessories:
 - a. Cornerite: Fabricated from expanded-metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 - b. Striplath: Fabricated from expanded-metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 - c. Cornerbeads: Fabricated from zinc or zinc-coated (galvanized) steel.
 - 1) Small nose cornerbead with expanded flanges; use unless otherwise indicated.
 - 2) Small nose cornerbead with perforated flanges; use on curved corners.
 - 3) Small nose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing unit masonry corners.
 - 4) Bull nose cornerbead, radius 3/4 inch (19.1 mm) minimum, with expanded flanges; use at locations indicated on Drawings.
 - d. Casing Beads: Fabricated from zinc or zinc-coated (galvanized) steel; square-edged style; with expanded flanges.
 - e. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
 - f. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
 - g. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch (6 to 16 mm) wide; with perforated flanges.
3. Plastic Accessories: Fabricated from high-impact PVC.
 - a. Cornerbeads: With perforated flanges.
 - 1) Small nose cornerbead; use unless otherwise indicated.
 - 2) Bull nose cornerbead, radius 3/4 inch (19.1 mm) minimum; use at locations indicated on Drawings.

- b. Casing Beads: With perforated flanges in depth required to suit plaster bases indicated and flange length required to suit applications indicated.
 - 1) Square-edge style; use unless otherwise indicated.
 - 2) Bull-nose style, radius 3/4 inch (19.1 mm) minimum; use at locations indicated on Drawings.
 - c. Control Joints: One-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
 - d. Expansion Joints: Two-piece type, formed to produce slip-joint and square-edged 1/2-inch- (13-mm-) **OR** 1-inch- (25.4-mm-) **OR** 1-1/2-inch- (38.1-mm-), **as directed**, wide reveal; with perforated concealed flanges.
 - 4. Aluminum Trim: Extruded accessories of profiles and dimensions indicated on Drawings.
 - a. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221 (ASTM B 221M), Alloy 6063-T5.
 - b. Finish: Mill **OR** Chemical-conversion coating, ASTM D 1730, Type B, compatible with field-applied finish coatings specified, **as directed**.
- D. Miscellaneous Materials
 - 1. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
 - 2. Bonding Compound: ASTM C 631.
 - 3. Steel Drill Screws: For metal-to-metal fastening, ASTM C 1002 or ASTM C 954, as required by thickness of metal being fastened; with pan head that is suitable for application; in lengths required to achieve penetration through joined materials of no fewer than three exposed threads.
 - 4. Fasteners for Attaching Metal Lath to Substrates: Complying with ASTM C 841.
 - 5. Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch (1.21-mm) diameter, unless otherwise indicated.
 - 6. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - a. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of rated assembly.
 - b. Recycled Content: Provide blankets with recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 25 percent by weight.
 - 7. Acoustical Sealant: As specified in Division 7 Section "Joint Sealants."
 - a. Provide sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- E. Base-Coat Plaster Materials
 - 1. Base-Coat Plasters, General: ASTM C 28/C 28M.
 - 2. Lightweight Gypsum Ready-Mixed Plaster: With mill-mixed perlite aggregate.
 - 3. Gypsum Neat Plaster: For use with job-mixed aggregates.
 - 4. Gypsum Wood-Fibered Plaster:
 - 5. High-Strength Gypsum Neat Plaster: With a minimum, average, dry compressive strength of 2800 psi (19 MPa) per ASTM C 472 for a mix of 100 lb (45 kg) of plaster and 2 cu. ft. (0.06 cu. m) of sand.
 - 6. Aggregates for Base-Coat Plasters: ASTM C 35, sand and perlite.
- F. Finish-Coat Plaster Materials
 - 1. Gypsum Gaging Plaster: ASTM C 28/C 28M.
 - 2. Gypsum Ready-Mixed Finish Plaster: Manufacturer's standard, mill-mixed, gaged, interior finish.
 - 3. High-Strength Gypsum Gaging Plaster: ASTM C 28/C 28M, with a minimum, average, dry compressive strength of 5000 psi (34 MPa) per ASTM C 472 for a neat mix.
 - 4. Gypsum Keene's Cement: ASTM C 61/C 61M.
 - 5. Lime: ASTM C 206, Type S, special finishing hydrated lime.

6. Lime: ASTM C 206, Type N, normal finishing hydrated lime.
7. Aggregates for Float Finishes: ASTM C 35, sand **OR** perlite, **as directed**; graded per ASTM C 842.

G. Plaster Mixes

1. Mixing: Comply with ASTM C 842 and manufacturer's written instructions for applications indicated.

1.3 EXECUTION

A. Examination

1. Examine nonstructural and structural metal framing, substrates, and hollow-metal frames, for compliance with requirements and other conditions affecting performance of the Work.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

1. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.

C. Installation, General

1. Fire-Resistance-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.
2. STC-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.
 - a. Seal construction at perimeters, behind control and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations.
 - b. Comply with ASTM C 919 and manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
3. Sound Attenuation Blankets: Where required, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.
4. Acoustical Sealant: Where required, seal joints between edges of plasterwork and abutting construction with acoustical sealant.

D. Installing Steel Framing For Solid-Plaster Partitions

1. Install according to ASTM C 841.
2. Framing for Solid-Plaster Partitions: Provide channel stud to support expanded-metal lath construction.
 - a. Space channel studs at 16 inches (406 mm) **OR** 24 inches (610 mm), **as directed**, o.c. unless otherwise indicated.
3. Framing for Studless Solid-Plaster Partition: Provide top and bottom L-track runners to support expanded-metal lath.

E. Installing Expanded-Metal Lath

1. Expanded-Metal Lath: Install according to ASTM C 841.
 - a. Partition Framing and Vertical Furring: Install flat diamond-mesh **OR** flat rib, **as directed**, lath.
 - b. Flat-Ceiling and Horizontal Framing: Install flat diamond-mesh **OR** flat rib, **as directed**, lath.
 - c. Curved-Ceiling Framing: Install flat diamond-mesh lath.
 - d. On Solid Surfaces, Not Otherwise Furred: Install self-furring, diamond-mesh lath.
 - e. Solid-Plaster Partitions: Where supported by channel studs, install flat rib **OR** flat diamond-mesh, **as directed**, lath.

- f. Studless Solid-Plaster Partitions: Install 3/8-inch (9.5-mm) rib lath.

F. Installing Accessories

1. General: Install according to ASTM C 841.
2. Cornerbeads: Install at external corners.
3. Casing Beads: Install at terminations of plasterwork, except where plaster passes behind and is concealed by other work and where metal screeds, bases, or frames act as casing beads.
4. Control Joints: Install control joints at locations indicated on Drawings **OR** with spacing between joints in either direction not exceeding the following and in specific locations approved by Architect for visual effect, **as directed**:
 - a. Partitions: 30 feet (9 m).
 - b. Ceilings: 50 feet (15 m) **OR** 30 feet (9 m), **as directed**.

G. Plaster Application

1. General: Comply with ASTM C 842.
 - a. Do not deviate more than plus or minus 1/8 inch in 10 feet (3.1 mm in 3 m) from a true plane in finished plaster surfaces, as measured by a 10-foot (3-m) straightedge placed on surface.
 - b. Grout hollow-metal frames, bases, and similar work occurring in plastered areas, with base-coat plaster material, before lathing where necessary. Except where full grouting is indicated or required for fire-resistance rating, grout at least 6 inches (152 mm) at each jamb anchor.
 - c. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
 - d. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
2. Bonding Compound: Apply on unit masonry and concrete plaster bases.
3. Base Coats:
 - a. Base Coats over Expanded-Metal Lath: High-strength gypsum **OR** Gypsum neat, **as directed**, plaster with job-mixed sand for scratch and brown coats.
 - b. Base Coats over Expanded-Metal Lath:
 - 1) Scratch Coat: Gypsum wood-fibered plaster; neat or with job-mixed sand.
 - 2) Brown Coat: Gypsum wood-fibered plaster with job-mixed sand **OR** neat plaster with job-mixed sand **OR** lightweight ready-mixed plaster **OR** neat plaster with job-mixed perlite, **as directed**.
 - c. Base Coats over Unit Masonry: Gypsum wood-fibered plaster with job-mixed sand **OR** neat plaster with job-mixed sand **OR** lightweight ready-mixed plaster, **as directed**.
 - d. Base-Coat Mix over Monolithic Concrete: Gypsum neat plaster with job-mixed sand.
4. Finish Coats:
 - a. Finish-Coat Mix for Smooth-Troweled Finishes: Gypsum gaging plaster **OR** Gypsum ready-mixed finish plaster **OR** High-strength gypsum gaging plaster **OR** Gypsum Keene's cement, **as directed**.
 - b. Finish-Coat Mix for Float Finishes: Gypsum gaging plaster **OR** Gypsum Keene's cement, **as directed**.
 - c. Finish-Coat Mix for Sprayed Finishes: Gypsum ready-mixed finish plaster.
 - d. Finish-Coat Mix for Textured Finishes: Gypsum ready-mixed finish plaster.
5. Plaster Finishes:
 - a. Provide troweled finish unless otherwise indicated **OR** where indicated, **as directed**.
 - b. Provide float finish unless otherwise indicated **OR** where indicated, **as directed**.
 - c. Provide sprayed finish unless otherwise indicated **OR** where indicated, **as directed**.
 - 1) Sprayed Finish: Match sample.
 - d. Provide textured finish where indicated.
 - 1) Textured Finish: Match sample.
6. Concealed Plaster:

- a. Where plaster application will be concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.
- b. Where plaster application will be concealed above suspended ceilings and in similar locations, finish coat may be omitted.
- c. Where plaster application will be used as a base for adhesive application of tile and similar finishes, finish coat may be omitted.

H. Plaster Repairs

- 1. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

I. Cleaning And Protection

- 1. Remove temporary protection and enclosure of other work. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

END OF SECTION 09 22 13 00

SECTION 09 22 13 00a - GYPSUM VENEER PLASTER

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for gypsum veneer plastering. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes the following:
 - a. Gypsum veneer plaster and gypsum base for veneer plaster.
 - b. Gypsum veneer plaster over cementitious backer units.
 - c. Gypsum veneer plaster over masonry surfaces.
 - d. Gypsum veneer plaster over monolithic concrete surfaces.

C. Submittals

1. Product Data: For each type of product indicated.
2. Shop Drawings: Show locations, fabrication, and installation of control joints, and reveals and trim; include plans, elevations, sections, details of components, and attachments to other work.
3. Samples: For the following products:
 - a. Trim Accessories: Full-size Sample in 12-inch (300-mm) length for each trim accessory.
 - b. Textured Finishes: Manufacturer's standard size for each textured finish and on rigid backing.
4. LEED Submittals:
 - a. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.
 - b. Product Data for Credit MR 4.1 and MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.

D. Quality Assurance

1. Source Limitations: Obtain gypsum veneer plaster products, including gypsum base for veneer plaster, **OR** cementitious base units, **as directed**, joint reinforcing tape, and embedding material, from a single manufacturer.
2. Fire-Resistance-Rated Assemblies: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by a testing and inspecting agency.
3. STC-Rated Assemblies: Provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by a testing and inspecting agency.

E. Delivery, Storage, And Handling

1. Deliver materials in original packages, containers, and bundles bearing brand name and identification of manufacturer or supplier.
2. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.
3. Stack panels flat on leveled supports off floor or slab to prevent sagging.

F. Project Conditions

1. Environmental Limitations: Comply with ASTM C 843 requirements or gypsum veneer plaster manufacturer's written recommendations, whichever are more stringent.

2. Room Temperatures: Maintain not less than 55 deg F (13 deg C) or more than 80 deg F (27 deg C) for 7 days before application of gypsum base and gypsum veneer plaster, continuously during application, and after application until veneer plaster is dry.
3. Avoid conditions that result in gypsum veneer plaster drying too rapidly.
 - a. Distribute heat evenly; prevent concentrated or uneven heat on veneer plaster.
 - b. Maintain relative humidity levels, for prevailing ambient temperature, that produce normal drying conditions.
 - c. Ventilate building spaces in a manner that prevents drafts of air from contacting surfaces during veneer plaster application until it is dry.
4. Do not install panels that are wet, moisture damaged, or mold damaged.
 - a. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
 - b. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

1.2 PRODUCTS

A. Gypsum Veneer Plaster Materials

1. One-Component Gypsum Veneer Plaster: ASTM C 587, formulated for application directly over substrate without use of separate base-coat material.
2. High-Strength, One-Component Gypsum Veneer Plaster: ASTM C 587, ready-mixed, smooth, finish-coat veneer plaster containing mill-mixed, fine silica sand; with a compressive strength of 3000 psi (20 MPa) when tested according to ASTM C 472; and formulated for application directly over substrate without use of separate base-coat material.
3. Two-Component Gypsum Veneer Plaster: ASTM C 587, with separate formulations; one for base-coat and one for finish-coat application over substrates.
4. High-Strength, Two-Component Gypsum Veneer Plaster: ASTM C 587, ready-mixed, base-coat plaster and smooth finish-coat veneer plaster containing mill-mixed, fine silica sand; with a compressive strength of 3000 psi (20 MPa) when tested according to ASTM C 472.
5. Radiant-Heat, Two-Component Gypsum Veneer Plaster: ASTM C 587, and approved in writing by gypsum veneer plaster manufacturer for application with embedded electric heating cables.
 - a. Provide ready-mixed **OR** job-aggregated, **as directed**, components, as standard for manufacturer, to comply with manufacturer's written recommendations.
 - b. Aggregate: For job-aggregated base coat and texture finish coat, provide white silica sand passing a No. 30 (0.6-mm) sieve.

B. Panel Products

1. Recycled Content: Provide gypsum panel products with recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 25 percent by weight.
2. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.
3. Gypsum Base for Veneer Plaster: ASTM C 588/C 588M.
 - a. Regular Type: In thickness indicated **OR** 1/2 inch (13 mm) thick, unless otherwise indicated, **as directed**.
 - b. Type X: In thickness indicated **OR** 5/8 inch (16 mm) thick, **as directed**.
 - c. Foil-Backed, Regular-Type Core: In thickness indicated **OR** 1/2 inch (13 mm) thick, unless otherwise indicated, **as directed**.
 - d. Type C: In thickness indicated **OR** 5/8 inch (16 mm) thick **OR** 1/2 inch (13 mm) thick, **as directed**.
 - e. Abuse-Resistant Base: With specially reinforced core for greater resistance to surface indentation, 5/8-inch (16-mm) thick, Type X core **OR** 1/2-inch (13-mm) thick, regular-type core, **as directed**.

- f. High-Impact Base: With Type X core, plastic film laminated to back side for greater resistance to through-penetration (impact resistance), and in thickness indicated **OR** 5/8 inch (16 mm) thick, **as directed**.
 - 1) Plastic-Film Thickness: 0.010 inch (0.254 mm) **OR** 0.020 inch (0.508 mm) **OR** 0.030 inch (0.762 mm) **OR** 0.081 inch (2.057 mm), **as directed**.
 - g. Moisture- and Mold-Resistant Base: With moisture- and mold-resistant core, glass-mat facing on both sides of panel, and in thickness indicated **OR** 5/8-inch (16-mm) thick, Type X core **OR** 1/2-inch (13-mm) thick, regular-type core, **as directed**.
 - 1) Mold Resistance: ASTM D 3273; no mold growth after four weeks' exposure.
 4. Backing Panels for Multilayer Applications: ASTM C 588/C 588M gypsum base or ASTM C 36/C 36M gypsum board, as recommended by gypsum veneer plaster manufacturer, for application method and thicknesses indicated.
 - a. Core: Matching face layer, unless otherwise indicated.
 - b. Thickness: Matching face layer, unless otherwise indicated.
 5. Cementitious Backer Units: ANSI A118.9, in thickness indicated **OR** 1/2 inch (13 mm) thick, **as directed**.
- C. Trim Accessories
 1. Standard Trim: ASTM C 1047, provided or approved by manufacturer for use in gypsum veneer plaster applications indicated.
 - a. Material: Galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized steel sheet **OR** Galvanized or aluminum-coated steel sheet or rolled zinc **OR** Plastic **OR** Paper-faced galvanized steel sheet, **as directed**.
 - b. Shapes:
 - 1) Cornerbead.
 - 2) Bullnose bead.
 - 3) LC-Bead: J-shaped; exposed long flange receives joint compound.
 - 4) L-Bead: L-shaped; exposed long flange receives joint compound.
 - 5) U-Bead: J-shaped; exposed short flange does not receive joint compound.
 - 6) Curved-Edge Cornerbead: With notched or flexible flanges.
 - 7) Control joints.
 2. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.
 - a. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B 221 (ASTM B 221M), Alloy 6063-T5.
 - b. Finish: Manufacturer's standard Architectural Class II, Clear Anodic Finish AA-M12C22A31, complying with AAMA 611 **OR** chemical conversion coat finish **OR** prime paint finish, **as directed**.
- D. Joint Reinforcing Materials
 1. General: Comply with joint strength requirements in ASTM C 587 and with gypsum veneer plaster manufacturer's written recommendations for each application indicated.
 2. Joint Tape:
 - a. Gypsum Base for Veneer Plaster: As recommended by gypsum veneer plaster manufacturer for applications indicated **OR** Paper **OR** Open-mesh, glass fiber, **as directed**.
 - b. Cementitious Backer Units: As recommended by cementitious backer unit manufacturer.
 3. Embedding Material for Joint Tape:
 - a. Gypsum Base for Veneer Plaster: As recommended by gypsum veneer plaster manufacturer for use with joint-tape material and gypsum veneer plaster applications indicated.
 - b. Cementitious Backer Units: As recommended by cementitious backer unit manufacturer for applications indicated.
- E. Auxiliary Materials
 1. General: Provide auxiliary materials that comply with referenced product standards and manufacturer's written recommendations.

2. Bonding Agent: ASTM C 631, polyvinyl acetate.
3. Laminating Adhesive: Adhesive or joint compound recommended by manufacturer for directly adhering gypsum base face-layer panels to backing-layer panels in multilayer construction.
 - a. Use adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.
 - a. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.
5. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.
6. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing), produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - a. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
 - b. Recycled Content: Provide blankets with recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 25 percent by weight.
7. Acoustical Sealant: As specified in Division 07 Section "Thermal Insulation".
 - a. Provide sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
8. Patching Mortar: Dry-pack patching mortar, consisting of 1 part portland cement to 2-1/2 parts fine aggregate passing a No. 16 (1.18-mm) sieve, using only enough water for handling and placing.

F. Gypsum Veneer Plaster Mixes

1. Mechanically mix gypsum veneer plaster materials to comply with ASTM C 843 and with gypsum veneer plaster manufacturer's written recommendations.

1.3 EXECUTION

A. Preparation

1. Monolithic Concrete Substrates: Prepare according to gypsum veneer plaster manufacturer's written recommendations and as follows:
 - a. Clean surfaces to remove dust, loose particles, grease, oil, incompatible curing compounds, form-release agents, and other foreign matter and deposits that could impair bond with gypsum veneer plaster.
 - b. Remove ridges and protrusions greater than 1/8 inch (3 mm) and fill depressions greater than 1/4 inch (6 mm) with patching mortar. Allow to set and dry.
 - c. Apply bonding agent on dry and cured concrete substrates.
2. Masonry Substrates: Prepare according to gypsum veneer plaster manufacturer's written recommendations and as follows:
 - a. Clean surfaces to remove dirt, grease, oil, and other foreign matter and deposits that could impair bond with gypsum veneer plaster.
 - b. Apply bonding agent on dry masonry substrates.

B. Installing Panels, General

1. Gypsum Base for Veneer Plaster: Apply according to ASTM C 844 unless manufacturer's written recommendations are more stringent.
 - a. Do not allow gypsum base to degrade from exposure to sunlight as evidenced by fading of paper facing.
 - b. Erection Tolerance: No more than 1/16-inch (1.6-mm) offsets between planes of gypsum base panels, and 1/8 inch in 8 feet (3 mm in 2.4 m) noncumulative, for level, plumb, warp, and bow.

2. Install sound attenuation blankets before installing gypsum base for veneer plaster unless blankets are readily installed after panels have been installed on one side.
3. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in the central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.
4. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.6 mm) of open space between panels. Do not force into place.
5. Locate edge and end joints over supports except in ceiling applications where intermediate supports or back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints, other than control joints, at corners of framed openings.
6. Attach panels to steel studs so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
7. Attach panels to framing provided at openings and cutouts.
8. Form control joints with space between edges of adjoining panels.
9. Cover both sides of steel stud partition framing with panels in concealed spaces, including above ceilings, except in internally braced chases.
 - a. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.74 sq. m) in area.
 - b. Fit panels around ducts, pipes, and conduits.
 - c. Where partitions intersect open concrete coffer, concrete joists, and other structural members projecting below underside of floor/roof slabs and decks, cut panels to fit profile formed by coffer, joists, and other structural members; allow 1/4- to 3/8-inch- (6.4- to 9.5-mm-) wide joints; seal joints with acoustical sealant.
10. Wood Framing: Install panels over wood framing, with "floating" internal corner construction. Do not attach panels across the flat grain of wide-dimension lumber, including floor joists and headers. "Float" panels over these members or provide control joints to counteract wood shrinkage.
11. STC-Rated Assemblies: Seal construction at perimeters, behind control joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C 919 and with manufacturer's written recommendations for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.
12. Fastener Spacing: Comply with ASTM C 844, manufacturer's written recommendations, and fire-resistance-rating requirements.
 - a. Space screws a maximum of 12 inches (305 mm) o.c. along framing members for wall or ceiling application.
 - b. Space fasteners in cementitious backer units a maximum of 8 inches (200 mm) o.c. along framing members for wall applications and 6 inches (150 mm) o.c. along framing members for ceiling applications.

C. Installing Panels

1. Install gypsum base panels for veneer plaster in the following locations:
 - a. Regular Type: As indicated on Drawings **OR** Vertical surfaces, unless otherwise indicated, **as directed**.
 - b. Ceiling Type: As indicated on Drawings **OR** Ceiling surfaces, **as directed**.
 - c. Type X: As indicated on Drawings **OR** Where required for fire-resistance-rated assembly **OR** Vertical surfaces, unless otherwise indicated, **as directed**.
 - d. Type C: As indicated on Drawings **OR** Where required for specific fire-resistance-rated assembly indicated, **as directed**.
 - e. Foil-Backed, Regular-Type Core: As indicated on Drawings **OR as directed**.
 - f. Abuse-Resistant Base: As indicated on Drawings **OR as directed**.
 - g. High-Impact Base: As indicated on Drawings **OR as directed**.
 - h. Moisture- and Mold-Resistant Base: As indicated on Drawings **OR as directed**.
2. Single-Layer Application:

- a. On ceilings, apply gypsum base panels before wall panels, to the greatest extent possible and at right angles to framing, unless otherwise indicated.
- b. On walls, apply gypsum base panels vertically and parallel **OR** horizontally and perpendicular, **as directed**, to framing, unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.
 - 1) Stagger abutting end joints not less than one framing member in alternate courses of panels.
 - 2) At stairwells and other walls higher than 30 feet (9.0 m), install gypsum base panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.
- c. On Z-furring, apply gypsum base panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.
- 3. Multilayer Application on Ceilings: Apply backing panels for ceilings before applying backing panels for partitions; apply gypsum-base face layers in same sequence. Apply backing panels at right angles to framing members and offset gypsum-base face-layer joints a minimum of 16 inches (400 mm) from parallel backing panel joints, unless otherwise required by fire-resistance-rated assembly.
- 4. Multilayer Application on Partitions: Apply backing panels indicated and gypsum-base face layers vertically (parallel to framing) with joints of backing panels located over stud or furring members and gypsum-base face-layer joints offset at least one stud or furring member from backing-panel joints, unless otherwise required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
 - a. Z-Furring: Apply backing panels vertically (parallel to framing) and gypsum-base face layer either vertically or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of backing panels over furring members.
- 5. Single-Layer Fastening Methods: Apply gypsum base panels to supports with steel drill screws.
- 6. Multilayer Fastening Methods: Fasten backing panels and gypsum-base face layers separately to supports with screws **OR** with screws; fasten gypsum-base face layers with adhesive and supplementary fasteners, **as directed**.
- 7. Curved Partitions: Comply with gypsum base manufacturer's written installation recommendations.
- 8. Cementitious Backer Units: Install according to ANSI A108.11.
 - a. Where cementitious backer units abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

D. Installing Trim Accessories

- 1. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.
- 2. Control Joints: Install at locations indicated on Drawings **OR** according to ASTM C 844 and in specific locations approved by the Owner, **as directed**.
- 3. Trim: Install in the following locations:
 - a. Cornerbead: Use at outside corners, unless otherwise indicated.
 - b. Bullnose Bead: Use at outside corners **OR** where indicated, **as directed**.
 - c. LC-Bead: Use at exposed panel edges.
 - d. L-Bead: Use where indicated.
 - e. U-Bead: Use at exposed panel edges **OR** where indicated, **as directed**.
 - f. Curved-Edge Cornerbead: Use at curved openings.
- 4. Aluminum Trim:
 - a. Install aluminum trim according to manufacturer's written recommendations.
 - b. Apply and embed joint tape over flanges of aluminum trim accessories if recommended by trim manufacturer.

E. Installing Joint Reinforcement

1. Gypsum Base for Veneer Plaster: Reinforce interior angles and flat joints with joint tape and embedding material to comply with ASTM C 843 and with gypsum veneer plaster manufacturer's written recommendations.
 2. Abuse-Resistant Base: Reinforce joints between abuse-resistant panels with joint tape and embedding material according to panel manufacturer's written recommendations.
 3. Impact-Resistant Base: Reinforce joints between impact-resistant panels with joint tape and embedding material according to panel manufacturer's written recommendations.
 4. Moisture- and Mold-Resistant Base: Reinforce joints between moisture- and mold-resistant panels with joint tape and embedding material according to panel manufacturer's written recommendations.
 5. Cementitious Backer Units: Reinforce joints between cementitious backer units with joint tape and embedding material according to unit manufacturer's written recommendations.
- F. Gypsum Veneer Plastering
1. Bonding Agent: Apply bonding agent on dry monolithic concrete **OR** masonry **OR** abuse-resistant base panels **OR** cementitious backer units, **as directed**, according to gypsum veneer plaster manufacturer's written recommendations.
 2. Gypsum Veneer Plaster Application: Comply with ASTM C 843 and with veneer plaster manufacturer's written recommendations.
 - a. One-Component Gypsum Veneer Plaster: Trowel apply base coat over substrate to uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm). Fill all voids and imperfections. Allow plaster to set, then scratch and immediately double back with gypsum veneer plaster to uniform total thickness of 3/16 inch (4.8 mm).
 - b. Two-Component Gypsum Veneer Plaster:
 - 1) Base Coat: Trowel apply base coat over substrate to uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm). Fill all voids and imperfections.
 - 2) Finish Coat: Trowel apply finish-coat plaster over base-coat plaster to uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm).
 - c. Where gypsum veneer plaster abuts only metal door frames, windows, and other units, groove finish coat to eliminate spalling.
 - d. Do not apply veneer plaster to gypsum base if paper facing has degraded from exposure to sunlight. Before applying veneer plaster, use remedial methods to restore bonding capability to degraded paper facing according to manufacturer's written recommendations and as approved by the Owner.
 3. Radiant-Heat, Two-Component Gypsum Veneer Plaster Ceilings: Comply with ASTM C 843 and with radiant-heat veneer plaster manufacturer's written recommendations.
 - a. Base Coat: Apply plaster base coat to sufficiently cover electric heating cables. Trowel plaster parallel in direction of cables to uniform thickness of 3/16 inch (4.8 mm). Completely cover cables.
 - b. Finish Coat: After base coat has developed sufficient bond, apply finish coat. Trowel plaster to uniform thickness of 1/16 to 3/32 inch (1.6 to 2.4 mm).
 4. Concealed Surfaces: Do not omit gypsum veneer plaster behind cabinets, furniture, furnishings, and similar removable items. Omit veneer plaster in the following areas where it will be concealed from view in the completed Work unless otherwise indicated or required to maintain fire-resistance and STC ratings:
 - a. Above suspended ceilings.
 - b. Behind wood paneling.
 5. Gypsum Veneer Plaster Finish: Smooth-troweled finish, unless otherwise indicated **OR** Textured finish matching the Owner's sample, **as directed**.
- G. Protection
1. Protect installed gypsum veneer plaster from damage from weather, condensation, construction, and other causes during remainder of the construction period.
 2. Remove and replace gypsum veneer plaster and gypsum base panels that are wet, moisture damaged, or mold damaged.

- a. Indications that gypsum base panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, and irregular shape.
- b. Indications that gypsum base panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 09 22 13 00a

SECTION 09 22 13 00b - PORTLAND CEMENT PLASTER

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for portland cement plaster. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Interior portland cement plasterwork on metal lath, unit masonry and monolithic concrete.
 - b. Exterior portland cement plasterwork (stucco) on metal lath, unit masonry and monolithic concrete.

C. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For sealants, including printed statement of VOC content.
3. Shop Drawings: Show locations and installation of control and expansion joints including plans, elevations, sections, details of components, and attachments to other work.
4. Samples: For each type of factory-prepared, colored or textured finish coat indicated; 12 by 12 inches (305 by 305 mm), and prepared on rigid backing.

D. Quality Assurance

1. Fire-Resistance Ratings: Where indicated, provide portland cement plaster assemblies identical to those of assemblies tested for fire resistance per ASTM E 119 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
 - a. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.
2. Sound-Transmission Characteristics: Where indicated, provide portland cement plaster assemblies identical to those of assemblies tested for STC ratings per ASTM E 90 and classified according to ASTM E 413 by a qualified testing agency.
3. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling

1. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

F. Project Conditions

1. Comply with ASTM C 926 requirements.
2. Interior Plasterwork: Maintain room temperatures at greater than 40 deg F (4.4 deg C) for at least 48 hours before plaster application, and continuously during and after application.
 - a. Avoid conditions that result in plaster drying out during curing period. Distribute heat evenly; prevent concentrated or uneven heat on plaster.
 - b. Ventilate building spaces as required to remove water in excess of that required for hydrating plaster in a manner that prevents drafts of air from contacting surfaces during plaster application and until plaster is dry.
3. Exterior Plasterwork:

- a. Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.
- b. Apply plaster when ambient temperature is greater than 40 deg F (4.4 deg C).
- c. Protect plaster coats from freezing for not less than 48 hours after set of plaster coat has occurred.
- 4. Factory-Prepared Finishes: Comply with manufacturer's written recommendations for environmental conditions for applying finishes.

1.2 PRODUCTS

A. Metal Lath

- 1. Expanded-Metal Lath: ASTM C 847 with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 - a. Recycled Content: Provide steel products with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
 - b. Diamond-Mesh Lath: Flat **OR** Self-furring, **as directed**, 2.5 lb/sq. yd. (1.4 kg/sq. m) **OR** 3.4 lb/sq. yd. (1.8 kg/sq. m), **as directed**.
 - c. Flat Rib Lath: Rib depth of not more than 1/8 inch (3.1 mm), 2.75 lb/sq. yd. (1.5 kg/sq. m) **OR** 3.4 lb/sq. yd. (1.8 kg/sq. m), **as directed**.
 - d. 3/8-Inch (9.5-mm) Rib Lath: 3.4 lb/sq. yd. (1.8 kg/sq. m) **OR** 4 lb/sq. yd. (2.2 kg/sq. m), **as directed**.
- 2. Wire-Fabric Lath:
 - a. Welded-Wire Lath: ASTM C 933; self-furring, 1.4 lb/sq. yd. (0.8 kg/sq. m) **OR** 1.95 lb/sq. yd. (1.1 kg/sq. m), **as directed**.
 - b. Woven-Wire Lath: ASTM C 1032; self-furring, with stiffener wire backing, 1.1 lb/sq. yd. (0.6 kg/sq. m) **OR** 1.4 lb/sq. yd. (0.8 kg/sq. m), **as directed**.
- 3. Paper Backing: FS UU-B-790, Type I, Grade D, Style 2 vapor-permeable paper **OR** Grade B, Style 1a vapor-retardant paper, **as directed**.
 - a. Provide paper-backed lath unless otherwise indicated **OR** at exterior locations **OR** in locations indicated on Drawings, **as directed**.

B. Accessories

- 1. General: Comply with ASTM C 1063 and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.
- 2. Metal Accessories:
 - a. Foundation Weep Screed: Fabricated from hot-dip galvanized-steel sheet, ASTM A 653/A 653M, G60 (Z180) zinc coating.
 - b. Cornerite: Fabricated from metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 - c. External-Corner Reinforcement: Fabricated from metal lath with ASTM A 653/A 653M, G60 (Z180), hot-dip galvanized zinc coating.
 - d. Cornerbeads: Fabricated from zinc or zinc-coated (galvanized) steel.
 - 1) Small nose cornerbead with expanded flanges; use unless otherwise indicated.
 - 2) Small nose cornerbead with perforated flanges; use on curved corners.
 - 3) Small nose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing masonry corners.
 - 4) Bull nose cornerbead, radius 3/4 inch (19.1 mm) minimum, with expanded flanges; use at locations indicated on Drawings.
 - e. Casing Beads: Fabricated from zinc or zinc-coated (galvanized) steel; square-edged style; with expanded flanges.

- f. Control Joints: Fabricated from zinc or zinc-coated (galvanized) steel; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
 - g. Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
 - h. Two-Piece Expansion Joints: Fabricated from zinc or zinc-coated (galvanized) steel; formed to produce slip-joint and square-edged reveal that is adjustable from 1/4 to 5/8 inch (6.34 to 16 mm) wide; with perforated flanges.
 - 3. Plastic Accessories: Fabricated from high-impact PVC.
 - a. Cornerbeads: With perforated flanges.
 - 1) Small nose cornerbead; use unless otherwise indicated.
 - 2) Bull nose cornerbead, radius 3/4 inch (19.1 mm) minimum; use at locations indicated on Drawings.
 - b. Casing Beads: With perforated flanges in depth required to suit plaster bases indicated and flange length required to suit applications indicated.
 - 1) Square-edge style; use unless otherwise indicated.
 - 2) Bull-nose style, radius 3/4 inch (19.1 mm) minimum; use at locations indicated on Drawings.
 - c. Control Joints: One-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
 - d. Expansion Joints: Two-piece type, formed to produce slip-joint and square-edged 1/2-inch- (13-mm-) **OR** 1-inch- (25-mm-) **OR** 1-1/2-inch- (38-mm-), **as directed**, wide reveal; with perforated concealed flanges.
- C. Miscellaneous Materials
 - 1. Water for Mixing: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.
 - 2. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 1/2 inch (13 mm) long, free of contaminants, manufactured for use in portland cement plaster.
 - 3. Bonding Compound: ASTM C 932.
 - 4. Steel Drill Screws: For metal-to-metal fastening, ASTM C 1002 or ASTM C 954, as required by thickness of metal being fastened; with pan head that is suitable for application; in lengths required to achieve penetration through joined materials of no fewer than three exposed threads.
 - 5. Fasteners for Attaching Metal Lath to Substrates: Complying with ASTM C 1063.
 - 6. Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, not less than 0.0475-inch (1.21-mm) diameter, unless otherwise indicated.
 - 7. Sound Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.
 - a. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
 - b. Recycled Content: Provide blankets with recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content constitutes a minimum of 25 percent by weight.
 - 8. Acoustical Sealant: As specified in Division 7 Section "Joint Sealants".
 - a. Provide sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Plaster Materials
 - 1. Portland Cement: ASTM C 150, Type I **OR** Type II, **as directed**.
 - a. Color for Finish Coats: White **OR** Gray, **as directed**.
 - 2. Masonry Cement: ASTM C 91, Type N.
 - a. Color for Finish Coats: White **OR** Gray, **as directed**.
 - 3. Plastic Cement: ASTM C 1328.
 - 4. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color to match sample.

5. Lime: ASTM C 206, Type S; or ASTM C 207, Type S.
6. Sand Aggregate: ASTM C 897.
 - a. Color for Job-Mixed Finish Coats: White **OR** In color matching sample, **as directed**.
7. Perlite Aggregate: ASTM C 35.
8. Exposed Aggregates for Finish Coats: For marblecrete finish, clean, sound, crushed marble matching color and size gradation of sample.
9. Ready-Mixed Finish-Coat Plaster: Mill-mixed portland cement, aggregates, coloring agents, and proprietary ingredients.
 - a. Color: As selected from manufacturer's full range.
10. Acrylic-Based Finish Coatings: Factory-mixed acrylic-emulsion coating systems, formulated with colorfast mineral pigments and fine aggregates; for use over portland cement plaster base coats. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.
 - a. Color: As selected from manufacturer's full range.

E. Plaster Mixes

1. General: Comply with ASTM C 926 for applications indicated.
 - a. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 1 lb of fiber/cu. yd. (0.6 kg of fiber/cu. m) of cementitious materials.
2. Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:
 - a. Portland Cement Mixes:
 - 1) Scratch Coat: For cementitious material, mix 1 part portland cement and 0 to 3/4 **OR** 3/4 to 1-1/2, **as directed**, parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - 2) Brown Coat: For cementitious material, mix 1 part portland cement and 0 to 3/4 **OR** 3/4 to 1-1/2, **as directed**, parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.
 - b. Masonry Cement Mixes:
 - 1) Scratch Coat: 1 part masonry cement and 2-1/2 to 4 parts aggregate.
 - 2) Brown Coat: 1 part masonry cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.
 - c. Portland and Masonry Cement Mixes:
 - 1) Scratch Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - 2) Brown Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.
 - d. Plastic Cement Mixes:
 - 1) Scratch Coat: 1 part plastic cement and 2-1/2 to 4 parts aggregate.
 - 2) Brown Coat: 1 part plastic cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.
 - e. Portland and Plastic Cement Mixes:
 - 1) Scratch Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - 2) Brown Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.
3. Base-Coat Mixes: Single base coats for two-coat plasterwork as follows:
 - a. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 0 to 3/4 part lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - c. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

4. Base-Coat Mixes: Single base coats for two-coat plasterwork as follows:
 - a. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
 - b. Masonry Cement Mix: Use 1 part masonry cement and 2-1/2 to 4 parts aggregate.
 - c. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.
5. Job-Mixed Finish-Coat Mixes:
 - a. Portland Cement Mix: For cementitious materials, mix 1 part portland cement and 3/4 to 1-1/2 **OR** 1-1/2 to 2, **as directed**, parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
 - b. Masonry Cement Mix: 1 part masonry cement and 1-1/2 to 3 parts aggregate.
 - c. Portland and Masonry Cement Mix: For cementitious materials, mix 1 part portland cement and 1 part masonry cement. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
 - d. Plastic Cement Mix: 1 part plastic cement and 1-1/2 to 3 parts aggregate.
6. Factory-Prepared Finish-Coat Mixes: For ready-mixed finish-coat plasters or acrylic-based finish coatings, comply with manufacturer's written instructions.

1.3 EXECUTION

- A. Examination
 1. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.
 2. Proceed with installation only after unsatisfactory conditions have been corrected.
- B. Preparation
 1. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.
 2. Prepare solid substrates for plaster that are smooth or that do not have the suction capability required to bond with plaster according to ASTM C 926.
- C. Installation, General
 1. Fire-Resistance-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.
 2. Sound Attenuation Blankets: Where required, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.
 3. Acoustical Sealant: Where required, seal joints between edges of plasterwork and abutting construction with acoustical sealant.
- D. Installing Metal Lath
 1. Expanded-Metal Lath: Install according to ASTM C 1063.
 - a. Partition Framing and Vertical Furring: Install flat diamond-mesh **OR** flat rib **OR** welded-wire **OR** woven-wire, **as directed**, lath.
 - b. Flat-Ceiling and Horizontal Framing: Install flat diamond-mesh **OR** flat rib **OR** 3/8-inch (9.5-mm) rib lath **OR** welded-wire **OR** woven-wire, **as directed**, lath.
 - c. Curved-Ceiling Framing: Install flat diamond-mesh **OR** welded-wire **OR** flat woven-wire, **as directed**, lath.
 - d. On Solid Surfaces, Not Otherwise Furred: Install self-furring, diamond-mesh **OR** welded-wire **OR** woven-wire, **as directed**, lath.
- E. Installing Accessories
 1. Install according to ASTM C 1063 and at locations indicated on Drawings.
 2. Reinforcement for External Corners:
 - a. Install lath-type, external-corner reinforcement at exterior locations.
 - b. Install cornerbead at interior and exterior, **as directed**, locations.

3. Control Joints: Install control joints at locations indicated on Drawings **OR** in specific locations approved for visual effect as follows, **as directed**:
 - a. As required to delineate plasterwork into areas (panels) of the following maximum sizes:
 - 1) Vertical Surfaces: 144 sq. ft. (13.4 sq. m).
 - 2) Horizontal and other Nonvertical Surfaces: 100 sq. ft. (9.3 sq. m).
 - b. At distances between control joints of not greater than 18 feet (5.5 m) o.c.
 - c. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.
 - d. Where control joints occur in surface of construction directly behind plaster.
 - e. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.

F. Plaster Application

1. General: Comply with ASTM C 926.
 - a. Do not deviate more than plus or minus 1/4 inch in 10 feet (6.4 mm in 3 m) from a true plane in finished plaster surfaces, as measured by a 10-foot (3-m) straightedge placed on surface.
 - b. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
 - c. Provide plaster surfaces that are ready to receive field-applied finishes indicated.
2. Bonding Compound: Apply on unit masonry and concrete plaster bases.
3. Walls; Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork, on masonry or on concrete; 3/4-inch (19-mm) thickness.
 - a. Portland cement mixes.
 - b. Masonry cement mixes.
 - c. Portland and masonry cement mixes.
 - d. Plastic cement mixes.
 - e. Portland and plastic cement mixes.
4. Ceilings; Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork; 1/2 inch (13 mm) thick **OR** 3/4 inch (19 mm) thick on concrete, **as directed**.
 - a. Portland cement mixes.
 - b. Masonry cement mixes.
 - c. Portland and masonry cement mixes.
 - d. Plastic cement mixes.
 - e. Portland and plastic cement mixes.
5. Walls; Base-Coat Mix: Scratch coat for two-coat plasterwork, 3/8 inch (10 mm) thick on concrete masonry **OR** 1/4 inch (6 mm) thick on concrete, **as directed**.
 - a. Portland cement mixes.
 - b. Masonry cement mixes.
 - c. Portland and masonry cement mixes.
 - d. Plastic cement mixes.
 - e. Portland and plastic cement mixes.
6. Ceilings; Base-Coat Mix: Scratch coat for two-coat plasterwork, 1/4 inch (6 mm) thick on concrete.
 - a. Portland cement mixes.
 - b. Masonry cement mixes.
 - c. Portland and masonry cement mixes.
 - d. Plastic cement mixes.
 - e. Portland and plastic cement mixes.
7. Plaster Finish Coats: Apply to provide float **OR** dash **OR** scraped trowel-textured **OR** skip trowel-textured **OR** brocade (knock-down dash) **OR** trowel sweep **OR** combed **OR** sacked (California mission) **OR** English **OR** marblecrete, **as directed**, finish to match sample.

8. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, according to manufacturer's written instructions.
 9. Concealed Exterior Plasterwork: Where plaster application will be used as a base for adhered finishes, omit finish coat.
 10. Concealed Interior Plasterwork:
 - a. Where plaster application will be concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.
 - b. Where plaster application will be concealed above suspended ceilings and in similar locations, finish coat may be omitted.
 - c. Where plaster application will be used as a base for adhesive application of tile and similar finishes, omit finish coat.
- G. Plaster Repairs
1. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.
- H. Protection
1. Remove temporary protection and enclosure of other work. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

END OF SECTION 09 22 13 00b

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 22 16 00 - CSF NON-STRUCTURAL METAL FRAMING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 22 16 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Interior non load-bearing steel stud framing and furring 20 gage and lighter.
 2. Metal furring.
 3. Wood blocking.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy Coated (Galvannealed) by the Hot-Dip Process.
 2. ASTM C 645 - Specification for Non-Structural Steel Framing Members.
 3. ASTM C 754 - Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.
 4. ASTM C 954 - Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 inches to 0.112 inches in Thickness.
- B. United States Department of Commerce Product Standard (PS):
 1. PS 20 - American Softwood Lumber Standard.
- C. Southern Pine Inspection Bureau (SPIB):
 1. Grading Rules.
- D. Western Wood Products Association (WWPA):
 1. Western Lumber Grading Rules.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data:
 - a. Framing Members: Standard materials and finish, product criteria, sizes and lengths, load charts, and limitations.
 - b. Fasteners and Anchorage Devices: Standard materials and finish, sizes, and load charts.
 - 2. Shop Drawings:
 - a. Indicate prefabricated work, component details, framing layout, framed openings, anchorage to structure, type and location of fasteners, and accessories or items required of other related work.
 - b. Indicate methods of securing studs and framing to tracks, splicing, suspension, and for blocking and reinforcement to framing connections.

1.4 QUALITY ASSURANCE

- A. Qualifications:
 - 1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 - 2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Protect metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.
- C. Store and protect metal framing with weatherproof covering, and ventilate to avoid condensation.
- D. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- 1. Manufacturers: Subject to compliance with project requirements, alternate manufacturers offering specified items which may be incorporated in the Work include the following:
 - a. Dale/Incor, Dearborn, MI (800) 882-7883.
 - b. National Gypsum Company, Gold Bond Building Products, Charlotte, NC. (800) 628-4662.
 - c. Clark Steel Framing Systems, Middletown, OH (800) 543-7140.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Interior Nonload-Bearing Partition Framing: ASTM A 653 and ASTM C 645; galvanized sheet steel, channel shaped, punched for utility access, depth as indicated on Drawings, gages as indicated below unless indicated on Drawings.
 - 1. 2-1/2 Inch Studs - Unbraced Length 13 Feet or Less: Minimum 20 gage.
 - 2. 3-5/8 Inch Studs - Unbraced Length 17 Feet or Less: Minimum 22 gage.
 - 3. 3-5/8 Inch Studs - Unbraced Length 18 Feet or Less: Minimum 20 gage.
 - 4. 6 Inch Studs - Unbraced Length 25 Feet or Less: Minimum 22 gage.
 - 5. 6 Inch Studs - Unbraced Length Greater Than 25 Feet: Minimum 20 gage.
 - 6. Limiting heights are for 5/8 inch thick gypsum board panels on each side of partition and 5 pounds per square foot uniform load perpendicular to partition.
- B. Partition Floor Tracks and Runners: ASTM A 653 and ASTM C 645; galvanized sheet steel, channel shaped, same depth and gage as studs, tight fit; solid web.
- C. Wall Furring and Partition Bracing: ASTM A 653 and ASTM C 645; galvanized sheet steel.
 - 1. Studs: 2-1/2 inch deep, 22 gage.
 - 2. Studs: 3-5/8 inch deep, 20 gage.
 - 3. Hat-Shaped Channels: 7/8 inch deep x 1-1/2 inch wide, 25 gage.
 - 4. Cold-Rolled Channels: 3/4 x 1/2 inch and 1-1/2 x 17/32 inch, 16 gage.
 - 5. Z Furring Channel: 1-1/2 inch deep, 25 gage.
 - 6. Clip Angles: 2 inches x 2 inches x 16 gage x 1/4 inch less than stud width.
- D. Partition Framing Fasteners: Corrosion-resistant self-drilling self-tapping steel screws.
 - 1. 22 Gage Framing: ASTM C 1002; 3/8 inch Type S pan head.
 - 2. 20 Gage and Heavier Framing: ASTM C 954; 5/8 inch Type S-12 low-profile head.
- E. Partition Floor Track Anchorage Device: Low velocity powder-actuated drive pins; minimum 0.140 inch shank diameter x 1-1/2 inch shank length with 7/8 inch diameter washer.
 - 1. DX 451 System using X-DNI Pins with R23 washers, by Hilti, Tulsa, OK. (800) 879-8000.
 - 2. Ramset/Red Head System using 4700SD Pins, by ITW Ramset/Redhead, Wood Dale, IL (708) 350-1858.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- F. Wall Furring to Concrete or Masonry Wall Fasteners: Hex head sleeve anchors; minimum 1/4 inch diameter x minimum 1-1/8 inch embedment.
 - 1. Slv Anch HX 5/16X2-1/2, by Hilti, Tulsa, OK (800) 879-8000.
 - 2. Dynabolt HN-1413, by ITW Ramset/Redhead, Wood Dale, IL (708) 350-1558.
 - 3. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.
- G. Furring Channel to Masonry or Concrete Surface Fasteners: Low velocity powder-actuated drive pins of size to suit application.
- H. Flat Straps and Plates: ASTM A 653; galvanized sheet steel, gage, shape, and configuration as indicated on Drawings.
- I. Wood Blocking Attached to Partition Framing:
 - 1. PS 20; S4S. Maximum of 19 percent moisture content, surfaced dry, No. 2 any species graded under WWPA grading rules or No. 3 Grade Southern Pine graded under SPIB grading rules.
 - 2. Full sized, sound lumber without splits, warps, wane, or loose knots.
- J. Security Mesh: 1/2 inch #16 galvanized carbon steel flattened expanded metal sheets or 22ga. sheet metal.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that building framing components are ready to receive Work.
 - 2. Verify that rough-in utilities are in-place and located where required.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install studs and fasteners in accordance with manufacturer's published instructions and ASTM C 754.
- B. Metal Stud Spacing: 16 inches on center, maximum.
- C. Align stud web openings horizontally.
- D. Splice studs with minimum 8 inch nested lap, fasten each stud flange with minimum two screws.
- E. Construct corners using minimum three studs.
- F. Double stud at wall openings and door jambs, maximum 2 inches from each side of openings.
- G. Place studs as indicated on Drawings, minimum 2 inches from abutting walls.
- H. Install framing between studs for attachment of mechanical and electrical items.
- I. Install intermediate studs above and below openings to match wall stud spacing.
- J. Fasten studs adjacent to door frames, partition intersections, and corners to top and bottom runner flanges in double-stud fashion with metal lock fastener tools.
 - 1. Securely fasten studs to jamb and head anchor clips of door and borrowed-light frames.
 - 2. Place horizontally a cut-to-length section of runner with web-flange bend at each end, fasten with minimum one screw per flange.
 - 3. Position a cut-to-length stud (extending to top runner) at vertical panel joints over door frame header.
- K. Blocking: Screw attach wood blocking between studs for support of surface mounted items.
 - 1. Plumbing fixtures.
 - 2. Toilet partitions.
 - 3. Wall cabinets.
 - 4. Toilet accessories
 - 5. Hardware.
 - 6. Architectural woodwork.
 - 7. Grab bars.

8. Handrails and railings.
 9. Signage.
 10. Other items requiring backing for attachment.
- L. Install batt insulation in walls, where indicated on Drawings, as specified in Section 072100.
- M. Framing Fastening: Fasten framing in accordance with manufacturer's published instructions and schedule below, unless indicated otherwise on Drawings.

CONNECTION	FASTENER
Floor and Top Track to Concrete	1 - Pin at 32 inches on center.
Partition Stud to Floor Track	1 - Screw each side at each flange.
Plates and Straps to Studs	2 - Screws.
Stud Web to Stud Web	2 - Screws.
Runner to Header	1 - Screw at 16 inches on center, max. 6 inches from each end.

3.3 INSTALLATION - SECURITY MESH

- A. Attach security mesh to metal framing, where indicated on Drawings, with modified truss head screws and washers spaced at 12 inches on center.

3.4 INSTALLATION - FURRING

- A. Furring Channels:
1. Attach vertically spaced at maximum 16 inches on center, to masonry and concrete surfaces with hammer set or powder driven fasteners staggered 24 inches on center on opposite flanges.
 2. Nest channels 8 inches at splices and anchor with 2 fasteners in each wing.
- B. Wall Furring:
1. Secure top and bottom runners to structure.
 2. Space metal studs at maximum 16 inches on center.

3.5 CONSTRUCTION

- A. Interface with Other Work:
1. Coordinate erection of studs at openings and with hollow metal door frames.
 2. Coordinate installation of anchors, supports, and blocking for mechanical, electrical, and building accessory items installed within framing.
- B. Site Tolerances:
1. Maximum Variation From True Position: 3 mm in 3 m.
 2. Maximum Variation From Plumb: 3 mm in 3 m.

3.6 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect metal framing erection, placement, spacing, fasteners, and connections to building.
- C. Inspect security mesh installation, fastener type, spacing, and attachment to metal framing.

USPS CSF Specifications issued: 10/1/2013
Last revised: 4/12/2011

END OF SECTION

SECTION 09 22 16 13 - NON-LOAD-BEARING STEEL FRAMING

1.1 GENERAL

- A. Description Of Work
 - 1. This specification covers the furnishing and installation of materials for non-load bearing steel framing. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.
- B. Summary
 - 1. This Section includes non-load-bearing steel framing members for the following applications:
 - a. Interior framing systems (e.g., supports for partition walls, framed soffits, furring, etc.).
 - b. Interior suspension systems (e.g., supports for ceilings, suspended soffits, etc.).
- C. Submittals
 - 1. Product Data: For each type of product indicated.
 - 2. LEED Submittal:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
- D. Quality Assurance
 - 1. Fire-Test-Response Characteristics: For fire-resistance-rated assemblies that incorporate non-load-bearing steel framing, provide materials and construction identical to those tested in assembly indicated according to ASTM E 119 by an independent testing agency.
 - 2. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

1.2 PRODUCTS

- A. Non-Load-Bearing Steel Framing, General
 - 1. Recycled Content of Steel Products: Provide products with average recycled content of steel products such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
 - 2. Framing Members, General: Comply with ASTM C 754 for conditions indicated.
 - a. Steel Sheet Components: Comply with ASTM C 645 requirements for metal, unless otherwise indicated.
 - b. Protective Coating: ASTM A 653/A 653M, G40 (Z120) **OR** ASTM A 653/A 653M, G60 (Z180) **OR** Coating with equivalent corrosion resistance of ASTM A 653/A 653M, G40 (Z120), **as directed**, hot-dip galvanized, unless otherwise indicated.
- B. Suspension System Components
 - 1. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625-inch- (1.59-mm-) diameter wire, or double strand of 0.0475-inch- (1.21-mm-) diameter wire.
 - 2. Hanger Attachments to Concrete:
 - a. Anchors: Fabricated from corrosion-resistant materials with holes or loops for attaching wire hangers and capable of sustaining, without failure, a load equal to 5 times that imposed by construction as determined by testing according to ASTM E 488 by an independent testing agency.

- 1) Type: Cast-in-place anchor, designed for attachment to concrete forms **OR** Postinstalled, chemical anchor **OR** Postinstalled, expansion anchor, **as directed**.
 - b. Powder-Actuated Fasteners: Suitable for application indicated, fabricated from corrosion-resistant materials with clips or other devices for attaching hangers of type indicated, and capable of sustaining, without failure, a load equal to 10 times that imposed by construction as determined by testing according to ASTM E 1190 by an independent testing agency.
 3. Wire Hangers: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.162-inch (4.12-mm) diameter.
 4. Flat Hangers: Steel sheet, in size indicated on Drawings **OR** 1 by 3/16 inch (25.4 by 4.76 mm) by length indicated, **as directed**.
 5. Carrying Channels: Cold-rolled, commercial-steel sheet with a base-metal thickness of 0.0538 inch (1.37 mm) and minimum 1/2-inch- (12.7-mm-) wide flanges.
 - a. Depth: As indicated on Drawings **OR** 2-1/2 inches (64 mm) **OR** 2 inches (51 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
 6. Furring Channels (Furring Members):
 - a. Cold-Rolled Channels: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges, 3/4 inch (19.1 mm) deep.
 - b. Steel Studs: ASTM C 645.
 - 1) Minimum Base-Metal Thickness: As indicated on Drawings **OR** 0.0179 inch (0.45 mm) **OR** 0.0312 inch (0.79 mm), **as directed**.
 - 2) Depth: As indicated on Drawings **OR** 1-5/8 inches (41.3 mm) **OR** 2-1/2 inches (63.5 mm) **OR** 3-5/8 inches (92.1 mm), **as directed**.
 - c. Hat-Shaped, Rigid Furring Channels: ASTM C 645, 7/8 inch (22.2 mm) deep.
 - 1) Minimum Base Metal Thickness: As indicated on Drawings **OR** 0.0179 inch (0.45 mm) **OR** 0.0312 inch (0.79 mm), **as directed**.
 - d. Resilient Furring Channels: 1/2-inch- (12.7-mm-) deep members designed to reduce sound transmission.
 - 1) Configuration: Asymmetrical **OR** Hat shaped, **as directed**.
 7. Grid Suspension System for Ceilings: ASTM C 645, direct-hung system composed of main beams and cross-furring members that interlock.
- C. Steel Framing For Framed Assemblies
1. Steel Studs and Runners: ASTM C 645.
 - a. Minimum Base-Metal Thickness: As indicated on Drawings **OR** 0.0179 inch (0.45 mm) **OR** 0.027 inch (0.7 mm) **OR** 0.0312 inch (0.79 mm), **as directed**.
 - b. Depth: As indicated on Drawings **OR** 3-5/8 inches (92.1 mm) **OR** 6 inches (152.4 mm) **OR** 4 inches (101.6 mm) **OR** 2-1/2 inches (63.5 mm) **OR** 1-5/8 inches (41.3 mm), **as directed**.
 2. Slip-Type Head Joints: Where indicated, provide one of the following:
 - a. Single Long-Leg Runner System: ASTM C 645 top runner with 2-inch- (50.8-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top runner and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
 - b. Double-Runner System: ASTM C 645 top runners, inside runner with 2-inch- (50.8-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer runner sized to friction fit inside runner.
 - c. Deflection Track: Steel sheet top runner manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 3. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.
 4. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
 - a. Minimum Base-Metal Thickness: As indicated on Drawings **OR** 0.0179 inch (0.45 mm) **OR** 0.027 inch (0.7 mm) **OR** 0.0312 inch (0.79 mm), **as directed**.

5. Cold-Rolled Channel Bridging: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges.
 - a. Depth: As indicated on Drawings **OR** 1-1/2 inches (38.1 mm), **as directed**.
 - b. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38.1 by 38.1 mm), 0.068-inch- (1.73-mm-) thick, galvanized steel.
6. Hat-Shaped, Rigid Furring Channels: ASTM C 645.
 - a. Minimum Base Metal Thickness: As indicated on Drawings **OR** 0.0179 inch (0.45 mm) **OR** 0.0312 inch (0.79 mm), **as directed**.
 - b. Depth: As indicated on Drawings **OR** 7/8 inch (22.2 mm) **OR** 1-1/2 inches (38.1 mm), **as directed**.
7. Resilient Furring Channels: 1/2-inch- (12.7-mm-) deep, steel sheet members designed to reduce sound transmission.
 - a. Configuration: Asymmetrical **OR** Hat shaped, **as directed**.
8. Cold-Rolled Furring Channels: 0.0538-inch (1.37-mm) bare-steel thickness, with minimum 1/2-inch- (12.7-mm-) wide flanges.
 - a. Depth: As indicated on Drawings **OR** 3/4 inch (19.1 mm), **as directed**.
 - b. Furring Brackets: Adjustable, corrugated-edge type of steel sheet with minimum bare-steel thickness of 0.0312 inch (0.79 mm).
 - c. Tie Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, 0.0625-inch- (1.59-mm-) diameter wire, or double strand of 0.0475-inch- (1.21-mm-) diameter wire.
9. Z-Shaped Furring: With slotted or nonslotted web, face flange of 1-1/4 inches (31.8 mm), wall attachment flange of 7/8 inch (22.2 mm), minimum bare-metal thickness of 0.0179 inch (0.45 mm), and depth required to fit insulation thickness indicated.

D. Auxiliary Materials

1. General: Provide auxiliary materials that comply with referenced installation standards.
 - a. Fasteners for Metal Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.
2. Isolation Strip at Exterior Walls: Provide one of the following:
 - a. Asphalt-Saturated Organic Felt: ASTM D 226, Type I (No. 15 asphalt felt), nonperforated.
 - b. Foam Gasket: Adhesive-backed, closed-cell vinyl foam strips that allow fastener penetration without foam displacement, 1/8 inch (3.2 mm) thick, in width to suit steel stud size.

1.3 EXECUTION

A. Preparation

1. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
 - a. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.
2. Coordination with Sprayed Fire-Resistive Materials:
 - a. Before sprayed fire-resistive materials are applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed fire-resistive materials. Where offset anchor plates are required, provide continuous plates fastened to building structure not more than 24 inches (600 mm) o.c.
 - b. After sprayed fire-resistive materials are applied, remove them only to extent necessary for installation of non-load-bearing steel framing. Do not reduce thickness of fire-resistive materials below that required for fire-resistance ratings indicated. Protect adjacent fire-resistive materials from damage.

B. Installation, General

1. Installation Standard: ASTM C 754, except comply with framing sizes and spacing indicated.

- a. Gypsum Plaster Assemblies: Also comply with requirements in ASTM C 841 that apply to framing installation.
- b. Portland Cement Plaster Assemblies: Also comply with requirements in ASTM C 1063 that apply to framing installation.
- c. Gypsum Veneer Plaster Assemblies: Also comply with requirements in ASTM C 844 that apply to framing installation.
- d. Gypsum Board Assemblies: Also comply with requirements in ASTM C 840 that apply to framing installation.
2. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
3. Install bracing at terminations in assemblies.
4. Do not bridge building control and expansion joints with non-load-bearing steel framing members. Frame both sides of joints independently.

C. Installing Suspension Systems

1. Install suspension system components in sizes and spacings indicated on Drawings, but not less than those required by referenced installation standards for assembly types and other assembly components indicated.
2. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.
3. Suspend hangers from building structure as follows:
 - a. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
 - 1) Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - b. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
 - 1) Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
 - c. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 - d. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
 - e. Do not attach hangers to steel roof deck.
 - f. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
 - g. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
 - h. Do not connect or suspend steel framing from ducts, pipes, or conduit.
4. Fire-Resistance-Rated Assemblies: Wire tie furring channels to supports.
5. Seismic Bracing: Sway-brace suspension systems with hangers used for support.
6. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.
7. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

D. Installing Framed Assemblies

1. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.

2. Install studs so flanges within framing system point in same direction.
 - a. Space studs as follows:
 - 1) Single-Layer Application: 16 inches (406 mm) **OR** 24 inches (610 mm) **OR** 400 mm **OR** 600 mm, **as directed**, o.c., unless otherwise indicated.
 - 2) Multilayer Application: 16 inches (406 mm) **OR** 24 inches (610 mm) **OR** 400 mm **OR** 600 mm, **as directed**, o.c., unless otherwise indicated.
 - 3) Tile backing panels: 16 inches (406 mm) **OR** 400 mm, **as directed**, o.c., unless otherwise indicated.
3. Install tracks (runners) at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts penetrating partitions above ceiling.
 - a. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
 - b. Door Openings: Screw vertical studs at jambs to jamb anchor clips on door frames; install runner track section (for cripple studs) at head and secure to jamb studs.
 - 1) Install two studs at each jamb, unless otherwise indicated.
 - 2) Install cripple studs at head adjacent to each jamb stud, with a minimum 1/2-inch (12.7-mm) clearance from jamb stud to allow for installation of control joint in finished assembly.
 - 3) Extend jamb studs through suspended ceilings and attach to underside of overhead structure.
 - c. Other Framed Openings: Frame openings other than door openings the same as required for door openings, unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
 - d. Fire-Resistance-Rated Partitions: Install framing to comply with fire-resistance-rated assembly indicated and support closures and to make partitions continuous from floor to underside of solid structure.
 - 1) Firestop Track: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.
 - e. Sound-Rated Partitions: Install framing to comply with sound-rated assembly indicated.
 - f. Curved Partitions:
 - 1) Bend track to uniform curve and locate straight lengths so they are tangent to arcs.
 - 2) Begin and end each arc with a stud, and space intermediate studs equally along arcs. On straight lengths of not less than 2 studs at ends of arcs, place studs 6 inches (150 mm) o.c.
4. Direct Furring:
 - a. Screw to wood framing.
 - b. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
5. Z-Furring Members:
 - a. Erect insulation (specified in Division 7 Section "Building Insulation") vertically and hold in place with Z-furring members spaced 24 inches (610 mm) **OR** 600 mm, **as directed**, o.c.
 - b. Except at exterior corners, securely attach narrow flanges of furring members to wall with concrete stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (600 mm) o.c.
 - c. At exterior corners, attach wide flange of furring members to wall with short flange extending beyond corner; on adjacent wall surface, screw-attach short flange of furring channel to web of attached channel. At interior corners, space second member no more than 12 inches (300 mm) from corner and cut insulation to fit.
6. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

SECTION 09 22 36 23 - LATH AND PLASTER RENOVATION

GENERAL

Description Of Work

1. This specification covers the furnishing and installation of materials for lath and plaster renovation. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

Quality Assurance

2. Regulatory Requirements:
 - a. Plaster Partitions: Listed and labeled for fire-protective ratings as indicated or scheduled.
 - b. Plaster Floor/Ceilings and Roof/Ceiling Assemblies: Listed and labeled for fire-protective ratings as indicated or scheduled.
 - c. Fire Rated Assemblies: Comply with UL 05, FM P8016, or GA 600 for required fire-rated assembly.

Submittals

3. Product Data: Submit in accordance with Detailed Scope of Work. Include each type of plaster material, metal lath, and lathing accessories to be installed.

Delivery, Storage, And Handling

4. General:
 - a. Plastering Materials: Deliver in original unopened containers and store off ground and under cover.
 - b. Metal Lath and Accessories: Protect from rusting during storage.
 - c. Rusted or Water Damaged Materials: Subject to rejection before or after installation.

Project Conditions

5. Environmental Requirements: Comply with Detailed Scope of Work.
 - a. Cold-Weather Protection: Do not apply plaster if ambient temperature is less than 4 degrees C (40 degrees F) or more than 26 degrees C (80 degrees F). Maintain this temperature range in all areas 7 days prior to application, during application, and for 7 days after plaster is set.
 - b. Hot-Weather Protection: Protect plaster against uneven or excessive evaporation during dry, hot weather and from strong blasts of dry air, either natural or artificial.
 - c. Ventilation: Ventilate building spaces as required to remove water in excess of that required for hydration of plaster. Begin ventilation immediately after plaster is applied and continue until it sets.
6. Existing Conditions: See Division 1 Section "Summary of Work". Do not interfere with use of occupied buildings or portions of buildings. Maintain free and safe passage to and from occupied areas.
7. Protection: Protect grounds, plantings, buildings, and any other facilities or property from damage caused by construction operations.

Scheduling And Sequencing

8. Scheduling and Completion: Comply with Detailed Scope of Work.
 - a. Sequence plaster application with installation and protection of other work so that neither will be damaged by installation of other.

PRODUCTS

Materials

9. **Materials for Patching, Extending, and Matching:**
 - a. Provide same products or types of construction as existing structure, as needed to patch, extend, or match existing work.
 - 1) Generally, Contract Documents will not define products or standards of workmanship present in existing construction. Determine products by inspection and any necessary testing, and workmanship by use of existing as sample of comparison.
 - 2) Patching, extending, and matching of existing work and systems shall result in complete, finished system.
 - b. Presence of product, finish, or type of construction, requires that patching, extending, or matching shall be performed as necessary to make work complete and consistent.
10. **Partition Metals: ASTM C 645, galvanized steel:**
 - a. Interior Steel Studs: Minimum 0.46 mm (25 gage), provide sizes and gages to match existing, or as indicated.
 - 1) Provide minimum of 0.84 mm (20 gage) studs both sides of hollow metal frames.
 - b. Steel Stud Runners: Match studs. Provide long leg runners for slip joint at structure above to allow for deflection.
 - c. Furring Channels: Hat-shaped furring channels, minimum 0.46 mm (25 gage).
 - d. Sheet Metal Reinforcement (Alternate to Wood Blocking): 1.52 mm (16 gage) minimum.
11. **Suspended Ceiling Metals:**
 - a. Main Runners (Primary Members): ASTM C 754 cold-rolled steel channels with rust-inhibitive finish.
 - 1) 50 mm (2 inches) deep, 88 kg per 100 m (590 pounds per 1,000 LF).
 - 2) 38 mm (1-1/2 inch) deep, 70 kg per 100 m (475 pounds per 1,000 LF).
 - 3) 19 mm (3/4 inch) deep, 45 kg per 100 m (300 pounds per 1,000 LF).
 - b. Cross Furring (Furring Channels): Hat-shaped galvanized steel furring channels, minimum 0.46 mm (25 gage).
 - c. Wire for Hangers and Ties: ASTM A 641, Class 1 zinc coating, soft temper.
 - 1) Hanger Wire: Minimum 4.1 mm (8 gage).
 - 2) Tie Wire: 6 mm (16 gage).
12. **Lath:**
 - a. Metal Lath: ASTM C 847, galvanized expanded metal.
 - 1) Weight: In compliance with ASTM C 841 for conditions and spacing of supports.
 - b. Gypsum Lath: ASTM C 37, plain. Provide Type X at fire-rated assemblies.
 - 1) Thickness: As indicated or specified and in compliance with ASTM C 841 for conditions and spacing of supports.
13. **Fasteners:**
 - a. Screws: ASTM C 1002, corrosion-resistant. Provide types as recommended by manufacturer for each application.
 - 1) To Metal Framing: Minimum 25 mm (1 inch), Type S.
 - 2) To Wood Framing: Minimum 32 mm (1-1/4 inch), Type W bugle head.
14. **Accessories: ASTM C 841, galvanized steel.**
 - a. Comer Beads: Small nose with expanded flanges, unless otherwise indicated.
 - b. Casing Beads: Square-edged style. with short or expanded flanges to suit kinds of plaster bases indicated.
 - c. Control Joints: Prefabricated folded pair of non-perforated screeds in M-shaped configuration, with expanded or perforated flanges.
 - 1) Provide removable protective tape on plaster face of control joints.
 - d. Cornerite: Galvanized expanded metal lath in accordance with ASTM C 841.
15. **Gypsum Plaster Materials: ASTM C 28.**
 - a. Base Coat Plasters: One of following:
 - 1) Gypsum ready-mixed plaster with mill-mixed perlite aggregate.
 - 2) Gypsum wood-fibered plaster, ASTM C 28, Type N.
 - b. Finish Coat Plasters: One of following:
 - 1) Gypsum ready-mixed finished plaster, manufacturers standard mill-mixed gauged interior finish.

- 2) Gypsum Gauging Plaster: ASTM C 28, Type G.
 - c. Quicklime: ASTM C 5.
 - d. Sand: ASTM C 35.
 - e. Finishing Hydrated Limes: ASTM C 206, Type S, special hydrated lime for finishing purposes.
 - f. Bonding Compound for Gypsum Plaster: ASTM C 631.
 - g. Water: Clean and free from injurious amounts of oils, acids, alkalis, salts, organic materials, or substances that may be deleterious to plaster or metals in contact with plaster.
- 16. Sound-Isolation Materials:
 - a. Sound Insulation: ASTM C 665, Type I (unfaced) mineral-fiber blankets, 12 to 16 kg per cu m (0.75 to 1 PCF), thickness as indicated or scheduled, or required by fire-rated assembly.
 - b. Acoustical Sealant:
 - 1) Concealed: ASTM C 919 nondrying, non-hardening, non-skinning, non-bleeding, and non-staining.
 - 2) Exposed: ASTM C 919 non-oxidizing and skinning, permanently elastic, and paintable.
 - c. Ductwork Penetrations Packing: Low-density fiberglass.
- 17. Gypsum Plaster Mixes: As recommended by manufacturer:
 - a. Scratch Coat:
 - 1) Over Metal Lath: Gypsum wood-fibered plaster, neat or with job-mixed sand.
 - 2) Over Gypsum Lath: Gypsum neat plaster with job-mixed sand.
 - 3) Over Unit Masonry: Gypsum wood-fibered plaster, neat or with job-mixed sand.
 - b. Brown Coat:
 - 1) Over Metal Lath: Gypsum wood-fibered plaster, with job-mixed sand.
 - 2) Over Gypsum Lath: Gypsum neat plaster with job-mixed sand.
 - 3) Over Unit Masonry: Gypsum wood-fibered plaster with job-mixed sand.
 - c. Finish Coat: Proportion materials for finish coats to comply with ASTM C 842 for each type of finish coat and texture indicated.
 - 1) Gypsum Gauging Plaster 1 part plaster and 2 parts lime.
 - a) Over lightweight aggregate base coats, add 15 L (1/2 cubic foot) of perlite fines or 23 kg (50 pounds) of No. 1 white silica sand per 45 kg (100 pounds) of plaster.
 - 2) Gypsum Ready-mixed Finish Plaster Neat.
 - d. Mechanically mix cementitious and aggregate materials for plasters to comply with applicable referenced application standard and with recommendations of plaster manufacturer.

EXECUTION

Examination

- 18. Units, Spaces, and Areas to be renovated: Comply with Detailed Scope of Work.
 - a. Verify that surfaces to receive rough carpentry are prepared to required grades and dimensions.

Preparation

- 19. Dust Protection: Comply with Detailed Scope of Work.
- 20. Building Occupation: Carry out demolition and renovation work to cause as little inconvenience to occupants as possible. See Detailed Scope of Work.
- 21. Protection: Comply with Detailed Scope of Work.
 - a. Protection: Provide drapes and drop cloths necessary to protect walls, floors, ductwork and piping, electrical work, etc. during plastering operations.
- 22. Selective Demolition: Comply with Detailed Scope of Work.
- 23. Surface Preparation: Clean projections, dust, loose particles, grease, bond breakers, and foreign matter from surfaces to receive plaster.

- a. Do not apply plaster directly to surfaces (1) of masonry or concrete that have been coated with bituminous compound or other waterproofing agents, or (2) that have been painted or previously plastered.
- b. Before plaster work is started, wet masonry and concrete surfaces thoroughly with fine fog spray of clean water to produce uniformly moist surface.
- c. Do not apply plaster to surfaces containing frost.

Laying-Out Work

24. Discrepancies: Verify dimensions and elevations indicated in layout of existing work.
 - a. Prior to commencing work, carefully compare and check Drawings (if any) for discrepancies in locations or elevations of work to be executed.
 - b. Refer discrepancies among Drawings (if any), Specifications, and existing conditions to the Owner for adjustment before work affected is performed.
 - 1) Failure to make such notification shall place responsibility on Contractor to carry out work in satisfactory, workmanlike manner.
25. Contractor: Responsible for location and elevation of construction contemplated by Construction Documents.

Performance

26. Patching: Patch and extend existing work using skilled mechanics who are capable of matching existing quality of workmanship.
 - a. Quality of Patched or Extended Work: Not less than specified for new work. If similar new work is not specified, equal to existing work.
27. Damaged Surfaces: Comply with Detailed Scope of Work.
28. Transitions from Existing to New Work: Comply with Detailed Scope of Work.
29. Isolation: Where lathing and metal support system abuts building structure horizontally and where partition/wall work abuts overhead structure, isolate work from structural movement sufficiently to prevent transfer of loads to work from building structure. Install slip or cushion-type joints to absorb deflections but maintain lateral support.
 - a. Frame both sides of control and expansion joints independently, and do not bridge joints with furring and lathing or accessories.

Installation Of Suspended Steel Framing

30. General: Construct ceilings of lath and plaster on suspended steel framing system in accordance with manufacturer's recommendations and Reference Standards.
31. Hanger Installation: Attach hangers to structure above ceiling to comply with NAAMM ML/SFA 920.
32. Ceiling Suspension System Components: Install in sizes and at spacings indicated but not in smaller sizes or greater spacings than those required by ASTM C 841 and NAAMM ML/SFA 920.
 - a. Wire Hangers: Space and install wire hangers in accordance with ASTM C 841 and within 150 mm (6 inches) of channel ends, unless closer spacing indicated or required for fire-resistance rated assembly.
 - b. Main Runners (Primary Members): Space and install channels in accordance with ASTM C 841, unless closer spacing indicated or required for fire-resistance rated assembly.
 - c. Cross Furring (Furring Channels): Space and install furring channels in accordance with ASTM C 841, unless closer spacing indicated or required for fire-resistance rated assembly.
33. Framing Around Openings: Frame channels and lath on suspended soffits and ceilings and at furring to receive electric lights, etc. as indicated or as necessary to complete work. Furnish and install in furring, plaster rings or access panels furnished under other sections.

Installation Of Steel Stud Partitions

34. General: Install steel stud partition support systems in accordance with manufacturer's recommendations and Reference Standards.
35. Steel Stud Systems: Comply with ASTM C 754.

- a. To Receive Metal Lath: Space studs in accordance with ASTM C 841 and NAAMM ML/SFA 920.
- b. To Receive Gypsum Lath: Space studs in accordance with ASTM C 841.
- 36. Extend partition support systems to finish ceilings and attach to ceiling suspension members, unless otherwise indicated.

Metal Furring

- 37. General: Install in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - a. Install supplementary framing, blocking, and bracing at terminations in work and for support of fixtures, equipment services, heavy trim, grab bars, bath accessories, furnishings, and similar work to comply with manufacturer's recommendations.
- 38. Metal Furring to Receive Gypsum Lath: Space furring channels in accordance with ASTM C 841.
- 39. Metal Furring Systems:
 - a. To Receive Metal Lath: Space furring in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - b. To Receive Gypsum Lath: Space furring in accordance with ASTM C 841.
- 40. Isolation: Where lathing and metal support system abuts building structure horizontally and where partition/wall work abuts overhead structure, isolate work from structural movement sufficiently to prevent transfer of loads to work from building structure. Install slip or cushion-type joints to absorb deflections but maintain lateral support.
 - a. Frame both sides of control and expansion joints independently, and do not bridge joints with furring and lathing or accessories.

Installation Of Suspended Steel Framing

- 41. General: Construct ceilings of lath and plaster on suspended steel framing system in accordance with manufacturer's recommendations and Reference Standards.
- 42. Hanger Installation: Attach hangers to structure above ceiling to comply with NAAMM ML/SFA 920.
- 43. Ceiling Suspension System Components: Install in sizes and at spacings indicated but not in smaller sizes or greater spacings than those required by ASTM C 841 and NAAMM ML/SFA 920.
 - a. Wire Hangers: Space and install wire hangers in accordance with ASTM C 841 and within 150 mm (6 inches) of channel ends, unless closer spacing indicated or required for fire-resistance rated assembly.
 - b. Main Runners (Primary Members): Space and install channels in accordance with ASTM C 841, unless closer spacing indicated or required for fire-resistance rated assembly.
 - c. Cross Furring (Furring Channels): Space and install furring channels in accordance with ASTM C 841, unless closer spacing indicated or required for fire-resistance rated assembly.
- 44. Framing Around Openings: Frame channels and lath on suspended soffits and ceilings and at furring to receive electric lights, etc. as indicated or as necessary to complete work. Furnish and install in furring, plaster rings or access panels furnished under other sections.

Installation Of Steel Stud Partitions

- 45. General: Install steel stud partition support systems in accordance with manufacturer's recommendations and Reference Standards.
- 46. Steel Stud Systems: Comply with ASTM C 754.
 - a. To Receive Metal Lath: Space studs in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - b. To Receive Gypsum Lath: Space studs in accordance with ASTM C 841.
- 47. Extend partition support systems to finish ceilings and attach to ceiling suspension members, unless otherwise indicated.

Metal Furring

- 48. General: Install in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - a. Install supplementary framing, blocking, and bracing at terminations in work and for support of fixtures, equipment services, heavy trim, grab bars, bath accessories, furnishings, and similar work to comply with manufacturer's recommendations.

49. Metal Furring to Receive Gypsum Lath: Space furring channels in accordance with ASTM C 841.
50. Metal Furring Systems:
 - a. To Receive Metal Lath: Space furring in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - b. To Receive Gypsum Lath: Space furring in accordance with ASTM C 841.

Lathing

51. Metal Lathing: Install in accordance with ASTM C 841 and NAAMM ML/SFA 920.
 - a. At Metal Framing: Attach metal lath to furring channels with long dimension of sheet at right angles to furring channels with gage wire ties spaced not over 150 mm (6 inches) apart.
 - b. At Wood Framing: Nail metal lath to wood framing with long dimension of sheet at right angles to framing member.
 - c. Place ties where sides of sheets laps at supports and at side laps of sheets between supports. Lap metal lath not less than 13 mm (1/2 inch) at sides of sheets and 25 mm (1 inch) at ends of sheets.
 - d. Suspended and Furred Ceilings: Use 1.8 kg/sq m (3.4 pounds/SY) minimum weight diamond mesh lath.
 - e. Ceramic Tile Setting Beds: Use 1.8 kg/sq m (3.4 pounds/SY) minimum weight diamond mesh lath.
52. Gypsum Lath: Install in accordance with ASTM C 841.
 - a. Wood Framing and Furring: Install lath as follows:
 - 1) With screws to comply with lath manufacturer's directions.
 - 2) With nails.
 - 3) Provide floating angle construction.
 - b. Suspended and Furred Ceilings: Install lath to furring members with clips.
 - c. Vertical Metal Framing and Furring: Install lath as follows:
 - 1) With screws.
 - 2) With clips, supplemented by screws where required by lath manufacturer.
 - 3) Where sound-rated partitions are indicated, attach lath with resilient clips.

Installation Of Accessories

53. Accessories: Install as required to repair area of work to match existing. Install in accordance with ASTM C 841. Miter or cope accessories at corners; Install with tight joints and in alignment. Attach accessories securely to plaster bases to hold accessories in place and alignment during plastering.
54. Interior Corners: Apply cornerite.
55. Corner Beads: Install corner beads tightly secured to lath at exposed exterior corners.
56. Casing Beads: Install at terminations of plaster work, except where plaster passes behind and is concealed by other work and where metal screeds, bases, or metal frames act as casing beads.
57. Control Joints: Install at locations indicated or, if not indicated, at spacings and locations required by Reference Standards. Coordinate specific locations with the Owner.
58. Access Panels: Provide access panels as required for maintenance of concealed plumbing work in coordination with Division 15 Section "Plumbing." Tiled Areas: Coordinate with Division 9 Section "Ceramic Tile."
59. Sound-Rated Plaster Work: Where sound-rated plaster work is indicated by STC ratings or other notation:
 - a. Acoustical Sealant: Seal work at perimeters, control joints, openings, and penetrations with continuous bead of acoustical sealant. Comply with ASTM C 919 and plastering manufacturer's recommendations for location of sealant beads.
 - b. Sound Insulation: Install insulation blankets within stud cavities of sound-rated partition assemblies where indicated.

Plastering

60. Plastering: Comply with ASTM C 842 in thickness to match existing.

- a. Preparation: Remove loose, fractured, or separated plaster to face of substrate. repairing lath at substrate to ensure repair area bounded by solid and sound existing plaster construction.
 - 1) Prepare monolithic surfaces for bonded base coats and use bonding compound to comply with Reference Standards for conditioning of monolithic surfaces.
- b. Grout hollow metal frames, bases, and similar work with base-mat plaster material, and prior to lathing where necessary. Except where full grouting is indicated or required for fire-resistance rating, grout at least 150 mm (6 inches) at each jamb anchor dip.
- c. Plaster flush with metal frames and other built-in metal items or accessories that act as plaster ground, unless otherwise indicated. Where plaster is not terminated at metal by casing beads, cut base coat free from metal before plaster sets and groove finish coat at junctures with metal.
- 61. Preparation: Check metal grounds, corner beads, screeds, and other accessories carefully for alignment before starting plaster application. Check expansion and control joints and supporting metal structures to ensure that expansion and control joints can move unrestrained.
- 62. Plaster: Apply in accordance with ASTM C 842 in thickness to match existing:
 - a. Use three-coat work over following plaster bases:
 - 1) Metal lath.
 - 2) Gypsum lath attached to ceiling supports by clips.
 - 3) Gypsum lath attached to ceiling supports spaced over 400 mm (16 inches) OC.
 - 4) Gypsum lath, 9.5 mm (3/8 inch) thick, with separate vapor retarder behind.
 - b. Use two-coat work over following bases.
 - 1) Gypsum lath except for installations requiring three-coat work.
 - 2) Unit masonry.
 - 3) Concrete, cast-in-place or precast when surface condition complies with ASTM C 842 for plaster bonded to solid base.
 - c. First Coat: Apply first coat of plaster with such force to secure good key.
 - d. Finish Coats: Apply troweled finish coats unless otherwise indicated.
- 63. Workmanship: Perform work true to line, straight, and plumb.
 - a. Finished Surfaces: Free from waves, dents, bumps, cracks, pits, checks, streaks, catfaces, blisters, or other defects. Cutout and properly replace defective areas.
 - b. Execute work to avoid any irregularity occurring at point or place where one section is joined to another.
 - c. Arises and Angles: True and sharp.
- 64. Tolerances: Plaster surface plane within plus/minus 3 mm in 3 000 mm (1/8 inch in 10 feet).

Integrating Existing Work

- 65. Protection: Comply with Detailed Scope of Work.

Adjustments

- 66. Partition Removal: Comply with Detailed Scope of Work.

Dust Control

- 67. Dust: Comply with Detailed Scope of Work.

Patching And Cleaning

- 68. Cutting and Patching: Do necessary cutting, patching, and repairing and pointing up of plastering after other work is in place to restore defective areas. Repair or replace work to eliminate blisters, buckles, excessive crazing and check-cracking, dry outs, efflorescence, sweat-outs, and similar defects and where bond to substrate has failed.
 - a. Sand smooth-troweled finishes lightly to remove trowel marks and arises.
- 69. Cleaning: As rapidly as plastering is completed in each space, clean up rubbish, utensils, and surplus material, sweep floor and leave in neat condition for work of others.
 - a. When general plastering is concluded, remove plastering rubbish, equipment, and surplus materials from premises.
 - b. Clean surfaces splattered with plaster.

SECTION 09 23 13 00 - GYPSUM BOARD RENOVATION**GENERAL****Description Of Work**

1. This specification covers the furnishing and installation of materials for gypsum board renovation. Products shall be as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

Submittals

2. Quality Assurance/Control Submittals
 - a. Certificates: Manufacturer's written certification that gypsum products meet or exceed specified requirements.

Quality Assurance

3. Regulatory Requirements:
 - a. Gypsum Board Partitions: Listed and labeled for fire-protective ratings as indicated or scheduled.
 - b. Gypsum Board Floor/Ceilings and Roof/Ceiling Assemblies: Listed and labeled for fire protective ratings as indicated or scheduled.
 - c. Fire-Rated Assemblies: Comply with UL 05, FM P8016, or GA 600 for required fire-rated assembly.

Delivery, Storage, And Handling

4. Storage and Protection: Store wallboard off ground to protect it from weather and damage due to moisture damage.
 - a. Wallboard: Dry, free of warpage, and have bundling tape intact immediately prior to use.

Project Conditions

5. Environmental Requirements: Comply with Detailed Scope of Work.
 - a. During gypsum-panel application and finishing, maintain indoor temperatures within range of 13 degrees C (55 degrees F) to 21 degrees C (70 degrees F). Provide adequate ventilation to carry off excess moisture.
6. Existing Conditions: See Division 1 Section "Summary of Work". Do not interfere with use of occupied buildings or portions of buildings. Maintain free and safe passage to and from occupied areas.
7. Protection: Protect grounds, plantings, buildings and any other facilities or property from damage caused by construction operations.

Scheduling And Sequencing

8. Scheduling and Completion: Comply with Detailed Scope of Work.

PRODUCTS**Materials**

9. Materials for Patching, Extending, and Matching:

- a. Provide same products or types of construction as in existing structure, as needed to patch, extend, or match existing work.
 - 1) Generally, Contract Documents will not define products present in existing construction. Determine products by Inspection and any necessary testing.
 - 2) Patching, extending, and matching of existing work and systems shall result in a complete, finished system.
- b. Presence of product, finish, or type of construction requires that patching, extending, or matching be performed as necessary to make work complete and consistent.

Metals

- 10. Partition Metals: ASTM C 645, galvanized steel:
 - a. Interior Steel Studs: Minimum 0.46 mm (25 gage), provide sizes and gages to match existing or as indicated.
 - 1) Provide minimum of 0.84 mm (20 gage) studs both sides of hollow metal frames.
 - b. Steel Stud Runners: Match studs. Provide long leg runners for slip joint at structure above to allow for deflection.
 - c. Furring Channels: Hat-shaped furring channels, minimum 0.46 mm (25 gage).
 - d. Resilient Furring Channels: Manufacturer's standard product designed to reduce sound transmission by resilient attachment of gypsum board, 13 mm (1/2 inch) deep.
 - e. Sheet-Metal Reinforcement (Alternate to Wood Blocking): 1.52 mm (16 gage) minimum.
- 11. Suspended Coiling Metals:
 - a. Runner Channels: ASTM C 754 cold-rolled steel channels with rust-inhibitive finish.
 - 1) 50 mm (2 Inches) deep, 88 kg per 100 m (590 pounds per 1,000 LF).
 - 2) 38 mm (1-1/2 inch) deep, 70 kg per 100 m (475 pounds per 1,000 LF).
 - 3) 19 mm (3/4 Inch) deep, 45 kg per 100 m (300 pounds per 1,000 LF).
 - b. Furring Channels: Hat-shaped galvanized-steel furring channels, minimum 0.46 mm (25 gage).
 - c. Steel Studs: Galvanized steel as specified above, minimum 0.46 mm (25 gage).
 - d. Wire for Hangers and Ties: ASTM A 641, Class 1 zinc coating, soft temper.
 - 1) Hanger Wire: Minimum 4.1 mm (8 gage).
 - 2) Tie Wire: 6 mm (16 gage).

Gypsum Board And Related Materials

- 12. Gypsum Board: GA216 and ASTM C 36
 - a. Size: 12.7 mm and 15.9 mm (1/2 inch and 5/8 inch) thick to match existing, as indicated or scheduled. Provide boards 1 200 mm (48 inches) wide by length required to minimize cross joints.
 - b. Regular Tapered-edge gypsum panels.
 - 1) Provide Type X gypsum panels at fire-rated assemblies.
 - c. Water-Resistant: ASTM C 630, paintable, tapered-edge gypsum panels.
 - 1) Provide Type X water-resistant gypsum panels at fire-rated assemblies.
- 13. Cementitious Backer Units (CBU): ANSI A118.9, nailable/screwable backer board composed of stable portland cement, aggregates, and reinforcements with ability to remain unaffected by prolonged exposure to moisture, 12.7 mm (1/2 inch) thick.
- 14. Fasteners:
 - a. Screws: ASTM C 1002, drywall screws, corrosion resistant. Provide types as recommended by manufacturer for each application.
 - 1) Wallboard to Metal Framing: Minimum 25 mm (1 inch), Type S.
 - 2) Wall board to Wood Framing: Minimum 32 mm (1-1/4 inch) Type W bugle head.

- 3) Wall board to Wallboard: Type G.
 - b. Nails: ASTM C 514.
- 15. Accessories: GA 216 and ASTM C 1047, galvanized steel.
 - a. Comer Bead: GA 216 Type CB-114 x 114.
 - b. Metal Trim (Casing Beads): GA 216 Type L, in depth to match gypsum-board thickness.
 - c. Control Joint: V-shaped control joint.
 - d. Adhesive: ASTM C 557 multi-purpose adhesive.
- 16. Finishing Materials: ASTM C 475.
 - a. Joint Tape: Provide type as recommended by panel manufacturer.
 - b. Joint Treatment: Joint compound, adhesive, water, and fasteners.
- 17. Sound-Isolation Materials:
 - a. Sound Insulation: ASTM C 665, Type I (unfaced) mineral fiber blankets, 3.7 to 4.9 kg per sq m (3/4 to 1 PCF), thickness as indicated, scheduled, or required by fire-rated assembly.
 - b. Acoustical Sealant:
 - 1) Concealed: ASTM C 919 nondrying, non-hardening, and non-skinning; non-bleeding; and non-staining.
 - 2) Exposed: ASTM C 919 non-oxidizing and skinning; permanently elastic; and paintable.
 - c. Ductwork Penetrations Packing: Low-density fiberglass.

EXECUTION

Examination

- 18. Units, Spaces, and Areas to be Renovated: Comply with Detailed Scope of Work.
 - a. Existing Conditions: Before beginning installation, examine substrates and framing to receive gypsum board for defects or conditions adversely affecting quality and execution of installation.

Preparation

- 19. Dust Protection: Comply with Detailed Scope of Work.
- 20. Building Occupation: Carry out demolition and renovation work to cause as little inconvenience to occupants as possible. See Detailed Scope of Work.
- 21. Protection: Comply with Detailed Scope of Work.
 - a. Protection: Provide drapes and drop cloths necessary to protect walls, floors, ductwork and piping, electrical work, etc. during drywall finishing operations.
- 22. Selective Demolition: Comply with Detailed Scope of Work.

Laying Out Work

- 23. Discrepancies: Verify dimensions and elevations indicated in layout of existing work.
 - a. Prior to commencing work, carefully compare and check Drawings (if any) for discrepancies in locations or elevations of work to be executed.
 - b. Refer discrepancies among Drawings (if any), Specifications, and existing conditions to the Owner or adjustment before work affected is performed.
 - 1) Failure to make such notification shall place responsibility on Contractor to carry out work in satisfactory, workmanlike manner.
 - c. Contractor: Responsible for location and elevation of construction indicated by Construction Documents.

Performance

24. Patching: Patch and extend existing work using skilled mechanics capable of matching existing quality of workmanship.
 - a. Quality of Patched or Extended Work: Not less than specified for new work. If similar new work is not specified, equal to existing work.
25. Damaged Surfaces: Comply with Detailed Scope of Work.
26. Transitions from Existing to New Work: Comply with Detailed Scope of Work.

Erection Of Drywall Stud Partitions

27. Reference Standard: Erect steel framing in accordance with ASTM C 754.
28. Layouts: Align partition studs accurately according to partition layout.
29. Anchoring: Anchor runner channels to concrete slabs with concrete stub nails or power-driven anchors at 600 mm (24 inches) OC. Anchor runner channels to coiling grid, where applicable, with stove bolts. Where studs extend above ceiling system, install headers where required to receive runners.
30. Studs: Position studs vertically in runners. Where studs are located adjacent to openings or partition intersections and comers. anchor studs to runners with manufacturer's metal lock fastener or with 13 mm (1/2 inch) Type S pan-head screws.
 - a. Space studs at 400 mm (16 Inches) and 600 mm (24 inches) OC as indicated or scheduled.
 - 1) Cementitious Backer Units (CBU): Space studs at maximum of 400 mm (16 inches) OC.
 - 2) Limiting Heights: Comply with ASTM C 754 for transverse load of 240 Pa (5 lb-force/SF) without exceeding either allowable stress or deflection of L/240. Comers and Intersections: Locate studs no more than 50 mm (2 inches) from abutting partitions, comers, etc.
 - b. Openings: Locate studs not more than 50 mm (2 inches) from opening frames. Anchor studs to frame anchor clips by bolt or screw attachment. Install headers over openings as recommended by the manufacturer.
 - 1) Solid-Core Wood Doors and Hollow Metal Doors: Provide two full-height studs at jambs fastened together back to back.
 - 2) Fire-Rated Openings: Comply with GA 219.
31. Bracing: Provide diagonal bracing at head of studs that terminate above the ceiling level. Bracing shall consist of metal studs bent to V-shape and extending at 45 degrees from partition head to structure above. Locate bracing 1 200 mm (48 inches) maximum OC.
32. Wood Blocking or Metal Reinforcement:
 - a. Wood Blocking: See Division 6 Section "Rough Carpentry."
 - b. Install metal reinforcement of size required for support of toilet and bath accessories, hardware, cabinets, shelving, counters, and other wall-mounted items.
 - c. Set true to line, level, or plumb well-secured in stud wall and flush with back of drywall or other wall finish.
 - d. Coordinate exact locations with other sections.

Miscellaneous Framing And Furring

33. General: Provide necessary framing and furring for special framing at recesses, offsets, specialty items, and at wall-mounted casework, shelving, and equipment.
34. Furring Channels: Install furring channels over back-up material. Position channels vertically at 600 mm (24 inches) OC. Use power-activated fasteners or stub nails at 600 mm (24 Inches) OC along alternating flanges. Shim channels level as required.
 - a. Cementitious Backer Units (CBU): Space furring at maximum of 400 mm (16 inches) OC.

35. Resilient Furring Channels: Screw-attach In accordance with manufacturer's recommendations.
 - a. Spacing: 600 mm (24 inches) OC for framing at 16 inches OC and 400 mm (16 inches) OC for framing at 24 Inches OC.

Ceiling Grillage Erection

36. Reference Standard: Erect steel framing In accordance with ASTM C 754.
37. Hangers: Install wire hangers spaced not over 1 200 mm (48 inches) OC in direction of 38 mm (1-1/2 inch) main runner channels and within 150 mm (6 inches) of ends of main runners or interruptions of ceiling continuity. Hang from structure above.
38. Runners: Place main runners not over 1 200 mm (48 inches) OC. Provide, position, and level hangers with hangers saddle-tied along runners. Space furring channels at 600 mm (24 inches) OC at right angles to runner channels and secure with furring channel clips.
39. Reinforcement: At light troffers or other openings, reinforce grillage with 19 mm (3/4 inch) cold-rolled channels wired atop and parallel to main runner channels.
 - a. Provide lateral seismic bracing as required by code.
40. Special Shapes: Provide necessary framing and suspension for off sets, verticals, etc.

Insulation

41. Sound Insulation: Place sound Insulation blankets in partitions tight within spaces, around cut openings. behind and around electrical and mechanical items within partitions, and tight to items passing through partitions.
 - a. Ductwork Penetrations: Provide one-inch wide clearance around ductwork and pack with fiberglass ready for joint sealers.

Installation Of Gypsum Drywall

42. Reference Standards: Apply and finish gypsum board in accordance with GA 216 and ASTM C 840.
43. Partition Gypsum Board Layout: Apply gypsum wallboard panels vertically with abutting ends and edges occurring over stud flanges or furring.
 - a. Joints on Opposite Sides of Partitions: Stagger; joints shall not occur over same stud.
 - b. Two Layer Construction: Stagger Joints between layers.
44. Ceiling Gypsum Board: Apply gypsum board of maximum practical length with long dimensions at right angles to furring channels. End and edge joints shall occur over furring channels with end joints staggered. Properly support gypsum board around cutouts and openings.
45. Fasteners: Apply board to studs or furring with drywall screws spaced 300 mm (12 inches) OC in field of board and 200 mm (8 inches) OC staggered along abutting edges.
46. Water-Resistant: Apply gypsum wallboard manufacturer's recommended sealant to raw cut edges and screw heads.
47. Cementitious Backer Units (CBU): Install in accordance with ANSI A108.11 and manufacturer's recommendations.
48. Accessories:
 - a. Comer Bead: Apply as recommended by manufacturer at exposed outer corners.
 - b. Trim (Casing Beads): Apply as recommended by manufacturer, where gypsum board abuts other materials, and as indicated.
 - c. Control Joints: Comply with GA 216.
 - 1) Walls: Install at not more than 9 m (30 feet) OC.
 - 2) Ceilings: Install at not more than 15 m (50 feet) OC and where framing changes direction.
 - 3) Coordinate locations with the Owner.
49. Access Panels: Securely install access panels furnished under other sections. Set plumb and square to align with finish surface.

50. Acoustical Sealant: Seal perimeter and penetrations on both sides of sound-rated partitions and partitions with sound-attenuation blankets with minimum of single 6 mm (1/4 inch) bead of sealant
 - a. Locations:
 - 1) Seal around gypsum-board perimeter in angle formed by gypsum-board panels and abutting dissimilar materials.
 - 2) Seal intersections of gypsum board with dissimilar materials.
 - 3) Seal pipe, conduit, ductwork, penetrations, etc.
 - 4) Seal around cutouts for lights, cabinets, pipes, ductwork, electrical boxes, etc.
 - 5) Seal gypsum board panel terminations in door and window frames.
 - 6) Seal control-joint locations before installing control Joints to panels.
 - b. Installation: Comply with ASTM C 919 and requirements of indicated sound-rated assembly. Provide number and positions of beads to comply with sound rating of assembly.
51. Tolerances: Gypsum-board surface plane within plus or minus 3 mm in 3 000 mm (1/8 inch in 10 feet).
52. Finishing: Finish in accordance with GA 214.
 - a. Concealed Locations (Not Exposed to View in Rooms): Level 1
 - b. Beneath Tile: Level 2.
 - c. Other Finished Areas: Level 4. Finish joints, trim, and fastener dimples. Sand smooth.
 - d. Cementitious Backer Units (CBU): Treat joints in accordance with ANSI A108.11 and manufacturer's recommendations.

END OF SECTION 09 23 13 00

Task	Specification	Specification Description
09 23 13 00	09 22 13 00	Gypsum Plaster

SECTION 09 29 00 00 - CSF GYPSUM BOARD**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 29 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 1. Gypsum board and joint treatment.
 2. Gypsum sheathing.
 3. Cementitious backer board.
 4. Sound attenuation blankets.
 5. Finishing.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 1. Section 061000 - Rough Carpentry: Wood framing for attachment of gypsum board.
 2. Section 092216 - Non-Structural Metal Framing: Metal framing for attachment of gypsum board.
 3. Section 099100 - Painting: Field paint finish on gypsum board.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 1. ASTM C36 - Specification for Gypsum Wallboard.
 2. ASTM C79 - Test Method for Gypsum Sheathing Board.
 3. ASTM C557 - Specification for Adhesives for Fastening Gypsum Wallboard to Wood Framing.
 4. ASTM C630 - Specification for Water-Resistant Gypsum Backing Board
 5. ASTM C954 - Specification for Steel Drill Screws for the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 inches to 0.112 inches in Thickness.
 6. ASTM C1002 - Specification Steel Drill Screws for the Application of Gypsum Panel Products.
 7. ASTM C1177 - Specification for Glass Mat Gypsum Substrate for Use As Sheathing.
 8. ASTM C1178 - Specifications for Glass Mat Water Resistant Gypsum Backing Panel.
 9. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.

10. ASTM E119 - Test Methods for Fire Tests of Building Construction and Materials.

B. Gypsum Association (GA):

1. GA-214 - Recommended Levels of Gypsum Board Finish.
2. GA-216 - Application and Finishing of Gypsum Board.
3. GA-253 - Application of Gypsum Sheathing.
4. GA-600 - Fire Resistance Design Manual.

1.3 SUBMITTALS

A. Section 013300 - Submittal Procedures: Procedures for submittals.

- a. Product Data: Data on gypsum board, joint materials, and finish materials.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
2. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.
- C. Stack gypsum board flat to prevent sagging.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

A. Jobsite Requirements:

1. Establish and maintain environmental conditions for applying and finishing gypsum board in conformance with GA-216.
2. Maintain minimum 50 degrees F for 48 hours before application and finishing of gypsum board. Maintain temperature continuously until dry. Do not exceed 95 degrees F when using temporary heat sources.
3. Ventilate building spaces as required to dry joint treatment materials. Prevent drafts during hot, dry weather to avoid finishing materials from drying too rapidly.

NOTE TO SPECIFIER

"REQUIRED Article (ENVIRONMENTAL REQUIREMENTS) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

1.7 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
1. Recycled Content: Provide gypsum board products with paper backing manufactured from 100 percent post-consumer recycled paper and gypsum core containing minimum 10 percent recycled gypsum.
 - a. Soil amendment from recycled scrap gypsum: Coordinate with Section 329200 - Turf and Grasses to identify requirements for gypsum soil amendment and to prepare scrap gypsum board for use as soil amendment.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering Products which may be incorporated in the Work include the following:
1. Georgia-Pacific Gypsum Products, Atlanta, GA (800) 225-6119.
 2. National Gypsum Company, Gold Bond Building Products, Charlotte, NC (800) 628-4662.
 3. United States Gypsum Company, Chicago, IL (800) 874-4968.
 4. Allied Stud Co., Phoenix, AZ, (800) 877-8823.
 5. Consolidated Fabricators Corp., Paramount, CA, (800) 635-8335
 6. Steeler, Inc., Seattle, WA (800) 275-2279
 7. Western Metal Lath, Inc., Riverside, CA (909) 360-3500
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Standard Gypsum Board: ASTM C 36; 1/2 inch and 5/8 inch thick 48 inch width, maximum permissible length; ends square cut, tapered edges.
- B. Type X Gypsum Wallboard (Fire Resistant): ASTM C36; 1/2 inch and 5/8 inch thick, 48 inch width, maximum permissible length; ends square cut, edges tapered, providing at least 1-hour fire-retardant rating for boards 5/8 inch thick or 3/4-hour fire-resistance classification for boards 1/2 inch thick, when tested in accordance with ASTM E119.
- C. Water-Resistant Gypsum Backing Board: ASTM C630; 1/2 and 5/8 inch thick, 48 inch width, maximum permissible length; ends and edges straight and solid, edges tapered. Board consisting of a noncombustible water-resistant gypsum core, surfaced on face and back with water-repellent paper bonded to the core.
- D. Water-Resistant Glass Mat Embedded Gypsum Backing Board: ASTM C1178; 1/4 and 1/2 inch thick, 32 inch or 48 inch width, maximum permissible length; ends and edges straight and solid, edges square. Board consisting of a noncombustible water-resistant gypsum core, with glass mat embedded on front and back with the face surface with a heat cured copolymer water and vapor retardant coating. For janitor and toilet rooms where tile is the finish material.
- E. Type X Water-Resistant Gypsum Backing Board (fire-resistant): ASTM C630; 1/2 and 5/8 inch thick, 48 inch width, maximum permissible length; ends and edges straight and solid, edges tapered. Board consisting of a noncombustible water-resistant gypsum core, surfaced on face and back with water-

repellent paper bonded to the core. Providing at least 1-hour fire-retardant rating for boards 5/8 inch thick, or 3/4-hour fire-retardant rating for boards 1/2 inch thick, when tested in accordance with ASTM E119.

- F. Type X Water-Resistant Glass Mat Embedded Gypsum Backing Board (fire-resistant): ASTM C1178; 5/8 inch thick, 48 inch width and 8 foot length; ends and edges straight and solid, edges squared. Board consisting of a noncombustible water-resistant gypsum core, embedded on face and back with water resistant fiberglass mat bonded into the core. Providing at least 1-hour fire-retardant rating for boards 5/8 inch thick, or 3/4-hour fire-retardant rating for boards 1/2 inch thick, when tested in accordance with ASTM E119.
- G. Gypsum Sheathing Board: ASTM C79; moisture resistant type; 1/2 inch (13 mm) thick, maximum available size in place; ends square cut, tongue and grooved edges; water repellent paper faces. Exterior wall sheathing where noted.
- H. Gypsum Sheathing Glass Mat Embedded Board: ASTM C1177; moisture resistant type; 1/2 inch (13 mm) and 5/8 inch thick type X, maximum available size in place; ends and edges straight and solid, edges squared. Water resistant glass mat embossed both sides and edges, treated water resistant gypsum core with alkali resistant coating/primer. Flame spread: 0, smoke developed: 0 when tested in accordance with ASTM E84. Exterior wall sheathing where noted.
- I. Cementitious Backing Board: High density, glass fiber reinforced, 1/2 inch (13 mm) thick x 26 inches or 48 inches x length as required; 2 inch (50 mm) wide, coated glass fiber tape for joints and corners; For janitor and toilet rooms where tile is the finish material.
- J. Sound Attenuation Blankets: Semi-rigid, paperless spun mineral fiber blankets or uniform dimension controlled density of 3 lb./cu. ft. Minimum thickness shall be 1-1/2 inch.
- K. Gypsum Board Fasteners:
 - 1. Metal Framing: ASTM C 954 and C 1002, Type S-12 bugle head, corrosion-resistant self-drilling self-tapping steel screws.
 - a. One Layer 1/2 Inch: 1 inch.
 - b. One Layer 5/8 Inch: 1-1/8 inch.
- L. Gypsum Board Accessories:
 - 1. Corner Beads: 1 1/4 inch by 1 1/4 inch galvanized steel corner bead.
 - 2. Edge Trim: Galvanized steel casing.
 - a. L bead for tight abutment at edges.
 - b. J bead at other locations.
 - 3. Control Joint: No. 093 roll-formed zinc.
 - 4. Joint Materials:
 - a. Reinforcing Tape: Sheetrock Joint Tape. Paper; fiberglass joint tape not permitted.
 - b. Joint Compound: Ready-Mixed All-Purpose Joint Compound.
 - c. Adhesive: Commercial Adhesive complying with ASTM C 557.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.

- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.
- E. Design non-axial load-bearing framing to accommodate 1/2 inch (13 mm) vertical deflection.

3.2 INSTALLATION

- A. Install gypsum board in accordance with manufacturer's published instructions, GA-201 and GA-216.
- B. Where applicable, install ceiling panels before the installation of wall panels.
- C. Erect single layer gypsum board in most economical direction, with attachment to firm bearing surfaces over framing members. Do not align panel joints with edges of openings.
- D. Treat cut edges, holes, fastener heads and joints, including those at angle intersections, in water resistant gypsum board and exterior gypsum soffit board with specified joint compound. Treat cut edges, holes, fastener heads and joints in water resistant glass mat embedded backing board with mastic or mortar. Treat prior to tile installation.
- E. Place gypsum panels over supporting framing members with panel ends aligning and parallel with framing members.
- F. Install fasteners from center of field of panel toward ends and edges. Install fasteners 3/8 inch from ends and edges of panels, and as follows:
 - 1. Ceiling: 12 inches on center, perimeter and field.
 - 2. Walls: 16 inches on center, perimeter and field.

3.3 GYPSUM SHEATHING INSTALLATION

- A. Install gypsum board sheathing in accordance with manufacturer's published instructions, GA-216, GA-253 and GA-600, all latest editions.
 - 1. Erect single layer gypsum board horizontally, with edges butted tight, tongue up with attachment to firm bearing. Glass mat embedded board may be installed horizontally or vertically.
- B. Provide construction control joints at maximum 30 feet on center, at inside corners, and at intersections.
 - 1. Locate panel, allowing 1/4 inch space between edge of panel and adjacent walls, beams, columns, and fascia construction.
- C. Place edge trim where gypsum board abuts dissimilar materials. Use longest practical length.
- D. Using screws, secure panels in place at maximum 12 inches on center to supporting substrate.
- E. Protect all exposed gypsum core at perimeter edges, and penetrations by covering core with metal trim.

3.4 JOINT TREATMENT

- A. Reinforce interior and exterior corners at ceiling and wall surfaces. Apply 3 inch wide initial coating of joint compound, pressing tape firmly into joint compound. Wipe off excess joint compound. Apply

second coat of joint compound with tools of sufficient width to extend beyond joint center, approximately 4 inches. Draw joint compound down to a smooth even plane.

- B. After drying or setting, sand or sponge joints, edges, and corners, eliminating high spots and excessive joint compound to produce smooth finish surface. Prepare surfaces to receive subsequent finishes to height of 6 inches above finish ceiling. Feather coats onto adjoining surfaces resulting in maximum camber of 1/32-inch in 12.
- C. Sand after second and third applications of joint compound. Do not to raise nap of paper when sanding.
- D. Install control joints full height of partition, consistent with lines of building spaces, with 1/2 inch between boards. Apply sealant at base of joint and control joint accessory piece at face.
- E. Place corner beads at external corners. Use longest practical length. Place edge trim where gypsum board abuts dissimilar materials.

3.5 FINISH

- A. Apply gypsum board finish in accordance with manufacturer's published instructions and GA-214 Finish Levels.
 - 1. Level 1: All joints and interior angles shall have tape embedded in joint compound. Surface shall be free of excess joint compound. Tool marks and ridges are acceptable.
 - a. Application: In plenum areas above ceilings, in attics, in mechanical rooms, in areas where the assembly is generally concealed, and other areas not normally open to view. Accessories not required, unless shown or required by rating. Where a fire resistance rating is required for the gypsum board assembly, details of construction shall be in accordance with reports of fire tests of assemblies that have met the fire rating requirement.
 - 2. Level 4: All joints and interior angles shall have tape embedded in joint compound and two separate coats of joint compound applied over all flat joints and one separate coat of joint compound applied over interior angles. Fastener heads and accessories shall be covered with three separate coats of joint compound. All joint compound shall be smooth and free of tool marks and ridges. Prepared surface shall be coated with a drywall primer/sealer prior to the application of finish paint. Refer to specification section 099100.
 - a. Application: For use where gloss semi-gloss, enamel, or nontextured flat paints are specified or where severe lighting conditions occur. Generally in all areas except where noted otherwise.

3.6 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Coordinate installation of firestopping Specified in Section 078400 at penetrations through fire-restive rated gypsum board partitions.
 - 2. Coordinate installation of joint sealers specified in Section 079200 at penetrations of non fire-restive rated partitions.

NOTE TO SPECIFIER

"REQUIRED Article (SITE ENVIRONMENTAL PROCEDURES) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

SECTION 09 29 00 00 - MPF GYPSUM BOARD**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. SECTION INCLUDES
 - 1. Interior partitions
 - 2. Security walls and ceilings.
 - 2. Exterior soffits
 - 3. Exterior walls.

1.2 SUBMITTALS

- A. Product Data: Required
 - 1. Technical Sheet: Indicating manufacturer, product composition, V.O.C. content.
 - 2. Schedule of product locations within product.

1.3 QUALITY ASSURANCE

- A. Regulatory Requirements: Applicable code for fire rated assemblies:
 - 1. Partitions: UL Assemblies.
 - 2. Ceiling and soffits: UL Assemblies.
- B. Quality Standards: GA-216 - Recommended Specifications for the Application and Finishing of Gypsum Board.
- C. Performance Requirements- Acoustic Attenuation for Interior Partitions: Meet minimum requirements of USPS Standard Design Criteria.
- D. Security Requirements: USPS Handbook RE-5.

PART 2 – PRODUCTS

2.1 MANUFACTURERS/PRODUCTS

- A. Studs and Tracks: Galvanized sheet steel, 20 gage.
- B. Gypsum Board (Recycled 100% paper backing and 20% core if applicable):
 - 1. Interior partitions: Standard, moisture resistant and fire rated, 5/8 inch thick, with tapered edges.
 - 2. Exterior sheathing: 1/2 inch thick, square edges.
 - 3. Exterior soffit board: 3/4 inch thick, tapered edges.

2.2 ACCESSORIES/MIXES

- A. Acoustical Insulation: Preformed mineral wool, unfaced, 3 ½ or 6 inch thick.
- B. Corner Beads and Edge Trim: GA 201 and GA 216.

- C. Joint Materials: Reinforcing tape and joint compound.
- D. Fasteners: Type S12 screws.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Metal stud spacing: 24 inches o.c.
- B. Metal stud spacing for security walls and ceilings: 8 inches o.c.
- C. Wall furring spacing: 24 inches o.c.
- D. Fasten gypsum board to furring or framing with screws.
- E. Tape, fill, and sand joints. Taping, filling, and sanding is not required at surfaces behind adhesive applied ceramic tile.
- F. Stencil ratings on firewalls above ceiling at maximum of 10'-0" o.c.

3.2 SCHEDULES

- A. Interior Partitions:
 - 1. Metal Studs: Minimum size 3 - 5/8" inch, 20 gage. Design studs based on loading requirements
 - 2. Gypsum Wall Board:
 - a) Moisture resistant at toilet rooms and wet areas.
 - b) Foil faced in rooms with humidity control.
- B. Wall Furring: 7/8 inch deep hat shaped furring channels at 24 inches on center, zee - furring and rigid board insulation where required for thermal resistance ratings.
- C. Exterior Walls: Size of metal studs and spacing are to be designed based on loading requirement.

3.3 FINISH LEVEL SCHEDULE

- A. Level 1: Above finished ceilings concealed from view.
 - 1. Tape in joint compound at joints and interior angles. Tool marks and ridges acceptable.
- B. Level 2: Utility areas and areas behind cabinetry.
 - 1. Level 1, plus separate coat of compound at joints, angles, fasteners, and accessories. Tool marks and ridges acceptable.
- C. Level 4: Walls and ceilings scheduled to receive flat or eggshell paint finish.
 - 1. Level 1, plus three separate coats of compound at joints, angles, fasteners, and accessories. Compound shall be smooth and free of tool marks and ridges.
- D. Level 5: Walls and ceilings scheduled to receive semi-gloss or gloss paint finish.
 - 1. Level 4, plus separate skim coat of compound over entire surface of gypsum board.

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 31 00 00 - CERAMIC TILE**1.1 GENERAL****A. Description Of Work**

1. This specification covers the furnishing and installation of materials for ceramic tile. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Ceramic tile.
 - b. Stone thresholds.
 - c. Waterproof membrane.
 - d. Crack isolation membrane.
 - e. Tile backing panels.
 - f. Metal edge strips.

C. Definitions

1. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.
2. ANSI A108 Series: ANSI A108.01, ANSI A108.02, ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, ANSI A108.4, ANSI A108.5, ANSI A108.6, ANSI A108.8, ANSI A108.9, ANSI A108.10, ANSI A108.11, ANSI A108.12, ANSI A108.13, ANSI A108.14, ANSI A108.15, ANSI A108.16, and ANSI A108.17, which are contained in "American National Standard Specifications for Installation of Ceramic Tile."
3. Module Size: Actual tile size plus joint width indicated.
4. Face Size: Actual tile size, excluding spacer lugs.

D. Performance Requirements

1. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:
 - a. Level Surfaces: Minimum 0.6.
 - b. Step Treads: Minimum 0.6.
 - c. Ramp Surfaces: Minimum 0.8.

E. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittal:
 - a. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
3. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
4. Samples:
 - a. Full-size units of each type and composition of tile and for each color and finish required. For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.

OR

Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 12 inches (300 mm) square, but not fewer than 4 tiles. Use grout of type and in color or colors approved for completed Work.

- b. Full-size units of each type of trim and accessory for each color and finish required.
- c. Stone thresholds in 6-inch (150-mm) lengths.
- d. Metal edge strips in 6-inch (150-mm) lengths.
- 5. Qualification Data: For qualified Installer.
- 6. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.
- 7. Product Certificates: For each type of product, signed by product manufacturer.
- 8. Material Test Reports: For each tile-setting and -grouting product and special purpose tile.

F. Quality Assurance

- 1. Source Limitations for Tile: Obtain tile of each type and color or finish **OR** tile of each type **OR** tile of each color or finish **OR** tile, **as directed**, from one source or producer.
 - a. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.
- 2. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from one manufacturer and each aggregate from one source or producer.
- 3. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer for each product:
 - a. Stone thresholds.
 - b. Waterproof membrane.
 - c. Crack isolation membrane.
 - d. Joint sealants.
 - e. Cementitious backer units.
 - f. Metal edge strips.
- 4. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

- 1. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.
- 2. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.
- 3. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.
- 4. Store liquid materials in unopened containers and protected from freezing.
- 5. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

H. Project Conditions

- 1. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.2 PRODUCTS

A. Products, General

- 1. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.
 - a. Provide tile complying with Standard grade requirements unless otherwise indicated.
- 2. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 1.2 articles, ANSI standards referenced by TCA installation methods specified in tile installation schedules, and other requirements specified.

3. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.
4. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.
 - a. Where tile is indicated for installation in swimming pools, on exteriors or in wet areas, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.
5. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

B. Tile Products

1. Tile Type: Factory-mounted unglazed **OR** glazed, **as directed**, ceramic mosaic tile.
 - a. Composition: Porcelain **OR** Impervious natural clay or porcelain **OR** Vitreous or impervious natural clay or porcelain, **as directed**.
 - b. Module Size: 1 by 1 inch (25.4 by 25.4 mm) **OR** 1 by 2 inches (25.4 by 50.8 mm) **OR** 2 by 2 inches (50.8 by 50.8 mm), **as directed**.
 - c. Thickness: 1/4 inch (6.35 mm).
 - d. Face: Plain **OR** Pattern of design indicated, **as directed**, with cushion edges.
 - e. Surface (for unglazed tile): Smooth, without **OR** Slip-resistant, with, **as directed**, abrasive admixture.
 - f. Finish (for glazed tile): Bright, opaque **OR** Bright, clear **OR** Mat, opaque **OR** Mat, clear **OR** Semimat, opaque **OR** Semimat, clear **OR** Vellum, opaque **OR** Vellum, clear **OR** Crystalline, **as directed**, glaze.
 - g. Tile Color and Pattern: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 - h. Grout Color: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 - i. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile, **as directed**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - 1) Base Cove: Cove, module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm), **as directed**.
 - 2) Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm), **as directed**.
 - 3) Base Cap for Thin-Set Mortar Installations: Surface bullnose, module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm) **OR** 2 by 2 inches (50.8 by 50.8 mm), **as directed**.
 - 4) Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm), **as directed**.
 - 5) Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose, module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm) **OR** 2 by 2 inches (50.8 by 50.8 mm), **as directed**.
 - 6) Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 - 7) External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm), **as directed**.
 - 8) External Corners for Thin-Set Mortar Installations: Surface bullnose, module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm) **OR** 2 by 2 inches (50.8 by 50.8 mm), **as directed**.
 - 9) Internal Corners: Cove, module size 1 by 1 inch (25.4 by 25.4 mm) **OR** 2 by 1 inch (50.8 by 25.4 mm), **as directed**.

OR

- Internal Corners: Field-butt square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.
- 10) Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 1/2 to 1/4 inch (12.7 to 6.35 mm) across nominal 4-inch (100-mm) dimension.
2. Tile Type: Unglazed **OR** Glazed, **as directed**, square-edged quarry tile.
 - a. Face Size: 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm) **OR** 6 by 3 inches (152 by 76 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 8 by 3-7/8 inches (203 by 98 mm) **OR** 8 by 8 inches (203 by 203 mm), **as directed**.
 - b. Thickness: 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm) **OR** 3/4 inch (19 mm), **as directed**.
 - c. Wearing Surface (for unglazed tile): Nonabrasive, smooth **OR** Abrasive aggregate embedded in surface, **as directed**.
 - d. Finish (for glazed tile): Bright, opaque **OR** Bright, clear **OR** Mat, opaque **OR** Mat, clear **OR** Semimat, opaque **OR** Semimat, clear **OR** Vellum, opaque **OR** Vellum, clear **OR** Crystalline, **as directed**, glaze.
 - e. Tile Color and Pattern: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 - f. Grout Color: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 - g. For furan-grouted quarry tile, precoat with temporary protective coating.
 - h. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile, **as directed**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - 1) Base: Coved with surface bullnose top edge, **as directed**, face size 6 by 6 inches (152 by 152 mm) **OR** 8 by 3-7/8 inches (203 by 98 mm), **as directed**.
 - 2) Wainscot Cap: Surface bullnose, face size 6 by 6 inches (152 by 152 mm) **OR** 8 by 3-7/8 inches (203 by 98 mm), **as directed**.
 - 3) Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 3. Tile Type: Unglazed **OR** Glazed, **as directed**, paver tile.
 - a. Composition: Porcelain **OR** Impervious natural clay or porcelain **OR** Vitreous or impervious natural clay or porcelain **OR** Natural clay or porcelain, **as directed**.
 - b. Face Size: 3 by 3 inches (76 by 76 mm) **OR** 4 by 4 inches (102 by 102 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 7-3/4 by 3-7/8 inches (197 by 98 mm) **OR** 7-7/8 by 7-7/8 inches (200 by 200 mm) **OR** 11-13/16 by 11-13/16 inches (300 by 300 mm) **OR** 165 by 333 mm **OR** 200 by 250 mm **OR** 250 by 250 mm **OR** 165 by 333 mm **OR** 333 by 333 mm **OR** 400 by 400 mm, **as directed**.
 - c. Thickness: 1/4 inch (6.35 mm) **OR** 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm), **as directed**.
 - d. Face: Plain with square or cushion edges **OR** Plain with square edges **OR** Plain with cushion edges **OR** Pattern of design indicated, with square or cushion edges **OR** As indicated, **as directed**.
 - e. Finish (for glazed tile): Bright, opaque **OR** Bright, clear **OR** Mat, opaque **OR** Mat, clear **OR** Semimat, opaque **OR** Semimat, clear **OR** Vellum, opaque **OR** Vellum, clear **OR** Crystalline, **as directed**, glaze.
 - f. Tile Color and Pattern: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 - g. Grout Color: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
 4. Tile Type: Glazed wall tile **OR** Decorative thin wall tile, **as directed**.
 - a. Module Size: 4-1/4 by 4-1/4 inches (108 by 108 mm) **OR** 6 by 4-1/4 inches (152 by 108 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 200 by 200 mm **OR** 250 by 250 mm **OR** 200 by 300 mm, **as directed**.
 - b. Thickness: 5/16 inch (8 mm).

- c. Face: Plain with modified square edges or cushion edges **OR** Plain with modified square edges **OR** Plain with cushion edges **OR** Pattern of design indicated, with manufacturer's standard edges, **as directed**.
- d. Finish: Bright, opaque **OR** Bright, clear **OR** Mat, opaque **OR** Mat, clear **OR** Semimat, opaque **OR** Semimat, clear **OR** Vellum, opaque **OR** Vellum, clear **OR** Crystalline, **as directed**, glaze.
- e. Tile Color and Pattern: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
- f. Grout Color: As indicated by manufacturer's designations **OR** As selected from manufacturer's full range, **as directed**.
- g. Mounting: Factory, back mounted.
- h. Mounting: PregROUTED sheets of tiles factory assembled and grouted with manufacturer's standard white silicone rubber.
- i. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable and matching characteristics of adjoining flat tile, **as directed**. Provide shapes as follows, selected from manufacturer's standard shapes:
 - 1) Base for Portland Cement Mortar Installations: Coved, module size 4-1/4 by 4-1/4 inches (108 by 108 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 6 by 3-3/4 inches (152 by 95 mm), **as directed**.
 - 2) Base for Thin-Set Mortar Installations: Straight, module size 4-1/4 by 4-1/4 inches (108 by 108 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 6 by 2 inches (152 by 51 mm), **as directed**.
 - 3) Wainscot Cap for Portland Cement Mortar Installations: Bullnose cap, module size 4-1/4 by 4-1/4 inches (108 by 108 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 6 by 2 inches (152 by 51 mm), **as directed**.
 - 4) Wainscot Cap for Thin-Set Mortar Installations: Surface bullnose, module size 4-1/4 by 4-1/4 inches (108 by 108 mm) **OR** 6 by 6 inches (152 by 152 mm) **OR** 6 by 2 inches (152 by 51 mm), **as directed**.
 - 5) Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
 - 6) External Corners for Portland Cement Mortar Installations: Bullnose shape with radius of at least 3/4 inch (19 mm) unless otherwise indicated.
 - 7) External Corners for Thin-Set Mortar Installations: Surface bullnose, same size as adjoining flat tile.
 - 8) Internal Corners: Field-butt square corners. For coved base and cap use angle pieces designed to fit with stretcher shapes.
- 5. Accessories: Provide vitreous china accessories of type and size indicated, suitable for installing by same method as adjoining wall tile.
 - a. One soap holder with grab handle, **as directed**, for each shower and tub indicated.
 - b. One paper holder at each water closet.
 - c. Color and Finish: Match adjoining glazed wall tile **OR** As indicated by manufacturer's designations **OR** As selected from manufacturer's full range **OR** White, bright glaze, **as directed**.

C. Thresholds

- 1. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.
 - a. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1/16 inch (1.5 mm) above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 1/2 inch (12.7 mm) or less above adjacent floor surface.
- 2. Granite Thresholds: ASTM C 615, with polished **OR** honed, **as directed**, finish.
 - a. Description: Uniform, fine **OR** medium, **as directed**, -grained, white **OR** gray **OR** black, **as directed**, stone without veining.
OR
Description: Match sample.

3. Marble Thresholds: ASTM C 503, with a minimum abrasion resistance of 10 **OR** 12, **as directed**, per ASTM C 1353 or ASTM C 241 and with honed finish.
 - a. Description: Uniform, fine- to medium-grained white stone with gray veining.
OR
Description: Match sample.
 4. Slate Thresholds: ASTM C 629, Classification I Exterior **OR** II Interior, **as directed**, with fine, even grain and honed finish.
 - a. Description: Uniform, black **OR** blue-black **OR** gray **OR** blue-gray **OR** green, **as directed**, stone and unfading.
OR
Description: Match sample.
- D. Tile Backing Panels
1. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325, in maximum lengths available to minimize end-to-end butt joints.
 - a. Thickness: 1/4 inch (6.4 mm) **OR** 1/2 inch (12.7 mm) **OR** 5/8 inch (15.9 mm) **OR** As indicated, **as directed**.
 2. Fiber-Cement Underlayment: ASTM C 1288, in maximum lengths available to minimize end-to-end butt joints.
 - a. Thickness: 1/4 inch (6.4 mm) **OR** 1/2 inch (12.7 mm) **OR** As indicated, **as directed**.
- E. Waterproof Membrane
1. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
 2. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.
 3. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 0.040-inch (1.01-mm) nominal thickness.
 4. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.
 5. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with woven reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.
 6. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.
 7. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
 8. Latex-Portland Cement: Flexible mortar consisting of cement-based mix and latex additive.
 9. Urethane Waterproofing and Tile-Setting Adhesive: One-part, liquid-applied urethane, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), in a consistency suitable for trowel application and intended for use as both waterproofing and tile-setting adhesive in a two-step process.
- F. Crack Isolation Membrane
1. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.12 for standard **OR** high, **as directed**, performance and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.
 2. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.030-inch (0.76-mm) nominal thickness.
 3. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 0.040-inch (1.01-mm) nominal thickness.
 4. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.008-inch (0.203-mm) nominal thickness.
 5. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; 3/16-inch (4-mm) nominal thickness.

6. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; 0.040-inch (1.01-mm) nominal thickness.
7. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.
8. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.
9. Latex-Portland Cement: Flexible mortar consisting of cement-based mix and latex additive.
10. Urethane Crack Isolation Membrane and Tile-Setting Adhesive: One-part, liquid-applied urethane, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), in a consistency suitable for trowel application and intended for use as both waterproofing and tile-setting adhesive in a two-step process.

G. Setting Materials

1. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.
 - a. Cleavage Membrane: Asphalt felt, ASTM D 226, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 4.0 mils (0.1 mm) thick.
 - b. Reinforcing Wire Fabric: Galvanized, welded wire fabric, 2 by 2 inches (50.8 by 50.8 mm) by 0.062-inch (1.57-mm) diameter; comply with ASTM A 185 and ASTM A 82 except for minimum wire size.
 - c. Expanded Metal Lath: Diamond-mesh lath complying with ASTM C 847.
 - 1) Base Metal and Finish for Interior Applications: Uncoated or zinc-coated (galvanized) steel sheet, with uncoated steel sheet painted after fabrication into lath.
 - 2) Base Metal and Finish for Exterior Applications: Zinc-coated (galvanized) steel sheet.
 - 3) Configuration over Studs and Furring: Flat.
 - 4) Configuration over Solid Surfaces: Self furring.
 - 5) Weight: 2.5 lb/sq. yd. (1.4 kg/sq. m) **OR** 3.4 lb/sq. yd. (1.8 kg/sq. m), **as directed**.
 - d. Latex Additive: Manufacturer's standard, acrylic resin or styrene-butadiene-rubber water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.
2. Dry-Set Portland Cement Mortar (Thin Set): ANSI A118.1.
 - a. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.1.
3. Latex-Portland Cement Mortar (Thin Set): ANSI A118.4.
 - a. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
OR
Provide prepackaged, dry-mortar mix combined with acrylic resin or styrene-butadiene-rubber liquid-latex additive at Project site.
 - b. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.
4. Medium-Bed, Latex-Portland Cement Mortar: Comply with requirements in ANSI A118.4. Provide product that is approved by manufacturer for application thickness of 5/8 inch (16 mm).
 - a. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
OR
Provide prepackaged, dry-mortar mix combined with acrylic resin or styrene-butadiene-rubber liquid-latex additive at Project site.
5. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thin Set): ANSI A118.11.
 - a. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
 - b. Provide prepackaged, dry-mortar mix combined with acrylic resin or styrene-butadiene-rubber liquid-latex additive at Project site.
6. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- a. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 deg F (60 deg C) and 212 deg F (100 deg C), respectively, and certified by manufacturer for intended use.
7. Chemical-Resistant Furan Mortar: ANSI A118.5, with carbon filler.
8. Organic Adhesive: ANSI A136.1, Type I, with a VOC content of 65 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

H. Grout Materials

1. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate as required to produce color indicated.
2. Standard Cement Grout: ANSI A118.6.
3. Polymer-Modified Tile Grout: ANSI A118.7.
 - a. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.

OR

Polymer Type: Acrylic resin or styrene-butadiene rubber in liquid-latex form for addition to prepackaged dry-grout mix.
4. Water-Cleanable Epoxy Grout: ANSI A118.3.
 - a. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 140 deg F (60 deg C) and 212 deg F (100 deg C), respectively, and certified by manufacturer for intended use.
5. Chemical-Resistant Furan Grout: ANSI A118.5, with carbon filler.
6. Grout for Pregrouted Tile Sheets: Same product used in factory to pregrout tile sheets.

I. Elastomeric Sealants

1. General: Provide sealants, primers, backer rods, and other sealant accessories that comply with the following requirements and with the applicable requirements in Division 7 Section "Joint Sealants."
 - a. Use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 - b. Use primers, backer rods, and sealant accessories recommended by sealant manufacturer.
2. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints unless otherwise indicated.
3. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.
4. Multipart, Pourable Urethane Sealant for Use T: ASTM C 920; Type M; Grade P; Class 25; Uses T, M, A, and, as applicable to joint substrates indicated, O.
5. Chemical-Resistant Sealants: For chemical-resistant floors, provide chemical-resistant elastomeric sealant of type recommended and produced by chemical-resistant mortar and grout manufacturer for type of application indicated, with proven service record and compatibility with tile and other setting materials, and with chemical resistance equivalent to mortar/grout.

J. Miscellaneous Materials

1. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.
2. Metal Edge Strips: Angle or L-shape, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; half-hard brass **OR** white zinc alloy **OR** nickel silver **OR** stainless-steel, ASTM A 666, 300 Series, **as directed**, exposed-edge material.

3. Temporary Protective Coating: Either product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.
 - a. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg F (49 to 60 deg C) per ASTM D 87.
 - b. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.
4. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.
5. Grout Sealer: Manufacturer's standard silicone product for sealing grout joints and that does not change color or appearance of grout.

K. Mixing Mortars And Grout

1. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.
2. Add materials, water, and additives in accurate proportions.
3. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

1.3 EXECUTION

A. Examination

1. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.
 - a. Verify that substrates for setting tile are firm, dry, clean, free of coatings that are incompatible with tile-setting materials including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
 - b. Verify that concrete substrates for tile floors installed with adhesives, bonded mortar bed or thin-set mortar comply with surface finish requirements in ANSI A108.01 for installations indicated.
 - 1) Verify that surfaces that received a steel trowel finish have been mechanically scarified.
 - 2) Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.
 - c. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.
 - d. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.
2. Proceed with installation only after unsatisfactory conditions have been corrected.

B. Preparation

1. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with adhesives or thin-set mortar with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.
2. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1/4 inch per foot (1:50) toward drains.
3. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

4. Field-Applied Temporary Protective Coating: If indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

C. Tile Installation

1. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
 - a. For the following installations, follow procedures in the ANSI A108 Series of tile installation standards for providing 95 percent mortar coverage:
 - 1) Exterior tile floors.
 - 2) Tile floors in wet areas.
 - 3) Tile swimming pool decks.
 - 4) Tile floors in laundries.
 - 5) Tile floors composed of tiles 8 by 8 inches (200 by 200 mm) or larger.
 - 6) Tile floors composed of rib-backed tiles.
2. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.
3. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.
4. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.
 - a. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
 - b. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
 - c. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.
5. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:
 - a. Ceramic Mosaic Tile: 1/16 inch (1.6 mm).
 - b. Quarry Tile: 1/4 inch (6.35 mm) **OR** 3/8 inch (9.5 mm), **as directed**.
 - c. Paver Tile: 1/4 inch (6.35 mm) **OR** 3/8 inch (9.5 mm), **as directed**.
 - d. Glazed Wall Tile: 1/16 inch (1.6 mm).
 - e. Decorative Thin Wall Tile: 1/16 inch (1.6 mm).
6. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.
7. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.
 - a. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.
 - b. Prepare joints and apply sealants to comply with requirements in Division 07 Section "Joint Sealants".
8. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.
 - a. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-portland cement mortar (thin set).
 - b. Do not extend cleavage membrane, waterproofing or crack isolation membrane under thresholds set in dry-set portland cement or latex-portland cement mortar. Fill joints between such thresholds and adjoining tile set on cleavage membrane, waterproofing or crack isolation membrane with elastomeric sealant.

9. Metal Edge Strips: Install at locations indicated **OR** where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile **OR** where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated, **as directed**.
 10. Grout Sealer: Apply grout sealer to cementitious grout joints in tile floors according to grout-sealer manufacturer's written instructions. As soon as grout sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.
- D. Tile Backing Panel Installation
1. Install cementitious backer units and fiber-cement underlayment and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. Use latex-portland cement mortar for bonding material unless otherwise directed in manufacturer's written instructions.
- E. Waterproofing Installation
1. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.
 2. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.
- F. Crack Isolation Membrane Installation
1. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.
 2. Do not install tile or setting materials over crack isolation membrane until membrane has cured.
- G. Cleaning And Protecting
1. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 - a. Remove epoxy and latex-portland cement grout residue from tile as soon as possible.
 - b. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
 - c. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.
 2. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.
 3. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.
 4. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.
- H. Exterior Tile Installation Schedule
1. Exterior Floor Installations:
 - a. Tile Installation F101: Cement mortar bed (thickset) bonded to concrete **OR** over waterproof membrane on concrete **OR** over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated, **as directed**; TCA F101 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.

- 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- b. Tile Installation F102: Thin-set mortar on concrete **OR** over waterproof membrane on concrete **OR** over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated, **as directed**; TCA F102.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
2. Exterior Wall Installations, Masonry or Concrete:
 - a. Tile Installation W201: Cement mortar bed (thickset) on metal lath over waterproof membrane; TCA W201 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - b. Tile Installation W202: Thin-set mortar; TCA W202.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- I. Interior Tile Installation Schedule
 1. Interior Floor Installations, Concrete Subfloor:
 - a. Tile Installation F111: Cement mortar bed (thickset) with cleavage membrane; TCA F111 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - b. Tile Installation F112: Cement mortar bed (thickset) bonded to concrete; TCA F112 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - c. Tile Installation F113: Thin-set mortar; TCA F113.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.

- 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- d. Tile Installation F114: Cement mortar bed (thickset) with cleavage membrane; epoxy **OR** furan, **as directed**, grout; TCA F114 and ANSI A108.1B.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Water-cleanable epoxy **OR** Chemical-resistant furan, **as directed**, grout.
- e. Tile Installation F115: Thin-set mortar; epoxy **OR** furan, **as directed**, grout; TCA F115.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Water-cleanable epoxy **OR** Chemical-resistant furan, **as directed**, grout.
- f. Tile Installation F116: Organic adhesive **OR** Water-cleanable, tile-setting epoxy, **as directed**; TCA F116.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- g. Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- h. Tile Installation F122: Thin-set mortar on waterproof membrane; TCA F122.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Polymer-modified sanded **OR** unsanded, **as directed**, grout.
- i. Tile Installation F125A: Thin-set mortar on crack isolation membrane; TCA F125A.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- j. Tile Installation F131: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F131.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Water-cleanable epoxy grout.
- k. Tile Installation F132: Water-cleanable, tile-setting epoxy on cured cement mortar bed bonded to concrete subfloor **OR** installed over cleavage membrane, **as directed**; epoxy grout; TCA F132.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Water-cleanable epoxy grout.
- l. Tile Installation F133: Chemical-resistant furan mortar **OR** Water-cleanable, tile-setting epoxy, **as directed**; furan grout. TCA F133 except use water-cleanable, tile-setting epoxy instead of chemical-resistant furan mortar for setting tile.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Chemical-resistant furan grout.
2. Interior Floor Installations, Wood Subfloor:
 - a. Tile Installation F121: Cement mortar bed (thickset) on waterproof membrane; TCA F121 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.

- 1) Tile Type: as directed by the Owner.
- 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
- 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- b. Tile Installation F141: Cement mortar bed (thickset) with cleavage membrane; TCA F141 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- c. Tile Installation F142: Organic adhesive; TCA F142.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- d. Tile Installation F143: Water-cleanable, tile-setting epoxy; epoxy grout; TCA F143.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Water-cleanable epoxy grout.
- e. Tile Installation F144: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA F144.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- f. Tile Installation F150/160: Thin-set mortar on exterior-glue plywood; TCA F150 or TCA F160.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: EGP latex-portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
3. Interior Radiant Heat Floor Installations, Concrete Subfloor:
 - a. Tile Installation RH110: Thin-set mortar on crack isolation membrane; hydronic piping installed in concrete; TCA RH110.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - b. Tile Installation RH115: Thin-set mortar; electric radiant system encapsulated in thin-set mortar; TCA RH115.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.

- c. Tile Installation RH116: Thin-set mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment; TCA RH116.
 - 1) Tile Type: as directed by the Owner.
 - 2) Cementitious Self-Leveling Underlayment: Specified in Division 03 Section "Hydraulic Cement Underlayment".
 - 3) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - 4. Interior Radiant Heat Floor Installations, Wood Subfloor:
 - a. Tile Installation RH130: Thin-set mortar on exterior-glue plywood; electric radiant system encapsulated in thin-set mortar; TCA RH130.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: EGP latex-portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - b. Tile Installation RH135: Thin-set mortar on cementitious backer units or fiber cement underlayment; electric radiant system encapsulated in thin-set mortar; TCA RH135.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - c. Tile Installation RH140: Thin-set mortar on crack isolation membrane; electric radiant system encapsulated in cementitious self-leveling underlayment; TCA RH140.
 - 1) Tile Type: as directed by the Owner.
 - 2) Cementitious Self-Leveling Underlayment: Specified in Division 03 Section "Hydraulic Cement Underlayment".
 - 3) Thin-Set Mortar: Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - 5. Interior Wall Installations, Masonry or Concrete:
 - a. Tile Installation W202: Thin-set mortar; TCA W202.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex- **OR** Medium-bed, latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - b. Tile Installation W211: Cement mortar bed (thickset) bonded to substrate; TCA W211 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.

- c. Tile Installation W221: Cement mortar bed (thickset) on metal lath over waterproof membrane, **as directed**; TCA W221 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- d. Tile Installation W222: One-coat cement mortar bed (thickset) on metal lath over waterproof membrane, **as directed**; TCA W222 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- e. Tile Installation W223: Organic adhesive; TCA W223.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- 6. Interior Wall Installations, Wood Studs or Furring:
 - a. Tile Installation W221: Cement mortar bed (thickset) over waterproof membrane, **as directed**, on solid backing; TCA W221 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - b. Tile Installation W222: One-coat cement mortar bed (thickset) over waterproof membrane, **as directed**, on solid backing; TCA W222 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - c. Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.

- d. Tile Installation W231: Cement mortar bed (thickset); TCA W231 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- e. Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- f. Tile Installation W244: Thin-set mortar on cementitious backer units or fiber cement underlayment over cleavage membrane, **as directed**; TCA W244.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- g. Tile Installation W245: Thin-set mortar **OR** Organic adhesive, **as directed**, on coated glass-mat, water-resistant gypsum backer board; TCA W245.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- 7. Interior Wall Installations, Metal Studs or Furring:
 - a. Tile Installation W221: Cement mortar bed (thickset) over waterproof membrane, **as directed**, on solid backing; TCA W221 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - b. Tile Installation W222: One-coat cement mortar bed (thickset) over waterproof membrane, **as directed**, on solid backing; TCA W222 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
 - c. Tile Installation W223: Organic adhesive on solid backing; TCA W223.
 - 1) Tile Type: as directed by the Owner.

- 2) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- d. Tile Installation W241: Cement mortar bed (thickset); TCA W241 and ANSI A108.1B.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- e. Tile Installation W242: Organic adhesive on gypsum board; TCA W242.
 - 1) Tile Type: as directed by the Owner.
 - 2) Grout: Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- f. Tile Installation W243: Thin-set mortar on gypsum board; TCA W243.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- g. Tile Installation W244: Thin-set mortar on cementitious backer units or fiber cement underlayment over cleavage membrane, **as directed**; TCA W244.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- h. Tile Installation W245: Thin-set mortar **OR** Organic adhesive, **as directed**, on coated glass-mat, water-resistant gypsum backer board; TCA W245.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
8. Bathtub Wall Installations, Wood **OR** Metal, **as directed**, Studs or Furring:
 - a. Tile Installation B413: Thin-set mortar **OR** Organic adhesive, **as directed**, on water-resistant gypsum board; TCA B413.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
9. Bathtub/Shower Wall Installations, Wood **OR** Metal, **as directed**, Studs or Furring:
 - a. Tile Installation B411: Cement mortar bed (thickset); TCA B411 and ANSI A108.1A.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - b. Tile Installation B412: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA B412.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.

- 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
- c. Tile Installation B419: Thin-set mortar **OR** Organic adhesive, **as directed**, on coated glass-mat, water-resistant backer board; TCA B419.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded **OR** Water-cleanable epoxy, **as directed**, grout.
10. Shower Receptor and Wall Installations, Concrete or Masonry:
 - a. Tile Installation B414: Cement mortar bed (thickset); TCA B414 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - b. Tile Installation B421: Thin-set mortar on waterproof membrane; TCA B421.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex-portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - c. Tile Installation B422: Thin-set mortar on waterproof membrane with integrated bonding flange for bonded membranes; TCA B422.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
11. Shower Receptor and Wall Installations, Wood **OR** Metal, **as directed**, Studs or Furring:
 - a. Tile Installation B414: Cement mortar bed (thickset); TCA B414 and ANSI A108.1A **OR** ANSI A108.1B **OR** ANSI A108.1C, **as directed**.
 - 1) Tile Type: as directed by the Owner.
 - 2) Bond Coat Mortar for Wet-Set Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Thin-Set Mortar for Cured-Bed Method: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 4) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - b. Tile Installation B415: Thin-set mortar on cementitious backer units or fiber cement underlayment; TCA B415.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
 - c. Tile Installation B420: Thin-set mortar on coated glass-mat, water-resistant backer board; TCA B420.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Dry-set **OR** Latex-, **as directed**, portland cement mortar.

- 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- d. Tile Installation B421: Thin-set mortar on waterproof membrane over cementitious backer units or fiber cement underlayment; TCA B421.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex-portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.
- e. Tile Installation B422: Thin-set mortar on waterproof membrane over cementitious backer units or fiber cement underlayment with integrated bonding flange for bonded membranes; TCA B422.
 - 1) Tile Type: as directed by the Owner.
 - 2) Thin-Set Mortar: Latex-portland cement mortar.
 - 3) Grout: Sand-portland cement **OR** Standard sanded cement **OR** Standard unsanded cement **OR** Polymer-modified sanded **OR** Polymer-modified unsanded, **as directed**, grout.

SECTION 09 51 13 00 - CSF ACOUSTICAL PANEL CEILINGS**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 51 13 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Suspended metal grid ceiling system.
 - 2. Acoustical panels.
 - 3. Perimeter trim.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections:
 - 1. Section 210000 - Fire Suppression: Sprinkler heads in ceiling system.
 - 2. Section 233713 - Diffusers Registers and Grilles: Air diffusion devices in ceiling system.
 - 3. Section 265100 - Interior Lighting: Light fixtures attached to ceiling system.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM C 635 - Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.
 - 2. ASTM C 636 - Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels.
 - 3. ASTM E 84 Test Method for Surface Burning Characteristics of Building Materials.

NOTE TO SPECIFIER

Use ASTM E 580 in Seismic Zones where seismic restraint design of ceiling suspension system is a part of the Work. Delete for other zones.

- 4. ASTM E 580 - Specification for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels in Areas Requiring Seismic Restraint.

1.3 SYSTEM DESCRIPTION

- A. Design Requirements: Rigidly secure acoustical ceiling system including integral mechanical and electrical components with maximum deflection of 1/360.

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for Submittals.
1. Product Data: Metal grid suspension system components and acoustical panel units.
 2. Shop Drawings: Indicate grid layout and related dimensioning, junctions with other work or ceiling finishes, interrelation of mechanical and electrical items related to system.

1.5 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum 5 years documented experience.
- B. Regulatory Requirements: Surface Burning Characteristics in Accordance with ASTM E 84 for Class III or C finish:
1. Flame Spread: Less than 200.
 2. Smoke Density: Less than 450.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements Transport, handle, store, and protect products.
- B. Deliver acoustical units in manufacturer's original unopened containers with brand name and type clearly marked.
- C. Store under cover in dry, watertight conditions.
- D. Prior to installation, store acoustical units for 24 hours minimum at same temperature and relative humidity as space where Work will be installed.

1.7 PROJECT CONDITIONS

- A. Jobsite Requirements: Maintain uniform temperature range of 60-85 degrees F, and humidity of no more than 70 percent relative humidity prior to, during, and after installation.

NOTE TO SPECIFIER

REQUIRED ARTICLE (Environmental Requirements) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.

1.8 ENVIRONMENTAL REQUIREMENTS

- A. Resource Management:
1. Recycled Content:

- a. Acoustical panels type ACT-1: Manufactured from minimum 20 percent recycled newsprint.
- b. Acoustical panels type ACT-2: Manufactured from minimum 65 percent recovered slag.
- c. Suspension system: Manufactured from minimum 20 percent recycled steel.

1.9 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials: Provide 1 box of extra acoustical panels for each panel type, pattern, and color to Contracting Officer.

NOTE TO SPECIFIER

“REQUIRED Part (Products) follows. Do not revise this Part, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.”

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Suspension System: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 - 1. Armstrong World Industries, Incorporated, Lancaster, PA (800) 448-1405.
 - 2. Chicago Metallic Corporation, Chicago, IL (800) 323-7164.
 - 3. USG Interiors, Chicago, IL (800) 950-3839.
 - 4. Certainteed Ceilings (800) 346-7978
- B. Acoustical Panels: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 - 1. Armstrong World Industries Incorporated, Lancaster, PA (800) 448-1405.
 - 2. USG Interiors, Chicago, IL (800) 950-3839.
 - 3. Certainteed Ceilings (800) 346-7978
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 SUSPENSION SYSTEM

- A. Model:
 - 1. Armstrong: Prelude 15/16 inch Exposed Tee System.
 - 2. Chicago Metallic: 1200 System.
 - 3. USG: Donn DX System.
 - 4. Certainteed: Classic Stab CS12-12-15
- B. Description:
 - 1. Grid: ASTM C 635, intermediate duty, steel exposed T; nominal 1 inch width; stab-in connections.
 - 2. Accessories: Stabilizer bars, clips, and splices.
 - 3. Grid Finish: White.
 - 4. Support System: Hot or cold rolled steel channels; galvanized hanger wire, minimum 12 gage.
 - 5. Edge Moldings: Metal channel with exposed flange to match suspension system.

**NOTE TO SPECIFIER**

Use **COMPRESSION STRUTS** in Seismic Zones where seismic restraint design of ceiling suspension system is a part of the Work. Delete for other zones.

6. Compression Struts: Indicated on Drawings.

NOTE TO SPECIFIER

Coordinate the Acoustical Ceiling Tile Identification Numbers (ACT-1, ACT-2, etc.) used herein with Numbers used to identify each tile type on the Drawings.

2.3 ACOUSTICAL PANELS

A. Type ACT-1:

1. Model:

- a. Armstrong: Fine Fissured #1729.
- b. Certaineed : HHF – 157
- c. USG: Auratone, Radar #2310.

2. Description:

- a. Size: 24 x 48 x 5/8 inches.
- b. Edge: Square lay-in.
- c. Weight: minimum 0.60 pounds per square foot.
- d. Surface Finish: Factory-applied vinyl latex paint, perforated, and scored.
- e. Color: White.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that layout of hangers will not interfere with other Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION - SUSPENSION SYSTEM

NOTE TO SPECIFIER

Use **ASTM E 580** in Seismic Zones where seismic restraint design of ceiling suspension system is a part of the Work. Delete for other zones.

- A. Install system in accordance with ASTM C 636 [ASTM E 580] and manufacturer's published instructions.

- B. Provide metal hanger tabs and clips attached to metal deck where required for attachment of suspension wires.
- C. Hang system independent of walls, columns, ducts, pipes and conduit. Where carrying members are spliced, avoid visible displacement of face plane of adjacent members. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest affected hangers and related carrying channels to span extra distance.
- D. Locate system on room axis according to Reflected Ceiling Plan, where indicated on Drawings, or locate system to a balanced grid design with edge units no less than 50 percent of acoustical panel size where Reflected Ceiling Plan not shown on Drawings
- E. Do not support components on main runners or cross runners if weight causes total dead load to exceed deflection capability. Do not eccentrically load system, or produce rotation of runners.
- F. Install edge molding at intersection of ceiling and vertical surfaces using longest practical lengths. Miter corners. Provide edge moldings at junctions with other interruptions. Secure at 16 inches (41 cm) on center.
- G. Install hold-down clips within five feet of doors.

NOTE TO SPECIFIER

Use CROSS TEE RIVETS in Seismic Zones where seismic restraint design of ceiling suspension system is a part of the Work. Delete for other zones.

- H. Rivet cross tee's at 4 feet on center to edge mould.

NOTE TO SPECIFIER

Use COMPRESSION STRUTS in Seismic Zones where seismic restraint design of ceiling suspension system is a part of the Work. Delete for other zones.

- I. Install compression struts and secure system with tie wires as indicated on Drawings.
 - 1. Provide hanger wires, splayed 45 degrees, within 3 inches of intersection between main runner and cross runner.
 - 2. Provide compression strut and splayed hanger wires as follows:
 - a. One assembly for each light fixture.
 - b. Located within 6 feet of wall.
 - c. Located at maximum 12 feet on center or as indicated on Drawings.

3.3 INSTALLATION - ACOUSTICAL PANELS

- A. Fit acoustic units in place free from damaged edges or other defects. Install acoustic units level, in uniform plane, and free from twist, warp, and dents.

3.4 CONSTRUCTION

- A. Interface with Other Work:
 - 1. Do not install acoustical ceilings until building is enclosed, heating is provided, dust generating activities have terminated, and overhead work is completed, tested, and approved.
 - 2. Schedule installation of acoustic units after interior wet work is completed.
 - 3. Install after major above ceiling work is complete.

4. Coordinate location of hangers with other Work.

B. Site Tolerances:

1. Variation from Flat and Level Surface: 1/8 inch in 12 feet.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.

- B. Inspect acoustical panel placement, ceiling grid suspension system installation and connection to structure.

NOTE TO SPECIFIER

"REQUIRED Article (SITE ENVIRONMENTAL PROCEDURES) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

3.6 SITE ENVIRONMENTAL PROCEDURES

- A. Indoor Air Quality:

1. Temporary ventilation: As specified in Section 013543 - Environmental Procedures.
 - a. Ventilate products prior to installation. Remove from packaging and ventilate in a secure, dry, well-ventilated space free from strong contaminant sources and residues. Provide a temperature range of 60 degrees F minimum to 90 degree F maximum continuously for minimum 72 hours. Do not ventilate within limits of Work unless otherwise approved by USPS Contracting Officer.

3.7 CLEANING

- A. Section 017300 - Execution: Cleaning installed Work.

- B. Clean exposed surfaces of acoustical ceilings including trim, edge mouldings, and suspension system members.

USPS CSF Specifications issued: 10/1/2013

Last revised: 4/12/2011

END OF SECTION

SECTION 09 51 13 00 - MPF ACOUSTICAL PANEL CEILINGS**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Acoustical tile and suspension system.

1.2 SUBMITTALS

- A. Product Data: Required.
- B. Shop Drawings: Required.
- C. Samples: Required.

1.3 QUALITY ASSURANCE

- A. Quality Standards:
 - 1. Acoustical Panels, ASTM E, 1264 Class A.
 - 2. Suspension System ASTM C 635, for seismic requirements ASTM E 580.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Suspension System (Fabricate with 20% recycled steel):
 - 1. Heavy duty exposed T with 15/16 inch wide face, cold rolled galvanized steel, white color.
 - 2. Source: Armstrong, USG, Chicago Metallic.
- B. Acoustical Panels (Fabricate with 65% recycled slag):
 - 1. Size: 24 x 48 inches.
 - 2. Thickness: ¾ inches.
 - 3. Edge: Tegular.
 - 4. Surface finish: Non-directional fissured (vinyl faced panels where required).
 - 5. Source: Armstrong, USG, Celotex.
- C. Acoustical Insulation:
 - 1. Fiberglass blanket type (25% recycled glass).
 - 2. Install fiberglass blanket insulation on top of acoustical ceiling panels where required to achieve acoustical control requirements.

PART 3 – EXECUTION

- 3.1 Install all products in accordance with manufacturer's guidelines and printed instructions.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 09 51 13 00

SECTION 09 51 23 00 - ACOUSTICAL TILE CEILINGS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for acoustical tile ceilings. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. This Section includes acoustical tiles for ceilings and the following:
 - a. Concealed suspension systems.
 - b. Direct attachment of tiles to substrates with adhesive.
 - c. Direct attachment of tiles to substrates with staples.
2. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.

C. Definitions

1. AC: Articulation Class.
2. CAC: Ceiling Attenuation Class.
3. LR: Light-Reflectance coefficient.
4. NRC: Noise Reduction Coefficient.

D. Submittals

1. Product Data: For each type of product indicated.
2. Coordination Drawings: Drawn to scale and coordinating acoustical tile ceiling installation with hanger attachment to building structure and ceiling mounted items. Show size and location of initial access modules.
3. Samples: For each exposed finish.
4. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For adhesives and sealants, including printed statement of VOC content.
5. Field quality-control test reports.
6. Product test reports.
7. Research/evaluation reports.
8. Maintenance data.

E. Quality Assurance

1. Acoustical Testing Agency Qualifications: An independent testing laboratory, or an NVLAP-accredited laboratory, with the experience and capability to conduct the testing indicated. NVLAP-accredited laboratories must document accreditation, based on a "Certificate of Accreditation" and a "Scope of Accreditation" listing the test methods specified.
2. Fire-Test-Response Characteristics: Provide acoustical tile ceilings that comply with the following requirements:
 - a. Fire-Resistance Characteristics: Where indicated, provide acoustical tile ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
 - 1) Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.

- 2) Identify materials with appropriate markings of applicable testing and inspecting agency.
 - b. Surface-Burning Characteristics: Provide acoustical tiles with the following surface-burning characteristics complying with ASTM E 1264 for Class A **OR B OR C**, **as directed**, materials as determined by testing identical products per ASTM E 84:
 - 1) Smoke-Developed Index: 450 or less.
 3. Seismic Standard: Provide acoustical tile ceilings designed and installed to withstand the effects of earthquake motions according to the following:
 - a. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580.
 - b. CISCA's Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings--Seismic Zones 0-2."
 - c. CISCA's Guidelines for Systems Requiring Seismic Restraint: Comply with CISCA's "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies--Seismic Zones 3 & 4."
 - d. UBC Standard 25-2, "Metal Suspension Systems for Acoustical Tile and for Lay-in Panel Ceilings."
 - e. ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."
 4. Preinstallation Conference: Conduct conference at Project site.
- F. Delivery, Storage, And Handling
1. Deliver acoustical tiles, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
 2. Before installing acoustical tiles, permit them to reach room temperature and a stabilized moisture content.
 3. Handle acoustical tiles carefully to avoid chipping edges or damaging units in any way.

1.2 PRODUCTS

A. Acoustical Tiles, General

1. Acoustical Tile Standard: Provide manufacturer's standard tiles of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.
 - a. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E 795.
2. Acoustical Tile Colors and Patterns: Match appearance characteristics indicated for each product type.
 - a. Where appearance characteristics of acoustical tiles are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by the Owner from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.
3. Broad Spectrum Antimicrobial Fungicide and Bactericide Treatment: Provide acoustical tiles treated with manufacturer's standard antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.
4. Antimicrobial Fungicide Treatment: Provide acoustical tiles with face and back surfaces coated with antimicrobial treatment consisting of manufacturer's standard formulation with fungicide

added to inhibit growth of mold and mildew and showing no mold or mildew growth when tested according to ASTM D 3273 and evaluated according to ASTM D 3274 or ASTM G 21.

B. Acoustical Tiles For Acoustical Tile Ceiling

1. Classification: Provide fire-resistance-rated, **as directed**, tiles complying with ASTM E 1264 for type, form, and pattern as follows:
 - a. Type III, mineral base with painted finish; Form 1, nodular **OR** 2, water felted **OR** 4, cast or molded, **as directed**.
 - b. Pattern: C (perforated, small holes) **OR** CD (perforated, small holes and fissured) **OR** CE (perforated, small holes and lightly textured) **OR** D (fissured) **OR** E (lightly textured) **OR** F (heavily textured) **OR** G (smooth) **OR** I (embossed) **OR** J (embossed-in-register) **OR** As indicated by manufacturer's designation, **as directed**.
2. Color: White **OR** As selected from manufacturer's full range **OR** Match sample **OR** As indicated by manufacturer's designation **OR** As indicated on Drawings **OR** As indicated in a schedule, **as directed**.
3. LR: Not less than 0.65 **OR** 0.70 **OR** 0.75 **OR** 0.80, **as directed**.
4. NRC: Not less than 0.50 **OR** 0.55 **OR** 0.60 **OR** 0.65 **OR** 0.70, **as directed**.
5. CAC: Not less than 20 **OR** 25 **OR** 30 **OR** 35 **OR** 40, **as directed**.
6. AC: Not less than 170 **OR** 180 **OR** 190 **OR** 200 **OR** 210, **as directed**.
7. Edge/Joint Detail: Square, kerfed and rabbeted, or tongue and grooved, or butt **OR** Beveled, kerfed and rabbeted, or tongue and grooved, or butt **OR** Beveled, kerfed and rabbeted long edges and square, butt on short edges, **as directed**.
8. Thickness: 5/8 inch (15 mm) **OR** 3/4 inch (19 mm) **OR** As indicated on Drawings **OR** As indicated in a schedule, **as directed**.
9. Modular Size: 12 by 12 inches (305 by 305 mm) **OR** 300 by 300 mm **OR** As indicated on Drawings **OR** As indicated in a schedule, **as directed**.
10. Antimicrobial Treatment: Broad spectrum fungicide and bactericide **OR** Fungicide, **as directed**, based.

C. Metal Suspension Systems, General

1. Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
2. Metal Suspension System Standard: Provide manufacturer's standard metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.
3. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.
4. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - a. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - 1) Type: Cast-in-place **OR** Postinstalled expansion **OR** Postinstalled bonded, **as directed**, anchors.
 - 2) Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
 - 3) Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.
 - b. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without

failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.

5. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
 - a. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 - b. Size: Select wire diameter so its stress at 3 times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) **OR** 0.135-inch- (3.5-mm-), **as directed**, diameter wire.
6. Hanger Rods **OR** Flat Hangers, **as directed**: Mild steel, zinc coated or protected with rust-inhibitive paint.
7. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1-mm-) thick, galvanized steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
8. Seismic Struts: Manufacturer's standard compression struts designed to accommodate lateral forces.
9. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical tiles in-place.

D. Metal Suspension System For Acoustical Tile Ceiling

1. Direct-Hung, Double-Web, Fire-Rated, **as directed**, Suspension System: Main and cross runners roll formed from and capped with cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, G30 (Z90) coating designation.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. Access: Upward **OR** Downward, **as directed**, and end pivoted, **OR** side pivoted, **as directed**, with initial access openings of size indicated below and located throughout ceiling within each module formed by main and cross runners, with additional access available by progressively removing remaining acoustical tiles.
2. Indirect-Hung, Fire-Rated, **as directed**, Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, G30 (Z90) coating designation.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. Carrying Channels: Cold-rolled steel, 0.059850-inch- (1.52-mm-) minimum base (uncoated) metal thickness, not less than 3/16-inch- (4.7-mm-) wide flanges by 1-1/2-inch- (38-mm-) deep steel channels, 475 lb/1000 feet (0.707 kg/m), with rust-inhibitive paint finish **OR** hot-dip galvanized according to ASTM A 653/A 653M, G60 (Z180) coating designation, **as directed**.
 - c. Access: Where access is indicated, provide special cross runners or split splines to allow for removal of acoustical units in indicated access areas. Identify access tile with manufacturer's standard unobtrusive markers for each access unit.

E. Metal Edge Moldings And Trim

1. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension system runners.
 - a. Provide manufacturer's standard edge moldings that fit acoustical tile edge details and suspension systems indicated and that match width and configuration of exposed runners, unless otherwise indicated.
 - b. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.
2. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements and the following:
 - a. Aluminum Alloy: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with not less than the strength and durability

properties of aluminum extrusions complying with ASTM B 221 (ASTM B 221M) for Alloy and Temper 6063-T5.

- b. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.
- c. Conversion-Coated Finish: AA-M12C42 (Chemical Finish: cleaned with inhibited chemicals; acid-chromate-fluoride-phosphate conversion coating).
- d. Conversion-Coated and Factory-Primed Finish: AA-M12C42R1x (Chemical Finish: cleaned with inhibited chemicals; acid-chromate-fluoride-phosphate conversion coating; organic coating as follows):
 - 1) Manufacturer's standard factory-applied prime-coat finish ready for field painting.
- e. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 611.
- f. Baked-Enamel Finish: AA-C12C42R1x (Chemical Finish: cleaned with inhibited chemicals; Chemical Finish: acid-chromate-fluoride-phosphate conversion coating; organic coating: as specified below). Apply baked enamel complying with paint manufacturer's written instructions for cleaning, conversion coating, and painting.
 - 1) Organic Coating: Thermosetting, enamel primer/topcoat system with a minimum dry film thickness of 0.8 to 1.2 mils (0.02 to 0.03 mm).

F. Acoustical Sealant

1. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex sealant, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
2. Acoustical Sealant for Concealed Joints: Manufacturer's standard nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), recommended for sealing interior concealed joints to reduce airborne sound transmission.

G. Miscellaneous Materials

1. Tile Adhesive: Type recommended by tile manufacturer, bearing UL label for Class 0-25 flame spread.
 - a. Use adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
2. Staples: 5/16-inch- (8-mm-) long, divergent-point staples.

1.3 EXECUTION

A. Preparation

1. Testing Substrates: Before installing adhesively applied tiles on wet-placed substrates such as cast-in-place concrete or plaster, test and verify that moisture level is below tile manufacturer's recommended limits.
2. Measure each ceiling area and establish layout of acoustical tiles to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width tiles at borders, and comply with layout shown on reflected ceiling plans.

B. Installation, Suspended Acoustical Tile Ceilings

1. General: Install acoustical tile ceilings to comply with ASTM C 636 **OR** UBC Standard 25-2, **as directed**, and seismic design requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
 - a. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.
2. Suspend ceiling hangers from building's structural members and as follows:

- a. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
- b. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
OR
Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
- c. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
- d. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
OR
Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
- e. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
- f. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
- g. Do not attach hangers to steel deck tabs.
- h. Do not attach hangers to steel roof deck. Attach hangers to structural members.
- i. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
- j. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
3. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
4. Install edge moldings and trim of type indicated at perimeter of acoustical tile ceiling area and where necessary to conceal edges of acoustical tiles.
 - a. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 - b. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
 - c. Do not use exposed fasteners, including pop rivets, on moldings and trim.
5. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.
6. Arrange directionally patterned acoustical tiles as follows:
 - a. As indicated on reflected ceiling plans.
OR
Install tiles with pattern running in one direction parallel to long **OR** short, **as directed**, axis of space.
OR

- Install tiles in a basket-weave pattern.
7. Install acoustical tiles in coordination with suspension system and exposed moldings and trim. Place splines or suspension system flanges into kerfed edges so tile-to-tile joints are closed by double lap of material.
 - a. Fit adjoining tile to form flush, tight joints. Scribe and cut tile for accurate fit at borders and around penetrations through tile.
 - b. Hold tile field in compression by inserting leaf-type, spring-steel spacers between tile and moldings, spaced 12 inches (305 mm) o.c.
 - c. Protect lighting fixtures and air ducts to comply with requirements indicated for fire-resistance-rated assembly.
- C. Installation, Directly Attached Acoustical Tile Ceilings
1. Adhesive Installation: Install acoustical tile by bonding to substrate, using amount of adhesive and procedure recommended in writing by tile manufacturer and as follows:
 - a. Remove loose dust from backs of tiles by brushing and prime them with a thin coat of adhesive.
 - b. Install splines in joints between tiles; maintain level of bottom surface of tiles to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m) and not exceeding 1/4 inch (6.35 mm) cumulatively.
 - c. Maintain tight butt joints, aligned in both directions and coordinated with ceiling fixtures.
 2. Stapled Installation: Fasten acoustical tile to substrate using a minimum of two staples per tile that are installed in flanges of tile and as follows:
 - a. Form double-lapped joint between tiles by securely pressing tile tongues into corresponding tile grooves.
 - b. Maintain level of bottom surface of tiles to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m) and not exceeding 1/4 inch (6.35 mm) cumulatively. Shim tile or correct substrate as required to maintain tolerance.
 - c. Maintain tight butt joints, aligned in both directions and coordinated with ceiling fixtures.
 3. Install edge moldings and trim of type indicated at perimeter of acoustical tile ceiling area and where necessary to conceal edges of acoustical units.
 4. Arrange directionally patterned acoustical tiles as follows:
 - a. As indicated on reflected ceiling plans.
OR
 Install tiles with pattern running in one direction parallel to long axis of space.
OR
 Install tiles with pattern running in one direction parallel to short axis of space.
OR
 Install tiles in a basket-weave pattern.
- D. Field Quality Control
1. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
 2. Tests and Inspections: Testing and inspecting of completed installations of acoustical tile ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of acoustical tile ceiling hangers for the next area until test results for previously completed installations of acoustical tile ceiling hangers show compliance with requirements.
 - a. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no tiles have been installed.
 - 1) Within each test area, testing agency will select 1 of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every 2 postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
 - 2) When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.

3. Remove and replace acoustical tile ceiling hangers and anchors and fasteners that do not pass tests and inspections and retest as specified above.

E. Cleaning

1. Clean exposed surfaces of acoustical tile ceilings, including trim and edge moldings. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace tiles and other ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 23 00

SECTION 09 51 33 00 - ACOUSTICAL METAL PAN CEILINGS

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for acoustical metal pan ceilings. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section includes clip-in, lay-in, snap-in, and torsion-spring acoustical metal pans and the following suspension system for ceilings:
 - a. Direct hung, exposed tee and slot-bolt grid.
 - b. Direct-hung and Indirect-hung, concealed grid designed to support metal pans.
2. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete at ceilings.

C. Definitions

1. CAC: Ceiling Attenuation Class.
2. LR: Light Reflectance coefficient.
3. NRC: Noise Reduction Coefficient.

D. Performance Requirements

1. Structural Performance: Exterior snap-in metal pan ceilings shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling units; or permanent damage to fasteners and anchors.
 - a. Wind Load: Uniform pressure of 20 lbf/sq. ft. (960 Pa) **OR** of 30 lbf/sq. ft. (1436 Pa) **OR** as indicated on Drawings, **as directed**, acting inward or outward.
2. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 100 deg F (55 deg C).

E. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and MR 4.2, **as directed**: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement indicating costs for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For sealants, including printed statement of VOC content.
3. Samples: For each exposed finish.
4. Performance Data: For installed products indicated to comply with design loads and other criteria, include structural analysis and other analytical data signed and sealed by the qualified professional engineer responsible for their preparation.
5. Coordination Drawings: Drawn to scale and coordinating and showing the following:
 - a. Ceiling suspension members.
 - b. Method of attaching hangers to building structure.
 - c. Ceiling-mounted items.
 - d. Ceiling perimeter and penetrations through the ceiling; and trim and moldings.
6. Product test reports.

7. Evaluation reports.
8. Field quality-control reports.
9. Maintenance data.

F. Quality Assurance

1. Acoustical Testing Agency Qualifications: An independent testing laboratory or an NVLAP-accredited laboratory, with the experience and capability to conduct the testing indicated. NVLAP-accredited laboratories must document accreditation, based on a "Certificate of Accreditation" and a "Scope of Accreditation" listing the test methods specified.
2. Surface-Burning Characteristics: Complying with ASTM E 1264 for Class A materials as determined by testing identical products according to ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
3. Seismic Standard: Provide acoustical metal pan ceilings designed and installed to withstand the effects of earthquake motions according to the following:
 - a. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580.
 - b. CISCAs Recommendations for Acoustical Ceilings: Comply with CISCAs "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings - Seismic Zones 0-2."
 - c. CISCAs Guidelines for Systems Requiring Seismic Restraint: Comply with CISCAs "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies - Seismic Zones 3 & 4."
 - d. UBC Standard 25-2, "Metal Suspension Systems for Acoustical Tile and for Lay-in Panel Ceilings."
 - e. SEI/ASCE 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."
4. Preinstallation Conference: Conduct conference at Project site.

G. Delivery, Storage, And Handling

1. Deliver acoustical metal pans, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
2. Handle acoustical metal pans, suspension system components, and accessories carefully to avoid damaging units and finishes in any way.

1.2 PRODUCTS

A. Acoustical Metal Ceiling Pans

1. Acoustical Metal Pan Standard: Provide manufacturer's standard acoustical metal pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, acoustical ratings, and light reflectances unless otherwise indicated.
 - a. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E 795.
2. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.
 - a. Aluminum Sheet: Roll-formed aluminum sheet, complying with ASTM B 209 (ASTM B 209M); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
 - b. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C 635.

- 1) Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
- 2) Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A 591/A 591M, 40Z (12G) coating, surface treatment as recommended by finish manufacturer for type of use and finish indicated.
- 3) Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A 1008/A 1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.
- c. Stainless-Steel Sheet: Complying with ASTM A 240/A 240M, Type 304 **OR** Type 430, **as directed**.
3. Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84.
 - a. Bond fabric layer to panels in the factory with manufacturer's standard nonflammable adhesive.
4. Sound-Absorbent Pads: Provide width and length to completely fill concealed surface of pan, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84, and to comply with the following requirements:
 - a. Plastic Sheet-Wrapped Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, II, or III, and as follows:
 - 1) Mineral-Fiber Type and Thickness: Glass fiber; 1 inch (25 mm) **OR** 1-1/2 inches (38 mm) **OR** 3 inches (76 mm), **as directed**.
 - 2) Mineral-Fiber Density: 3/4 lb/cu. ft. (12 kg/cu. m) **OR** 1 lb/cu. ft. (16 kg/cu. m) **OR** 1-1/2 lb/cu. ft. (24 kg/cu. m), **as directed**.
 - 3) Plastic Sheet Thickness and Color: Not less than 0.003 inch (0.076 mm); clear **OR** flat black **OR** white, **as directed**.
 - b. Unwrapped, Glass-Fiber Insulation: Black coated, unfaced, complying with ASTM C 553, Type I, II, or III; not less than 1-lb/cu. ft. (16-kg/cu. m) density; treated to be nondusting; and as follows:
 - 1) Thickness: 1 inch (25 mm) **OR** 1-1/2 inches (38 mm), **as directed**.
 - c. Spacer Grids: Provide manufacturer's standard aluminum **OR** galvanized-steel, **as directed**, grid units that provide an air cushion between metal pans and insulation pads and that act to improve sound absorption.
 - d. Sound Attenuation Panels: Provide manufacturer's standard aluminum **OR** galvanized-steel, **as directed**, unperforated metal backing unit that acts as a sound-attenuating pan to reduce the travel of sound through ceiling plenum into adjoining rooms.
 - 1) Sound-Absorbent Pads: Provide secondary sound-absorbent pads, same as specified for primary pads, for placement over sound attenuation pan to reduce plenum sound.
- B. Aluminum Pans For Acoustical Metal Pan Ceiling
 1. Classification: Units complying with ASTM E 1264 for Type VII, perforated aluminum facing (pan) with mineral- or glass-fiber-base backing **OR** Type XX, other types described as perforated aluminum facing (pan) units with sound-absorbent fabric backing **OR** Type XX, other types described as unperforated aluminum facing (pan) units, **as directed**.
 - a. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in diagonal **OR** parallel, **as directed**, alignment to pan edge with uniform perforations of dimension, holes per square foot or inch, and percent open area as indicated by product designation **OR** selected from manufacturer's full range, **as directed**.
OR

Pattern: Pattern C (perforated, small holes) regularly spaced, with uniform perforations of dimension, holes per square foot or inch, and percent open area as specified by product designation **OR** selected from manufacturer's full range, **as directed**.

2. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
 - a. Lay-in Pans: Formed to set in exposed suspension grid.
 - b. Clip-in Pans: Designed to clip-in and be securely retained in exposed suspension grid by formed edges or accessory clips.
 - c. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
 - d. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted exposed suspension grid by torsion springs.
3. Pan Thickness: Not less than 0.020 inch (0.5 mm) **OR** 0.025 inch (0.6 mm) **OR** 0.032 inch (0.8 mm) **OR** 0.040 inch (1.0 mm), **as directed**.
4. Pan Edge Detail: Square **OR** Beveled **OR** Reveal **OR** Manufacturer's standard edge detail, **as directed**.
OR
Pan Joint Detail: Butt **OR** Wide reveal, not less than 15/16 inch (24 mm) wide **OR** Narrow reveal, not greater than 9/16 inch (15 mm) wide **OR** Flush narrow reveal, not greater than 9/16 inch (15 mm) wide, **as directed**.
5. Pan Size: 12 by 12 inches (305 by 305 mm) **OR** 12 by 24 inches (305 by 610 mm) **OR** 12 by 36 inches (305 by 915 mm) **OR** 24 by 24 inches (610 by 610 mm) **OR** 24 by 48 inches (610 by 1220 mm) **OR** 24 by 60 inches (610 by 1525 mm) **OR** 30 by 30 inches (760 by 760 mm) **OR** 30 by 60 inches (760 by 1525 mm) **OR** As indicated on Drawings, **as directed**.
6. Scoring: Score pans at intervals to appear as 12-by-12-inch (305-by-305-mm) ceiling units.
7. Pan Face Finish: Mill **OR** Lacquered mill **OR** Clear anodized **OR** Clear mirror-anodized **OR** Painted white **OR** Painted to match color indicated by product designation **OR** Painted to match sample **OR** Painted in color selected from manufacturer's full range **OR** Bright-reflective metallic finish selected from manufacturer's full range, **as directed**.
8. LR: Not less than 0.70 **OR** 0.75, **as directed**.
9. NRC: Not less than 0.60 **OR** 0.65 **OR** 0.70 **OR** 0.75 **OR** 0.80 **OR** 0.85 **OR** 0.90 **OR** 0.95, **as directed**.
10. CAC: Not less than 35 **OR** 40 **OR** 45, **as directed**.

C. Steel Pans For Acoustical Metal Pan Ceiling

1. Classification: Units complying with ASTM E 1264 for Type V, perforated steel facing (pan) with mineral- or glass-fiber-base backing **OR** Type XX, other types described as perforated steel facing (pan) units with sound-absorbent fabric backing **OR** Type XX, other types described as unperforated steel facing (pan) units, **as directed**.
 - a. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in diagonal **OR** parallel, **as directed**, alignment to pan edge with uniform perforations of dimension, holes per square foot or inch, and percent open area as indicated by product designation **OR** selected from manufacturer's full range, **as directed**.
OR
Pattern: Pattern C (perforated, small holes) regularly spaced, with uniform perforations of dimension, holes per square foot or inch, and percent open area as specified by product designation **OR** selected from manufacturer's full range, **as directed**.
2. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
 - a. Lay-in Pans: Formed to set in exposed suspension grid.
 - b. Clip-in Pans: Designed to clip-in and be securely retained in exposed suspension grid by formed edges or accessory clips.
 - c. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.

- d. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted exposed suspension grid by torsion springs.
3. Pan Thickness: Not less than 0.010-inch (0.25-mm) **OR** 0.020-inch (0.5-mm) **OR** 0.024-inch (0.6-mm) **OR** 0.030-inch (0.75-mm) **OR** 0.036-inch (0.9-mm), **as directed**, nominal thickness.
4. Pan Edge Detail: Square **OR** Beveled **OR** Reveal **OR** Manufacturer's standard edge detail, **as directed**.
OR
Pan Joint Detail: Butt **OR** Wide reveal, not less than 15/16 inch (24 mm) wide **OR** Narrow reveal, not greater than 9/16 inch (15 mm) wide **OR** Flush narrow reveal, not greater than 9/16 inch (15 mm) wide, **as directed**.
5. Pan Size: 12 by 12 inches (305 by 305 mm) **OR** 12 by 24 inches (305 by 610 mm) **OR** 12 by 36 inches (305 by 915 mm) **OR** 24 by 24 inches (610 by 610 mm) **OR** 24 by 48 inches (610 by 1220 mm) **OR** 24 by 60 inches (610 by 1525 mm) **OR** 30 by 30 inches (760 by 760 mm) **OR** 30 by 60 inches (760 by 1525 mm) **OR** As indicated on Drawings, **as directed**.
6. Scoring: Score pans at intervals to appear as 12-by-12-inch (305-by-305-mm) ceiling units.
7. Pan Face Finish: Painted white **OR** Painted to match color indicated by product designation **OR** Painted to match sample **OR** Painted in color selected from manufacturer's full range **OR** Plated with metallic finish, as selected from manufacturer's full range **OR** Bright-reflective metallic finish selected from manufacturer's full range, **as directed**.
8. LR: Not less than 0.70 **OR** 0.75, **as directed**.
9. NRC: Not less than 0.60 **OR** 0.65 **OR** 0.70 **OR** 0.75 **OR** 0.80 **OR** 0.85 **OR** 0.90 **OR** 0.95, **as directed**.
10. CAC: Not less than 35 **OR** 40 **OR** 45, **as directed**.

D. Stainless-Steel Pans For Acoustical Metal Pan Ceiling

1. Classification: Units complying with ASTM E 1264 for Type VI, perforated stainless-steel facing (pan) with mineral- or glass-fiber-base backing **OR** Type XX, other types described as perforated stainless-steel facing (pan) units with sound-absorbent fabric backing **OR** Type XX, other types described as unperforated stainless-steel facing (pan) units, **as directed**.
 - a. Pattern: Pattern A (perforated, regularly spaced large holes), arranged in parallel alignment to pan edge with uniform perforations of 0.109-inch (2.8-mm) diameter, 1800 holes/sq. ft. or inch, and 11.8 percent open area.
2. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated and finished to comply with requirements indicated.
 - a. Lay-in Pans: Formed to set in exposed suspension grid.
 - b. Clip-in Pans: Designed to clip-in and be securely retained in exposed suspension grid by formed edges or accessory clips.
 - c. Snap-in Pans: Designed with dimples or continuous beads on flanges for snap-in, secure engagement with concealed suspension system.
 - d. Torsion-Spring-Hinged Pans: Designed to be securely retained in preslotted exposed suspension grid by torsion springs.
3. Pan Thickness: Not less than 0.019 inch (0.5 mm) **OR** 0.025 inch (0.65 mm) **OR** 0.030 inch (0.76 mm), **as directed**.
4. Pan Edge Detail: Square **OR** Beveled **OR** Reveal **OR** Manufacturer's standard edge detail, **as directed**.
OR
Pan Joint Detail: Butt **OR** Wide reveal, not less than 15/16 inch (24 mm) wide **OR** Narrow reveal, not greater than 9/16 inch (15 mm) wide **OR** Flush narrow reveal, not greater than 9/16 inch (15 mm) wide, **as directed**.
5. Pan Size: 12 by 12 inches (305 by 305 mm) **OR** 12 by 24 inches (305 by 610 mm) **OR** 12 by 36 inches (305 by 915 mm) **OR** 24 by 24 inches (610 by 610 mm) **OR** 24 by 48 inches (610 by 1220 mm) **OR** 30 by 30 inches (760 by 760 mm) **OR** As indicated on Drawings, **as directed**.
6. Scoring: Score pans at intervals to appear as 12-by-12-inch (305-by-305-mm) ceiling units.
7. Pan Face Finish: Brushed, directional polish **OR** Satin, directional polish **OR** Mirrorlike reflective, nondirectional polish, **as directed**.

8. NRC: Not less than 0.60 **OR** 0.65 **OR** 0.70 **OR** 0.75 **OR** 0.80 **OR** 0.85 **OR** 0.90 **OR** 0.95, **as directed**.
9. CAC: Not less than 35 **OR** 40 **OR** 45, **as directed**.

E. Metal Suspension Systems

1. Recycled Content: Provide products made from steel sheet with average recycled content such that postconsumer recycled content plus one-half of preconsumer recycled content is not less than 25 percent.
2. Metal Suspension System Standard: Provide manufacturer's standard metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable ASTM C 635 requirements.
3. Suspension Systems: Provide systems complete with carriers, runners, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, and other suspension components required to support ceiling units and other ceiling-supported construction.
4. Attachment Devices: Size for five times the design load indicated in ASTM C 635, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
 - a. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing per ASTM E 488 or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.
 - 1) Type: Cast-in-place **OR** Postinstalled expansion **OR** Postinstalled bonded, **as directed**, anchors.
 - 2) Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC 1 service condition.
 - 3) Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchor.
 - 4) Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.
 - b. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.
5. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:
 - a. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.
 - b. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
 - c. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
 - d. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C 635, Table 1, Direct Hung will be less than yield stress of wire, but provide not less than 0.106-inch- (2.69-mm-) **OR** 0.135-inch- (3.5-mm-), **as directed**, diameter wire.
6. Hanger Rods **OR** Flat Hangers, **as directed**: Mild steel, zinc coated or protected with rust-inhibitive paint.
7. Angle Hangers: Angles with legs not less than 7/8 inch (22 mm) wide; formed with 0.04-inch- (1.0-mm-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, G90 (Z275) coating designation; with bolted connections and 5/16-inch- (8-mm-) diameter bolts.
8. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.
9. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.
10. Seismic Clips: Manufacturer's standard seismic clips designed and spaced to secure acoustical metal pans in place.
11. Hold-Down Clips: Manufacturer's standard hold-down clips spaced to secure acoustical metal pans in place to molding and trim at perimeter **OR** at each pan, **as directed**.

12. Exposed Metal Edge Moldings and Trim: Provide exposed members as indicated or as required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of and penetrations through ceiling, to conceal edges of pans and runners, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching acoustical metal pan ceiling units, unless otherwise indicated.
 - a. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.
- F. Direct-Hung, Standard-Grid, Metal Suspension System For Acoustical Metal Pan Ceiling
1. Suspension System: For clip-in **OR** lay-in **OR** torsion-spring, **as directed**, pans.
 2. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A 653/A 653M, G30 (Z90) coating designation, with prefinished, cold-rolled, 15/16-inch- (24-mm-) wide sheet metal caps on flanges.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. End Condition of Cross Runners: Override (stepped) **OR** Butt-edge, **as directed**, type.
 - c. Face Design: Flat, flush.
 - d. Cap Material: Steel **OR** Aluminum, **as directed**, cold-rolled sheet.
 - e. Cap Finish: Painted white **OR** Painted in color as selected from manufacturer's full range **OR** Painted to match color indicated by manufacturer's designation **OR** Painted to match color of metal pan **OR** Plated with metallic finish, as selected from manufacturer's full range **OR** Plated with metallic finish indicated by manufacturer's designation **OR** Natural finish for aluminum, **as directed**.
 3. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized according to ASTM A 653/A 653M, G30 (Z90) coating designation, with prefinished, cold-rolled, 9/16-inch- (15-mm-) wide sheet metal caps on flanges.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. End Condition of Cross Runners: Override (stepped) **OR** Butt-edge, **as directed**, type.
 - c. Face Design: Flat, flush **OR** Flanges formed with an integral center reveal, **as directed**.
 - d. Cap Material: Steel **OR** Aluminum, **as directed**, cold-rolled sheet.
 - e. Cap Finish: Painted white **OR** Painted in color as selected from manufacturer's full range **OR** Painted to match color indicated by manufacturer's designation **OR** Painted to match color of metal pan **OR** Plated with metallic finish, as selected from manufacturer's full range **OR** Plated with metallic finish indicated by manufacturer's designation **OR** Natural finish for aluminum, **as directed**.
 4. Narrow-Face, Uncapped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytic zinc-coated or hot-dip galvanized, to produce structural members with 9/16-inch- (15-mm-) wide faces.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. Face Design: With 1/8-inch- (3.2-mm-) wide, slotted, box-shaped flange **OR** With 1/4-inch- (6.35-mm-) wide, slotted, box-shaped flange, **as directed**.
 - c. Face Finish: Painted white **OR** in color as selected from manufacturer's full range **OR** to match color indicated by manufacturer's designation **OR** to match color of metal pan, **as directed**.
 5. Wide-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, hot-dip galvanized according to ASTM A 653/A 653M, G60 (Z180) coating designation, with prefinished, cold-rolled, 15/16-inch- (24-mm-) wide aluminum caps on flanges.
 - a. Structural Classification: Intermediate-duty **OR** Heavy-duty, **as directed**, system.
 - b. Face Design: Flat, flush.
 - c. Face Finish: Painted white **OR** Painted to match color indicated by manufacturer's designation **OR** Painted to match color of acoustical unit **OR** Natural finish, **as directed**.
 6. Wide-Face, Capped, Double-Web, Stainless-Steel Suspension System: Main and cross runners roll formed from and capped with Type 304 or 316 stainless-steel sheet, with prefinished, cold-rolled, 15/16-inch- (24-mm-) wide stainless-steel caps on flanges.

- a. Structural Classification: Intermediate-duty system.
 - b. Face Design: Flat, flush.
- 7. Suspension System for Torsion-Spring Metal Pans: Provide runners with factory-cut slots fabricated to accept torsion-spring attachment.
- G. Metal Suspension System For Acoustical Snap-In Metal Pan Ceiling
 - 1. Indirect-Hung, Snap-Tee **OR** Bar, **as directed**, System: Designed to support metal pans that snap into main runners, consisting of main runners connected to carrying channels that are attached by hangers to building structure, and complying with the following requirements:
 - a. Main Runners: Formed from the following metal:
 - 1) Aluminum Sheet: Alloy and temper recommended by aluminum producer and finisher for type of use indicated and manufacturer's standard finish, complying with ASTM B 209 (ASTM B 209M).
 - 2) Electrolytic Zinc-Coated Steel Sheet: ASTM A 591/A 591M, with not less than 80Z (24G) zinc coating.
 - 3) Hot-Dip Galvanized Steel: ASTM A 653/A 653M, not less than G60 (Z180) zinc coating.
 - 4) Stainless-Steel Sheet: ASTM A 666, Type 302 or 304, stretcher leveled, with cold-rolled mill finish.
 - 5) Metal Sheet: Metal as standard with ceiling system manufacturer with factory-applied protective finish complying with ASTM C 635.
 - b. Carrying Channels: Same member and metal as indicated for main runners.
OR
Carrying Channels: Cold-rolled steel, not less than 0.060-inch (1.5-mm) nominal thickness of base (uncoated) metal and 7/16-inch- (11-mm-) wide flanges, protected with rust-inhibitive paint **OR** hot-dip galvanized according to ASTM A 653/A 653M, G60 (Z180) coating designation, **as directed**, and as follows:
 - 1) Depth and Weight: 1-1/2 inches and 475 lb/1000 feet (38 mm and 215 kg/305 m) **OR** 2 inches and 590 lb/1000 feet (51 mm and 268 kg/305 m), **as directed**.
 - c. Exterior Bracing Channels and Angles: Cold-rolled steel, hot-dip galvanized to comply with ASTM A 653/A 653M, G60 (Z180) coating designation; size and profile as required to withstand wind load.
 - 2. Direct-Hung, Snap-Tee **OR** Bar, **as directed**, System: Designed to support metal pans that snap into main runners, consisting of main runners supported by hangers attached directly to building structure, and complying with the following requirements:
 - a. Hangers: Angles or channels, as standard with ceiling system manufacturer, formed from same metal as main runners.
 - b. Main Runners: Rolled aluminum sheet; alloy and temper recommended by aluminum producer and finisher for type of use indicated and manufacturer's standard finish, complying with ASTM B 209 (ASTM B 209M).
 - 3. Access Panels: For access at locations indicated, provide acoustical snap-in metal pan ceiling units, accessible by key or tool **OR** two access knobs; place one access knob at each end of panel near corners, **as directed**.
 - a. Access Key or Tool: Provide manufacturer' standard key or tool for opening access panels; one **OR** two, **as directed**.
- H. Acoustical Sealant
 - 1. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex sealant, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.
 - 2. Acoustical Sealant for Concealed Joints: Manufacturer's standard nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant, with a VOC content of 250 g/L or

less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), recommended for sealing interior concealed joints to reduce airborne sound transmission.

- I. General Finish Requirements
 1. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
 - a. High-Humidity Finish: Comply with ASTM C 635 requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.
 2. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
 3. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
- J. Aluminum Finishes
 1. Mill Finish: AA-M10C10 (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned).
 2. Lacquered Mill Finish: AA-M10C10R1x (Mechanical Finish: as fabricated, unspecified; Chemical Finish: chemically cleaned; Organic Coating: as specified below).
 - a. Organic Coating: Manufacturer's standard clear organic coating.
 3. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
 4. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.
 5. Color-Coated Finish: Manufacturer's standard powder-coat, **as directed**, baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
 6. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.
- K. Galvanized-Steel Sheet Finishes
 1. Color-Coated Finish: Manufacturer's standard powder-coat, **as directed**, baked paint complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.
- L. Steel Sheet Finishes
 1. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness to produce a coating uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.
 2. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.
- M. Stainless-Steel Finishes
 1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
 2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
 - a. Run grain of directional finishes with long dimension of each piece.
 - b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

1.3 EXECUTION

A. Preparation

1. Measure each ceiling area and establish layout of acoustical metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width pans at borders, and comply with layout shown on reflected ceiling plans and Coordination Drawings.

B. Installation

1. Install acoustical metal pan ceilings to comply with ASTM C 636 **OR** UBC Standard 25-2, **as directed**, and seismic requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
2. Suspend ceiling hangers from building's structural members and as follows:
 - a. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
 - b. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
 - c. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
 - d. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
OR
Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved.
 - e. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
 - f. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
 - g. Do not attach hangers to steel deck tabs.
 - h. Do not attach hangers to steel roof deck. Attach hangers to structural members.
 - i. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
 - j. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.
3. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.
4. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical metal pans.
 - a. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
 - b. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3.2 mm in 3.6 m). Miter corners accurately and connect securely.
 - c. Do not use exposed fasteners, including pop rivets, on moldings and trim.
5. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

6. Cut acoustical metal pan units for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.
7. Install acoustical metal pans in coordination with suspension system and exposed moldings and trim.
 - a. For lay-in square-edge pans, install pans with edges fully hidden from view by flanges of suspension system runners and moldings.
 - b. For lay-in reveal-edge pans on suspension system runners, install pans with bottom of reveal in firm contact with top surface of runner flanges.
 - c. For lay-in reveal-edge pans on suspension system members with box-shaped flanges, install pans with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
 - d. For clip-in **OR** torsion-spring-hinged, **as directed**, pans, position pans according to manufacturer's written instructions.
 - e. For snap-in pans, fit adjoining units to form flush, tight joints.
 - f. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
 - g. Fit adjoining units to form flush, tight joints.
 - h. Install directionally patterned or textured metal pans in directions indicated.
 - i. Install sound-absorbent fabric layers in perforated metal pans.
 - j. Install sound-absorbent pads in perforated metal pans over metal spacer grids, **as directed**.
8. Install sound attenuation panels in areas indicated by reflected ceiling plans or room finish schedules. Lay panels directly on ceiling system and close major openings to form complete coverage in required areas. Lay second sound-absorbent pads on sound attenuation panels.
9. Install hold-down clips where indicated.

C. Field Quality Control

1. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
2. Tests and Inspections: Testing and inspecting of completed installations of acoustical panel ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.
 - a. Extent of Each Test Area: When installation of ceiling suspension systems on each floor has reached 20 percent completion but no panels have been installed.
 - 1) Within each test area, testing agency will select 1 of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 200 lbf (890 N) of tension; it will also select one of every 2 postinstalled anchors used to attach bracing wires to concrete and will test them for 440 lbf (1957 N) of tension.
 - 2) When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.
3. Acoustical panel ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.
4. Prepare test and inspection reports.

D. Cleaning

1. Clean exposed surfaces of acoustical metal pan ceilings, including trim and edge moldings after removing strippable, temporary protective covering, if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION 09 51 33 00

SECTION 09 54 23 00 - CSF LINEAR METAL CEILINGS

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

Use this section where linear metal ceilings are part of the Work.

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 54 23 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Suspended metal grid ceiling system and perimeter trim.
 - 2. Linear, formed metal soffit panels.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvanealed) by the Hot-Dip Process.
 - 2. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
 - 3. ASTM C636 - Standard Method for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels.
 - 4. ASTM E580 - Standard Method for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels in Areas Requiring Seismic Restraint.

1.3 PERFORMANCE REQUIREMENTS

NOTE TO SPECIFIER

Verify project requirements with local codes and conditions.

- A. Exterior Soffit And Suspension System: Resist wind uplift [in accordance with applicable code] [of [_____] psf without damage.

NOTE TO SPECIFIER

- B. Resist seismic loads [required by applicable code.] [by using practices specified in ASTM E580.]

1.4 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
1. Product Data:
 - a. Product Data: Furnish for component profiles, materials, perimeter and integral trim, and space closures.
 2. Shop Drawings:
 - a. Shop Drawings: Indicate soffit system reflected plan, location of mechanical and electrical components, details of junction with dissimilar materials, and points of suspension.
 3. Samples:
 - a. Samples: Submit two samples 8 x 24 inch in size illustrating color and finish of exposed to view components.
 4. Assurance/Control Submittals:
 - a. Certificates: Manufacturer's certificate that Products meet or exceed specified requirements.
 - b. Qualification Documentation: Submit documentation of experience indicating compliance with specified qualification requirements.

1.5 QUALITY ASSURANCE

- A. Qualifications:
1. Designer Qualifications for Seismic Design: Under direct supervision of a Professional Structural Engineer experienced in design of work of this section and licensed at the place where the Project is located.
 2. Manufacturer: Company specializing in manufacturing Products specified with minimum 5 years documented experience.
 3. Installer: Company specializing in performing the Work of this Section with minimum 5 years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.
- B. Accept factory-finished products on site in manufacturer's unopened factory packaging only; reject opened packages.
- C. Protect factory-finished products from damage to appearance by storing products in manufacturer's unopened factory packaging in dry storage area.

1.7 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Supply hanger clips during steel deck erection. Supply additional hangers and inserts as required.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturer's offering Products which may be incorporated in the Work include the following:
 - 1. Hunter Douglas Architectural Products, Norcross, GA, (800) 366-4327. Model: "Linear Box 8 Ceiling Panels".
 - 2. AEP Span, Dallas, TX, (800) 527-2503. Model [_____].
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Linear Panels:
 - 1. Linear Panels: Aluminum sheet, ASTM B209, 0.032 inch thick.
 - 2. Profile: Box shape, 5/8 x 7-5/32 inch forming 8 inch module.
 - 3. Edge: Square.
 - 4. Length: [Equal] [Unequal].

NOTE TO SPECIFIER

Verify color at time of Project Manual preparation for Project.

- 5. Sight-exposed Surface Finish: Enamel finish; of color [from manufacturer's standard range.] [as selected.]
- 6. Edge Molding, [Expansion Joints,] and Splices: Same material, thickness, and finish as linear panels.
- 7. End Caps: [Molded plastic,] [Formed metal,] same color and finish as sight-exposed surfaces of linear panels.
- 8. Space Closures: [Recessed,] [Flush,] [extruded vinyl] [formed steel] [formed aluminum] sections, [black] [_____] color [as selected]; snap fit between exposed linear panels.

2.3 ACCESSORIES

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, code requirements, and availability at time of Project Manual preparation for Project.

- A. [Stabilizer bars,] [clips,] [hold down clips,] [and] [_____] as required for suspended grid system; sight-exposed surfaces same color and finish as sight-exposed surfaces of linear panels.

NOTE TO SPECIFIER

The suspension members may be comprised of solid wire or formed metal sections (angles or channel shaped) to brace the grid members from sway or movement.

- B. Suspension Members: Formed [steel] [aluminum] sections, with integral attachment points; [galvanized] [primed] finish; size and type to suit application [, seismic requirements,] and ceiling system flatness requirement specified.

***** [OR] *****

- C. Suspension Wire: Steel, annealed, [galvanized] [plain] finish, [[9] [____] gage_diameter.] [size and type for application, [seismic requirements,] and ceiling system flatness requirement specified.]
- D. Subgirt Members: [ASTM A653/A653M,] [galvanized with [G90] [____] ([Z275] [____]) zinc coating,] formed to resist imposed loads and to provide attachment for linear panels and accessories.
- E. Access Panel: Provide matching hinged panel [with frameless appearance], swinging downward, with spring latch; [____x____] feet in size.

2.4 FABRICATION

- A. Shop cut linear panels to accommodate mechanical and electrical items.
- B. Form internal and external corners of same material, thickness, finish, and profile to match exposed linear panels [; back brace internal corners].
- C. Ceiling Panels: Edges formed to snap onto carriers with a positive locking action,

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
 - 1. Verify that layout of hangers will not interfere with other work.
 - 2. Verify that required utilities are available, in proper location, and ready for use.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 INSTALLATION

- A. Install in accordance with manufacturer's instructions.
- B. Suspension Components: Install after above soffit work is complete in accordance with ASTM C636 [and ASTM E580].
 - 1. Hang carrying members independent of walls, columns, ducts, light fixtures, pipe, and conduit; where carrying members are spliced, avoid visible displacement of face panels with adjacent panels.

2. Where ducts or other equipment prevent regular spacing of hangers, reinforce nearest adjacent hangers to span the required distance.
 3. Locate suspension system for linear panel layout parallel to building lines according to [reflected plan.] [_____].
- C. Linear Panels: [Stagger end joints minimum 12 inches (300 mm.)] [Align end] joints.
1. [Butt interior end joints tight.] [Set exterior end joints with [1/16] [____] inch gap for expansion and contraction.]
 2. Provide [expansion] [control] joints to accommodate plus or minus [1] [____] inch movement and maintain visual closure.

NOTE TO SPECIFIER

The space closures described in the following paragraph are optional. Use caution in specifying these closures between exterior panels; wind uplift of the whole system becomes a greater factor.

3. Install recessed space closures between linear panels at exterior locations.
4. Install edge moldings at intersections of soffit, junctions with other finishes, and at vertical surfaces; use maximum piece lengths.
5. [Where bullnose masonry units occur, install radiused closures to fit edge molding.]
6. [Install end caps at sight-exposed ends of linear panels.]
7. [Field miter corners.] [Install prefabricated corner sections.]
8. Exercise care when site cutting sight-exposed finished components to ensure surface finish is not defaced.

3.3 ERECTION TOLERANCES

NOTE TO SPECIFIER

Coordinate this article with the suspension system members selected and the performance statements indicated.

- A. Tolerances:
1. Maximum Variation from Flat and Level Surface: [1/8] [____] inch in 10 feet .
 2. Maximum Variation from Plumb of Grid Members Caused by Eccentric Loads: [2] [____] degrees.
 3. Maximum Variation From Dimensioned Position: [1/4] [____] inch.

3.4 CLEANING

- A. Section 017300 - Execution: Cleaning installed work.
- B. Remove protective coating or film.
- C. Replace damaged or abraded components.

SECTION 09 62 15 00 – JURATILE FLOORING

Detailed Guidelines for Installing the J.W. Spec 14 TM JuraTile TM Floor System THE JENNISON WRIGHT CO., CLEVELAND OHIO (216)671-5900

Scope of Work

Work shall include the furnishing of all labor and materials necessary to complete J.W. Spec-14 JuraTile Floor with JuraTile Seal-(W)right TM SWT-102 TM Black Finish as scheduled throughout the building. Prior to delivery and installation, purchaser agrees to furnish a dry, smooth, true and level concrete foundation in perfect contour with the surface of the finished floor, swept broom clean of dirt and debris. The building must be dry, entirely enclosed, heated to a minimum of 55 degrees and weather proof before the installation of the floor is started. All materials shall be those manufactured by The Jennison Wright Company, Cleveland Ohio.

Materials - (Premium Quality)

JURATILE shall be manufactured from recycled High Density Polyethylene Polymers and Kiln Dried Untreated Hardwood Fibers and shall be machined with square edges. JuraTile and installation materials shall be those manufactured by The Jennison Wright Company of Cleveland Ohio, 216-671-5900.

JURATILE FLOORING ADHESIVE No. JT-1280 TM : Adhesive.

JURATILE SEAL-(W)RIGHT SWT-102: Black Water Based Sealer and Finish.

Concrete Base

A semi-hard, hand or machine troweled float finish is required. Curing of the concrete shall be accomplished without the use of curing compounds as directed by the architect. It is of major importance that the thoroughly seasoned concrete base be free of all defects that would cause an uneven bearing surface for the individual JuraTiles. The defects include, but are not limited to, ridges, depressions, projections, variation of elevations, uneven finish particularly at columns, manholes, drains, machine bases saw cut control joints, etc. Elevations should be checked throughout the base, and especially at any transitions to other floor surfaces. The same should be done for construction joints in the slab (if any exist). The above repairs can be accomplished by using a standard skim coat polymer-modified one component product for leveling and smoothing concrete. After the base is deemed to be in satisfactory condition it shall be broom cleaned, (and/or) vacuumed immediately before commencing installation of the JuraTile floor.

Note:

Transverse expansion joints in either the JuraTile or concrete base are not recommended. If such joints are specified in the concrete, a non extruding type should be used or the expansion joints must be left far enough below the surface of the concrete so that, when expansion of the concrete occurs, the expansion joint material will not be forced above the surface and raise the JuraTiles above the finished floor level.

JuraTile Acclimation

Prior to commencement of the floor installation, the JuraTiles should be placed in the room receiving the JuraTile floor to allow adjustment to the ambient temperature consistent with the conditions of the building as it will be maintained when occupied. This is best accomplished by opening the pallets and stacking the

individual bundles of JuraTile to allow air movement between each bundle's side, alternating each stacked row 90 degrees until the JuraTiles reach the ambient building temperature.

Adhesive

Apply JuraTile Flooring Adhesive JT-1280 as it comes from the container with a 1/8 inch notched trowel or rake to the completely seasoned, thoroughly cleaned, concrete slab. Work the adhesive into the concrete and trowel away excess. Apply at the rate of 40-60 square feet per gallon. The JuraTiles should be installed within 10 minutes after the application of the adhesive while it is still fresh. Do NOT allow the adhesive to turn black and set. For this reason, apply the Adhesive no further ahead of the JuraTile laying as determined by the rate of JuraTile thus being laid.

Installation of JuraTile

Upon the prepared base the JuraTiles shall be laid tightly together making certain the rows of JuraTiles are kept straight and parallel. A header row of (1) JuraTile wide is to be placed along both sides of the floor and at columns and other vertical obstructions (see Detail No. 1). Allow a 1/4" gap for expansion at walls and other obstructions to be concealed by cove base supplied by others. When starting rows, alternate between full and half size JuraTile. All joints shall be broken by a minimum lap of 2 inch (see Detail No. 1). To keep the JuraTiles properly aligned and fitted together, use a 2 inch x 4 inch x 3-4 foot straight edge with a hammer. Do this continuously along the line every 10-18 rows of JuraTiles, or every 30 minutes, whichever occurs first. Keep JuraTiles tight lengthwise by tapping on the end with another JuraTile or mallet every 15-25 JuraTiles of each row. See Detail No. 2 (Caution: Do NOT allow the adhesive to work up between the joints, should this occur, reduce the amount of adhesive being applied and do not slide the JuraTile into place).

At the end of each row, when cutting the JuraTiles into the header row at side perimeters, columns or other vertical obstructions, keep the cuts straight. Never use JuraTiles that are less than 2 inch in length or width; see detail No. 3. Immediately after the JuraTile installation is completed, make a careful inspection and remove any JuraTiles that may need to be replaced or may have chips, stones or debris under them and replace. JuraTiles to be replaced include, but are not limited to, distorted JuraTiles, chipped corners, high and low JuraTiles, etc.

Finishing

After the floor has been culled for any low, high or damaged tiles and deemed satisfactory, the entire floor shall be broom cleaned and/or vacuumed to remove all dust and debris. Any adhesive must be removed from the surface. The entire floor should then be lightly sanded or screened (60 grit) with a circular disc sanding machine typically used for wood floors to remove any contaminants and level any irregular edges between tiles. Sweep all dust from the surface allowing the sanding dust to fill any joints and apply two to three applications of JuraTile Seal-(W)right SWT-102 with a closed cell sponge rubber squeegee. Care must be taken to apply the coating evenly to produce a uniform finish. Additional coats may be necessary to insure a uniform gloss. Depending on ambient temperature and ventilation allow at least 1 hour between applications and at least 24 hours before placing floor in service for foot and light duty traffic. The coating should be allowed to cure for at least 2 days prior to heavy wheeled traffic.

Note

These specifications are based upon optimum site conditions which require exact adherence to the Specifications installed by personnel thoroughly experienced in installing JuraTile Flooring Systems.

However, since conditions at the installation site are critical, variations in these Specifications may be required depending on all site conditions. Therefore, we cannot accept responsibility for results of installation by others. This attractive floor system and others similar require routine maintenance and inspection by qualified personnel to provide a premium quality floor surface.

JURATILE WARRANTY LIMITATION: Jennison Wright Co warrants for a period of one year from date of sale that JuraTile products are free from defects in materials and workmanship. Our liability is expressly limited to replacement of defective goods. Jennison Wright Co. shall not be liable for incidental and consequential damages, directly or indirectly sustained, nor for any loss caused by application of these goods. Plastic and wood from which this product is produced is made from recycled materials and considerable variance will occur between the individual JuraTiles with regard to color, and general appearance. Therefore, the product ultimately delivered may vary from the characteristics represented by any samples presented or specifications contained in any literature. Purchasers should make their own test to determine the suitability of this product for their particular purpose. This product is sold without warranties, expressed or implied, without limitation, implied warranties of merchantability or fitness for a particular purpose, other than the limited warranty set forth above. Any claim shall be deemed waived unless made in writing to us within thirty (30) days from the date it was, or reasonably should have been, discovered. Specifications are subject to change without notice.

SECTION 09 65 00 00 - CSF RESILIENT FLOORING**

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 65 00 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resilient tile flooring.
 - 2. Resilient base.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections: Related work specified elsewhere includes but may not be limited to
 - 1. Section 017704 - Closeout Procedures and Training.
 - 2. Section 033000 - Cast-In-Place Concrete.
 - 3. Section 123504 – Postal Casework.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM F710
 - 2. ASTM F1066
 - 3. ASTM 1869-98 ASTM F2170-02
 - 4. ASTM F2170-02
 - 5. ASTM F2195
- B. Manufacturer's Guides:
 - 1. Armstrong Installation Systems Guide F-5061
 - 2. Forbo MCT Installation Fast Facts v1.0 04/08
 - 3. Armstrong Maintenance Guide F-8663
 - 4. Forbo MCT Maintenance Manual 02/08/MDW

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - a. Product Data: Data describing physical and performance characteristics; including sizes, patterns and colors including manufacturer's product sheet.
 - 1) Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage, accessories, finish colors, patterns and textures.
 - 2) Samples: Submit selection and verification samples for finishes, colors, and textures.
 - 3) Quality Assurance Submittals: Submit the following:
 - i. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
 - ii. Certificates: Product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria, and physical requirements.
 - iii. Manufacturer's Instructions: Manufacturer's installation instructions.
 - 4) Closeout Submittals: Submit the following:
 - i. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
 - ii. Warranty: Warranty documents specified herein.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum 5 years documented experience.
 - 1. Engage installer certified, as a "manufacturer's approved mechanic."
 - 2. Certificate: When requested, submit certificate indicating qualification.
- B. Regulatory Requirements:
 - 1. Critical Radiant Flux in Accordance with ASTM E 684: More than 0.45 Watts per square centimeter.
 - 2. Specific Optical Smoke Density in Accordance with ASTM E 662: Less than 450.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, Handle, Store, and Protect Products.
- B. Ordering: Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.
- C. Deliver tiles and installation accessories to site in original manufacturer's unopened cartons and containers each bearing names of product and manufacturer, project identification, and shipping and handling instructions.
- D. Storage and Protection: Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.
 - 1. Material should be stored in areas that are fully enclosed, weathertight with the permanent HVAC system set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hrs. prior to, and during installation.
 - 2. Store tiles on flat surfaces.

1.6 SEQUENCING AND SCHEDULING

- A. Finishing Operations: Install tile flooring after finishing operations, including painting and ceiling operations, have been completed.
- B. Concrete Curing: Do not install tile flooring over concrete substrates until substrates have cured and are dry to bond with adhesive as determined by resilient flooring manufacturer's recommended bond, moisture test, and pH test.

1.7 WARRANTY

- A. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
 - 1. Warranty Period: Five (5) year limited warranty commencing on Date of Substantial Completion.

1.8 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials:
 - 1. Provide 1 box of extra floor tiles for each tile type, panel, and color.
 - 2. Deliver to Owner extra materials from same production run as products installed. Package products with protective covering and identify with descriptive labels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Tile: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 - 1. Armstrong World Industries, Lancaster, PA Representative Contact: Lien Chu (800) 356-9301, ext. 8274.
 - 2. Forbo flooring systems, Hazelton, PA Representative Contact: Tim J. Brown (302) 419-8492
 - 3. Johnsonite, Donna Heffernan Sission (703) 250-0714
- B. Wall Base: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 - 1. Allstate Rubber Corporation, Ozone Park, NY (718) 526-7890.
 - 2. Armstrong World Industries, Lancaster, PA (800) 448-1405. Representative Contact: Lien Chu (800) 356-9301, ext. 8274.
 - 3. Forbo Flooring Systems, Hazelton, PA Representative Contact: Tim J. Brown (302) 419-8492.
 - 4. Johnsonite, Donna Heffernan Sission (703) 250-0714
 - 5. Vinyl Plastics, Inc., Sheboygan, WI (800) 874-4240.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

NOTE TO SPECIFIER

For administrative areas, other colors can be selected from the manufacturer's standard colors, with the approval of USPS Headquarters Design & Construction, Contracting officer.

2.2 MATERIALS

A. Floor Tile

1. Armstrong Migrations (BBT), ASTM F1066 Class 2
 - a. Size: 12 inch x 12 inch
 - b. Thickness: 0.125 in (3.2 mm)
 - c. Style and Color:
 - 1) RFT-1: T3518 Denim Blue
 - 2) RFT-2: T3506 Glacier Gray
2. Forbo Marmoleum Composition Tile (MCT)
 - a. Size: 13 inch x 13 inch Approx (33 cm x 33 cm), ASTM F2195
 - b. Thickness: 0.080 in (2.0 mm).
 - c. Style and Color:
 - 1) RFT-1: 3030 Blue
 - 2) RFT-2: 3055 Fresco Blue
3. Johnsonite Linoleum
 - a. Size: 12 inch x 12 inch
 - b. Thickness: 0.080 in (2.0 mm)
 - c. Style and Color:
 - 1) RFT-1: 688 Downpour
 - 2) RFT-2: 666 Raindrop

B. Wall Base:

1. Height: 4 inches
2. Thickness: 1/8 inch.
3. Coved.
4. Length: Roll.
5. Material Color: Color to be coordinate with adjacent resilient floor tile and as approved by the Contracting Officer.

2.3 ACCESSORIES

- A. Subfloor Filler: Latex underlayment, mixed with undiluted latex liquid furnished by the selected manufacturer.
 1. Underlayment and Patching Compound: Refer to Section 033000 Cast-In-Place Concrete for portland cement based underlayments and patching compounds.
- B. Primers and Adhesives: Waterproof; clear; of types as approved by resilient flooring manufacturer for specific material and substrates encountered. Zero VOC.
- C. Base Accessories: Premolded end stops and internal, and external corners of same material, size, and color as base.
- D. Expansion Joint Covers: Refer to other specification section for expansion joint covers to be used with resilient flooring.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.

- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work and are acceptable for product installation in accordance with manufacturer's instructions.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.
- E. Material Inspection: In accordance with manufacturer's installation requirements, visually inspect materials prior to installation. Material with visual defects shall not be installed and shall not be considered as a legitimate claim.

3.2 PREPARATION

- A. Adjacent Surfaces Protection: Protect adjacent work areas and finish surfaces from damage during product installation.
- B. Surface Preparation:
 - 1. General: Prepare floor substrate in accordance with manufacturer's instructions.
 - 2. Floor Substrate: Prepare floor substrate to be smooth, rigid, flat, level, permanently dry, clean and free of foreign materials such as dust, paint, grease, oils, solvent, curing and hardening compounds, sealers, asphalt and old adhesive residue.
 - 3. Concrete Floor Substrate: Concrete floor substrate shall have a minimum compressive strength of 3500 psi. Refer to Division 3 Concrete sections for patching and repairing crack materials, and leveling compounds with Portland cement based compounds. Do not use or install flooring over gypsum based leveling or patching materials
 - 4. Reference Standard: Comply with ASTM F 710 Practice for Preparing Concrete Floors and Other Monolithic Floors to Receive Resilient Flooring.
- C. Concrete Moisture Test:
 - 1. ASTM F1869-98 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Sub floor Using Anhydrous Calcium Chloride: The moisture emission from the concrete shall not exceed 5.0 lbs. per 1000 sq. ft. in 24 hrs (verify using the calcium chloride test as per ASTM F 1869-98). A diagram of the area showing the location and results of each test shall be submitted to the Contracting Officer. If the test results exceed the limitations, the installation shall not proceed until the problem has been corrected.
 - 2. ASTM F2170-02 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes. The relative humidity measured from the center of the concrete slab should not exceed 75%. If the test results exceed the limitations, the installation must not proceed until the problem has been corrected.
 - 3. The test area shall be conditioned with the permanent HVAC system set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hrs prior to and during testing.
- D. Concrete pH Test: Perform pH tests on concrete floors regardless of the age or grade level. If the pH is greater than 10, it must be neutralized prior to beginning the installation.
- E. Prohibit traffic until filler is cured.
- F. Vacuum clean substrate.

3.3 INSTALLATION - TILE FLOORING

- A. Install resilient tile flooring in accordance with manufacturer's published instructions referenced above.
 - 1. Installation environment should be conditioned to a constant temperature and humidity conditions. Site should have permanent windows and doors, fully enclosed, weather tight with permanent HVAC system (not temporary) set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hours prior to, during, and 72 hours after installation.
- B. Open number of floor tile cartons to provide quantity of flooring material required to cover each area; mix tile pieces to ensure shade variations do not occur within any one area.
- C. Spread only enough adhesive to permit installation of floor materials before initial set.
- D. Set flooring in place, press with a 150 pound resilient flooring roller to attain full adhesion.
- E. Lay flooring from center marks established parallel to building walls.
 - 1. Allow minimum 1/2 full size tile width at room or area perimeter.
 - 2. Adjust tile layout as required to avoid use of units less than 1/2 tile.
- F. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar. Where flooring continues through door opening, continue established pattern with no interruption.
- G. Install edge strips at unprotected or exposed edges where flooring terminates.
- H. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.
- I. Extend flooring into toe spaces, door reveals, closets, and similar openings.
- J. Do not install resilient flooring over expansion joints. Use expansion joint covers manufactured for use with resilient flooring. Refer to other specifications sections for expansion joint covers.
- K. Adhere resilient flooring to flooring substrate without producing open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections in completed flooring installation.
 - 1. Use adhesive applied to substrate in compliance with flooring manufacturer's recommendations, including those for trowel notching, adhesive mixing, and adhesive open and working times.
- L. The specified resilient tiles are factory finished; no finishing is required after installation. Refer to manufacturer's instructions referenced above for detailed recommendations for initial and restorative maintenance.

3.4 INSTALLATION – WALL BASE

- A. Install wall base in accordance with manufacturer's published instructions.
- B. Fit joints tight and vertical. Maintain minimum measurement of 18 inches between joints.
- C. Miter internal corners. At external corners, use premolded units. At exposed ends, use premolded units.
- D. Install wall base on solid backing. Bond tight to wall and floor surfaces.
- E. Apply the base to the cabinet toe kicks. If necessary, use a hot air gun to make the base pliable enough to turn the corners of the toe kick. Minimize or eliminate base seams on the toe kick. If the cabinet butts into a wall, start the base where the wall and cabinet meet and continue around the exposed area of the toe kick.

NOTE TO SPECIFIER

"REQUIRED Article (SITE ENVIRONMENTAL PROCEDURES) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, Contracting Officer."

3.5 SITE ENVIRONMENTAL PROCEDURES

A. Indoor Air Quality:

1. Temporary ventilation: As specified in Section 013543 - Environmental Procedures.
 - a. Ventilate products prior to installation. Remove from packaging and ventilate in a secure, dry, well-ventilated space free from strong contaminant sources and residues. Provide a temperature range of minimum 60 degrees F to maximum 90 degree F continuously for minimum 72 hours. Do not ventilate within limits of Work unless otherwise approved by USPS Contracting Officer.

3.6 FIELD QUALITY CONTROL

A. Section 014000 - Quality Requirements: Field inspection.

1. Manufacturer's Field Services: Upon Owner's request and with at least 2-3 week notice, provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions.

B. Inspect resilient flooring and base installation, pattern, layout, and attachment to substrate.

3.7 CLEANING

A. Section 017300 - Execution: Cleaning installed Work.

- B. Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance. Remove construction debris from project site and legally dispose of debris.
 1. Remove visible adhesive and other surface blemishes using cleaning methods recommended by tile floor manufacturer.
 2. Sweep and vacuum floor after installation.
 3. Do not wash floor until after time period recommended by tile flooring manufacturer.
 4. Damp mop tile flooring to remove black marks and soil.

3.8 PROTECTION

- A. Protection: Protect installed product and finish surfaces from damage during construction. Remove and legally dispose of protective covering at time of Substantial Completion.

3.9 INITIAL MAINTENANCE PROCEDURES FOR LINOLEUM.

- A. Drying Room Film: Expose installed linoleum to either natural or artificial light to allow "drying room film" (the yellow film is a natural occurrence of the oxidation of the linseed oil in linoleum products) on installed linoleum flooring to disappear prior to initiating temporary protection procedures.

USPS CSF Specifications issued: 10/1/2013

END OF SECTION

SECTION 09 65 00 00 - MPF RESILIENT FLOORING**

NOTE TO SPECIFIER

Use this section for Mail Processing Facilities.

****THIS ENTIRE SECTION CONSISTS OF REQUIRED PARTS OR ARTICLES. DO NOT REVISE WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Resilient tile flooring.
 - 2. Resilient base.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other documents.
- C. Related Sections: Related work specified elsewhere includes but may not be limited to
 - 1. Section 017704: Closeout Procedures and Training.
 - 2. Section 033000: Cast-In-Place Concrete.
 - 3. Section 123504 – Postal Casework.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM F710
 - 2. ASTM F1066
 - 3. ASTM 1869-98 ASTM F2170-02
 - 4. ASTM F2170-02
 - 5. ASTM F2195
- B. Manufacturer's Guides:
 - 1. Armstrong Installation Systems Guide F-5061
 - 2. Forbo MCT Installation Fast Facts v1.0 04/08
 - 3. Armstrong Maintenance Guide F-8663
 - 4. Forbo MCT Maintenance Manual 02/08/MDW

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - a. Product Data: Data describing physical and performance characteristics; including sizes, patterns and colors including manufacturer's product sheet.
 - 1) Shop Drawings: Submit shop drawings showing layout, profiles, and product components, including anchorage, accessories, finish colors, patterns and textures.
 - 2) Samples: Submit selection and verification samples for finishes, colors, and textures.
 - 3) Quality Assurance Submittals: Submit the following:

- i. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
- ii. Certificates: Product certificates signed by manufacturer certifying materials comply with specified performance characteristics and criteria, and physical requirements.
- iii. Manufacturer's Instructions: Manufacturer's installation instructions.
- 4) Closeout Submittals: Submit the following:
 - i. Operation and Maintenance Data: Operation and maintenance data for installed products in accordance with Division 1 Closeout Submittals (Maintenance Data and Operation Data) Section. Include methods for maintaining installed products, and precautions against cleaning materials and methods detrimental to finishes and performance.
 - ii. Warranty: Warranty documents specified herein.

1.4 QUALITY ASSURANCE

- A. Installer Qualifications: Company specializing in performing work of this Section with minimum 5 years documented experience.
 - 1. Engage installer certified, as a "manufacturer's approved mechanic."
 - 2. Certificate: When requested, submit certificate indicating qualification.
- B. Regulatory Requirements:
 - 1. Critical Radiant Flux in Accordance with ASTM E 684: More than 0.45 Watts per square centimeter.
 - 2. Specific Optical Smoke Density in Accordance with ASTM E 662: Less than 450.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, Handle, Store, and Protect Products.
- B. Ordering: Comply with manufacturer's ordering instructions and lead time requirements to avoid construction delays.
- C. Deliver tiles and installation accessories to site in original manufacturer's unopened cartons and containers each bearing names of product and manufacturer, project identification, and shipping and handling instructions.
- D. Storage and Protection: Store materials protected from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.
 - 1. Material should be stored in areas that are fully enclosed, weathertight with the permanent HVAC system set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hrs. prior to and during installation.
 - 2. Store tiles on flat surfaces.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Jobsite Requirements:
 - 1. Environmental Requirements/Conditions: In accordance with manufacturer's recommendations, areas to receive flooring shall be clean, fully enclosed, weather tight with the permanent HVAC set at a uniform temperature of at least 68 degrees F. The flooring material should be conditioned in the same manner. Maximum temperature should not exceed 100 degrees F after installation.
 - 2. Temperature Requirements: Maintain air temperature in spaces where products will be installed for time period before, during, and after installation as recommended by manufacturer.

- a. Temperature Conditions: 68 degrees F (20 degrees C) for 72 hours prior to, during and after installation.
3. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.7 SEQUENCING AND SCHEDULING

- A. Finishing Operations: Install tile flooring after finishing operations, including painting and ceiling operations, have been completed.
- B. Concrete Curing: Do not install tile flooring over concrete substrates until substrates have cured and are dry to bond with adhesive as determined by resilient flooring manufacturer's recommended bond, moisture test, and pH test.

1.8 WARRANTY

- A. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.
 1. Warranty Period: Five (5) year limited warranty commencing on Date of Substantial Completion.

1.9 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials:
 1. Provide 1 box of extra floor tiles for each tile type, panel, and color.
 2. Deliver to Owner extra materials from same production run as products installed. Package products with protective covering and identify with descriptive labels.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Tile: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 1. Allstate Rubber Corporation, Ozone Park, NY (718) 526-7890.
 2. Armstrong World Industries, Lancaster, PA Representative Contact: Lien Chu (800) 356-9301 ext. 8274.
 3. Forbo Flooring Systems, Hazelton, PA Representative Contact: Tim J. Brown (302) 419-8492.
 4. Johnsonite, Donna Heffernan Sission (703) 250-0714
 5. Vinyl Plastics, Inc., Sheboygan, WI (800) 874-4240.
- B. Wall Base: Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the Work include the following:
 1. Allstate Rubber Corporation, Ozone Park, NY (718) 526-7890.
 2. Armstrong World Industries, Lancaster, PA (800) 448-1405.
 3. Vinyl Plastics, Inc., Sheboygan, WI (800) 874-4240.
- C. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

**NOTE TO SPECIFIER**

For administrative areas, other colors can be selected from the manufacturer's standard colors, with the approval of USPS Headquarters Design & Construction, Contracting officer.

2.2 MATERIALS**A. Floor Tile**

1. Armstrong Migration (BBT), ASTM F1066 Class 2
 - a. Size: 12 inch x 12 inch
 - b. Thickness: 0.125 in (3.2 mm)
 - c. Style and Color:
 - 1) RFT-1: T3518 Denim Blue
 - 2) RFT-2: T3506 Glacier Gray
2. Forbo Marmoleum Composition Tile (MCT)
 - a. Size: 13 inch x 13 inch Approx (33 cm x 33 cm), ASTM F2195
 - b. Thickness: 0.080 in (2.0 mm)
 - c. Style and Color:
 - 1) RFT-1: 3030 Blue
 - 2) RFT-2: 3055 Fresco Blue
3. Johnsonite Linoleum
 - a. Size: 12 inch x 12 inch
 - b. Thickness: 0.080 in (2.0 mm)
 - c. Style and Color:
 - 1) RFT-1: 688 Downpour
 - 2) RFT-2: 666 Raindrop

B. Wall Base:

1. Height: 4 inches
2. Thickness: 1/8 inch.
3. Coved.
4. Length: Roll.
5. Material/Color: Color to be coordinate with adjacent resilient floor tile and as approved by the Contracting Officer.

2.3 ACCESSORIES

- A. Subfloor Filler: Latex underlayment, mixed with undiluted latex liquid furnished by the selected manufacturer.
 1. Underlayment and Patching Compound: Refer to Section 033000 Cast-In-Place Concrete for portland cement based underlayments and patching compounds.
- B. Primers and Adhesives: Waterproof; clear; of types as approved by resilient flooring manufacturer for specific material and substrates encountered. Zero VOC.
- C. Base Accessories: Premolded end stops and internal, and external corners of same material, size, and color as base.
- D. Expansion Joint Covers: Refer to other specification section for expansion joint covers to be used with resilient flooring.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work and are acceptable for product installation in accordance with manufacturer's instructions.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.
- E. Material Inspection: In accordance with manufacturer's installation requirements, visually inspect materials prior to installation. Material with visual defects shall not be installed and shall not be considered as a legitimate claim.

3.2 PREPARATION

- A. Adjacent Surfaces Protection: Protect adjacent work areas and finish surfaces from damage during product installation.
- B. Surface Preparation:
 - 1. General: Prepare floor substrate in accordance with manufacturer's instructions.
 - 2. Floor Substrate: Prepare floor substrate to be smooth, rigid, flat, level, permanently dry, clean and free of foreign materials such as dust, paint, grease, oils, solvent, curing and hardening compounds, sealers, asphalt and old adhesive residue.
 - 3. Concrete Floor Substrate: Concrete floor substrate shall have a minimum compressive strength of 3500 psi. Refer to Division 3 Concrete sections for patching and repairing crack materials, and leveling compounds with Portland cement based compounds. Do not use or install flooring over gypsum based leveling or patching materials
 - 4. Reference Standard: Comply with ASTM F 710 Practice for Preparing Concrete Floors and Other Monolithic Floors to Receive Resilient Flooring.
- C. Concrete Moisture Test:
 - 1. ASTM F1869-98 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Sub floor Using Anhydrous Calcium Chloride: The moisture emission from the concrete shall not exceed 5.0 lbs. per 1000 sq. ft. in 24 hrs (verify using the calcium chloride test as per ASTM F 1869-98). A diagram of the area showing the location and results of each test shall be submitted to the Contracting Officer. If the test results exceed the limitations, the installation shall not proceed until the problem has been corrected.
 - 2. ASTM F2170-02 Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes. The relative humidity measured from the center of the concrete slab should not exceed 75%. If the test results exceed the limitations, the installation must not proceed until the problem has been corrected.
 - 3. The test area shall be conditioned with the permanent HVAC system set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hrs prior to and during testing.
- D. Concrete pH Test: Perform pH tests on concrete floors regardless of the age or grade level. If the pH is greater than 10, it must be neutralized prior to beginning the installation.

- E. Prohibit traffic until filler is cured.
- F. Vacuum clean substrate.

3.3 INSTALLATION - TILE FLOORING

- A. Install resilient tile flooring in accordance with manufacturer's published instructions referenced above.
 - 1. Installation environment should be conditioned to a constant temperature and humidity conditions. Site should have permanent windows and doors, fully enclosed, weather tight with permanent HVAC system (not temporary) set at a uniform temperature of at least 68 degrees F (20 degrees C) for 72 hours prior to, during, and 72 hours after installation.
- B. Open number of floor tile cartons to provide quantity of flooring material required to cover each area; mix tile pieces to ensure shade variations do not occur within any one area.
- C. Spread only enough adhesive to permit installation of floor materials before initial set.
- D. Set flooring in place, press with a 150 pound resilient flooring roller to attain full adhesion.
- E. Lay flooring from center marks established parallel to building walls.
 - 1. Allow minimum 1/2 full size tile width at room or area perimeter.
 - 2. Adjust tile layout as required to avoid use of units less than 1/2 tile.
- F. Terminate flooring at centerline of door openings where adjacent floor finish is dissimilar. Where flooring continues through door opening, continue established pattern with no interruption.
- G. Install edge strips at unprotected or exposed edges where flooring terminates.
- H. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances to produce tight joints.
- I. Extend flooring into toe spaces, door reveals, closets, and similar openings.
- J. Do not install resilient flooring over expansion joints. Use expansion joint covers manufactured for use with resilient flooring. Refer to other specifications sections for expansion joint covers.
- K. Adhere resilient flooring to flooring substrate without producing open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections in completed flooring installation.
 - 1. Use adhesive applied to substrate in compliance with flooring manufacturer's recommendations, including those for trowel notching, adhesive mixing, and adhesive open and working times.
- L. The specified resilient tiles are factory finished; no finishing is required after installation. Refer to manufacturer's instructions referenced in 1.2B for detailed recommendations for initial and restorative maintenance.
- M. Wait at least 5 days after installation before conducting wet cleaning. Scrub floor with a neutral pH detergent/cleaner.

3.4 INSTALLATION - BASE

- A. Install wall base in accordance with manufacturer's published instructions.
- B. Fit joints tight and vertical. Maintain minimum measurement of 18 inches between joints.

- C. Miter internal corners. At external corners, use premolded units. At exposed ends, use premolded units.
- D. Install wall base on solid backing. Bond tight to wall and floor surfaces.
- E. Apply the base to the cabinet toe kicks. If necessary, use a hot air gun to make the base pliable enough to turn the corners of the toe kick. Minimize or eliminate base seams on the toe kick. If the cabinet butts into a wall, start the base where the wall and cabinet meet and continue around the exposed area of the toe kick.

NOTE TO SPECIFIER

"REQUIRED Article (SITE ENVIRONMENTAL PROCEDURES) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, Contracting Officer."

3.5 SITE ENVIRONMENTAL PROCEDURES

- A. Indoor Air Quality:
 - 1. Temporary ventilation: As specified in Section 013543 - Environmental Procedures.
 - a. Ventilate products prior to installation. Remove from packaging and ventilate in a secure, dry, well-ventilated space free from strong contaminant sources and residues. Provide a temperature range of minimum 60 degrees F to maximum 90 degree F continuously for minimum 72 hours. Do not ventilate within limits of Work unless otherwise approved by USPS Contracting Officer.

3.6 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field inspection.
 - 1. Manufacturer's Field Services: Upon Owner's request and with at least 2-3 week notice, provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instructions.
- B. Inspect resilient flooring and base installation, pattern, layout, and attachment to substrate.

3.7 CLEANING

- A. Section 017300 - Execution: Cleaning installed Work.
- B. Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance. Remove construction debris from project site and legally dispose of debris.
 - 1. Remove visible adhesive and other surface blemishes using cleaning methods recommended by tile floor manufacturer.
 - 2. Sweep and vacuum floor after installation.
 - 3. Do not wash floor until after time period recommended by tile flooring manufacturer.
 - 4. Damp mop tile flooring to remove black marks and soil.

3.8 PROTECTION

- A. Protection: Protect installed product and finish surfaces from damage during construction. Remove and legally dispose of protective covering at time of Substantial Completion.

3.9 INITIAL MAINTENANCE PROCEDURES FOR LINOLEUM.

- A. Drying Room Film: Expose installed linoleum to either natural or artificial light to allow "drying room film" (the yellow film is a natural occurrence of the oxidation of the linseed oil in linoleum products) on installed linoleum flooring to disappear prior to initiating temporary protection procedures.

USPS Mail Processing Facility Specification issued: 10/1/2013
Last revised: 3/31/2010

END OF SECTION 09 65 00 00

SECTION 09 65 13 13 - CORK FLOORING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for cork flooring. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Cork floor tile.
 - b. Engineered cork floor tile.
 - c. Cork rubber floor tile.
 - d. Cork floating floor system.

C. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 6.0: For cork flooring, including printed statement of costs for each rapidly renewable material.
 - b. Product Data for Credit EQ 4.1: For adhesive, including printed statement of VOC content.
 - c. Product Data for Credit EQ 4.2: For field-applied sealer and finish coatings, including printed statement of VOC content.
 - d. Product Data for Credit EQ 4.4: For cork flooring and MDF, including printed statement indicating that the bonding agent and adhesive contain no urea-formaldehyde resins.
3. Shop Drawings: For each type of cork flooring. Include cork flooring layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.
4. Samples: Full-size units of each shade and finish **OR** shade, pattern, and finish **OR** color and pattern, **as directed**, of cork flooring required.
5. Maintenance Data: For each type of cork flooring to include in maintenance manuals.

D. Quality Assurance

1. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.
 - a. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm **OR** Class II, not less than 0.22 W/sq. cm, **as directed**.
2. Product Certificates: For cork floating floor system, from manufacturer, certifying that MDF core contains no urea-formaldehyde resins.

E. Delivery, Storage, And Handling

1. Store cork flooring and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F (10 deg C) or more than 90 deg F (32 deg C). Store cork flooring on flat surfaces.

F. Project Conditions

1. Maintain ambient temperatures within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 75 deg F (24 deg C) where relative humidity is between 45 and 65 percent, in spaces to receive cork flooring during the following time periods:
 - a. 72 hours before installation.
 - b. During installation.
 - c. 72 hours after installation.

2. Until Final Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 65 deg F (18 deg C) or more than 75 deg F (24 deg C).
3. Close spaces to traffic during cork flooring installation.
4. Close spaces to traffic for 72 hours after cork flooring installation.
5. Install cork flooring after other finishing operations, including painting, have been completed.

1.2 PRODUCTS

A. Cork Floor Tile

1. Cork Floor Tile: Composed of 100 percent natural cork bark and recycled cork granules and set in a natural or synthetic, flexible resin matrix; homogeneous and uniform in composition throughout the tile thickness.
2. Provide cork floor tile made with adhesives and binders that do not contain urea-formaldehyde resins.
3. Minimum Density: 30 lb/cu. ft. (480 kg/cu. m) **OR** 34 lb/cu. ft. (544 kg/cu. m) **OR** 37 lb/cu. ft. (592 kg/cu. m), **as directed**.
4. Thickness: Nominal 0.180 inch (4.8 mm) **OR** Nominal 0.312 inch (8.0 mm), **as directed**.
5. Size: 12 by 12 inches (305 by 305 mm) **OR** 12 by 24 inches (305 by 610 mm) **OR** 24 by 24 inches (610 by 610 mm), **as directed**.
6. Shade: Light **OR** Medium **OR** Dark **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.
7. Finish: Sanded or unfinished **OR** Waxed **OR** Polyurethane **OR** Polyurethane containing UV inhibitors **OR** Acrylic **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.

B. Engineered Cork Floor Tile

1. Engineered Cork Floor Tile: Composed of 100 percent natural cork bark and recycled cork granules with laminated, patterned cork veneers and set in a natural or synthetic, flexible resin matrix; homogeneous and uniform in composition throughout the tile thickness.
2. Provide cork floor tile made with adhesives and binders that do not contain urea-formaldehyde resins.
3. Minimum Density: 30 lb/cu. ft. (480 kg/cu. m) **OR** 34 lb/cu. ft. (544 kg/cu. m) **OR** 37 lb/cu. ft. (592 kg/cu. m), **as directed**.
4. Thickness: Nominal 0.180 inch (4.8 mm) **OR** Nominal 0.312 inch (8.0 mm), **as directed**.
5. Size: 12 by 12 inches (305 by 305 mm) **OR** 12 by 24 inches (305 by 610 mm) **OR** 24 by 24 inches (610 by 610 mm), **as directed**.
6. Shade: Light **OR** Medium **OR** Dark **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.
7. Pattern: As indicated by manufacturer's designations **OR** Match sample, **as directed**.
8. Finish: Sanded or unfinished **OR** Waxed **OR** Polyurethane **OR** Polyurethane containing UV inhibitors **OR** Acrylic **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.

C. Cork Rubber Floor Tile

1. Cork Rubber Floor Tile: Composed of 70 percent natural cork granules and 30 percent rubber granules combined with fade-resistant pigments; homogeneous and uniform in composition throughout the tile thickness.
2. Provide cork rubber floor tile made with adhesives and binders that do not contain urea-formaldehyde resins.
3. Physical Characteristics:
 - a. Minimum Density: 78 lb/cu. ft. (1249 kg/cu. m).
 - b. Minimum Tensile Strength: 700 psi (4.8 MPa).
4. Thickness: Nominal 0.125 inch (3.2 mm).
5. Size: 18 by 18 inches (450 by 450 mm).

6. Texture: Lightly textured wear surface.
 7. Colors and Patterns: As indicated by manufacturer's designations **OR** Match sample **OR** As selected from full range of industry colors, **as directed**.
- D. Cork Floating Floor System
1. Cork Floating Floor System: Laminated planks made of two cork layers, top and bottom, sandwiched around an MDF core and containing no urea-formaldehyde resins.
 2. Plank Density:
 - a. Cork Top Layer: 28 lb/cu. ft. (448 kg/cu. m) **OR** Manufacturer's standard density, **as directed**.
 - b. Interlocking MDF Core: 45 lb/cu. ft. (720 kg/cu. m) **OR** Manufacturer's standard density, **as directed**.
 - c. Cork Underlayment Layer: 13 lb/cu. ft. (208 kg/cu. m) **OR** Manufacturer's standard density, **as directed**.
 3. Plank Thickness: Nominal 0.450-inch (11.4-mm) overall thickness made up as follows:
 - a. Cork Top Layer: Nominal 0.125 inch (3.2 mm) **OR** Manufacturer's standard dimension, **as directed**.
 - b. Interlocking MDF Core: Nominal 0.250 inch (6.3 mm) **OR** Manufacturer's standard dimension, **as directed**.
 - c. Cork Underlayment Layer: Nominal 0.078 inch (2.0 mm) **OR** Manufacturer's standard dimension, **as directed**.
 4. Plank Size: 18 by 18 inches (450 by 450 mm) **OR** 36 by 12 inches (900 by 305 mm), **as directed**.
 5. Plank Edge: Tongue-and-groove type **OR** Manufacturer's standard interlock, **as directed**.
 6. Shade: Light **OR** Medium **OR** Dark **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.
 7. Pattern: As indicated by manufacturer's designations **OR** Match sample, **as directed**.
 8. Finish: Sanded or unfinished **OR** Waxed **OR** Polyurethane **OR** Polyurethane containing UV inhibitors **OR** Acrylic **OR** As indicated by manufacturer's designations **OR** Match sample, **as directed**.
- E. Installation Materials
1. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement-based or blended hydraulic-cement-based formulation provided or approved by cork flooring manufacturer for applications indicated.
 2. Vapor Retarder: ASTM D 4397, polyethylene sheet not less than 6.0 mils (0.15 mm) **OR** 8.0 mils (0.2 mm), **as directed**, thick.
 3. Adhesive: Water-resistant products as recommended by manufacturer to suit cork flooring and substrate conditions indicated.
 - a. Use adhesives that have a VOC content of not more than 50 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- F. Field-Applied Finishes
1. Cork Sealer: Product as recommended by cork flooring manufacturer.
 - a. Use sealers that have a VOC content of not more than 350 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Paste Wax: Products as recommended by cork flooring manufacturer.
 3. Finish Coatings: Products containing UV inhibitors as recommended by cork flooring manufacturer.
 - a. Use finish coatings that have a VOC content of not more than 350 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 4. Cork Rubber Tile Sealer: Product as recommended by cork rubber floor tile manufacturer.
 - a. Use sealers that have a VOC content of not more than 350 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

1.3 EXECUTION

A. Preparation

1. Prepare substrates according to cork flooring manufacturer's written instructions to ensure adhesion of cork flooring.
2. Concrete Substrates: Prepare according to ASTM F 710.
 - a. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
 - b. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
 - c. Alkalinity and Adhesion Testing: Perform tests recommended by cork flooring manufacturer. Proceed with installation only after substrates pass testing.
 - d. Moisture Testing: Perform tests recommended by cork flooring manufacturer and as follows. Proceed with installation only after substrates pass testing.
 - 1) Perform anhydrous calcium chloride test according to ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - 2) Perform relative humidity test using in situ probes according to ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
3. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.
4. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
5. Do not install cork flooring until materials are same temperature as space where they are to be installed.
 - a. Move cork flooring products and installation materials into spaces where they will be installed at least 72 hours in advance of installation.
6. Immediately before installation, sweep and vacuum clean substrates to be covered by cork flooring products.

B. Floor Tile Installation

1. Comply with cork flooring manufacturer's written instructions for installing cork flooring.
2. Mix floor tiles from each carton together to ensure uniform distribution of shade.
3. Discard broken, cracked, chipped, or deformed floor tiles.
4. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.
5. Lay floor tiles square with room axis **OR** at a 45-degree angle with room axis **OR** in ashlar or staggered joint pattern **OR** in pattern indicated, **as directed**.
6. Apply adhesive to substrate and set floor tiles in adhesive.
7. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.
8. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.
9. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
10. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in finished floor areas. Maintain overall continuity of shade and finish **OR** shade, pattern, and finish **OR** color and pattern, **as directed**, between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

C. Cork Floating Floor System Installation

1. Comply with manufacturer's written instructions for installing cork floating floor system.
 2. Install continuous vapor retarder over substrate, taping side and end laps.
 3. Mix floor planks from several cartons to ensure uniform distribution of shade.
 4. Discard broken, cracked, chipped, or deformed floor planks.
 5. Do not attach floor planks to substrate.
 6. Tightly interlock and adhere plank edges with adhesive. Remove excess adhesive from top surface of planks.
 7. Lay floor planks in pattern indicated.
 8. Use spacers to keep planks from shifting as subsequent rows are added. Remove spacers after installing cork floating floor system.
 9. Maintain expansion space at walls and other obstructions and terminations of flooring as indicated on Drawings **OR** of not less than 3/8 inch (9.5 mm), **as directed**.
 10. Extend floor planks into toe spaces, door reveals, closets, and similar openings. Extend floor planks to center of door openings.
 11. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor planks as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.
- D. Field-Applied Finishes
1. Apply finishes according to cork flooring manufacturer's written instructions.
 2. Cork Sealer: Apply one **OR** two, **as directed**, coat(s).
 3. Paste Wax: Apply one **OR** two **OR** three, **as directed**, coat(s).
 4. Finish Coatings: Apply two **OR** three, **as directed**, coat(s).
 5. Cork Rubber Tile Sealer: Apply one **OR** two, **as directed**, coat(s).
- E. Cleaning And Protection
1. Comply with manufacturer's written instructions for cleaning and protecting cork flooring.
 2. Remove adhesive and other blemishes from exposed surfaces.
 3. Sweep and vacuum surfaces thoroughly.
 4. Damp-mop surfaces to remove marks and soil.
 5. Protect cork flooring products from marks, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
 6. Cover cork flooring until Final Completion.

SECTION 09 66 23 16 - RESINOUS MATRIX TERRAZZO FLOORING

1.1 GENERAL

A. Description Of Work

1. This specification covers the furnishing and installation of materials for resinous matrix terrazzo flooring. Products shall be as follows or as directed by the Owner. Installation procedures shall be in accordance with the product manufacturer's recommendations. Demolition and removal of materials shall be as required to support the work.

B. Summary

1. Section Includes:
 - a. Thin-set epoxy-resin terrazzo flooring and base.
 - b. Precast terrazzo units.

C. Submittals

1. Product Data: For each type of product indicated.
2. LEED Submittals:
 - a. Product Data for Credit MR 4.1 and Credit MR 4.2, **as directed**: For marble chips, aggregates, documentation indicating percentages by weight of postconsumer and preconsumer recycled content.
 - 1) Include statement that indicates cost for each product having recycled content.
 - b. Product Data for Credit EQ 4.1: For adhesives, including printed statement of VOC content.
3. Shop Drawings: Include terrazzo installation requirements. Include plans, elevations, sections, component details, and attachments to other work.
4. Samples: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected.
5. Installer certificates.
6. Qualification data.
7. Material certificates.
8. Maintenance data.

D. Quality Assurance

1. Installer Qualifications: A qualified installer who is acceptable to terrazzo manufacturer to install manufacturer's products.
 - a. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
 - b. Engage an installer who is a contractor member of NTMA.
2. NTMA Standards: Comply with NTMA's "Terrazzo Specifications and Design Guide" and with written recommendations for terrazzo type indicated unless more stringent requirements are specified.
3. Preinstallation Conference: Conduct conference at Project site.

E. Delivery, Storage, And Handling

1. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.
2. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

F. Project Conditions

1. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

2. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.
3. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.
4. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.
5. Control and collect dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.
 - a. Provide dustproof partitions and temporary enclosures to limit dust migration and to isolate areas from noise.

1.2 PRODUCTS

A. Epoxy-Resin Terrazzo

1. Materials:
 - a. Flexible Reinforcing Membrane: Manufacturer's resinous membrane for substrate crack preparation and reflective crack reduction.
 - 1) Reinforcement: Fiberglass scrim.
 - b. Primer: Manufacturer's product recommended for substrate and use indicated.
 - c. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.
 - 1) Physical Properties without Marble Chips **OR** Aggregates, **as directed**:
 - a) Hardness: 60 to 85 per ASTM D 2240, Shore D.
 - b) Minimum Tensile Strength: 3000 psi (20.7 MPa) per ASTM D 638 for a 2-inch (51-mm) specimen made using a "C" die per ASTM D 412.
 - c) Minimum Compressive Strength: 10,000 psi (6.9 MPa) per ASTM D 695, Specimen B cylinder.
 - d) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D 1308.
 - i. Distilled water.
 - ii. Mineral water.
 - iii. Isopropanol.
 - iv. Ethanol.
 - v. 0.025 percent detergent solution.
 - vi. 1.0 percent soap solution.
 - vii. 10 percent sodium hydroxide.
 - viii. 10 percent hydrochloric acid.
 - ix. 30 percent sulfuric acid.
 - x. 5 percent acetic acid.
 - 2) Physical Properties with Marble Chips **OR** Aggregates, **as directed**: For resin blended with Georgia white marble, ground, grouted, and cured per requirements in NTMA's "Terrazzo Specifications and Design Guide," comply with the following:
 - a) Flammability: Self-extinguishing, maximum extent of burning 0.25 inch (6.35 mm) per ASTM D 635.
 - b) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F (0.0025 mm/mm per 0.5556 deg C) for temperature range of minus 12 to plus 140 deg F (minus 24 to plus 60 deg C) per ASTM D 696.
 - d. Marble Chips **OR** Aggregates, **as directed**: Complying with NTMA gradation standards for mix indicated and containing no deleterious or foreign matter.
 - 1) Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C 131.
 - 2) 24-Hour Absorption Rate: Less than 0.75 percent.
 - 3) Dust Content: Less than 1.0 percent by weight.
 - e. Finishing Grout: Resin based.

2. Terrazzo (for NTMA-formulated design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and marble-chip proportions and mixing.
 - a. Formulated Mix Color and Pattern: As selected by the Owner from manufacturer's full range **OR** As selected from NTMA standard-terrazzo plates **OR** As selected from NTMA thin-set terrazzo plates, **as directed**.
 3. Terrazzo (for custom design mixes): Comply with NTMA's "Terrazzo Specifications and Design Guide" and manufacturer's written instructions for matrix and marble-chip **OR** aggregate, **as directed**, proportions and mixing.
 - a. Custom Mix Color and Pattern: Match sample **OR** Match existing, **as directed**.
- B. Strip Materials
1. Thin-Set Divider Strips: L-type angle or T-type, 1/4 inch (6.4 mm) deep.
 - a. Material: White-zinc alloy **OR** Brass **OR** Aluminum **OR** Plastic, in color selected from manufacturer's full range, **as directed**.
 - b. Top Width: 1/8 inch (3.2 mm) **OR** 1/4 inch (6.4 mm), **as directed**.
 2. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.
 - a. Bottom-Section Material: Galvanized steel **OR** Matching top-section material, **as directed**.
 - b. Top-Section Material: White-zinc alloy **OR** Brass **OR** Aluminum **OR** Plastic, in color selected from manufacturer's full range, **as directed**.
 - c. Top-Section Width: 1/8 inch (3.2 mm) **OR** 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** 1/2 inch (12.7 mm), **as directed**.
 3. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material, thickness, and color of divider strips and in depth required for topping thickness indicated.
 4. Accessory Strips: Match divider strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:
 - a. Base-bead strips for exposed top edge of terrazzo base.
 - b. Edge-bead strips for exposed edges of terrazzo.
 - c. Nosings for terrazzo stair treads and landings.
 5. Abrasive Strips (for terrazzo stair treads and landings): Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.
 - a. Width: 1/2 inch (12.7 mm).
 - b. Depth: As required by terrazzo thickness.
 - c. Length: 4 inches (100 mm) less than stair width **OR** As indicated, **as directed**.
 - d. Color: As selected from manufacturer's full range.
- C. Miscellaneous Accessories
1. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use and acceptable to terrazzo manufacturer.
 - a. Use adhesives that have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
 2. Anchoring Devices:
 - a. Strips: Provide mechanical anchoring devices for strip materials as required for secure attachment to substrate.
 - b. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.
 3. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
 4. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.
 5. Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.
 6. Sealer: Slip- and stain-resistant penetrating-type sealer that is chemically neutral with pH factor between 7 and 10; does not affect color or physical properties of terrazzo; is recommended by

sealer manufacturer; and complies with NTMA's "Terrazzo Specifications and Design Guide" for terrazzo type indicated **OR** Acrylic **OR** Urethane **OR** Chemical-resistant epoxy, **as directed**.

D. Precast Terrazzo

1. Precast Terrazzo Units: Precast epoxy-resin terrazzo base, stair tread, threshold, bench, and planter units.
2. Precast Terrazzo Base Units: 1/4 inch (6.4 mm) thick; cast in maximum lengths possible, but not less than 36 inches (900 mm); with rounded, finished top edge.
 - a. Type: Coved with minimum 3/4-inch (19-mm) radius **OR** Straight **OR** Splayed **OR** As indicated, **as directed**.
 - b. Height: 6 inches (152 mm) **OR** 4 inches (101 mm) **OR** As indicated, **as directed**.
 - c. Outside Corner Units: With finished returned edges at outside corner.
 - d. Color, Pattern, and Finish: As selected from manufacturer's full range **OR** Match sample **OR** Match adjacent poured-in-place terrazzo flooring, **as directed**.
3. Precast Terrazzo Stair Treads: 1/2 inch (12.7 mm) thick with rounded nosing edge.
 - a. Abrasive Strips: Three-line **OR** Two-line **OR** One-line **OR** Abrasive nosing strip and two-line, **as directed**, abrasive inserts at nosings.
 - b. Color, Pattern, and Finish: As selected from manufacturer's full range **OR** Match sample **OR** Match adjacent poured-in-place terrazzo flooring, **as directed**.
4. Precast Terrazzo Finishing (for custom precast terrazzo components):
 - a. Finish exposed-to-view edges or reveals to match face finish.
 - b. Ease exposed edges to 1/8-inch (3-mm) radius.

1.3 EXECUTION

A. Preparation

1. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.
2. Concrete Slabs:
 - a. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.
 - 1) Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
 - 2) Repair damaged and deteriorated concrete according to terrazzo manufacturer's written recommendations.
 - 3) Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.
 - b. Verify that concrete substrates are visibly dry and free of moisture.
 - c. Moisture Testing:
 - 1) Test for moisture by anhydrous calcium chloride method according to ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. (1.36 kg of water/92.9 sq. m) in 24 hours.
 - 2) Test for moisture by relative humidity probe and digital meter method according to ASTM F 2170. Proceed with installation only after substrates have a maximum relative-humidity-measurement reading of 70 to 75 percent in 24 hours.
 - 3) Test for moisture content by method recommended in writing by terrazzo manufacturer. Proceed with installation only after substrates pass testing.
3. Protect other work from dust generated by grinding operations. Control dust to prevent air pollution and comply with environmental protection regulations.
 - a. Erect and maintain temporary enclosures and other suitable methods to limit dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

4. Installation of terrazzo indicates acceptance of surfaces and conditions.
- B. Epoxy-Resin Terrazzo Installation
1. General:
 - a. Comply with NTMA's written recommendations for terrazzo and accessory installation.
 - b. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions and NTMA's "Terrazzo Specifications and Design Guide."
 - c. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet (6 mm in 3 m); noncumulative.
 - d. Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.
 - e. Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted.
 2. Thickness: 1/4 inch (6.4 mm) **OR** 3/8 inch (9.5 mm) **OR** As indicated, **as directed**, nominal.
 3. Flexible Reinforcing Membrane:
 - a. Prepare and prefill substrate cracks with membrane material.
 - b. Install membrane to produce full substrate coverage in areas to receive terrazzo.
 - c. Reinforce membrane with fiberglass scrim.
 - d. Prepare membrane according to manufacturer's written instructions before applying substrate primer.
 4. Primer: Apply to terrazzo substrates according to manufacturer's written instructions.
 5. Strip Materials:
 - a. Divider and Control-Joint Strips:
 - 1) Locate divider strips in locations indicated.
 - 2) Install control-joint strips back to back directly above concrete-slab control joints **OR** in locations indicated, **as directed**.
 - 3) Install control-joint strips with 1/4-inch (6.4-mm) gap between strips, and install sealant in gap.
 - 4) Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.
 - b. Accessory Strips: Install accessory strips as required to provide a complete installation **OR** in locations indicated, **as directed**.
 - c. Abrasive Strips: Install with surface of abrasive strip positioned 1/16 inch (1.6 mm) **OR** 1/32 inch (0.8 mm), **as directed**, higher than terrazzo surface.
 6. Fine Grinding: Grind with stones 120 grit or finer until all grout is removed from surface. Repeat rough grinding, grout coat, and fine grinding if large voids exist after initial fine grinding. Produce surface with a minimum of 70 percent aggregate exposure.
 7. Repair: Remove and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by the Owner.
- C. Precast Terrazzo Installation
1. Install precast terrazzo units using method recommended NTMA and manufacturer unless otherwise indicated.
 2. Installation Tolerance: Set units with alignment level and true to dimensions, varying 1/8-inch (3.2-mm) maximum in length, height, or width; noncumulative.
 3. Do not install units that are chipped, cracked, discolored, or not properly finished.
 4. Seal joints between units with joint compound matching precast terrazzo matrix **OR** joint sealant, **as directed**.
- D. Cleaning And Protection
1. Cleaning:
 - a. Remove grinding dust from installation and adjacent areas.

- b. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow to dry thoroughly.
2. Sealing:
 - a. Seal surfaces according to NTMA's written recommendations.
 - b. Apply sealer according to sealer manufacturer's written instructions.
3. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Final Completion.

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [____] indicates information may be inserted at that location.

PART 1 – GENERAL

1.1 SUMMARY

- A. Epoxy flooring.

1.2 SUBMITTALS

- A. Product Data: Required
- B. Samples: Required
- C. Color: Light Gray, to be selected from manufacturer's standard colors and approved by the Contracting Officer.

1.3 QUALITY ASSURANCE

- A. Applicator to be certified and licensed by the flooring manufacturer.
- B. Field samples to be approved and serve as minimum acceptable standards for finished work.

PART 2 – PRODUCTS

2.1 MANUFACTURERS

- A. Stonhard;
 - 1. Floor Product: Stonclad GS
- B. Crossfield Products Corporation;
 - 1. Floor Product: Dex-O-Tex Decor-flor
- C. General Polymers
- D. Florock
- E. Dur-A-Flex Inc.

PART 3 – EXECUTION

3.1 INSTALLATION

- A. Apply coating systems in accordance with manufacturer instructions for material and substrate involved.
- B. Provide ample ventilation during application.

USPS Mail Processing Facility Specification issued: 10/1/2013

END OF SECTION 09 67 23 00

SECTION 09 67 23 00 - CSF RESINOUS FLOORING

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 67 23 00

PART 1 - GENERAL

1.1 SUMMARY

- A. Epoxy coating with integral slip-resistant abrasive additive on Toilet Room floors.

1.2 REFERENCES

- A. Comply with the following American Society for Testing and Materials (ASTM) standards:
 1. E-84: Test Method for Surface Burning Characteristics of Building Materials
 2. D-4060: Test Method for Abrasion Resistance of Organic Coatings
 3. D-714: Test Method for Evaluating degree of blistering of Paints
 4. D-4585: Standard Practice for Testing Water Resistance of Coatings

1.3 SUBMITTALS

- A. Product Data: Required
- B. Samples: Required

NOTE TO SPECIFIER

Color to be selected from manufacturer's standard colors and approved by the Contracting Officer.

- C. Color: [_____]

1.4 QUALITY ASSURANCE

- A. Applicator to be certified and licensed by the flooring manufacturer.
- B. Field samples to be approved and serve as minimum acceptable standards for finished work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design:

1. Manufacturer: Stonhard, Maple Shade, NJ (800) 257-7953

a. Floor Product: Stonclad GS.

B. Equal Products by one of the following Manufacturers may be substituted:

1. Crossfield Products, Dex-O-Tex, Rancho Dominguez, CA (310) 886-9100
2. General Polymers, Cincinnati, OH (800) 543-7694
3. Florock, Chicago, IL (800) 356-7625
4. Dur-A-Flex, East Hartford, CT (800) 253-3539

PART 3 - EXECUTION

3.1 INSTALLATION

- A. Apply coating system in strict accordance with manufacturer instructions for material and substrate involved.
- B. Provide ample ventilation during application.

REMINDER TO USPS MASTER SPEC REVIEWERS

Where the text for each Program differs, it is identified by colored highlighting

Yellow highlighted text is for MSBD only.

Blue highlighted text is for SSBD and RSD only.

NOTE TO SPECIFIER

EDIT THIS SECTION BY ADDING AND/OR DELETING TEXT FOR THE SPECIFIC CONDITIONS AND REQUIREMENTS OF THE PROJECT SITE.

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER. REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION.

NOTE TO SPECIFIER

USE THIS SECTION CARPET TILE ONLY IN ADMINISTRATIVE OFFICES. DO NOT USE IN POSTMASTER OFFICES.

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Carpet tile loose laid with edges and control grid adhered. Product and color selections are indicated on the Finish Schedule on the drawings.
 - 2. Surface preparation and repair.
 - 3. Removal of existing carpet.
 - 4. Accessories.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

1.2 REFERENCES

- A. ASTM D 2859 - Standard Test Method for Ignition Characteristics of Finished Textile Floor Covering Materials.
- B. ASTM E 648 - Standard Test Method for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.
- B. CRI 104 - Standard for Installation of Commercial Textile Floorcovering Materials; Carpet and Rug

Institute.

- I. AATCC Test Method 175

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
- B. Shop Drawings: Indicate layout plan indicating colors and areas to be adhered.
- C. Product Data: Provide data on specified products, describing physical and performance characteristics, sizes, patterns, colors available, and method of installation.
- D. Samples: Submit two samples 24 x 24 inch (609.6 mm) in size illustrating color and pattern for each carpet and cushion material specified.
- E. Manufacturer's Installation Instructions: Indicate special procedures.
- F. Maintenance Data: Include maintenance procedures, recommended

1.4 QUALITY ASSURANCE

- A. Manufacturer Qualifications: Company specializing in manufacturing specified carpet with minimum three years documented experience.
- B. Installer Qualifications: Company specializing in stalling carpet with minimum three years' experience.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect Products.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:

1.7 WARRANTY

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.

1.8 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Products: At completion of installation, deliver to Contracting Officer.
 - 1. Section 016000 – Product Requirements, for additional requirements.

1.9 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the work include the following:
 - 1. Lees Carpets Contact: Mike Barry, 248-515-8212, mike_barry@mohawkind.com
- B. Section 016000 – Product Requirements: Product options and substitutions. Substitution permitted.

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, product numbers, and availability at time of project manual preparation for project.

2.1 MANUFACTURERS

- A. General: This Finish Schedule on the drawings indicate specific products and colors which have been developed as part of a project-specific color scheme. Where products other than those indicated on the Finish Schedule are proposed, colors/textures of proposed products shall match, as determined by the Architect, the selected colors/textures.
- B. Carpet:
 - 1. Substitutions: See Section 016000 - Product Requirements.

NOTE TO SPECIFIER

Edit this section by adding a carpet type designation to each carpet, match to finish schedule, verify manufacturer information, product numbers and availability at time of project manual preparation for project.

2.2 MATERIALS

A. Carpet Type []:

1. Product: Lees Carpet.
2. Style: GT097 – Integrated Circuit Modular.
3. Size: 24in x 24 in.
4. Color: As shown on Finish Schedule on Drawings.
5. Installation Method: As recommended by manufacturer.
6. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with ASTM E 648 or NFPA 253.
7. Surface Flammability Ignition: Pass DOC-FF-1-70 (the “pill test”).
8. VOC Content: Provide CRI Green Label certified product in lieu of labeling, independent test report showing compliance is acceptable.
9. Substitutions: See Section 016000 – Product Requirements.

B. Carpet Type []:

1. Product: Lees Carpet.
2. Style: GT071- It's a Sign Modular.
3. Size: 24in x 24 in.
4. Color: As shown on Finish Schedule on Drawings.
5. Installation Method: As recommended by manufacturer.
6. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with ASTM E 648 or NFPA 253.
7. Surface Flammability Ignition: Pass DOD-FF-1-70 (the “pill test”).
8. VOC Content: Provide CRI Green Label certified product; in lieu of labeling, independent test report showing compliance is acceptable.
9. Substitutions: See Section 016000 – Product Requirements.

C. Carpet Type []:

1. Product: Lees Carpet.
2. Style: GT098 – Micro Stream Modular.
3. Size: 24in x 24in
4. Color: As shown on Finish Schedule on Drawings.
5. Installation Method: As recommended by manufacturer.
6. Critical Radiant Flux: Minimum of 0.45 watts/sq cm, when tested in accordance with ASTM E 648 or NFPA 253.
7. Surface Flammability Ignition: Pass DOC-FF-1-70 (the “pill test”).
8. VOC Content: Provide CRI Green Label certified product; in lieu of labeling, independent test report showing compliance is acceptable.
9. Substitutions: See Section 016000 - Product Requirements.

2.3 ACCESSORIES

- A. Sub-Floor Filler: Type recommended by carpet manufacturer.

- B. Moldings and Edge Strips: Embossed aluminum, color compatible with carpet color as selected by Owner's Representative.
- C. Adhesives – General: compatible with materials being adhered; maximum VOC content of 50 g/L; CRI Green Label certified; in lieu of labeled product, independent test report showing compliance is acceptable.
- D. Contact Adhesive: Recommended by carpet manufacturer; releasable type.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Verify that sub-floor surfaces are smooth and flat within the tolerances specified for that type of work and are ready to receive carpet.
- B. Verify that wall surfaces are smooth and flat within the tolerances specified for that type of work, are dust-free, and are ready to receive carpet.
- C. Verify that sub-floor surfaces are dust-free and free of substances that could impair bonding of adhesives to sub floor surfaces.
- D. Verify interior design coordination requirements with Architect prior to installation.
- E. Verify that required floor-mounted utilities are in correct location.

NOTE TO SPECIFIER

For R&A projects include Item A. For new construction rename B, C and D to A, B and C.

3.2 PREPARATION

- A. Remove existing carpet and carpet cushion.
- B. Remove sub-floor ridges and bumps. Fill minor or local low spots, cracks, joints, holes, and other defects with sub-floor filler.
- C. Apply, trowel, and float filler to achieve smooth, flat, hard surface. Prohibit traffic, until filler is cured.
- D. Clean substrate.

3.3 INSTALLATION - GENERAL

- A. Install carpet and cushion in accordance with manufacturer's instructions and CRI 104.
- B. Verify carpet match before cutting to ensure minimal variation between dye lots.

3.4 CLEANING

- A. Remove excess adhesive from floor and wall surfaces without damage.
- B. Clean and vacuum carpet surfaces.

USPS Master Specifications issued: 10/1/2013
Last revised: 6/17/2013

END OF SECTION 09 68 00 00

**SECTION 09 91 00 00 - CSF PAINTING****

NOTE TO SPECIFIER

This section contains information and text that may apply to CSF Medium and CSF Small facilities. A colored highlighting is used to identify differences between these two USPS programs: yellow highlighted text applies only to CSF Medium Facilities; and blue highlighted text applies only to CSF Small Facilities. When preparing a specification for a particular project, delete the highlighted text that does not apply, then remove the highlighting from the remaining text.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location. Drawing Coordination Items listed at end of Section.09 91 00 00

PART 1 - GENERAL**1.1 SUMMARY**

- A. Section Includes:
 - 1. Surface preparation and field application of paints and finishes for interior and exterior surfaces.
 - 2. Schedule of Items to be painted.
 - 3. Exterior painting and finishing schedule.
 - 4. Interior painting and finishing schedule.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 055000 - Metal fabrications:
 - 2. Section 081100 - Metal Doors and Frames: Shop priming.
 - 3. Section 083323 - Overhead Coiling Doors: Shop priming.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Section 013300 - Submittal Procedures: Procedures for submittals.
 - 1. Product Data: Submit product data for each type of paint specified.
 - a. Technical data sheets indicating manufacturer's catalog number, paint type description, and VOC content.
 - b. Painting Schedule listing surfaces to be painted with cross reference to the specific painting and finishing system and application. Identify each paint material by manufacturer's catalog number and general classification.

2. Samples: Submit color brush-out sample for each paint color and sheen specified.
 - a. Three samples on 8 1/2 inch x 11 inch card stock for color and sheen verification.
 - b. Identify each sample by paint manufacturer, paint type, color, and sheen.
3. Assurance/Control Submittals:
 - a. Test Reports: Submit manufacturer's Material Safety Data Sheets (MSDS) for each paint type proposed.

1.4 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in performing Work of this Section with minimum five years documented experience.
- B. Regulatory Requirements:
 1. Surface Burning Characteristics in Accordance with ASTM E-84 for Class I or A finish:
 - a. Flame Spread (Non-Combustible Surfaces): Less than 25.
 - b. Smoke Density (Non-Combustible Surfaces): Less than 450.
 2. Provide paint and coating materials that conform to Federal, State, and Local restrictions for Volatile Organic Compounds (VOC) content.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and/or reducing.
- C. Store paint materials at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's published instructions.
- D. Prevent fire hazards and spontaneous combustion.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Apply paint finishes only when moisture content of surfaces is within manufacturer's acceptable ranges for type of finish being applied.
 2. Surface temperatures or surrounding air temperature to be above 40 degrees F before applying alkyd finishes; above 45 degrees F for interior latex, and 50 degrees F for exterior latex work. Minimum for varnish and transparent finishes is 65 degrees F.
 3. Provide continuous ventilation and heating facilities to maintain temperatures above 45 degrees F for 24 hours prior to, during and 48 hours after application of finishes.
 4. Do not apply paint in areas where dust is being generated.
 5. Provide lighting level in areas being painted of 80 foot candles measured mid-height at substrate surface.

1.7 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials:

1. Provide one gallon of each color, type and sheen to Contracting Officer.
2. Label each container with color, type, texture, room locations, in addition to the manufacturer's label.

NOTE TO SPECIFIER

“REQUIRED Part (Products) follows. Do not revise this Part, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer.”

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the work include the following:
 1. Benjamin Moore and Company, Montvale, NJ (201) 573-9600.
 2. Comex Group (Color Wheel/Frazer/Kwal/Parker), 5575 Dtc Pkwy, Greenwood Village, CO 80111, (303)307-2100
 3. Duron Paints and Wallcoverings, Beltsville, MD (800) 723-8766.
 4. Devoe (ICI), Cleveland, OH (888) 681-6353.
 5. Glidden (ICI), Cleveland, OH (888) 681-6353.
 6. Pittsburgh Paints, Pittsburgh, PA (800) 441-9695.
 7. Sherwin-Williams Company, Cleveland, OH (800) 321-8194.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Paints:
 1. Manufacturer's "Best Grade" for each type specified.
 2. Ready-mixed; pigments fully ground maintaining a soft paste consistency, capable of readily and uniformly dispersing to a complete homogeneous mixture.
 3. Providing good flowing and brushing properties and be capable of drying or curing free of streaks or sags.
 4. VOC limits (g/L) for exterior and interior paint applications:
 - a. Exterior- Steel-Shop Primed
 - 1) Top Coat – Non-Flat: 150
 - 2) Top Coat - Gloss: 250
 - b. Exterior- Steel - Galvanized
 - 1) Primer Coat: 200
 - 2) Top Coat - Non-Flat: 150
 - 3) Top Coat - Gloss: 250
 - c. Interior Wood – Transparent
 - 1) Stain: 250
 - 2) Varnish: 350
 - d. Interior Concrete, Concrete Block
 - 1) Block filler: 300

- 2) Top Coat – Flat: 100
- 3) Top Coat – Non-Flat: 150
- 4) Top Coat – Gloss: 250
- e. Interior Steel – Unprimed
 - 1) Rust Prime Coat: 400
 - 2) Top Coat – Non-Flat: 150
 - 3) Top Coat – Gloss: 250
- f. Interior Steel – Primed
 - 1) Top Coat – Flat: 100
 - 2) Top Coat – Non-Flat: 150
 - 3) Top Coat – Gloss: 250
- g. Interior Steel – Galvanized
 - 1) Top Coat – Non-Flat: 150
 - 2) Top Coat – Gloss: 250
- h. Interior Plaster, Gypsum Board
 - 1) Undercoater: 200
 - 2) Top Coat - Flat: 100
 - 3) Top Coat – Non-Flat: 150
 - 4) Top Coat – Gloss: 250
- i. Interior Exposed Structural Steel and Metal Deck
 - 1) Industrial Maintenance - Primer: 340
 - 2) Industrial Maintenance – Top Coat: 340

B. Primers and Undercoaters: Manufactured by same manufacturer as finish coat materials.

C. Paint Accessory Materials: Linseed oil, shellac, turpentine and other materials not specifically indicated herein but required to achieve the finishes specified of high quality and approved manufacturer.

NOTE TO SPECIFIER

Verify manufacturer information, Product numbers, and availability at time of Project Manual preparation for Project.

2.3 EXTERIOR PAINT SYSTEMS

A. Benjamin Moore:

- 1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: M04 Acrylic Metal Primer; MDF 2.0 mils.
 - b. Each Finish Coat: M29 DTM Acrylic Semi-Gloss; MDF 2.0 mils.
- 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: M04 Acrylic Metal Primer; MDF 2.0 mils.
 - b. Each Finish Coat: M29 DTM Acrylic Semi-Gloss; MDF 2.0 mils.

B. Comex Group (Color Wheel/Frazee/Kwal/Parker)

- 1. Ferrous Metal: Semi-Gloss, Water Base, Alky Primer/Acrylic Latex.
 - a. Primer: Ultra-Tech C309 Universal water-Based Metal Primer, MDF 1.96 mils.
 - b. Each Finish Coat: Ultra-Tech C218 (Southeast)/C229 (Southwest)/C206 (Midwest) Exterior 100% Acrylic Semi-Gloss Enamel, MDF 1.44 mils.
- 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Ultra-Tech C309 Universal water-Based Metal Primer, MDF 1.96 mils.
 - b. Each Finish Coat: Ultra-Tech C218 (Southeast)/C229 (Southwest)/C206 (Midwest) Exterior 100% Acrylic Semi-Gloss Enamel, MDF 1.44 mils.

- C. Duron:
1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Dura Clad Universal Acrylic Metal Primer, 33-105; MDF 2.4 mils. (MPI xx, Approved)
 - b. Each Finish Coat: Dura Clad DTM Acrylic Coating Gloss 95-30X, MDF 3.0 mils. (MPI 110-G6)
 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Dura Clad Acrylic Galvanized Metal Primer, 33-100; MDF 1.4 mils. (MPI 134, Approved)
 - b. Each Finish Coat: Dura Clad DTM Acrylic Coating Gloss 95-30X, MDF 3.0 mils. (MPI 110-G6)
- D. Devoe (ICI):
1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Mirrolac W/B DTM Primer DP85XX.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Enamel DP83XX.
 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Mirrolac W/B DTM Primer, DP85XX.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Enamel DP83XX.
- E. Frazee:
1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 661F774Metal Prime; MDF 1.7 mils.
 - b. Each Finish Coat: 128 Satin Glide Semi Gloss Acrylic, 03-Series; MDF 1.4 mils.
 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 661F774 Metal Prime, 33-100; MDF 1.4 mils.
 - b. Each Finish Coat: 128 Satin Glide Semi Gloss Acrylic , 03-Series; MDF 1.4 mils.
- F. Pittsburgh:
1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 90-709 DTM Interior/Exterior Primer; MDF 3.0 mils.
 - b. Each Finish Coat: 90-474 Acrylic Enamel Satin; MDF 3.0 mils.
 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 90-709 DTM Interior/Exterior Primer; MDF 3.0 mils.
 - b. Each Finish Coat: 90-474 Acrylic Enamel Satin; MDF 3.0 mils.
- G. Sherwin-Williams:
1. Ferrous Metal: Semi-Gloss, Low VOC, Alkyd Primer/Acrylic Latex.
 - a. Primer: Pro-Cryl Universal Water-Based Primer, B66-310, MDF 3.0 mils.
 - b. Each Finish Coat: DTM Acrylic B66 Series; MDF 3.0 mils.
 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Pro-Cryl Universal Water Based Primer, B66-310, MDF 3.0 mils.
 - b. Each Finish Coat: DTM Acrylic B66 Series; MDF 3.0 mils.

2.4 INTERIOR PAINT SYSTEMS

- A. Benjamin Moore:
1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: 284 Moorecraft Superhide Interior Latex Primer/Undercoater; MDF 1.5 mils.
 - b. Each Finish Coat: Moorecraft Super-Hide Eggshell 286.
 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Moorecraft Super Hide Interior/Exterior Latex Blockfiller 285; MDF 11.0 mils.
 - b. Each Finish Coat: Moorecraft Super-Hide Eggshell 286.

3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: Moorecraft Super-Hide Eggshell 286.
4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: 253 Moorecraft Latex Enamel Undercoater and Primer Sealer; 2.0 mils.
 - b. Each Finish Coat: Moorecraft Super-Hide Eggshell 286.
5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Moorecraft Super Hide Interior/Exterior Latex Blockfiller 285; MDF 11.0 mils.
 - b. Each Finish Coat: 276 Moorecraft Acrylic Latex; MDF 1.5 mils.
6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: M04 Acrylic Metal Primer; MDF 2.0 mils.
 - b. Each Finish Coat: 276 Moorecraft Acrylic Latex; MDF 1.5 mils.
7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Enamel Undercoater: Moorecraft Acrylic Latex Underbody 269.
 - b. Each Finish Coat: 276 Moorecraft Acrylic Latex; MDF 1.5 mils.
8. Wood Bumpers:
 - a. Stain: 234 Benwood Penetrating Stain.

NOTE TO SPECIFIER

Select "Low Lustre" or "High-Gloss" polyurethane. Verify with USPS.

- b. Benwood Stays Clear Acrylic Polyurethane: 423 Benwood Low Lustre Polyurethane.
- c. Benwood Stays Clear Acrylic Polyurethane: 422 Benwood High-Gloss Polyurethane.

B. Comex Group (Color Wheel/Frazee/Kwal/Parker):

1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C152 Interior Latex Primer-Sealer; MDF 1.12 mils.
 - b. Each Finish Coat: Ultra-Tech C106 Interior Latex Eggshell Enamel; MDF 1.36 mils.
2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C302 Interior-Exterior Acrylic Block Filler; MDF 6.29 mils.
 - b. Each Finish Coat: Ultra-Tech C106 Interior Latex Eggshell Enamel; MDF 1.36 mils.
3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: Ultra-Tech C141 Interior 100% Acrylic Low-Sheen Enamel; MDF 1.44 mils.
4. Wood and Wood Doors: Satin, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C312 Interior-Exterior 100% Acrylic Wood Primer; MDF 1.8 mils.
 - b. Each Finish Coat: Ultra-Tech C141 Interior 100% Acrylic Low-Sheen Enamel; MDF 1.44 mils.
5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C302 Interior-Exterior Acrylic Block Filler; MDF 6.29 mils.
 - b. Each Finish Coat: Ultra-Tech C119 Interior Latex Semi-Gloss Enamel; MDF 1.6 mils.
6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C309 Universal Water-Based Metal Primer; MDF 1.96 mils.
 - b. Each Finish Coat: Ultra-Tech C119 Interior Latex Semi-Gloss Enamel; MDF 1.6 mils.
7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Ultra-Tech C312 Interior-Exterior 100% Acrylic Wood Primer; MDF 1.8 mils.
 - b. Each Finish Coat: Ultra-Tech C119 Interior Latex Semi-Gloss Enamel; MDF 1.6 mils.
8. Wood Bumpers:
 - a. Stain: ZAR Interior Penetrating Oil Wood Stain; MDF N/A.
 - b. Clear Polyurethane: 2002 Flecto Varathane Interior Clear Polyurethane Sealer/Finish; MDF 0.9 mils.

C. Duron:

1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Interior Latex Drywall Primer 04-124: Applied at a dry film thickness of not less than 1.6 mils (0.041 mm). (MPI 50, Approved)

- b. Each Finish Coat: Acrylic Latex Eggshell (Low Sheen) Enamel 36 Series; MDF 1.4 mils.(MPI 44, Approved)
 - 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Block Kote Interior/Exterior Latex Block Filler 08-128; MDF 10.2 mils.
 - b. Each Finish Coat: Acrylic Latex Eggshell (Low Sheen) Enamel 36Series; MDF 1.4 mils. (MPI 44, Approved)
 - 3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: Ultra Deluxe Interior Acrylic Latex Eggshell (Low Sheen) Enamel 36 Series; MDF 1.4 mils.
 - 4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: Interior Acrylic Enamel Undercoater 04-123; MDF 1.6mils. (MPI 50, Approved)
 - b. Each Finish Coat: Ultra Deluxe Interior Acrylic Latex Eggshell (Low Sheen) Enamel 36 Series; MDF 1.4 mils.
 - 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Block Kote Interior/Exterior Latex Block Filler 08-128; MDF 10.2 mils.
 - b. Each Finish Coat: Genesis Odor-Free Interior Latex Semi-Gloss Enamel, 83-Series, MDF 1.5 mils.
 - 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Dura Clad Universal Acrylic Metal Primer, White 33-015; MDF x.x mils. (MPI 76, Approved)
 - b. Each Finish Coat: Genesis Odor-Free Interior Latex Semi-Gloss Enamel, 83-Series, MDF 1.5 mils.
 - 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: Interior Acrylic Enamel Undercoater 04-123; MDF 1.6 mils.(MPI 50, Approved)
 - b. Each Finish Coat: Genesis Odor-Free Interior Latex Semi-Gloss Enamel, 83-Series, MDF 1.5 mils.
 - 8. Wood Bumpers:
 - a. Stain: Interior Penetrating Oil Wood Stain 28-100; MDF N/A.
 - b. Clear Polyurethane: Heirloom "Clean Air" Formula Gloss Polyurethane 80-06010. (MPI 130, Approved)
- D. Devoe (ICI):
 - 1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Wonder-Tones Primer DR50801; MDF 1.5 mil.
 - b. Each Finish Coat: Wonder-Tone Eggshell Enamel DR34XX; MDF 1.5 mil.
 - 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Bloxfil 4000 Interior/Exterior Heavy Duty Acrylic Block Filler 4000-1000; 7.0-14.5 MDF
 - b. Each Finish Coat: Wonder-Tone Eggshell Latex Enamel DR34XX; MDF 1.5 mil.
 - 3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: Mirrolac W/B Semi-Gloss Enamel DP83XX; MDF 1.5 mil.
 - 4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: Wonder-Prime DR51701; MDF 1.5 mil.
 - b. Each Finish Coat: Devflex 4216HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
 - 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Bloxfil 4000 Interior/Exterior Heavy Duty Acrylic Block Filler 4000-1000; 7.0-14.5 MDF
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Latex Enamel DP83XX; MDF 1.5 mil.
 - 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Mirrolac W/B DTM Primer DP85XX; MDF 1.5 mil.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss DP83XX.
 - 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: Wonder-Prime DR51701; MDF 1.5 mil.
 - b. Each Finish Coat: Devflex 4216HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
 - 8. Wood Bumpers:

- a. Stain: Penchrome Interior Solventborne Semi-Transparent Oil Stain, DF 2XX; MDF 1.5 mil.
- b. Clear Polyurethane: Penchrome Interior 100% Acrylic Finishes, DF 400 Satin; MDF 1.5 mil.

E. Frazee:

- 1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer :063 PVA Aqua Seal Drywall Vinyl Primer Sealer; MDF 1.4 mils.
 - b. Each Finish Coat: 026 Speed Sheen Interior Acrylic Eggshell Enamel; MDF 1.6 mils.
- 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: 262 Block Filler Latex Block Filler; MDF 10.2 mils.
 - b. Each Finish Coat: 026 Speed Sheen Interior Acrylic Eggshell Enamel; MDF 1.6 mils.
- 3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: 126 Mirro Glide Interior Low Sheen Acrylic Enamel; MDF 1.4 mils.
- 4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: 172 Grip N Seal Enamel Undercoater; MDF 2.2 mils.
 - b. Each Finish Coat: 126 Mirro Glide Interior Low Sheen Acrylic Enamel; MDF 1.4 mils.
- 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: 262 Block Filler Latex Block Filler; MDF 10.2 mils.
 - b. Each Finish Coat: 024 Speed Sheen Semi-Gloss Enamel; MDF 1.7 mils.
- 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: 661F774 Metal Prime Alkyd Metal Primer; MDF 1.7 mils.
 - b. Each Finish Coat: 123 Satin Glide Semi-Gloss Enamel; MDF 1.7 mils.
- 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: 172 Grip N Seal Enamel Undercoater MDF 2.2 mils.
 - b. Each Finish Coat: 024 Speed Sheen Semi-Gloss Enamel; MDF 1.7 mils.
- 8. Wood Bumpers:
 - a. Stain: ZAR Interior Penetrating Oil Wood Stain; MDF N/A.
 - b. Clear Polyurethane: 2002 Fleco Varathane Interior Clear Polyurethane Sealer/Finish; MDF 0.9

F. Glidden(ICI):

- 1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: ProMaster Interior Latex Primer-Sealer MP-5111; MDF 1.5 mil.
 - b. Each Finish Coat: ProMaster Interior Latex Eggshell MP-6800; MDF 1.5 mil.
- 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: Bloxfil 4000 Interior/Exterior Heavy Duty Acrylic Block Filler 4000-1000; MDF 11 mil
 - b. Each Finish Coat: ProMaster Interior Latex Eggshell MP-6800; MDF 1.5 mil.
- 3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: Devflex 4214HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
- 4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: Prime Interior 100% Acrylic Multi-Purpose Latex Stain Killer, PC 1000; MDF 1.5 mil.
 - b. Each Finish Coat: Devflex 4216 HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
- 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Bloxfil 4000 Interior/Exterior Heavy Duty Acrylic Block Filler 4000-1000; MDF 11 mil
 - b. Each Finish Coat: Devflex 4216 HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
- 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Devflex 4020 PF Direct to Metal Primer & Flat Finish; MDF 1.5 mil.

- b. Each Finish Coat: Devflex 4216 HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
 - 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: Prime Interior 100% Acrylic Multi-Purpose Latex Stain Killer, PC 1000; MDF 1.5 mil.
 - b. Each Finish Coat: Devflex 4216 HP High Performance Waterborne Acrylic Semi-Gloss Enamel; MDF 1.5 mil.
 - 8. Wood Bumpers:
 - a. Stain: DF200 semi-transparent; MDF 1.5 mil.
 - b. Clear Polyurethane: Penchrome Interior 100% Acrylic Finishes, DF 400 Satin; MDF 1.5 mil.
- G. Pittsburgh:
 - 1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: 6-2 Speedhide Latex Sealer; MDF 1.0 mils.
 - b. Each Finish Coat: 6-411 Speedhide Eggshell Latex; MDF 1.5 mils.
 - 2. Masonry: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: 6-2 Speedhide Latex Sealer; MDF 1.0 mils.
 - b. Each Finish Coat: 6-411 Speedhide Eggshell Latex; MDF 1.5 mils.
 - 3. Metal: Satin, Water Base, Acrylic Latex.
 - a. Each Finish Coat: 90-474 DTM Acrylic Satin; MDF 1.5 mils.
 - 4. Wood and Wood Doors : Satin, Water Base, Acrylic Latex.
 - a. Primer: 6-855 Interior Water Base Undercoater; MDF 1.5 mils.
 - b. Each Finish Coat: 90-474 DTM Acrylic Satin; MDF 1.5 mils.
 - 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: 6-7 Speedhide Block Filler; MDF 6.0 - 12.0 mils.
 - b. Each Finish Coat: 6-500 Speedhide Semi-Gloss Latex; MDF 1.2 mils.
 - 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Each Finish Coat: 90-474 DTM Acrylic Satin; MDF 1.5 mils.
 - 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: 6-855 Interior Water Base Undercoater; MDF 1.5 mils.
 - b. Each Finish Coat: 90-474 DTM Acrylic Satin; MDF 1.5 mils.
 - 8. Wood Bumpers:
 - a. Stain: 77-560 Interior Oil Stain
 - b. Clear Polyurethane: 77-89 Interior Oil Satin Polyurethane
- H. Sherwin Williams:
 - 1. Gypsum Board: Low VOC, Eg-shell, Water Base, Acrylic Latex.
 - a. Primer: Harmony Latex Primer, MDF 1.6 mils.
 - b. Each Finish Coat: Harmony Latex Eg-Shel, MDF 1.6 mils.
 - 2. Masonry: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: ProMar Interior/Exterior Block Filler, B25W25; MDF 10.0 mils
 - b. Each Finish Coat: ProMar 200 Interior Latex Egg Shell: MDF 1.5 mils.
 - 3. Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Each Finish Coat: DTM Acrylic S-G, B66W200; MDF 3.0 mils.
 - 4. Wood and Wood Doors : Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: PrepRite Classic Primer, B28W101, MDF 1.6 mils.
 - b. Each Finish Coat: ProClassic Waterborne S-G, MDF 1.4 mils.
 - 5. Concrete: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: ProMar Interior/Exterior Block Filler, B25W25; MDF 10.0 mils.
 - b. Each Finish Coat: ProClassic Waterborne S-G, MDF 1.4 mils.
 - 6. Ferrous Metal: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer: Pro-Cryl Universal Water Based Primer, B66-310, MDF 3.0 mils.
 - b. Each Finish Coat: DTM Acrylic S-G, B66W200; MDF 3.0 mils.
 - 7. Wood Cabinets and Wood Shelves: Semi-Gloss, Water Base, Acrylic Latex.
 - a. Primer/Sealer: PrepRite Classic Latex Primer, B28W300, MDF 1.6 mils.
 - b. Each Finish Coat: ProClassic Waterborne S-G, MDF 1.4 mils.

8. Wood Bumpers:
 - a. One Coat: Stain: Oil Stain, A48 Series.
 - b. Each Coat: Clear Polyurethane: WoodClassic Waterborne Polyurethane Varnish; A68 series MDF 1.0 mil.

PART 3 - EXECUTION

3.1 EXAMINATION

- A. Section 017300 - Execution: Verification of existing conditions before starting work.
- B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive Work.
- C. Report in writing to Contracting Officer prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with Work until unsatisfactory conditions have been corrected.
- D. By beginning Work, Contractor accepts conditions and assumes responsibility for correcting unsuitable conditions encountered at no additional cost to the United States Postal Service.

3.2 PREPARATION

- A. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, and conditions otherwise detrimental to formation of a durable paint film.
- B. Perform preparation and cleaning procedures in accordance with paint manufacturer's published instructions for each particular substrate condition.
 1. Provide barrier coats over incompatible primers or remove and reprime as required.
 2. Remove hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items in place and not to be painted or provide surface applied protection prior to surface preparation and painting operations. Reinstall all removed items after completion of paint work.
 3. Clean surfaces to be painted before applying paint of surface treatment. Remove oil and grease prior to mechanical cleaning.
- C. Ferrous Metals: Clean ferrous surfaces, that are not galvanized or shop-coated, of oil, grease, dirt, loose mill scale and other foreign substances by solvent or mechanical cleaning.
 1. Touch-up shop-applied prime coats, where damaged or bare. Clean and touch-up with same type shop primer.
- D. Galvanized Surfaces: Clean free of oil and surface contaminants with non-petroleum based solvent. Apply coat of etching primer if required by paint manufacturer.
- E. Cementitious Materials: Prepare cementitious surfaces to be painted by removing efflorescence, chalk, dust, dirt, grease, oils, and by roughening as required to remove glaze.
 1. Determine alkalinity and moisture content of surfaces to be painted by performing appropriate tests.
 - a. If surfaces are found to be sufficiently alkaline to cause blistering and burning of finish paint, correct condition before application of paint.
 2. Do not paint over surfaces where moisture content exceeds that permitted in manufacturer's printed instructions.

3. Clean floor surfaces scheduled to be painted with a commercial solution of muriatic acid, or other etching cleaner. Flush floor with clean water to neutralize acid, and allow to dry before painting.
- F. Wood: Clean wood surfaces to be painted of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sandpaper smooth those finished surfaces exposed to view, and dust off. Scrape and clean small, dry, seasoned knots and apply a thin coat of white shellac or other recommended knot sealer, before application of priming coat. After priming, fill holes, and imperfections in finish surfaces with putty or plastic wood-filler. Sandpaper smooth when dried.
 1. Prime, stain, or seal wood required to be job-painted immediately upon delivery to job. Prime edges, ends faces, undersides, and backsides of such wood, including cabinets and counters.
 2. Seal tops, bottoms, and cut-outs with a heavy coat of varnish or equivalent sealer immediately upon delivery to job.
 - G. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

3.3 APPLICATION

- A. Apply paint products in accordance with manufacturer's published instructions using application procedures approved for the particular application and substrate to the specified Minimum Dry Film Thickness (MDF). Apply each coat to uniform finish.
- B. Apply each coat slightly darker than preceding coat unless otherwise approved by Contracting Officer. Sand lightly between coats to achieve specified finish.
- C. Do not apply finishes on surfaces that are not dry.
- D. Number of coats and film thickness required is same regardless of application method. Do not apply succeeding coats until the previous coat has cured as recommended by the manufacturer.
- E. Apply additional coats when undercoats, stains, or other conditions show through final coat until paint film is of uniform finish, color, and appearance. Surfaces, including edges, corners, crevices, welds, and exposed fasteners to receive minimum dry film thickness equivalent to that of flat surfaces.
- F. Minimum Coating Thickness: Apply materials at not less than manufacturer's recommended spreading rate. Provide minimum dry film thickness (MDF) of the entire coating system as indicated in Painting and Finishing Schedule at end of this Section.
- G. Block Fillers: Apply block fillers to concrete masonry units at rate to provide complete coverage with pores filled.
- H. Prime Coats: Before application of finish coats, apply a prime coat of material as recommended by manufacturer to material scheduled to be painted or finished that has not been shop primed. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to assure a finish coat with no burn through or other defects due to insufficient sealing.
- I. Pigmented (Opaque) Finishes: Completely cover to provide an opaque, smooth surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, laps, brush marks, runs, sags, or other surface imperfections will not be acceptable.
- J. Hollow Metal Doors: Paint each door edge.
- K. Completed Work: Match Contracting Officer approved field samples for color and sheen.

3.4 MECHANICAL AND ELECTRICAL EQUIPMENT

- A. Clean or replace identification markings on mechanical or electrical equipment when painted over or spattered.
- B. Paint both sides and edges of plywood backboards for electrical equipment before installing backboards and mounting equipment on them.
- C. Prepaint Gas piping prior to installation. (Touch-up paint after installation.)
 - 1. Color:
 - a. Roof (Yellow): OSHA Standard "Safety Yellow."
 - b. Other Areas: Match adjacent surfaces.
- D. At Workroom locations, paint red background on wall behind fire extinguisher extending 6 inches on both sides of the extinguisher and from floor to ceiling, or to 12 feet above floor, whichever is lower. Color is to be OSHA Standard "Safety Red" and in accordance with ANSI Z53.1.

3.5 FIELD QUALITY CONTROL

- A. Section 014000 - Quality Requirements: Field testing and inspection.
- B. Inspect painting and coating application for scheduled material, color, sheen, specified thickness (MDF), and coverage.

3.6 CLEANING

- A. As work proceeds and upon completion, promptly remove paint where spilled, splashed, or spattered.
- B. During progress of work keep premises free from any unnecessary accumulation of tools, equipment, surplus materials, and debris.
- C. Collect waste, cloths, and material which may constitute a fire hazard, place in closed metal containers and remove daily from site.
- D. Upon completion of work leave premises neat and clean.

3.7 PROTECTION

- A. Protect other surfaces from paint and damage. Repair damage as a result of inadequate or unsuitable protection.

NOTE TO SPECIFIER

"REQUIRED Article (Color Schedule) follows. Do not revise this Article, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

Color Schedule is usually on the Drawings. Use Color Schedule in Specification when colors are not indicated on the Drawings. Verify colors with USPS Contracting Officer.

3.8 COLOR SCHEDULE

- A. Any proposal to substitute a color is to include manufacturer's certification that the color matches the specified Munsell notation.

- B. P-1 White (Munsell notation: #5Y 9.25/0.5NN)
 - 1. Benjamin Moore: #968.
 - 2. Comex Group (Color Wheel/Frazer/Kwal/Parker)/Duron/Frazer: #7760, Weaverbird.
 - 3. Glidden (ICI): #50YY 83/057.
 - 4. Pittsburgh: #512-1, Winter Mood.
- C. P-2 Light Gray (Munsell notation: #N8.0)
 - 1. Benjamin Moore: #1612 Base 1.
 - 2. Devoe (ICI): #1H51G, Catkin.
 - 3. Glidden (ICI): #50BG 62/007.
 - 4. Comex Group (Color Wheel/Frazer/Kwal/Parker)/Duron/Frazer: # 5441W.
- D. P-3 (Not Used)
- E. P-4 Red (Not Used)
- F. P-5 Blue (Munsell notation: #6.4PB3.24/11.0)
 - 1. Benjamin Moore: #819.
- G. P-6 Medium Gray (Munsell notation: #10B7/1)
 - 1. Sherwin Williams: SW#1232, Dublin Gray.
 - 2. ICI Dulux, #90BG41/040: Dauphin Gray.
 - 3. Comex Group (Color Wheel/Frazer/Kwal/Parker)/Duron/Frazer, # 5452M: Battleship.
- H. P-7 Semi-gloss Black

3.9 SCHEDULE OF ITEMS TO BE PAINTED

NOTE TO SPECIFIER

The following items to be painted are typically used. Edit as relating to the particular Project.

- A. Painted finishes shall be provided for, but not limited to, the following items. Refer to Drawings and Paint Color Schedule at end of this Section for designated finishes and colors of areas.
 - 1. Exterior: All exterior surfaces including, but not limited to:
 - a. Hollow metal doors and frames.
 - b. Metal opening frames and trim.
 - c. Metal flashing (if exposed from ground level) and downspout.
 - d. Metal gravelstops (vertical face).
 - e. Pipe Bollards, if not to receive plastic covers specified in Section 055000.
 - f. Metal railings.
 - g. Roof hatch.
 - h. Canopy supporting steel structure.
 - i. Wall louvers.
 - 2. Interior: All interior surfaces as scheduled on Drawings including, but not limited to:
 - a. Hollow metal doors and frames.
 - b. Hollow metal window frames.
 - c. Metal opening frames and trim.
 - d. Gypsum wallboard.
 - e. Exposed concrete unit masonry.
 - f. Pipe Bollards.
 - g. Metal railings.
 - h. Exposed structure columns.
 - i. Metal stair stringers and handrails.
 - j. Exposed wood trim.

B. Do not paint the following items:

1. Pre-finished items:
 - a. Aluminum, brass, bronze, stainless steel, and chrome plated steel.
 - b. Pre-finished items, such as toilet compartments, acoustical ceiling materials, mechanical, and electrical equipment.
 - c. UL, FM, and other code-required labels.
 - d. Equipment identification, performance rating, and name plates.
 - e. Finish hardware.
 - f. Factory finished metal wall panels, metal wall panel trim, and metal gravel stops.
2. Exposed items:
 - a. Exposed mechanical ductwork, hangers, and supports.
 - b. Exposed piping and conduit, hangers and supports.
 - c. Exposed fire protection piping, hangers and supports.
 - d. Exposed roof structure.
 - e. Exposed roof deck.

3.10 PAINTING AND FINISHING SCHEDULE

- A. Interior Paint Systems:
1. Interior Gypsum Wallboard:
 - a. 1 coat Latex Wall Primer.
 - b. 1 coat Latex Eggshell Enamel
 2. Interior Masonry:
 - a. 1 coat Latex Block Filler
 - b. 1 coat Latex Eggshell Enamel
 3. Interior Metal:
 - a. 2 coats Latex Satin
 4. Interior Wood (painted):
 - a. 1 coat Enamel Undercoat
 - b. 2 coats Alkyd Semi-Satin Enamel
 5. Cast-In-Place Concrete:
 - a. One coat of Latex Masonry Block Filler.
 - b. Two tinted coats of Acrylic Latex Semi-Gloss Enamel.
 6. Wood Doors - Painted.
 - a. One coat Enamel Undercoat.
 - b. Two tinted coats of Latex Semi-Gloss Enamel.
 7. Ferrous Metals
 - a. Touch up Prime Coat.
 - b. Two tinted coats of Alkyd Enamel Semi-Gloss.
 8. Wood Cabinets, Shelves, etc. - exposed surfaces.
 - a. One coat Primer-Sealer.
 - b. One coat Enamel Undercoat.
 - c. One coat Alkyd Enamel Semi-Gloss Enamel.

9. Wood Bumpers.
 - a. Penetrating Oil Stain.
 - b. Two Coats of Clear Polyurethane Semi-Gloss Finish.
- B. Exterior Paint Systems:
 1. Galvanized Metal:
 - a. Touch up Prime Coat.
 - b. Two tinted coats Exterior Alkyd Enamel Semi-Gloss Enamel.
 2. Ferrous Metals:
 - a. Touch up Prime Coat.
 - b. Two tinted coats Exterior Alkyd Enamel Semi-Gloss Enamel.

USPS CSF Specifications issued: 10/1/2013
Last revised: 5/24/2011

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 09 91 00 00 - MPF PAINTING**

NOTE TO SPECIFIER

Use this Outline Specification Section for Mail Processing Facilities only. This Specification defines "level of quality" for Mail Processing Facility construction. For Design/Build projects, it is to be modified (by the A/E preparing the Solicitation) to suit the project and included in the Solicitation Package. For Design/Bid/Build projects, it is intended as a guide to the Architect/Engineer preparing the Construction Documents. In neither case is it to be used as a construction specification. Text in [brackets] indicates a choice must be made. Brackets with [_____] indicates information may be inserted at that location.

NOTE TO SPECIFIER

****REQUIRED PARTS OR ARTICLES ARE INCLUDED IN THIS SECTION. DO NOT REVISE THIS SECTION WITHOUT A WRITTEN DEVIATION FROM USPS HEADQUARTERS DESIGN AND CONSTRUCTION, THROUGH THE CONTRACTING OFFICER.**

PART 1 - GENERAL

1.1 SUMMARY

- A. Section Includes:
 - 1. Surface preparation and field application of paints and finishes for interior and exterior surfaces.
 - 2. Schedule of Items to be painted.
 - 3. Exterior painting and finishing schedule.
 - 4. Interior painting and finishing schedule.
- B. Related Documents: The Contract Documents, as defined in Section 011000 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.
- C. Related Sections:
 - 1. Section 055000 - Metal fabrications
 - 2. Section 055213 - Pipe and Tube Railings
 - 3. Section 081100 - Metal Doors and Frames: Shop priming.

1.2 REFERENCES

- A. American Society for Testing and Materials (ASTM):
 - 1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

1.3 SUBMITTALS

- A. Section 013300 - Submittals: Procedures for submittals.
 - 1. Product Data: Submit product data for each type of paint specified.
 - a. Technical data sheets indicating manufacturer's catalog number, paint type description, and VOC content.
 - b. Painting Schedule listing surfaces to be painted with cross reference to the specific painting and finishing system and application. Identify each paint material by manufacturer's catalog number and general classification.

2. Samples: Submit color brush-out sample for each paint color and sheen specified.
 - a. Three samples on 8 1/2 inch x 11 inch card stock for color and sheen verification.
 - b. Identify each sample by paint manufacturer, paint type, color, and sheen.
3. Assurance/Control Submittals:
 - a. Test Reports: Submit manufacturer's Material Safety Data Sheets (MSDS) for each paint type proposed.

1.4 QUALITY ASSURANCE

- A. Applicator Qualifications: Company specializing in performing Work of this Section with minimum five years documented experience.
- B. Regulatory Requirements:
 1. Surface Burning Characteristics in Accordance with ASTM E-84 for Class I or A finish:
 - a. Flame Spread (Non-Combustible Surfaces): Less than 25.
 - b. Smoke Density (Non-Combustible Surfaces): Less than 450.
 2. Provide paint and coating materials that conform to Federal, State, and Local restrictions for Volatile Organic Compounds (VOC) content.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Section 016000 - Product Requirements: Transport, handle, store, and protect products.
- B. Deliver paint materials in sealed original labeled containers, bearing manufacturer's name, type of paint, brand name, lot number, brand code, coverage, surface preparation, drying time, cleanup requirements, color designation, and instructions for mixing and/or reducing.
- C. Store paint materials at minimum ambient temperature of 45 degrees F and a maximum of 90 degrees F, in ventilated area, and as required by manufacturer's published instructions.
- D. Prevent fire hazards and spontaneous combustion.

1.6 PROJECT CONDITIONS OR SITE CONDITIONS

- A. Environmental Requirements:
 1. Apply paint finishes only when moisture content of surfaces is within manufacturer's acceptable ranges for type of finish being applied.
 2. Surface temperatures or surrounding air temperature to be above 40 degrees F before applying alkyd finishes; above 45 degrees F for interior latex, and 50 degrees F for exterior latex work. Minimum for varnish and transparent finishes is 65 degrees F.
 3. Provide continuous ventilation and heating facilities to maintain temperatures above 45 degrees F for 24 hours prior to, during and 48 hours after application of finishes.
 4. Do not apply paint in areas where dust is being generated.
 5. Provide lighting level in areas being painted of 80 foot candles measured mid-height at substrate surface.

1.7 MAINTENANCE

- A. Section 017704 - Closeout Procedures and Training: Procedures for closeout submittals.
- B. Extra Materials:

1. Provide one gallon of each color, type and sheen to Contracting Officer.
2. Label each container with color, type, texture, room locations, in addition to the manufacturer's label.

NOTE TO SPECIFIER

"REQUIRED Part (Products) follows. Do not revise this Part, except as noted below, without a written Deviation from USPS Headquarters Design & Construction, through the Contracting Officer."

PART 2 - PRODUCTS

NOTE TO SPECIFIER

Verify manufacturer information and availability at time of Project Manual preparation for Project.

2.1 MANUFACTURERS

- A. Subject to compliance with project requirements, manufacturers offering specified items which may be incorporated in the work include the following:
 1. Benjamin Moore and Company, Montvale, NJ (201) 573-9600.
 2. Duron Paints and Wall Coverings, Beltsville, MD (800) 723-8766.
 3. Devoe (ICI), Cleveland, OH (888) 681-6353.
 4. Glidden (ICI), Cleveland, OH (888) 681-6353.
 5. Frazee Paint Company, Los Angeles, CA (800) 826-9048.
 6. Pittsburgh Paints, Pittsburgh, PA (800) 441-9695.
 7. Sherwin-Williams Company, Cleveland, OH (800) 321-8194.
- B. Section 016000 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

2.2 MATERIALS

- A. Paints:
 1. Manufacturer's "Best Grade" for each type specified.
 2. Ready-mixed; pigments fully ground maintaining a soft paste consistency, capable of readily and uniformly dispersing to a complete homogeneous mixture.
 3. Providing good flowing and brushing properties and be capable of drying or curing free of streaks or sags.
 4. VOC limits (g/L) for exterior and interior paint applications:
 - a. Exterior- Steel-Shop Primed
 - 1) Top Coat – Non-Flat: 150
 - 2) Top Coat - Gloss: 250
 - b. Exterior- Steel - Galvanized
 - 1) Primer Coat: 200
 - 2) Top Coat - Non-Flat: 150
 - 3) Top Coat - Gloss: 250
 - c. Interior Wood – Transparent
 - 1) Stain: 250
 - 2) Varnish: 350
 - d. Interior Concrete, Concrete Block
 - 1) Block filler: 300
 - 2) Top Coat – Flat: 100
 - 3) Top Coat – Non-Flat: 150

- 4) Top Coat – Gloss: 250
- e. Interior Steel – Unprimed
 - 1) Rust Prime Coat: 400
 - 2) Top Coat – Non-Flat: 150
 - 3) Top Coat – Gloss: 250
- f. Interior Steel – Primed
 - 1) Top Coat – Flat: 100
 - 2) Top Coat – Non-Flat: 150
 - 3) Top Coat – Gloss: 250
- g. Interior Steel – Galvanized
 - 1) Top Coat – Non-Flat: 150
 - 2) Top Coat – Gloss: 250
- h. Interior Plaster, Gypsum Board
 - 1) Undercoater: 200
 - 2) Top Coat - Flat: 100
 - 3) Top Coat – Non-Flat: 150
 - 4) Top Coat – Gloss: 250

B. Primers and Undercoaters: Manufactured by same manufacturer as finish coat materials.

C. Paint Accessory Materials: Linseed oil, shellac, turpentine and other materials not specifically indicated herein but required to achieve the finishes specified of high quality and approved manufacturer.

NOTE TO SPECIFIER

Verify Product numbers and availability at time of Project Manual preparation for Project.

2.3 EXTERIOR PAINT SYSTEMS

A. Benjamin Moore:

- 1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: M04 Acrylic Metal Primer; MDF 2.0 mils.
 - b. Each Finish Coat: M29 DTM Acrylic Semi-Gloss; MDF 2.0 mils.
- 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: M04 Acrylic Metal Primer; MDF 2.0 mils.
 - b. Each Finish Coat: M29 DTM Acrylic Semi-Gloss; MDF 2.0 mils.
- 3. Concrete/Masonry: Semi-Gloss Acrylic Latex.
 - a. Primer: Moorlastic 100'6 Acrylic Elastametic Waterproof Coating – Flat 056, 11 mils.
 - b. Each Finish Coat: Aura Waterborne Exterior Paint Semi-Gloss Finish 632, 1.5 mils.

B. Duron:

- 1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Dura Clad Universal Acrylic Metal Primer, 33-105; MDF 2.4 mils. (MPI xx, Approved)
 - b. Each Finish Coat: Dura Clad DTM Acrylic Coating Gloss 95-30X, MDF 3.0 mils. (MPI 110-G6)
- 2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Dura Clad Acrylic Galvanized Metal Primer, 33-100; MDF 1.4 mils. (MPI 134, Approved)
 - b. Each Finish Coat: Dura Clad DTM Acrylic Coating Gloss 95-30X, MDF 3.0 mils. (MPI 110-G6)
- 3. Concrete/Masonry Semi-Gloss Acrylic Latex.
 - a. Primer: Dura Crete Waterborne Acrylic Masonry Primer, 11 mils.
 - b. Each Finish Coat: MaxFlex Premium Elastomeric 1.5 mils.

C. Devoe (ICI):

1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Mirrolac W/B DTM Primer DP85XX.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Enamel DP83XX.
2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Mirrolac W/B DTM Primer, DP85XX.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Enamel DP83XX.
3. Concrete/Masonry Semi-Gloss Acrylic Latex MDF 1.5 mil.
 - a. Primer: Blaxfil 4000 Exterior Heavy Duty Acrylic Block Filler 4000-1000 7.0-14.5 MDF.
 - b. Each Finish Coat: Mirrolac W/B Semi-Gloss Latex Enamel DP83XX MDF 1.5 mil.

D. Frazee:

1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 661F774Metal Prime; MDF 1.7 mils.
 - b. Each Finish Coat: 128 Satin Glide Semi Gloss Acrylic, 03-Series; MDF 1.4 mils.
2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 661F774 Metal Prime, 33-100; MDF 1.4 mils.
 - b. Each Finish Coat: 128 Satin Glide Semi Gloss Acrylic , 03-Series; MDF 1.4 mils.
3. Concrete/Masonry Semi-Gloss Acrylic Latex MDF 1.5 mil.
 - a. Primer: 262 Acrylic Block Filler 7.0 MDF.
 - b. Each Finish Coat: 520 DTM Semi-Gloss Exterior Industrial Maintenance Semi-Gloss 1.5 mil.

E. Pittsburgh:

1. Ferrous Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 90-709 DTM Interior/Exterior Primer; MDF 3.0 mils.
 - b. Each Finish Coat: 90-474 Acrylic Enamel Satin; MDF 3.0 mils.
2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: 90-709 DTM Interior/Exterior Primer; MDF 3.0 mils.
 - b. Each Finish Coat: 90-474 Acrylic Enamel Satin; MDF 3.0 mils.
3. Concrete/Masonry Semi-Gloss Acrylic Latex MDF 1.5 mil.
 - a. Primer: Perma Crete High Build 100% Acrylic Primer 7.0 mil.
 - b. Each Finish Coat: Perma Crete High Build Acrylic Top Coat 1.5 mil.

F. Sherwin-Williams:

1. Ferrous Metal: Semi-Gloss, Low VOC, Alkyd Primer/Acrylic Latex.
 - a. Primer: Pro-Cryl Universal Water-Based Primer, B66-310, MDF 3.0 mils.
 - b. Each Finish Coat: DTM Acrylic B66 Series; MDF 3.0 mils.
2. Galvanized Metal: Semi-Gloss, Water Base, Alkyd Primer/Acrylic Latex.
 - a. Primer: Pro-Cryl Universal Water Based Primer, B66-310, MDF 3.0 mils.
 - b. Each Finish Coat: DTM Acrylic B66 Series; MDF 3.0 mils.
3. Concrete/Masonry Semi-Gloss Acrylic Latex MDF 1.5 mil.
 - a. Primer: Promar Exterior Block Filler B25W25 MDF 10.0 mils.
 - b. Each Finish Coat: DMT Acrylic B66 Series MDF 3.0 mils.

2.4 INTERIOR PAINT SYSTEMS

A. Benjamin Moore:

1. Gypsum Board: Eggshell, Water Base, Acrylic Latex.
 - a. Primer: 284 Moorecraft Superhide Interior Latex Primer/Undercoater; MDF 1.5 mils.
 - b. Each Finish Coat: Moorecraft Super-Hide Eggshell 286.
2. Masonry: Eggshell, Water Base, Acrylic Latex.
